AREA, NATURAL RESOURCES, AND POPULATION.

EXPLANATION OF TERMS.

General imports.—Tables Nos. 187 and 188 embrace imported articles entered at the custom-houses for immediate consumption and imported articles entered for warehouse. The statements of *imports entered for consumption*, Tables Nos. 192 and 193, embrace imported articles entered for immediate consumption and imported articles withdrawn from warehouse for consumption. The statement of *general imports* and the statement of *imports entered for consumption* for any period will always differ to the extent that the value of *entries for warehouse* for the period differs from the value of *withdrawals from warehouse for consumption.* The term "entry for consumption" is the technical name of the import entry made at the custom-house, and does not imply that the goods have been actually consumed, but simply that they have been delivered into the custody of the importer and that the duties have been paid on the dutiable portion. Some of them may be afterwards exported.

Import values.—The values or prices of articles imported since August 1, 1890, are governed by the provisions of section 19 of the act of June 10, 1890, which prescribes that the values of imported merchandise subject to ad valorem rates of duty shall be "the actual market value or wholesale price of such merchandise as bought and sold in usual wholesale quantities at the time of exportation to the United States in the principal markets of the country from whence imported, and in the condition in which such merchandise is there bought for exportation to the United States or consigned to the United States for sale, including the value of all cartons, cases, crates, boxes, sacks, and coverings of any kind, and all other costs, charges, and expenses incident to placing the merchandise in condition ready for shipment to the United States."

Domestic export values.—Tables Nos. 189 and 190 exhibit the exports of domestic products or manufactures, also exports of commodities of foreign origin which have been changed from the form in which they were imported, or enhanced in value by further manufacture in the United States, such as sugar refined in this country from imported raw sugar, flour ground from imported wheat, and articles and utensils made from imported metals, etc. The value of exports of domestic merchandise is their value at the time of exportation in the ports of the United States whence they are exported.

Foreign export values.—Table No. 191, called "foreign exports," or "reexports," exhibits exports of foreign merchandise which had been imported. The value of such commodities exported from "warehouse" is their import value. The value of such commodities exported "not from warehouse," comprising free goods mainly, is the value at the ports of the United States whence they are exported.

Values of foreign merchandise in transit or transshipped.—Table No. 197 exhibits foreign merchandise brought to the United States for immediate transit across the territory of the United States to a foreign country, or for transshipment in the ports of the United States to a foreign country. The value of the commodities returned in this table is similar to that of imports.

Values of warehoused merchandise.—Tables Nos. 195 and 196 exhibit imported merchandise in warehouse. This merchandise has already appeared in the statement of *general imports*, Tables Nos. 187 and 188, for the year in which it was imported. The official values of the articles therein represented are the same as the *import values.*

Ton.—The term "ton" used in this volume, as applied to weight, is specified "long" (2,240 pounds) or "short" (2,000 pounds). The term "ton" as applied to vessel measurement is specified as "net," equal to 100 cubic feet of carrying capacity exclusive of deductions for space occupied by cabins, machinery, etc., or "gross," equal to entire carrying capacity inclusive of such deductions. The term "M feet" used in connection with the measure of lumber, etc., signifies 1,000 feet, board measure, a "foot" of such measure being 1 foot long, 1 foot wide, and 1 inch or less in thickness. "Cubic feet" or "cords," as applied to the measurement of lumber, pulp wood, etc., signifies cubic contents.

[From the Report of the Civil Service Commission.]

[This table is based upon the number of positions shown in the Official Register of 1903, and changes in the service since reported by the departments and offices. Some of the reports were not made in such manner as to permit of a definite distinction as to employment in Washington and elsewhere. The figures are therefore to be regarded as approximate only. Omissions to report certain changes and neglect of details necessary only for statistical purposes also contribute to making the figures approximate only.]

[b] On account of the abundance of eligibles remaining from previous year, but few examinations were held; percentage upon the basis of these figures would therefore be deceptive.

[a] By the revision of the rules of May 6, 1896, the Indian Service was made a part of the Departmental Service, but for the purpose of comparison with previous years the Commission has, in its annual reports, kept separate statistics for this service. Only about one-half of the appointments in the Indian Service since July 1, 1900, have been made from examinations for positions belonging exclusively to the Indian Service, the remainder being made from examinations for positions in the Departmental Service generally. Percentages relating exclusively to the Indian Service can not, therefore, be given.

[b] Owing to the fact that the papers of a large number of persons examined during the fiscal year ended June 30, 1908, have not yet been rated, these figures are necessarily omitted.

No. 24.—DENSITY OF POPULATION PER SQUARE MILE AT EACH CENSUS, 1790 TO 1900: By States and Territories.

[From reports of the Bureau of the Census, Department of Commerce and Labor.]

[Note.—In computing density of population for the United States, the areas and population of Alaska and Hawaii in 1900, of Alaska in 1890, and of Indian Territory in 1860, 1870, and 1880 are not considered. The area of Indian reservations, outside of Indian Territory, is included in the area of the States and Territories in which they are severally situated, and in that of the United States prior to 1890, although the population of these Indian reservations was not ascertained, and for this reason can not be considered in figuring density of population at the censuses prior to 1890.]

[a] The gross value of manufactures as reported by the Census contains many duplications because the finished products of some factories frequently become the material for other factories. In this way not only one but several duplications of the cost of materials often occur. The net value of productions eliminates these duplications by deducting from the gross value the cost of all materials which have undergone any process of manufacture covered by the census reports on manufactures.

[b] The figures of production for 1900 differ from those shown in other portions of this volume for that year by reason of the fact that they exclude 10 lumber establishments reported for Alaska with products valued at $4,250,984.

[c] "Hand trades" not included in the census of 1905.

[a] Production of cane sugar beginning with 1903–4, from Willett & Gray; other figures are those of As Bouchereau, New Orleans, except that for census years and 1898–99 they are those of the Censu Bureau. All census figures for molasses except for 1898–99 include sirup.

[b] Beet-sugar production for 1897–98 from special report of the Department of Agriculture; for 1901–2 and later years from "Progress of the Beet-Sugar Industry in the United States;" for other years from Willett & Gray.

[c] Mean annual production.

[d] Texas only.

[a] Tons of 2,000 pounds each.
[b] By purity coefficient is meant the percentage of sugar in the total solids of the substance tested, whether it be beets, juice, or sirup. In this table it represents the average percentage of sugar in the total solids of the beets as determined by tests made at the factories.
[c] Based on reports from 27 factories and careful estimates for 14 others.
[d] These averages are not based on data for all the factories, as some of them failed to report results of tests, but it is believed that they fairly represent the character of the total beet crops.
[e] No data reported.
[f] Grouped together to avoid giving publicity to data relating to individual factories.
[g] The average yield of beets per acre is found by dividing the total beets worked by the total acreage harvested; the average extraction of sugar by dividing the total sugar produced by the total beets worked; the average contents of sugar, coefficients of purity, and length of campaign by adding the figures reported by the different factories and dividing by the number of reporting factories.
