Estimates of Households by Age of Householder and Tenure for Counties: July 1, 1985

INTRODUCTION

This report presents estimates of households by age of householder and tenure for 3,138 counties and county equivalents in the United States as of July 1, 1985. The two categories of age of householder are 15-64 and 65 and over. Owner households and renter households constitute the two categories of tenure.

The report also includes July 1, 1985 estimates of population for counties for age groups 15-64 and 65 and over, that are available in the Census Bureau. The estimates of household characteristics and population by age groups for counties in this report are consistent with previously published county estimates of total households and total population.[1] 1980 census data shown on households and population are as published in 1980 census reports.

This report represents the first time that the Census Bureau has published postcensal estimates of household characteristics for counties. The research underlying these estimates was funded partially by the Department of Housing and Urban Development. It should be noted that the estimates are experimental in nature. One important evaluation will be the comparison of the estimates of households shown in this report with the results of the 1990 census (which will be available in late 1991).

Because of the developmental character of these subnational household estimates, they are being presented as a research/developmental report (designated RD) in Series P-25, Population Estimates and Projections. The object of this research/developmental category for reports is to provide a forum for dissemination of information from new Census Bureau research activities that are not formally integrated into current programs.

OVERVIEW OF METHODOLOGY

We first estimate the household characteristics at the State level. These estimates serve as the State controls for age of householder (ages 15-64 and 65 and over) and for tenure (owner households and renter households). These State controls along with other available data for counties are then used to estimate the same two household characteristics at the county level.

Two different models are developed for this purpose. Model 1 produces the householder age estimates and Model 2 produces the household tenure estimates. Both models are tested by estimating the numbers for 1980 with 1970 census data as the base and then comparing them with the actual numbers in the 1980 census.

ESTIMATES OF HOUSEHOLD CHARACTERISTICS FOR STATES

State Controls for Age of Householder. Householders in the age groups 15-64 and 65 and over for States for July 1, 1985 are estimated from four sources of data: (1) Estimated total households for States for July 1, 1985, (2) Estimated population for States in the age groups 15-64 and 65 and over for July 1, 1985,[2] (3) Householders in the age groups 15-64 and 65 and over for the United States for July 1, 1985, and (4) Householders and population in the age groups 15-64 and 65 and over for States for the 1980 census.

The computation of provisional estimates for householders in the age groups 15-64 and 65 and over for a State involves the following basic steps:

1. Compute the ratio of householders in the age groups 15-64 and 65 and over for the State for April 1, 1980.
2. Compute the ratio of population in the age groups 15-64 and 65 and over for the State for April 1, 1980.
3. Compute the ratio of population in the age groups 15-64 and 65 and over for the State for July 1, 1985.
4. Compute the ratio of householders in the age groups 15-64 and 65 and over for the State for July 1, 1985 from the above three ratios as (4) = (3) x (1)/(2).

[1] U.S. Bureau of the Census, Current Population Reports, Series P-23, No. 156, *Estimates of Households, for Counties: July 1, 1985* (March 1988).

[2] U.S. Bureau of the Census, Current Population Reports, Series P-25, No. 1044, *State Population and Household Estimates, With Age, Sex, and Components of Change: 1981-88* (August 1989).

5. Use the solution of the ratio of householders in (4) and the knowledge of the total number of households to obtain the provisional estimates for householders 15-64 and 65 and over for July 1, 1985.

   The method is illustrated below by taking Alabama as an example:

	Alabama	
	April 1, 1980	July 1, 1985
$\frac{\text{Population 15—64}}{\text{Population 65+}}$	5.71620	5.38931
$\frac{\text{Householders 15—64}}{\text{Householders 65+}}$	3.65281	*

*This is estimated as $\frac{5.38931}{5.71620} \times 3.65281 = 3.44392$. .... (1)

Also, for Alabama, the total households, i.e.,

(Householders 15-64 + Householders 65+) for July 1, 1985 = 1444402. ...(2)

Solving (1) and (2), we obtain the provisional estimates for householders 15-64 and 65 and over as 1119373 and 325029, respectively. Once the provisional estimates for all States are obtained this way, the final estimates are derived from two-way raking using the marginal constraints of estimated total households for States for July 1, 1985 and of householders in the age groups 15-64 and 65 and over for the United States for July 1, 1985, as shown below:

Age of householder	Alabama	.....	Wyoming	United States
15-64 65+	(Provisional estimates)			(Known)
Total	(Known)			

This process yields, for example, the final estimates of 1119452 and 324950 for the householders in the two age groups for Alabama, which are different by only 0.01 and 0.02 percent from the provisional estimates.

State Controls for Tenure. Owner and renter households for States for July 1, 1985 are estimated from four sources of data: (1) Estimated total households for States for July 1, 1985, (2) Residential housing permits[3] by number of units in structure (1,2,3 and 4,5 or more) for States and the United States for the months October 1979 to December 1984 (which approximate the number of new housing units added during April 1, 1980 to July 1, 1985), (3) Total, owner and renter households for the United States by units in structure for July 1, 1985[4] and for the 1980 census, and (4) Total, owner, and renter households for States by units in structure for the 1980 census.

The computation of provisional estimates for owner and renter households for a State involves the following basic steps:

1. For each number of units in structure,
   i) compute the ratio of the number of households in July 1, 1985 over the number of households in April 1, 1980 plus the new housing units added during April 1, 1980 to July 1, 1985, for the United States.
   ii) compute the number of households in April 1, 1980 plus the new housing units added during April 1, 1980 to July 1, 1985, for the State.
   iii) multiply the ratio in (i) by the number in (ii) to obtain the provisional estimate of the number of households in July 1, 1985, for the State.
2. Add all provisional estimates for the number of units in structure in 1(iii) to obtain the provisional total number of households in July 1, 1985, for the State.
3. Obtain the final estimates of the number of households in July 1, 1985, for the State by number of units in structure as follows:
   i) compute the ratio of the known total number of households in July 1, 1985 for the State over the sum in (2).
   ii) prorate the provisional estimates in 1(iii) by multiplying them by the ratio in 2(i).
4. For each number of units in structure,
   i) compute the ratio (owner/renter) households in July 1, 1985 for the United States.
   ii) compute the ratio (owner/renter) households in April 1, 1980 for the United States.
   iii) compute the ratio (owner/renter) households in April 1, 1980 for the State.
   iv) compute the ratio (owner/renter) households in July 1, 1985 for the State from the above three ratios as (iv) = (iii) x (i)/(ii).
   v) obtain the provisional estimates of owner and renter households in July 1, 1985 for the State from the total number of households in (3) and the owner/renter ratios in 4(iv).
5. Add all provisional estimates in 4(v) to obtain the provisional total owner and renter households in July 1, 1985 for the State.

[3]U.S. Bureau of the Census, Construction Reports, C40, Nos. 79-10, 11, 12; 80, 81, 82, 83, 84 - 13, *Housing Units Authorized by Building Permits and Public Contracts,* Table 2 (October 1979 to December 1984).

[4]U.S. Bureau of the Census, Current Population Reports, Series P-20, No. 411, *Household and Family Characteristics: March 1985* (September 1986), Table 22.

Again, the method is illustrated below with Alabama as an example:

Subject	Total	In structures with			
		1 unit	2 units	3 & 4	5+
United States					
(1) Households 1985 / HH's 1980 + Permits	—	1.02761	1.11652	1.09751	0.85242
Alabama					
(2) HH's 1980 + Permits	1412218	1178710	44111	43573	145824
(3) HH's 1985 (Provisional) = (2) x (1)	1432629	1211253	49251	47822	124303
(4) HH's 1985 (Final) = (3) x 1444402/1432629	1444402	1221207	49656	48215	125324
United States					
(5) (Owner/Renter) HH's, 1985 / (Owner/Renter) HH's, 1980	—	0.96944	0.85518	0.82821	0.92529
Alabama					
(6) (Owner/Renter) HH's, 1980	—	4.00942	0.27596	0.17279	0.11746
(7) (Owner/Renter) HH's, 1985	—	3.88691	0.23600	0.14311	0.10869
(8) Solving (7) and (4), Owner HH's, 1985 (Provisional)	999117	971314	9481	6036	12286
Renter HH's, 1985 (Provisional)	445285	249893	40175	42179	113038

Once the provisional estimates of 999117 and 445285 for Alabama and those for all other States are obtained, the final estimates are derived from two-way raking using the marginal constraints of estimated total households for States for July 1, 1985 and of owner and renter households for the United States for July 1, 1985 as shown below:

Tenure	Alabama	.....	Wyoming	United States
Owner Renter	(Provisional estimates)			(Known)
Total	(Known)			

This iterative process produces, for example, the final estimates of 1000137 and 444265 for the owner and renter households for Alabama, which differ from the corresponding provisional estimates by 0.10 and 0.23 percent, respectively.

ESTIMATES OF AGE OF HOUSEHOLDER FOR COUNTIES (MODEL 1)

For the estimation of householders by age groups 15-64 and 65 and over for counties, we use the same model as was used for the estimation of corresponding numbers for States given in eq. 1. As before, the sets of data used are: (1) Estimated total households for counties for July 1, 1985, (2) Estimated population for counties in the age groups 15-64 and 65 and over for July 1, 1985,[5] (3) Estimated householders in the age groups 15-64 and 65 and over for States for July 1, 1985 (as obtained above), and (4) Householders and population in the age groups 15-64 and 65 and over for counties for the 1980 census.

In order to illustrate the computations, let us substitute the known numbers for Autauga County, Alabama in eq. 1 as follows:

	Autauga County, Alabama	
	April 1, 1980	July 1, 1985
Population 15—64 / Population 65+	7.35623	6.37164
Householders 15—64 / Householders 65+	4.58740	*

*This is estimated as $\frac{6.37164}{7.35623} \times 4.58740 = 3.97340.$ .... (3)

Also, for Autauga County, the total number of households for July 1, 1985 = 11865. ...(4)

Solving (3) and (4), we obtain the provisional estimates for householders 15-64 and 65 and over as 9479 and 2386, respectively. Once the provisional estimates for all counties in a State are obtained this way, the final estimates are derived from two-way raking using the marginal constraints of estimated total households for counties in a State for July 1, 1985 and of householders in the age groups 15-64 and 65 and over for the corresponding State for July 1, 1985, as shown below for the counties in Alabama:

Age of householder	Autauga	.....	Winston	Alabama
15-64 65+	(Provisional estimates)			(Known from State controls estimated before)
Total	(Known)			

The final estimates for householders 15-64 and 65 and over turn out to be 9475 and 2390 for Autauga in Alabama, and these numbers differ from the corresponding provisional estimates by 0.04 and 0.17 percent, respectively.

Test for the Model. How reasonable (accurate) are the county estimates of households by age? One way to evaluate the estimates was to test the model based on

[5]U.S. Bureau of the Census, Current Population Reports, Series P-23, No. 158, *Methodology for Experimental County Population Estimates for the 1980's* (September 1988).

the known county and state data for householders and population in the age groups 15-64 and 65 and over for the 1970 and 1980 censuses. There were 3,125 counties in the 1970 census. The model was applied to estimate the numbers for 1980, and they were compared with the actual numbers in the 1980 census as follows:

Of the total number of households in county i in the 1980 census, let P_i be the actual percent with householders in the age group 15-64, and let p_i be the corresponding estimated number.

The mean absolute percentage point error in the estimates is then

$$\frac{1}{3125}\sum_{i=1}^{3125} |p_i - P_i|, \qquad ...(5)$$

which was found to be 0.662. Since the estimation period involved in the estimates for July 1, 1985 is five years rather than ten years, this would tend to lower the mean error. Nevertheless, the overall mean error is expected to be larger than what is indicated by the test result because the estimation procedure involves the use of several sets of numbers which themselves had been estimated before and therefore are subject to error. These sets are the estimated total households for counties and States for July 1, 1985 and the estimated population for counties and States in the age groups 15-64 and 65 and over for July 1, 1985. The estimates of population by age for smaller counties are particularly subject to significant errors partly because of the assumption that the age pattern of migration for the postcensal period is similar to the pattern in the five years preceding the census.[6] The model will again be tested with the results of the 1990 census.

ESTIMATES OF HOUSEHOLD TENURE FOR COUNTIES (MODEL 2)

Since the knowledge of estimated population for counties by age groups for July 1, 1985 is not expected to be of much help in disaggregating the county households by owner and renter, a much simpler model was used for estimating the provisional numbers for them. The data used in this model are: (1) Estimated total households for counties for July 1, 1985, (2) Estimated households by owner and renter for States for July 1, 1985 (as obtained earlier), and (3) Households by owner and renter for counties for the 1980 census.

[6]For a detail discussion of possible errors, see Series P-23, No. 156, Series P-23, No. 158, and Series P-25, No. 1044, op. cit.

For provisional estimates, we assume that the owner/renter ratio for July 1, 1985 remains the same as that for the 1980 census. For Autauga County, Alabama, for example, this assumption means that

$$\frac{\text{Owner households}}{\text{Renter households}} \text{ for July 1, 1985}$$

$$= \frac{\text{Owner households}}{\text{Renter households}} \text{ for April 1, 1980}$$

$$= \frac{8136}{2061} = 3.94760. \qquad ...(6)$$

This ratio along with the fact that the estimated total number of households for Autauga County for July 1, 1985 is 11865 gives the provisional estimates for owner and renter households as 9467 and 2398. Finally, the provisional estimates for all counties in a State are subjected to a double-raking procedure to obtain the final estimates. This procedure uses the marginal constraints of estimated total households for counties in a State for July 1, 1985 and of owner and renter households for the corresponding State for July 1, 1985, as shown below for the counties in Alabama:

Tenure	Autauga	.....	Winston	Alabama
Owner Renter	(Provisional estimates)			(Known from State controls estimated before)
Total	(Known)			

The final estimates for Autauga County, for example, turn out to be 9382 and 2483, which differ from their corresponding provisional estimates by 0.90 and 3.54 percent, respectively.

It is possible to show that the final estimates by the above simple model are not different from those that can be obtained from an alternative, more complex model that computes the provisional estimates by assuming that the ratio of the owner/renter ratios for July 1, 1985 and the 1980 census for a county is identical with the corresponding ratio of ratios for the State.

Test for the Model. Like Model 1, this model was tested from the actual numbers of owner and renter households for the counties in the 1980 census and the corresponding estimated numbers from the model based on the 1970 and 1980 census data.

If P_i is the actual percent of owner households in the 1980 census among all the households in county i, and p_i the corresponding estimated number, then the mean

absolute percentage point error in the estimates, as obtained from formula (5), is 2.724. As shown in the following table, this mean error is substantially higher than the mean error corresponding to the estimated householders classified into two age groups by Model 1 (0.662 percentage points).

Estimated Characteristics	Mean Absolute Percentage Point Error	
	MODEL 1 (Uses county population data)	MODEL 2 (Does not use county pop. data)
Age of Householder	0.662	1.856
Household Tenure	3.365	2.724

Apparently, the county population data are highly correlated with the county household data, and, therefore, the estimation of the household data by using the knowledge of the population data proved to be very effective. Surprisingly, the use of Model 1 (i.e., the use of county population data by age) for the estimation of the owner and renter households in the counties increased the mean absolute percentage point error from 2.724 to 3.365. Thus, it is preferable not to use the county population data by age for estimating the owner and renter households. On the other hand, had Model 2 been used for the estimation of householders by age groups 15-64 and 65 and over, the mean absolute percentage point error would have been 1.856 instead of 0.662, and this justifies the use of county population data by age for the estimation of householders by age.

FURTHER RESEARCH

Comparison of model-based estimates for 1990 with the results from the 1990 census in the near future would indicate whether more research should be carried out to refine the models. One way of refining the models is to use more auxiliary data at the county level (besides county populations by age groups). Although residential housing permit data are available at the county level, the lengthy process of their compilation prevented us from using them in Model 2 for the estimation of the owner and renter households. We may use this information in the future if it is clear that would lead to significant reduction in the mean absolute error.

Table 1. Households, by Tenure and Age of Householder, for States: July 1, 1985

State	July 1, 1985 (estimate)							April 1, 1980 (census)
