June 9, 1961 | Washington 25, D.C. | Series P-60, No. 36

AVERAGE INCOME OF FAMILIES UP SLIGHTLY IN 1960

(Advance data from March 1961 sample survey)

The average (median) money income of families in the United States was $5,600 in 1960, according to estimates released today by the Bureau of the Census, Department of Commerce. This was about $200, or 4 percent, higher than in 1959, despite the downturn in economic activity in the closing months of 1960. However, the gain in real purchasing power between 1959 and 1960 was only about 2 percent, since prices also rose during this period.[1]

About 10 million families, or 22 percent of the 45½ million families in the Nation, received money incomes under $3,000 in 1960. This number did not differ appreciably from the number of families in that income range a year earlier. Another 9 million, or 20 percent, received incomes between $3,000 and $5,000 last year; and almost 11 million, or 24 percent, had incomes between $5,000 and $7,000. The remaining 15½ million families, or 34 percent, reported incomes of $7,000 or more.

Table A.--NUMBER OF FAMILIES BY FAMILY INCOME, FOR THE UNITED STATES: 1960

Family income	Number of families
Total	45,435,000
Under $1,000	2,285,000
$1,000 to $1,999	3,613,000
$2,000 to $2,999	3,970,000
$3,000 to $3,999	4,456,000
$4,000 to $4,999	4,773,000
$5,000 to $5,999	5,839,000
$6,000 to $6,999	4,889,000
$7,000 to $7,999	3,973,000
$8,000 to $9,999	5,135,000
$10,000 to $14,999	4,795,000
$15,000 and over	1,707,000

For men, last year's median income was about $4,100, not significantly greater than in 1959. Approximately 58 percent of the male income recipients reported that they worked 50 weeks or more at full-time jobs during 1960. This was about the same proportion as in 1959 and 1958, but well below the 61 percent reported in 1957. The median income of year-round full-time male workers in 1960 was $5,400, $200 above 1959, and $500 and $700 higher than in 1958 and 1957, respectively.

Women's incomes, which averaged $1,300 in 1960, remained about the same as in the preceding three years. This relatively low median income results in part from the sizable proportion of females who worked only part time or intermittently during the year, or whose income was limited to small amounts from sources other than earnings. For women who worked full time throughout the year--28 percent of all female income recipients in 1960--the average was $3,300 last year, not appreciably above 1959, but up about $300 from 1957.

The 1960 income statistics presented in this report were obtained from the Bureau's Current Population Survey of March 1961. More detailed income data from the survey for families and persons will appear in a report to be issued later this year. Income statistics collected by the Bureau of the Census in the Decennial Census covering the year 1959, which will be shown for individual States and smaller geographic areas, will be available within the next few months.

The information on income in 1960 was collected from the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Income data cover money income only, prior to deductions for taxes. The fact that many farm workers do not pay rent for their living quarters and that many receive an important part of their income in the form of goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm residents.

Total income is defined as the sum of money wage or salary income, net income from self-employment, and income other than earnings, such as net rents, interest, dividends, Social Security benefits, pensions, and public assistance or other governmental payments. Family income represents the combined total received from these sources by all family members during the calendar year. Earnings are defined as the sum of money wage or salary income and net income from

[1] The Consumer Price Index of the Department of Labor averaged 124.6 in 1959 and 126.5 in 1960.

For sale by the Bureau of the Census, Washington 25, D.C. Price 10 cents.
Annual subscription (Series P-20, P-23, P-25, P-27, and P-60, combined), $3.00.

self-employment. A year-round full-time worker is one who worked primarily at full-time jobs for 50 weeks or more during 1960.

The median income is the amount which divides an income distribution into two equal groups, one group having incomes above the median and the other having incomes below the median. In comparing income data for 1960 with those for previous years, account should be taken of the fact that changes in income were accompanied by changes in prices. Therefore, an increase or decrease in income between selected years does not necessarily represent a similar change in economic well-being.

Other data relating to the income received by the population are available from the personal income series of the Department of Commerce, the Department of Agriculture's farm income series, Federal individual income tax tabulations, and Old-Age and Survivors Insurance earnings records. These sets of statistics are collected for different purposes and differ with respect to coverage and definitions. For a discussion of the comparability of these statistics with survey data collected by the Bureau of the Census, and for more detailed definitions of the terms and concepts used in this report, see Current Population Reports, Series P-60, No. 35, "Income of Families and Persons in the United States: 1959."

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in interpreting medians and percents based on relatively small numbers of cases, as well as small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.
