# INTRODUCTION

## Uses of Classes of Products

Combination of individual products into classes of products makes it possible to publish an increased amount of products statistics, such as the value of products made in the primary industry, in secondary industries, and in each State. For individual products, such data could be shown only on a very limited scale because of the excessive cost and the restrictions imposed by the disclosure rule.

The use of classes of products also provides a more significant unit for application of the plant specialization (homogeneity) classification system described below.

## Content of this Manual

The Class of Products Manual consists of two parts. Part 1 is an arrangement of classes of products within each industry showing the individual products codes included in each class. It contains class-of-product codes, titles of each of the classes, and the product codes covered. It describes in detail the relation of the product to class-of-product codes, the nature of the special product and other codes not included within classes of products, classes of products primary in more than one industry, special instructions for plant specialization (class-of-product homogeneity) coding, etc. Part 2 lists each of the individual product codes in numerical sequence, and the class-of-products code corresponding to each product code. It is a convenient reference for converting individual product into class-of-products codes.

## Selection of Classes of Products

A class of products consists of one or a group of individual products derived from the list of products used in the Census of Manufactures. For the list of individual products, see the Industry and Commodity Classification Manual, Volume I, Part 1.

The classes of products were selected so that (1) they included a relatively homogeneous grouping of individual products; (2) all of the individual products constituting the class fell within the same industry (or industries, if primary in more than one industry); (3) every individual product was included in some one class of products; (4) an individual product was not included in more than one class of products; and (5) the number of classes within an industry did not exceed 10.

In many instances one of the classes of products of an industry having two or more classes, is of a residual nature and may not meet the criterion

of homogeneousness to the same degree as do the non-residual classes. The class of products, "other food preparations, n.e.c.", (code 2089-4) is an example of a residual class.

Derivation of Class-of-Product Codes

The class-of-product code is a five digit number consisting of the first four digits (industry base) of the product codes comprising the class and a fifth "class-of-products" digit.

The number of specific classes of products per industry varies from a minimum of one to a maximum of ten. When there is only one class of products in an industry, the class-of-product fifth digit is zero except for those classes primary in more than one industry. The class of products for single-class industries includes all primary products of the industry. The following industries have only a single class of products, the fifth digit of which is not zero: 2045, 2872, 3333, 3334, 3393, 3481, and 3631. For industries having two to nine specific classes of products, the fifth digit of the code of the first class is 1; second, 2; and so on, to 9. For industries having ten classes, the fifth digit of the first is zero; second 1; and so on, to 9. A "zero" fifth digit occurs for classes with the following industry-base codes for industries (or subindustries) having ten classes of products: 2011, 0010 (subindustry 2233), 2421, 2511, 2614 (industry 2612), 2911, 3312, and 3439.

Industry-base (first four digits) different from industry in which class of products is primary - The industry base (first four digits) of the class-of-products code differs from the industry code in which the class of products is primary in the same instances as the six-digit product codes constituting the class-of-products code. These differences occur chiefly for classes of products (1) primary in more than one industry; (2) affected by caption headings; (3) falling within subindustries; (4) of industry 2231 for which special product codes were used; and (5) of industries 2612 and 2819, products of which were assigned different industry-base codes.

When a class of products is primary in more than one industry, the same fifth digit of the code is reserved for each of the industries in which primary. In these cases the class-of-products codes with the same fifth digit but different industry bases (corresponding to industries in which the class is primary) are identical in content. For example, the class of product" processed and cured pork" comprising the product codes 201308-14, is primary in both industry 2013 and 2011. The fifth digit assigned to the class is "8". Hence 2018-8 is identical to 2011-8.

In some cases, a class of products of one industry is also primary in another industry but may constitute only a part of a broader class in the latter industry. For example, the class of products, "other sausages, etc., n.e.c.", (product codes 201301-07, 41-44, 98) is primary in industry 2013 and

comprises the whole of code 2013-9. It is also primary in industry 2011 and forms part of class of product code 2011-9 (product codes 201109, 11-13, 18, 98; and 201301-07, 41-44, 98).

If the content of a product is affected by caption headings on a particular schedule, the corresponding class of products is similarly affected. When the same products are reported on a different schedule, special product codes are assigned to provide for the distinction called for by the caption headings on the original schedule. In these cases the class of products code is shown to consist of products with different industry-base codes. For example, the class of products "metal office cabinets and cases", code 2522-1, consists of product codes 252105-06 (Form MC-54B, column D, lines 94 and 95) and 252205-06 (forms other than MC-54B).

Product combinations falling within a class of products - A reported item representing a combination of individual products falling entirely within a single class of products may under certain conditions be assigned a six-digit product code consisting of the four-digit industry base, followed by a "V" and the fifth digit of the class of products. Thus, the class-of-products code for all product codes having a "V" as the fifth digit may be obtained by merely dropping the "V". For example, the product code for "canned fruit juices" would be 2033V4 and the corresponding class-of-products code, 2033-4.

"Other products" of an industry - When a specific six-digit product code (other than those ending in "98") has been assigned to "all other (primary products" of an industry, that code is included within some one class of products. In other cases, the product code for "all other (primary) products" of an industry consists of the four-digit industry base followed by "98". In instances where the creation of "98" codes seemed appropriate, they were listed in the manual and assigned to a particular class of products. However, in the processing of schedules, other cases requiring the use of a "98" code will probably arise. The assignment of these additional product codes to corresponding class codes will be listed in supplements to this Manual.

"Unclassified" classes of products of an industry - Reported product combinations crossing class-of-products lines but falling entirely within an industry, may be assigned a product code consisting of the four-digit industry base followed by two zeros. For example, the item "canned fruits and vegetables" which crosses product and class-of-product lines (2033-1, 2033-2 and 2033-3), would be coded 203300, "canned fruits, vegetables, etc., unclassified." The unclassified product code for each industry, except those listed below converts to the unclassified class-of-products code consisting of the same four-digit industry base and the class-of-product fifth digit, zero. Thus, product code 203300 converts to class-of-products code 2033-0.

For the following industries having a single class of products, the fifth digit of which is not zero, the unclassified product code converts to the same single class code (fifth digit other than zero): 2045, 2872, 3333, 3334, 3393, 3481, and 3631.

For industries having 10 classes of products, one of which has a fifth digit, zero, the unclassified product code converts to a class-of-products code consisting of the same four-digit industry base followed by a "V". Thus, product code 201100 converts to class-of-products code 2011-V. The unclassified class-of-products code ends in a "V" for these industries: 2011, 2233 (subindustry of 2231), 2421, 2511, 2612, 2911, 3312 and 3439.

Special Product or Editing Codes Not Included Within Classes of Products

Following are the main types of special product codes or editing codes used for tabulating purposes, which are not included within any classes of products. In Part 2 of this manual, an "x" is shown in place of a class-of-products fifth digit for these product codes. An explanation of the nature of each of the six-digit codes not included within classes of products is contained in the footnotes to each industry major group in Part 1.

1. Subtotals codes representing the sum of a number of individual products, values for each of which are to be reported on the schedule; for example, total gasoline, code 291101;

2. Products of industries 2251 and 2252 on Form MC-67C3 for which only quantity data are to be reported, and which occur in the same tabulating field as the value; for example, quantity of men's full-fashioned hose, code 225109;

3. Products which are rearranged or redistributed according to different characteristics; for example, codes 204411-14 which represent a redistribution of shipments of rice by size of container;

4. Products for which data other than production or shipments are reported; for example, code 208409 which represents quantity of wine removed from fermenters

5. Special codes used to facilitate tabulation of data; for example, code 974100 represents value of shipments (sales) during 1947 by establishments reporting on Form MC-67B;

6. Codes in the 9100-, 9200-, 9300-, 9400- and 9800- series, which represent receipts for scrap and salable refuse, receipts for repair work, etc., and are common to most of the industries.

7. Reported items representing a combination of products crossing industry lines and assigned product codes consisting of the industry classification of the establishment followed by "99"; for example, the item, "canned and cured fish" (industries 2031 and 2032, respectively) reported by an establishment primarily canning vegetables (industry 2033), which would be assigned code 203399.

## Number of Classes of Products per Industry

A total of 1,038 classes of products were established for use in the Census of Manufactures. The distribution of the number of classes per industry, counting a single class in only one industry (that is, eliminating duplication for instances where a class is primary in more than one industry) follows:

| Number of classes of products per industry | Number of industries | Number of classes of products |
|---|---|---|
| Total | 456 | 1038 |
| 1 | 242 | 242 |
| 2 | 73 | 146 |
| 3 | 53 | 159 |
| 4 | 34 | 136 |
| 5 | 21 | 105 |
| 6 | 12 | 72 |
| 7 | 7 | 49 |
| 8 | 2 | 16 |
| 9 | 7 | 63 |
| 10 | 5 | 50 |

## Plant Specialization (Homogeneity) Classification

Classes of products are used as the basic units for classification of establishments according to the degree of specialization (homogeneity) of production. Application of this classification system to establishment reports permits the compilation of significant data on shipments, employment, cost of materials, materials consumed, and other measures of industrial activity, for more closely related groups of establishments and for narrower-than-industry lines of activity.

Under this procedure, an establishment is classified according to the percentage that the value of shipments (or production) of its largest class of products bears to its total shipments (or production).

The plant specialization code is a six-digit number consisting of (1) a four-digit industry (or subindustry) code (2) one digit representing the fifth digit of the class-of-products code, and (3) one digit representing the percentage range of the value of shipments of the largest class of products relative to the total value of shipments of the establishment.

Plant specialization codes are only assigned to establishments whose largest specific class of products (not including "unclassified class of products" for industries having more than one class--see "Derivation of Class-of-Product Code" above) accounts for more than 50 percent of its total value of shipments. When the largest class is less than 50 percent of the total shipments, an "xx" is assigned to the fifth and sixth digits of the plant specialization code. The percentage codes used when the major class of products exceeds 50 percent of total value of shipments, follows:

| Percentage range | Code |
|---|---|
| 100.0 | a/ 1 |
| 90.0-99.9 | 2 |
| 80.0-89.9 | 3 |
| 70.0-79.9 | 4 |
| 60.0-69.9 | 5 |
| 50.1-59.9 | 6 |

a/ The percentage code "1" is assigned when the percent of one specific class of products to total shipments, excluding receipts for scrap and salable refuse, is 100.0.

Generally, the industry base of the product codes of the largest class of products accounting for more than 50 percent of total value of shipments is the same as the industry classification of the establishment. It may differ from the industry code in the circumstances described above (see "Derivation of Class-of-Products Codes"). The class-of-products codes have been created in such a way that the fifth digit of each code is the same as the fifth digit of the plant specialization code for instances where the industry base of the class-of-products code differs from the industry classification of an establishment. For example, the largest class of products (over 50 percent of total value) on a schedule may be for "blended and prepared flour" (product codes 204501-04), which is coded 2045-5, and the industry classification of the establishment may be 2041. This is possible since 2045-5 is primary in both industry 2041 and 2045. The first five digits of the plant specialization code for the schedule would be 2041-5 which is identical to 2045-5.

In a number of cases, two or more classes of products must be combined for purposes of determining the plant specialization code for a particular industry. For example, if an establishment is classified in industry 3312, the classes of products 3312-3 and 3399-3 (each primary in industry 3312) must be combined as a unit for determining the largest class of products and the percentage code is based on the value for both classes of products relative to the total value of shipments. On the other hand, if the establishment is in industry 3399 each class of products is considered separately, since the class-of-products, 3312-3, is not primary in industry 3399.

Special instructions applying to plant specialization classification procedures are shown in Part 1 of this Manual.

# LIST OF CLASSES OF PRODUCTS - 1947 CENSUS OF MANUFACTURES

## EXPLANATORY NOTES

### Explanation of Codes

The four-digit code in the first column represents the industry or sub-industry. The single digit preceding the title of the class of products represents the fifth digit of the class-of-products code. The complete class-of-products code consists of either (1) the first four digits (industry base) of the product codes in the last column, followed by the class-of-products fifth digit, or (2) the four-digit industry code in the first column, followed the the class-of-products fifth digit. The first four digits derived from (1) and (2) above may be different, but the class-of-products codes thus obtained are identical in content and meaning. For example, the class-of-products code for "canned meats" obtained by method (1) is 2013-8, and by method (2), 2011-8. Both of these codes are identical in content and meaning.

The "Product Codes" column contains the product codes comprising each class of products. For classes consisting of a series of product codes with the same four-digit industry base, that industry base is shown only with the first product code; only the last two digits of the other codes are indicated separately. Series of product codes in consecutive sequence are indicated by a hyphen between the codes. Thus, the series of codes 203513-16, 18 (class code, 2035-4) represents the codes 203513, 203514, 203515, 203516, and 203518.

### "Unclassified" Classes of Products

All product codes ending in "00", except those listed below convert to a class-of-products code with the same four-digit industry base and the fifth digit "0".

The following product codes convert to a class-of-products code with the same four-digit industry base and the fifth digit "V": 201100, 223300, 242100, 251100, 261200, 291100, 331200, 343900.

The following product codes ending in "00" convert to a class-of-products code with the same four-digit industry base, and the fifth digit as indicated: 204500 - 5; 287200 - 1; 333300 - 3; 333400 - 4; 339300 - 8; 348100 - 1; and 363100 - 7.

b/ The product codes for certain items affected by column headings on Form MC-73A-2 are equivalent to other product codes assigned to the same items when reported on other than Forms MC-73A-1 and MC-73A-2, as indicated:

| Class-of-product description | Product codes on Form MC-73A-2 | Equivalent product codes on other than Forms MC-73A-1 and MC-73A-2 | | | |
|---|---|---|---|---|---|
| | | Letter-press (2752) | Gravure (2753) | Litho-graphy (2761) | Engraving (2792) |
| Publication printing (except book)..... | 275101-02 | 275121-22 | 275301-02 | 276111-12 | 279211-12 |
| Labels and wrappers..... | 275106 | 275126 | 275306 | 276116 | 279216 |
| Business forms..... | 275107 | 275127 | 275307 | 276117 | 279217 |
| Tickets and coupons..... | 275108 | 276128 | 275308 | 276118 | 279218 |
| Calendars..... | 275109 | 275129 | 275309 | 276119 | 279219 |
| Catalogs and directories..... | 275110 | 275130 | 275310 | 276120 | 279220 |
| Other commercial printing, n.e.c..... | 275103-05,11 | 275123-25, 31 | 275303-05, 11 | 276113-15, 21 | 279213-15, 21 |

c/ The following codes represent combinations on MC-73A-I, of individual product codes, on MC-73A-2, as indicated:

| Combined product code | Corresponding individual product codes |
|---|---|
| 275114 | 273201-02; 275101-11; 277102; 279201 |
| 278104 | 278101-03 |
| 278205 | 278201-03 |
| 278303 | 278301-02 |

d/ Code 273113 is a subtotal of products 273101-12 and is not included within classes of products.

a/ The following codes have been voided: 282329, 282341, 289412, 289616

b/ The following codes are not included within classes of products:

281105 - Quantity of spent sulfuric acid fortified in contact units

282338 - Subtotal shipments of rods and tubes

282339 - Occurs on Form MC-19F and is assigned as a "tie-in" line to the current report "Synthetic Organic Chemicals", collected by the United States Tariff Commission. The data reported under this code will soon be allocated to the proper classification under product codes 282301-28, 30-37

282606 - Quantity of nitroglycerine consumed in contract shooting of wells

288417 - Quantity of hydrogenated vegetable oils made and consumed in the manufacture of standard shortening

289408 - Quantity of dry glue consumed in the manufacture of flexible glue

289410 - Quantity of dry glue consumed in the manufacture of liquid glue

289606 - Quantity of oxygen produced by the liquefication process

c/ The following class of product is primary in more than one industry as indicated:

| Class of Product | Industries |
|---|---|
| 2871-1 | 2871, 2872 |

| 3299 | Nonmetallic mineral products, n.e.c. (MC-26C, MC-100) b/ | |
| 1 | Exfoliated vermiculite..... | 329901-07 |
| 2 | Other nonmetallic mineral products, n.e.c. | 329998 |

a/ The following class of products is primary in more than one industry as indicated:

| Class of product | Industries |
|---|---|
| 3231-1 | 3211, 3231 |

b/ The following codes are not included within classes of products:

322122 - Net weight of glass containers packed.
324104 - Quantity of Portland cement used in production of prepared or mixed hydraulic and masonry cements.
326406 - Value of metal fittings, if any, that are an integral part of insulators and whose value is included in the value of shipments of porcelain and steatite electrical supplies.
327526 - Total quantity of bulk mineral wool leaving cupolas or furnaces in 1947.
329908 - Total quantity of bulk exfoliated vermiculite produced in 1947.
975100 - Total cost of containers in which products (of industry 3241 or 3274) were shipped.

c/ The following codes have been voided:

| | |
|---|---|
| 326204-06 | 327518-24 |
| 326301-03 | 329311 |

d/ Identical breakdowns of earthenware and stoneware products are shown in industries 3263 and 3269. The six-digit product codes are identical for these products in the two industries. On Form MC-26J stoneware products are differentiated from earthenware products by means of check boxes which are marked by the reporting establishment.

| 3391-2 | 3312, 3391 | | |

b/ The following codes are not included within classes of products:

331258-65 - Quantity of steel ingots and steel for castings produced; by type of furnace.

331266 - Value of products transferred to other plants of own company (for establishments reporting on Form MC-22A).

332001-10 - Quantity of castings produced; by metal and by type of furnace (as reported for industries 3321, 3322, 3323, and 3361).

339108 - Quantity of forged railroad car or locomotive wheels shipped or transferred.

339109 - Quantity of forged rolls for rolling mills shipped or transferred.

MAJOR GROUP 33

LIST OF CLASSES OF PRODUCTS - 1947 CENSUS OF MANUFACTURES

c/ The list below shows all instances in Major Group 33 where several class-of-produ codes will be combined into a single code for plant homogeneity coding purposes. The industries affected are shown in the first column; the product codes and the corresponding classes of products which are to be combined are shown in the secon and third columns respectively, and the combining code to be used for plant homogeneity coding is shown in the fourth column. These combinations will be made only on reports which are assigned the industry codes specified in the first column but in no other industries.

| Industry | Product Codes | Class of product | Code for plant homogeneity |
|---|---|---|---|
| 3312 | 331208-12, 40-41, 52-53<br>339901-03, 08-10, 14-15 | 3312-3)<br>3399-3) | 3312-3 |

| 0 | Safes and vaults | 349200-05 |
| 3493 | Steel springs ( MC-25C) | |
| 0 | Steel springs, excluding wire | 349300-05 |
| 3494 | Bolts, nuts, washers, and rivets (MC-25A) | |
| 1 | Bolts, nuts, washers, rivets, and screws, standard | 349401-25, 98 |
| 2 | Other products, including wood screws and non-wood screws | 349426-27 |

MAJOR GROUP 34

LIST OF CLASSES OF PRODUCTS - 1947 CENSUS OF MANUFACTURES

| Industry and Class of Product | | Product Code |
|---|---|---|
| Code | Title | |
| 3495 | Screw-machine products (MC-25A) | |
| 0 | Screw-machine products..... | 349501 |
| 3496 | Collapsible tubes (MC-24E) | |
| 0 | Collapsible tubes, and caps, spouts, applicators, and screw eyes for collapsible tubes..... | 349600-07 |
| 3497 | Gold, silver, tin, aluminum, and other foil (MC-24D) | |
| 0 | Leaf and foil..... | 349700-12 |
| 3499 | Fabricated metal products, n.e.c. (MC-100) | |
| 0 | Fabricated metal products, n.e.c..... | 349900 |

a/ The following codes have been voided: 342109, 342111, 346201, 346312

b/ The following codes are not included within classes of products:

343202 - Quantity of residential oil burners produced and incorporated into heating equipment shipped from same plant.

343204 - Quantity of commercial and industrial oil burners produced and incorporated into heating equipment shipped from same plant.

343902 - Quantity of residential gas burners produced and incorporated into heating equipment shipped from same plant.

343904 - Quantity of commercial and industrial gas burners produced and incorporated into heating equipment shipped from same plant.

347151 - Number of motor vehicle sealed beam headlight units.

c/ For purposes of class-of-product homogeneity coding, assign the following codes based upon boxes checked at end of Item 20:

| MC-25D | MC-25E | Installation | Inclusion of installation costs |
|---|---|---|---|
| - | 3444-1 | No | - |
| 3441-6 | 3444-2 | Yes | Yes |
| 3441-7 | 3444-3 | Yes | No |

d/ The following classes of products are primary in more than one industry, as indicated:

| Class of product | Industries |
|---|---|
| 3481-1 | 3392, 3481 |
| 3489-2 | 3392, 3489 |
| 3489-3 | 3392, 3489 |
| 3489-4 | 3392, 3489 |
| 3489-5 | 3392, 3489 |
| 3489-6 | 3392, 3489 |

a/ The class-of-product code to be assigned to 3519- products (with the exception of 351901) will depend on the sixth digit of the product code regardless of

which numeral appears as the fifth digit. The relationshop of the sixth digit to the class-of-product code will be as follows:

| Class-of-product code | Sixth digit of product code |
|---|---|
| 3519-1 | 1 |
| 3519-2 | 2,3 |
| 3519-3 | 4,7,8,9 |

b/ The class-of-product codes to be assigned to "tie-in" lines in industries 3521 and 3522 will be determined on the basis of the reference numbers used in identifying the specific products covered by current survey M35A, in the following manner:

| Class-of-product code | Reference numbers | Class-of-product code | Reference numbers |
|---|---|---|---|
| 3521-1 | 1-16 | 3522-1 | 1-43 |
| 3521-2 | 17-30 | 3522-2 | 44-63 |
| 3521-3 | 31-38 | 3522-3 | 64-110 |
| | | 3522-4 | 135-161 |
| | | 3522-5 | 162-192 |
| | | 3522-6 | 193-208 |
| | | 3522-8 | 262-280 |
| | | 3522-9 | 111-134, 209-237 ( 245-250, 281-309, 310-333 |

c/ The following codes have been voided:

| | | |
|---|---|---|
| 354196 | 355315 | 356712 |
| 354244 | 356711 | 357114 |

d/ Product code 354349 represents stamping tools and dies shipped by establishments in industry 3463 reporting on Form MC-25E.

e/ For determination of the largest class of products in subindustries 3545 and 3557, totals of values based on proration of unit values to quantities must be obtained separately for codes 355311-14, 16-20 for Column C alone and for D and E combined, without regard to Columns B and F. Codes corresponding to Column C are primary in subindustry 3557; codes corresponding to Columns D and E are primary in subindustry 3545.

Codes 354501-08, 11-18 are assigned to machine tools designed primarily for home workshops, etc. when reported on other than Form MC-34A; they correspond to codes 355311-14, 17-20 for data in columns D and E on Form MC-34A. Codes 355701-08 are assigned to woodworking machinery designed primarily for home workshops, etc. when reported on other than Form MC-34A; they correspond to codes 355311-14, 17-20 for data in column C on Form MC-34A.
