INCOME OF THE ELDERLY IN 1963

The median income of families with a head 65 years of age or over in 1963 was approximately $3,400, about $500 greater than in 1960, but only about half the median income of families with a head under 65 years of age. In terms of constant (1963) dollars, median income of families with an elderly head increased about $900 since 1950, while the increase for all families over the same period was approximately $2,000. Twenty-six percent of the families with an elderly head had incomes below $2,000, about three times the proportion of families with younger heads with that income. At the upper end of the income scale, only 10 percent of the older group--but 21 percent of the younger group--had incomes of $10,000 or more.

Table A.--MEDIAN INCOME IN 1947, 1950, AND 1952 TO 1963 OF ALL FAMILIES AND FAMILIES WITH HEAD 65 YEARS OLD AND OVER, IN 1963 DOLLARS, FOR THE UNITED STATES

Year	Total families	Families with head 65 years and over	Ratio of older to total families
1963	$6,249	$3,352	.54
1962	6,053	3,259	.54
1961	5,890	3,112	.53
1960	5,830	3,010	.52
1959	5,701	2,987	.52
1958	5,389	2,844	.53
1957	5,401	2,756	.51
1956	5,401	2,902	.54
1955	5,074	2,688	.53
1954	4,760	2,623	.55
1953	4,868	2,563	.53
1952	4,497	2,633	.59
1950	4,235	2,436	.58
1947	4,165	2,516	.60

As table B indicates, family income shows a tendency to rise until the head reaches late middle age and to decline thereafter, dropping sharply after age 65. Median income reached its peak, $7,400, for families in which the head was 45 to 54 years old, declined to $6,500 for those in the age group 55 to 64, and dropped to $3,400 for those 65 years old and over.

A low labor force participation rate tends to hold down the level of income received by families with an elderly head. In 72 percent of all families in the older group, the head was not in the labor force. The median income for these families was about $2,900, and approximately 30 percent received less than $2,000. For families with an elderly head that had no earner and depended only upon sources of income other than earnings (35 percent of all families in the older group), median income was only $2,100.

Table B.--MEDIAN INCOME IN 1963, FOR FAMILIES, UNRELATED INDIVIDUALS, AND PERSONS, BY AGE, FOR THE UNITED STATES

(Families, unrelated individuals, and persons as of March 1964)

Age	Families	Unrelated individuals	Persons	
			Male	Female
14 to 19 years	$4,197	$1,780	$406	$375
20 to 24 years			2,632	1,793
25 to 34 years	6,324	4,181	5,470	1,856
35 to 44 years	7,081	4,176	6,233	2,145
45 to 54 years	7,415	3,130	5,828	2,311
55 to 64 years	6,480	2,303	4,901	1,774
65 years and over	3,352	1,277	1,993	920

Unrelated individuals included relatively more elderly persons than did family heads. Approximately 38 percent of the unrelated individuals and only 14 percent of the family heads were 65 years old and over. Median income for these elderly individuals was $1,300, about 44 percent of the median income of individuals between the ages of 14 and 64.

Elderly female unrelated individuals, who constituted about 73 percent of the aged individuals, had a median income of $1,200, about $400 less than that of male individuals. The median for elderly nonwhite individuals was only $900.

These are some of the highlights from the inquiry on consumer income in 1963 made in March 1964 in connection with the Bureau's Current Population Survey. Data on consumer income collected by the Bureau of the Census cover money income prior to deduction for taxes. The fact that many farm families receive part of their income in the form of rent-free housing and goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm residents.

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases as well as small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.

Employment status and occupation of family head.--The major economic characteristic that differentiates families with younger and older heads is the low employment rate of elderly family heads. In early 1964, only 27 percent of family heads 65 years old or over were reported as employed. This was in marked contrast to the 87 percent of family heads under 65 years of age who were employed during the survey week (table C). Since incomes are generally low for families whose head is not in the labor force, this difference in employment status partly accounts for the fact that the median income of the younger group is about twice that of the older group.

Median income was not significantly different for families in the older and younger groups whose head was not in the labor force; but, for families with employed heads, the median income for the older group was about two-thirds that of the younger. Seventeen percent of the families with employed heads 65 and over had incomes below $2,000, as compared with only 5 percent of those with younger employed heads.

In the survey, the widest disparity between the median incomes of the two age groups, however, was in the self-employed professional and managerial category, where the median family income was $5,700 for families with elderly employed heads and $8,000 for those with younger employed heads.

Approximately 34 percent of employed family heads 65 years old and over were in this occupational category or were farmers or farm managers, in contrast to the 12 percent of employed heads under 65 (table 3). This relatively large concentration of older workers in these occupations can presumably be accounted for by the lack of formal retirement plans in some of these occupations, as well as the opportunities that self-employment offers in reduced and flexible working hours.

Table C.--INCOME IN 1963 AND 1960 OF FAMILIES WITH HEAD UNDER 65 YEARS OLD AND 65 YEARS OLD AND OVER, BY EMPLOYMENT STATUS OF HEAD, FOR THE UNITED STATES

(Families as of March of the following year)

Number of earners in family.--The low employment rate of older persons is reflected in the greater proportion of older families who reported that no member of the family was an earner. In 1963, 35 percent of the families with an elderly head had no earner, in contrast to only about 3 percent of the younger families. Although 65 percent of the older group reported one or more earners in the family, only 27 percent reported employed heads during the survey week. This contrast exists largely because the earner classification refers to activity during the entire year rather than employment at the time of the survey.

In 1963, less than one-fourth of families with an elderly head, compared with over one-half of the younger group, were multiearner families, largely because approximately three-quarters of the elderly group were composed of only two persons. Although the proportion of multiearner families was low for the elderly group, the median

income for older multiearner families was about 85 percent that of the younger multiearner families. This proximity to the earnings of younger families may be explained largely by the fact that many of the earners in multiearner families headed by someone 65 or over are undoubtedly younger and contribute relatively large earnings to the family income pool.

The relatively large contribution that family members other than the head make to the family income is also indicated by comparing the income figures for older heads with the income of families with older heads. In 1963, the median income of men 65 and over who were family heads was $2,200 (table 7), whereas the median family income of families headed by elderly men was about $3,300 (table 1), or approximately 50 percent larger. For family heads under 65 years of age, the median family income was only 21 percent greater than the income of the head.

Table D.--INCOME IN 1963 AND 1960 OF FAMILIES WITH HEAD UNDER 65 YEARS OLD AND 65 YEARS OLD AND OVER, BY NUMBER OF EARNERS, FOR THE UNITED STATES

(Families as of March of the following year)

X Not applicable.

Source of family income.--Families headed by persons under 65 years of age typically receive income from wages and salary or self-employment, whereas those with heads 65 or over more frequently receive one or more of the various types of income other than earnings, such as Social Security benefits, public assistance, pensions, interest, dividends, and rents. One-half of the families with a younger head had income from earnings only in 1963, whereas only 6 percent of the elderly group reported earnings as their sole source of income. On the other hand, one-third of the elderly group received other income only, about 10 times the proportion of younger families who received only income other than earnings.

Size of family.--In comparing the incomes of families with older and younger heads, account must be taken of the fact that the average number of persons which the family income must maintain is much smaller for the older group. In early 1964, the mean size of family was 3.9 persons for families with heads under 65, but only 2.5 for families with elderly heads. As table E indicates, approximately three-fourths of families with elderly heads were composed of two persons compared with only one-fourth of younger families. Since family incomes generally average less for 2-person than for larger families, a portion of the disparity between median incomes of the younger and older groups is associated with differences in family size.

Even within a particular family-size category, however, there is generally a substantial difference in the incomes received by the older and the younger groups. For 2-person families, the median income of $2,900 for those with an elderly head was only about half that for families with a younger head, and the proportion with income less than $2,000 was twice as large for older as for younger 2-person families--30 percent compared

Table E.--INCOME IN 1963 AND 1960 OF FAMILIES WITH HEAD UNDER 65 YEARS OLD AND 65 YEARS OLD AND OVER, BY SIZE OF FAMILY, FOR THE UNITED STATES

with 13 percent. Among 4-person families, where there was overall a greater likelihood that at least one family member was in the labor force, about 50 percent of both the younger and the older group received incomes of $7,000 or more, and the median incomes of the two groups were not significantly different.

Family type.--Incomplete families, those with a female head and those with a male head with no wife present, account for a larger proportion of the older group than of the younger. These two types of families together comprised about 22 percent of all elderly families as compared with 11 percent of younger families.

Family incomes of less than $2,000 were received by about one-third of families with a female head, whether over or under 65 years of age. Among families with a male head with no wife present, incomes below $2,000 were found slightly more frequently in the older group than in the younger group--19 percent as compared with 12 percent. In contrast, there was a wide disparity between the income distributions of "husband-wife" families, i.e., families headed by a married male with wife present, in the two age groups. Incomes below $2,000 were reported by 26 percent of the families with a head 65 years old and over but by only 6 percent of the families with a younger head.

Unrelated individuals 65 and over.--Approximately 38 percent of all unrelated individuals were 65 years of age or over, a much larger proportion than the 14 percent which elderly families were of all families. This fact reflects in part the large number of widows and widowers who maintain their own households as unrelated individuals rather than as members of families.

Median income in 1963 for elderly unrelated individuals was about $1,300, approximately 45 percent of the median for individuals under 65. The differences in median income between young and elderly unrelated individuals can be attributed to some of the factors which have been noted in the discussion of family income. Of particular interest is the relatively large proportion of older individuals who were nonearners in 1963 and who depended on other sources of income. Almost three-quarters of the elderly unrelated individuals were nonearners in contrast to only one-sixth of those between the ages of 14 and 64 (table G). An important factor underlying this difference is the high ratio of women to men in the elderly group, females constituting about 73 percent of elderly and about 55 percent of younger unrelated individuals. Since labor force participation rates are low for older women, this predominance of females within the older group serves to lower the proportion of earners among the elderly individuals.

Persons 65 and over.--Median income for all elderly men in 1963 was $2,000, about 40 percent of the median income of males aged 14 to 64. The ratio of the median income of elderly to that of younger males was about 56 percent for males who worked in 1963 and 71 percent for those who worked at full-time jobs during the year. Part-time work, on the other hand, yielded a median income approximately four times as large for elderly men as for those 14 to 64. The proportion of younger males who received earnings only in 1963 was 58 percent as contrasted to only 6 percent of the elderly.

[1] Data on work experience based on February 1964 and 1961 surveys; members of the Armed Forces covered by the surveys are included in the total but are not shown separately in the distribution by work experience.

DEFINITIONS AND EXPLANATIONS

Population coverage.--This report excludes inmates of institutions. It includes only those members of the Armed Forces living off post or with their families on post; the 1964 survey included about 1,037,000 members.

Farm-nonfarm residence.--The farm population refers to rural residents living on farms. The method of determining farm-nonfarm residence in the March 1964 survey and in the Current Population Surveys since March 1960 is the same as that used in the 1960 Census but differs from that used in earlier surveys and censuses. Since March 1960

in the Current Population Surveys, farm residence has been determined by the responses to two questions. Owners are asked "Does this place have 10 or more acres?" and renters are asked "Does the place you rent have 10 or more acres?" If the response is "Yes," the respondent is asked "During the past 12 months, did sales of crops, livestock, and other farm products from this place amount to $50 or more?" If the acreage response is "No," the inquiry relates to sales of $250 or more. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming, are not classified as farm population.

The nonfarm population, as the term is used here, comprises persons living in urban areas and rural persons not on farms.

Family.--The term "family," as used in this report, refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son of the head of the household and the son's wife are in the household, they are treated as part of the head's family. On the other hand, a lodger and his wife not related to the head of the household or an unrelated servant and his wife are considered as additional families, and not as part of the household head's family.

Type of family.--Families classified as male head, married, wife present, are those in which the husband and wife are members of the same household, even though he or she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Male heads of other marital status and female heads include heads who are widowed, divorced, separated, or never married and those heads who are married but whose spouse is not a member of the same household because of absence in the Armed Forces, employment at a considerable distance from home, or other reasons.

Unrelated individual.--The term "unrelated individuals," as used in this report, refers to persons (other than inmates of institutions) who are not living with any relatives. An unrelated individual may constitute a one-person household by himself, or he may be part of a household including one or more other families or unrelated individuals, or he may reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the head of the household or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals. An unrelated individual who is the head of the household is a primary individual, that is, a household head with no relatives in the household. An unrelated individual who is not the head of a household is a secondary individual, that is, a roomer, resident employee, etc., with no relatives in the household or group quarters.

Income.--For each person in the sample 14 years old and over, questions were asked on the amount of money income received in 1963 from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security, veterans' payments, or other government or private pensions; (5) interest (on bonds or savings), dividends, and income from annuities, estates, or trusts; (6) net income from boarders or lodgers, or from renting property to others; (7) all other sources such as unemployment benefits, public assistance, alimony, etc.

The amounts received represent income before deductions for personal taxes, Social Security, bonds, etc. It should be noted that although the income statistics refer to receipts during 1963 the characteristics of the person, such as age, labor force status, etc., and the composition of families refer to March 1964.

Total money earnings.--These are defined as the algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings.--This includes money received from such sources as net rents, interest, dividends, Social Security benefits, pensions, veterans' payments, unemployment compensation, public assistance, periodic receipts from insurance policies or annuities, and other kinds of periodic income other than earnings.

Receipts not counted as income.--Receipts from the following sources were not included as income: (1) Money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

Total money income.--This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than

earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

Head of family.--One person in each family was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey. Married couples related to the head of a family are included in the head's family and are not classified as separate families.

Size of family.--The term "size of family" refers to the number of persons who are living together and who are related to each other by blood, marriage, or adoption.

Number of earners.--This number includes all persons in the family with $1 or more in wages and salaries, or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age.--The age classification is based on the age of the person at his last birthday.

Color.--The term "color" refers to the division of the population into two groups, white and nonwhite. The nonwhite group includes Negroes, Indians, Japanese, Chinese, and other nonwhite races.

Employed.--Employed persons comprise those who, during the survey week, were either (1) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or business; or (2) "with a job but not at work"--those who did not work and were not looking for work but had a job or business from which they were temporarily absent because of vacation, illness, industrial dispute, or bad weather, or because they were taking the week off for various other reasons.

Unemployed.--Unemployed persons include those who did not work at all during the survey week and were looking for work. Also included as unemployed are those who did not work at all during the survey week and (1) were waiting to be called back to a job from which they had been laid off; or (2) were waiting to report to a new wage or salary job scheduled to start within the following 30 days (and were not in school during the survey week); or (3) would have been looking for work except that they were temporarily ill or believed no work was available in their line of work or in the community.

Labor force.--Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week.

Not in labor force.--All civilians 14 years old and over who are not classified as employed or unemployed are defined as "not in labor force." These persons include those "engaged in own home housework," "in school," "unable to work" because of long-term physical or mental illness, and "other," the latter group including for the most part retired persons, those too old to work, seasonal workers for whom the survey week fell in an "off" season, and the voluntarily idle. Persons doing only incidental unpaid family work (less than 15 hours) are also classified as not in the labor force. In March 1964, persons attending school during the survey week who had new jobs to which they were scheduled to report within 30 days were also included among those not in the labor force.

Paid labor force.--Persons are classified in the paid labor force if they were employed as wage or salary or self-employed workers during the survey week in March, or were looking for work at that time and had last worked as wage or salary or self-employed workers. Unpaid family workers are excluded.

Occupation.--The data on occupation refer to the civilian job held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week. Persons who were unemployed during the survey week are classified according to their last civilian job.

Work experience in 1963.--A person with work experience in 1963 is one who did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in 1963.--Persons are classified according to the number of different weeks during 1963 in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs.--A person is classified as having worked at part-time jobs during 1963 if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at

full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Nonworker.--A nonworker is one who did not do any civilian work in 1963.

Median income.--The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for families and individuals are based on all families and individuals. The medians for persons are based on the distributions of persons with income. The medians for wage or salary income, income from nonfarm self-employment, income from farm self-employment, and income other than earnings are based on the distributions of persons or families and individuals having these types of income.

Rounding.--Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0.

Further definitions.--More extensive definitions of the terms used in this report, explanations of collection and processing procedures, and a statement on sampling variability, may be found in the introduction to Current Population Reports, Series P-60, No. 43, "Income of Families and Persons in the United States: 1963."

Table 1.--INCOME IN 1963 AND 1960 OF FAMILIES WITH HEAD 65 YEARS OLD AND OVER, BY SOCIAL CHARACTERISTICS, FOR THE UNITED STATES

(Families as of March of the following year. This report excludes inmates of institutions. It includes only those members of the Armed Forces living off post or on post with their families; the 1964 survey included about 1,037,000 members)
