CHAPTER IV

FARM STATISTICS BY COLOR AND TENURE OF FARMER

CONTENTS.

Page.

Introduction 187

Number and acreage of farms, by color and tenure of farmer: 1920 and 1910 187

Farms of minor tenure groups: 1920 and 1910 189

Number of farms, by color and tenure of farmer: 1900 to 1920. 191

Color and tenure of farmers in the South: 1900 to 1920 191

Value of farm property, by color and tenure of farmer: 1920 and 1910 194

Domestic animals on farms, by color and tenure of farmer: 1920 and 1910 197

TABLES FOR GEOGRAPHIC DIVISIONS AND STATES.

Number of farms, by color and tenure: 1900 to 1920 198

Per cent distribution of white and colored farmers, by tenure: 1900 to 1920 203

Acreage of all land in farms, and acreage of improved land, with percentages and averages, by color and tenure: 1920 and 1910 (by divisions only) 204

Acreage of all land in farms, and acreage of improved land, with percentages and averages, by color and tenure: 1920 and 1910 (by states only) 207

Farms and farm acreage, percentage of farm land improved, and average acreage per farm, by color and tenure (detailed classification): 1920 214

Value of all farm property and of the several classes, by color and tenure: 1920 and 1910 (by divisions only) 224

Value of all farm property and of the several classes, by color and tenure: 1920 and 1910 (by states only) 227

Value of land and buildings, with average per farm and per acre, and per cent distribution of the value of all classes of farm property, by color and tenure: 1920 and 1910 (by divisions only) 234

Page.

Value of land and buildings, with average per farm and per acre, *and per cent distribution* of the value of all classes of farm property, by color and tenure: 1920 and 1910 (by states only). 237

Average value of all farm property and of the several classes, per farm and per acre, by color and tenure: 1920 and 1910 244

Value of all farm property and of the several classes, with average per farm, by color and tenure (detailed classification): 1920 252

Number of domestic animals on farms classified according to color and tenure: 1920 and 1910 274

Value of domestic animals on farms classified according to color and tenure: 1920 and 1910 282

Colored farmers in the South—Per cent distribution by tenure: 1900 to 1920 192

CHAPTER IV.—FARM STATISTICS BY COLOR AND TENURE OF FARMER.

Introduction.—This chapter presents the statistics of farms and farm property (including live stock) collected at the 1920 census, classified according to the color of the farm operator and the tenure under which the land was held. Comparative figures for 1910 are given for most of the items, and the number of farms classified according to the color and tenure of the operator is given also for 1900, at which time the color classification was first used in tabulating the census data for agriculture.

In this chapter statistics are presented for white farm operators and for colored farm operators, but there are no totals for all farm operators—that is, for white and colored combined. These totals may be found, however, in Chapter III, on "Farm Tenure," which gives the farm statistics classified according to tenure alone. Where it is desired simply to compare the statistics for white farmers with those for colored farmers (as will most often be the case), the comparison can be made on the basis of the data presented herewith. And where it is desired to compare the figures for either white farmers or colored farmers with the general totals, the data for all farmers (white and colored together) can readily be found in Chapter III.

The colored farmers in the South are practically all Negroes, while those in the Mountain and Pacific Divisions are practically all Indians or Asiatics. In Chapter V, entitled "Farm Statistics by Race, Nativity, and Sex of Farmer," figures are presented for colored farm operators classified according to race, including a brief tenure classification showing simply owners, managers, and tenants. Chapter V also gives figures for native and foreign-born white farmers, and for foreign-born white farmers by country of birth, in each case with the brief tenure classification.

The several tenure classes used in the 1920 census reports have been defined as follows:

Farm owners include (1) farmers operating their own land only and (2) those operating in addition to their own land some land hired from others. The latter are sometimes designated *part owners*, the term *full owners* being then used for those owning all the land they farm.

Farm managers are farmers operating a farm for the owner for wages or a salary.

Farm tenants are farmers who as tenants, renters, or croppers, operate only rented land. They were reported in 1920 in five classes: (1) *Share tenants*—those who pay a certain share of the products, as one-half, one-third, or one-quarter, for the use of the farm, but furnish their own work animals; (2) *croppers*—share tenants whose work animals are furnished by their landlords; (3) *share-cash tenants*—those who pay a share of the products for a part of the land and cash for a part; (4) *cash tenants*—those who pay a cash rental, as $7 per acre of crop land or $500 for the use of the whole farm; (5) *standing renters*—those who pay a stated amount of farm products for the use of the farm, as 3 bales of cotton or 500 bushels of corn. In some cases the character of the tenancy was not indicated on the schedule; such tenants are shown in the tables as "unspecified."

Croppers and standing renters were tabulated separately only for the Southern states; and in the tables giving comparative figures for 1920 and 1910, even for the Southern states, croppers are included with other share tenants and standing renters are included with cash tenants.

Since nearly all of the colored farmers are in the South, the figures for white and colored farmers for the United States as a whole contrast conditions on farms operated by white farmers located all over the United States with conditions on farms of colored farmers located almost entirely in the South. In order to make possible a better comparison of conditions on the farms of white and colored farmers, a separate presentation is made for the South alone, in addition to that for the United States as a whole. The difference between the geographic distribution of white farmers and that of colored farmers must be kept constantly in mind in using the figures for the United States as a whole.

Number and acreage of farms, by color and tenure of farmer: 1920 and 1910.—For both white and colored farmers a higher proportion of the number of farms, of the total acreage, and of the improved acreage was operated by tenants in 1920 than in 1910, while the proportions for farms operated by their owners were somewhat smaller, as shown in Table 2. The increase in the proportion of farms operated by tenants was most marked, for both white and colored, however, in certain states of the Northwest (for the most part states where the percentage was relatively low, even in 1920).

On the Pacific coast and in the South, where most of the colored farmers are located, the proportion of tenants is very much higher among the colored farmers than among the white.

For the United States as a whole, farms operated by white owners in 1920 averaged 168 acres in size; by white tenants, 136.3 acres; and by white managers, 810.2 acres. Farms operated by colored owners averaged 71.6 acres; by colored tenants, 38.9 acres; and by colored managers, 213.7 acres. For both white and colored, however, a larger proportion of the land in the tenant farms was improved than in those operated by their owners; hence there was much less difference between the average acreage of improved land in owned and in rented farms than between the averages based on the total acreage.

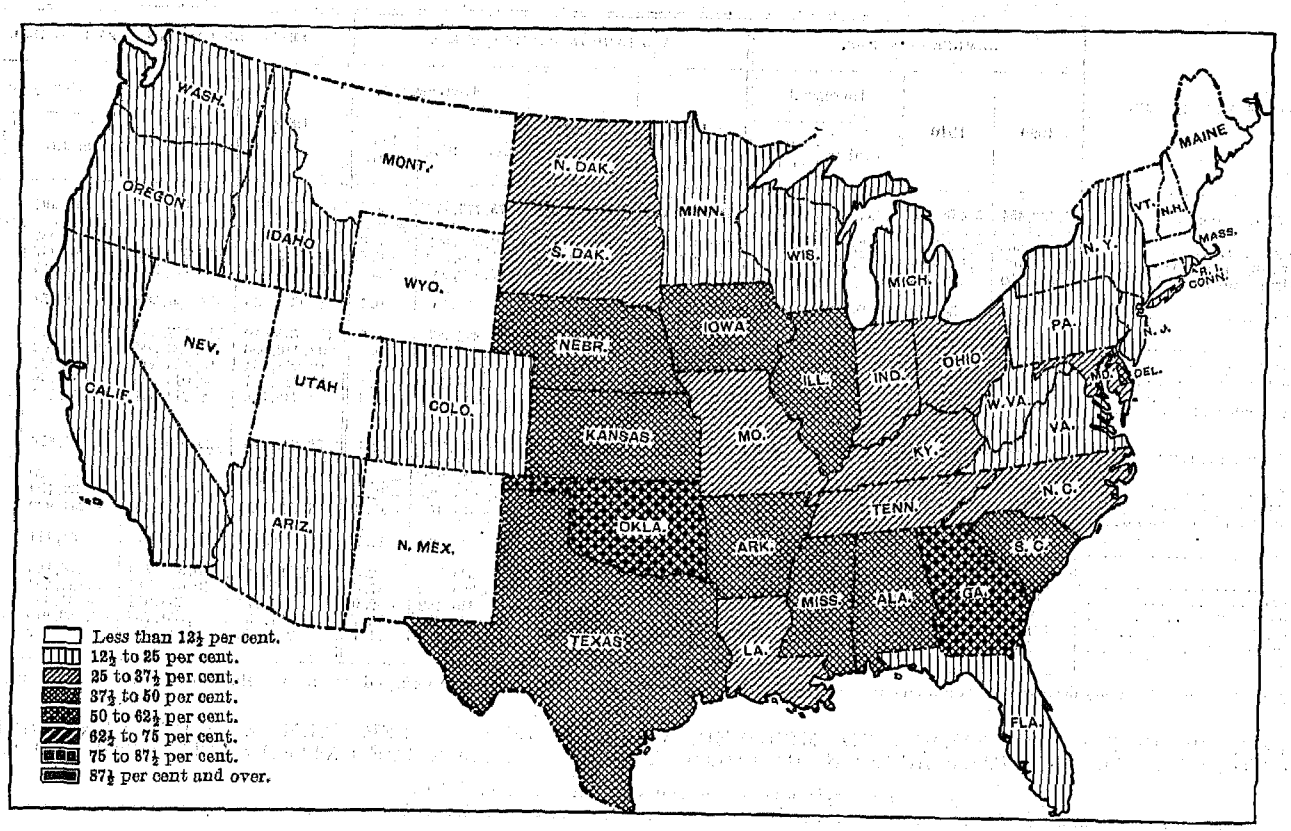
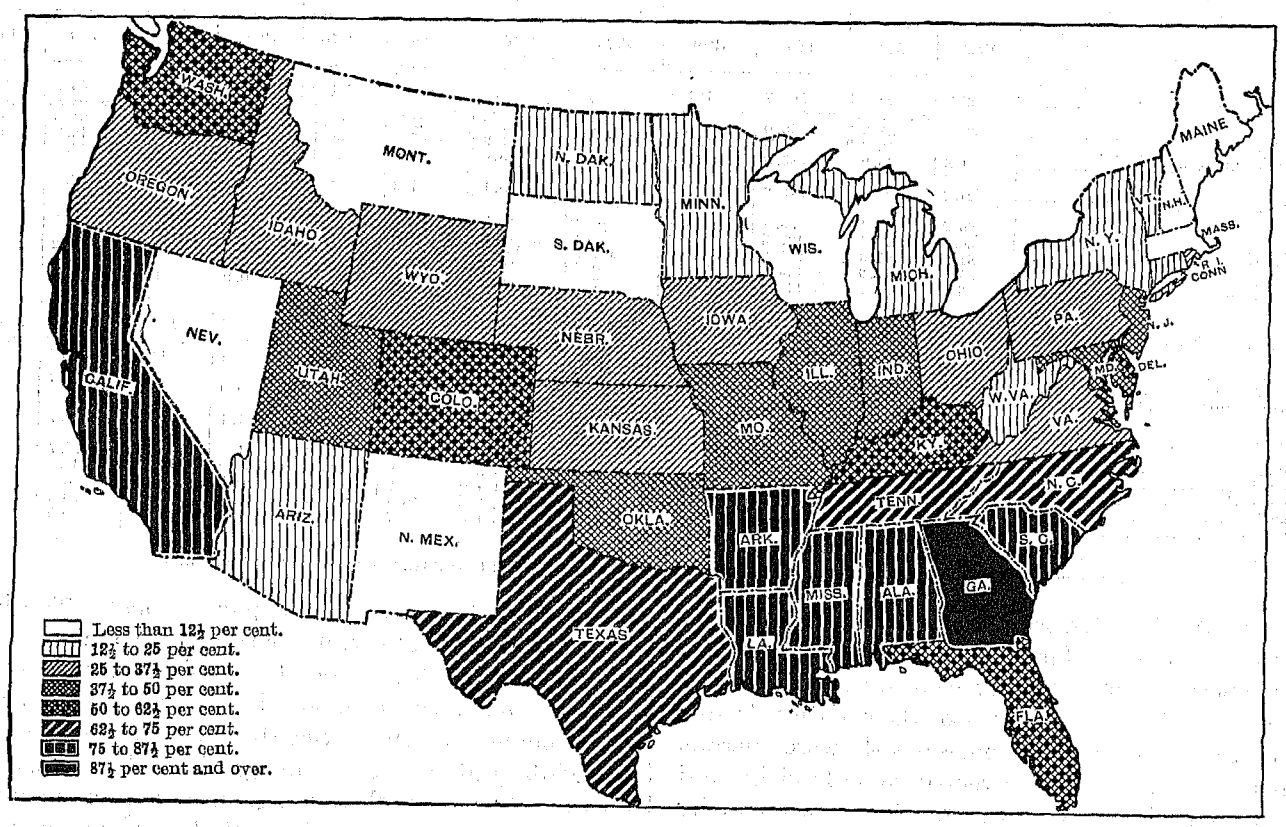
[1] Share tenants include croppers reported in the Southern states in 1920, and cash tenants likewise include standing renters.

Farms of minor tenure groups: 1920 and 1910.—Of the total number of farms operated by white owners on January 1, 1920, 86 per cent were operated by full owners (those who owned their entire farms), while 14 per cent, or about one-seventh, were operated by part owners (those who rented some land in addition to that which they owned). A somewhat higher proportion of colored owners were in the part-owner class, the proportions being 82.5 per cent for full owners and 17.5 per cent for part owners. The land in the farms of the white part owners amounted to more than one-fourth of the total land farmed by white owners, the average size of these part-owned farms being more than twice that of the farms operated by white full owners. Among the colored farmers, on the other hand, the average size of farms operated by part owners was less than that of farms operated by full owners.

WHITE FARMERS—PERCENTAGE OPERATING RENTED FARMS, BY STATES: 1920.



COLORED FARMERS—PERCENTAGE OPERATING RENTED FARMS, BY STATES: 1920.



Of the farms operated by tenants under specified forms of tenancy, 69.1 per cent of the white tenants operated their farms on a share basis, 23.8 per cent on a cash basis, and 7.1 per cent on a share-cash basis; while 72.8 per cent of the colored tenants operated their farms on a share basis, 26 per cent on a cash basis, and 1.2 per cent on a share-cash basis. A somewhat higher proportion of colored tenants than of white tenants operated on a cash basis, while relatively few colored tenants operated on a share-cash basis.

In 1910 share tenants represented 64.6 per cent of the whole number of white tenants and 57.2 per cent of the colored tenants (omitting the "unspecified" in each case), and cash tenants represented 28.2 per cent of the white and 40.5 per cent of the colored tenants. The 1920 figures therefore show an increase in the proportion of share tenants, with a corresponding decrease in the cash tenants, the change being most marked in the case of the colored farmers.

Number of farms, by color and tenure of farmer: 1900 to 1920.—Of the total number of farms operated by white farmers in the United States in 1920, 31.7 per cent were operated by tenants, as compared with 30.8 per cent in 1910 and 29.5 per cent in 1900; of the farms operated by colored farmers, 75.2 per cent were in the hands of tenants in 1920, 73.6 per cent in 1910, and 72.9 per cent in 1900. It thus appears that while the percentage of farms operated by tenants has increased during the twenty years for both white and colored farmers, white farmers showed the greater increase for the decade 1900 to 1910 and colored farmers the greater increase for the decade 1910 to 1920.

TABLE 3.—NUMBER OF FARMS IN THE UNITED STATES, WITH PER CENT DISTRIBUTION, BY COLOR AND TENURE: 1900 TO 1920.

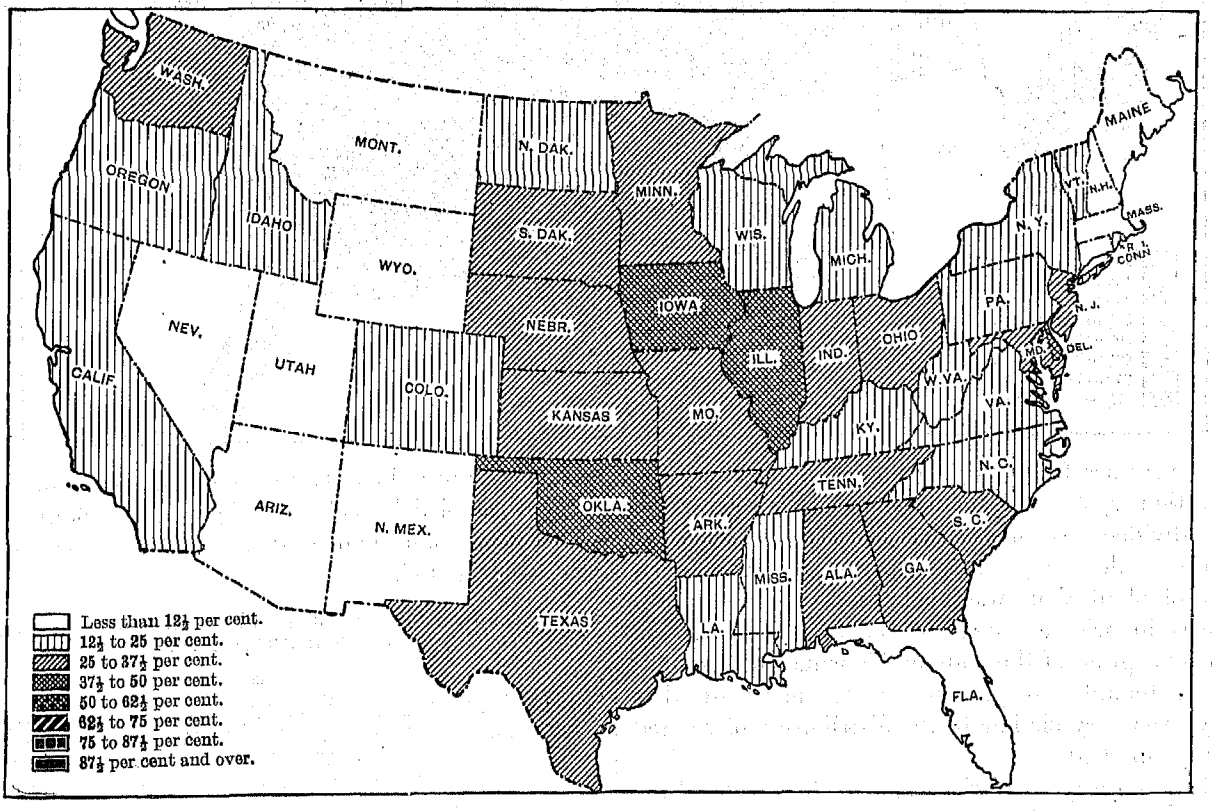
WHITE FARMERS—PERCENTAGE OF FARM LAND OPERATED BY TENANTS, BY STATES: 1920.

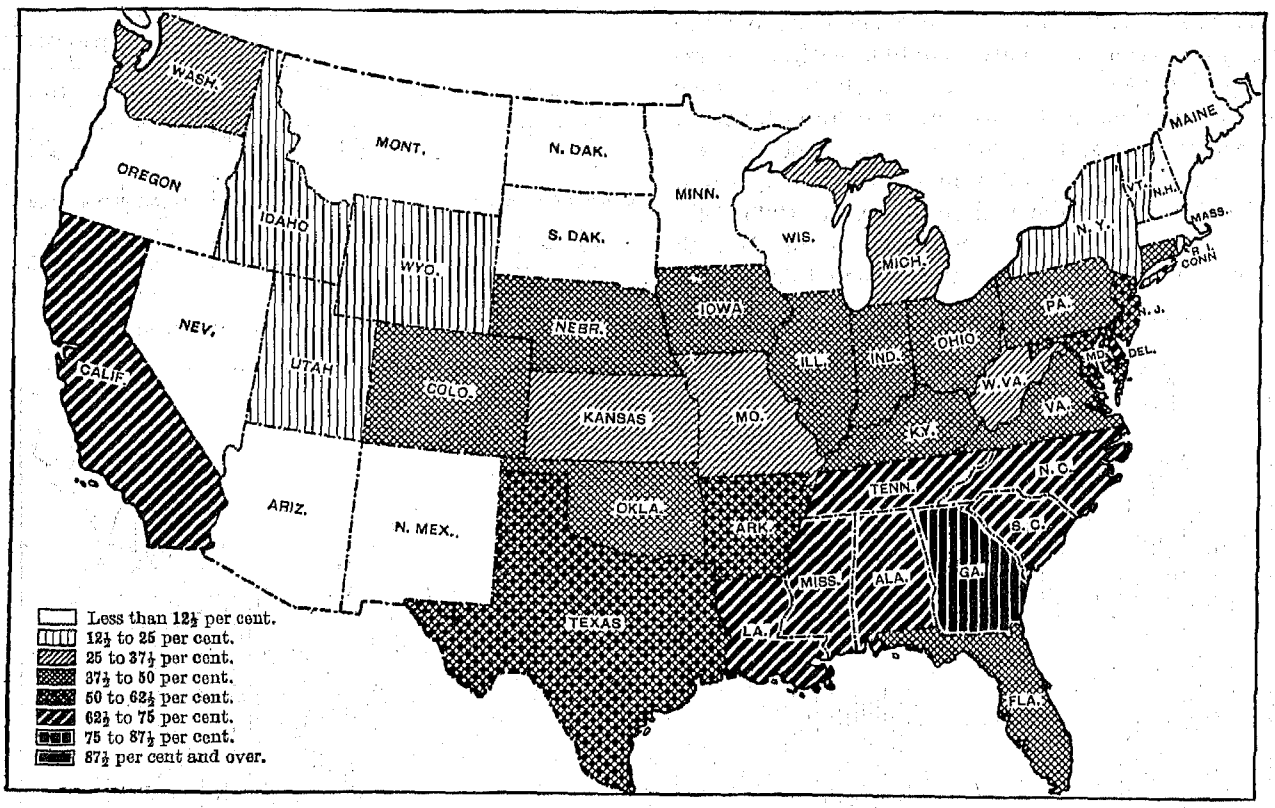


Color and tenure of farmers in the South: 1900 to 1920.—In the South the proportion of tenants is much higher among colored farmers than among white farmers. Of the white farmers only 38.9 per cent were tenants in 1920, while among the colored farmers in the South over three-fourths (76.2 per cent) were reported as tenants in 1920. The special tabulation made for the South in 1920, showing additional tenure classes, is of especial significance in this connection. In this tabulation standing renters were separated from cash tenants and croppers were separated from other share tenants.

Standing renters were defined as tenants who paid for the use of the land a fixed quantity of some farm product rather than an amount of cash. In 1920, 27,072 white tenants and 77,924 colored tenants were classed as standing renters. This form of tenure is relatively much more important with colored farmers than with white, especially when compared with the number of actual cash tenants of each color.

The most important difference between the cropper and the regular share tenant lies in the greater degree of supervision exercised by the landlord in the case of the cropper. As a convenient means of classification, however, croppers were defined as share tenants to whom the landlord furnished the necessary work stock. The number of colored farmers in the South classified as croppers in 1920 was 333,713, while the number classified as share tenants proper was only 176,711. The colored croppers were thus nearly twice as numerous as the share tenants proper, and formed nearly one-half (47.4 per cent) of all the colored tenants in the South. Of the white tenants 227,378 were classified as croppers and 474,513 as share tenants proper. The number of white croppers was therefore less than one-half as great as the number of regular share tenants and formed only 25.6 per cent of all the white tenants in the South.

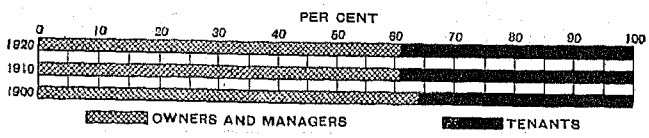
COLORED FARMERS—PERCENTAGE OF FARM LAND OPERATED BY TENANTS, BY STATES: 1920.



Croppers are frequently found operating under the plantation system of management, the plantation being divided into small tracts which are operated by tenants under very close supervision. A detailed study of plantations was made at the census of 1910 for certain selected areas in the South. With the single exception of the state of Alabama, the distribution of tenants on plantations, as shown by that study, was very similar to the distribution of colored croppers in 1920.

When the Negroes—who form practically all of the colored population in the South—were set free, few, if any, of them were able to obtain land. The first available figures as to their success in acquiring the ownership of land are from the study made in 1890 of the proprietorship of farms and homes. That canvass showed that 21 per cent of the total number of farm homes (which is approximately the same as the number of farms) occupied by colored people in the South were owned by them, and that the balance, or 79 per cent, were rented.

WHITE FARMERS IN THE SOUTH—PER CENT DISTRIBUTION, BY TENURE: 1900 TO 1920.



COLORED FARMERS IN THE SOUTH—PER CENT DISTRIBUTION, BY TENURE: 1900 TO 1920.

[1] A minus sign (−) denotes decrease.

[2] Less than one-tenth of 1 per cent.

The farm statistics were first tabulated by color of farmer at the census of 1900. In that year 25.2 per cent of the colored farm operators in the South were owners and 74.6 per cent were tenants. In 1910 the percentage of tenancy among the colored farmers of the South had risen to 75.3, and in 1920 to 76.2.

TABLE 6.—NUMBER OF FARMS IN THE SOUTH, WITH PER CENT DISTRIBUTION, BY COLOR AND TENURE: 1900 TO 1920.

[Figures for divisions and states in Tables 12 and 13.]

Owners	217,589	218,467	186,676	23.6	24.5	25.2
Managers	1,770	1,200	1,593	0.2	0.1	0.2
Tenants	703,555	670,474	552,401	76.2	75.3	74.6

The farms of white owners in the South averaged 149.7 acres in size in 1920, with 59.7 acres improved, as compared with an average size of 64.7 acres and 33.3 acres improved for colored owners. The farms of white tenants averaged 90.4 acres in size, with 49.2 acres improved, as compared with 38.2 and 28.9 acres, respectively, for the total and improved acreage of farms operated by colored tenants.

Value of farm property, by color and tenure of farmer: 1920 and 1910.—Of the total value of farm property (including land, buildings, implements and machinery, and live stock) for farms operated by white farmers in 1920, 62.5 per cent was reported for farms operated by owners, 33.4 per cent for farms operated by tenants, and 4.1 per cent for farms operated by hired managers. The corresponding distribution of value for the farms operated by colored farmers was 27 per cent for owners, 71.6 per cent for tenants, and 1.4 per cent for managers. The distribution of the value of farm property among the several tenure classes of both white and colored farmers follows very closely the distribution of improved land in farms. For both white and colored farmers the 1920 distribution showed a smaller percentage of the total value for owners and a larger percentage for tenants than in 1910.

Domestic animals on farms, by color and tenure of farmer: 1920 and 1910.—On the basis of total value in 1920, the most important classes of live stock on the farms of white operators were, first, cattle other than dairy cows; second, horses; third, dairy cows; and fourth, swine; on the farms of colored operators, first, mules; second, horses; third, dairy cows; and fourth, swine, followed closely by cattle other than dairy cows. The difference between the live stock kept by white and by colored farmers in the United States as a whole is due primarily to the difference in geographic distribution; but even in the South the difference is pronounced, as appears from the fact that in the South the value of work animals—horses and mules—constituted 63.1 per cent of the value of all live stock on the farms of colored operators in 1920, but only 42.2 per cent of the value of all live stock on the farms of white operators.

Detailed information with regard to the distribution of the different kinds of domestic animals among the farms of the tenure classes is given in Table 11, which shows the number and value of the different kinds of animals, by color and tenure of farmer, for 1920 and 1910.

TABLE 11.—NUMBER AND VALUE OF DOMESTIC ANIMALS ON FARMS IN THE UNITED STATES, BY COLOR AND TENURE: 1920 AND 1910.

Tables for divisions and states.—In Tables 12 to 24, inclusive, practically all of the data which have been summarized in Tables 1 to 11, above, are presented by geographic divisions and states. Whatever explanation or comment has been made with regard to the figures for the United States as a whole, or with regard to the South, will also apply, in general, to the component divisions or states.

A study of the figures here presented by divisions and states will, in many cases, suggest an explanation of a change or a tendency which appears simply as a stated fact in the summary for the United States as a whole. In order to expedite the publication of the figures themselves, however, it was thought best not to attempt any detailed analysis of these tables in the present report.

TABLE 12.—NUMBER OF FARMS, BY COLOR AND TENURE, BY DIVISIONS AND STATES: 1900 TO 1920.

[Share tenants include croppers reported in the Southern states in 1920, and cash tenants likewise include standing renters.]
