# Population and Land Area of Urbanized Areas, For the United States: 1970 and 1960

This report presents population and land area data and maps for the 275 urbanized areas (UA's) recognized by the Bureau of the Census in 1979. Previously published data for the 248 UA's delineated for the 1970 Census of Population and the 27 UA's designated in 1974 are consolidated in this report.

The tables presented here are updates of tables from the **Census of Population: 1970,** Volume I, Part 1, **United States Summary,** and Parts 2-52, State reports. They incorporate corrections to the component part listings of certain UA's, as published in the correction notes in Volume I, Parts 2-52, but do not include corrections to the population of counties, county subdivisions, and places published in the correction notes in Volume I, or made subsequently (see appendix).

In 1974, 27 new UA's were designated by the Bureau of the Census as a result of a revision in the criteria for determining the central cities for which UA's are defined. The change in criteria for UA central cities parallels the change in standard metropolitan statistical area (SMSA) criteria announced by the Office of Management and Budget in November 1971. Essentially this modification extends UA recognition to certain cities of 25,000 to 50,000 population which, when densely settled communities adjacent to the city limits are included, have a total population of 50,000 or more. Although 27 new areas were established, none of the 248 existing UA's was affected by this revision. The changes in criteria are the subject of **Supplementary Report,** Series PC(S1)-106, "Population of Urbanized Areas Established Since the 1970 Census, For the United States: 1970." The definitional criteria as revised in 1974 are shown below.

## URBANIZED AREA CRITERIA

The major objective of the Bureau of the Census in delineating urbanized areas is to provide a better separation of urban and rural populations in the vicinity of the larger cities. A UA includes a central city or cities that qualify under one of the criteria listed below. All population criteria refer to 1970 census population counts (except as specified in criterion 1a).

1a. A city of 50,000 inhabitants or more according to the 1970 census, a special census taken between 1960 and 1970, or the 1960 census, provided that the city is located in an SMSA and is not included in an existing UA, or

b. A city with at least 25,000 inhabitants which, together with those contiguous places (incorporated or unincorporated[1]) having population densities of at least 1,000 persons per square mile, has a combined population of 50,000 and constitutes for general economic and social purposes a single community, provided that the city is located within an SMSA and is not included in an existing UA.

2. In addition to a central city or cities, a UA includes contiguous territory meeting the following criteria:

a. Incorporated places of 2,500 inhabitants or more but excluding the rural portions of extended cities.

b. Incorporated places with fewer than 2,500 inhabitants, provided that each has a closely settled area of 100 housing units or more; and all unincorporated places recognized in the 1970 census.

c. Contiguous small parcels of unincorporated land determined to have a 1970 census population density of 1,000 inhabitants or more per square mile. The areas of large nonresidential tracts devoted to such urban land uses as railroad yards, airports, factories, parks, golf courses, and cemeteries are excluded in computing the population density.

d. Other similar small areas in unincorporated territory without regard to population density provided that they serve:

To eliminate enclaves, or

To close indentations of one mile or less in width across the open end of the UA's in order to eliminate narrow fingers of "rural" areas, or

To link outlying areas of qualifying density provided that these are not more than one and a half miles from the main body of the UA.

**Urbanized Area Title.** The title is limited to three names and normally lists the largest cities in descending order of size. For other cities to be listed in the title of a UA with a central city of 50,000 or more, such cities (a) must have at least one-third the population of the largest city and a population of 25,000 or (b) must have 250,000 inhabitants or more.

[1] Unincorporated places as identified and defined for the 1970 census by the Bureau of the Census.

For those areas in which the largest city has a population of at least 25,000 but less than 50,000 (criterion 1b.), any named city or cities must have a population equal to one-third or more of that of the largest city and a minimum population of 15,000.

Area titles which include the names of more than one city start with the largest city and list other cities in descending order of size according to the most recent census, except that cities which qualify the area under criterion 1b are listed prior to the names of any other qualifying city.

**Extended cities.** In recent years, there has been an increasing trend toward the extension of city boundaries to include territory essentially rural in character (for example, by city-county consolidations). The classification of all the inhabitants of such cities as urban would include in the urban population persons whose environment is primarily rural in character. In order to separate these people from those residing in the closely settled portions of such cities, the Bureau of the Census examined patterns of population density and classified a portion or portions of each such city as rural in 1970. These cities—designated as extended cities—thus consist of both an urban part and a rural part.

An extended city is defined as a city that contains one or more areas, each of at least 5 square miles in extent, and with a population density of less than 100 persons per square mile according to the 1970 census. These areas constitute at least 25 percent of the land area of the legal city or a total of 25 square miles or more.

The delineation of extended cities in 1970 was limited to cities within urbanized areas. When an extended city is a central city of an urbanized area, only the urban part is considered as the central city; references to central cities in the remainder of this report include only their urban portions.

**Symbols.** In the tables, a dash "—" signifies zero, three dots "..." mean not applicable, a minus sign preceding a figure denotes decrease, and the symbol "NA" means not available. The symbol "U" means that the place is unincorporated.

## SUMMARY TABLES ON URBANIZED AREAS FOR THE UNITED STATES

Table 1 lists the 1970 populations, land areas, and population densities of the 275 UA's and their central cities. The 27 new UA's are denoted by asterisks. In 1970, 120.7 million persons or nearly 60 percent of the total U.S. population were living within the boundaries of urbanized areas as they are now defined. However, these areas covered only 36,290 square miles, or about 1 percent of the total land area of the United States.

More than half of the UA population (65 million) lived in the 340 central cities, whereas 56 million were in the urban fringe—the remainder of the UA outside the central city or cities. The population density of all UA's combined was 3,327 persons per square mile, with an average density of 4,399 persons per square mile in the central cities and 2,589 in the urban fringe. By contrast, the density was 24 persons per square mile outside UA's and 57 for the United States as a whole in 1970.

There is considerable variation among individual UA's in terms of population, land area, and density, as shown by the rankings in table 2. Populations range from just over 50,000 to more than 16 million for the New York, N.Y.-Northeastern N.J. Urbanized Area, with the majority of areas totaling less than 150,000. Land areas of individual UA's range from 12 square miles to the New York area's 2,425 square miles, and densities vary from a low of 847 persons to a figure nearly eight times as high in the New York area - 6,683. The median land area and density are 63.1 square miles and 2,600 persons per square mile, respectively. As can be seen from this table, most of the post-1970 UA's (denoted by asterisks) fall in the 4th and 5th quintiles, or lower 40 percent, of the distributions for the three characteristics.

The 1970 population of the United States by size of place prior to the 1974 revision of UA criteria and the population following the revision are shown in table 3. The designation of the 27 new UA's resulted in a reclassification from rural to urban of 321,699 persons, or 0.16 percent of the total 1970 population. The small magnitude of the shift reflects the fact that most of the population of the new UA's is in places of 2,500 or more and thus was already defined as urban at the time of the 1970 census. A more important impact of the UA criteria revision was its effect on the composition of the urban population. The total population residing inside UA's increased from 118,448,254 to 120,726,234, an addition of nearly 2.3 million persons. Approximately one-half of this increase is accounted for by the population of the 32 added central cities. The other half includes the population of the new UA's residing outside the central cities in places of 2,500 or more (previously designated urban but outside UA's) as well as in places of less than 2,500 and in territory not recognized as places (previously designated rural).

Table 4 shows the composition of the 1970 revised urban population of the United States by region, division, and State. The region that was most affected by the designation of the post-1970 UA's was the South, where 1,285,023 persons were added to UA's—more than 56 percent of the total population of the 27 new areas. The Northeast, however, continues to contain the greatest proportion of the total population inside urbanized areas—35.2 million or 29 percent—followed by the North Central (31.7 million or 26 percent), the South (29.9 million or 25 percent), and the West (24 million or 20 percent).

Table 5 lists the population and land areas for the urban and rural portions of extended cities. There were 59 such cities identified within urbanized areas in 1970. These cities had a total population of nearly 8.2 million and extended over 6,545 square miles. The urban portions accounted for approximately 99 percent of their total population but only 56 percent of their land area. The average population densities of the urban and rural portions of these cities were 2,189 persons per square mile and 37, respectively.

## DETAILED TABLES AND MAPS FOR URBANIZED AREAS BY STATE

This section presents tables showing the component parts and maps of the 275 UA's. The tables and maps are consolidated in this report for user convenience; they have been published previously in the individual State reports of the 1970 Census of Population (Volume I, Parts 2-52, table 11) and the Supplementary Report on the post-1970 Urbanized Areas (Series PC(S1)-106). The tables have been revised to reflect corrections to the component parts of certain UA's as published in the correction notes to Volume I of the 1970 census. Other population corrections published in the correction notes or made subsequently are not reflected (see appendix).

The data are arranged by State, with a table and set of maps for each State except Vermont and Wyoming, which do not contain any urbanized areas. For many UA's in the following tables, the 1960 population totals for various component parts have footnotes indicating that they were involved in reorganizations. Reorganizations refer to situations where precise allocation of the 1960 population of the UA cannot be made because of changes between 1960 and 1970 in the boundaries of the MCD's or CCD's involved.

## Table 1. POPULATION, LAND AREA, AND POPULATION DENSITY OF URBANIZED AREAS: 1970

(This table updates Volume I, U.S. Summary, table 20. *Indicates urbanized areas established since the 1970 census. For meaning of other symbols, see text)

| Urbanized area | Population | | Land area in square miles | Population per square mile of land area |

[1]For the "current criteria" section of the table, St. Cloud, Minn. and Clarksville, Tenn. have been assigned to a central city size category on the basis of their 1970 populations of 42,223 and 41,802, respectively. Included in these figures are the 1970 populations within areas annexed subsequent to the census, because it was on this basis that the two areas qualified as UA's. The 1970 populations of St. Cloud and Clarksville within their boundaries as of January 1, 1970 (39,691 and 31,719) were used to assign these places to a size category according to the previous criteria.

[2]The "previous criteria" section of the table has been revised since publication of the 1970 census reports to reflect corrections to the Sacramento, Calif. UA and the New London-Norwich, Conn. UA. Mather (U), having a 1970 population of 7,027, was erroneously excluded from the Sacramento UA in the 1970 census. Noank (U), having a 1970 population of 1,371, was not shown as a separate place in the 1970 census.

[3]Reflects revision to the listings of the component parts of certain urbanized areas as published in the correction notes of the 1970 census reports. See appendix.

# Table 4. COMPOSITION OF THE URBAN POPULATION : 1970

(This table represents a revision of Volume I, U.S. Summary, table 16, to reflect the effects of the change in the UA criteria. For meaning of symbols, see text)

| Regions, divisions, and States | Total urban population | Inside urbanized areas | | | | | Outside urbanized areas | | |
|---|---|---|---|---|---|---|---|---|---|
| | | Total | Incorporated places of 2,500 or more | Unincorporated places of 5,000 or more | Other incorporated places | Other urban | Total | Incorporated places of 2,500 or more | Unincorporated places of 2,500 or more |

| Hawaii | 638,683 | 442,397 | 422,768 | - | - | 19,629 | 196,286 | 196,286 | - |

Note: In addition to changes resulting from the revision in UA criteria, this table includes the following: (1) A correction to the Sacramento, Calif. UA to include Mather (U), 1970 population of 7,027, which was erroneously excluded from the area in the 1970 census. (2) St. Cloud, Minn. and Clarksville, Tenn. have been included with 1970 populations of 42,223 and 41,802, respectively. These figures include the 1970 population of areas annexed subsequent to the census, because it was on this basis that the two areas qualified as UA's. (3) Revisions to the listings of the component parts of certain urbanized areas as published in the correction notes of the 1970 census reports. See appendix.

# Table 5. POPULATION AND LAND AREA OF EXTENDED CITIES: 1970
