MEDIAN FAMILY INCOME UP IN 1970

(Advance data from March 1971 sample survey)

The median money income of families in the United States was $9,870 in 1970, according to estimates recently released by the Bureau of the Census, Department of Commerce. This was about $440, or 4.6 percent higher than the 1969 figure of $9,430. However, consumer prices rose during the year and, in terms of constant dollars, median family income in 1970 was about the same as in 1969.[1]

In 1970, the median income of families of Negroes and other races was $6,520; a gain of $330 or 5.3 percent over the median in 1969. This rate of increase was not significantly different from the rate for all families. The median income of families of Negroes and other races was 64 percent of the median for white families ($10,240) in 1970, not significantly different from that of 1969.

Of the 51.9 million families in the United States, 8.9 percent received incomes below $3,000 in 1970. Families with incomes between $3,000 and $5,000 accounted for 5.3 million families; and another 6.1 million, or 11.8 percent had incomes between $5,000 and $7,000; 10.3 million families had incomes between $7,000 and $10,000. The number of families with incomes of $10,000 or more increased from 23.6 million families or 45.9 percent in 1969 to 25.5 million families or 49.1 percent in 1970.

In 1970, the median incomes of men and women were about $6,670 and $2,240, respectively. The median income for men increased approximately 3.7 percent over the median in 1969. The median income for women increased about 4.9 percent over the median in 1969. For men working year round full time, the median income was $9,180, 6.0 percent higher than the 1969 median. For women working year round full time, the median income was $5,440, an increase of 7.1 percent. It should be noted that because of sampling error, any apparent differences among the four percentage increases included in this paragraph are not statistically significant.

The median income of households in the United States was $8,730 in 1970. This figure is 4.1 percent above the 1969 median.

The 1970 income statistics presented in this report were obtained from the Census Bureau's Current Population Survey of March 1971. The information was collected from the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. More detailed income data for families and persons will appear in a report in this series to be issued later this year. Furthermore, another report in this series will be issued in which is shown detailed income data for households.

This report covers money income only, prior to deductions for taxes. For more detailed definitions of the terms and concepts used in this report in connection with families and persons see **Current Population Reports**, Series P-60, No. 75. For definitions of households, see **Current Population Reports**, Series P-60, No. 72.

Since the estimates in this report are based on a sample, they are subject to sampling variability. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.
