Introduction 1

TABLES

1. Comparative summary—Cotton production; number of active cotton gins and average number of bales ginned per gin; linter production: Crops of 1899–1965 2
2. Production and ginnings of cotton, by States, with percentage of total ginnings reported from each State; rank of each State according to production; number of active and idle gins; and production of linters: 1962–65 4
3. Cotton ginned prior to specified dates during the season, by States: 1962–65 7
4. Percent of the total cotton ginned prior to specified dates, by States: 1963–65 10
5. Average gross weight of running bales and number and gross weight of upland square bales for which weights were obtained, by States: 1963–65 11
6. Number of gins in 1965; quantity of cotton, exclusive of linters, ginned from the crops of 1963–65; and cotton grown 1964–65; by counties 12
7. Cotton ginned prior to specified dates and total for the season, by counties: Crop of 1965 28

COTTON PRODUCTION IN THE UNITED STATES

INTRODUCTION

The statistics given in this bulletin are published in order to make available final figures for cotton ginning and production for the crop of 1965. The statistics given in this publication are based upon reports collected from all cotton gins in the United States. These reports were collected during the cotton-ginning season and preliminary releases were issued within 8 days after the end of the reporting period for cotton ginned prior to August 1, August 16, September 1, September 16, October 1, October 18, November 1, November 14, December 1, December 13, January 16, and at the end of the cotton-ginning season. The data for cotton ginned prior to August 1, September 1, October 1, November 1, December 1, January 16, and the total for the cotton-ginning season are based upon reports obtained from all cotton gins. The figures for cotton ginned prior to August 16, September 16, October 18, November 14, and December 13, represent estimates based upon reports received from 97.2 to 99.4 percent of the active gins. The percentages of the active gins for which estimates were made were as follows for each of the 5 reporting periods—August 16, .6 percent; September 16, 2.0 percent; October 18, 2.8 percent; November 14, 2.3 percent; and December 13, 2.3 percent.

Since 1939, each ginner has been required to keep a record of the county in which cotton ginned by him was grown. On the basis of the reports obtained from these records kept by ginners, data on cotton production have been obtained by allocating all cotton ginned to the county and State in which the cotton was grown. Therefore, the production of cotton in a county may differ from the ginnings because not all the cotton ginned in the county may have been grown in that county. Data are shown for most counties with a production of 100 or more bales, provided the cotton was ginned by at least 3 cotton gins. Figures on cotton ginned are given when the ginning was performed by 3 or more cotton gins. Where there were less than 3 cotton gins active in a county, the figures for the county have been combined with all other counties in order to avoid disclosure of information for individual cotton gins.

In order to measure accurately the size of the cotton crop, it is necessary to convert running bales, which vary in weight, into bales of uniform weight. For this purpose, data on bale weights have been collected from all cotton gins. Generally, two reports on bale weights are collected during the season. The first report related to cotton ginned prior to November 1, and the second, to cotton ginned November 1 and later. The weight of bales was collected for a sample of the cotton ginned. For cotton gins in counties in which usually less than 20,000 bales of cotton are ginned each season, the weight of every tenth bale was secured; for counties in which usually 20,000 to 40,000 bales of cotton are ginned, the weight was secured for every twentieth bale ginned; and for counties in which more than 40,000 bales are ginned, the weight of every fiftieth bale was obtained. On the basis of these reports, the weighted average gross weight of running bales and the number of equivalent 500-pound bales were computed for each county and State.

TABLE 1.—*Comparative summary—Cotton production; number of active cotton gins and average number of bales ginned per gin; linter production: Crops of 1899–1965*

Year of growth	Cotton (exclusive of linters)							Number of active gins	Average number of bales per gin	Linters	
	Running bales, counting round as half bales	Equivalent 500-pound bales	Running bales							Running bales	Equivalent 500-pound bales
			Total	Upland		American-Egyptian	Sea Island

*Revised.
[1] Monthly reports collected from oil mills; linter production not available until close of season.
[2] Linter production collected in thousands of pounds since 1957.
[3] Includes 11 bales grown in Mexico.

TABLE 2.—*Production and ginnings of cotton, by States, with percentage of total ginnings reported from each State; rank of each State according to production; number of active and idle gins; and production of linters: 1962–65*

*Revised.

[1] Included are 45,745 bales American-Egyptian grown in Arizona and California; 12,701 in New Mexico; and 27,138 in Texas.

[2] Based on equivalent 500-pound bales (gross weight).

[3] Statistics on linter production for 1965 not available until end of season.

[4] Linter production included in totals for Illinois.

[5] Bales ginned in Illinois included with Kentucky.

[6] Less than 0.005 percent.

TABLE 3.—*Cotton ginned prior to specified dates during the season, by States: 1962–65*

[Quantities are given in running bales. Linters are not included]
