SUPPLEMENTARY BULLETINS CONTAINING REVISIONS IN THE JANUARY 1, 1945 EDITION OF SCHEDULE B, PART I

The changes which have been made in Part I, "Alphabetic Index," of Schedule B, "Statistical Classification of Domestic and Foreign Commodities Exported from the United States," are contained in the supplementary bulletins listed below. Since the Foreign Commerce Statistical Regulations of the Department of Commerce require that the correct Schedule B commodity number be reported on all Shipper's Export Declarations, exporters should make certain that the revised Schedule B numbers called for in these bulletins are shown on export declarations. Therefore, these changes should be carried into your copy of Schedule B wherever it is necessary for current use of the schedule.

Memorandum to Recipients of Schedule B, "Statistical Classification of Domestic and Foreign Commodities Exported from the United States" Part I, "Alphabetic Index" January 1, 1945 edition

Foreign trade regulations require that the shipper determine the proper schedule B number for insertion on the Shipper's Export Declaration. To simplify the choice of the proper Schedule B number, Schedule B was published in two parts in 1944, Part I of which was for this purpose. The 1945 edition of Part I now appears in revised and improved form. Its coverage has been extended so that most commodities entering into the export trade of the United States will be found under specific listings. Instructions for its use are found on page XVI.

Many new listings of commodities are added to Schedule B from time to time and it is necessary, therefore, that shippers receive all supplements covering such additions, and bulletins indicating changes in Schedule B, as they are issued. These supplements and bulletins may be received, free of charge, by filling out and mailing to the Bureau of the Census the form shown below.

Schedule B, Part II, designed for use by analysts and other users of United States export statistics, contains the names of classifications under which United States export statistics are compiled. It may be purchased from the Superintendent of Documents, Government Printing Office, Washington 25, D.C., from your district Collector of Customs, or from the Department of Commerce Field Office in your district.

All suggestions, criticisms or other comments concerning Schedule B should be submitted to the Bureau of the Census. All comments which are submitted will receive prompt and careful attention.

NOTICE TO EXPORT SHIPPERS

Neither Part I nor Part II of Schedule B, "Statistical Classification of Domestic and Foreign Commodities Exported from the United States," is being reprinted effective January 1, 1946. Changes in Part I of Schedule B, effective January 1, 1946 are presented in the following:

1. Part I of Schedule B has been separately printed for chemicals and related products, Schedule B commodity Group 8. The 1946 edition of Part I of Schedule B for chemicals and related products is constructed in the same manner as the Part I of the 1945 edition of Schedule B and supersedes all chemicals and related products appearing in the 1945 edition. It must be used for reporting all chemicals and related products on Shipper's Export Declarations filed after December 31, 1945.

2. P. B. 73B-I - 1946 changes in the 1945 edition of Schedule B, Part I for commodities other than chemicals and related products. Wherever necessary for current use of the Schedule, Schedule B should be revised in accordance with P.B. 73B-I.

3. P.B. 74B-I and II - Deletion of Double Units of Quantity. Effective January 1, 1946, it will no longer be necessary to report any commodity in terms of more than one net quantity (column 6) on the Shipper's Export Declaration. Wherever necessary for current use of the Schedule, Schedule B should be revised in accordance with P.B. 74B-I and II to show this change in requirements.

Copies of the above material will be furnished free upon request.

Since the Foreign Trade statistical regulations of the Department of Commerce require that the correct Schedule B commodity number be reported on all Shipper's Export Declarations, exporters should make certain that the revised Schedule B numbers called for in the above revision of the 1945 edition of Schedule B are strictly adhered to.

CHANGES IN SCHEDULE B, STATISTICAL CLASSIFICATION OF DOMESTIC AND FOREIGN COMMODITIES EXPORTED FROM THE UNITED STATES - JANUARY 1, 1945 EDITION

EFFECTIVE JANUARY 1, 1946

DELETION OF DOUBLE UNITS OF QUANTITY

Effective January 1, 1946, it will no longer be necessary for export shippers to report any commodity in terms of more than one net quantity (column 6) on the Shipper's Export Declaration. In the past, shippers have been required to report export shipments of some 48 commodities in terms of more than one unit of quantity. Exports of cotton, for example, were required to be reported both in terms of bales and net pounds. Exports of cattle hides were required to be reported both in terms of pounds and number of pieces.

In most instances shippers will no longer be required to report the unit of quantity, net pounds, but will continue to be required to report in terms of the remaining unit of quantity, pieces, number of bales, etc.

Wherever necessary for current use of the Schedule, Schedule B should be revised to show this change in requirements. Part II of Schedule B may be readily revised by making the changes indicated on the attached list. Part I of the 1945 edition of Schedule B is more difficult to revise since it contains lists of each of the individual items included within the 48 commodity classifications for which dual reporting of net quantity will no longer be required. Wherever necessary, Part I of the 1945 edition of Schedule B may be revised in the following manner:

1. Commodities which required more than one unit of quantity are listed twice, adjacent to each other, in Part I of the 1945 edition of Schedule B and each item is followed by an asterisk. Except for the commodities noted in 2 below, the items appearing in the 1945 edition of Schedule B, Part I, should be revised by deleting the first listing entirely and deleting the words "Quantity only" from the second listing.

   For example:

   First listing: "Sheep skins, ~~dry~~ wet . . . . . Lb. *023003"
   Delete entirely

   Second listing: "Sheep skins, ~~dry~~ wet - Quantity only - Piece *023004"
   Delete "Quantity only"

   The Shipper's Export Declaration should be filled out according to the revised second listing only.

711217 O - 46 - 2

2. Commodity descriptions referring to the following should be revised by deleting the second item in the listing only:

Motion-picture films, exposed or developed
Molybdenum ores and concentrates
Vanadium ores and concentrates

For example:

Retain: Newsreels, motion-picture film, exposed or developed, positive .... Lin. Ft. #912370

Delete entirely: Newsreels, motion-picture film, exposed or developed, positive - Quantity only, in number of reels or rolls ... No. #912371

The Shipper's Export Declaration should be filled out according to the first listing only.

In the foreword to Parts I and II, page XV, "Code Classification of Units of Quantity with Abbreviations," under Number, delete:

(b) Motion-picture features, negative and positive - number of complete features

(c) Motion-picture short subjects, newsreels, trailers, inserts, replacements, and sound track, negative and positive - number of reels or number of rools.

In the foreword to Part I, page XVI, "How to use Schedule," under Net Quantity, delete second paragraph.

CHANGE IN VALUE LIMITATION OF EXPORTS VALUED AT $10 OR LESS (SCHEDULE B NO. 999910)

Under How to use Schedule, page XVI, "Export Shipments Valued at $10 or less" should be changed to read as follows:

Export Shipments Valued at Less than $25

Schedule B commodity number 999910 should be used for all shipments under one Schedule B commodity number valued at less than $25 (except shipments under individual export license or on defense aid declarations). A shipment of aspirin in bulk worth $25, or more, would show Schedule B commodity number 813530 on the Shipper's Export Declaration. If the shipment of aspirin is valued at less than $25, Schedule B number 999910 should be shown.

If several items are shown on one Shipper's Export Declaration, each valued at less than $25 and each carrying a different Schedule B commodity number, 999910 should be used to cover all of them. For example: medicated soap worth $12 (Schedule B number 871000), toilet soap worth $14 (Schedule B number 871200), and mechanics' soap worth $23 (Schedule B number 872400), should all be coded 999910, if reported on the same declaration, even though they have a total value of $49. Commodity number 999910 should be inserted only once in column 5 of the Shipper's Export Declaration to cover these items and only the total value of all of them should be reported in column 7.

If, however, several soaps are shown on one Shipper's Export Declaration each of which is properly included under the same Schedule B commodity number, the specific Schedule B number is used for the total value if it is over $25. For example: castile soap worth $23, Cuticura soap worth $9, and cold cream soap worth $12 are all coded under 871200 when listed on the same declaration. Although each of the items is worth less than $25 the total value is more than $25 for all the items within the one Schedule B number. Schedule B number 871200 should be inserted only once in column 5 to cover these items and only one value should be reported in column 7 covering them all.

When the commodities listed on a single Shipper's Export Declaration are not all under $25 in value those valued at less than $25 should be listed adjacent to each other so that one commodity number and one total value may be readily used to cover them.

SCHEDULE B

STATISTICAL CLASSIFICATION OF DOMESTIC AND FOREIGN COMMODITIES EXPORTED FROM THE UNITED STATES

GROUP - 8

CHEMICALS AND RELATED PRODUCTS (1946 EDITION)

PART I - ALPHABETIC INDEX

This Part I of Schedule B, Group 8, 1946 edition, which covers only chemicals and related products, is constructed in the same manner as the 1945 edition of Schedule B and supersedes all chemical and related items appearing in the 1945 edition of Schedule B. It must be used for reporting all chemicals and related products on Shipper's Export Declarations filed after December 31, 1945. In unusual circumstances if a chemical or related item is not found under specific listings in this 1946 edition of Group 8, the 1945 edition of Schedule B should be consulted.

The 1945 edition of Schedule B remains in effect in 1946 for all commodities other than those in Group 8, "Chemicals and Related Products." Minor changes in the 1945 edition of Schedule B for commodities other than Group 8, "Chemicals and Related Products," have been announced by public bulletins.

Specific instructions on how to use Schedule B, Group 8, will be found on Page iii. For complete information on Schedule B see pages iii - XVI of the 1945 edition.

HOW TO USE SCHEDULE B PART I - GROUP 8
CHEMICALS AND RELATED PRODUCTS

Finding the Commodity

Look for the specific name of the commodity, not a general name. If the shipment consists of menthol, look for the specific name "Menthol," not the general name "Pharmaceuticals" or "Drugs." Look for "Lavoris" not "Proprietary medicinal preparations."

If the commodity can be described in more than one way, look for more than one description if the commodity is not located the first time.

Look for a trade name if a commodity is commonly known by its trade name. Trade names have been listed when it seems that the exporter will be more likely to know the commodity by that name.

If the description of any chemical or related product has more than one word in it, look under more than one word if the commodity is not located on the first try. Look for it first under the adjective with which the description commonly starts. Look for "Methyl cellulose" not "Cellulose, methyl." Chemicals are not cross referenced when there is a possibility that a change in word order might confuse the meaning.

Net Quantity

The net quantity of the commodity in the export shipment must be reported on the Shipper's Export Declaration in terms of the unit of quantity shown in the index for the commodity. This unit of quantity is usually different for different commodities. The unit of quantity for exports of metal-cutting paste is "pounds"; that for exports of liquid petrolatum is "gallons." If the unit of quantity is pounds or long tons it is always the "net" quantity, that is, exclusive of the weight of the container.

If You Cannot Find the Commodity

If the commodity is not located in Schedule B, Group 8, after having followed the instructions above in "Finding the Commodity," or in the 1945 edition of Schedule B, show Schedule B number 999990 on the shipper's Export Declaration. Do not hesitate to use this Schedule B commodity number under these circumstances. When 999990 is so used provide a description of the commodity in column 3 of the Shipper's Export Declaration and report the net quantity of the shipment in the units in which the shipment is being made.

Export Shipments Valued at Less than $25

Schedule B commodity number 999910 should be used for all shipments under one Schedule B commodity number valued at less than $25 (except shipments under individual export license or on defense aid declarations). A shipment of aspirin in bulk worth $25, or more, would show Schedule B commodity number 813530 on the Shipper's Export Declaration. If the shipment of aspirin is valued at less than $25, Schedule B number 999910 should be shown.

If several items are shown on one Shipper's Export Declaration, each valued at less than $25 and each carrying a different Schedule B commodity number, 999910 should be used to cover all of them. For example: medicated soap worth $12 (Schedule B number 871000), toilet soap worth $14 (Schedule B number 871200), and mechanics' soap worth $23 (Schedule B number 872400), should all be coded 999910, if reported on the same declaration, even though they have a total value of $49. Commodity number 999910 should be inserted only once in column 5 of the Shipper's Export Declaration to cover these items and only the total value of all of them should be reported in column 7.

If, however, several soaps are shown on one Shipper's Export Declaration each of which is properly included under the same Schedule B commodity number, the specific Schedule B number is used for the total value if it is over $25. For example: castile soap worth $23, Cuticura soap worth $9, and cold cream soap worth $12 are all coded under 871200 when listed on the same declaration. Although each of the items is worth less than $25 the total value is more than $25 for all the items within the one Schedule B number. Schedule B number 871200 should be inserted only once in column 5 to cover these items and only one value should be reported in column 7 covering them all.

When the commodities listed on a single Shipper's Export Declaration are not all under $25 in value those valued at less than $25 should be listed adjacent to each other so that one commodity number and one total value may be readily used to cover them.

Export Shipments for Relief or Charity

Exports for relief or charity by individuals and private agencies (such as Red Cross) should be reported in the following classifications:

Drugs and biological supplies	(no unit of quantity)	999840
Other export shipments for relief and charity (including chemicals and related products not reported in 999840)	" " " "	999890

These classifications cannot be used for exports of drugs and biological supplies and other chemicals and related products for relief or charity by United States Government agencies or by U.N.R.R.A., which should be reported under the commodity number shown in Schedule B, Group 8, Part I for the particular commodities.

CIRCULAR LETTER TO EXPORTERS, IMPORTERS AND OTHERS CONCERNED

Schedule D, "Code Classification of Customs Districts by Port of Entry," has been revised effective January 1, 1946. The only change in the new Schedule D is the provision of separate code numbers for approximately 100 additional domestic places, each of which lies within a Customs port of entry or Customs station having supervision over it. This revision in Schedule D makes necessary certain changes in procedure in the preparation of export and import documents. These changes are required only in those cases in which either the port of lading or unlading is one of the new places, or air exportations leave the United States through one of these new places.

Exports

Whenever in the case of vessel exportations, merchandise is laden at one of these new places, or in the case of air shipments, merchandise leaves the United States through one of these new places, the 1946 Schedule D name of this place must be inserted by the shipper or his agent on Shipper's Export Declarations (Commerce Forms 7525-V, 7525-DA-V, 7513, and 7513-DA).

Imports

Whenever merchandise is unladen at one of these new places listed in the 1946 Schedule D, the name of this place must be shown in the space labelled "Port of Unlading_____" on Customs Forms 7501 and 7502, and in parenthesis immediately following the designation of Customs port of entry in the space marked "Port of_____" on copies of Customs Form 7512. On Customs Form 7501 and 7502 as in the past only the Customs port of entry will be shown in the space labelled "Port of_____."

These changes of existing procedures must be followed in order that the Bureau of the Census may be able to provide Government Agencies and the general public with information on trade through these ports.

You will note that the title of the 1946 edition of Schedule D is "Code Classification of Customs Districts, indicating the Ports of Lading and Unlading in the Foreign Trade of the United States," since it includes places other than Customs ports of entry. Copies of the revised Schedule D are being transmitted under separate cover.

Your cooperation in this matter is greatly appreciated.
