PRELIMINARY REPORT NO. 2

GC77(P)-2
Issued November 1977

Assessed Valuations for Local General Property Taxation

1977 CENSUS OF GOVERNMENTS

Local Property Tax Scenario

State and local government revenue derived from property taxes rose 10.7 percent during fiscal 1976, from $51.5 billion to $57.0 billion. This represents the largest such increase since the 11.5 percent jump during the 1971-72 year.

Local property taxes continue to comprise the major portions of these totals. Increasing from $50.0 billion in fiscal 1975 to $54.9 billion in fiscal 1976, these local property tax dollars accounted for 30.8 percent of local government revenue from all sources, and 81.2 percent of local government tax revenue. For State and local governments taken together, property tax revenue of $57.0 billion in 1975-76 represented 36.3 percent of all tax revenue and 18.7 percent of total revenue. Property taxes are a much more dominant component of total revenue for local governments than for State governments. A fiscal year summary of property tax revenue since 1970-71 is shown in table A.

The State and local government property tax yield during **calendar** 1976 was $59.7 billion, an increase of 9.9 percent over the 1975 yield of $54.3 billion.

A minor percentage of these amounts of revenue has been obtained from "special" property taxes, applied distinctively to certain kinds of property. However most property tax revenue is from "general" property taxes. For Bureau of the Census reporting, general property taxes are those conditioned on ownership of property and measured by its value and applicable either to all property, to all tangible property, or to all real property not specifically excepted, whether at a single rate or at classified rates.[1]

Assessed value concept

In this report the terms "assessment" and "assessed value" refer to values officially determined for tax purposes. In some situations, however, each of several local governments may determine separate assessed values for the same parcel of property. In such cases, there may be separate assessing offices serving the municipalities, the school districts, and the special districts within a given county. At the same time, the county itself may be served by a county assessor. Whenever such overlapping occurs, the assessed value used in this report is the one determined for purposes of **county** government taxes.

In Illinois, Minnesota, Montana, and North Dakota, and occasionally elsewhere, two values are locally recorded for each property. The value against which tax rates are applied is a percentage (as in Minnesota) or a multiple (as in Illinois) of the value initially determined and listed by the assessor. In Montana, the initially determined figure is the "assessed" value (also referred to as the "true and full" value in the statutes), against which a specified percentage is applied to arrive at "taxable" value. It is the "taxable" value figure which is used in this report. In North Dakota the assessment roll contains an "assessor's" value, also identified as "true and full" value in the statutes, and a "taxable" value for each property; the "taxable" value is used in this report. In Minnesota, the initially determined figure is the "market" value, against which a specified percentage is applied to arrive at the value against which property tax rates are applied (i.e., the taxable value); the taxable value is used in this report.

The State is the primary assessing jurisdiction for the entire State of Hawaii and for the unorganized territory in Maine. In Maryland, local supervisors of assessments and their clerical staffs be-

[1] This does not necessarily mean that the tax will have a uniform relationship with "full" value of all taxable property, since, by law or in practice, the relationship of the taxable value to current market value may differ among various classes of property.

Table A. **Revenue From Property Taxes for Fiscal Years 1971 to 1976**

Fiscal year	State and local governments			State governments				Local governments			
	Revenue (million dollars)	Percent of— All revenue sources	Percent of— Tax revenue	Revenue (million dollars)	Percent increase	Percent of— All revenue sources	Percent of— Tax revenue	Revenue (million dollars)	Percent increase	Percent of— All revenue sources	Percent of— Tax revenue
1976 . . .	57,001	18.7	36.3	$2,117	45.9	1.1	2.4	54,884	9.7	30.8	81.2
1975 . . .	51,491	19.7	36.4	1,451	11.4	0.9	1.8	50,040	7.7	32.2	81.6
1974 . . .	47,754	20.1	36.5	1,302	—	0.9	1.8	46,452	5.6	32.4	82.2
1973 . . .	45,283	20.8	37.4	1,313	4.5	1.0	1.9	43,970	7.6	34.1	82.9

came employees of the State on July 1, 1974, and July 1, 1975, respectively. In Montana, county assessors became agents of the State Department of Revenue effective July 1, 1973. In this report, however, assessed values for Hawaii are shown as locally assessed in order to assure comparability with data presented for other States. Similarly, property assessed by county supervisors of assessments in Maryland or assessors in Montana is shown in this report as locally assessed property.

Property Tax Base

Extent of property tax base

Property values that were officially set or "assessed" in 1976 for local general property taxation totaled $1,216.3 billion. This includes $84.0 billion in assessed value determined initially by a State agency and $1,132.3 billion in locally assessed property value. Of the total of all such valuations, however, $38.7 billion were legally exempt from the application of local general property taxes (see text table D). Accordingly, the net aggregate of locally taxable assessed valuations was $1,177.6 billion, distributed as follows:

Item	Amount (billion dollars)	Percent of total
Total	1,177.6	100
State-assessed property	*83.9	*7.1
Railroads	2.5	0.2
Other utilities	27.3	0.2
Other	19.4	2.3
Locally assessed property	1,093.7	92.9
Real	950.4	80.7
Personal	143.2	12.2

*Breakdown of State-assessed property was not available for 14 States.

As mentioned, the above amounts are net assessed value after deduction of value exempt from the application of local general property tax rates. The total amount of legally exempt value in 1976 was $38.7 billion, which compares with previous census years as follows:

Item	Amount (billion dollars)			
	1961	1966	1971	1976
Total gross assessed value	365.9	499.0	717.8	1,216.3
Amount exempt	12.0	14.9	23.2	38.7
Total net assessed value	354.0	484.1	694.6	1,177.6

Note: Because of rounding, detail may not add to totals.

It should be noted that changes in assessed value aggregates over a period of time result in large part from diverse local and regional influences which must be considered in any analysis of such changes. Such influences, more pronounced than ever in recent years, include primarily the following:

1. Amounts of assessed value shown on local records often reflect diverse value levels, usually lower than those of the current market and typically sensitive in varying degree to pertinent economic and other factors including changes in construction costs and prices.
2. In recent years, law, economics, and technology have begun to influence assessment administration more profoundly than in times past. The prescribed legal level for assessed values has changed in some States (e.g., to full value in Iowa as of January 1, 1975, and in Washington, as of January 1, 1974). Other States meanwhile established several legal levels for specified types of property (e.g., six classes of property at 15 percent to 60 percent of full cash value in Arizona—seven as of August 1977; three classes of realty at 25 percent to 55 percent of full value in Tennessee). During this same period, one result of the economic impact on property tax bills has been an increased resort to the courts for review and adjustment of inequitable assessments.

Composition of property tax base

Table 1 presents State-by-State data for each of the major components of the general property tax base, as summarized nationally above. Excluded from these statistics is the substantial aggregate of value legally outside the scope of local general property taxation, attributable to real and personal property in the following categories:

1. Property owned by nonprofit and otherwise qualifying groups or institutions and used for purposes deemed publicly beneficial, i.e., government holdings, religious properties, nonprofit hospitals, educational institutions, and the like.
2. New industrial plants exempt for stated periods in specific States as an inducement to new industry.
3. Other particular classes of property exempted by specific legislative action.

The total of net taxable assessed value located within standard metropolitan statistical areas (SMSA's) exceeds the total located outside such areas by a margin of almost three to one. In 1976, the net aggregate value inside SMSA's amounted to $849.1 billion, vs. $329.5 billion in the nonmetropolitan areas. This represents a 10.6 percent increase over the 1975 SMSA portion of $767.6 billion (text table B).

Summary tax base figures corresponding to the statewide amounts shown in table 1 are presented in table 3 for all individual county areas (and county-type areas), as well as for selected major

Table B. **Percent Distribution of Net Taxable Assessed Value Inside and Outside SMSA's: 1975 and 1976**

Class of property	1975		1976	
	Inside SMSA's	Outside SMSA's	Inside SMSA's	Outside SMSA's
Total	72.2	27.8	72.0	28.0
State-assessed property	57.9	42.1	57.3	42.7
Locally assessed property	73.3	26.7	73.2	26.8
Real	74.3	25.7	74.2	25.8
Personal	67.0	33.0	66.6	33.4

cities—those that had a population of 50,000 (estimated) or more in 1973.

The proportions of the local general property tax base that are represented by State-assessed property, locally assessed personal property, and locally assessed realty range widely from one State to another. This variation results from differences in both the scope of general property taxation and the assignment of assessing responsibilities. The degree of variation is actually understated somewhat as a result of treating State assessed real property (types which elsewhere are commonly locally assessed) in Hawaii, Maryland, and Montana as "locally assessed" to assure comparability.

The greatest portion of privately owned real property in the United States is legally subject to local general property taxes. Intangible personal property, at the other extreme, is legally exempt in most States from general property taxes although in many instances subject to certain special property taxes. In most States, at least some kinds of tangible personal property are within the scope of the general property tax (commonly, commercial and industrial equipment and inventories, agricultural implements, and livestock), but legal provisions frequently grant partial or complete exemption of some personal property from the general property tax.

Locally assessed real property

For the Nation as a whole, locally assessed real property accounts for most of the base for general property taxation.

Tables 4 through 7 report the estimated distribution of locally assessed real property by use class in each State. Nationwide totals from these tables are summarized in the following table.

These assessed values relate to gross valuations before deduction of partial exemptions that apply in some States, as discussed above. No attempt has been made to estimate the applicability of such exemptions by use class of property.

Tables 4 through 7 show assessed valuations, number of taxable real properties, and percent distributions separately for the portion of each State located inside SMSA's, and State and National totals. The 261 SMSA's included in these tables contain slightly more than two-thirds of the population of the United States (based on 1973 estimated population). In 1976, as indicated by tables 4 and 6, these areas accounted for 73.3 percent of the aggregate dollar amount of local assessments of taxable property and 10.0 of the total number of realty parcels on the local tax rolls. Exclusive of acreage and farm properties, the SMSA portion represents about 12.1 percent of all assessed values and 11.2 percent of taxable parcels.

Type of real property	Gross assessed value		Properties	
	Amount (billion dollars)	Percent	Number (1,000)	Percent
Total	982.9	100.0	86,787.4	100.0
Residential (nonfarm)	584.6	59.5	51,080.2	58.8
Single-family houses only	486.7	49.5	47,965.0	55.3
Acreage and farms	119.6	12.2	13,794.1	15.9
Vacant lots	37.7	3.8	17,380.6	20.0
Commercial and industrial	233.8	23.8	3,587.9	4.1
Commercial	163.1	16.6	3,121.5	3.6
Industrial	70.7	7.2	466.4	0.5
Other and unallocable	7.1	0.7	1,011.5	1.2

Note: Because of rounding, detail may not add to totals.

The following figures in table C summarize gross assessed values for SMSA's and their relation to nationwide aggregates for various property classes.

Except for the aggregate value of locally assessed real property (obtained from official State agencies and services, as described below), the figures summarized above and shown in tables 4 through 7 are estimates. They are based on information obtained by Census enumerators for a sample of about 1.2 million real properties selected from the assessment records of 1,935 sample assessing jurisdictions. A description of that operation is included below under "Data Sources and Survey Procedures." Data from the sample were expanded, in accordance with the sampling rates used, to arrive at the reported estimates of the number of parcels of taxable realty. Estimates of assessed value for various property use classes were similarly derived and used as a basis for distributing the valuation officially reported for taxable realty as a whole.

The use classes are:

Residential (nonfarm) single-family—All types of single-family houses not on farms, including detached houses; single-family parts of semidetached and row or town houses if separately assessed, rural and suburban estates and residences not primarily used for farming, and single-family units of a condominium.

Table C. Gross Assessed Values and Numbers of Properties for SMSA's, by Use: 1976

Type of real property	Gross assessed value		Properties	
	SMSA amount (billion dollars)	Percent of U.S. total	SMSA total (thousands)	Percent of U.S. total
Total	729.8	100.0	51,046.9	100.0
Acreage and farms	38.6	5.3	3,451.2	6.8
Other than acreage and farms	691.2	94.7	47,595.7	93.2
Residential (nonfarm)	469.3	64.3	35,884.7	70.3
Single-family houses only	378.6	51.9	33,170.9	65.0
Vacant lots	26.7	3.7	4,238.1	18.1
Commercial and industrial	191.8	26.3	2,312.8	4.5
Commercial	135.7	18.6	1,970.3	3.9
Industrial	56.0	7.7	342.5	0.7
Other and unallocable	3.5	0.5	225.0	0.4

Note: Because of rounding, detail may not add to totals.

Residential (nonfarm) multifamily—All nonfarm residences containing two or more living units, including duplexes and apartment houses. The latter group includes apartment houses with street level stores and offices. This category does not include motels or hotels.

Acreage—Farms and farm acreage, as well as forest and timber land, recreational acreage, idle land, and waste land. Major criteria for application of this category to a given parcel are rural location and description in terms of acreage.

Vacant platted lots—Parcels described in terms other than acreage, usually by means of lot and block numbers plus subdivision names. They are located within municipalities or in adjacent or otherwise proximate territory.

Commercial property—Stores, stores with living quarters, office buildings, hotels and motels, gasoline service stations, commercial garages, parking lots, warehouses, theater buildings, banks, clinics and nursing homes, and generally any nonindustrial realty of commercial enterprises.

Industrial property—Factories, bakeries, dairy plants, other food processing plants, mills, mines, quarries, all locally assessed utility property, and generally any property used in manufacturing activity.

Other and unallocable—Any property not classified within any of the preceding groups. Examples are mineral rights, timber rights, and oil rights which are locally assessed separately as real property.

The numbers of properties shown in table 6 relate to pieces of real estate separately assessed and will not conform to statistics that involve a different basis of measurement. For example, the estimated number of separate pieces of real estate classed as commercial and industrial cannot be directly related to numbers of commercial and industrial "establishments." Numerous separate stores or small manufacturing establishments may operate in a single structure that is only one parcel on the real property assessment roll; conversely, a single large manufacturing establishment may have numerous separately assessed pieces of realty. A similar distinction may be noted between the numbers estimated here for separate nonfarm residential assessments and "housing units" counted in statistics on housing. The count of assessments classed as pertaining to acreage and farm property will also differ from numbers of "farms" because of the definitions that apply.

In some States, the count of distinctly assessed pieces of acreage and farm property is magnified by statutory limits on the size of the plot that may be separately recorded on the tax rolls. Even apart from such legal provisions, a number of separate assessments will often appear for rural land parcels that are subject to a single ownership and are jointly farmed. Such split recording for tax purposes of what is a single parcel in ownership and use tends to be less common in most southern States than elsewhere for two reasons: (1) There are relatively fewer separate local governments in the South, and therefore fewer distinct tax-rate areas; and (2) it is fairly common in the South for realty tax assessments to be based on declarations filed by property owners rather than—as in most parts of the country—on an independent listing of individual parcels of realty by the local assessors. These factors help to account for the relatively small numbers of properties reported here as "acreage and farms" in various southern States. However, such interstate differences in assessing practice should not materially affect the findings on assessed value for this or the other major use categories of taxable property.

In Texas, the normal classification of taxable property as real or personal is not readily apparent on the local tax rolls or in the State reports of aggregate assessed value by counties. Such classification is not deemed necessary because of the constitutional requirement of "equal and uniform" taxation of all types of property. Consequently, in this survey, the following Texas classifications were treated as real property: Land assessed in acres (generally including mineral rights), town lots, railroads assessed in miles, telephone and telegraph lines, and pipe lines. All other tangible property was categorized as locally assessed personalty, while the intangible personal property values have been included in the State assessed totals.

In South Carolina and Wisconsin, the responsibility of assessing property of manufacturing establishments lies with the State Tax Commission and the State Department of Revenue, respectively. However, to assure comparability with all other States where assessment of "manufacturing" property is performed at the local level, the value of such property in these two States has been included in all the tables as real property locally assessed.

Locally assessed personal property

Table 2 shows the composition of locally assessed personal property values in the degree of detail made possible by the availability of data for the States and the District of Columbia. Categories of tangible personalty presented are commercial and industrial, agricultural, motor vehicle, and other. It should be noted that value amounts for several States comprise all categories, with no allocation by types. Intangibles are reported by total only, without category detail.

Tangible personal property

Tangible personal property, privately owned and used for private consumption or for business pursuits, is completely exempt from local general property taxation in Delaware, Hawaii, New York, and Pennsylvania. In the other States, the taxability of various types of tangible personal property varies widely. Accordingly, in some States, household personalty, agricultural implements, livestock, motor vehicles, inventories, or combinations thereof, may be exempt from local general property taxation.

Table D contains a description by State of the legal status of four major classes of tangible personal property with respect to local general property taxation. Personalty in the commercial and industrial class is legally taxable in 47 States—more than for any of the other three classes. The table can be misleading, however, since the base for each of the specified classes of personalty is substantially constricted by exemption provisions in several of the States. Agricultural personalty, for example, is totally exempt in only 9 States, but statutes provide for exemption of selected categories, now or at specified future dates, in 20 of the 42 taxing States.

Table D. **Legal Status of Major Types of Tangible Personal Property With Respect to Local General Property Taxation, by States: 1976**

Wyoming	T	T	[1]T	E

Note: T locally taxable. E exemption. L local option; except in Virginia, option to exempt affected items is exercised in most jurisdictions.
[1] Subject to legal provisions for partial exemptions.

In Virginia, the taxable status of household personal property is an option of the local governments. This is also true, for specified or all types of personal property, in Alaska, Maryland, and Minnesota, but in those three States, the local option is usually in favor of not taxing the property affected.

Twenty-one States subject motor vehicles to local general property taxation. This count includes Alaska, where motor vehicles are taxed or not according to local option. Also included is Illinois, where since 1969 one personal car per family is exempt. Not included in the 21 is Louisiana, where municipalities but not parishes have the option to levy a property tax applicable to motor vehicles.

Intangible personal property

Intangible personal property includes, among other things, corporate stocks and securities, bonds, money (in cash or in bank deposits), mortgages, and franchises. Discovery, listing, and valuation of taxable intangibles still present an administrative challenge unlikely to dissipate without a shift in basis from ad valorem to income. Some States provide for local general property taxation of all or some types of intangibles, usually the latter.

The following States either specifically exempt intangible personalty or omit reference to such property in coverage of property subject to tax:

Alaska
Arizona
Arkansas
California
Colorado

Connecticut
Delaware
District of Columbia
Florida
Hawaii
Indiana
Iowa
Kansas
Kentucky
Maine
Maryland
Massachusetts
Michigan
Minnesota
Missouri
Nebraska
New Hampshire
New Jersey
New York
North Carolina
Ohio
Oklahoma
Oregon
Pennsylvania
Rhode Island
South Carolina
South Dakota
Utah
Vermont
Virginia
Washington
Wisconsin

In addition, a number of States subject specified types of intangibles to special property taxes.[2]

Railroads and other public utilities

In most States, the law subjects property of railroads and other public utilities to taxation on the same ad valorem basis as that applicable to other taxable property.

[2] For details as of December 1974, see **Property Values Subject to Local General Property Taxation in the United States: 1973**, U.S. Bureau of the Census, December 1974, pp. 18-19.

As a natural consequence of its complex nature and expansive, multiarea location, most railroad and utility property is an assessment responsibility of a State agency rather than of a local assessing jurisdiction. Furthermore, utility property is frequently appraised as an integrated whole without reference to the value of component parts; a proportion of the value is allocated to the assessing State or other assessing jurisdiction and, after equalization, apportioned to local taxing units. Methods of unit appraisal vary widely.

Some States exempt railroads and other public utilities from general property taxes, subjecting them instead to special property taxes or to some other form of taxation.

Property tax base exemptions

Considerable aggregates of property value are not included in the totals ultimately available for local general property taxation. Such values are basically of two types: Values of property deemed to be outside the scope of general property taxation and values representing deductions from gross assessed values prior to the application of local tax rates in accordance with applicable laws. In many cases, the effect of these deductions from gross assessed values of individual pieces of property is total removal from the tax base.

Property value excluded from the tax base—Property totally exempt from local general property taxation consists of the following types:

1. Property held by Federal, State, or local governments.
2. Property held by nonprofit and otherwise qualifying groups or institutions and used for purposes deemed publicly beneficial: Religious properties, nonprofit hospitals, educational institutions, and the like.
3. Particular classes of property specifically exempted from general taxation, often because of alternative treatment via special property taxes or other types of taxes. Property of certain public utilities, as discussed earlier, is a notable example.
4. New industrial plants exempted by specific statutes for stated periods of time as an inducement to new industry.
5. Property constructed explicitly for publicly encouraged activities such as pollution control and abatement.

The amount of value represented by all excluded property nationwide is unknown, either on the market level or any individual or composite assessed value level. Many assessors and others believe efforts to assign assessed value equivalents to excluded property cannot be justified. Not only do such values produce no revenue, goes the rationale, but also they resist discovery. Property of the institutional and special purpose types, which predominate in the excluded total, sell very rarely and possess distinctive characteristics incompatible with expeditious market value appraisal, especially the "mass" type of appraisal which assessors regard as essential to their work. This does not mean, however, that assessing officials are unaware of revenue complications arising from a high proportion of excluded or totally exempt value in local value totals.

Some States do require that nonprofit corporations submit for other purposes reports disclosing the amounts of property holdings. Also, increasingly, assessors are providing a listing of all totally exempt property, even though no value may be shown. In any event, estimated amounts represented by excluded property have come to public attention in recent years as proportions of entire jurisdictional property value bases and as formidable aggregates in themselves.

Table E shows excluded value aggregates for each of the 18 States that were able to provide such data for 1976. Extreme care should condition any use of totals for specific type and for all types. Moreover, all values reported reflect the same variations among assessment levels that apply to assessed values throughout the country.

Property value removed from the tax base—In general, property value removed from the tax base refers to portions of otherwise taxable value, usually for real property, which are exempt from taxation. Principal examples of exemptions of this type are those applicable to homesteads, veterans, and senior citizens. Some commercial and agricultural purposes may also be affected (i.e., business inventory in California, pollution control equipment

Table E. **Value Reported for Excluded (Totally Exempt) Property, by Type of Exemption, for Selected States: 1976**

in New Jersey, and agricultural products in Oregon).

The "tax base" in this context means gross assessed value. From this value a dollar amount, specified by law, is removed before any remaining amount can be subjected to tax.

Amounts of partial exemptions benefiting individuals reflect attempts to alleviate particular tax burdens or express public esteem (e.g., for veterans). In some instances, depending on the prevailing level of assessment, the effect of the "partial" exemption may be to remove the entire assessed value of a parcel from taxation. Thus, if a homestead that would sell for $25,000 is assessed for $5,000 in a jurisdiction where a $5,000 homestead exemption applies, the exemption in effect removes the entire property from the tax base. Also the full $5,000 of exemption may apply to any qualifying homestead regardless of its value.

Table F shows a summary of reported assessed value amounts relieved of liability for local property taxes by various types of partial exemptions.

In a few States, the amounts of property value removed from the tax base represent important components of total gross assessed values. California and Florida alone accounted for more than half of the $38.7 billion in partial exemptions in 1976—each with about 10 percent of their gross value subject to removal from the tax base. Partial exemptions comprise 10 percent or more of the gross valuation for Hawaii, Louisiana, Mississippi, Nebraska, and Oklahoma.

Of the $38.7 billion in partial exemptions reported in 1976, $23.8 billion or 61.5 percent is represented by homestead exemptions in 12 States. Veteran's exemptions reported amount to $1.4 billion, or 3.6 percent of total partial exemptions. Other types of partial exemptions comprise the remainder and represent a wide variety of exempted properties; some of the more notable of these apply to property of senior citizens and disabled citizens and property in a specified industrial use.

The effects of partial exemptions on the tax base have led in many States to forms of State-financed property tax relief more directly related to measurable differences in ability to pay the tax. One of the more common forms of property tax relief is the "circuit breaker," by means of which specified low income homeowners can receive cash rebates or income tax credits if their property tax liability exceeds a specified percentage of their total income.

Table F. **Assessed Value Removed From Tax Base For Selected States: 1976**

Survey Procedures and Limitations

Data sources and survey procedures

The assessed value amounts shown in tables 1, 2, and 3 were obtained from the agencies primarily concerned with property tax administration in the respective States—in a few instances by Census compilation from published reports, but mainly from the replies of State agencies to a mail questionnaire. These sources also supplied the statistics which appear in the foregoing text discussion of tax exemptions and of various components of taxable property. Analysis of State laws and court decisions, directly and by reference to other studies and reports, provided the basis for most of this discussion about property tax arrangements of particular States.

The valuation dates applicable to the aggregate assessed values in this report appear by State in table G.

The data in tables 4 through 7, concerning the number of locally assessed real properties and the distribution of such properties and their assessed value by type, are based on a large-scale sample survey which involved the assembly of information from assessment records in some 1,935 assessing jurisdictions.

The sample plan for this survey included two stages, the first consisting of assessing jurisdictions and the second of individual assessed values selected from local assessment rolls.

Table G. **Valuation Dates Applicable to Assessed Value in This Report**

State	Valuation date	State	Valuation date
Alabama	October 1, 1976	Missouri	January 1, 1976
Alaska	January 1, 1976	Montana	January 1, 1976
Arizona[1]	January 1, 1976	Nebraska	January 1, 1976
Arkansas	January 1, 1976	Nevada	January 1, 1976
California	March 1, 1976	New Hampshire	April 1, 1976

Massachusetts	January 1, 1976	Washington	January 1, 1976
Michigan	December 31, 1975	West Virginia	July 1, 1976
Minnesota	January 1, 1976	Wisconsin	May 1, 1975
Mississippi	January 1, 1976	Wyoming	February 1, 1976

[1] Data are preliminary for 1976. [2] Except for jurisdictions using fiscal year.

The jurisdictional or first stage sample consists of counties in 42 States and of collections of municipalities or townships in New England (Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont) and in Michigan and Wisconsin. (Such municipalities or townships are in Census terms minor civil divisions.)

Two basic components comprise the jurisdiction sample: **Certainty** jurisdictions (as described below), and **noncertainty** jurisdictions chosen randomly from the universe of residual jurisdictions stratified by aggregate assessed value.

Certainty jurisdictions include the following (populations as of July 1, 1973):

1. Each with a population of 100,000 or more.
2. Each in those standard metropolitan statistical areas (SMSA's) with a population of 250,000 or more in the 42 county-jurisdiction States.
3. Each in SMSA's (regardless of size) in those county-jurisdiction States with only one or two SMSA's.
4. Each required for the selection process to yield:
   a. A total for each SMSA in Michigan and Wisconsin with a population of 250,000 or more.
   b. A total for each State Economic Area (SEA) with a population of 250,000 or more in any of the six New England States.
   c. A total for each SEA (regardless of size) in any New England State with one or two SEA's.
   d. Statewide SMSA or SEA totals.
   e. State totals.

The second stage of the sample design consisted of the selection of individual parcels of real property listed on local tax rolls. Here, stratification was applied on the basis of the assessed value of individual parcels. Within each primary sample unit (county, township, or municipality), all taxable real properties which exceeded a predetermined assessed value were chosen as well as samples of lesser valued properties, as described below.

Census enumerators visited each of the selected local areas and examined the records on which locally assessed real properties were listed (except in 94 areas where computerized output was used to select the sample; see below). They obtained information about the assessed value and the use class of a selected group of such properties. This selection was in two parts. The enumerator first recorded information on all properties assessed at more than a certain amount. On a second run through the whole assessment roll, he examined items at a prescribed interval (e.g., every 12th, every 6th, etc.) and selected for recording those which met certain value requirements. For example, for this operation the enumerator might have been instructed to (1) begin with the third item listed and record it, regardless of its valuation; (2) count to the fourth succeeding item and record it if the value shown is $3,000 or more; (3) record the fourth next item if it is valued at $700 or more, then successive fourth items if valued respectively at $3,000, $1,500, and $3,000; (4) continue this procedure, using the prescribed listing sheets, through the entire assessment roll. This resulted in the selection, for each area, of a random sample containing differing but predetermined expected proportions of all properties on the assessment roll falling within particular value ranges.

In some instances, the enumerator was able to obtain both value and kind-of-property information from the assessment roll itself. In other instances, it was necessary for him to refer to other records in the tax office or to seek the advice of the local assessor in order to determine the use classification of the sample properties he had selected and listed.

For each area, there was an advance determination of the assessed-value amount above which all properties were to be listed (the "certainty level"), and the desired fractions of lesser valued items to be selected. These standards were set in the light of estimates of the number of taxable properties in the area,

their average assessed value, and the relative importance of the area as a component in the statewide total of locally assessed real property values. For many large counties, the certainty level was $250,000; however, for large numbers of areas covered, this level was $15,000 or less.

The field-enumerated information was checked for evidence of completeness and accuracy. This included a comparison of the "take" for each area on both samples with that similarly obtained for the 1967 Census of Governments.

Using electronic data processing, the data for each State were then expanded into estimates of the number of assessments and dollar amounts of assessed value by property class. The resulting estimates of the total assessed value of real property for each State were then compared with related figures available from official State sources. In instances where this review evidenced some apparent incompleteness or error in the figures based on the field enumeration, the underlying estimates for individual sample areas were also analyzed, and corrective action was taken.

Finally, the percentage distributions of assessed value estimated from the sample survey were applied to the value aggregates for locally assessed real property reported by State agencies to develop the data on composition of real estate assessments which appear in tables 4 through 7.

In place of the standard method of manual enumeration, the cooperation of many State and local assessing and data processing officials made possible the utilization of computer-assisted data collection methods in numerous areas. Some degree of sample selection using these more efficient and economical methods occurred in 94 jurisdictions. These jurisdictions either supplied a machine readable file (e.g., magnetic tape) of the sample properties on the basis of specifications prepared by the Bureau or supplied a complete file of all assessed valuations from which the sample properties were selected in order to derive use class and assessed valuation size data.

Reliability and limitations of data

Any use of the statistics contained in this report is subject to limitations and qualifications specified elsewhere in this introductory text, in footnotes to the tables, and in the material which follows.

Assessed value of major property classes

As mentioned earlier, the data shown in tables 1, 2, and 3 emanate from State agencies. Questions concerning any of the data were resolved by consultation with responsible State and local officials as part of careful checking procedures. These data represent counts of all taxable properties within the jurisdictions shown and are consequently free of possible errors resulting from sampling procedures.

Any comparison of assessed value for one State with those for one or more of the other States, however, is subject to the diversity characterizing property assessment and taxation. This diversity affects taxability of particular kinds of property, prescribed and prevailing levels of assessment, placement of initial and other assessing responsibility, and total or partial exemption from property taxation.

As a consequence, the nationwide totals of assessed value represent the summation of broadly differing elements. The total for locally assessed personalty, for example, consists of value amounts that differ widely in scope from one State to another. On the other hand, residential realty has a much more uniform meaning among the various States. Its quantification as assessed value, however, is subject to the pervasive variations reflected in local assessment levels. Even uniform meaning is subject to whatever influence variation in category definition (e.g., mobile homes, sometimes realty, sometimes personalty) may have on jurisdiction totals.

Classification by use category

Statistics for particular use categories of locally assessed real property shown in tables 4 through 7 are estimates subject both to sampling error and to possible errors of classification originating with initial enumeration of the data.

These data, based on a sample, differ from results obtainable from enumeration covering all locally assessed realty. It is possible to identify mathematically the amount of probable sampling variance. An analysis of variance for the jurisdictions covered shows that the aggregate value estimated for a major use category such as residential property is subject to minimal sampling variation. Data on the relative error of various estimates will be included in Volume 2 of the 1977 Census of Governments.

Estimated aggregates for use categories constituting lesser proportions of jurisdiction totals are likely to involve greater sampling variation.

Classification errors associated with initial enumeration are separate matters requiring separate attention. Official local records vary widely in the nature and extent of individual property description, even though many locally rooted efforts to standardize parcel identification, involving an assortment of disciplines, can be noted in recent years. Census enumeration work proceeded within a framework of detailed instructions for each enumerated area, however, and rigid checking procedures controlled subsequent use of enumerated data. These latter included particular attention to properties having substantial amounts of assessed value. Thus, it is reasonable to conclude that any description error falls within a limited range.

It should be noted also that individual States differ in how the assessment and tax records of their local jurisdictions display a group of separate assessments that may constitute a single property from the standpoint of ownership and use. This factor limits the interstate comparability of the data on numbers of real properties which appear in table 6.

Historical comparisons

Caution should be used in any comparison of 1976 figures shown here for individual States or local areas with corresponding data reported in any previous

Census of Governments publications. Although methods and coverage were generally similar, differences between the findings may arise from numerous factors including changes in law, tax administration, and economic developments.

In each of these censuses, detail shown for particular use classes of taxable real property represent sample-based estimates. Any measure of change or trend based on these estimates will be subject to a sampling variability greater than the variability of either of the figures involved.

In Alaska, property taxation is limited to 11 organized boroughs (including the North Slope borough, incorporated July 1, 1972) and 20 first-class city districts. It is the assessed value of such areas which comprise the data for Alaska in this report. Accordingly, territory approximating 400,000 square miles, known as the unorganized area, is not represented.

Table 1. Assessed Value of Property Subject to Local General Property Taxation, Inside and Outside SMSA's, by States: 1976

(Amounts in millions of dollars. The value of wholly exempt property is omitted from this table)

Note: Because of rounding, detail may not add to totals.

*For Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island, "SEA's" as used in this report refer to State economic areas designated as metropolitan State economic areas in the 1970 Census of Population.

-Represents zero or rounds to zero.

Z Less than 0.05 percent.

[1]Year of valuation other than 1976; see text table G.

[2]Data for Alaska, New Hampshire, and Oregon exclude $1.88 million, $6.20 million, and $3.50 million, respectively, in State-assessed values, not allocable by county, of property in unincorporated areas.

[3]Arizona data are preliminary for 1976.

[4]Florida assessed values include 1975 data for Holmes County.

[5]Total values of real property include "highest and best use" assessments rather than "classified use" assessments for eligible properties for Baker, Clay, Collier, Glades, Jackson, Manatee, Nassau, Orange, Pasco, Putnam, St. Johns, and St. Lucie Counties.

[6]Georgia values include 1974 data for Douglas and Towns Counties.

[7]All assessment in Hawaii, Maryland, and Montana is performed by a State agency, but assessed values are shown here as "locally assessed" for comparability with data for other States; see text.

[8]Illinois values of locally assessed property are based on preliminary abstracts, except for Lake County which are 1975 final values.

[9]Minnesota totals include "tentative" data for Cook, Crow Wing, Freeborn, Isanti, Redwood, Sherburne, Stearns, and Steele Counties.

[10]New Mexico gross locally assessed values include the values of fully exempt property.

[11]North Carolina values reported as gross are actually net of the $300 personal property exemptions and the $5,000 senior citizen exemptions, except for Bertie and Person Counties.

[12]"Manufacturing" property in South Carolina is assessed by a State agency. However, to assure comparability with data for other States, the values for such property are shown here as "locally assessed," except for Aiken, Darlington, Marlboro, and Oconee Counties.

[13]South Carolina totals include an estimated value of locally assessed real property for Chester County.

[14]Virginia totals of locally assessed realty include "one hundred percent" values for Arlington County.

Table 2. **Assessed Value of Property Subject to Local General**

(Amounts in millions of dollars. The value of wholly

Line number	Area	Gross assessed value (before partial exemptions)									
		Total	State-assessed property	Locally assessed property							
				All	Real	Personal					
						Total	Tangible personal property					Intangible personal property
							All classes	Commercial and industrial	Agricultural	Motor vehicles	Other

Note: Because of rounding, detail may not add to totals.

- Represents zero or rounds to zero. NA Not available.

[1]In some instances, these data are not shown, because there were no tax-exempt portions or because the aggregates were not identified in reported data. [2]Amounts shown are for those types of railroad or public utility property, respectively, which are subject to State assessment; thus they do not necessarily represent assessed value of all railroad or public utility property. [3]Year of valuation other than 1976; see text table G. [4]Indicated distribution among types of personal property based on available reported data. Therefore, total personal property assessed values do not always equal the sum of the various types of personal property. [5]Exempt portion of personal property assessed value, if any, included with exempt portion of real property assessed value, for the following States: Alabama, Maine, Nevada, New Jersey, New Mexico, North Dakota, and Wyoming. [6]Data for Alaska, New Hampshire, and Oregon exclude $1.88 million, $6.20 million, and $3.50 million, respectively, in State-assessed values, not allocable by county, of property in unincorporated areas. [7]Arizona data are preliminary for 1976. [8]Includes partial exemptions applied to State-assessed property. [9]Total values of real property include "highest and best use" assessments rather than "classified use" assessments for eligible properties for Baker, Clay, Collier, Glades, Jackson, Manatee, Nassau, Orange, Pasco, Putnam, St. Johns, and St. Lucie Counties. Total values of all property include 1975 data for Holmes County. [10]Georgia values include 1974 data for Douglas and Towns Counties. [11]All assessment in Hawaii, Maryland, and Montana is performed by a State agency, but assessed values are shown here as "locally assessed" for comparability with data for other States; see text. [12]Illinois values of locally assessed property are based on preliminary abstracts, except for Lake County which are 1975 final values. [13]Minnesota totals include "tentative" data for Cook, Crow Wing, Freeborn, Isanti, Redwood, Sherburne, Stearns, and Steele Counties. [14]New Mexico gross locally assessed values include the values of fully exempt property. [15]North Carolina values reported as gross are actually net of the $300 personal property exemptions and the $5,000 senior citizen exemptions, except for Bertie and Person Counties. [16]"Manufacturing" property in South Carolina is assessed by a State agency. However, to assure comparability with data for other States, the values for such property are shown here as "locally assessed," except for Aiken, Darlington, Marlboro, and Oconee Counties. South Carolina totals also include an estimated value of locally assessed real property for Chester County. [17]Virginia totals of locally assessed realty include "one hundred percent" values for Arlington County.

Note: Because of rounding, detail may not add to totals.

*Denotes multi-State SMSA, separately identified following State by State display.
**For Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island, "SEA's" as used in this report refer to State economic areas.
- Represents zero or rounds to zero.
NA Not available.
Z Less than 0.05 percent.
[1]In some instances, these data are not shown, because there were no tax-exempt portions, or because the aggregates involved were not identified in reported data.
[2]Year of valuation other than 1976; see text table G.
[3]Exempt portion of personal property assessed value, if any, included with exempt portion of real property assessed value, for the following States: Alabama, Maine, Nevada, New Jersey, New Mexico, North Dakota, and Wyoming.
[4]Total State assessed value does not include $1,876,189 of property value in unorganized territory.
[5]County, borough, or parish governments are consolidated with city governments in the following instances: Juneau and Sitka, Alaska; San Francisco, California; Denver, Colorado; Duval County (Jacksonville), Florida; Honolulu, Hawaii; Lexington-Fayette Metropolitan County, Kentucky; East Baton Rouge Parish (Baton Rouge), Louisiana; Philadelphia, Pennsylvania; and Davidson County (Nashville), Tennessee.
[6]Data are preliminary for 1976.
[7]Florida assessed values include 1975 data for Holmes County.
[8]Total values of real property for the following counties include "highest and best use" assessments rather than "classified use" assessments for properties so eligible: Baker, Clay, Collier, Glades, Jackson, Manatee, Nassau, Orange, Pasco, Putnam, St. Johns, and St. Lucie.
[9]Georgia assessed values include 1974 data for Douglas and Towns counties--current data not available due to litigation.
[10]All assessment in Hawaii, Maryland, and Montana is performed by a State agency, but assessed values are shown here as "locally assessed" for comparability with data for other States; see text.
[11]Aggregate values of locally assessed property are based on preliminary abstracts except for Lake County which are 1975 final values.
[12]Throughout Illinois, Minnesota, Montana, and North Dakota, two sets of values are locally recorded for taxable property. In this report, for comparability with data for other States, the assessed values for these States pertain to the final values against which tax rates are applied, rather than to the preliminary "full and true" or (in Illinois) local unadjusted values. See text discussion of assessed values.
[13]Assessed values presented for Michigan are the State equalized values; these are the legal values against which tax rates are applied in Michigan.
[14]Minnesota aggregates include "tentative" data for Cook, Crow Wing, Freeborn, Isanti, Redwood, Sherburne, Stearns, and Steele Counties.
[15]For Mississippi, tax-exempt portions of locally assessed values are preliminary for 1976.
[16]Assessed value totals for the cities of Las Vegas and Reno represent State provided estimates.
[17]Values for New Hampshire exclude $6.20 million in State-assessed values, not allocable by county, of property in unincorporated places.
[18]New Mexico gross locally assessed values, and tax-exempt portions thereof, include the value of fully exempt property; breakdown between partial and full exemptions not available.
[19]North Carolina values reported as gross are actually net of the $300 personal property exemptions and the $5,000 Senior Citizen exemptions except for Bertie and Person Counties.
[20]Oregon totals of State-assessed property exclude $3.50 million of value unallocable by county.
[21]"Manufacturing" property in South Carolina is assessed by State agency. However, to assure comparability with data for other States, the values for such property are shown here as "locally assessed realty" except for Aiken, Darlington, Marlboro, and Oconee Counties.
[22]South Carolina totals include an estimated value of locally assessed real property for Chester County.
[23]Virginia totals of locally assessed realty include "one hundred percent" values for Arlington County.

Table 4. Gross Assessed Value of Locally Assessed Taxable Real Property, by Type, by State: 1976

(Millions of dollars)

Note: Because of rounding, detail may not add to totals.

*For Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island, "SEA's" as used in this report refer to State economic areas designated as metropolitan State economic areas in the 1970 Census of Population.

- Represents zero or rounds to zero.

[1]These data are estimates subject to sampling variations. One consequence is that the totals shown for the use categories of "Residential (nonfarm)" and "Commercial and industrial," will not necessarily equal the sums, respectively, of estimates for "Single-family" and "Multifamily" residential and "Commercial" and "Industrial." Similarly, the residual difference between statewide and SMSA portion amounts for a particular class of property will not necessarily equal the amount of such property for the non-SMSA portion of the State.

[2]Year of valuation other than 1976; see text table G.

[3]Though enumeration will, wherever possible, be completed in every sample jurisdiction before publication of the final report of this survey, the estimates presented in this preliminary report were developed without any sample data for those listed below (by State) and designated by the letter "a" (a), nor do they include sample data for any of the others listed with respect only to the property indicated:

Alabama.....Walker County (corporate)
California.....Orange County[a]
Colorado.....Gilpin and Mesa Counties (commercial and industrial)
Moffat County (oil and gas)
Indiana.....Lake County[a]
Maryland.....Portions[a] of Allegany County
Massachusetts.....Cambridge and Somerville cities (substantial amounts of residential)
Missouri.....Cole County (industrial)
New Hampshire.....Town of Gorham ($6.5 million of locally assessed public utility)
New Jersey.....Portions[a] of Essex, Hudson, Morris, and Union Counties
New York.....Portions[a] of Oneida County
Pennsylvania.....Portions[a] of Northampton County
Texas.....Ector, Fort Bend, Hardeman, Jones, Madison, Pecos, Winkler, and Zapata Counties (mineral)
Vermont.....Town of Milton (approximately $2.6 million of industrial)
Wisconsin.....Portions[a] of cities of Kiel and River Falls

[4]Arizona data are preliminary for 1976.

[5]Total values of real property include "highest and best use" assessments rather than "classified use" assessments for eligible properties in Baker, Clay, Collier, Glades, Jackson, Manatee, Nassau, Orange, Pasco, Putnam, St. Johns, and St. Lucie Counties. Florida assessed values include 1975 data for Holmes County.

[6]Georgia values include 1974 data for Douglas and Towns Counties.

[7]All assessment in Hawaii, Maryland, and Montana is performed by a State agency, but assessed values are shown here as "locally assessed" for comparability with data for other States; see text.

[8]Illinois values of locally assessed property are based on preliminary abstracts, except for Lake County, where they are 1975 final values.

[9]Minnesota totals include "tentative" data for Cook, Crow Wing, Freeborn, Isanti, Redwood, Sherburne, Stearns, and Steele Counties.

[10]New Mexico gross locally assessed values include the values of fully exempt property.

[11]North Carolina values reported as gross are actually net of the $300 personal property exemptions and the $5,000 senior citizen exemptions, except for Bertie and Person Counties.

[12]"Manufacturing" property in South Carolina is assessed by a State agency. However, to assure comparability with data for other States, the values for such property are shown here as "locally assessed," except for Aiken, Darlington, Marlboro, and Oconee Counties. Such property was not sampled in Spartansburg County.

[13]South Carolina totals include as estimated value of locally assessed real property for Chester County.

[14]For Tennessee the estimate shown for multifamily residential is exclusive of any such property that may, because of differences in State and Bureau coding, be included in estimates for single-family houses or commercial property.

[15]Virginia aggregate distributions are based on sampling estimates which include special use assessments rather than standard "highest and best use" assessments in Albemarle County.

Note: These data are estimates subject to sampling variations. Because of rounding, detail may not add to totals.

*For Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island, "SEA's" as used in this report refer to State economic areas designated as metropolitan State economic areas in the 1970 Census of Population.

- Represents zero or rounds to zero.

[1]Though enumeration will, wherever possible, be completed in every sample jurisdiction before publication of the final report of this survey, the estimates presented in this preliminary report were developed without any sample data for those listed below (by State) and designated by the letter "a" (a), nor do they include sample data for any of the others listed with respect only to the property indicated:

Alabama.....Walker County (corporate)
California.....Orange County[a]
Colorado.....Gilpin and Mesa Counties (commercial and industrial)
Moffat County (oil and gas)
Indiana.....Lake County[a]
Maryland.....Portions[a] of Allegany County
Massachusetts.....Cambridge and Somerville cities (substantial amounts of residential)
Missouri.....Cole County (industrial)
New Hampshire.....Town of Gorham ($6.5 million of locally assessed public utility)
New Jersey.....Portions[a] of Essex, Hudson, Morris, and Union Counties
New York.....Portions[a] of Oneida County
Pennsylvania.....Portions[a] of Northampton County
Texas.....Ector, Fort Bend, Hardeman, Jones, Madison, Pecos, Winkler, and Zapata Counties (mineral)
Vermont.....Town of Milton (approximately $2.6 million of industrial)
Wisconsin.....Portions[a] of cities of Kiel and River Falls

[2]Total values of real property include "highest and best use" assessments rather than "classified use" assessments for eligible properties in Baker, Clay, Collier, Glades, Jackson, Manatee, Nassau, Orange, Pasco, Putnam, St. Johns, and St. Lucie Counties. Florida assessed values include 1975 data for Holmes County.

[3]South Carolina distributions are based on sampling estimates which do not include State-assessed manufacturing property in Aiken, Darlington, Marlboro, Oconee, and Spartansburg Counties.

[4]For Tennessee the estimate shown for multifamily residential is exclusive of any property that may, because of differences in State and Bureau coding, be included in estimates for single-family houses or commercial property.

[5]Virginia distributions are based on sampling estimates which include special use assessments rather than the standard "highest and best use" assessments in Albemarle County.

Note: These data are estimates subject to sampling variations. Consequently, the residual difference between statewide and SMSA portion amounts for a particular class of property will not necessarily equal the amount of such property for the non-SMSA portion of the State.

*For Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island, "SEA's" as used in this report refer to State economic areas designated as metropolitan State economic areas in the 1970 Census of Population.

- Represents zero or rounds to zero.

[1]Though enumeration will, wherever possible, be completed in every sample jurisdiction before publication of the final report of this survey, the estimates presented in this preliminary report were developed without any sample data for those listed below (by State) and designated by the letter "a" (a), nor do they include sample data for any of the others listed with respect only to the property indicated:

Alabama.....Walker County (corporate)
California.....Orange County[a]
Colorado.....Gilpin and Mesa Counties (commercial and industrial)
Moffat County (oil and gas)
Indiana.....Lake County[a]
Maryland.....Portions[a] of Allegany County
Massachusetts.....Cambridge and Somerville cities (substantial amounts of residential)
Missouri.....Cole County (industrial)
New Hampshire.....Town of Gorham ($6.5 million of locally assessed public utility)
New Jersey.....Portions[a] of Essex, Hudson, Morris, and Union Counties
New York.....Portions[a] of Oneida County
Pennsylvania.....Portions[a] of Northampton County
Texas.....Ector, Fort Bend, Hardeman, Jones, Madison, Pecos, Winkler, and Zapata Counties (mineral)
Vermont.....Town of Milton (approximately $2.6 million of industrial)
Wisconsin.....Portions[a] of cities of Kiel and River Falls

[2]South Carolina aggregate distributions are based on sampling estimates which do not include State-assessed manufacturing property in Aiken, Darlington, Marlboro, Oconee, and Spartansburg Counties.

[3]For Tennessee the estimate shown for multifamily residential is exclusive of any such property that may, because of differences in State and Bureau coding, be included in estimates for single-family houses or commercial property.

Note: These data are estimates subject to sampling variation. Because of rounding, detail may not add to totals.

*For Connecticut, Maine, Massachusetts, New Hampshire, and Rhode Island, "SEA's" as used in this report refer to State economic areas designated as metropolitan State economic areas in the 1970 Census of Population.

- Represents zero or rounds to zero.

[1]Though enumeration will, wherever possible, be completed in every sample jurisdiction before publication of the final report of this survey, the estimates presented in this preliminary report were developed without any sample data for those listed below (by State) and designated by the letter "a" (a), nor do they include sample data for any of the others listed with respect only to the property indicated:

Alabama.....Walker County (corporate)
California.....Orange County[a]
Colorado.....Gilpin and Mesa Counties (commercial and industrial)
Moffat County (oil and gas)
Indiana.....Lake County[a]
Maryland.....Portions[a] of Allegany County
Massachusetts.....Cambridge and Somerville cities (substantial amounts of residential)
Missouri.....Cole County (industrial)
New Hampshire.....Town of Gorham ($6.5 million of locally assessed public utility)
New Jersey.....Portions[a] of Essex, Hudson, Morris, and Union Counties
New York.....Portions[a] of Oneida County
Pennsylvania.....Portions[a] of Northampton County
Texas.....Ector, Fort Bend, Hardeman, Jones, Madison, Pecos, Winkler, and Zapata Counties (mineral)
Vermont.....Town of Milton (approximately $2.6 million of industrial)
Wisconsin.....Portions[a] of cities of Kiel and River Falls

[2]South Carolina distributions are based on sampling estimates which do not include State-assessed manufacturing property in Aiken, Darlington, Marlboro, Oconee, and Spartansburg Counties.

[3]For Tennessee the estimate shown for multifamily residential is exclusive of any such property that may, because of differences in State and Bureau coding, be included in estimates for single-family houses or commercial property.
