1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

BUREAU OF THE CENSUS
JUN 20 3 38 PM '61
LIBRARY

March 31, 1961 PC(A2)-1

United States

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the United States. Comparable figures for 1950 are also shown. The data presented here are being issued in advance of their publication in Final Report PC(1)-1B, which will provide additional information on the characteristics of the population of the United States. Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship. The third table presents summary figures for these subjects for States.

Between 1950 and 1960 the population of the United States grew both older and younger. The number of persons 65 years old and over increased by 34.7 percent and those under 18 years old, by 36.7 percent. In the intervening ages (18 to 64 years), however, the increase was only 7.2 percent, and there was an actual decline in the age group 20 to 29 years. The greater absolute and relative gains among younger persons offset the increase in the older population, and the median age of the population decreased by a fraction of a year during the decade. This is the first intercensal decrease in the median age in the history of the United States. Women outnumbered men in 1960 as they had in 1950 but to a slightly greater degree; in 1960 there were about 97 men for every 100 women whereas in 1950, this number was nearly 99.

During the past decade, the rate of growth in the nonwhite population exceeded that of the white population. The white population increased by 17.5 percent and the Negro population by 25.4 percent. The other nonwhite races had rates of increase ranging from 24.9 percent for the residual "other" group to 58.2 percent for the Chinese.

Among persons 14 years old and over, the increase in population of all marital status groups combined was 12.6 percent, whereas the number of single persons increased only 7.0 percent, married persons by 14.0 percent, widowed persons by 12.7 percent, and divorced persons 28.3 percent. The changes in the marital status distribution have resulted in part from changes in the age distribution discussed above.

Ninety-seven percent of all persons were living in households in 1960, compared with 96.2 percent in 1950. Children under 18 related to the head of the household comprise a substantially larger proportion of persons in

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

NOTE: With the publication of this report, all 52 reports in the PC(A2) Series have been published.

households now than in 1950--34.2 percent compared to only 29.1 percent based on the previous census. The proportion of heads and wives remained about the same, but relatives of the head other than children and wives dropped from 15.9 to 11.2 percent of the total.

There was an unusually large increase--80.1 percent--in the number of household heads who were primary individuals (that is, who were living alone or with nonrelatives only). This change reflects both a tendency for an increasing number of persons to maintain homes away from their close relatives and a change in the definition of a household in the 1960 Census.

DEFINITIONS AND EXPLANATIONS

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where

many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 8, 1961 PC(A2)-2

Alabama

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-2B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 29, 1961 PC(A2)-3

Alaska

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-3B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

January 30, 1961 PC(A2)-4

Arizona

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-4B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS, Robert W. Burgess, *Director*

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 29, 1961 PC(A2)-5

Arkansas

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-5B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 23, 1961 PC(A2)-6

California

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-6B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

[1] CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD.
[2] SEE TEXT FOR CHANGES IN HOUSEHOLD DEFINITION.
[3] 1950 DATA NOT AVAILABLE.
A THE REVISED POPULATION TOTALS FOR SAN FRANCISCO-OAKLAND URBANIZED AREA AND BELLFLOWER ARE 2,395,098 AND 45,909, RESPECTIVELY. THE FIGURE IN THE TABLE FOR SAN FRANCISCO-OAKLAND INCLUDES POPULATION FOR THREE AREAS MISCLASSIFIED AS INSIDE, RATHER THAN OUTSIDE, THE URBANIZED AREA. THE FIGURE FOR BELLFLOWER RESULTED FROM AN OMISSION. THESE ERRORS WERE DISCOVERED TOO LATE FOR CORRECTION IN THE DETAILED DISTRIBUTIONS.

Table 13.—SUMMARY OF POPULATION CHARACTERISTICS, FOR THE STATE, BY SIZE OF PLACE, AND FOR STANDARD METROPOLITAN STATISTICAL AREAS, URBANIZED AREAS, URBAN PLACES, AND COUNTIES: 1960—Con.

["U" denotes an unincorporated place. Minus sign (−) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100; fertility ratio not shown where base is less than 100; population per household not shown where less than 100 persons in households]

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

February 16, 1961 PC(A2)-7

Colorado

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-7B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

BUREAU OF THE CENSUS
JUN 20 3 30 PM '61
LIBRARY

March 24, 1961 PC(A2)-8

Connecticut

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-8B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

[1] CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD.
[2] SEE TEXT FOR CHANGES IN HOUSEHOLD DEFINITION.
[3] 1950 DATA NOT AVAILABLE.
[4] NORWALK AND STAMFORD URBANIZED AREAS REPORTED IN 1950 AS STAMFORD-NORWALK URBANIZED AREA. 1950 POPULATION TOTAL ALLOCATED TO EACH AREA AS DEFINED IN 1960.

Table 13.—SUMMARY OF POPULATION CHARACTERISTICS, FOR THE STATE, BY SIZE OF PLACE, AND FOR STANDARD METROPOLITAN STATISTICAL AREAS, URBANIZED AREAS, URBAN PLACES, AND COUNTIES: 1960—Con.

["U" denotes an unincorporated place. "UT" denotes an urban town. Minus sign (−) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100; fertility ratio not shown where base is less than 100; population per household not shown where less than 100 persons in households]

Bureau of the Census

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

January 23, 1961 PC(A2)-9

Delaware

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-9B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

MARCH 24, 1961 PC(A2)-10

District of Columbia

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the District of Columbia. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-10B, which will provide additional information on the population characteristics of the inhabitants of the District. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the District. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the District, the standard metropolitan statistical area, and the urbanized area.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS,

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 8, 1961 PC(A2)-11

Florida

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-11B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 9, 1961 PC(A2)-12

Georgia

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-12B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 30, 1961 PC(A2)-13

Hawaii

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-13B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 15, 1961 PC(A2)-14

Idaho

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-14B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 28, 1961 PC(A2)-15

Illinois

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-15B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

[1] CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD.
[2] SEE TEXT FOR CHANGES IN HOUSEHOLD DEFINITION.
[3] 1950 DATA NOT AVAILABLE.
[4] PERCENT INCREASE IS MORE THAN 1,000.

Table 13.—SUMMARY OF POPULATION CHARACTERISTICS, FOR THE STATE, BY SIZE OF PLACE, AND FOR STANDARD METROPOLITAN STATISTICAL AREAS, URBANIZED AREAS, URBAN PLACES, AND COUNTIES: 1960—Con.

["U" denotes an unincorporated place. Minus sign (−) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100; fertility ratio not shown where base is less than 100; population per household not shown where less than 100 persons in households]

[1] CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD.
[2] SEE TEXT FOR CHANGES IN HOUSEHOLD DEFINITION.
[8] 1950 DATA NOT AVAILABLE.
[4] 1950 POPULATION TOTAL REVISED SINCE THE PUBLICATION OF 1950 REPORTS.
[5] PERCENT INCREASE IS MORE THAN 1,000.
Δ THE REVISED POPULATION TOTAL FOR NORTH CHICAGO IS 22,938. THE FIGURE IN THIS TABLE EXCLUDES POPULATION FOR AN AREA MISCLASSIFIED AS OUTSIDE, RATHER THAN INSIDE, THE CITY LIMITS. THIS ERROR WAS DISCOVERED TOO LATE FOR CORRECTION IN THE DETAILED DISTRIBUTIONS.

Table 13.—SUMMARY OF POPULATION CHARACTERISTICS, FOR THE STATE, BY SIZE OF PLACE, AND FOR STANDARD METROPOLITAN STATISTICAL AREAS, URBANIZED AREAS, URBAN PLACES, AND COUNTIES: 1960—Con.

["U" denotes an unincorporated place. Minus sign (−) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100; fertility ratio not shown where base is less than 100; population per household not shown where less than 100 persons in households]

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 30, 1961 PC(A2)-16

Indiana

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-16B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

[1] CHILDREN UNDER 5 YEARS OLD PER 1,000 WOMEN 15 TO 49 YEARS OLD.
[2] SEE TEXT FOR CHANGES IN HOUSEHOLD DEFINITION.
[3] 1950 DATA NOT AVAILABLE.
△THE REVISED POPULATION TOTAL FOR MADISON IS 10,488. THE FIGURE IN THE TABLE RESULTED FROM AN OMISSION WHICH WAS DISCOVERED TOO LATE FOR INCLUSION IN THE DETAILED DISTRIBUTIONS.

Table 13.—SUMMARY OF POPULATION CHARACTERISTICS, FOR THE STATE, BY SIZE OF PLACE, AND FOR STANDARD METROPOLITAN STATISTICAL AREAS, URBANIZED AREAS, URBAN PLACES, AND COUNTIES: 1960—Con.

["U" denotes an unincorporated place. Minus sign (−) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100; fertility ratio not shown where base is less than 100; population per household not shown where less than 100 persons in households]

AREA	POPULATION: ALL PERSONS: NUMBER	PERCENT INCREASE, 1950 TO 1960	PERCENT NONWHITE	PERCENT UNDER 18 YEARS OLD	PERCENT 18 TO 64 YEARS OLD	PERCENT 65 YEARS AND OVER	FERTILITY RATIO[1]	14 YEARS OLD AND OVER: MALE — PERCENT MARRIED	14 YEARS OLD AND OVER: FEMALE — PERCENT MARRIED	18 YEARS OLD AND OVER — PERCENT MALE	HOUSEHOLDS: NUMBER	HOUSEHOLDS: PERCENT INCREASE, 1950 TO 1960[2]	HOUSEHOLDS: POPULATION PER HOUSEHOLD	POPULATION IN GROUP QUARTERS: NUMBER	POPULATION IN GROUP QUARTERS: PERCENT OF TOTAL

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 28, 1961 PC(A2)-17

Iowa

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-17B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

February 28, 1961 PC(A2)-18

Kansas

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-18B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS, Robert W. Burgess, *Director*

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

February 28, 1961 PC(A2)-19

Kentucky

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-19B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS, Robert W. Burgess, *Director*

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 30, 1961 PC(A2)-20

Louisiana

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-20B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

(1950 data on marital status based on sample. Minus sign (-) denotes decrease. Percent not shown where less than 0.1 or where base is less than 100)

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

February 28, 1961 PC(A2)-21

Maine

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-21B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respond was required to reply by giving the month year of birth.

Medians.--The median, a type of averag is presented in connection with the data age which appear in this report. The medi is the value which divides the distributi into two equal parts--one-half of the cas falling below this value and one-half of t cases exceeding this value.

Marital status.--Persons classified "married" comprise both those who have be married only once and those who remarried aft having been widowed or divorced. The te "separated" relates to persons legally sep rated or otherwise absent from their spou because of marital discord Enumerators we instructed to report persons in common-la marriages as married and persons whose onl marriage had been annulled as single. Differ ences between the number of married males an the number of married females arise from th fact that some husbands and wives have thei usual residences in different areas, and fro errors of response.

Household.--A household includes all o the persons who occupy a house, an apartmen or other group of rooms, or a room which con stitutes a housing unit. A group of rooms o a single room is regarded as a housing uni when it is occupied or intended for occupanc as separate living quarters, that is, when th actual or intended occupants do not live an eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 22, 1961 PC(A2)-22

Maryland

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-22B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.

Table 1.--RACE, AGE, AND MARITAL STATUS, BY SEX, FOR THE STATE: 1960 AND 1950

1960 Census of Population

ADVANCE REPORTS

GENERAL POPULATION CHARACTERISTICS

March 17, 1961 PC(A2)-23

Massachusetts

(This series consists of 52 reports--one each for the United States, 50 States, and the District of Columbia--which are numbered in alphabetical order rather than in order of publication)

This report presents statistics from the 1960 Census of Population on the basic demographic characteristics of the inhabitants of the State. Comparable figures for 1950 are also shown.

The data presented here are being issued in advance of their publication in Final Report PC(1)-23B, which will provide additional information on the population characteristics of the inhabitants of this State. The final report will be published within the next month or two.

Tables 1 and 2 of this advance report show data on sex, race, age, marital status, and household relationship for the State. The third table (which is a preprint of table 13 from the final report) presents summary figures for these subjects for the State, its urban and rural parts, standard metropolitan statistical areas, urbanized areas, urban places, and counties.

An outline of the publication program for the 1960 Census of Population may be obtained free of charge from the Bureau of the Census, Washington 25, D.C., or any United States Department of Commerce Field Office.

DEFINITIONS AND EXPLANATIONS

Urban-rural residence.--According to the definition adopted for use in the 1960 Census, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (b) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas (see next paragraph); (c) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (d) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (e) unincorporated places of 2,500 inhabitants or more. The population not classified as urban constitutes the rural population.

Urbanized areas.--An urbanized area contains at least one city of 50,000 inhabitants or more and the surrounding closely settled

U.S. DEPARTMENT OF COMMERCE, Luther H. Hodges, *Secretary*
BUREAU OF THE CENSUS

For sale by the Bureau of the Census, Washington 25, D.C., and U.S. Department of Commerce Field Offices, 10 cents. Complete set of 52 reports, $4.

area, whether incorporated or unincorporated, that meets specified criteria relating to land use or population density. There are a few urbanized areas where there are "twin central cities" that have a combined population of at least 50,000.

Standard metropolitan statistical areas (SMSA's).--Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, the basic unit for defining SMSA's is the town rather than the county. The comparative figures for 1950 that were used to compute the percent of increase apply to the SMSA as defined in 1960.

Race and color.--The concept of race as it has been used by the Bureau of the Census is derived from that which is commonly accepted by the general public. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories obviously refer to nationality. The color group designated as "nonwhite" consists of such races as the Negro, Indian, Japanese, Chinese, Filipino, Korean, Asian Indian, and Malayan races. Persons of Mexican birth or ancestry who are not definitely of Indian or other nonwhite race are classified as white.

Persons of mixed racial parentage are classified according to the race of the nonwhite parent, and mixtures of nonwhite races are classified according to the race of the father, with the following special exceptions: Persons of mixed Indian and Negro parentage are classified as Negro unless the Indian blood very definitely predominates or unless the individual is accepted in the community as an Indian. Persons of mixed white and Indian blood are classified as Indian if the proportion of Indian blood is one-fourth or more, or if they are regarded as Indian in the community.

Age.--The age classification is based on the age of the person in completed years as of April 1, 1960. In answer to the question, "When was this person born?" the respondent was required to reply by giving the month and year of birth.

Medians.--The median, a type of average, is presented in connection with the data on age which appear in this report. The median is the value which divides the distribution into two equal parts--one-half of the cases falling below this value and one-half of the cases exceeding this value.

Marital status.--Persons classified as "married" comprise both those who have been married only once and those who remarried after having been widowed or divorced. The term "separated" relates to persons legally separated or otherwise absent from their spouse because of marital discord. Enumerators were instructed to report persons in common-law marriages as married and persons whose only marriage had been annulled as single. Differences between the number of married males and the number of married females arise from the fact that some husbands and wives have their usual residences in different areas, and from errors of response.

Household.--A household includes all of the persons who occupy a house, an apartment or other group of rooms, or a room which constitutes a housing unit. A group of rooms or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters, that is, when the actual or intended occupants do not live and eat with any other persons in the structure, and when there is either (1) direct access from the outside or through a common hall, or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

The 1960 definition of a household differs slightly from that used in the 1950 Census. The change arises as a result of the shift from a dwelling unit to a housing unit as the basic unit of enumeration in the Census of Housing. The main difference between housing units and dwelling units is as follows: Living quarters consisting of one room with direct access but without separate cooking equipment qualify as a housing unit in 1960 but generally did not qualify as a dwelling unit in 1950. The change in concept probably had little effect on the comparability of the 1960 and 1950 statistics on the number and

composition of households for the country as a whole or for most of the States and other large areas. However, it may have had a significant effect on the comparability of the household statistics shown in other reports for selected census tracts that are located in some of the larger metropolitan areas where many persons live alone in single rooms in hotels, rooming houses, and other light housekeeping quarters.

The head of a primary family is a household head living with one or more persons related to him by blood, marriage, or adoption. A primary individual is a household head living alone or with nonrelatives only.

Group quarters.--All persons who are not members of households are regarded, by the Bureau of the Census, as living in group quarters. Group quarters are living arrangements for institutional inmates or for groups containing five or more persons unrelated to the person in charge whose quarters are not divided into housing units. They are found most frequently in institutions, lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, residences for clergy, ships, and vessels. This concept of group quarters is similar to the concept of quasi households used in the 1950 Census.
