ACKNOWLEDGMENTS

This report was prepared by **Edward J. Welniak** and **Mary F. Henson,** under the general direction of **John F. Coder,** Chief, Current Income Statistics Staff. The historical and summary tables were programmed by **Emmett F. Spiers** and **Robert W. Cleveland.** Statistical assistance was provided by **Ellen Yates, Helen Ogle,** and **Rose Mary Schade,** and typing assistance was provided by **Shirley L. Smith.** Publication review assistance was provided by **Marion Porter.** Overall direction was provided by **Gordon W. Green, Jr.,** Assistant Chief (Socioeconomic Statistics Programs), Population Division. Programming of the detailed tables was provided by **Thelma Varhach,** and survey operations were coordinated by **Kathleen Creighton** of the Demographic Surveys Division. Sampling review was conducted by **Prithwis Das Gupta** and **Donna Kostanich** of the Statistical Methods Division. In Publications Services Division, the report was edited by **Paula Coupe,** and the cover was designed by **Beverly Jo Jaquish.**

SUGGESTED CITATION

U.S. Bureau of the Census, Current Population Reports, Series P-60, No. 132, *Money Income of Households, Families, and Persons in the United States: 1980,* U.S. Government Printing Office, Washington, D.C., 1982.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Current Population Reports are sold in two subscription packages: Series P-20, P-23, P-27, and P-60 are available for $75 per year ($18.75 additional for foreign mailing); Series P-25, P-26, and P-28 are available for $100 per year ($25 additional for foreign mailing). The single-copy price of this report is $7.50.

Money Income of Households, Families, and Persons in the United States: 1980

NOTE

Estimates in this report for 1980 are based on adjustment of sample results to independent estimates of the civilian noninstitutional population derived from the 1980 decennial census. Reports for income years 1971 through 1979 used population estimates based on the 1970 decennial census. Previously published data for 1979 have been revised using the 1980 census population counts in order to make these data comparable with the new estimates. These revised figures are shown in tables 1, 14, 15, 40, and 41. All references to changes between 1979 and 1980 are based on comparisons of the revised 1979 estimates. Details concerning the introduction of the 1980 census population figures can be found in the section, "Introduction of 1980 Census Population Controls."

HIGHLIGHTS

The average American family experienced a significant decline in real income between 1979 and 1980, according to results of the March 1981 Current Population Survey (CPS) conducted by the Bureau of the Census. The 1980 median family income of $21,020 was 7.3 percent higher than the 1979 median, however, a 13.5-percent increase in consumer prices between 1979 and 1980 caused a net decline of 5.5 percent in real median family income.[1] This represents the first statistically significant annual decline in real median family income since 1974-75 and the largest decline recorded in the post-World War II period. The sluggishness of real income growth during the last decade (figure 1) is evidenced by the fact that 1980 median family income was about $1,330 lower than the 1973 median ($22,350) in constant dollars.[2]

Money Income of Families

Double-digit inflation along with a downturn in economic activity in the early months of 1980 caused a substantial decline in real income for families in all but a few segments of our society. (See table A.) Real median family income fell in all four regions of the country. Farm families suffered a particularly large decline. In real terms, the median income of farm families dropped by 14.8 percent in 1980 to $15,760. The median for nonfarm families also declined but only by 5.3 percent to $21,150. Declines in both metropolitan and nonmetropolitan areas were about the same, 5.3 percent and 5.8 percent, respectively.

Families with no earners seemed to fare better than their counterparts with earners. Families with one or more earners showed declines in real median income, while the median for families without earners showed no significant change in real terms from the 1979 level. The indexing of Social Security benefits, Supplemental Security income, and other sources of retirement income to the Consumer Price Index apparently has helped many families without earners to keep pace with inflation.

Median family income in 1980 was $21,900 for Whites, $12,670 for Blacks, and $14,720 for Spanish-origin families. Although there was a decline in real median family income for all three groups, the rates of change were not significantly different from one another.[3]

Money Income of Persons

Results of the survey indicate that while income for men declined significantly in real terms between 1979 and 1980, the incomes of women were maintained at about the same level. Incomes for men fell in all but a few of the socioeconomic categories shown in tables 40 and 41. In real terms, the median income for men decreased by 6.3 percent to $12,530 in 1980. By age, only men 65 years old and over did not show a significant decrease in real income between 1979 and 1980. Data by region reveal that men experienced significant declines in real income in the Northeast, North Central, and South, while median income in the West showed no significant change from the 1979 level. The median income of men working year round full time fell by 3.4 percent after adjusting for inflation.

In contrast, women showed significant decreases in real income in only a few of the socioeconomic groups. Median income for all women was $4,920 in 1980, essentially unchanged from their 1979 level in real terms. By age, only women 15 to 19 years old had a significant decline in real income. By family relationship, both female householders with no husband present and unrelated individuals showed significant declines in real terms from the previous year. By region, women in the North Central and West had median income levels not significantly different from those of 1979.

[1] The percentage increase in prices between 1979 and 1980 is computed by dividing the annual average Consumer Price Index (CPI) for 1980 by the annual average value of the CPI for 1979. See table A-1 of appendix A for CPI's from 1947 to 1980.

[2] Throughout this report "constant dollars" refers to dollars in 1980 purchasing power.

[3] The decline of 3.5 percent for Black families was statistically significant at the 90-percent confidence level.

Index of Median Family Income in Current and Constant Dollars: 1970 to 1980

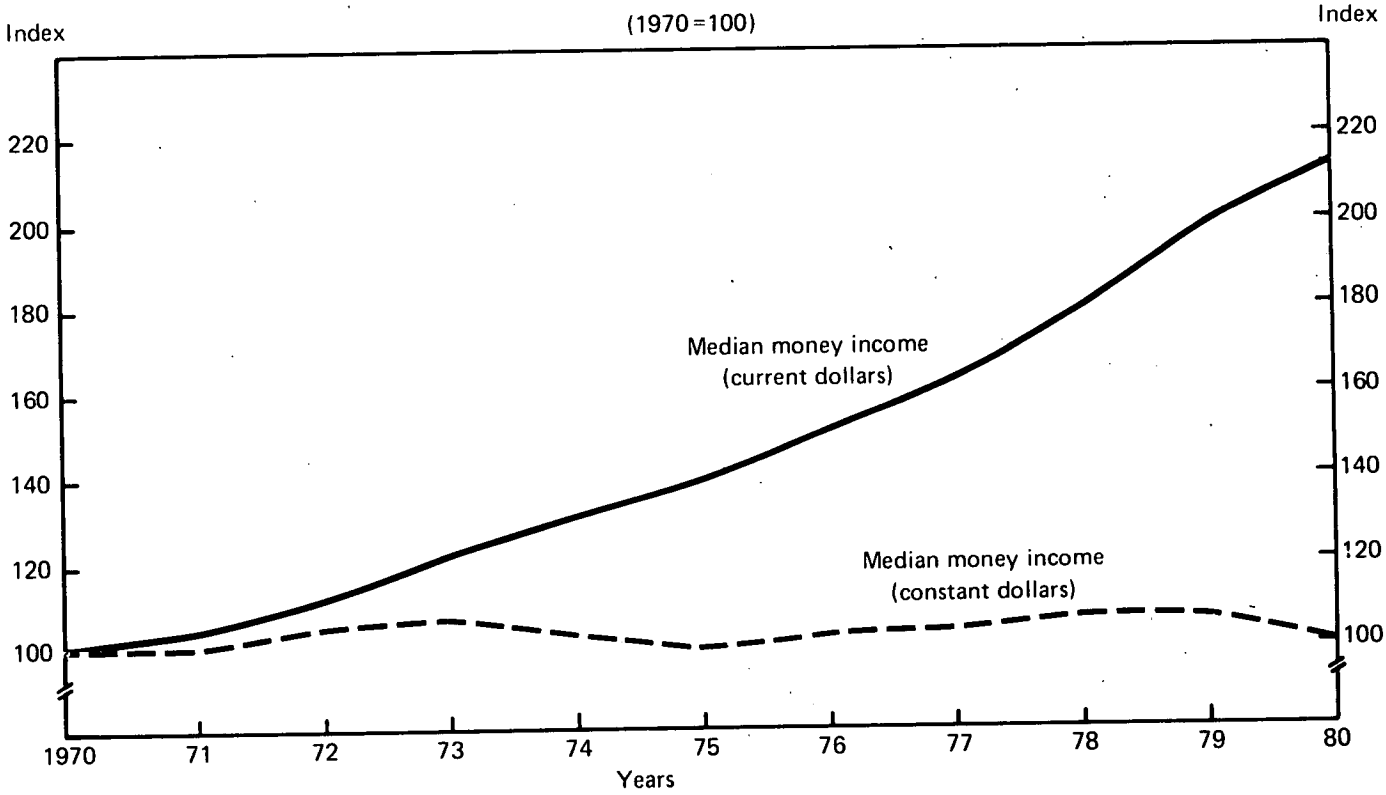

Table A. Median Family Income in 1980 and 1979 in Current and Constant Dollars, by Selected Characteristics

Selected characteristics	Median family income			Percent change in real income
		1979		
	1980	Constant dollars	Current dollars	
All families	$21,023	$22,236	$19,587	*-5.5
RACE AND SPANISH ORIGIN				
White	21,904	23,203	20,439	*-5.6
Black	12,674	13,139	11,574	**-3.5
Spanish origin[1]	14,717	16,085	14,169	*-8.5
TYPE OF RESIDENCE				
Nonfarm	21,151	22,339	19,678	*-5.3
Farm	15,755	18,483	16,281	*-14.8
Inside metropolitan areas	22,590	23,848	21,007	*-5.3
Outside metropolitan areas	18,069	19,190	16,904	*-5.8
REGION				
Northeast	21,856	23,411	20,622	*-6.6
North Central	21,736	23,353	20,571	*-6.9
South	19,142	19,923	17,550	*-3.9
West	22,281	23,487	20,689	*-5.1

*Significant at the 95-percent confidence level.
**Significant between the 90-percent and 95-percent confidence levels.

[1]Persons of Spanish origin may be of any race.

However, women in the Northeast Region experienced a 3.7 percent decrease in median income, while women in the South had a 4.2 percent increase. Real median income of women working year round full time decreased by 3.0 percent, about the same decline as that registered by men.

Money Income of Households

Median household income in the United States was $17,710 in 1980, an increase of 7.6 percent over the 1979 median of $16,460. However, after adjusting for a 13.5-percent increase in the cost of consumer goods between 1979 and 1980, real median household income declined by 5.2 percent. Declines in real income were felt in all four regions of the country, ranging from 4.0 percent in the West to 6.8 percent in the North Central.[4] The 1980 median household income was $18,680 for White households, $10,760 for Black households, and $13,650 for households of Spanish origin. All three groups showed real declines in income from 1979.

The changes in income for households are very similar to those of families. Households not showing significant declines in real income from 1979 tended to be those with income tied to the change in the Consumer Price Index. Of all the age groups, households with householders 65 years and over was the only group not experiencing a significant decline in real median income. Single person households, largely composed of elderly, also showed no real change. By residence, households in central cities of large metropolitan areas showed no significant change in real median income.

DEMOGRAPHIC FACTORS AND CHANGES IN INCOME DURING THE 1980's

There are many important demographic, social, and economic factors which are likely to have significant impacts on the level and growth rate of household and family income in the 1980's.[5] Based on changes during the 1970's, three factors appear to be particularly important in determining the growth of household and family income during the present decade: the changing age distribution of the U.S. population, changes in the composition of households and families, and increased labor force participation by women.

Changes in the age distribution of the population can be expected to have important influences on many aspects of the economy. The most prominent feature of the age distribution today is the existence of a disproportionately large age group (about 80 million persons) born during the "baby boom" years between 1946 and 1965. In the past 10 years, this generation has been entering the labor force in ever increasing numbers. These young adults tend to earn less, and their lack of experience and training tends to lower productivity. Thus, the entry of this large age group into the labor force has helped account for the slow growth in average earnings over the last decade. However, the aging of this generation will result in a 40-percent increase in the number of persons 35 to 44 years old in the 1980's, thus increasing the average age and experience of the workforce. As these workers begin to enter their peak earning, savings, and tax-paying years, an upward influence on income levels should result.

The second factor, changes in household composition, should also have an important effect on income levels during this decade. One of the most dramatic changes in the composition of households during the 1970's was the increase in the number of family households maintained by women with no husband present. In 1970, these households constituted 11 percent of all family households; 10 years later, the number of family households maintained by women had increased by 53 percent to 8.5 million, constituting 15 percent of all family households. These families tend to have considerably lower incomes than married couples and constitute a very large share of the poverty population. In 1979, about 50 percent of all poor families had a female householder, compared with 37 percent in 1970. This trend may continue into the next decade, especially if there are increases in the number of separations, divorces, and children born out of wedlock. Disproportionately high increases in families maintained by women will likely have a dampening effect on the overall growth rate of household and family income.

In addition to the changing composition of family households, there has been an increase in the proportion of nonfamily households, mainly households with persons living alone. The number of nonfamily households has grown at a faster rate than the traditional married-couple households over the last 10 years. Married-couple households represented 61 percent of all households in 1980, down from 71 percent in 1970. In contrast, the proportion of nonfamily households increased from 19 percent in 1970 to 26 percent in 1980. This can be attributed in part to the postponement of marriage, higher divorce rates, and increases in the elderly population. This trend, which is also expected to continue into the 1980's, will tend to lower the growth rate in household income because nonfamily households have smaller incomes, on the average, than family households.

The third factor, increased labor force participation by women, is perhaps the most complex and difficult of these issues to foresee. During the last decade, women accounted for 60 percent of the growth in the labor force, increasing their participation rate from 43 percent in 1970 to 51 percent in 1980. Married women played a major part in this growth in female employment. By March 1980, 51 percent of all married women were in the labor force; in 1970, this figure was about 41 percent, and in 1950, it was 24 percent. The increase of married women in the labor force during the 1970's had a positive influence on the growth rate of family income, and if the trend continues into the

---

[4] The difference between the rates of decline for the West and North Central Regions was significant at the 93-percent confidence level.

[5] The data contained in this section were obtained from reports published by the Bureau of the Census and Bureau of Labor Statistics. Data on changes in number and composition of families and poverty statistics can be found in this report and Current Population Reports, Series P-60, Nos. 75 and 81 and P-20, No. 357 published by the Bureau of the Census. Labor force participation rates were obtained from *Special Labor Force Reports*, 13, 130, and 237 published by the Bureau of Labor Statistics.

1980's, the income of married women will again have a favorable impact on family income growth rates.

Contributing strongly to the increased number of married women in the labor force was the growth in labor force participation of married women with pre-school-age children. The participation rate for married women with children under 6 years old increased from 30 percent in 1970 to 45 percent in 1980. The pattern of a more continuous work history for women in their childbearing years may widen career opportunities and advancement and could result in higher income levels for women.

The income estimates were obtained from the Census Bureau's Current Population Survey (CPS) of March 1981. The survey includes both the civilian noninstitutional population and an estimated 817,000 members of the Armed Forces living off post or with their families on post in the United States. The March 1981 CPS population was 225,243,000 persons, comprising 60,309,000 family householders, 136,653,000 other family members (including 50,535,000 children under 15 years old), 932,000 persons in unrelated subfamilies, and 27,348,000 unrelated individuals (including 215,000 children under 15 years old); unrelated individuals are persons living alone or not related to others in the household. The collection of income data in the survey, however, is restricted to persons 15 years old and over. (See table B.)

Household income differs from family income in that household income includes not only the income of all related persons in the household but also the income of any unrelated persons in the household. Household income also covers the income of one-person households. Family income is limited to the income of only related persons in the household.

Table B. Derivation of the Current Population Survey (CPS) Universe and Population Characteristics of the March 1981 Current Population Survey

(For meaning of symbols, see text)

Population groups	Number (thousands)	Percent distribution
Total resident population	228,626	100.0
Minus:		
Civilian institutional population	2,564	1.1
Armed Forces living without families on post in the United States	819	0.4
Equals:

Female	112	-

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting. For further details, see the section, "Reliability of the Estimates," in appendix B.

Data on consumer income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc. Money income is the sum of amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workers' compensations; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents, such as the use of business transportation and facilities, full or partial payments by business for retirement programs, and medical and educational expenses. These elements should be considered when comparing income levels.

Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income.[6] Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, unemployment compensation, public assistance, and net income from interest, dividends, and rentals. Overall, income earned from wages or salary is much better reported than other sources of income and, when dollar imputations are assigned for nonreporting, total wage and salary income approximates independently derived estimates.

A study which attempts to adjust the CPS data for underreporting and to impute government "in-kind" transfer program benefits (such as food stamps, Medicare, and subsidized housing) to families in the survey has been prepared by the Congressional Budget Office (CBO).[7] This represents one attempt to measure and study the effects of adjusting for underreporting of money income and the inclusion of nonmoney transfer payments on the size distribution of income and poverty counts. Although the procedures used by the CBO provide one approach, there continues to be a general lack of agreement of how to measure and value "in-kind" income. The interested reader may wish to consult the report of a governmental interagency task force which discusses many of these issues.[8]

In March 1980, for the first time, the CPS income supplement included a group of questions on the receipt of selected noncash benefits in 1979. The means-tested benefits covered in the survey were food stamps, free or reduced-price school lunches, public or subsidized housing, and Medicaid. Questions were also asked about the following nonmeans-tested benefits: Medicare, CHAMPUS or other military health care, employer-provided pension plans, and employer-provided group health insurance plans. Preliminary data from this survey are contained in Current Population Reports, Series P-23, No. 110, *Characteristics of Households and Persons Receiving Noncash Benefits: 1979.* A report presenting analysis and detailed data collected in the March 1981 survey is planned for release in the spring of 1982. An additional report, Technical Paper No. 50, *Alternative Methods for Valuing Selected In-Kind Transfer Benefits and Measuring Their Effect on Poverty,* focuses on the valuation of in-kind food, housing, and medical care transfers received by the low-income population.

INTRODUCTION OF 1980 CENSUS POPULATION CONTROLS

The estimation procedure used in this report involves the weighting of sample results to independent estimates of the population. These independent estimates are based on civilian noninstitutional population counts from the decennial censuses. Data published in the Consumer Income Series (P-60) for income years 1971 through 1979 were based on independent population estimates derived by updating the 1970 decennial census counts. Starting with the 1980 income data collected in the March 1981 Current Population Survey (CPS), independent estimates will be based on civilian noninstitutional population controls for age, race, and sex established by the 1980 decennial census.

The April 1980 census population count differed somewhat from the independent estimates for April 1980 derived by updating 1970 census population figures. The April 1980 census count of the civilian noninstitutional population was 222,420,441, compared with the updated 1970 census figure of 217,400,244 used for the CPS. Basically, this difference had little impact on income summary measures for 1979 (means and medians) and proportional measures (percent distributions and poverty rates), however, use of the new controls may have significant impact on the absolute numbers. Tables 1, 14, 15, 40, and 41 of this report show the effect of the new population controls on the numbers of households, families, and persons, and median incomes by comparing estimates for 1979 based on the 1980 population controls and the updated 1970 population controls.

---

[6] The accuracy of reported and imputed CPS earnings and property income is discussed in a paper, "Measuring the Impact on Income Statistics of Reporting Differences Between the Current Population Survey and Administrative Sources," by Roger A. Herriot and Emmett F. Spiers, published in American Statistical Association, *Proceedings of the Social Statistics Section,* 1975.

[8] *The Measure of Poverty,* A Report to Congress as Mandated by the Education Amendments of 1974, and in particular, see Technical Paper VII, "In-kind Income and the Measurement of Poverty," prepared by Janice Peskin, U.S. Department of Health and Human Services, April 1976.

RELATED REPORTS

Current Population Survey. Other data based on the Current Population Survey showing the distributions of households, families, unrelated individuals, and persons by income levels have been published in Series P-60 reports, Nos. 1 to 107, 109, and 114 to 130. Frequently, tables showing the cross-classification of income and other characteristics have been published in the Series P-20 and P-23 reports of the Bureau of the Census and in the Special Labor Force Reports of the Bureau of Labor Statistics. An advance report showing 1980 income data cross-classified by selected characteristics of families, persons, households, and the poverty population was issued as Series P-60, No. 127.

Projections of money income size distributions have been prepared from the March 1978 Current Population Survey and appear in Series P-60, No. 122, *Illustrative Projections of Money Income Size Distributions for Households: 1980 to 1995.* This report contains projections of income distributions for households by type of household and age of householder in terms of constant 1977 dollars. For each of the years, separate projected distributions are shown for selected annual growth rates. The tables also contain projected aggregate income distributions in addition to the projected number of units. The P-60, No. 122 report updates information contained in Series P-23, No. 47, *Illustrative Projections of Money Income Size Distributions for Families and Unrelated Individuals.*

Data on the educational attainment and income of men have been assembled from information collected in the Current Population Survey. These data appear in Series P-60, No. 92, *Annual Mean Income, Lifetime Income, and Educational Attainment of Men in the United States, for Selected Years: 1956 to 1972.* Included in the report are annual mean income and estimates of expected lifetime income in current dollars and in constant (1972) dollars, by educational attainment and age group, for all males and for male year-round full-time workers.

An historical and analytical summary of the income data collected in the Current Population Survey appears in Technical Paper No. 17, *Trends in the Income of Families and Persons in the United States: 1947 to 1964,* published in 1967. This report contains detailed tables showing income distributions in constant (1964) dollars, mean incomes, fifths, and Gini ratios of families and unrelated individuals cross-classified by various characteristics, for the United States, nonfarm, and farm populations. Similar data are shown for males and females classified by the amount of their own income and various personal characteristics.

Preliminary data on the receipt of noncash benefits in 1980 appear in Current Population Reports, Series P-60, No. 128, *Characteristics of Households Receiving Noncash Benefits: 1980.*

Decennial censuses. Income data collected in the 1970 Census of Population appear in a number of published reports. Basic distributions of families and unrelated individuals, by money income in 1969, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in 1970 Census of Population, Volume I, *Characteristics of the Population,* Chapter C, "General Social and Economic Characteristics." Statistics on income of persons 14 years old and over, households, families, and unrelated individuals in 1969, by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., are presented in 1970 Census of Population, Volume I, *Characteristics of the Population,* Chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, and standard metropolitan statistical areas of 250,000 inhabitants or more.

Detailed cross-classifications of income of families and persons by social and economic characteristics are presented in Volume II, *Subject Reports,* 8A, "Sources and Structures of Family Income"; 8B, "Earnings by Occupation and Education"; and 8C, "Income of the Farm-Related Population." Other statistics on income are included in volume II reports on other subjects and in some reports of the 1970 Census of Housing. Reports of the 1960, 1950, and 1940 censuses also contain various statistics on income.

An important difference in the data content included in the 1970 reports versus the corresponding reports from the 1960 census is the cross-classification of most of the 1970 data for the Black population and the population of Spanish origin.

Statistics on income in 1969 collected in the March 1970 CPS differ from data from the 1970 decennial census despite the fact that the same basic concept was used in both instances. First, the CPS data excluded the institutional population and most members of the Armed Forces living on post; these two groups were included in the census. Secondly, college students were generally enumerated at their own homes in the CPS and classified as family members, but were enumerated at their college residence in the census, usually as secondary individuals. Thirdly, the small group of CPS enumerators was more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Furthermore, approximately 60 percent of the households were self-enumerated in the 1970 census. Moreover, income data in the CPS were based on responses to separate questions on eight types of income, as well as responses to additional yes-no circles within four of these questions, whereas, in the census, only six questions were used.

In general, the level of income reported in the census is slightly higher than that reported in the CPS. Thus, median family income reported in the 1970 census was about $9,586, 2.8 percent below the comparable figure of $9,867 derived from the March 1970 CPS. For a more detailed discussion of these differences, see "Preliminary Evaluation of 1969 Money Income Data Collected in the 1970 Census of Population and Housing," by Mitsuo Ono, published in the American Statistical Association, *Proceedings of the Social Statistics Section, 1972.*

Income data collected in the 1980 Census of the Population for States and their subdivisions will become available in 1982. Current plans call for the published 1980 census

income data to be basically comparable with data presented in 1970.

Survey of Income and Education. The Survey of Income and Education (SIE) was a one-time survey of approximately 151,000 interviewed households nationwide, and was conducted in each State by the Bureau of the Census between April and July 1976. The purpose of the SIE was to provide estimates of the number of children 5 to 17 years old in poverty families in each State and the District of Columbia, as required by the Education Amendments of 1974.

In addition to collecting income data needed to determine poverty status, the opportunity presented by such a large survey was also used to gather some additional income-related information not usually collected in the Census Bureau's current income surveys. Such data include the receipt of food stamps, housing costs for homeowners and renters, and estimated cash assets. Also, information relevant to a number of Department of Health and Human Services (HHS) programs was collected, including data on English language proficiency, school enrollment, food stamp and public assistance recipiency, housing tenure, liquid asset holdings, child and adult disability, and health insurance coverage.

Income and poverty data from the SIE have been published in a series of four reports (one for each of the four major regions in the Nation): Current Population Reports, Series P-60, No. 110 (Northeast), No. 111 (North Central), No. 112 (South), and No. 113 (West). Each report presents data for the divisions and States within the region and for the total United States. Contained in the reports are income distributions and poverty data for families, persons, and unrelated individuals, cross-classified by a broad range of socioeconomic and demographic characteristics similar in content to data published from the Current Population Survey. The income tables include such characteristics as residence, housing tenure, age, race, size and type of family, number of children under 18 years old, number of earners, and occupation, work experience, and education of head. In addition to many of the above characteristics, the poverty tables also include information on reasons for not working, type of income, subsidized housing of renters, and living arrangements for unrelated individuals.

An additional report, Current Population Reports, Series P-60, No. 108, contains estimates of household money income in 1975 for the United States, regions, divisions, and States. The primary focus of this report is to show income distributions by housing tenure and type of residence, cross-classified by age of head and other key characteristics of households. Added emphasis has been placed on showing summary statistics; in addition to mean and median incomes, average household size and per capita income are shown along with each income distribution.

Another report was published from the SIE (Current Population Reports, Series P-20, No. 334) and contained data by selected characteristics, such as family status, migration, income, and poverty. Where appropriate, this report includes comparisons between SIE and 1970 census data.

A report of the evaluation study entitled "Assessment of the Accuracy of the Survey of Income and Education" has been submitted to Congress in accordance with section 822(b) of the Education Amendments of 1974. This report outlines principal conclusions from the reinterview study.

Data on income and poverty for calendar year 1975 from the SIE differ somewhat from those based on the CPS. In general, the estimates of median income from the SIE are slightly higher than comparable estimates from the CPS. For example, the median family income from the SIE was $14,094, compared with $13,719 from the CPS. Estimates of the number of persons below the poverty level by various characteristics from the SIE are generally lower than from the CPS. For example, there were 23,991,000 persons below the poverty level in 1975 from the SIE, compared with 25,877,000 from the CPS.

Although two major aspects of these surveys were the same, the money income concept and the questionnaire wording and design, there were some significant procedural differences which probably cause the income estimates in these surveys to differ. For a detail discussion of these differences, see the published SIE reports.

[r]BASED ON REVISED METHODOLOGY. [1]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEARS 1967 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES HOUSEHOLDS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 4. Summary Measures of Household Characteristics and Income in 1980—Selected Characteristics of Households, by Race and Spanish Origin of Householder

(HOUSEHOLDS AS OF MARCH 1981. FOR MEANING OF SYMBOLS, SEE TEXT)

SELECTED CHARACTERISTICS	ALL HOUSEHOLDS		PERSONS IN HOUSEHOLDS		AVERAGE NUMBER OF PERSONS PER HOUSEHOLD	AGGREGATE MONEY INCOME		MEAN HOUSEHOLD INCOME (DOL.)		INCOME PER HOUSEHOLD MEMBER (DOL.)
	NUMBER (THOUSANDS)	PERCENT DISTRIBUTION	NUMBER (THOUSANDS)	PERCENT DISTRIBUTION		AMOUNT (BILLIONS OF DOLLARS)	PERCENT DISTRIBUTION	VALUE	STANDARD ERROR

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 16. Families and Unrelated Individuals, by Total Money Income in 1947 to 1980 (In Current Dollars), Race, and Spanish Origin of Householder—Continued

(FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION												MEDIAN INCOME	
		TOTAL	UNDER $2,000	$2,000 TO $2,999	$3,000 TO $3,999	$4,000 TO $4,999	$5,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $24,999	$25,000 AND OVER	VALUE (DOL.)	INDEX[1]

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).
[2]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: BEGINNING WITH THE YEAR 1979, BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES.

FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 17. Families and Unrelated Individuals, by Total Money Income in 1947 to 1980 (In Constant 1980 Dollars), Race, and Spanish Origin of Householder—Continued

(FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION												MEDIAN INCOME	
		TOTAL	UNDER $2,000	$2,000 TO $2,999	$3,000 TO $3,999	$4,000 TO $4,999	$5,000 TO $7,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $24,999	$25,000 AND OVER	VALUE (DOL.)	INDEX[1]

[r]BASED ON REVISED METHODOLOGY.

NOTE: BEGINNING WITH THE YEAR 1979, BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES.

Table 18. Families, by Total Money Income in 1953 to 1980 (In Constant 1980 Dollars), Race of Householder, and Region—Continued

(FAMILIES AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

REGION, RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION: TOTAL	UNDER $2,500	$2,500 TO $4,999	$5,000 TO $7,499	$7,500 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 TO $34,999	$35,000 TO $49,999	$50,000 AND OVER	MEDIAN INCOME: VALUE (DOL.)	INDEX (1953=100)

[r]BASED ON REVISED METHODOLOGY.

NOTE: BEGINNING WITH THE YEAR 1979, BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES.

FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 19. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1980 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

rBASED ON REVISED METHODOLOGY.

NOTE: BEGINNING WITH THE YEAR 1979, BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES.

FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 19. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1980 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCEN-TRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH									
UNRELATED INDIVIDUALS--CON.

[r]BASED ON REVISED METHODOLOGY.

NOTE: BEGINNING WITH THE YEAR 1979, BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES.

FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 20. Summary Measures—Selected Family Characteristics, by Total Money Income in 1980, Race, and Spanish Origin of Householder

(FAMILIES AS OF MARCH 1981. FOR MEANING OF SYMBOLS, SEE TEXT)

TOTAL MONEY INCOME	NUMBER (THOUSANDS)	MEAN FAMILY INCOME (DOLLARS)	INCOME PER FAMILY MEMBER (DOLLARS)	AVERAGE NUMBER OF-- PERSONS PER FAMILY	RELATED CHILDREN PER FAMILY	RELATED CHILDREN PER FAMILY WITH CHILDREN	EARNERS PER FAMILY	RATIO OF NON-EARNERS TO EARNERS[1]	MEAN AGE OF HOUSEHOLDER	MEAN SCHOOL YEARS COMPLETED BY HOUSEHOLDER[2]

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and approximately 817,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The March 1981 CPS and March 1980 CPS employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population.

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan-nonmetropolitan residence. The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contain at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in a SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

This report contains data for the 20 largest SMSA's and their central cities; these figures are based on SMSA's as defined in the 1970 census. The counties (or towns and cities) which comprised these SMSA's in the 1970 census can be found in 1970 Census of Population, Vol. 1, *Characteristics of the Population, Part A,* "Number of Inhabitants."

Central cities. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) the additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

Geographic regions. The four major regions and nine Census divisions of the United States for which data are presented in this report represent groups of States as follows:

Northeast:

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Middle Atlantic: New Jersey, New York, and Pennsylvania.

North Central:

East North Central: Illinois, Indiana, Michigan, Ohio, and Wisconsin.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.

South:

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.

East South Central: Alabama, Kentucky, Mississippi, and Tennessee.

West South Central: Arkansas, Louisiana, Oklahoma, and Texas.

West:

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.

Pacific: Alaska, California, Hawaii, Oregon, and Washington.

North and West:

Northeast, North Central, and West combined.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Mobility status. The population of the United States 2 years old and over has been classified according to mobility status on the basis of a comparison of the place of residence of each individual at the time of the March 1981 CPS and place of residence 1 year earlier. Nonmovers are all persons who were living in the same house at the beginning and end of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or other investments which pay interest); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other

farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments, such as aid to families with dependent children and general assistance.

Dividends, interest (on savings or other investments which pay interest), income from estates or trusts, net rental income, or royalties include dividends from stockholdings or membership in associations, interest on savings or any type of investment which pays interest, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or worker's compensation include (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payments, and unemployment and worker's compensations.

Receipts not counted as income. Receipts from the following sources were not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrealted individuals include in the lowest income group (under $2,500) those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Some of these were living on income "in kind," saving, or gifts; or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons with income.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population (excluding patients or inmates in institutional quarters) in that group.

Index of income concentration. The index of income concentration (or Gini index) is a statistical measure of income equality ranging from 0 to 1. A measure of 0 indicates perfect inequality, i.e., one person having all the wealth and the rest having none. A measure of 1 indicates perfect equality, i.e., all persons having equal shares of the wealth. For a more detailed discussion see *Current Population Reports,* Series P-60, No. 123.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households.

Family. A family is a group of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family household. A family household is a household maintained by a family (as defined above), and any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there are included. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of family.)

Unrelated subfamily. An unrelated subfamily (formerly called a secondary family) is a group of two persons or more who are related to each other by birth, marriage, or adoption, but who are not related to the householder. The unrelated subfamily may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of unrelated subfamilies. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with data for 1968 (and beginning with census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or "married-couple" before the term "household," or "family," indicates that the household, or family, is maintained by a husband and wife.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary individual. A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily householders and inmates of institutions) who is not related to any other person in the household or group quarters. (See section on unrelated subfamily for slight change in coverage of secondary individuals in 1968.)

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Related persons and family members. In the classification of households by number of related persons, the person or couple who maintains the household or (housing unit) and all persons in the household related to them are included. In the classification of families by number of family members, all persons in the family are included. The number of family members is the same as the size of the family.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Number of earners. This number includes all persons in the household with $1 or more in wage and salaries or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Spanish origin. Persons of Spanish origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flashcard" listing ethnic origins. Persons of Spanish origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Spanish origin. It should be noted that persons of Spanish origin may be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week containing March 12, 1981 did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week containing March 12, 1981, had no employment but were available for work and (1) had engaged in any specific jobseeking activity *within the past 4 weeks*, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, who were attending school or were unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the specified week) are also classified as not in the labor force.

Paid labor force. Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week containing March 12, 1981, or were looking for work at the time and had last worked as wage and salary or self-employed worker.

Occupation. The data on occupation in tables 4, 5, 14, 15, and 21 refer to the civilian jobs held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week. The data on occupation in tables 38, 40, 41, 55, 56, and 57 refer to the job held longest during the income year.

The occupation groupings were derived from occupation subgroups delineated on the basis of the classification system used in the 1970 census. For information, see Bureau of the Census Technical Paper No. 26, *1970 Occupation and Industry Classification in Terms of Their 1960 Occupation and Industry Elements,* by John A. Priebe, Joan Heinkel, and Stanley Greene, July 1972.

Starting with the March 1972 survey, a supplemental question, "What were your most important activities or duties?" was added in the questionnaire and provided additional information for classifying persons by occupation. In general, the major impact of this supplemental question was to reclassify some persons from the "managers" classification into other types of occupations (primarily into the major occupation group of "craft and kindred workers").

The major occupation groups are combined into four divisions, as follows:

White-collar workers. Professional, technical, and kindred workers; managers and administrators, except farm; sales workers; and clerical and kindred workers.

Blue-collar workers. Craft and kindred workers; operatives, except transport; transport equipment operatives; and laborers, except farm.

Farm workers. Farmers and farm managers; and farm laborers and supervisors.

Service workers. Service workers, excluding private households; and private household workers.

The sequence in which these four divisions appears is not intended to imply that any division has a higher social or skill level than another.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round full-time worker. A year-round full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question, "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question, "What were you doing most of last year?"

Symbols. A dash (–) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol "X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1980 are based on civilian noninstitutional population controls for age, race, and sex established by the 1980 census. The base figures shown for 1971 to 1979 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years from 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census.

Computation of aggregate income by fifths. The data shown on aggregate income and dollar cutoffs for fifths (and top 5 percent) of families, ranked by size of their total money income, were calculated using two different procedures. In table 5, aggregate income and dollar cutoffs by fifths were derived directly from the Current Population Survey microdata file using actual income amounts.

In contrast, the data shown in table 19 were calculated using estimates from grouped data, as described below:

1. In calculating the aggregate income by fifths (and top 5 percent) of families using grouped data, the underlying aggregate income distribution by size of income was estimated initially. The aggregate income distributions were obtained by multiplying the number of units in each income interval by an estimated mean income for the corresponding income interval. For the top open-end interval ($75,000 and over), a Pareto distribution was fitted to the data in the interval just below the open-interval ($50,000 to $74,999). This fitted distribution was then extrapolated to estimate the number of families with incomes greater than $100,000. The mean income of families with greater than $100,000 was assumed to be $100,000 exactly.[1] The mean income for the $75,000 to $100,000 interval was estimated from the same fitted Pareto distribution. Below the "$75,000 and over" interval, a Pareto distribution was fitted to each separate income interval. If the absolute value of the slope parameter of the fitted Pareto distribution was greater than 1, the mean income of the interval was estimated from the fitted Pareto distribution. If the absolute value of the slope parameter was less than or equal to 1, the midpoint of the interval was used as the estimated mean of the interval.

2. The upper income levels (quantiles) of each fifth and the top 5 percent of families were estimated using either linear or Pareto interpolation depending upon the methods used to estimate the mean income in the interval in which the quantile was located (reference interval). After determining a particular quantile, the aggregate income above this quantile was calculated by estimating the aggregate income of the subinterval between the quantile and the next higher actual income interval and adding the result to the aggregate income above the reference interval. The aggregate income of the subinterval was determined using the method (either Pareto or linear interpolation) consistent with that used for estimating the quantile and the mean income of the reference interval. The aggregate incomes between the quantiles were determined by disaccumulating the aggregate income distribution.

The two methods for determining aggregate income and dollar cutoffs produce some slight discrepancies, particularly for the highest fifth and top 5 percent. For the current year, the data shown in table 5 are preferable, since no interpolation was involved.

For more information on the use of Pareto techniques, see "Estimation of Summary Measures of Income Size Distribution from Grouped Data," by Emmett F. Spiers, published in the American Statistical Association *Proceedings of the Social Statistic Section,* 1977.

Computation of constant dollar distributions. The adjustment for price change was made by converting the income distribution for families for each year (1947 to 1979) into 1980 dollars on the basis of the change in the Consumer Price Index. The indices used to make the constant dollar conversions are shown in table A-1. In choosing a procedure to make this conversion, two fundamental assumptions concerning income data were made: (1) price changes have the same proportional effect on various income levels and (2) the distribution within each income interval follows a Pareto distribution. The following procedure satisfies these two assumptions.

The first step required the accumulation of the income distribution starting with the highest income interval and cumulating to the lowest income interval. Next, the limits of each income interval were converted into 1980 dollars by adjusting them by a factor representing the change on the basis of that year's price index (1980 = 100). Finally, the number of families in each of the detailed class intervals were computed by logarithmic interpolation and then combined into broad income intervals.

The Consumer Price Index (CPI) is an index designed to measure changes in family purchasing power. While the CPI is a good measure of the changes in prices paid by the average family represented in the index (urban consumers), it is not necessarily a good measure of the changes in prices faced by consumers of different characteristics and income levels. Furthermore, the housing component of the CPI has been criticized for contributing to unduly large increases in the CPI over the past several years. These limitations should be noted when comparing income figures adjusted to constant dollars using the CPI since the same index was used for all families and all income levels.

[1] Individual income amounts greater than or equal to $100,000 are recorded as $99,999 in the Current Population Survey.

Table A-1. Consumer Price Index: 1947 to 1980

(1977 = 100)

Year	CPI	Year	CPI
1947	36.9	1964	51.2
1948	39.7	1965	52.1
1949	39.3	1966	53.6
1950	39.7	1967	55.1
1951	42.9	1968	57.4
1952	43.8	1969	60.5
1953	44.1	1970	64.1
1954	44.4	1971	66.8
1955	44.2	1972	69.0
1956	44.8	1973	73.3
1957	46.4	1974	81.4
1958	47.7	1975	88.8
1959	48.1	1976	93.9
1960	48.9	1977	100.0
1961	49.4	1978	107.7
1962	49.9	1979	119.8
1963	50.5	1980	136.0

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis (formerly the Office of Business Economics), Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. **Income definition.** The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. **Source of data.** The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employer's wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households.

   As discussed in the section, "Source and Reliability of the Estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable total money income aggregates and about 97 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

   For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see "Size Distribution of Family Personal Income: Methodology and Estimates for 1964" by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. **Population coverage.** The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post).

   In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

4. **Average income.** The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for households, families, unrelated individuals, or income recipients 15 years old and over.

Department of Agriculture farm income series. The farm income data are not directly comparable to that published by the Department of Agriculture for several reasons. The Department of Agriculture publishes two major series on income of the farm population: (1) personal income of the farm population and (2) realized net farm income of farm operators.

Because of the following reasons, the estimates of total money income of the farm population as published by the Bureau of the Census are not directly comparable to

estimates of personal income data of the farm population as published by the Department of Agriculture:

1. The estimates of total money income exclude the value of farm crops and other noncash income as well as income from capital gains, whereas estimates of personal income include both of these items.

2. Estimates of total money income include contributions for social insurance by farmers and farm laborers and contributions from persons living outside the household, while estimates of personal income exclude these two sources of income.

For reasons listed below, the estimates of farm self-employment income per person or per family as published by the Bureau of the Census differ from estimates of operators' realized net farm income per farm as published by the Department of Agriculture:

1. The estimates of farm self-employment income as published by the Bureau of the Census exclude nonmoney income such as crops grown for home consumption. However, these are included in the estimates of operators' realized net farm income per farm.

2. The estimates of the Bureau of the Census include in their universe, persons who do not live on a farm but who do have farm income, while the estimates of the Department of Agriculture exclude these people from their universe.

3. The agriculture series includes the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

The estimates of the Department of Agriculture differ from the estimates of the Bureau of the Census methodologically as well as conceptually. The Department of Agriculture estimates are based on data derived from farm, business, and governmental sources, while the Bureau of the Census estimates are compiled from data collected in sample surveys. As noted later, the latter estimates are subject not only to sampling variation but also to errors of response and nonreporting.

For a more detailed discussion of the concepts and methodology used in the Department of Agriculture estimates, see U.S. Department of Agriculture Handbook No. 365, *Major Statistical Series of the U.S. Department of Agriculture,* Vol. 3, "Gross and Net Farm Income," September 1969.

Federal income tax data. For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts, such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because single persons receiving less than $3,300 (less than $4,300 of 65 years old or over) and married couples receiving less than $5,400 ($6,400 if one spouse is 65 years old or over; $7,400 if both are 65 or over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data. Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the reasons listed below.

1. The earnings of the following groups are not covered by the earnings record data: many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers, and domestic servants.

2. Employees' earnings in excess of $25,900 per employer are not covered by the earnings record data.

3. Income other than earnings is not covered by the earnings record data.

4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, while the data presented in this report are obtained by household interviews.

COMPARABILITY OF ESTIMATES FROM MARCH 1981 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1981 CPS and the March 1980 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

The data for 1971 through 1980 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. The estimates for 1980 are based on civilian noninstitutional population established by the 1980 census. Starting in January 1972, 1970 census-based population controls, metropolitan resi-

dence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the overall national level is the introduction of population controls based on the 1970 census. The data for 1971 through 1979 are based on civilian noninstitutional population established by the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes. (See table 3, Current Population Reports, Series P-60, No. 91.) Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings, such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings,* Vol. 18, No. 8, February 1972.

The figures shown in this report for metropolitan areas are based on the standard metropolitan statistical areas (SMSA's) as defined on the basis of the 1970 census; those published prior to the March 1973 CPS referred to SMSA's as defined on the basis of the 1960 census. There are significant differences in the population classified as metropolitan from each of these definitions. For the 1970 definition of SMSA's, see U.S. Census of Population: 1970, *Number of Inhabitants,* PC(1)-A1, United States Summary.

Comparability of metropolitan and nonmetropolitan data from the March 1980 CPS with data for previous years. Changes in CPS design and procedures over the last several years have made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures should be avoided. Trends in metropolitan and nonmetropolitan population growth over the 1970-81 period should not be appreciably affected by the procedural changes.

The major revisions to the CPS sample design and estimation methods have involved the expansion of the number of sample units from 55,000 housing units to 68,000 occupied households. This incorporation of approximately 10,000 supplemental housing units into the March CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined subsequent to the introduction of the additional sample that the new inflating (weighting) procedures used for processing both the March 1977 and March 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. For the March 1979 CPS, another revision of the weighting process was introduced to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to March 1978 CPS levels.

The March 1980 CPS and March 1979 CPS metropolitan/nonmetropolitan population estimates also reflect other operational changes including the introduction of a coverage improvement sample designed to provide greater accuracy in survey estimation. The net effect of all changes in procedure was to increase the metropolitan area estimates. Research and detailed analysis of the impact of each procedural change on the population estimates is underway and the results will be issued in a forthcoming technical report.

Collection of Income and Work Experience Data

This report presents data showing income of persons and family householders with varying amounts of work experience. In the Surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. In order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together beginning with the March 1970 survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions. It should be noted that the proportions of year-round, full-time workers shown in the Series P-60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, *Special Labor Force Reports,* "Work Experience of the Population". The difference exists because the proportions are not based on exactly the same groups. The proportions presented in the Special Labor Force Reports relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P-60 reports relate to civilians who received income, including not only workers but also many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings.

Noninterviews, Nonresponses, and Allocations

In the March 1981 CPS, no interview was obtained for approximately 4 percent of the 68,500 households in the

sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or refused. In March 1981, the income data were incomplete for about 28 percent of the persons 15 years old and over. About 34 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March 1979 Current Population Survey. As part of the March 1979 CPS, the Bureau conducted an experiment in an effort to improve the reporting of income data. An alternative questionnaire was used on the remaining five rotation groups. The experimental questionnaire used more probing questions and inquired about more detailed sources of income. The results of the experiment and its subsequent impact on the estimates are discussed in the Current Population Reports, Series P-60, No. 123, page 12.

Modifications in collecting income data in the March 1980 Current Population Survey. A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" presented earlier.

Definition of the Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS."

UNDERREPORTING OF INCOME

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources, such as the Bureau of Economic Analysis, the Social Security Administration, and the Veterans Administration. The difference between the survey estimate and the independent estimate is termed "underreporting".

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA. A publication covering the general topic of income underreporting is *The Distribution of Personal Income, A Study of Statistics on the Size Distribution of Personal Income in the United States,* prepared by T. Paul Schultz for use by the Subcommittee on Economic Statistics of the Joint Economic Committee, Congress of the United States, 1964. For more details regarding the procedures for developing independent estimates of aggregate income, see "Appraisal of Basic Data Available for Constructing Income Size Distributions" by Selma F. Goldsmith, published in *Studies in Income and Wealth,* Volume 13, National Bureau of Economic Research, 1951; and "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-021, June 1973.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table A-2 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, and (4) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should also be kept in mind that the independent estimates are, themselves, subject to errors and conceptual differences for which no adequate adjustment is possible.

The data in table A-2 showing comparisons of CPS aggregate money income in 1979 with independent estimates do not correspond to the income data in this report. The information required to compute the independently estimated aggregates for 1980 were not available in time to be

included in this report. The magnitude of underreporting in 1980 is expected to be similar to that of 1979.

Comparisons of the 1980 CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 11 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 58 percent for interest income to only about 3 percent for wage and salary income. Both reported and allocated proportions of CPS aggregate incomes are shown in table A-2.

In 1979, 297.3 billion, or about 19 percent of the total aggregate income was allocated as a result of nonresponses to the income questions. About 14 percent of the 9.5 billion of the CPS public assistance or welfare income in 1979 was allocated, while about 30 percent of the 93.9 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 30 percent or above include interest and dividends.

The reasons for underreporting of income in the 1980 CPS and in other household surveys are many and varied. Some of the more important of these reasons include (1) respondent's overlooking income received (especially small amounts not regularly received), (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For more details on income underreporting in censuses and surveys, see (1) *Income Distribution in the United States* (a 1960 Census Monograph), by Herman P. Miller, Bureau of the Census, 1966; (2) *The Structure of Income,* by Irving B. Kravis, University of Pennsylvania, 1962; and (3) "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," cited earlier in this section.

Table A-2. Comparison of CPS Aggregate Money Income in 1979 With Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Allocated CPS Amounts

(For meaning of symbols, see text)

Source of income	Independent sources		CPS						CPS reported and allocated as a percent of CPS total			CPS as a percent of independent sources		
			Total		Reported		Allocated

Appendix B. Source and Reliability of the Estimates

SOURCE OF DATA

The estimates are based on data obtained annually in March 1948 through 1981 from the Current Population Survey (CPS) of the Bureau of the Census and from supplementary questions to the CPS. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member 14 years old and over in every sample household. In addition, supplementary questions are asked every March about money income and work experience for the previous year. In order to obtain more reliable data for the Spanish origin population, the March CPS sample was enlarged to include all households from the previous November sample which contained at least one sample person of Spanish origin. For this report, persons in the Armed Forces living off post or with their families on post are included.

The present CPS sample was initially selected from the 1970 census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. The current CPS sample is located in 629 areas comprising 1,133 counties, independent cities, and minor civil divisions in the Nation. In this sample, approximately 68,500 occupied households were eligible for interview. Of this number, about 3,000 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. In addition to the 68,500 there were also about 12,800 sample units which were visited but were found to be vacant or otherwise not to be interviewed.

The following table provides a description of some aspects of the CPS sample designs in use during the referenced data collection periods.

The estimation procedure used in this survey involved the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from decennial censuses; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The independent population estimates used in this report to obtain data for 1979 and 1980 are based on the 1980 decennial census. In earlier reports in this series (P-60), data for 1971 through 1979 were obtained using independent population estimates based on the 1970 decennial census. For more details on this change, see the section of the text, "Introduction of 1980 Census Population Controls." The estimation procedure for the data in the report also involved a further adjustment so that husband and wife of a household received the same weight.

Description of the March Current Population Survey

Time period	Number of sample areas[1]	Housing units eligible	
		Interviewed	Not interviewed
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	[2]333	33,500	1,500
1957 to 1959	330	33,500	1,500
1954 to 1956	230	21,000	500-1,000
1948 to 1953	68	21,000	500-1,000

[1]Beginning in May 1956, these areas were chosen to provide coverage in each State and the District of Columbia.

[2]Three sample areas were added in 1960 to represent Alaska and Hawaii after statehood.

Note: Prior to 1966, income data were collected from approximately 75 percent of occupied households in CPS.

RELIABILITY OF THE ESTIMATES

Since the CPS estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaire, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. The standard errors provided for this report primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of the respondents to provide correct information, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage, as compared with the level of the 1980 decennial census, is about 7 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. Ratio estimation to independent age-sex-race population controls partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the decennial census.

A coverage improvement sample was included in computing the estimates beginning in 1978 in order to provide coverage of mobile homes and new construction housing units which had no chance for selection under the 461 area CPS design. This sample is composed of approximately 450 sample household units which represent 237,000 occupied mobile homes and 600,000 new construction housing units. These new construction units are composed of those units where building permits were issued prior to January 1970 and construction was not completed by the time of the 1970 census (i.e., April 1970). The extent of other sources of housing undercoverage is unknown but believed to be small. The inclusion of this coverage improvement sample in the CPS does not have a significant effect on the estimates.

In most cases the questionnaire entries for income are based on the memory or knowledge of one person, usually the wife. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept. See also the section entitled "Underreporting of Income."

Comparability with other data. In using metropolitan and nonmetropolitan data, particular care should be exercised in comparing estimates from 1977 and later years to each other and to those from earlier years. Methodological and sample design changes have occurred in these recent years resulting in relatively large differences in the metropolitan and nonmetropolitan area estimates. Caution should also be used in comparing estimates for 1980, in which 1980 census-based population controls were used, with those for years 1971 through 1979 in previous reports, in which 1970 census-based population controls were used. The 1979 estimates in tables 1, 14, 15, 40, and 41 were revised, however, so that comparisons between 1980 and 1979 could be consistently made. This change in population controls had relatively little impact on summary measures such as means, medians, and percent distributions, but may have a significant impact on absolute numbers. For example, use of 1980-based population controls resulted in a 2-percent increase in the number of families and households. (For further details about the effect of the new population controls, see the section "Introduction of 1980 Census Population Controls.")

Estimation of median incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto interpolation or linear interpolation. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 and 1980 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families and households. (That is where the width of the income interval containing the estimate is greater than $2,500.) Estimates of median income for 1976, 1977, and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families and households. (That is where the width of the income interval containing the estimate is greater than $1,000.) All other estimates of median income and associated standard errors for 1976 through 1980 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Thus, caution must be exercised when comparing median incomes above $12,000 for persons or $18,000 for families and households for different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear inter-

polation, see Series P-60, No. 114, *Money Income in 1976 of Families and Persons in the United States.*

Sampling variability. The standard errors given in tables B-1 through B-4 are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common types of hypotheses are 1) the population parameters are identical or 2) they are different. An example of this would be comparing the mean annual income of men versus the mean annual income of women. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the parameters are different when, in fact, they are identical. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better, and most have passed a hypothesis test at the 0.05 level of significance or better. This means that, for most differences cited in the text, the estimated difference between parameters is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference between parameters is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison will be qualified in some way; e.g., by use of the phrase "some evidence."

Note when using small estimates. Summary measures (such as means, medians, and percent distributions) are shown when the base is 75,000 or greater. Because of the large standard errors involved there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for the corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in tables B-1 through B-4 are approximations to standard errors of various estimates for households, families, unrelated individuals, and persons in the United States. Estimated standard errors for specific characteristics cannot be obtained from tables B-1 through B-4 without the use of the factors in table B-5. The factors in table B-5 must be applied to the generalized standard errors in order to adjust for the combined effect of sample design and estimating procedure on the value of the characteristic. Standard errors for intermediate values not shown in the generalized tables of standard errors may be approximated by linear interpolation. Standard errors of estimated means and medians are provided in the detailed tables.

Two parameters (denoted "a" and "b") are used to calculate standard errors for each type of characteristic; they are also presented in table B-5. These parameters were used to calculate the standard errors in tables B-1 through B-4 and to calculate the factors in table B-5. They also may be used to directly calculate the standard errors for estimated numbers and percentages. Methods for direct computation are given in the following sections.

Standard errors of estimated numbers. The approximate standard error, σ_x, of an estimated number can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f\sigma \qquad (1)$$

where f is the appropriate factor from table B-5, and σ is the standard error on the estimate obtained by interpolation from tables B-1 or B-3. Alternatively, standard errors may be approximated by using formula (2), from which the standard errors were calculated in tables B-1 and B-3. Use of this formula will provide more accurate results than the use of formula (1).

$$\sigma_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table B-5 associated with the particular type of characteristic.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameters from table B-5 indicated by the numerator. The approximate standard error, $\sigma_{(x,p)}$, of an estimated percentage can be obtained by use of the formula

$$\sigma_{(x,p)} = f\sigma \qquad (3)$$

Table B-1. Standard Errors of Estimated Numbers of Households, Families, Unrelated Individuals, and Persons: 1966 to 1980

(Total, White, and Spanish Origin)

(Numbers in thousands)

Size of estimate	Standard error[1]	Size of estimate	Standard error[1]
75	11	7,500	111
100	13	10,000	127
250	21	15,000	154
500	29	25,000	192
1,000	41	50,000	247
2,000	58	100,000	269
3,000	71	125,000	243
5,000	91	160,000	139

[1]These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

Table B-2. Standard Errors of Estimated Percentages of Households, Families, Unrelated Individuals, and Persons: 1966 to 1980

(Total, White, or Spanish Origin)

Base of estimated percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.1	3.3	4.5	6.6	7.6
100	1.8	2.9	3.9	5.7	6.6
250	1.2	1.8	2.5	3.6	4.1
500	0.8	1.3	1.8	2.5	2.9
1,000	0.6	0.9	1.2	1.8	2.1
2,000	0.4	0.6	0.9	1.3	1.5
3,000	0.3	0.5	0.7	1.0	1.2
5,000	0.3	0.4	0.6	0.8	0.9
7,500	0.2	0.3	0.5	0.7	0.8
10,000	0.2	0.3	0.4	0.6	0.7
15,000	0.15	0.2	0.3	0.5	0.5
25,000	0.12	0.2	0.2	0.4	0.4
50,000	0.08	0.13	0.2	0.3	0.3
100,000	0.06	0.09	0.12	0.2	0.2
125,000	0.05	0.08	0.11	0.2	0.2
160,000	0.05	0.07	0.10	0.14	0.2

[1]These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

In this formula, f is the appropriate factor from table B-5 and σ is the standard error on the estimate from table B-2 or B-4. Alternatively, standard errors may be approximated by using formula (4), from which the standard errors in tables B-2 and B-4 were calculated. Use of this formula will provide more accurate results than use of formula (3).

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot p(100-p)} \qquad (4)$$

Here x is the size of the subclass of persons or families and unrelated individuals which is the base of the percentage, p is the percentage ($0<p<100$), and b is the parameter in table B-5 associated with the particular type of characteristic in the numerator of the percentage.

Illustration of the use of standard error tables. Table 9 shows that in 1980 there were 8,847,000 Black households in the United States. Table B-5 indicates that the appropriate "a" and "b" parameters to use in calculating a standard error for this estimate are a = -0.000087 and b = 1,255. Using formula (2)[1], the approximate standard error is

$$\sqrt{(-0.000087)\ (8{,}847{,}000)^2 + 1{,}255\ (8{,}847{,}000)} = 66{,}000$$

The 68-percent confidence interval as shown by the data is from 8,781,000 to 8,913,000. Therefore, a conclusion that

[1] In this particular example, we must use formula (2). (See footnote 2 of table B-5.)

Table B-3. Standard Errors of Estimated Numbers of Households, Families, Unrelated Individuals, and Persons: 1966 to 1980 (Black and/or Other Races)

(Numbers in thousands)

Size of estimate	Standard error[1]	Size of estimate	Standard error[1]
75	12	3,000	69
100	14	5,000	85
250	22	7,500	95
500	30	10,000	99
1,000	42	15,000	90
2,000	58	20,000	44

[1] These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

Table B-4. Standard Errors of Estimated Percentages of Households, Families, Unrelated Individuals, and Persons: 1966 to 1980 (Black and/or Other Races)

Base of estimated percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.2	3.4	4.7	6.8	7.9
100	1.9	3.0	4.1	5.9	6.8
250	1.2	1.9	2.6	3.8	4.3
500	0.9	1.3	1.8	2.7	3.1
1,000	0.6	0.9	1.3	1.9	2.2
2,000	0.4	0.7	0.9	1.3	1.5
3,000	0.4	0.5	0.8	1.1	1.3
5,000	0.3	0.4	0.6	0.8	1.0
10,000	0.2	0.3	0.4	0.6	0.7
15,000	0.2	0.2	0.3	0.5	0.6
20,000	0.14	0.2	0.3	0.4	0.5

[1] These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

Table B-5. "a" and "b" Parameters and "f" Factors for Calculating Approximate Standard Errors of Estimated Numbers and Percentages of Households, Families, Unrelated Individuals, and Persons: 1966 to 1980

Type of characteristic[1]	Parameter		f factor
	a	b	
INCOME			
Number of households, families, or unrelated individuals:			
Total or White	-0.000010	1,721	1.00
Black and/or other races	-0.000089	1,876	1.00
Spanish origin	-0.000014	2,420	1.19
Number of farm households, families, or unrelated individuals	-0.000011	3,167	1.36
Number of persons:			
Total or White	-0.000009	1,885	1.05
Black and/or other races	-0.000077	2,155	1.07
Spanish origin	-0.000020	3,000	1.32
Number of farm persons	-0.000012	3,600	1.45
NONINCOME			
Number of households, families, or unrelated individuals:			
Total or White	-0.000010	1,389	0.90
Black and/or other races	-0.000087	1,255	[2]0.82
Spanish origin	-0.000020	1,422	0.91
Number of farm households, families, or unrelated individuals	-0.000011	2,556	1.22
Number of persons:			
Total or White	-0.000017	3,500	1.43
Black and/or other races	-0.000210	5,020	1.64
Spanish origin	-0.000026	4,432	1.60
Number of persons in households or families:			
Total or White:			
Some household or family members	-0.000017	3,500	1.42
All household or family members	-0.000020	4,253	1.57
Black and/or other races:			
Some household or family members	-0.000210	5,020	1.64
All household or family members	-0.000308	7,402	1.99
Spanish origin:			
Some household or family members	-0.0000256	4,432	1.61
All household or family members	-0.0000441	8,917	2.28

[1]For metropolitan and nonmetropolitan areas, multiply the "a" and "b" parameters by 2. To obtain the appropriate "f" factor, multiply by 1.4. For estimates from Federal Region VIII (Denver), multiply the "a" and "b" parameters by 0.5. To obtain the appropriate "f" factor, multiply by 0.7.

[2]The "f" factor for Black households, families, or unrelated individuals for nonincome characteristics is to be used for calculating standard errors of percentages only. For standard errors of estimated numbers, the appropriate "a" and "b" parameters and formula (2) must be used.

Note: For years prior to 1966, a standard error estimate computed with the "a" and "b" parameters or with the "f" factor must be adjusted. For 1947 to 1954, multiply the standard error by 1.8; for 1955 to 1964, multiply by 1.4; and for 1965 multiply by 1.2.

the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude that the average estimate derived from all possible samples lies within the interval 8,715,000 to 8,979,000 (using twice the standard error) with 95 percent confidence.

Table 9 also shows that 24.8 percent of these 8,847,000 Black households had incomes of $20,000 or more in 1980. Table B-4 indicates the standard error on this percentage to be 0.6 percentage points. Using formula (3) with the appropriate "f" factor from table B-5, the approximate standard error is (1.0) (0.6) = 0.6 percentage points. (Note that formula (4) also gives the same value for the standard error.)

Consequently, the 68-percent confidence interval as shown by these data is from 24.2 to 25.4 percent, and the 95-percent confidence interval is from 23.6 to 26.0 percent.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2 - 2\rho\sigma_x\sigma_y} \qquad (5)$$

where σ_x and σ_y are the standard errors of the estimates x and y, and ρ represents the correlation between the two estimates. The estimates can be of numbers, percents, ratios, etc. For estimates of year-to-year change for income characteristics (e.g., number of families with income less than $5,000), use the correlations given in table B-6. For all other differences, ρ should be assumed zero.

Table B-6. Year-to-Year Correlation Coefficients for Income Characteristics: 1953 to 1980

Characteristic	Families or unrelated individuals	Persons
Total, White, Black, and/or other races....	0.35	0.30
Spanish origin.....	0.55	0.45

Note: These correlations are for comparisons of consecutive years. For comparisons of nonconsecutive years, all correlations should be assumed zero. For comparisons involving years prior to 1953, all correlations are zero.

Illustration of the computation of the standard error of a difference. Table 14 shows that the median income in current dollars for Black families in 1980 was $12,674 and that in 1979 based on 1980 census population controls it was $11,574. The estimates of the standard errors of these medians (see following section) are $273 and $211, respectively. Therefore, the standard error of the estimated difference of $1,100 is

$$\sqrt{(273)^2 + (211)^2 - 2\,(.35)\,(273)\,(211)} = 281$$

This means that the 68-percent confidence interval on the difference of $1,100 as shown by these data is from $819 to $1,381. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. The corresponding 95-percent confidence interval is from $538 to $1,662. Since this interval does not contain zero, we can conclude with 95-percent confidence that income for Black families was higher in 1980 than in 1979.

Standard error of a ratio. Certain mean values for persons in families or households shown in the tables were calculated as the ratio of two numbers. For example, the mean number of persons per family or household is calculated as

$$\frac{x}{y} = \frac{\text{total number of persons in families or households}}{\text{total number of families or households}}$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families or households of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families or households.

Case 1: There is at least one person having the characteristic in every family or household of the class: as for example, the mean number of persons per family or the mean number of persons per family with a male householder. For ratios of this kind, the standard errors are approximated by the following formula:

$$\sigma_{\left(\frac{x}{y}\right)} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{\sigma_y}{y}\right)^2 + \left(\frac{\sigma_x}{x}\right)^2 - 2\rho\left(\frac{\sigma_x}{x}\right)\left(\frac{\sigma_y}{y}\right)\right]} \qquad (6)$$

The standard error of the estimated number of families or households, σ_y, and the standard error of the estimated number of persons with the characteristics in those families or households, σ_x, may be calculated by the methods described above. In formula (6), ρ represents the correlation coefficient between the numerator and the denominator of the estimate. In the above examples, and for other ratios of this kind, use 0.7 as an estimate of ρ.

Case 2: The number of persons having the characteristic in a given family or household may be 0, 1, 2, 3, or more: for example, the mean number of persons under 18 years of age per household. For ratios of this kind the standard error is approximated by formula (6) but ρ is assumed to be zero. If ρ is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio.

STANDARD ERRORS OF ESTIMATED MEANS AND MEDIANS

Estimated standard errors are provided for the means and medians of the published income distributions, and do not need to be calculated by the user. However, because of the approximations used in developing the formula used to estimate the standard error of the mean, the standard error reported for this statistic will generally be an underestimate. Since some users may wish to combine two or more income distributions and compute means and medians for the combined distribution, the following sections are provided to enable the user to calculate standard errors for these statistics.

Estimating the standard error of the mean. The standard error of a mean can be approximated by formula (7). Because of the approximations used in developing formula (7), an estimate of the standard error of the mean obtained from that formula will generally underestimate the true standard error. The formula used to estimate the standard error of a mean is

$$s_{\bar{x}} = \sqrt{\frac{b}{y}\,s^2} \qquad (7)$$

where y is the size of the base and b is a parameter which depends on the sample size, the sample design, the estimation procedure, and the type of characteristic. The b values are given in table B-5. The variance, s^2, is given by formula (8):

$$s^2 = \sum_{i=1}^{c} p_i \bar{x}_i^2 - \bar{x}^2 \qquad (8)$$

where $\bar{x}$ is the mean of the distribution.

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of households whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i = (Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group i.

$\bar{x}_i$ is assumed to be the most representative value for the characteristic for households in group i. Group c is open-ended, i.e., no upper interval boundary exists. For this group an approximate average value is $\bar{x}_c = \frac{3}{2} Z_{c-1}$.

When two or more distributions are combined, the mean of the combined distribution is:

$$\bar{x} = \frac{1}{y} \sum_j \bar{x}_j y_j$$

where $\bar{x}_j$ is the mean of the jth distribution, y_j is the base of jth distribution, and $y = \sum_j y_j$. This mean must be computed by the user.

Confidence interval and standard error of a median. The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for measuring the reliability of an estimated median is to determine a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.) The following procedure may be used to estimate the 68-percent confidence limits and hence the standard error of a median based on sample data.

1. Determine, using the standard error tables and factors or formula (4), the standard error of the estimate of 50 percent from the distribution;
2. Add to and subtract from 50 percent the standard error determined in step (1);
3. Using the distribution of the characteristic, calculate the values from the distribution corresponding to the two points established in step (2). These values will be the limits for the 68-percent confidence interval;
4. Divide the difference between the two points determined in step (3) by two to obtain the standard error of the median.

For calculation of the confidence interval in step (3) use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise. A 95-percent confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step (1).

The formulae used to implement step (3) for Pareto or linear interpolation are:

$$\text{Pareto:} \quad x_{pN} = A_1 \exp\left[\ln\left(\frac{pN}{N_1}\right) \ln\left(\frac{A_2}{A_1}\right) \Big/ \ln\left(\frac{N_2}{N_1}\right)\right] \qquad (9)$$

$$\text{Linear:} \quad x_{pN} = \frac{N_1 - pN}{N_1 - N_2} (A_2 - A_1) + A_1 \qquad (10)$$

where N = total number of households, families, or persons in the distribution.

x_{pN} = estimated income for which the number pN ($0<p<1$) of households, families, or persons in the distribution have larger incomes. For the purposes of calculating the confidence interval, p takes on the two values in step (2). Note that the median can be approximated by using p = .50 in the formulae.

A_1 and A_2 = the estimated incomes which are the lower and upper bounds, respectively, on the interval in which x_{pN} falls.

N_1 and N_2 = the estimated number of households, families, or persons with incomes greater than A_1 and A_2, respectively.

exp refers to the exponential function.

ln refers to the natural logarithm function.

It should be noted that a mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

Since the new, more detailed income intervals used in this report have $2,500 increments up to $40,000, and since Pareto interpolation will only be used when a median income falls in an interval of width larger than $2,500 (beginning with March 1980 CPS), this type of interpolation will now be needed very infrequently (i.e., only in cases where the estimated median income exceeds $40,000). For this reason an illustration of the use of Pareto interpolation in computing a confidence interval for a median has been omitted. Illustrations of this procedure can be found, however, in the Source and Reliability section of Current Population Reports, Series P-60, No. 123.

Illustration of the computation of a confidence interval and the standard error for a median using linear interpolation. Table 23 of this report shows that the median income in 1980 for all families is estimated to be $21,022. Table 23 also shows that the base of the distribution from which this median was determined is 60,309,000.

1. Using formula (4), the standard error of 50 percent on a base of 60,309,000 is about 0.3 percentage points.

2. To obtain a 68-percent confidence interval on the estimated median, add to and subtract from 50 percent the standard error found in step (1). This yields percent limits of 49.7 and 50.3.

3. From table 23, the income of 31,974,000 (53.0 percent) of these families was at least $20,000 and the income of 27,523,000 (45.6 percent) of these families was at least $22,500.

   Thus, the entire 68-percent confidence interval falls in the income interval $20,000 to $22,499. Therefore, the median income and the upper and lower limits on the confidence interval are to be calculated using linear interpolation. Using formula (10), the lower limit on the estimate is found to be about

$$\frac{31{,}974{,}000 - (0.503)\,(60{,}309{,}000)}{31{,}974{,}000 - 27{,}523{,}000}\,(\$22{,}500 - \$20{,}000) + \$20{,}000 = \$20{,}920$$

   Similarly, the upper limit is found by linear interpolation to be about

$$\frac{31{,}974{,}000 - (0.497)\,(60{,}309{,}000)}{31{,}974{,}000 - 27{,}523{,}000}\,(\$22{,}500 - \$20{,}000) + \$20{,}000 = \$21{,}124$$

   Thus, the 68-percent confidence interval on the estimated median is from $20,920 to $21,124.

4. The standard error of the median is, therefore, ($21,124–$20,920)/2, i.e., $102. (*Note:* Published standard errors are calculated by the same method as above. However, a different standard error may be obtained because of rounding-off errors; e.g., for the above illustration, table 23 gives a standard error of $90.)

18. LINE NUMBER

19. What was . . . doing most of LAST WEEK –
Working
Keeping house
Going to school
or something else?

Working *(Skip to 20A)* . . . . WK ○
With a job but not at work . . J ○
Looking for work . . . . . LK ○
Keeping house . . . . . H ○
Going to school . . . . . S ○
Unable to work *(Skip to 24)* . . U ○
Retired . . . . . R ○
Other *(Specify)* . . . . . OT ○

20C. Does . . . USUALLY work 35 hours or more a week at this job?
Yes ○ **What is the reason . . . worked less than 35 hours LAST WEEK?**
No ○ **What is the reason . . . USUALLY works less than 35 hours a week?**
(Mark the appropriate reason)

Slack work . . . . . ○
Material shortage . . . . . ○
Plant or machine repair . . . . . ○
New job started during week . . . ○
Job terminated during week . . . ○
Could find only part-time work . ○
Holiday *(Legal or religious)* . . . . . ○
Labor dispute . . . . . ○
Bad weather . . . . . ○
Own illness . . . . . ○
On vacation . . . . . ○
Too busy with housework, school, personal bus., etc. . . . ○
Did not want full-time work . . . ○
Full-time work week under 35 hours . . ○
Other reason *(Specify)* . . . . . ○

(Skip to 23 and enter job worked at last week)

20. Did . . . do any work at all LAST WEEK, not counting work around the house? *(Note: If farm or business operator in hh., ask about unpaid work)*
Yes ○ No ○ *(Go to 21)*

20A. How many hours did . . . work LAST WEEK at all jobs?
49+ ○ *(Skip to item 23)*
1–34 ○ *(Go to 20C)*
35–48 ○ *(Go to 20D)*

20B. INTERVIEWER CHECK ITEM

20D. Did . . . lose any time or take any time off LAST WEEK for any reason such as illness, holiday or slack work?
Yes ○ **How many hours did . . . take off?**

(Correct 20A if lost time not already deducted; if 20A reduced below 35, correct 20B and fill 20C; otherwise, skip to 23.)

No ○

20E. Did . . . work any overtime or at more than one job LAST WEEK?
Yes ○ **How many extra hours did . . . work?**

(Correct 20A and 20B as necessary if extra hours not already included; skip to 23.)

No ○
(Skip to 23)

21. *(If J in 19, skip to 21A.)* Did . . . have a job or business from which he/she was temporarily absent or on layoff LAST WEEK?
Yes ○ No ○ *(Go to 22)*

21A. Why was . . . absent from work LAST WEEK?
Own illness . . . . . ○
On vacation . . . . ○
Bad weather . . . . ○
Labor dispute . . . ○
New job to begin within 30 days ○ *(Skip to 22B and 22C2)*
Temporary layoff *(Under 30 days)* ○
Indefinite layoff *(30 days or more or no def. recall date)* ○ *(Skip to 22C3)*
Other *(Specify)* . . ○

21B. Is . . . getting wages or salary for any of the time off LAST WEEK?
Yes . . . . . ○
No . . . . . ○
Self-employed ○

21C. Does . . . usually work 35 hours or more a week at this job?
Yes ○
No ○
(Skip to 23 and enter job worked last week)

22. *(If LK in 19, Skip to 22A.)* Has . . . been looking for work during the past 4 weeks?
Yes ○ No ○ *(Go to 24)*

22A. What has . . . been doing in the last 4 weeks to find work? *(Mark all methods used; do not read list.)*
Checked with –
pub. employ. agency ○
pvt. employ. agency ○
employer directly . . ○
friends or relatives . . ○
Placed or answered ads. . . . . ○
Nothing *(Skip to 24)* . . . . . ○
Other *(Specify in notes, e.g., CETA, union or prof. register, etc.)* . . . . . ○

22B. Why did . . . start looking for work? Was it because . . . lost or quit a job at that time *(pause)* **or was there some other reason?**
Lost job . . . . . ○
Quit job . . . . . ○
Left school . . . . . ○
Wanted temporary work . . . ○
Other *(Specify in notes)* . . ○

22C. 1) How many weeks has . . . been looking for work?
2) How many weeks ago did . . . start looking for work?
3) How many weeks ago was . . . laid off?

22D. Was . . . looking for full-time or part-time work?
Full ○ Part ○

22E. Is there any reason why . . . could not take a job LAST WEEK?
Yes ○
Already has a job . . . . ○
Temporary illness . . . . ○
Going to school . . . . . ○
Other *(Specify in notes)* ○
No ○

22F. When did . . . last work at a full-time job or business lasting 2 consecutive weeks or more?
Within last 12 months *(Specify)* . . . . . ○
(Month)
One to five years ago . . . . . ○
More than 5 years ago . . . . . ○
Nev. worked full-time 2 wks. or more ○
Never worked at all . . . . . ○
(SKIP to 23. If layoff entered in 21A, enter job, either full or part time, from which laid off. Else enter last full time civilian job lasting 2 weeks or more, or "never worked.")

24. INTERVIEWER CHECK ITEM *(Rotation number)*
First digit of SEGMENT number is:
○ 2, 3, 4, 6, 7, or 8 *(End questions)*
○ 1 or 5 *(Go to 24A)*

24A. When did . . . last work for pay at a regular job or business, either full- or part-time?
Within past 12 months ○
1 up to 2 years ago . . . ○
2 up to 3 years ago . . . ○
3 up to 4 years ago . . . ○
4 up to 5 years ago . . . ○ *(Go to 24B)*
5 or more years ago . . ○
Never worked . . . . . ○ *(Skip to 24C)*

24B. Why did . . . leave that job?
Personal, family *(Incl. pregnancy)* or [illegible] ○
Health . . . . . ○
Retirement or old age . . . . . ○
Seasonal job completed . . . . . ○
Slack work or [illegible] conditions . . . ○
Temporary [illegible] . . . . . ○
Seasonal job completed . . . ○
Unsatisfactory work arrangements *(Hours, pay, etc.)* ○
Other . . . . . ○

24C. Does . . . want a regular job now, either full- or part-time?
Yes . . . . . ○
Maybe – it depends *(Specify in notes)* ○ *(Go to 24D)*
No . . . . . ○
Don't know . . . . . ○ *(Skip to 24E)*

24D. What are the reasons . . . is not looking for work? *(Mark each reason mentioned)*
- Believes no work available in line of work or area ○
- Couldn't find any work . . . . . ○
- Lacks nec. schooling, training, skills or experience . . . ○
- Employers think too young or too old . . . . . ○
- Other pers. handicap in finding job ○
- Can't arrange child care . . . . . ○
- Family responsibilities . . . . . ○
- In school or other training . . . . . ○
- Ill health, physical disability . . . . . ○
- Other *(Specify in notes)* . . . . . ○
- Don't know . . . . . ○

24E. Does . . . intend to look for work of any kind in the next 12 months?
Yes . . . . . ○
It depends *(Specify in notes)* ○
No . . . . . ○
Don't know . . . . . ○
(If entry in 24B, describe job in 23 otherwise, end questions.)

25. INTERVIEWER CHECK ITEM *(Rotation number)*
First digit of SEGMENT number is:
○ 2, 3, 4, 6, 7, or 8 *(End questions)*
○ 1 or 5 *(Go to 25A)*

25A. How many hours per week does . . . USUALLY work at this job?

25B. Is . . . paid by the hour on this job?
Yes ○ *(Go to 25C)*
No ○ *(Skip to 25D)*

25C. How much does . . . earn per hour?
Dollars Cents
$. ¢

(Ask 25D)

25D. How much does . . . USUALLY earn per week at this job BEFORE deductions? Include any overtime pay, commissions, or tips usually received.
$

(End questions)

OFFICE USE ONLY

INTRODUCTION
(Optional)

We have just completed the questions about employment and unemployment. Each March, the Census Bureau also collects information about the economic situation of Americans and their families for the previous year. I am going to ask these questions now. We don't expect all answers to be perfect, but please think about each question and answer it the best you can.

(Skip to 53)

33. During 1980 in how many weeks did . . . work even for a few hours? Include paid vacation and sick leave as work.
(Mark weeks and Go to 34) →

34. INTERVIEWER CHECK ITEM
Number of weeks in item 33 is:
1–49 ○ *(Skip to 36)*
50–51 ○ *(Ask 35)*
52 ○ *(Skip to 39)*

35. Did . . . lose any full weeks of work in 1980 because he/she was on layoff from a job or lost a job?
Yes ○ No ○ *(Skip to 39)*

36. You said . . . worked about *(entry in Item 33)* weeks in 1980. How many of the remaining *(52 minus entry in Item 33)* weeks was . . . looking for work or on layoff from a job?
(Mark weeks and ask 37) →
None ○ *(Skip to 38)*

37. Were the *(entry in Item 36)* weeks . . . was looking for work *(or on layoff)* all in one stretch?
Yes – 1 stretch ○
No – 2 stretches ○
No – 3+ stretches ○
(Go to 38)

(If the entries in Items 33 and 36, add to 52 weeks, skip to Item 39. If not, ask 38)

38. What was . . . doing most of the remaining weeks in 1980? Was he/she . . . *(Read list until "Yes" reply is received.)*
- Ill or disabled and unable to work ○
- Taking care of home or family . . . . ○
- Going to school . . . . ○
- In Armed Forces . . . . ○
- Retired . . . . . ○
- Doing something else ○

(Go to Item 39)

39. For how many employers did . . . work in 1980? If more than one at same time, only count it as one employer.
1 ○ *(Skip to 41)*
2 ○
3+ ○
(Ask 40)

40. Did . . . look for work between jobs in 1980?
Yes ○ No ○

41. In the weeks that . . . worked, how many hours did . . . usually work per week?
(Mark hours) →
(Go to 42)

42. INTERVIEWER CHECK ITEM
Number of weeks in item 41 . . .
34 ○ *(Skip to 43)*
○ *(Ask 43)*

43. Did . . . work more than 35 hours for at least one week in 1980? Include time off with pay because of holidays, vacation, days off, or sickness.
Yes ○ *(Ask 44)*
No ○ *(Skip to 46)*

44. How many weeks did . . . work less than 35 hours in 1980?
(Mark weeks) →

45. What was the main reason . . . worked less than 35 hours per week?
- Could only find part time job. . . ○
- Wanted to work part time or could work only part time ○
- Slack work or material shortage ○
- Other . . . . . ○

(Ask 46)

46. What was . . .'s longest job in 1980? *(Compare with entry in CPS-1 Item 23)*
Same as item 23 or Armed Forces ○ *(Skip to 48A or 48B)*
Different from item 23 or item 23 blank . . . . . ○ *(Specify in 47A–47E)*

47A. For whom did . . . work?

47B. What kind of business or industry is this?

47C. What kind of work was . . . doing?

47D. What were . . .'s most important activities or duties?

47E. CLASS OF WORKER
- Private . . . . . P ○
- Federal Gov't. . F ○
- State Gov't. . . . S ○
- Local Gov't. . . . L ○

(Ask 48A)

Self-employment
Inc. { Yes . . . . . I ○ / No *(or farm)* SE ○
Without pay . . . WP ○ *(Skip to 49A)*

48A. How much did . . . earn from this employer before deductions during 1980?

48B. What was . . . net earnings from this business/farm after expenses during 1980?
Lost money

48C. Is this amount include all tips, bonuses, overtime pay or commissions . . . may have received?
No ○ *(Probe and make corrections to 48A)*

49A. Did . . . earn money from any other work he/she did during 1980?
Yes ○ No ○ *(Skip to 50A)*

49B. How much did . . . earn from:

Other employers?	His/her own business after expenses?	His/her farm after expenses?
Yes ○ No ○	Yes ○ No ○	Yes ○ No ○
$	$	$
000 111 222 333 444 555 666 777 888 999	000 111 222 333 444 555 666 777 888 999	000 111 222 333 444 555 666 777 888 999
	○ Lost money	○ Lost money

50A. INTERVIEWER CHECK ITEM Longest job *(Item 46)* is farmer?
Yes ○ No ○ *(Skip to 51A)*

50B. Other than the farm income we have already talked about, did . . . receive any income from agricultural work done for others, recreational services, or government farm programs other than loans?
Yes ○ *(Probe and make corrections to 48A or 49B)* No ○ *(Ask 51A)*

51A. During 1980 did . . . receive any unemployment compensation from the State or local government?
Yes ○ No ○ *(Skip to 52A)*
Any Supplemental Unemployment Benefits *(SUB)*? { Yes ○ / No ○
Any Union unemployment or strike benefits? { Yes ○ / No ○

OFFICE USE ONLY	INDUSTRY	OCCUPATION
00 11 22 33 44 55 66 77 88 99 Ref. ○	A ○ B ○ C ○ D ○ E ○ F ○ G ○ H ○ J ○ K ○ L ○ M ○	000 111 222 333 444 555 666 777 888 999 N ○ P ○ Q ○ R ○ S ○ T ○ U ○ V ○ W ○ X ○ Y ○ Z ○ Ref. ○

51B. How much did . . . receive in unemployment benefits during 1980?
$

52A. During 1980 did . . . receive any Worker's Compensation payments or other payments as a result of a job related injury or illness? *(Exclude sick pay and disability retirement)*
Yes ○ No ○ *(Skip to 53)*

52B. What was the source of these payments?
- State Workers Compensation . . . . ○
- Employer or employer's insurance ○
- Own insurance . . . . . ○
- Other . . . . . ○

52C. How much compensation did . . . receive during 1980?
$

53. Was . . . living in this house 1 year ago; that is, on March 1, 1980?
Yes ○ *(Skip to 55)* No ○

54. Where did . . . live on March 1, 1980?
A. Name of State, foreign country, U.S. possession, etc.
B. Name of county
C. Name of city, town, etc.
D. Did . . . live inside the limits of that city, town, village, etc.)
Yes ○ No ○

55. In March 1980, what was . . .'s main activity? *(Fill one circle)*
a. On active duty in the Armed Forces? ○
b. Working at a job or business? . . . ○
c. Attending college? . . . . ○
d. Something else? . . . . . ○
