UNITED STATES SUMMARY

POPULATION CHARACTERISTICS BY AGE

INTRODUCTION

GENERAL

This summary, constituting Part 1 of Volume IV of the Reports on Population, presents, for the United States as a whole, data on a number of the general characteristics of the population, each cross-classified by age. These statistics are based on the Sixteenth Decennial Census of Population, taken as of April 1, 1940. The subjects included are citizenship, marital status, relationship to head of household, school attendance, highest grade of school completed, and employment status. Detailed statistics on these subjects, cross-classified by age, are presented for the United States, its urban, rural-nonfarm, and rural-farm parts, and for four regions. Data on marital status and relationship to head of household are presented for divisions, for States, and for cities of 100,000 inhabitants or more, but not cross-classified by age. Median ages are also presented for these areas.

All of the classifications of the population that are presented for the United States in the present summary are presented for each State, its urban, rural-nonfarm, and rural-farm parts, and for each city of 500,000 or more, in the State sections which comprise the remaining parts of this volume. These State sections also give statistics on practically all of these subjects for cities of 100,000 to 500,000 and on many of them for cities of 50,000 to 100,000. The material was first published in a series of State bulletins, each entitled "Population, Fourth Series, Characteristics by Age." These bulletins, with a few minor corrections, have been assembled and bound together as sections of the present volume.

Related reports.—In Volume I of the Sixteenth Census Reports on Population, entitled "Number of Inhabitants" and comprising the first series of Population bulletins, the total population on April 1, 1940, is given for all of the political subdivisions of each State, for metropolitan districts, and for census tracts.

In Volume II, entitled "Characteristics of the Population" and comprising the second series of Population bulletins for States, are presented some of the simpler classifications of population characteristics for each State, urban and rural, and for counties, urban places, rural incorporated places of 1,000 to 2,500, minor civil divisions (townships, etc.), wards of cities of 50,000 or more, and metropolitan districts. Subjects included are sex, age, race, nativity, urban-rural residence, citizenship, country of birth, school attendance, highest grade of school completed, and general characteristics of the labor force.

Volume III, entitled "The Labor Force--Occupation, Industry, Employment, and Income" and comprising the third series of Population bulletins for States, presents detailed statistics on the labor force for each State by urban and rural residence, and for cities of 100,000 or more.

Additional reports on population present characteristics of the migrant population. These migration reports present data for both interstate and intrastate migrants, by sex, color, age, education, and other characteristics.

A supplementary report on the nonwhite population presents statistics for Negroes and individual minor races in selected areas on the following subjects: Sex, age, nativity, highest grade of school completed, relationship to head of household, marital status, employment status, and major occupation group.

Supplementary information on subjects covered by the present summary, as well as statistics on characteristics not treated here, are to be given in a series of publications based on sample tabulations entitled "Nativity and Parentage of the White Population." The specific titles of these reports and a brief summary of the subjects covered are given below.[1]

General Characteristics: Detailed data on nativity and parentage of the white population, according to age, marital status, and years of school completed, for the United States, by regions, divisions, and States, and for large cities.

Country of Origin of the Foreign Stock: Statistics on country of origin of the foreign white stock, by nativity, citizenship, age, and value or rent of home, for the United States, by regions, divisions, and States, and for large cities.

Mother Tongue: Mother tongue of the white population by nativity, parentage, country of origin, and age, for the United States, by regions, divisions, and States, and for large cities.

Statistics for families that are to appear in forthcoming reports include characteristics of heads of families and of members of the family or household. Heads of families are shown by race, nativity, parentage, citizenship, sex, marital status, age, highest grade of school completed, migration status, employment status, and major occupation group. Characteristics of families include tenure, size, number of children, number of lodgers and subfamilies, number of persons in the labor force, family employment status, and family wage or salary income. These data, based on sample tabulations, are shown for the United States, by regions and States, and for large cities.

Statistics on fertility of women 15 to 74 years old in 1940 and 1910 appear in a series of reports, based on sample tabulations. These data show fertility in terms of number of children ever born and number of children under 5 years old and 5 to 9 years old. Characteristics of women shown in connection with number of children include race, nativity, parentage, age, marital status, age at marriage, highest grade of school completed, tenure and value or rent of home, migration status, and employment status and major occupation group. The fertility of married women is also shown in connection with the highest grade of school completed and major occupation group of husband.

Areas.—Statistics are presented in this summary for continental United States as a whole, for four regions (the Northeastern States, the North Central States, the South, and the West), for the nine geographic divisions, for States, and for cities of 100,000 or more. In practically all the tables for the United States, figures are shown separately for urban, rural-nonfarm, and rural-farm areas.

Most of the statistics given here for the United States as a whole are given also for each of the four regions in order to facilitate the analysis of regional variations in the characteristics of the population, and to provide an area classification comparable to that used in the publications based on the 5-percent sample tabulations. The Northeastern States comprise the New England and Middle Atlantic Divisions; the North Central States comprise the East North Central and West North Central Divisions; the South comprises the South Atlantic, East South Central, and West South Central Divisions; and the West comprises the Mountain and Pacific Divisions.

Arrangement of tables.—Following the 15 text tables (tables I to XV), which present summary figures for the United States, the more detailed tables (tables 1 to 58) are arranged on the

[1] At the time this summary goes to press (early in 1943) only a part of the reports referred to in this and the subsequent two paragraphs have been printed. The remainder are still in various stages of completion, and it is possible that changes may be made before publication.

basis of the areas for which figures are presented. Tables 1 to 25 present the figures for the United States as a whole and for the urban, rural-nonfarm, and rural-farm parts of the United States. Tables 26 to 45 contain the figures for the United States by regions. In tables 46 to 52, abridged data are presented for divisions and States; and in tables 53 to 58 figures are given for cities. Within each area presentation, the tables are grouped according to subject.

Availability of unpublished data.—The statistics in this summary which are presented for the United States represent practically all of the data tabulated in this phase of the 1940 program. Similar statistics have been tabulated for States and for cities of 500,000 inhabitants or more, and most of them have been published in the State sections which comprise the remaining parts of this volume. Although the same data have been tabulated for cities of 50,000 to 500,000, it has not been possible, because of space limitations, to publish the data in full detail.

These unpublished statistics, however, can be made available upon request, for the cost of transcribing or reproducing them. Requests for such statistics, addressed to the Director of the Census, Washington, D. C., will receive a prompt reply which will include an estimate of the cost of preparing the data.

Population schedule and instructions to enumerators.—The schedule used in enumerating the population in the 1940 Census is reproduced in the Appendix of this volume, with a note inserted to indicate the method of selecting the 5-percent sample of the population who were also asked the supplemental questions in columns 35 to 50 of the schedule.

The census enumerators were supplied with printed instructions as to the method of determining what persons should be enumerated in their respective districts. These instructions are also reproduced in the Appendix.

DEFINITIONS OF TERMS AND EXPLANATIONS

The statistics on each subject are explained, and the terms used in the tables are defined, in the paragraphs which follow. In some cases the definitions of terms and explanations given below are abridged from the fuller explanations appearing in Volume II of the Reports on Population.

Urban and rural areas.—Urban population, as defined by the Bureau of the Census, is in general that residing in cities and other incorporated places having 2,500 inhabitants or more. In addition, certain densely populated townships or other civil divisions, not incorporated as municipalities, have been classified as urban under special rules. The remainder of the population is classified as rural and is subdivided into the rural-farm population, which comprises all rural residents living on farms, without regard to occupation, and the rural-nonfarm population, which comprises the remaining rural population. (For further details for each State, see Volume I of the Reports on Population.) Data for the United States are presented separately by urban, rural-nonfarm, and rural-farm areas in practically all tables.

Sex.—Because of the importance of the classification of population by sex, the data are presented separately for males and females in practically all of the tables.

The number of males per 100 females is shown for each 5-year age group, by color and nativity, for the United States in 1940 in table I.

Color.—The color classification used in this summary is limited to white and nonwhite, most of the tables for the United States and for regions containing this two-fold classification. The nonwhite population in most areas consists largely of Negroes, though there are areas in which there are fairly large numbers of Indians, Chinese, and Japanese. Volume II of the Reports on Population shows the distribution of the population by race, and the supplementary report on the nonwhite population contains, for the more significant areas, data on age, marital status, and education, for Negroes, Indians, Chinese, Japanese, etc.

Persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race were returned as white in 1940. Such persons were designated Mexican in 1930 and were classified as nonwhite. The 1930 data for whites and nonwhites published in this summary have been adjusted to conform to the 1940 definition.

Nativity.—The classification by nativity in this bulletin is limited to the white population. In this classification, a person born in the United States or in any of its territories or possessions is counted as native. Likewise included as native is the small group of persons who, although born in a foreign country or at sea, were American citizens by birth because their parents were American citizens. The remainder of the white population is classified as foreign born. The native population is not here subdivided according to nativity of parents as has been done in previous censuses. Information on this subject, however, based on sample data, is presented in other publications as described under "Related reports" above.

Table I. MALES PER 100 FEMALES, BY AGE, COLOR, AND NATIVITY, FOR THE UNITED STATES: 1940

AGE	All classes	WHITE			Nonwhite
		Total	Native	Foreign born	
All ages	100.7	101.2	100.1	111.1	96.7
Under 5 years	103.2	103.8	103.8	102.9	99.2
Under 1 year	103.4	104.1	104.1	97.2	98.3
5 to 9 years	102.9	103.5	103.5	102.7	99.0
10 to 14 years	102.7	103.2	103.3	101.8	99.1
15 to 19 years	100.4	101.2	101.3	100.0	94.2
20 to 24 years	96.6	97.8	98.0	89.4	86.5
25 to 29 years	96.5	97.6	98.3	84.0	88.2
30 to 34 years	98.0	98.7	99.1	93.7	92.2
35 to 39 years	98.9	99.8	99.5	102.3	91.4
40 to 44 years	101.2	101.4	100.1	108.3	99.1
45 to 49 years	104.0	104.1	100.7	118.9	103.0
50 to 54 years	107.1	106.9	100.9	129.5	109.3
55 to 59 years	106.3	105.8	100.0	126.2	113.1
60 to 64 years	102.9	102.2	98.3	115.7	113.0
65 to 69 years	99.2	98.6	95.8	108.5	107.2
70 to 74 years	97.9	97.2	94.4	106.2	107.8
75 to 79 years	92.7	92.5	88.5	104.3	97.6
80 to 84 years	86.4	86.4	82.7	98.8	87.5
85 to 89 years	78.1	77.9	75.2	86.5	79.9
90 to 94 years	67.2	67.0	65.1	72.0	68.4
95 to 99 years	63.5	62.9	61.7	65.6	65.3
100 years and over	57.2	61.1	64.4	56.0	54.8

Age.—The age classification is based on the age of the person at his last birthday before the date of the census, that is, the age of the person in completed years. In the 1940 census tabulations, when the age of a person was not reported, it was estimated on the basis of other information on the Population schedule, such as marital status, school attendance, employment status, age of other members in the family, etc. The number of persons for whom age was estimated represented less than 0.2 percent of the population of the United States; and since the age estimates were based on actual age distributions of various population groups, the resulting age statistics are consistent with known age data. The number of persons of unknown age is shown for earlier censuses in the comparative tables.

Table II summarizes the data on the distribution of the population by age for the United States from 1890 to 1940.

Table II. AGE FOR THE UNITED STATES, 1940, WITH PERCENT DISTRIBUTION BY AGE, 1890 TO 1940

[Percent not shown where less than 0.1]

AGE	Population, 1940	PERCENT DISTRIBUTION					
		1940	1930	1920	1910	1900	1890
All ages	131,669,275	100.0	100.0	100.0	100.0	100.0	100.0
Under 5 years	10,541,524	8.0	9.3	10.9	11.6	12.1	12.2

100 years and over	3,679	-	-	-	-	-	-
Not reported	-	-	0.1	0.1	0.2	0.3	0.3

Single years of age for the white population by nativity are presented only for those 35 years old and over, since there were relatively few foreign born under 35 years of age in 1940.

All median ages published in this summary have been computed on the basis of 5-year intervals, except those for censuses earlier than 1840. The median age may be defined as that age which divides the population into two equal groups--one-half being older and one-half younger than the median.

Table III presents median ages for the United States, by color and sex, for each census date from 1790 to 1940.

Table III. MEDIAN AGE, BY COLOR AND SEX, FOR THE UNITED STATES: 1790 TO 1940

[Because of change in computation procedure, medians for 1850 to 1930 differ slightly from those published in previous censuses]

CENSUS YEAR	ALL CLASSES			WHITE			NONWHITE		
	Both sexes	Male	Female	Both sexes	Male	Female	Both sexes	Male	Female
1940	29.0	29.1	29.0	29.5	29.5	29.5	25.2	25.4	25.1
1930	26.5	26.7	26.2	26.9	27.1	26.6	23.5	23.9	23.1
1920	25.3	25.8	24.7	25.6	26.1	25.1	22.4	23.1	21.9
1910	24.1	24.6	23.5	24.5	24.9	23.9	21.1	21.5	20.6
1900	22.9	23.3	22.4	23.4	23.8	22.9	19.7	20.0	19.5
1890	22.0	22.3	21.6	22.5	22.9	22.1	18.4	18.5	18.3
1880	20.9	21.2	20.7	21.4	21.6	21.1	18.0	17.9	18.0
1870	20.2	20.2	20.1	20.4	20.6	20.3	18.5	18.2	18.9
1860	19.4	19.8	19.1	19.7	20.2	19.3	17.5	17.5	17.5
1850	18.9	19.2	18.6	19.2	19.5	18.8	17.4	17.3	17.4
1840	17.8	17.8	17.7	17.9	17.9	17.8	17.3	17.0	17.5
1830	17.2	17.1	17.3	17.2	17.2	17.3	16.9	16.7	17.1
1820	16.7	16.6	16.7	16.5	16.5	16.6	17.2	16.9	17.4
1810	-	-	-	16.0	15.9	16.1	-	-	-
1800	-	-	-	16.0	15.7	16.3	-	-	-
1790	-	-	-	-	15.9	-	-	-	-

As revealed in the distribution by single years of age (and to a lesser extent in the distribution by 5-year periods), there are some irregularities in the age distribution which are due to inaccuracies in the census returns. In the 1940 Census, as in previous censuses, some ages were misstated, either intentionally or through ignorance of the true age on the part of the person giving the information. Where the age is not accurately known, there is a tendency to report it as a multiple of 5 or as an even number. The returns also exaggerate the number of centenarians, particularly among nonwhites. In general, the degree of inaccuracy in reported ages is greater for adults than for children.

A comparison of the 1940 age data for the United States with a computation of the expected survivors from the 1930 population indicates that the number of persons enumerated in 1940 as 65 years of age and over was appreciably in excess of the number that might be expected to have survived from the group 55 years old and over in 1930. This comparison also indicates that the number of persons 55 to 64 years of age in 1940 was somewhat smaller than the number that might be expected to have survived from the age group 45 to 54 years in 1930. It is possible that the enactment of old-age insurance and old-age assistance legislation during the decade may have led to some overstatement of age in 1940 by persons actually 55 to 64 years old, but it is also possible that persons in this age range may have understated their ages in 1930. It is hoped that more definite conclusions may be reached after further study of the figures now available.

The enumeration of children under 5, and especially infants under 1,[2] was incomplete in 1940, as in previous censuses, the underenumeration being particularly apparent in the case of the nonwhite population. The underenumeration of children is not peculiar to the United States census. It has been noted in the British census returns and in the census returns from some of the countries of continental Europe.

A summary of the age data in 5-year groups by sex is presented for the United States in 1940 in table IV.

Table V summarizes the data on the distribution of the population by 5-year age groups by color and nativity for the United States in 1940.

The distribution of the 1940 population by 5-year age groups for the United States, urban and rural, is summarized in table VI.

[2] Data have been tabulated, but not published, on age by single months for infants under 1 year old, by sex, for white and nonwhite. These data are available for each city of 50,000 inhabitants or more and for the balance of each State, urban and rural. For information as to the availability of these and other unpublished statistics, see the section on "Availability of unpublished data" above.

Citizenship of the foreign-born white.—The classification of the foreign-born white in regard to citizenship embraces two major categories, naturalized citizen and alien. The alien category is further subdivided into those having first papers and those who have taken no steps toward becoming naturalized ("No papers"). There is an additional group designated "Citizenship not reported," comprising persons for whom the enumerator secured no report as to citizenship.[3]

The "first papers" constitute the declaration of intention to become a citizen of the United States, a declaration which may be made by any eligible alien 18 years of age and over at any time after arrival in the United States. Citizenship by naturalization is open only to white persons and persons of African nativity or descent. Foreign-born Chinese, Japanese, and other Asiatics are not eligible for citizenship except under rare circumstances.

[3] At the Census of 1940 there were 825,072 foreign-born white persons in the United States reported as of unknown citizenship status. It would appear that this group consisted predominantly of persons who had not applied for any papers or who had applied for their first papers only. This conclusion is based partly upon the fact that the total number of foreign-born aliens plus those of unknown citizenship status is approximately equal to the number of aliens registered under the Alien Registration Act of 1940.

Since 98.5 percent of the foreign-born population in the United States in 1940 was white, no figures are given here for foreign-born nonwhites. In the tables presenting age data for the foreign-born white population by citizenship, persons under 35 are subdivided into two groups--those under 21 and those 21 to 34 years old, but for persons above 35, who comprise the great majority of the foreign-born white population, age is shown by 5-year periods.

Table VIII summarizes the 1940 data on citizenship of the foreign-born white population by age for the United States.

Marital status.—Inquiry regarding marital status was first made in the Census of 1880, but the results were not tabulated; the earliest Federal census figures for marital status available and presented in this summary are therefore those for 1890.

In the classification by marital status, four major groups are shown: *single, married, widowed, and divorced.* These terms refer to marital status at the time the census was taken. Persons classified as "married" comprise, therefore, both those who have been married only once and those who remarried after being divorced or widowed. Since it is probable that some divorced persons are reported as single, married, or widowed, the census returns doubtless understate somewhat the actual number of divorced persons who have not remarried.

The category "married" is further divided into "married, spouse present" and "married, spouse absent." This classification appears in the Population census reports for the first time in 1940. A person was classified as "married, spouse present" if the person's husband or wife was reported as a member of the household in which the person was enumerated. The group "married, spouse absent" consists of married persons whose spouses were not living in the same household at the time of the census. The latter group includes, therefore, married persons whose families have been broken by separation (often preceding divorce), immigrants whose husbands or wives were left abroad, husbands or wives of persons enumerated as inmates of institutions, and other married persons whose usual place of residence is not the same as that of their husbands or wives, including soldiers, sailors, men in labor camps, etc., and their wives.

In both 1930 and 1940 the enumerator failed to report marital status for a small number of persons. All these persons were classified as single in 1940, whereas in 1930 only those under 18 were included among the single, and the remainder were shown as "unknown." For censuses prior to 1930, all persons for whom information on marital status was not secured have been retained in the category "not reported."

Marital status by single years of age and sex for the population 14 to 34 years old is shown in several tables. The data by single years of age cover the period in which the proportion married increases sharply. Marital status of the population in 1940 was not tabulated for persons under 14 years of age as practically all such persons are single. The 1930 data by color, where included, are given by sex but not by age.

A summary of the data on marital status by age for the United States in 1940 is presented in table IX.

Private household.—The term "private household," as used in the 1940 Census, includes the related family members and the unrelated lodgers and servants or hired hands who live in the same dwelling unit and share common housekeeping arrangements. A person living alone or a small group of unrelated persons sharing the same living accommodations as "partners" is also counted as a private household. A family residing permanently or for an indefinite period in an apartment hotel is counted as a private household. The number of heads of private households is equal to the number of private families in 1930.

Quasi household.—A quasi household is a group of persons not living in private households, such as those living in a boarding or lodging house, an institution, a school, a labor camp, a military or naval post, or the transient population of a hotel, or the crew of a vessel. If a household reports 11 or more lodgers, it is classified as a quasi household (specifically, as a lodging house) rather than as a private household.

Heads of quasi households are usually managers or officers of institutions, hotels, lodging houses, or similar establishments. In a few instances, where no logical head was returned for the quasi household, the first member of the household was arbitrarily designated as the head. Thus, the number of heads of quasi households also represents the number of quasi households. This number is comparable with the number of quasi-family groups in 1930.

Table X summarizes the 1940 data for the United States, urban and rural, on the number of persons in private and in quasi households, respectively, and on relationship to head for persons within private households.

Relationship to head of household.— The 1940 Census was the first from which a tabulation was made of the relationship of each person to the head of his household. The tables on this subject give the number of persons returned in each of the categories: Head of household; wife, child, grandchild, parent, or other relative of head; lodger, servant or hired hand; and head or other member of a quasi-household group. The following sections describe the categories of relationship shown in the various tables.

Head of private household.— The head of a private household is usually a married man and the chief breadwinner in the family. In some cases, however, the head is a parent of the chief earner or is the only adult member of the household.

Wife.— The total number of females shown under the heading "wife" is ordinarily somewhat less than the total number of married women shown in tables presenting statistics on marital status, since the category "wife" in the relationship tables includes only wives of heads of households and excludes other married women who may be living in the household. The number of "wives" is equal to the number of "normal" households (households with head and wife present).

Child.—This category includes sons and daughters, stepchildren, and adopted children of the head regardless of their age or marital status. It excludes sons-in-law and daughters-in-law, and, of course, any children of the head no longer living in the household.

Grandchild.—This class comprises all persons living in the household who are sons, daughters, stepchildren, or adopted children of a child of the head.

Parent.—This classification comprises both parents and parents-in-law of the head if living in the household.

Other relative.— This class includes such relatives of the head as sons-in-law, brothers-in-law, nephews, brothers, uncles, grandparents, cousins, and great-grandchildren if these are members of the household.

Lodger.—All persons in private households who are not related to the head, except servants and hired hands, are counted as lodgers.[4] Among these persons are lodgers and partners, and their wives and children. The few relatives of servants who are not themselves servants in the family, but live in the household are also included here.

Servant or hired hand.—This category consists of all employees of the heads of private households who usually reside in the household with their employer. The main types of such employees are cooks, maids, nurses, and hired farm hands.

Table X. PERCENT DISTRIBUTION OF THE POPULATION IN PRIVATE HOUSEHOLDS AND OUTSIDE PRIVATE HOUSEHOLDS, AND PERCENT DISTRIBUTION OF THE POPULATION IN PRIVATE HOUSEHOLDS BY RELATIONSHIP TO HEAD, FOR THE UNITED STATES, BY COLOR AND BY SEX, AND FOR URBAN AND RURAL AREAS: 1940

School attendance.—The school attendance statistics for 1940 are based on the replies to the enumerator's inquiry as to whether the person had attended, or been enrolled in, any regular school or college between March 1 and April 1, 1940. Night schools, extension schools, or vocational schools are not included unless they are a part of the regular school system; and no correspondence schools are included.

The school attendance question in the Census of 1930 applied to a somewhat longer period, namely, the seven months between the preceding September 1 and the census date (April 1). Furthermore, in the 1930 Census the question was not restricted as to the type of school or college. The shortening of the period to which the question applied undoubtedly accounts for many of the apparent declines during the decade in the proportion attending school at given ages. Further, there were a number of areas in which the rural schools were closed for the entire month of March 1940; and, although the children in these areas were for the most part still enrolled in school, negative answers were

[4] In the 1930 family tabulation, hired hands living with the family were counted as lodgers. This doubtless accounted for a considerable fraction of the whole number of families with lodgers.

533094 O - 43 - 2

generally given to the school attendance question, since the children were not actually in attendance. Moreover, in those urban areas where midyear graduations are important, the midyear graduates would have been returned in 1940 as not attending school--but in 1930 they would have been returned as attending.

In a number of tables, statistics on school attendance by single years of age are cross-classified with highest grade of school completed.

A summary of data on school attendance by single years of age for persons 5 to 20 is presented for the United States, 1940 and 1930, in table XI.

Table XI. SCHOOL ATTENDANCE BY SINGLE YEARS OF AGE FROM 5 TO 20, FOR THE UNITED STATES: 1940 AND 1930

Highest grade of school completed.—In 1940 the census, for the first time, included a question on the formal educational attainment of each person. The question on the schedule asked for the last full grade that the person had completed in the regular school system--public, private, or parochial school, college, or university. This question replaced the inquiry on illiteracy included in previous censuses and provides data on educational status, a characteristic that is significant for every population group, especially in combination with other characteristics.

Various tables present data on highest grade of school completed by single years of age for all persons 5 to 24 years old, for those attending school, and for those not attending school, respectively. In the tables for those attending school, persons may be assumed to have been attending the grade above the one given as completed. For persons 20 years old and over, the highest grade of school completed is given by 5-year age periods, but not cross-classified by school attendance as most of these persons are assumed to have completed their schooling.

From the cross-classification of highest grade of school completed with single years of age for the group attending school, it is possible to measure the extent of acceleration or retardation, particularly among the younger school children. Most of the youths not attending school may be assumed to have completed their schooling, but among the younger children many were probably out of school only temporarily.

Several additional tables are also included, summarizing the educational statistics in terms of the median year of school completed by persons at given ages and also the median age of persons having completed given grades. The median year of school completed may be defined as the year which divides the population group into equal parts--one-half having completed more schooling and one-half having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, the completion of the first year of high school is indicated by 9 and of the last year of college by 16. For the sake of comparability, the first year of high school is uniformly represented by 9, although there are some areas with only 7 years of elementary school. In this summary, the medians are based on the distribution by single years of school completed, whereas those in Volume II are based on an abridged distribution.

Table XII shows the median years of school completed by persons 5 to 24 years old, by school attendance and single years of age, for the United States, urban and rural.

Table XII. MEDIAN YEARS OF SCHOOL COMPLETED BY PERSONS 5 TO 24 YEARS OLD, BY SCHOOL ATTENDANCE AND SINGLE YEARS OF AGE, FOR THE UNITED STATES, BY COLOR AND BY SEX, AND FOR URBAN AND RURAL AREAS: 1940

[Medians for total persons and persons attending school, 5 and 6 years old, and for those 5 to 7 years old not attending school, may be assumed to be less than 1.0 years]

Labor force.— Included in this summary is a cross classification of employment status by single years of age for the age group 14 to 24, and by 5-year age groups from 25 to 75 and over. This represents an extension of the age classification presented in Volume III of the Reports on Population and provides the basis for determining more exactly the turning points in rates of employment and movement into and out of the labor force.[5]

Table XIV summarizes the data on employment status by age and sex, for the United States in 1940.

Table XIV. EMPLOYMENT STATUS OF PERSONS 14 YEARS OLD AND OVER, BY AGE AND SEX, FOR THE UNITED STATES: 1940

Presented in this summary are the number and proportion of employed persons among those attending school and among those not attending school by single years of age from 14 to 24 years. These data are provided to show the relationship between employment and school attendance during the period when most persons enter the labor force.

Table XV summarizes the data on employed persons by school attendance, single years of age, and sex, for the United States in 1940.

Employment status.— The classification by employment status in the 1940 Census of Population was obtained from questions regarding the activity during the week of March 24 to 30, 1940, of all persons 14 years old and over. These questions permitted a classification into two large groups: (a) persons in the labor force, including those at work, those with a job but temporarily absent from work, those on public emergency work, and those seeking work; and (b) persons not in the labor force. The latter group includes persons reported as engaged in own home housework, those in school, those unable to work, all inmates of penal and mental institutions and homes for the aged, infirm, and needy, regardless of their activity during the census week; other persons not at work and not having a job, not on public emergency work, and not seeking work; and persons for whom employment status was not reported.

[5] These data and those presented on employment status by school attendance, which more logically should have been presented with the other labor force statistics in Volume III of the Reports on Population, are presented in this summary because it was possible to obtain them more economically as a byproduct of the detailed age statistics than in the earlier labor force tabulations.

Table XV. SCHOOL ATTENDANCE FOR PERSONS 14 TO 24 YEARS OLD, BY EMPLOYMENT STATUS, SINGLE YEARS OF AGE, AND SEX, FOR THE UNITED STATES: 1940

AGE AND SEX	ATTENDING SCHOOL			NOT ATTENDING SCHOOL

Employed (except on public emergency work).— The group classified as employed includes (a) persons who worked for pay or profit at any time during the week of March 24 to 30, 1940, in private work or nonemergency Federal, State, or local government work, or who assisted without pay on a family farm or in a family business; and (b) persons not actually at work and not seeking work during the week of March 24 to 30, 1940, but with jobs, businesses, or professional enterprises from which they were temporarily absent because of vacation, illness, industrial dispute, bad weather, or layoff not exceeding four weeks with definite instructions to return to work on a specific date. The group "Employed (except on public emergency work)" includes not only employees but also proprietors, farmers, other self-employed persons, and unpaid family workers.

On public emergency work.— This category includes persons who, during the week of March 24 to 30, 1940, were at work on, or assigned to, public emergency work projects conducted by the Work Projects Administration (WPA), the National Youth Administration (NYA), the Civilian Conservation Corps (CCC), or State or local work relief agencies. In the interpretation of the data for persons on public emergency work, allowance must be made for the fact that considerable numbers of persons actually on public emergency work were returned in the census as employed on private or nonemergency government work, seeking work, or in school.[6]

Seeking work.— This category represents persons without work of any sort in the week of March 24 to 30, 1940, who were actively seeking work during that week.

[6] See the introductory section in Part 1 of Volume III of the Reports on Population for a discussion of the misclassification of public emergency workers.

Table 1.—AGE BY SINGLE YEARS, FOR THE POPULATION OF THE UNITED STATES, 1910 TO 1940, AND FOR THE WHITE AND NONWHITE POPULATION, 1920 TO 1940

[1930 figures have been revised to include as white the Mexicans who were classified as nonwhite in the 1930 reports. Percent not shown where less than 0.01]
