PREFACE AND ACKNOWLEDGMENTS

This report presents data from the Annual Housing Survey, which was sponsored by the U.S. Department of Housing and Urban Development and conducted by the U.S. Bureau of the Census. It was developed under the direction of Arnold H. Diamond, Director, Office of Economic Analysis, Department of Housing and Urban Development; and Arthur F. Young, Chief, Housing Division, Bureau of the Census.

Arnold H. Diamond, Duane McGough, and David Yentis were responsible for overseeing the Annual Housing Survey and the resultant report on behalf of the Department of Housing and Urban Development.

Within the Bureau of the Census, this report was developed in the Housing Division under the overall direction of Arthur F. Young, Chief. It was prepared under the supervision of Elmo E. Beach, Chief, Current Surveys Branch, assisted by Aneda E. France and George Spraggins. Specific activities related to data collection procedures, statistical presentation, organization of the report, and preparation of text materials were performed by Joyce A. Aso, Robert W. Bonnette, Mary C. Carroll, Paul P. Harple, Jr., Richard G. Kreinsen, Jane S. Maynard, Edward D. Montfort, Marjorie Shelton, and Janet A. Tippett. Important contributions were made by Aaron Josowitz, Nathan Krevor, Leonard J. Norry, and Herbert Shapiro in the planning and coordination of the survey.

The operational aspects of the Annual Housing Survey were coordinated by the Demographic Surveys Division under the direction of Earle J. Gerson, Chief, by Stanley Greene, Assistant Division Chief, and Edward F. Knowles, assisted by John C. Cannon and Patricia A. McDermott. Systems and processing procedures were performed under the direction of Barry M. Cohen, Assistant Division Chief, by D. Richard Bartlett, Leonard Goldberg, David B. Lipscomb, and Robert G. Munsey.

The planning of sample design, weighting, and computation of sampling variances were developed in the Statistical Methods Division under the supervision of Morton Boisen, Chief, and Robert H. Hanson, Assistant Division Chief, assisted by David Bateman, Peter Bounpane, and Dennis Schwanz. Implementation of the sampling selection, computation of variances, and preparation of field sample control procedures were carried out under the supervision of Herman H. Fasteau, Assistant Division Chief, by Jude Klein, Tom Scopp, William Alsbrooks, Irene Montie, Fay Nash, and Patricia Clark (Data Preparation Division, Jeffersonville).

Data collection activities were administered by the Field Division under the supervision of Richard C. Burt, Chief, by Stanley D. Matchett, Assistant Division Chief, Dean C. Schroeder, and William F. Hill, as well as the directors of the Bureau's regional offices.

Clerical processing of the questionnaires was performed in the Data Preparation Division under the direction of Hobert A. Yerkey, Chief, by O. Bryant Benton, Assistant Division Chief, Don L. Adams, and Harry Myers.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

GENERAL

This report presents detailed statistics on financial characteristics of the housing inventory from the 1973 Annual Housing Survey for the United States by inside and outside standard metropolitan statistical areas (SMSA's) and each of the four geographic regions. Data are shown on income, value, and gross rent cross-tabulated by housing and household characteristics.

The Annual Housing Survey was designed to provide a current series of information on the size and composition of the housing inventory, the characteristics of its occupants, the changes in the inventory resulting from new construction and from losses, indicators of housing and neighborhood quality, and the characteristics of recent movers. The survey, performed for the Department of Housing and Urban Development, is authorized under sections 501 and 502(d), 502(e), and 502(f) of the Housing and Urban Development Act of 1970, Title 12, United States Code 1701z-1 and 1701z-2. The Bureau of the Census is authorized under Title 31, United States Code 686, to perform special work or services for Federal agencies.

The statistics presented in this report are based on information from a sample of housing units. The information for the survey was collected by personal interview from August 1973 to December 1973, with the bulk of the enumeration completed by the end of October.

This report series consists of four parts (see list on page III) issued jointly by the Department of Housing and Urban Development and the Bureau of the Census. Part A provides data on general housing characteristics, Part B on indicators of housing and neighborhood quality, Part C on financial characteristics, and Part D on recent mover households.

The content and procedures of the Annual Housing Survey were determined after consultation with a variety of users of housing data and through field pretesting. A large portion of the subjects covered in this report is the same as those collected in the 1970 Census of Housing; in general these data are comparable to those shown in the 1970 census reports. In addition, a number of new items were introduced in this survey on subjects such as garage or carport, owner or manager on property, breakdowns or failures in equipment, the physical condition of the structure, and neighborhood conditions and services. A few of these items are presented in this report.

More detailed information on the technical and procedural matters covered in the text of this report can be obtained by writing to the Director, Bureau of the Census, Washington, D.C. 20233.

Organization of the text.—The text consists of this introduction, a summary of findings including text tables, and appendixes A and B, which appear after the data tables. Appendix A describes the geographic area classifications and provides definitions and explanations of the subjects covered in this report. Appendix B presents information on sample design, estimation, and accuracy of the data.

Content of the tables.—A series of standard tables presents cross-tabulations of the data for occupied housing units for each area shown in this report. The numbers presented in these tables are rounded to the nearest thousand. Table 1 presents characteristics for owner- and renter-occupied housing units by income of the family or primary individual; table 2, characteristics for owner-occupied, one-family homes by value of property; and table 3, characteristics for renter-occupied housing units by gross rent. The same subject content as shown in tables 1 through 3 is presented for housing units with Negro head of household in tables 4 through 6 and for housing units with household head of Spanish origin in tables 7 through 9.

The prefix letter "A" has been assigned to the tables for the United States as a whole, "B" to the Northeast region, "C" to the North Central region, "D" to the South region, and "E" to the West region.

Sample size.—The statistics presented in this report are based on a sample of housing units and are, therefore, subject to sampling variability. The designated sample consisted of approximately 60,000 housing units located throughout the United States. The sample was selected from units enumerated in the 1970 census and updated to include units constructed since 1970. Detailed information on the sample design, size of sample, estimation procedure, and sampling variability associated with these data is given in appendix B.

Derived figures (medians, etc.).—Shown in this report are medians, means, and ratios. The median, which is a type of average, is the middle value in a distribution; i.e., the median divides the distribution into two equal parts—one-half the cases fall below the median and one-half the cases exceed the median. Derived figures are not presented (but indicated by three dots "...") if there are less than 25 sample cases in the distribution or the base.

Medians for rooms and persons are rounded to the nearest tenth, for value and income to the nearest hundred dollars, and for rent to the nearest dollar. In computing medians for rooms and persons per housing unit, the whole number is used as the midpoint of the interval so that, for example, the category "4 rooms" is treated as an interval ranging from 3.5 up to 4.5 rooms. In computing median rent, units reported as "no cash rent" are excluded. The medians presented are generally computed on the basis of the distributions as shown in this report.

When the median falls in the lower terminal category of an open-end distribution, the method of presentation is to show the initial value of the next category followed by a minus sign; thus, for example, if the median falls in the category "Less than $5,000," it is shown as "$5,000–." When the median falls in the upper terminal category of an open-end distribution, the method of presentation is to show the initial value of the terminal category followed by a plus sign; thus, for example, if the median falls in the category "$35,000 or more," it is shown as "$35,000+."

The mean real estate taxes last year is rounded to the nearest dollar and is the only data shown for real estate taxes. Thus, the mean is computed on the basis of the distribution as tabulated.

Symbols.—A dash "—" signifies zero. Three dots "..." in a data column mean not applicable or that the base for a derived figure is too small for it to be shown. The symbol "NA" means not available.

Boundaries.—The data shown in this report relate to the areas as defined for the 1970 census. See appendix A for a discussion of these areas. Additional information and definitions of the 1970 boundaries are given in the 1970 Population Census PC(1)-A reports.

Other reports from the Annual Housing Survey.—In addition to the four basic reports in the Annual Housing Survey Series H-150, one or more supplementary reports (Series H-151) may be published for the United States. A series of reports (H-170) similar to H-150 will also be published for 60 selected standard metropolitan statistical areas. The data for the SMSA's are based on an independent sample of the 60 SMSA's divided into 3 groups of approximately 20 each, with 1 group interviewed every 3 years on a rotating basis. Enumeration for the first group began on April 1, 1974, and continued through March 1975. Below is a list of the SMSA's in each group:

GROUP I	GROUP II	GROUP III
Albany-Schenectady-Troy, N.Y.	Atlanta, Ga.	Allentown-Bethlehem-Easton, Pa.-N.J.

Wichita, Kans.	Springfield-Chicopee-Holyoke, Mass.-Conn.	Seattle-Everett, Wash.

*Included with Group II for the first enumeration.

QUALIFICATIONS OF THE DATA

Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained from a complete census, using the same schedules, instructions, and enumerators. Particular care should be exercised, therefore, in the interpretation of figures based on relatively small numbers of sample cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting and to sampling variability. For a further discussion of accuracy of the data, see appendix B.

In making comparisons with 1970 data, differences in the data may reflect such factors as the use of direct interview for 1973 contrasted with extensive use of self-enumeration in 1970, the sample design, the estimation procedure used, the sampling variability of the estimates, and the processing procedures. See

the section on "Comparability with 1970 Census of Housing data" in appendix A for further discussion.

The concepts and definitions of most of the items in this report are essentially the same as those used for the 1970 census. The SMSA boundaries are the same as those in the 1970 census. For historical comparisons and boundary changes, refer to the census reports of 1960 and earlier.

In this report, statistics on income relate to the income of the family or primary individual. Therefore, no data are provided on household income; i.e., income of persons unrelated to the head of the household is excluded.

Statistics for some of the characteristics shown in this report are based on restricted universes and, therefore, care should be exercised in relating the statistics for one characteristic to another. For example, value is restricted to owner-occupied, one-family homes on less than 10 acres and no business on property, and gross rent is restricted to renter-occupied units excluding one-family homes on 10 acres or more. Therefore, the totals for owner-occupied units in the "value" universe and for renter-occupied units in the "gross rent" universe do not agree with the totals for some of the income universes.

See appendix A for a more detailed discussion of the definitions and qualifications of all items in this report.

DATA COLLECTION PROCEDURES

The 1973 Annual Housing Survey was conducted by enumerators who made personal visits to each sample unit and obtained the information from the occupants or, if the unit was vacant, from informed persons (landlords, rental agents, or knowledgeable neighbors) and by observation. The information reported by the enumerator reflected the situation at the time of enumeration, which began in August 1973 and extended through December 1973, with the major portion completed by the end of October.

Data were collected for sample housing units located in the counties and independent cities comprising the 461 sample areas used in current surveys of the Census Bureau. A sample of housing units was selected in these areas from the 1970 census and updated by a sample of addresses from building permits to include housing units added since 1970. Estimates of the counts and characteristics of the 1973 inventory were obtained for these sample units.

For the estimates of losses from the 1970 housing inventory, the interviewer located the address of the 1970 sample unit. If the structure which contained the 1970 sample unit no longer contained housing units (or no longer existed), the disposition of the structure was determined, i.e., lost through means such as demolition, disaster, or conversion to nonresidential use. Data on losses are shown in Part A of this series.

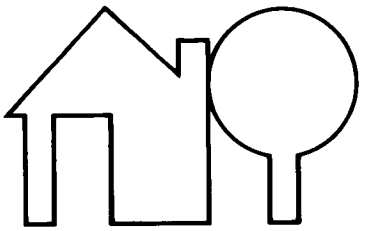
A more detailed description of the survey design and sampling procedures can be found in appendix B.

PROCESSING PROCEDURES

The questionnaires used for the 1973 Annual Housing Survey were of the conventional type, on which the enumerator recorded the information by marking a precoded check box or by writing in the entries. Census clerks edited and coded the schedules. The information from the questionnaires was data-keyed directly to magnetic tape which was processed on the Census Bureau's computers through a number of editing and tabulating steps. A facsimile of the questionnaire appears in appendix A.

The 1970 characteristics of units lost from the housing inventory were obtained by matching those units to the 1970 census records. The 1970 data for the losses were then extracted from the 1970 census record tapes. (As indicated above, data on losses are shown in Part A of this series.)

SUMMARY OF FINDINGS



TENURE AND INCOME

In the 69,337,000 occupied housing units in 1973, approximately one-fourth of the households earned less than $5,000, one-fourth earned $15,000 or more, and one-half earned between $5,000 and $15,000. While these income categories approximately delineated the upper and lower quartiles for all occupied units, they did not divide the homeowner or renter universes similarly. Only 20.1 percent of the owners earned less than $5,000, while 34.4 percent of the renters were in this category. Among the 17,483,000 families and primary individuals earning less than $5,000, the number of owners (8,981,000) slightly exceeded the number of renters (8,502,000). In the upper income category ($15,000 and over), the percentage distribution was reversed, with 32.5 percent of the owners falling in this group but only 13.7 percent of the renters. Of the 17,892,000 families and primary individuals earning $15,000 or more a year, 81.1 percent (14,503,000) were owners and 18.9 percent (3,389,000) were renters (table A).

HOMEOWNER CHARACTERISTICS

By Income

Among the 44,653,000 owner-occupied housing units, demographic and housing characteristics varied considerably by income and value of home. To illustrate this variability, a comparison of the upper ($15,000 or more) and lower (less than $5,000) income groups has been made.

Table A. **NUMBER OF HOUSEHOLDS BY INCOME AND TENURE: 1973**

(Numbers in thousands)

Tenure	Total		Less than $5,000		$5,000 to $14,999		$15,000 or more	
	Number	Percent	Number	Percent	Number	Percent	Number	Percent
All occupied units	69,337	100.0	17,483	25.2	33,963	49.0	17,892	25.8
Owner-occupied units	44,653	100.0	8,981	20.1	21,169	47.4	14,503	32.5
Renter-occupied units	24,684	100.0	8,502	34.4	12,794	51.8	3,389	13.7

Upper income homeowner households were predominately occupied by families with male head and wife present, while there were almost as many one-person households (42.2 percent) among lower income owners as husband-wife households (45.3 percent). Two-or-more-person households headed by females were much less prevalent in the upper income range (3.1 percent compared with 9.9 percent) as were owner households with head of age 65 or over (5.1 percent compared with 55.5 percent for lower income owners). Families with children under 18 occurred much more frequently among upper income owners, (59.0 percent) than in lower income owner households (15.7 percent) (table B).

Table B. **INCOME OF OWNER-OCCUPIED UNITS BY SELECTED HOUSEHOLD CHARACTERISTICS: 1973**

Characteristic	Less than $5,000	$5,000 to $14,999	$15,000 or more
Owner-occupied units. . thousands. .	8,981	21,169	14,503
Percent with:			
Male head, wife present, no nonrelatives.	45.3	78.3	90.0
Female head (2 or more persons)	9.9	8.5	3.1
1 person	42.2	9.5	2.8
Head 65 years and over	55.5	16.9	5.1
Own children under 18 years.	15.7	49.4	59.0
Subfamilies.	1.0	1.4	1.6
Nonrelatives	2.0	1.5	1.4

Upper income homeowner households were significantly larger than those of lower income owners (median of 3.6 persons compared with 1.7) (table C). The housing units occupied by the upper income households were also larger than units occupied by lower income households (a median of 6.3 rooms compared with 5.1). Units of the upper income households rarely lacked complete plumbing facilities (0.2 percent compared with 7.6 percent for the lower income group) and generally were newer. Of the upper income households, 43.6 percent of the occupied housing units were built in 1960 or later, in contrast to 22.9 percent for lower income households. Also, upper income households lived in units containing central (warm-air furnaces, steam, or hot water) or built-in heating equipment to a far greater extent than did lower income households.

The median value of owner-occupied units varied greatly by the income of the owner occupants: $16,100 for those with incomes less than $5,000 annually to $32,700 for the $15,000 and over income group.

The median ratio of value to income (computed separately for each owner-occupied unit) was 4.0 or more for lower-income households compared with a median "value-income" ratio of 1.6 for upper income households. Lower income homeowners thus were living in homes valued at more than four times their annual income while the upper income group occupied homes valued at 1.6 times their income (table C).

Table C. **INCOME OF OWNER-OCCUPIED UNITS BY SELECTED HOUSING CHARACTERISTICS: 1973**

Characteristic	Less than $5,000	$5,000 to $14,999	$15,000 or more

By Value of Housing Unit[1]

The median value of single-family, owner-occupied housing units for the United States was $24,100 in 1973. About one out of ten (3,393,000 households or 9.7 percent) homeowners occupied units valued at less than $10,000, while approximately one out of four (8,399,000 households or 23.9 percent) homeowners occupied units at $35,000 or more (table D).

The value of single-family, owner-occupied properties by selected characteristics is shown in figures 3 and 5. The median number of rooms per unit and the median number of persons are shown for each value class in figure 3. The median number

[1] Value characteristics are limited to specified owner-occupied units which are single-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property.

Table D. **VALUE OF OWNER-OCCUPIED UNITS: 1973**

(Numbers in thousands)

Value	Number	Percent
Specified owner-occupied units . .	35,107	100.0
Less than $10,000	3,393	9.7
$10,000 to $14,999	4,286	12.2
$15,000 to $19,999	5,690	16.2
$20,000 to $24,999	5,102	14.5
$25,000 to $34,999	8,237	23.5
$35,000 or more	8,399	23.9
Median	$24,100	. . .

of rooms was 4.6 for housing valued at less than $5,000 and 6.5+ for those valued at $35,000 or more. The median number of persons per household was 2.1 for housing in the lowest value class and 3.5 for housing in the highest value class. Figure 5 shows the percentage of units with specified equipment among owner-occupied housing units valued at $35,000 or more and those under $10,000; table E gives selected housing characteristics by value.

The median number of rooms in specified owner-occupied units in the United States was 5.8. Approximately 71.5 percent of the units had three or more bedrooms; 29.3 percent had two or more bathrooms; and 1.7 percent lacked complete private plumbing facilities. About 8.1 percent of the total homeowner units were built in 1970 or later, while 41.0 percent were built in 1949 or earlier. In addition, 53.8 percent had air conditioning, and 52.8 percent had a basement. The most typical type of heating equipment was a warm-air furnace (59.5 percent), while 14.7 percent of the homes were heated by steam or hot water; the remaining units were heated by a variety of other means.

The average (median) homeowner household contained 3.0 persons and had a male head whose wife was present (76.8 percent of all owner-occupied units). The head of these households was likely to be 45 to 64 years of age (42.1 percent). About 48.3 percent of all homeowners had children under 18 years of age. Only 12.3 percent of the owner-occupied units were comprised of one-person households, and 7.3 percent contained two-or-more-person households headed by females.

The median income for all homeowners was $12,200. About 61.8 percent of the 35,107,000 specified owner-occupied units[2] had a mortgage on their property. The average real estate tax per $1,000 of value was $17. About 23.9 percent of the owner-occupied homes were valued at $35,000 or more, while 9.7 percent were valued at less than $10,000. A comparative look at the housing characteristics of these value extremes highlights the housing variability among homeowners.

Units with values of $35,000 or more—The characteristics of units valued at $35,000 or more contrasted significantly with homeowner units valued under $10,000. The homes were larger with a median number of 6.5+ rooms (figure 3). About 88.6 percent had three or more bedrooms, and 62.7 percent had two or more complete bathrooms. Practically none (0.1 percent) lacked complete private plumbing facilities (table E). The $35,000 and over units also tended to be newer, with 53.0 percent built in 1960 or later; 13.5 percent were built in April 1970 or later. The higher valued units exceeded the proportion of all units in air conditioning (62.0 percent), a basement (61.9 percent), and a carport or garage (88.9 percent). Although the most common type of heating equipment was a warm-air furnace (64.8 percent), a sizeable proportion of these homes were heated by steam or hot water (25.1 percent).

Approximately 24.2 percent of the homes in the higher value class were reported as owned free and clear; the remainder had an existing mortgage or similar debt. Few of the homes (about 1.7 percent) reported failures in water supply and, of those units occupied during the previous winter, 7.6 percent reported heating equipment which had been unusable for 6 hours or longer.

[2] See footnote 1 on page XV.

Households in homes of the highest value class were larger, with a median of 3.5 persons. The predominant household type was one with a male head whose wife was present (85.7 percent), with the largest proportion of heads of these households in the 45 to 64 years age group (44.5 percent). About 55.8 percent of the households in the $35,000 or more value group had children under 18 years of age. A relatively small proportion of the higher valued homes were occupied by one-person households (6.4 percent).

The median income of the occupants of homes in the $35,000 or more value group was $18,900. This was $6,700 higher than the median income of $12,200 for all specified owner-occupied households and $13,700 higher than the median income of $5,200 for households in the under $10,000 value group.

Units with values of less than $10,000—Owner-occupied units valued at less than $10,000 showed significant differences from the homes with higher values. On the average, the homes were smaller with a median of 4.9 rooms. Only 41.5 percent had three or more bedrooms, and 3.6 percent had two or more complete bathrooms. A relatively larger proportion (12.4 percent) lacked some or all plumbing facilities (table E). These units also tended to be older. Approximately 88.2 percent were built before 1960, with most (73.3 percent) built before 1950. Only 1.4 percent were built in 1970 or later. A smaller proportion had such conveniences as air conditioning (33.4 percent); a basement (36.3 percent); and a carport or garage (39.2 percent). The majority of the homes were heated by means other than a warm-air furnace or steam or hot water. Only 33.7 percent of these homes were heated by one of these two methods (figure 5).

Table F. **INCOME OF RENTER-OCCUPIED UNITS BY SELECTED HOUSEHOLD CHARACTERISTICS: 1973**

Characteristic	Less than $5,000	$5,000 to $14,999	$15,000 or more
Renter-occupied units . . thousands. .	8,502	12,794	3,389
Percent with:			
Male head, wife present, no nonrelatives.	27.0	55.9	70.4
Female head (2 or more persons)	18.9	14.7	7.3
1 person	49.6	23.6	14.2
Head 65 years and over.	34.3	7.5	4.5
Own children under 18 years.	24.9	44.2	38.3
Subfamilies.	0.7	0.8	0.8
Nonrelatives	4.9	5.1	6.6

About 65.4 percent of the lower priced homes were reported as owned free and clear. About 3.8 percent reported failures in water supply, which was not statistically different from the 4.7 percent who reported their heating equipment had been unusable for at least 6 hours during the past winter (table E).

The size of the households living in lower valued homes was smaller, with a median of 2.3 persons. A much larger proportion of these homes were occupied by one-person households (26.5 percent). In 64.4 percent of the one-person households, the head was 65 years of age and older. About 31.4 percent of the households had children under 18 years of age.

The median income of occupants of lower valued homes was $5,200. This was $7,000 lower than the median income of $12,200 for all owner-occupied units and $13,700 lower than the median income of occupants of higher valued homes.

RENTER CHARACTERISTICS

By Income

Among the 24,684,000 renter-occupied units, demographic and housing characteristics varied considerably by income and rent. To illustrate this variability a comparison of the upper and lower groups has been made.

Among lower income renters, that is, those with incomes of less than $5,000, the proportion of one-person households was much greater than was that of husband-wife families (49.6 percent compared with 27.0 percent); while among upper income renters the inverse relationship prevailed (14.2 percent one-person households compared with 70.4 percent husband-wife families). The percentage of lower income renter households headed by females was much more marked than upper income renters (18.9 percent contrasted to 7.3 percent), as was the predominance of households headed by an individual aged 65 or over (34.3 percent contrasted to 4.5 percent). About one-fourth (24.9 percent) of the lower income families contained children under 18; for upper income renters the proportion was greater (38.3 percent). More of the upper income households contained nonrelatives (6.6 percent over 4.9 percent), but few of either type household contained subfamilies, 0.8 percent (table F).

Upper income renter households were somewhat larger than those of lower income renters (median of 2.4 vs. 1.5 persons), as were the units they occupied (4.4 room median compared with 3.6). A much higher proportion of upper income renters occupied units built in 1960 or later, 49.0 percent in contrast to 23.2 percent of the lower income renters. In addition, the proportion occupying units with central or built-in heating equipment was much higher among the upper income group (84.8 percent compared with 58.2 percent for the lower income renters). More lower income units were crowded; that is, 6.2 percent had 1.01 or more persons per room compared with 4.5 percent of the upper income units. Perhaps the most striking contrast was in the percentage of

Table G. **INCOME OF RENTER-OCCUPIED UNITS BY SELECTED HOUSING CHARACTERISTICS: 1973**

Gross rent as percentage of income.	35.0+	19.5	12.2

units lacking some or all plumbing facilities—0.8 percent of the upper income units, but 12.1 percent of the lower income units (table G).

The median monthly gross rent of the renter units varied significantly by the income of the occupants, from $98 for those having incomes of less than $5,000 annually to $189 for those in the $15,000 and over group. In terms of relative shelter costs, however, as seen in the gross rent as percentage of income figures (table G), the rents paid by lower income households represented 35 percent or more of their income, whereas the comparable percentage for upper income renters was 12.2 percent.

By Gross Rent

The median gross rent for all renter-occupied units was $133 monthly. Approximately 2,849,000 households or 11.7 percent of all renters paid less than $70 a month, while 3,519,000 renters or 14.5 percent, paid $200 or more monthly (table H). About 1,628,000 renter units were in the "No cash rent" category; e.g., the unit was provided free of charge by relatives or in connection with employment. (For a more complete explanation of this category, as well as for an explanation of gross rent, see the "Definitions and Explanations of Subject Characteristics" section of this report.)

Gross rent categories of renter-occupied units by selected characteristics are shown in figures 4 and 6. The median number of rooms per unit and the median number of persons are shown

Table H. **GROSS RENT OF RENTER-OCCUPIED UNITS: 1973**

(Numbers in thousands)

Gross Rent	Number	Percent
Specified renter-occupied units . .	24,348	100.0
Less than $70	2,849	11.7
$70 to $99.	3,704	15.2
$100 to $149	7,087	29.1
$150 to $199	5,561	22.8
$200 or more	3,519	14.5
No cash rent	1,628	6.7
Median	$133	. . .

for each gross rent class in figure 4. Size of units ranges from a median number of 3.2 rooms for units renting for less than $50 to a median of 4.4 for those renting for $200 or more a month. Median number of persons per household ranges from 1.4 in the lowest rent class to 2.4 in the highest rent class. Figure 6 shows the percentage of units with specified equipment for all renter units, and for those renting for less than $70 and $200 or more monthly; table I gives selected housing characteristics by gross rent.

The median number of rooms for renter-occupied units was 4.0. Of the specified renter-occupied units,[3] 21.1 percent had three or more bedrooms, 6.1 percent had two or more bathrooms, and 5.6 percent lacked complete plumbing facilities (figure 6 and table I). About 9.9 percent of the units were built in 1970 or later, while 55.3 percent were built in 1949 or earlier. Single-family homes accounted for 33.2 percent of the renter-occupied units. Approximately 37.7 percent of the renter-occupied units were in larger multiunit structures (5 or more) (table I).

The median size of renter households was 2.1 persons (table I). About 47.5 percent of the households had a male head with wife present; of these, about 69.1 percent were headed by an individual under 45 years of age. Approximately 36.5 percent of all renter households had own children under 18 years of age; 31.6 percent of the renter-occupied units were comprised of one-person households.

The variability of characteristics for occupants of renter housing and of the units they occupy may be seen by comparing the units at the upper (renting for $200 or more) and lower ends (renting for less than $70) of the rent scale.

Units with monthly gross rent of $200 or more—The characteristics of units with a gross rent of $200 or more contrasted significantly with the lower rent units (table I and figure 6). As with homeowner units, units in the higher rent group are larger (a median of 4.4 rooms). About 31.5 percent had

[3] Specified renter occupied excludes single-family homes on 10 acres or more.

three or more bedrooms, and 23.9 percent had two or more bathrooms. About 0.5 percent lacked some or all plumbing facilities. The higher rent units tended to be newer, with 24.8 percent built in 1970 or later. A smaller proportion (25.7 percent) were single-family houses; while a greater proportion were in structures with five or more units (53.4 percent). A greater proportion had air conditioning (68.6 percent).

Persons	2.1	1.5	2.1	2.4
Rooms	4.0	3.3	3.9	4.4

*Includes 1,628,000 "No cash rent" units.

Households living in higher rent units were larger with an average (median) of 2.4 persons. The typical household was still one with a male head with wife present (58.1 percent), with 68.3 percent of these heads under 45 years of age. About 40.9 percent of the renter households had own children under 18 years of age and only 19.1 percent were occupied by one-person households.

The median family income of the occupants of higher rent units was $13,100. This is $5,900 or 81.9 percent higher than the median income for all renter-occupied units, and more than $10,000 higher than the median income of occupants in the lower rent units.

Units with monthly gross rent of less than $70—Units renting for less than $70 show significant differences in contrast to higher rent units. They were smaller with an average (median) of 3.3 rooms. About 15.4 percent had three or more bedrooms, and only 1.3 percent had two or more bathrooms (figure 6). In addition, a greater proportion lacked complete plumbing facilities (26.4 percent). These units tended to be older, with 69.1 percent built before 1949. A larger proportion (42.1 percent) were single-family structures, while only 33.1 percent were in structures with five or more housing units (table I).

Households living in the lower rent units were smaller with a median of 1.5 persons. A much larger proportion (52.5 percent) of the units were occupied by one-person households. Of the one-person households, 49.8 percent were occupied by persons 65 years of age and older. About 27.8 percent of the units had children under 18 years of age.

The median income of the occupants of lower rent units was less than $3,000 which is only 41.7 percent of the median income of $7,200 for all renter-occupied units, and 22.9 percent of the median income of $13,100 for the occupants of the higher rent units.

HOUSING PATTERNS BY INCOME, FOR ALL HOUSEHOLDS

The survey further showed that in the 3½-year period between the last decennial housing census and the survey date, income,[4] housing values, and rents had all increased; i.e., while median income for homeowners increased from $9,700 to $11,500 (18.6 percent) the value of single-family homes rose from $17,100 to $24,100 (40.9 percent) and as the median income for renters rose from $6,300 to $7,200 (14.3 percent), the median gross rent increased from $108 to $133 (23.1 percent).[5]

Table J shows median income for homeowners and renters by geographic location. As a further indicator of income distribution between owners and renters, approximately 808.3 billion dollars of aggregate household income in 1973 was divided by tenure. Owners, constituting 64.4 percent of all

[4] Income data for 1973 refer to the 12 months prior to enumeration; income data for 1970 refer to the calendar year 1969.

[5] Income, value, and rent are expressed in current dollars (the value at the time the data were collected in 1970 and 1973). A significant part of the increases shown reflects the approximately 18½ percent rise in the cost of living during the 3½-year period, as measured by the Consumer Price Index, as well as changes in the characteristics of the housing inventory.

As indicated in the definitions section of appendix A, significant differences are likely between income data shown in this report and those obtained in the Current Population Survey. This is due to differences in the 12-month period covered, the way the income questions are asked, processing procedures, sampling variability, and nonsampling errors of the figures from the two surveys. For example, median income obtained from the Current Population Survey for calendar year 1973 was $10,300, compared with the $9,800 median income obtained from the Annual Housing Survey for the 12-month period preceding the October 1973 enumeration.

Table J. **MEDIAN INCOME OF FAMILIES AND PRIMARY INDIVIDUALS BY TENURE AND LOCATION: 1973 and 1970**

Area	All households			Owner			Renter		
	1973	1970	Percent increase	1973	1970	Percent increase	1973	1970	Percent increase
United States	$9,800	$8,400	16.7	$11,500	$9,700	18.6	$7,200	$6,300	14.3
Inside SMSA's	10,600	9,100	16.5	12,700	11,000	15.5	7,700	6,700	14.9
In central cities	9,000	7,900	13.9	11,700	10,100	15.8	6,900	6,100	13.1
Not in central cities	12,000	10,300	16.5	13,300	11,600	14.7	8,800	7,700	14.3
Outside SMSA's	8,200	6,800	20.6	9,100	7,500	21.3	6,100	5,300	15.1

households, had an approximate aggregate income of 589.1 billion dollars or 72.9 percent of the total, while renters, who made up the remaining 35.6 percent of the housing inventory, had an approximate aggregate income of 219.2 billion dollars or 27.1 percent of the total.

Differences between households at the upper and lower income levels and the housing they occupy, illustrate important variations in living patterns. The husband-wife family, for example, represented about 36.4 percent of those with annual incomes of less than $5,000, but accounted for 86.3 percent of households with incomes of $15,000 or more. Two-or-more person households headed by females were 14.2 percent of lower income households, but only 3.9 of upper income households. The most marked differences between the income groups, however, occurred among single-person households and those with an elderly head. Of the lower income group, approximately 46 percent were single-person households and a similar percent were headed by an individual aged 65 or over. In contrast, the percentages among upper income households were much lower—about 5 percent for single-person households and for households headed by an individual of 65 or more (table K).

Both the size of the households, as indicated by the median number of persons, and the size of the units occupied were smaller for lower income households. The median number of persons was 1.6 for lower income households and 3.4 for upper income households, while the median number of rooms was 4.4 for lower income households and 5.5+ for those in the upper income group. Thus lower income units had more rooms per person (2.75) than the higher income units (1.62).

Because of the nature of the household size and composition of many of the lower income households (such as, a high percentage of single-person households), some housing characteristics important to larger households, such as number of bedrooms and presence of more than one bathroom, are not as relevant.

About 51.4 percent of lower income households owned or were buying the units in which they were living, contrasted with 81.1 percent of the upper income households. The units occupied by the lower income households were, by several characteristics, less satisfactory than those occupied by the upper income households. For example, approximately 9.8 percent lacked some or all plumbing facilities; about 59.2 percent had central or built-in heating equipment; and less than a fourth (23.0 percent) had been built in 1960 or later. In contrast, the housing occupied by upper income families had complete plumbing facilities in almost all units, central heating equipment in 89.9 percent of the units, and represented newer housing to a greater degree—44.6 percent of the units constructed in 1960 or later (table K).

Table K. **INCOME BY SELECTED HOUSING CHARACTERISTICS: 1973**

CHARACTERISTICS OF HOUSEHOLDS WITH NEGRO HEAD

There were 6,962,000 housing units, or about one out of 10 occupied units, with Negro head of household in the United States in October 1973. Approximately 3,024,000 or 43.4 percent were owned by the persons living in them; the percentage of homeowners among white and other races was 66.7 percent. Income, property values, and monthly gross rent were generally lower for Negroes than for the rest of the Nation's households; i.e., those with heads of white and other races.

HOMEOWNER CHARACTERISTICS

By Income

The median annual income of Negro families and primary individuals in owner-occupied units was $8,000 compared with $11,700 for the rest of the Nation's homeowners. In 1970, the median income for Negro owners was $6,500; for all other owners it was $9,900.

Approximately 30.8 percent of the Negro homeowners had annual incomes of less than $5,000; for households of white and other races, 19.3 percent were in this income category. On the other hand, 19.3 percent of the Negro owners had incomes of $15,000 or more, while the proportion for white and other races households was 33.4 percent. While about half of the Negro and half of the white and other races homeowners had mid-level incomes; i.e., between $5,000 and $15,000, about 2 out of 10 Negro homeowners were in the upper income class ($15,000 or more), as compared with 3 out of 10 white and other races households in this same category.

This represented a significant change over the proportion of each group in this upper income class ($15,000 or more) as shown in the 1970 census. For Negro homeowners, the proportion had risen from 10.5 percent to 19.3 percent; for white and other races households, the comparable increase was from 23.0 percent to 33.4 percent.

As indicated in table L, differences were observed between racial groups for a number of characteristics. Frequently, however, characteristics of Negroes and of whites differed less within the same income group than did characteristics of Negroes in the upper versus the lower income groups and, similarly, the characteristics of whites in the upper versus the lower income groups. In some cases, the data suggest that the demographic and housing characteristics are more closely related to income than to race or color.

Among lower income Negro owners, for example, husband-wife and one-person households each represented about 3 of 8 households. An additional 22.9 percent were 2-or-more-person households headed by a female. Among lower income owners of white and other races, the corresponding percentages were 46.2 percent for husband-wife households, which was not statistically different from the 43.0 percent for one-person households, and 8.4 percent for households headed by females. Among owners in the $15,000 or more income category, 82.9 percent of the Negro households and 90.3 percent of the white and other races households had both husband and wife present. Households headed by an individual aged 65 or over were strikingly more common among lower income families, representing 56.5 percent of white households and 47.3 percent of Negro households; among upper income owners the proportions were only 5.2 percent and 3.1 percent, respectively (table L).

Table L. **INCOME BY RACE FOR SELECTED HOUSING CHARACTERISTICS: 1973**

With central or built-in heating equipment	63.4	91.2	32.1	88.2

Significant differences did occur between Negro and white households, however, for certain characteristics. For example, the median property value of homes occupied by Negroes ranged from $10,000 for those with annual incomes under $5,000 to $23,500 for those with incomes of $15,000 or more. For the homeowners of white and other races, the range was

from $16,900 for the lower income group to $33,100 for the higher income group (table L).

Although the housing occupied by both groups of lower income owners lacked some or all plumbing facilities to a much greater extent than that of upper income households, the proportion of such units among lower income Negro households was especially marked—20.9 percent compared with 6.0 percent for whites. More Negro households of both income groups had 1.01 or more persons per room than did those of other races.

By Value of Housing Unit

The median value of single-family properties of Negro homeowners was $15,900 which is $9,000 below the median value of $24,900 for homes with households of white or other races. As indicated in figure 1, there was considerable variation in median property values by income levels among both Negro and white households. For Negro homeowners, the median value ranged from $9,700 for those in the less than $3,000 income group to $23,600 for those with annual incomes of $15,000 and up. The range of median values for white homeowners was from $16,500 in the lowest income group to $33,100 for those in the highest income group. In each income group shown, the median value for Negro homeowners was lower than for white homeowners in the same income bracket (see figure 1).

The ratio of value to income was proportionately higher for homeowners at the lower income levels than at the higher income levels (figure 1). For example, the value of homes for the 433,000 Negro owners of single-family properties with incomes under $3,000 was at least three times ($9,700) their incomes while the ratio of value to income for those (512,000) with incomes of $15,000 or more was 1.6 or less.

There were few differences in the characteristics of homes valued at $25,000 or more regardless of the racial group of the occupants. The median number of persons was 3.4 and the median number of rooms was 6.3. Negro homes did have a higher proportion of households with more than one person per room, 6.3 percent compared with 2.8 percent (table M). About four of five homes of Negro and white and other races had three or more bedrooms. The proportions of single-family homes which were built in 1960 or later were not statistically different for Negroes, 42.2 percent, and for white and other races, 47.7 percent. Practically none of these higher value homes lacked complete private plumbing facilities. About 40.1 percent of these homes occupied by Negroes and 49.4 percent of those occupied by white and other races had two or more complete bathrooms. A majority of the units had central or built-in heating equipment—81.3 percent of the Negro homes and 92.4 percent of the white or other races homes. In addition, 48.1 percent of the houses occupied by Negro households and 59.7 percent of those occupied by households of white or other races had air conditioning.

The percentage of owner-occupied homes valued at less than $10,000 was about three times greater among Negro homeowners than among white and other races—26.8 compared with 8.3. Although the size of the units was approximately the same, Negro households were larger. The median number of rooms was 5.1 for Negro occupied units and 4.9 for units occupied by white and other races. The median number of persons was 2.7 for Negro households and 2.2 for white and other races households. Negroes in homes valued at less than $10,000 had a much higher proportion of homes with 1.01 or more persons per room (18.0 compared with 7.9 percent) (table M).

Table M. **VALUE BY RACE FOR SELECTED HOUSING CHARACTERISTICS: 1973**

Characteristic	Household heads of white and other races		Negro heads of households	
	Less than $10,000	$25,000 or more	Less than $10,000	$25,000 or more

Persons	2.2	3.4	2.7	3.4
Rooms.	4.9	6.3	5.1	6.3
Income	$5,400	$15,000+	$4,600	$14,700

A large proportion of the homes with values under $10,000 consisted of old dwellings. About 50.5 percent of the Negro homes and 60.9 percent of the homes of white and other races had been built before 1940. Only 15.5 percent of the Negro homes and 10.9 percent of the homes of white and other races were built in 1960 or later.

Lower value homes occupied by Negroes were more likely to lack complete plumbing facilities than similar homes occupied by white and other races—22.1 percent compared to 10.0 percent. While most of the homes with values under $10,000 had one complete bathroom, only a few had two or more.

Unlike the units valued at $25,000 or more, homeowner units valued under $10,000 were more often heated by means other than central or built-in furnaces. Approximately 64.9 percent of the Negro homeowners and 46.6 per-

cent of the white and other races homeowners heated their homes by "other means" (room heaters with and without flue, portable heaters, and other types). Although 24.3 percent of the Negro homes and 35.7 percent of the white or other races homes had air conditioning, most of them were room units.

RENTER CHARACTERISTICS

By Income

For the 3,938,000 Negro households living in renter-occupied units in 1973, the median income was $5,500 compared with $7,700 for the rest of the Nation's renters. In 1970, the median income for Negro renters was $4,300; for all other renters it was $6,700. Median income for Negro renters rose 27.9 percent, while that for all other renters increased by 14.9 percent.

Approximately 45.6 percent of the Negro renters had incomes of less than $5,000; the proportion of renter households of white and other races in this income group was significantly smaller (32.3 percent). On the other hand, only about 5.9 percent of the Negro renters were in the upper income category ($15,000 or more) while approximately 15.2 of the renters of white and other races fell in that income group.

In a manner similar to homeowners, differences for a number of characteristics were observed between racial groups of renters. Frequently, however, characteristics of Negroes and of whites differed less within the same income group than did characteristics of Negroes in the upper versus the lower income groups, and similarly, the characteristics of whites in the upper versus the lower income groups. In such cases, the data suggest that the demographic and housing characteristics are more closely related to income than to race or color. For example, while only 27.7 percent of lower income white renter households and 24.4 percent of Negro renters were of the husband-wife type, among upper income renters the proportions were higher—about the 70 percent level. While single-person households and those headed by an individual aged 65 and over were much more common among lower income households, they were found to a much greater degree among white renters than among Negro renters. Approximately 53.0 percent of the white lower income group were single-person households compared with 37.0 percent of lower income Negro households; the proportion with an elderly head was 37.5 percent for white and 22.4 percent for Negro lower income renters. The largest proportion of units in any of the four income-race groups headed by a female was among lower income Negro renters, 34.5 percent (table N).

For housing characteristics, lower income Negro renter units lacked some or all plumbing facilities and central or built-in heating much more often than did those occupied by upper income Negro renters. Units containing 1.01 or more persons per room were significantly more common for Negro renters than for white renters (table N).

By Gross Rent

The median gross monthly rent for renters was $107 for units occupied by Negro households and $139 for units occupied by white and other races. As illustrated in figure 2, for each income class the median gross rent paid by Negro households was lower than that paid by other races. The median ranged from $76 for Negro households with incomes of less than $3,000 to $169 for those with incomes of $15,000 or more. The comparable medians for white households were $95 for the lowest income group, and $191 for the highest (see figure 2).

The median "gross rent as percentage of income" was higher for Negro renters at the lower income levels than at the higher income levels. For Negro renters with incomes under $5,000, the median was 35 percent or more. For Negro renters with incomes of $15,000 or more, the median "gross rent as percentage of income" was 11.8 percent.

Table N. **INCOME OF RENTER-OCCUPIED UNITS BY RACE FOR SELECTED HOUSING CHARACTERISTICS: 1973**

Characteristic	Household heads of white and other races		Negro heads of households	
	Less than $5,000	$15,000 or more	Less than $5,000	$15,000 or more

Income	$3,000–	$15,000+	$3,000–	$15,000+
Gross rent.	$103	$191	$84	$169
Percent of units:				
Lacking some or all plumbing facilities .	10.6	0.7	17.9	2.1
With 1.01 or more persons per room . .	4.7	3.8	11.9	14.6
With central or built-in heating equipment	60.2	85.3	50.9	78.5

The gross monthly rent was less than $70 for 23.5 percent of the Negro renter households. About the same proportion (23.2 percent) paid $150 or more per month for rent. For households of white and other races, approximately 10.4 percent had a gross monthly rent of under $70 and 43.2 percent paid $150 or more monthly.

There was considerable variation in the characteristics of units in the lower rent group (less than $70) and those in the higher ($150 or more) group (table 0). For example, while 28.8 percent of the units renting for less than $70 lacked some or all plumbing facilities, practically none of the higher priced units lacked complete plumbing. A much higher proportion of the more expensive units had been built in 1960 or later—55.2 percent of those occupied by white households and 35.0 percent by Negro households.

Unlike renter units in the $150 and over group, a significant percentage of the under $70 rent class were in public housing projects—37.3 percent of the units occupied by Negro households and 22.1 percent of the units occupied by white and other races.

Negro renter households tended to be larger than white households; the median number of persons per Negro household was 2.0 for units renting for less than $70 and 2.9 for those renting for $150 or more. For white households, the median was 1.4 persons for units renting for less than $70 and 2.2 for those renting for $150 or more.

The median yearly income in the lower rent units was about $3,000 for units occupied both by Negroes and by white and other races. For renters living in the higher rent units, the median income was $9,000 for Negroes and $11,100 for white and other races.

CHARACTERISTICS OF HOUSEHOLDS WITH HEAD OF SPANISH ORIGIN

In October 1973, there were 2,754,000 occupied housing units with head of Spanish origin in the United States. About 1,189,000 or 43.3 percent owned or were buying the homes in which they lived.

HOMEOWNER CHARACTERISTICS

By Income

The median annual income of homeowners of Spanish origin was $9,800 in 1973, compared with a median of $11,500 for all homeowners. Approximately the same proportion of Spanish owners had incomes of less than $5,000 as had incomes of $15,000 or more a year (about one in five households); a similar proportion of all homeowners also had incomes of less than $5,000. However, almost a third of all homeowners were in the high income group.

As for all households, the housing and household characteristics of those of Spanish origin varied by income level. For example, of the homeowner households with incomes under $5,000, 63.8 percent had both husband and wife present, 17 percent were headed by a female, and about 17 percent consisted of one person living alone. Among upper income Spanish homeowners, husband-wife families represented 91.9 percent of the households, 2.3 percent were headed by a female, and only 1.6 percent were one-person households. Lower income housing tended to be older, to lack complete plumbing more often (10.6 percent of units occupied by households with incomes of less than $5,000 but a negligible amount of upper income households), and to be smaller (median of 4.7 rooms compared with 6.0).

By Value of Housing Unit

The median value of single-family properties of Spanish origin homeowners was $19,800 compared with a median of $24,100 for all owners. The median values varied by income level. For example, of the 1,040,000 owners of single-family properties, 19.3 percent had annual incomes of less than $5,000, which is not statistically different from the 22.6 percent that had incomes of $15,000 or more a year. The median value of properties owned by the lower income group was $11,300. For owners in the higher income group, the median value

was $29,800. The median "value-income ratio" for homeowners of Spanish origin at the lower income level was 3.9, substantially higher than the 1.5 for those at the higher income level.

As shown in table P, approximately 176,000 units, or 16.9 percent of all owner-occupied units with head of Spanish origin, were valued at less than $10,000. The comparative proportion for all owner-occupied units was 9.7 percent. Housing occupied by heads of Spanish origin, while slightly smaller than that of all households, contained more persons and, consequently, had a significantly higher number of units with 1.01 or more persons per room. For Spanish owners in houses valued at less than $10,000, the proportion was 27.8 percent, compared with 9.9 percent for all owners in homes of that value; for units valued at $25,000 or more, the proportion for Spanish households was 12.9 compared with 2.9 percent for all owners.

RENTER CHARACTERISTICS

By Income

The median annual income of renter households of Spanish origin was $6,500 in 1973, compared with a median of $7,200 for all renters. More than a third of both Spanish renters and all renters had incomes of less than $5,000. Fewer renters had incomes of $15,000 or more, 7.8 percent of the Spanish and 13.7 percent of all renters.

By Gross Rent

The median gross rent of Spanish households was $127, which was not statistically different from the $133 median for all renters. Approximately 11.9 percent of the Spanish renters paid rents of $70 or less per month and about 35.2 percent paid rents of $150 or more.

While the size of the units occupied by renters of Spanish origin was similar to all renters, the size of the Spanish households was larger. The median number of persons for Spanish households in lower rent units was 2.4 compared with 1.5 for all lower rent units. For units renting at $150 or more, the median number of persons was 3.2 for Spanish households, but 2.3 for all. Consequently, there were significant differences in the proportion of each group living in units with 1.01 or more persons per room (table Q).

AREA CLASSIFICATIONS

Counties

The primary divisions of most of the States are termed counties; in Louisiana the corresponding units are termed parishes. Alaska has no counties; in this State, areas designated census divisions have been defined for general statistical purposes by the State in cooperation with the Census Bureau and are treated as county equivalents. Four States (Maryland, Missouri, Nevada, and Virginia) contain one or more cities that are independent of any county; for statistical purposes these independent cities are treated as county equivalents.

Standard Metropolitan Statistical Areas

The definitions of standard metropolitan statistical areas used in the Annual Housing Survey correspond to the 243 SMSA's used in the 1970 census. These include the 228 SMSA's as defined and named in the Bureau of the Budget publication, **Standard Metropolitan Statistical Areas: 1967**, U.S. Government Printing Office, Washington, D.C. 20402. After 1967, 15 SMSA's were added, of which 2 were defined in January 1968 and an additional 13 were defined in February 1971 on the basis of the results of the 1970 census. Changes in SMSA definition criteria, boundaries, and titles made after February 1971 are not reflected in this series of reports. SMSA's are defined by the Office of Management and Budget (formerly Bureau of the Budget).

Except in the New England States, a standard metropolitan statistical area is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are socially and economically integrated with the central city. In the New England States, SMSA's consist of towns and cities instead of counties. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. For a detailed description of the criteria used in defining SMSA's, see the Bureau of the Budget publication cited above.

In this report, figures for "in central cities" refer to all housing units within the legal city boundaries. For a few central cities, the figures include some housing units in parts of the city classified as rural in the 1970 census.

DEFINITIONS AND EXPLANATIONS OF SUBJECT CHARACTERISTICS

General

As stated in the introductory text of this report, the 1973 Annual Housing Survey was conducted by direct interview. The survey enumerators were instructed to

read the questions directly from the questionnaire. The definitions and explanations given below for each subject are to a considerable extent drawn from various technical and procedural materials used in the collection of the data. This material helped the enumerative personnel to understand more fully the intent of each question and thus to resolve problem or unusual cases. Additional explanatory information has been added to this portion of the text to assist the user in the proper utilization of the statistics.

Comparability with 1970 Census of Housing data.—The data presented in this report are generally comparable to those shown in the 1970 census reports, particularly to the cross-tabulations shown in the 1970 Census of Housing, Volume II reports, **Metropolitan Housing Characteristics.** The concepts and definitions are essentially the same for items that appear in both the 1970 census and the 1973 survey. Definitional differences, if any, are discussed under the particular subject later in this section. Additional differences between the 1973 Annual Housing Survey data and the 1970 census data may be attributed to several factors. These include the extensive use of self-enumeration in the census in contrast to direct interview in the Annual Housing Survey; differences in processing procedures; the estimation procedures and sample designs; the sampling variability of the estimates from the Annual Housing Survey; to a smaller extent, the sampling variability associated with the sample data from the census; the nonsampling errors associated with the Annual Housing Survey estimates; and the nonsampling errors associated with the census estimates.

Data as of 1970 for "mortgage on property" and "real estate taxes last year" are presented in the 1970 Census of Housing, Volume V, **Residential Finance.** In Volume V, the data are based on information collected for a sample of housing units in the Residential Finance Survey which was conducted in 1971 as part of the 1970 census. The 1970 report provided data on the financing of homeowner and rental properties, including characteristics of the mortgages, properties, and homeowners.

Differences in the concepts and definitions between the data in this report and Volume V include the following. The basic unit of tabulation in this report is the housing unit; in Volume V, it is the property. Data on mortgage status in this report are based on the occupant's answer; in Volume V, mortgage status of the property was verified by the lender. In this report, real estate taxes reflect the total amount of real estate taxes excluding special assessments such as sewer taxes, road improvement taxes, and tax collection charges; in Volume V, real estate taxes *include* special assessments.

Comparability with other current reports.—This report contains some information similar to that contained in the Current Population Reports published by the Bureau of the Census. Because of procedural differences mentioned below, care should be taken when comparing data from the Annual Housing Survey with data from other current surveys.

Current Population Reports from the Current Population Survey.—The Current Population Survey (CPS) is a monthly sample survey of approximately 58,000 designated sample units. From the data collected in the Current Population Survey, the Bureau issues several publications under the general title Current Population Reports. Included are reports on household and family characteristics, mobility of the population, and income.

Although the concepts and definitions used in this report are essentially the same as those used in the Current Population Reports and the intent of both the Annual Housing Survey and the Current Population Survey is the same, there are likely to be significant differences in the income data. The time period covering income is different in that in this report income covers the 12 months prior to the date of enumeration while the income data in the Current Population Survey refer to the calendar year prior to the date of enumeration. There are also significant differences in the way income questions are asked. Additional differences between the 1973 Annual Housing Survey and the Current Population Survey may be attributed to factors such as the sampling variability and nonsampling errors of the figures from the two surveys, survey procedures and techniques, and processing procedures.

Current Population Reports from the Survey of Purchases and Ownership.—The 1973 Survey of Purchases and Ownership is a sample survey, covering approximately 20,000 of the 60,000 designated sample units in the 1973 Annual Housing Survey. Data are collected on ownership, availability, and recent purchases of automobiles and other vehicles, television sets, and selected major household appliances. Information on the price paid is obtained for recently purchased items. The data are available in the Current Populations Reports, Series P-65, **Consumer Buying Indicators.**

Although the Survey of Purchases and Ownership was taken in conjunction with the Annual Housing Survey, there are differences in the concepts and definitions between the two. For example, the data on automobiles and other four-wheel vehicles, such as pickup trucks and passenger vans, collected in the Survey of Purchases and Ownership reflect the number of such vehicles that are owned or being bought by a member of the family. The data collected in the Annual Housing Survey reflect the number of automobiles or trucks owned or regularly used by any member of the household, including nonrelatives. Additional differences may be attributed to such factors as estimation procedures, sampling variability, and nonsampling errors.

Living Quarters

Living quarters are classified as either housing units or group quarters. Usually, living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, boarding house, or mobile home or trail-

er). Living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a watchman lives), as well as in places such as tents, caves, and old railroad cars.

Housing units.—A housing unit is a house, an apartment, a group of rooms, or a single room occupied or intended for occupancy as separate living quarters. Separate living quarters are those in which the occupants do not live and eat with any other persons in the structure and which have either (1) direct access from the outside of the building or through a common hall which is used by the occupants of another unit or by the general public or (2) complete kitchen facilities for the exclusive use of the occupants. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in the section on group quarters). For vacant units, the criteria of separateness, direct access, and complete kitchen facilities for exclusive use are applied to the intended occupants whenever possible. If the information cannot be obtained, the criteria are applied to the previous occupants. Both occupied and vacant housing units are included in the housing inventory, except that mobile homes, trailers, tents, caves, boats, railroad cars, and the like, are included only if they are occupied.

Group quarters.—Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons not related to the person in charge. Group quarters are located most frequently in institutions, boarding houses, military barracks, college dormitories, fraternity and sorority houses, hospitals, monasteries, convents, and ships. A house or apartment is considered group quarters if it is shared by the person in charge and five or more persons unrelated to him, or if there is no person in charge, by six or more unrelated persons. Information on the housing characteristics of group quarters was not collected.

Rules for mobile homes, hotels, rooming houses, etc.—Mobile homes or trailers, tents, boats, or railroad cars are not considered housing units if vacant, used only for business, or used only for vacations.

Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents, i.e., persons who consider the hotel as their usual place of residence or have no usual place of residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have either direct access or complete kitchen facilities for exclusive use, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain four or fewer roomers unrelated to the head, they are classified as one housing unit; if the combined quarters contain five or more roomers unrelated to the head or person in charge, they are classified as group quarters. In a dormitory, residence hall, or similar place, living quarters of the supervisory staff and other employees are separate housing units if they satisfy the housing unit criteria; other living quarters are considered group quarters.

Institutions.—Living quarters of staff personnel are separate housing units if they satisfy the housing unit criteria. Other living quarters are considered group quarters.

Occupancy Characteristics

Occupied housing units.—A housing unit is classified as occupied if a person or group of persons is living in it at the time of enumeration or if the occupants are only temporarily absent—for example, on vacation. However, if the unit was occupied entirely by persons with a usual place of residence elsewhere, the unit is classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

Race.—The classification by race shown here refers to the race of the head of the household occupying the housing unit. The concept of race as used by the Census Bureau does not denote clear-cut scientific definitions of biological stock. The classification of race in the 1973 Annual Housing Survey was made by the enumerator based on his own observation. In the 1970 census, race was essentially a self-classification by people according to the race with which they identified themselves. Detailed characteristics of units with Negro head of household are presented in separate tables.

Spanish origin.—The classification by Spanish origin here refers to the origin of the head of the household occupying the housing unit. Detailed characteristics of units with head of Spanish origin are presented in separate tables. Spanish origin was determined on the basis of a question that asked for self-identification of a person's origin or descent. Respondents were asked to select their origins from a "flash card." Persons of Spanish origin were those who indicated that their origin was either Mexican-American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Spanish.

In the 1970 census and current surveys' reports, Spanish persons are identified according to various criteria: Birthplace, birthplace of parents, language, surname, and origin or descent. For this reason, care should be taken in making comparisons of Spanish origin estimates from the Annual Housing Survey and other surveys.

Tenure.—A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented

for cash rent and those occupied without payment of cash rent.

Owner or manager on property.—These statistics are presented in terms of the number of housing units in structures of two or more units with the owner or the resident manager or superintendent living on the property. The category "with owner on property" refers to the owner and not his agent, resident manager, or superintendent. "With resident manager or superintendent on property" refers to a resident manager, superintendent, janitor, or other representative of the owner.

Utilization Characteristics

Persons.—All persons occupying the housing unit are counted. These persons include not only occupants related to the head of the household but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the household head. The data on "persons" show the number of housing units occupied by the specified number of persons.

A person is enumerated at his usual place of residence. This refers to the place where the person lives and sleeps most of the time. This place is not necessarily the same as his legal residence, voting residence, or domicile.

Rooms.—The statistics on "rooms" are in terms of the number of housing units with specified number of rooms. Rooms counted include whole rooms used for living purposes, such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, permanently enclosed porches that are suitable for year-round use, and lodger's rooms. Also included are rooms used for offices by a person living in the unit.

A partially divided room, such as a dinette next to a kitchen or living room, is a separate room only if there is a partition from floor to ceiling, but not if the partition consists only of shelves or cabinets.

Not included in the count of rooms are bathrooms, halls, foyers or vestibules, balconies, closets, alcoves, pantries, strip or pullman kitchens, laundry or furnace rooms, unfinished attics or basements, other unfinished space used for storage, open porches, trailers used only as bedrooms, and offices used only by persons not living in the unit.

If a room is used by occupants of more than one unit, the room is included with the unit from which it is most easily reached.

Persons per room.—"Persons per room" is computed for each occupied unit by dividing the number of persons in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of persons per room.

Bedrooms.—The number of bedrooms in the unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping such as guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a hideaway bed, are not considered bedrooms. A housing unit consisting of only one room, such as one-room efficiency apartment, is classified, by definition, as having no bedroom.

Structural Characteristics

Complete kitchen facilities.—A unit has complete kitchen facilities when it has all three of the following for the exclusive use of the occupants of the unit: (1) An installed sink with piped water, (2) a range or cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An icebox is not included as a mechanical refrigerator.

The kitchen facilities are for the exclusive use of the occupants when they are used only by the occupants of one housing unit, including lodgers or other unrelated persons living in the unit. When a structure consists of only one housing unit, all equipment located inside the structure is classified, by definition, for exclusive use.

Basement.—Statistics on basements are presented in terms of the number of housing units located in structures built with a basement. A structure has a basement if there is enclosed space in which persons can walk upright under all or part of the building.

Year structure built.—Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. The figures relate to the number of units in structures built during the specified periods and in existence at the time of enumeration. For mobile homes and trailers, the model year was assumed to be the year built.

Units in structure.—In the determination of the number of units in a structure, all housing units, both occupied and vacant, were counted. The statistics are presented in terms of the number of housing units in structures of specified type and size, not in terms of the number of residential structures.

A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof.

Mobile homes and trailers are shown as a separate category. When one or more rooms have been added to a mobile home or trailer it is classified as a one-family house. If, however, only a porch or shed has been added, it is still counted as a mobile home or trailer.

Elevator in structure.—Statistics on elevator in structure are presented in terms of the number of housing units in structures with four floors or more which have a passenger elevator. Units are in a "walk-up" structure of four floors or more if the structure has no passenger elevator or if the only elevator service is for freight.

Garage or carport on property.—Counts of units with a garage or carport on the property are shown only for owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. The garage or carport must be currently available for use by the occupants of the unit; i.e., the members of the household can use it for parking even if it is currently used as a storage area for items such as lawn equipment or furniture. It may be attached to the house or it may be completely unattached, but it must be on the property. Excluded are garages or carports that have been converted to other uses such as living quarters, an extra room for business purposes, rented to someone else, or for some reason cannot be used for parking.

Plumbing Characteristics, Equipment, and Fuels

Plumbing facilities.—The category "with all plumbing facilities" consists of units which have hot and cold piped water inside the structure as well as a flush toilet and a bathtub or shower inside the structure for the exclusive use of the occupants of the unit. All plumbing facilities must be located in the structure but they need not be in the same room. "Lacking some or all plumbing facilities" means that the unit does not have all three specified plumbing facilities (hot and cold piped water, as well as flush toilet and bathtub or shower inside the structure), or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

Complete bathrooms.—A housing unit is classified as having a complete bathroom if it has a room with a flush toilet and bathtub or shower and a wash basin, as well as piped hot water in the structure for the exclusive use of the occupants of the unit. A half bathroom has either a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

The category "none or also used by another household" consists of units with no bathroom facilities, units with only a half bathroom, units with bathroom facilities which are also for the use of the occupants of other housing units, and units with all bathroom facilities but not in one room.

Source of water.—"A public system or private company" refers to a common source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well which supplies six or more housing units. If a well provides water for five or fewer housing units, it is classified as an "individual well." Water sources such as springs, creeks, rivers, etc., are included in the "other" category.

Flush toilet, water supply, sewage disposal, and heating equipment.—Data on breakdowns or failures of flush toilet, water supply, and sewage disposal are shown if the housing unit was occupied by the head of the household at least 3 months prior to enumeration and if the breakdown or failure lasted 6 consecutive hours or longer during the 3 months prior to enumeration. For breakdowns or failures of heating equipment, data are shown for units occupied by the household head during the winter prior to enumeration if the equipment was unusable for 6 consecutive hours or longer during that time. To qualify as having lived here "last winter," the household head must have moved into the unit prior to the previous February. Further discussion of each item is given below:

Flush toilet.—The statistics on breakdowns or failures of flush toilet are limited to units that had all plumbing facilities with only one flush toilet, that is, one complete bathroom or one complete bathroom plus a half bath without flush toilet. The flush toilet may be completely unusable because of broken pipes, stopped up soil pipe, lack of water supplied to the flush toilet, or some other reason.

Water supply.—Breakdowns or failures in the water supply were asked when the source of water was a public system, private company, or individual well. A public system or private company refers to water supplied by a city, county, water district, or private water company, or water supplied by a well to six or more housing units. A well that provides water for five or fewer housing units is classified as an individual well.

Breakdowns or failures in the water supply mean that the unit was completely without running water from its regular source. A unit was considered to be completely without running water if (1) the water system servicing the unit supplied no water at all, or (2) no water was available in the unit due to a breakdown or failure in the water supply inside the structure, or (3) the equipment and facilities (i.e., faucets in the kitchen and the bathroom sinks, faucet and shower in the bathtub, flush toilet, etc.) were all inoperable. If the faucet in the kitchen was broken, but the one in the bathtub was working, the unit was not classified as being completely without water.

Sewage disposal.—A "public sewer" is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a governmental body or private organization. A "septic tank or cesspool" is an underground tank or pit used for disposal of sewage. Small sewage treatment plants which in some localities are called neighborhood septic tanks are classified as public sewers. Units for which sewage is disposed of in some other way are included in the "other" category.

The data on breakdowns or failures in the means of sewage disposal are limited to units in which the means of sewage disposal was a public sewer, septic tank, or cesspool. The breakdown or failure may have been the result of an overloaded sewage disposal system, lack of running water, a broken or cracked tank, etc.

Heating equipment.—"Warm-air furnace" refers to a central system

which provides warm air through ducts leading to various rooms; central heat pumps are included in this category. "Steam or hot water" refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. "Built-in electric units" are permanently installed in floors, walls, ceilings, or baseboards. A "floor, wall, or pipeless furnace" delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed. "Other means" includes room heaters with or without flue, fireplaces, stoves, and portable heaters of all types.

Heating equipment is considered unusable if it cannot be used for the purposes intended; the breakdown or failure may be caused by broken pipes, electrical or gas parts out of order, or downed power lines.

Air conditioning.—Air conditioning is defined as the cooling of air by a refrigeration unit; excluded are evaporative coolers, fans, or blowers which are not connected to a refrigeration unit. A room unit is an individual air conditioner which is installed in a window or an outside wall and is generally intended to cool one room, although it may sometimes be used to cool more than one room. A central system is a central installation which air conditions the entire housing unit. In an apartment building, a central system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems, each providing central air conditioning for a group of apartments. A central installation with individual room controls is a central air-conditioning system.

Automobiles and trucks available.—Statistics on automobiles available represent the number of passenger automobiles, including station wagons, which are owned or regularly used by any member of the household and which are ordinarily kept at home. The figures include leased automobiles and company-owned automobiles kept at home. Police cars, taxicabs, pickups, or larger trucks were not to be counted.

The data on trucks available represent the number of pickups and small panel trucks of one-ton capacity or less which are owned or regularly used by any member of the household and which are ordinarily kept at home. Trucks used for business purposes were included only if also used for personal activities of household members.

The statistics do not reflect the number of privately owned automobiles or trucks or the number of households owning such vehicles.

Fuels used for house heating and cooking.—"Utility gas" is gas that is piped through underground pipes from a central system and serves the neighborhood. "Bottled, tank, or LP gas" is stored in tanks which are refilled or exchanged when empty. "Fuel oil, kerosene, etc." includes fuel oil, kerosene, gasoline, alcohol, and other combustible liquids. "Other fuel" includes any other fuel such as briquettes made of pitch and sawdust, coal dust, corncobs, or purchased steam.

Owned second home.—A second home may be a single-family house, vacation cottage, hunting cabin, ski lodge, etc., which is owned and held for use sometime during the year by the owner or members of his household. Second homes may also be owned in partnership with members of a different household. The figures include second homes which are sometimes rented or leased on a short-term basis to other persons but are principally held for the owner's occasional use during the year.

The statistics refer to the number of households that own (one or more) second homes. The data, therefore, do not reflect the number of owned second homes.

Financial Characteristics

Value.—Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. The statistics on value are shown only for one-family homes on less than 10 acres, without a commercial establishment or medical or dental office on the property. Owner-occupied cooperatives, condominiums, mobile homes, and trailers are excluded from the value tabulations.

Value-income ratio.—The value-income ratio is computed by dividing the value of the housing unit by the total money income of the family or primary individual. The ratio is presented for the same owner-occupied units for which value was tabulated; thus, the statistics on value-income ratio reflect the exclusion of certain owner-occupied units. The ratio was computed separately for each unit and was rounded to the nearest tenth. In reporting value, respondents were asked to select an appropriate class interval. The midpoints of the value intervals were used in the computation of the value-income ratio, except that a mean of $2,000 was assigned for values less than $2,500 and a mean of $70,000 was assigned for values of $60,000 or more. For income, the dollar amounts were used. Units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

Gross rent.—The computed rent termed "gross rent" is the contract rent plus the estimated average monthly cost of utilities (electricity, gas, water) and fuels (oil, coal, kerosene, wood, etc.), if these items are paid for by the renter (or paid for him by someone else, such as a relative, welfare agency, or friend) in addition to rent. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. Thus, gross rent is intended to eliminate differentials which result from varying practices with respect to the inclusion of utilities and fuel as part of the rental payment. The estimated costs of water and fuels are reported on a yearly basis but they are converted to monthly figures in the computation process.

The statistics on rent exclude one-family houses on 10 acres or more. Renter units occupied without payment of

cash rent are shown separately as "no cash rent" in the rent tabulations.

Gross rent as percentage of income.—The yearly gross rent (monthly gross rent multiplied by 12) is expressed as a percentage of the total income of the family or primary individual. The percentage is presented for the same renter-occupied units for which gross rent was tabulated; thus, the statistics on gross rent as percentage of income reflect the exclusion of certain renter-occupied units. The percentage was computed separately for each unit and was rounded to the nearest whole number. For gross rent and income the dollar amounts were used in the computation. Units for which no cash rent is paid and units occupied by families or primary individuals who reported no income or a net loss comprise the category "not computed."

Mortgage on property.—Statistics are presented on the number of owner-occupied housing units with a mortgage or similar debt and whether the mortgage or similar debt is insured. The data are restricted to one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. "Mortgage or similar debt" refers to all forms of debt where the property is pledged as security for repayment of the debt by the head of household or other household members. Included are such debt instruments as mortgages, deeds of trust, mortgage bonds, vendors' liens, and contracts to purchase. Units with no mortgage or similar debt outstanding on the property comprise the category "owned free and clear."

A mortgage or similar debt is considered insured if it is currently insured by the Federal Government, i.e., insured by the Federal Housing Administration (FHA), guaranteed by the Veterans Administration (VA), or insured by the Farmers' Home Administration. Excluded are mortgages or similar debts insured or guaranteed by private mortgage insurance companies, State or local government agencies, or other similar organizations.

Real estate taxes last year.—The mean real estate taxes for last year per $1,000 value of the property (house and lot) are presented in this report. The data are restricted to owner-occupied, one-family homes on less than 10 acres without a commercial establishment or medical or dental office on the property. "Real estate taxes last year" refers to the total amount of all real estate taxes payable on the entire property during the last billing year. It includes State and local real estate taxes. Not included are payments on delinquent taxes due from prior years or payments for special assessments, facilities, or services such as a sewer tax, road improvement tax, or tax collection charge which are sometimes included with the real estate tax bill. Housing units for which no taxes are paid are excluded from the computation of the mean.

Public or subsidized housing.—A housing unit is classified as being in a "public housing project" if the structure in which the unit is located is owned by a local housing authority or other public agency, such as a housing and redevelopment authority or a housing development agency, and operated as public housing. These organizations may receive subsidies from the Federal or State government but the local agency owns the property. All other housing units are classified as "private housing."

The category "private units with government rent subsidies" refers to units classified as private housing and in which the respondent pays a lower rent because a Federal, State, or local government program pays part of the cost of construction, building mortgage, or operating expenses. These programs include (1) the interest subsidy programs of the Department of Housing and Urban Development (HUD) for rental and cooperative housing for moderate-income families, (2) the rent supplement program where part of the rent for low-income families occupying certain types of rental housing projects is paid by HUD, and (3) the direct loan program of HUD for housing the elderly.

The statistics on public or subsidized housing exclude one-family homes on 10 acres or more and renter units occupied without payment of cash rent. In addition, the data are not based on government or local records; the figures are, therefore, subject to the ability of a respondent to properly classify his unit as public or private and, if private, as subsidized or nonsubsidized housing.

Inclusion in rent (parking facilities, garbage collection, and furniture).—Counts are shown separately for units in which parking facilities, garbage and trash collection, and furniture are included in the rent. The data are restricted to renter-occupied units for which cash rent is paid and exclude one-family homes on 10 acres or more.

Parking facilities.—The statistics refer to off-street parking facilities which are available in connection with the building. The facilities are provided by the landlord or management and must be available without additional cost to the renter. The parking facility may be a garage, carport, driveway, or open lot where the occupant may park his car off the street.

Garbage and trash collection.—Included are units which have garbage and trash collection service available in connection with the building. The service may be public or private and must be available without additional cost to the renter. If the garbage (food waste) is collected by one company and the trash (paper, cans, etc.) by another, the data refer to the garbage collection service. In tables 3, 6, and 9, separate counts are also shown for renter-occupied units reporting additional amounts paid for garbage and trash collection service.

Furniture.—The statistics refer to furnished apartments or houses in which the management supplied major pieces of furniture such as a bed, sofa, chest of drawers, and table and chairs for the use of the occupant. Refrigerator, cooking range or stove, lamps, and

rugs are not considered furniture. Units in which the occupants rent furniture from some source other than the management are not classified as furnished units.

Household Characteristics

Household.—A household consists of all the persons who occupy a housing unit. By definition, the count of households is the same as the count of occupied housing units.

Head of household.—One person in each household is designated as the "head," that is, the person who is regarded as the head by the members of the household. However, if a married woman living with her husband is reported as the head, her husband was considered the head for the purpose of simplifying the tabulations.

Household composition.—Statistics by age of head are presented separately for two-or-more-person households and for one-person households. Households having two or more persons are further subdivided as follows:

Male head, wife present, no nonrelatives.—Each household in this group consists of the head and his wife, and other persons, if any, all of whom are related to him.

Other male head.—This category includes households with male head, wife present, with nonrelatives living with them; male heads who are married, but with wife absent because of separation or other reason where husband and wife maintain separate residences; and male heads who are widowed, divorced, or single.

Female head.—This group comprises households with female heads regardless of their marital status. Included are female heads with no spouse and female heads whose husbands are living away from their families, as for example, husbands in the Armed Forces living on military installations.

Households consisting of only one person are shown separately as "one-person households" and are not included in the subcategories "other male head" and "female head."

Family or primary individual.—Housing units are occupied by either "families" or "primary individuals." The term "family" refers to the head of a household and all (one or more) other persons living in the same household who are related to the head by blood, marriage, or adoption. If the head lives alone or with nonrelatives only, then the head is considered a "primary individual."

Married couples related to the head of a family are included in the family and are not considered as separate families. A lodger, servant, or other person unrelated to the head is considered a member of the household but not of the family.

In the statistics on household composition, families are always included in one of the three major groups of two-or-more-person households. Primary individuals with nonrelatives living with them are tabulated as "other male head" or "female head." Primary individuals living alone are always tabulated as "one-person households."

Subfamily.—A subfamily is a married couple with or without children, or one parent with one or more own single (never married) children under 18 years old, living in a household and related to, but not including the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.

Age of head.—The age classification refers to the age reported for the head of the household as of his last birthday.

Own children.—Statistics on presence of "own" children of household heads are shown in this report. A child under 18 years old is defined as an "own" child if he or she is a single (never married) son, daughter, stepchild, or adopted child of a household head. Own children of subfamilies are excluded from the total count of own children.

Nonrelative.—A nonrelative of the head is any person in the household who is not related to the head by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are included in this category.

Income.—The statistics on income in the Annual Housing Survey are based on the respondent's reply to questions on income for the 12 months prior to enumeration and is the sum of the amounts reported for wage and salary income, net self-employment income, Social Security or railroad retirement income, public assistance or welfare payments, and all other money income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, Medicare deductions, etc.

In this report, the statistics relate to the money income of the family or primary individual occupying the housing unit, that is, the sum of the income of the head of the family and all other members of the family 14 years old and over or the income of the primary individual. Incomes of persons living in the unit but not related to the head of the household are not included in this sum.

Wage or salary income is defined as the total money earnings received for work performed as an employee at any time during the 12 month period prior to enumeration. It includes wages, salary, piece rate payments, commissions, tips, cash bonuses, and Armed Forces pay. Net self-employment income is defined as net money income (gross receipts minus operating expenses) received from a business, professional practice, partnership, or farm in which the person was engaged on his own account.

Social Security or railroad retirement income includes cash receipts of Social Security pensions; survivors' benefits; disability insurance programs for retired per-

sons, dependents of deceased insured workers, or disabled workers; and deductions for Medicare and health insurance premiums. Cash receipt of retirement, disability, and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included. Separate payments received for hospital or other medical care are not included.

Income from all other sources includes money income received from sources such as periodic payments from estates and trust funds; dividends; interest; net rental income (or loss) from property rentals; net receipts from roomers or boarders; net royalties; public assistance or welfare payments which include cash receipts received from public assistance programs such as old age assistance, aid to families with dependent children, and aid to the blind or totally disabled; unemployment insurance benefits; money received for transportation and/or subsistence by persons participating in special governmental training programs such as the Area Redevelopment Act and the Manpower Development and Training Act; workmen's compensation cash benefits; periodic payments by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans; public or private pensions; periodic receipts from insurance policies or annuities; alimony or child support from persons who are not members of the household; net gambling gains; and nonservice scholarships and fellowships.

Receipts from the following sources were not included as income: Value of income "in kind" such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; money received from the sale of property (unless the recipient was engaged in the business of selling such property); money borrowed; tax refund; withdrawal of bank deposits; accrued interest on "uncashed" savings bonds; exchange of money between relatives living in the same household; and gifts and lump-sum insurance payments, inheritances, and other types of lump-sum receipts.

The income statistics and the characteristics of the household refer to different periods in time; i.e., the income data refer to the 12 months prior to enumeration whereas the household characteristics refer to the date of enumeration. Thus, the income of the family does not include amounts received by persons who were members of the family during all or part of the income period if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income period but who were members of the family at the time of enumeration. For most families, however, the income reported was received by persons who were members of the family throughout the income period.

FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1973

Form Approved: O.M.B. No. 41-R2714

☐ Yes
☐ No – *Skip to 39a*

a. At any time in the last 90 days was there a breakdown in your flush toilet; that is, was it completely unusable?

(060)
1 ☐ Yes
2 ☐ No – *Skip to 39a*

b. Did any of these breakdowns last 6 hours or longer?

(061)
1 ☐ Yes
2 ☐ No – *Skip to 39a*

c. How many of these breakdowns were there?

(062)
1 ☐ 1
2 ☐ 2
3 ☐ 3
4 ☐ 4 or more

d. What was the (most common) reason you were completely without the use of your flush toilet for 6 hours or more – was it because of problems inside the building or problems outside the building?

(063)
1 ☐ Inside – *Specify problem* _____
_____
2 ☐ Outside – *Specify problem* _____

39a. Is this house (building) connected to a public sewer?

(064)
1 ☐ Yes – *Skip to 40*
2 ☐ No

b. What means of sewage disposal do you use?

(065)
1 ☐ Septic tank or cesspool
2 ☐ Chemical toilet
3 ☐ Privy
4 ☐ Use facilities in another structure
5 ☐ Other – *Describe*
_____
_____
} *Skip to 41*

40. INTERVIEWER *(Mark one)* Household head lived here last 90 days *(See Check Item A(1), page 3)*
☐ Yes
☐ No – *Skip to 41*

a. At any time in the last 90 days was there a breakdown in your public sewer (septic tank or cesspool); that is, was it completely unusable?

(066)
1 ☐ Yes
2 ☐ No – *Skip to 41*

b. Did any of these breakdowns last 6 hours or longer?

(067)
1 ☐ Yes
2 ☐ No
3 ☐ Don't know
} *Skip to 41*

c. How many of these breakdowns were there?

(068)
1 ☐ 1
2 ☐ 2
3 ☐ 3 or more

FORM AHS-2 (4-15-73)

FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1973 (Continued)

Section I – OCCUPIED UNITS *(Include URE's)* – Continued

41. How is your house (apartment) heated – by gas, oil, electricity, or with some other fuel?

(069)
- 1 ☐ Gas — From underground pipes serving the neighborhood
- 2 ☐ Gas — Bottled, tank, or LP
- 3 ☐ Fuel oil, kerosene, etc.
- 4 ☐ Electricity
- 5 ☐ Coal or coke
- 6 ☐ Wood
- 7 ☐ Other fuel
- 8 ☐ No fuels used

42. What type of heating equipment does your house (apartment) have?
(Mark heating equipment used most.)

(070)
- 1 ☐ A central warm-air furnace with ducts in individual rooms, or a heat pump
- 2 ☐ Steam or hot water system
- 3 ☐ Built-in electric units (permanently installed in wall, ceiling, or baseboard)
- 4 ☐ Floor, wall, or pipeless furnace
- 5 ☐ Room heaters **with** flue or vent burning gas, oil, or kerosene
- 6 ☐ Room heaters **without** flue or vent burning gas, oil, or kerosene — *Skip to 45*
- 7 ☐ Fireplaces, stoves, or portable room heaters — *Skip to 45*
- 8 ☐ Unit has no heating equipment — *Skip to 47a*

43. INTERVIEWER *(Mark one)* — Household head lived here LAST WINTER *(See Check Item A(2), page 3)*
- ☐ Yes
- ☐ No – *Skip to 44a*

During the past winter, when your regular heating system was working, did you, at any time, have to use additional sources of heat because your regular system did not provide enough heat? (Additional sources may be the kitchen stove, a fireplace, or a portable heater.)

(071)
- 1 ☐ Yes
- 2 ☐ No

44a. Do you have any rooms without hot air ducts or registers, radiators, or room heaters?
(Exclude kitchen and bathrooms.)

(072)
- 1 ☐ Yes
- 2 ☐ No – *Skip to 45*

b. How many?

(073)
- 1 ☐ 1 room
- 2 ☐ 2 rooms
- 3 ☐ 3 rooms or more

45. INTERVIEWER *(Mark one)* — Household head lived here LAST WINTER *(See Check Item A(2), page 3)*
- ☐ Yes
- ☐ No – *Skip to 47a*

a. At any time during the past winter, was there a breakdown in your heating equipment; that is, was it completely unusable for 6 hours or more?

(074)
- 1 ☐ Yes
- 2 ☐ No – *Skip to 46a*

b. How many times did that happen?

(075)
- 1 ☐ 1
- 2 ☐ 2
- 3 ☐ 3
- 4 ☐ 4 or more

FORM AHS-2 (4-15-73)

FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1973 (Continued)

Section I – OCCUPIED UNITS *(Include URE's)* – Continued

46a. During the past winter did you completely close certain rooms for a week or longer because you couldn't get them warm?

(076) 1 ☐ Yes
2 ☐ No – *Skip to 47a*

b. Which rooms?
(Mark all that apply)

(077) 1 ☐ Living room
* 2 ☐ Dining room
3 ☐ One or more bedrooms
4 ☐ Other – *Specify* _____

47a. Do you have air conditioning?

(078) 1 ☐ Yes
2 ☐ No – *Skip to 48*

b. Do you have a central air-conditioning system or individual room units?

(079) 1 ☐ Central – *Skip to 48*
2 ☐ Room units

c. How many room units do you have?

(080) 1 ☐ 1
2 ☐ 2 or more

48. INTERVIEWER *(Mark one)* ▷ Household head lived here last 90 days *(See Check Item A(1), page 3)*
☐ Yes
☐ No – *Skip to 49*

a. Have any electric fuses or breaker switches blown in your house (apartment) in the last 90 days?

(081) 1 ☐ Yes
2 ☐ No } *Skip to 49*
3 ☐ Don't know

b. How many times did this happen?

(082) 1 ☐ 1
2 ☐ 2
3 ☐ 3 or more

49. Is all the wiring in this house (apartment) concealed in the walls or in metal coverings?
Do not count appliance cords, extension cords or chandelier cords.

(083) 1 ☐ Yes

☐ URE household (See cc item 25) – *Skip to 92, page 15*

CHECK ITEM F ▶ (See Check Item A (3), page 3)

☐ Head moved here during the last 12 months – *Ask 71*

☐ Head has lived here 12 months or longer – *Skip to Check Item H*

71. What was the address of . . . 's (head) previous residence?

Address *(Number and street)*

City or town

County | State | ZIP code

OR

(130) 1 ☐ Outside the United States – *Skip to 72*

(131)

(132) 1 ☐ Same city or town
2 ☐ Different city or town

(133) 1 ☐ Same county
2 ☐ Different county

(134) 1 ☐ Same State
2 ☐ Different State

Interviewer *Mark one in each group*

72. What is the main reason . . . (head) moved from his previous residence?
(Write all reasons mentioned below, and then mark the **main** *reason.)*

_____

_____

_____

_____

_____

_____

_____

_____

EMPLOYMENT

(135) 1 ☐ Job transfer
2 ☐ Entered or left U.S. Armed Forces
3 ☐ Retirement
4 ☐ New job
5 ☐ Commuting reasons
6 ☐ To attend school
7 ☐ Other

FAMILY

(135) 8 ☐ Needed larger house or apartment
9 ☐ Widowed
10 ☐ Separated
11 ☐ Divorced
12 ☐ Moved to be closer to relatives
13 ☐ Newly married
14 ☐ Family increased
15 ☐ Family decreased
16 ☐ Wanted to establish own household
17 ☐ Other

OTHER

(135) 18 ☐ Neighborhood
19 ☐ Wanted to own residence
20 ☐ Lower rent or less expensive house
21 ☐ Wanted better house
22 ☐ Displaced by urban renewal, highway construction, or other public activity
23 ☐ Displaced by private action
24 ☐ Schools
25 ☐ Wanted to rent residence
26 ☐ Wanted residence with more conveniences
27 ☐ Natural disaster
28 ☐ Wanted change of climate
29 ☐ Other

FACSIMILE OF THE ANNUAL HOUSING SURVEY QUESTIONNAIRE: 1973 (Continued)

Section I – OCCUPIED UNITS (*Include URE's*) – Continued

73a. Was . . . (head) the head of the household in his previous residence at the time he moved?

(136) 1 ☐ Yes
☐ Respondent is the head – *Skip to INTERVIEWER INSTRUCTION*
☐ Respondent is not the head – *Ask 73b*
2 ☐ No – *Skip to Check Item H, page 14*

b. Were you also a member of . . . 's (head) household in the previous residence?

(137) 1 ☐ Yes
2 ☐ No

INTERVIEWER INSTRUCTION ⇨ If the respondent is the head, or "Yes" was marked in 73b – *Ask questions 74–88 in terms of "your" previous residence.* If "No" was marked in 73b – *Ask questions 74–88 in terms of "head's" previous residence.*

74. How many rooms were in . . . 's (your) (head) previous residence? Do not count bathrooms, porches, balconies, halls, foyers, or half-rooms.

(138) _____ Number

75. How many bedrooms were in . . . 's (your) (head) previous residence? Count rooms used mainly for sleeping, even if used for other purposes.

(139) _____ Number
OR
0 ☐ None

76. How many persons were in . . . 's (your) (head) previous residence at the time . . . (you) (head) moved?

(140) _____ Number

77. Did . . . (you) (head) have complete plumbing facilities in . . . 's (your) (head) previous residence; that is, hot and cold piped water, a flush toilet, and a bathtub or shower?

☐ Yes – **Were these facilities used by . . . 's (your) (head) household only?**
(141) 1 ☐ Yes – Exclusive use
2 ☐ No – Also used by another household
3 ☐ No

78. How many living quarters, both occupied and vacant, were in the building where . . . 's (your) (head) previous residence was located?

(142) 1 ☐ Mobile home or trailer
2 ☐ One, detached from any other house
3 ☐ One, attached to one or more houses
4 ☐ 2
5 ☐ 3 or 4
6 ☐ 5 to 9
7 ☐ 10 to 19
8 ☐ 20 to 49
9 ☐ 50 or more

79. Was . . . 's (your) (head) previous residence –
Owned or being bought by someone in the household?
A cooperative or condominium which was owned or being bought by someone in the household?
Rented for cash?
Occupied without payment of cash rent?

(143) 1 ☐ Owned or being bought
2 ☐ A cooperative or condominium – *Skip to Check Item H, page 14*
3 ☐ Rented for cash – *Skip to 82*
4 ☐ Occupied without payment of cash rent – *Skip to Check Item H, page 14*

CHECK ITEM G ▶ (See item 78)
☐ Previous residence was a one-unit structure (exclude mobile home or trailer) – *Ask 80a*
☐ Previous residence was a two-or-more-unit structure, or was a mobile home or trailer – *Skip to Check Item H, page 14*

80a. Was that house on a place of 10 acres or more?

(144) 1 ☐ Yes – *Skip to Check Item H, page 14*
2 ☐ No

b. Was there a commercial establishment or medical or dental office on the property?

(145) 1 ☐ Yes – *Skip to Check Item H, page 14*
2 ☐ No

FORM AHS-2 (4-15-73)

SAMPLE DESIGN

The estimates are based on data collected in August through December 1973 for the Annual Housing Survey (AHS), which was conducted by the Bureau of the Census, acting as collection agent for the Department of Housing and Urban Development. The sample for this survey was spread over 461 sample areas (called primary sampling units), comprising 923 counties and independent cities with coverage in each of the 50 States and the District of Columbia.

Approximately 53,800 sample housing units (both occupied and vacant) were eligible for interview in the 1973 AHS. Of this number, 1,500 interviews were not obtained because, for occupied housing units, the occupants were not found at home after repeated calls or were unavailable for some other reason, or, for vacant housing units, no informed respondent could be found after repeated visits. In addition to the 53,800, there were also 5,500 sample units which were visited but found not to provide information relevant to the 1973 housing inventory.

Selection of sample areas.—The United States was divided into areas made up of counties and independent cities referred to as primary sampling units (PSU's). Then the PSU's were grouped into 376 strata, 156 of which consisted of only one PSU, which was in sample with certainty. These strata were mostly the larger SMSA's and were called self-representing (SR) since the sample from the sample area represented just that PSU. Each one of the other 220 strata consisted of a group of PSU's and were referred to as non-self-representing (NSR), since the sample from the sample PSU in a stratum represented the other PSU's in the stratum as well.

One PSU was selected from each NSR stratum with probability proportionate to the 1970 census population of the PSU. (This resulted in 220 NSR sample PSU's.) In addition, the NSR strata were grouped into 110 pairs, and one stratum was picked at random from each pair. From this stratum, an additional PSU was selected independent of the other PSU selected from this stratum. Since the two PSU's were independently selected, it was possible for the same PSU to be selected twice. This occurred in 25 instances, producing an additional 85 NSR sample PSU's.

Selection of sample housing units.—The overall sampling rate used in the 1973 AHS was about 1 in 1,366. The within-PSU sampling rate for AHS was determined so that the overall probability of selection for each sample housing unit was the same (e.g., if the probability of selecting a NSR PSU was 1 in 10, then the within-PSU sampling rate would be 1 in 136.6).

Within the sample PSU's, a sample of the housing units enumerated in the 1970 Census of Population and Housing was selected for AHS. In addition, a sample of new construction building permits was also selected to represent the units constructed since the 1970 census. These samples were selected at about twice the rate mentioned previously (i.e., at 2 in 1,366), thereby producing a sample twice as large as needed. This sample was split into two equal-sized samples—one to be used for AHS and one to be held in reserve for possible future use for AHS. The procedure used to split this sample into half-samples is described in the next section.

The sample of 1970 census units was selected in several stages of sampling. The first step was the selection of a sample of census enumeration districts (ED's), administrative units used in the 1970 census. The probability of selection for an ED was proportionate to its 1970 population. The next step was to select a cluster of about four neighboring housing units within each sample ED. For most of the ED's, the selection was accomplished using the list of addresses for the ED as compiled in the 1970 census. However, in those ED's where addresses were incomplete or inadequate (mostly rural areas), the selection process was accomplished using area sampling methods. These ED's were subdivided into segments, i.e., small land areas with well-defined boundaries having an expected size of about four housing units.

The sample of new construction units was selected from building permits issued since the time of the 1970 census. Within each sample PSU, the building permits were chronologically ordered by month issued, and clusters of housing units with an expected size of four were created. These clusters were then sampled for inclusion in AHS at the sampling rate of 2 in 1,366. As a result of the area sampling methods mentioned above, housing units constructed since the 1970 census in areas which do not issue building permits were brought into the sample.

Splitting of the sample.—The sample selection procedure as described above produced segments of size four housing units for the sample taken from the census address frame, the new construction frame, and the area sampling frame (mainly rural areas). One can expect a minimum loss in precision for segments

of size-four housing units in rural areas because of the heterogeneity of this type of housing unit. Segments of size two, however, were considered to be more optimal for sampling within those areas where one could expect neighboring units to be very similar (e.g., urban areas and new construction units). It is felt that if one were to go to segments of size-four housing units in this type of area, a significant loss in precision would result. A splitting operation was then carried out for segments selected from the census address and new construction frames. This consisted of halving each segment of four housing units that was selected for the sample. Two housing units from each segment were to be included in the survey and two were to be held in reserve. No splitting operation was carried out within the segments selected from the area sampling frame; every other area sample segment of four housing units was used for the survey and the remaining segments were assigned to the reserve sample.

ESTIMATION

The 1973 AHS estimates employed a three-stage ratio estimation procedure. However, prior to implementation of the procedure, the basic weight (i.e., the inverse of the probability of selection) was adjusted to account for the noninterview housing units encountered in AHS. This noninterview adjustment was done separately for occupied and vacant units. The noninterview adjustment was equal to the following ratio:

$$\frac{\text{Interviewed housing units + noninterviewed housing units}}{\text{Interviewed housing units}}$$

The first-stage ratio estimation procedure was employed for sample housing units from non-self-representing (NSR) PSU's only. This procedure was designed to reduce the contribution to the variance arising from the sampling of PSU's. The first-stage ratio estimation procedure takes into account the differences that existed at the time of the 1970 census in the distribution by tenure and residence of the housing population estimated from the sample NSR PSU's and that of the NSR housing population in each of the four census regions of the country.

The first-stage ratio estimate factor for each specified category was as follows:

$$\frac{\text{The 1970 census housing population in the residence-tenure category for all NSR strata in a census region}}{\text{Estimate of the housing population category using 1970 census housing counts for sample NSR PSU's in a census region}}$$

The numerators of the ratios were calculated by obtaining the 1970 census housing counts for each of the residence-tenure categories for each NSR stratum and summing these counts across the NSR strata in each census region. The denominators were calculated by obtaining the 1970 census housing counts for each of the residence-tenure categories for each NSR sample PSU, weighting these counts by the inverse of the probability of selecting that PSU, and summing these weighted counts across the NSR PSU's in each census region.

The computed first-stage ratio estimate factor was then applied to the existing weight for each NSR sample unit in each first-stage ratio estimation category.

The second-stage ratio estimation procedure was only employed for AHS new construction sample units (i.e., sample units built April 1, 1970 or later). This procedure was designed to adjust the AHS sample estimates of new construction units to independently derived current estimates for three categories of new construction units (i.e., two categories for conventional new construction units and one for new construction mobile homes). These independent estimates were considered to be the best estimates available for current estimates of new construction units. This adjustment was necessary so as to correct for known deficiencies in the AHS sample with regard to representation of new construction units.

The second-stage ratio estimate factor for each specified category was as follows:

$$\frac{\text{Current independent estimate of new construction units in the category}}{\text{AHS sample estimate of new construction units in the category}}$$

The numerators of the ratios were derived from data based on the Survey of Construction (SOC), a survey of building permits conducted monthly by the Bureau of the Census.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units, using the existing weight after the first-stage ratio estimation procedure (i.e., the estimates employing the noninterview and first-stage adjustments).

The computed second-stage ratio estimate factor was then applied to the existing weight for each sample unit in each second-stage ratio estimation category.

The third-stage ratio estimation procedure was employed for all AHS sample units. This procedure was designed to adjust the AHS sample estimates of housing (i.e., the estimates employing the noninterview, first-stage, and second-stage adjustments) to independently derived current housing estimates for four types of vacant housing units and for residence-tenure-race of head-sex of head categories for occupied housing units.

The third-stage ratio estimate factor for each specified category was as follows:

$$\frac{\text{Current independent estimate of housing units in the category}}{\text{AHS sample estimate of housing units in the category}}$$

The numerators of the ratios for occupied housing units were derived from data based on the Current Population Survey (CPS), a household survey conducted monthly by the Bureau of the Census. The numerators of the ratios for vacant housing units were derived from data based on the Housing Vacancy Survey (HVS), a quarterly vacancy survey conducted by the Bureau of the Census.

The denominators of the ratios were obtained from the weighted estimates for the AHS sample units, using the existing

weight after the second-stage ratio estimation procedure.

The computed third-stage ratio estimate factor was then applied to the existing weight for each sample unit in each third-stage ratio estimation category.

The second- and third-stage ratio estimation procedures were repeated in an iterative process in order to bring the AHS estimates into close agreement with both sets of independent estimates (i.e., the independent estimates employed for the second-stage ratio estimation process as well as those employed for the third-stage ratio estimation process). The factors resulting from this iterative process were then applied to the existing weight on the appropriate records, and the resulting product was used as the final weight for tabulation.

The effect of the third-stage ratio estimation procedure, as well as the overall estimation procedure, was to reduce the sampling error for most statistics below what would have been obtained by simply weighting the results of the sample by the inverse of the probability of selection. The distribution of the housing population selected for the sample differed somewhat, by chance, from that of the nation as a whole in such basic housing characteristics as tenure, vacancy status, residence, race of head, and sex of head. These characteristics are probably closely correlated with other housing characteristics measured for AHS. Therefore, through the use of the three-stage ratio estimation procedure, one can expect the sample estimate to be improved substantially when the sample housing population is brought into close agreement with a known distribution of the entire housing population with respect to these basic housing characteristics.

RELIABILITY OF THE ESTIMATES

There are two types of possible errors associated with estimates based on data from sample surveys: Sampling and nonsampling errors. The "accuracy" of a survey estimate is determined by the joint effects of the sampling and nonsampling errors. Following is a description of the sampling and nonsampling errors associated with the AHS-National sample.

Sampling errors.—The particular sample used for this survey is one of a large number of possible samples of the same size that could have been selected using the same sample design. Even if the same schedules, instructions, and enumerators were used, estimates from each of the different samples would differ from each other. The deviation of a sample estimate from the average of all possible samples is defined as the sampling error. The standard error of a survey estimate attempts to measure this variation among the estimates from the possible samples and thus is a measure of the precision with which an estimate from a sample approximates the average result of all possible samples.

As calculated for this report, the standard error also partially measures the variation in the estimates due to response and enumerator errors (nonsampling errors), but it does not measure, as such, any systematic biases in the data. Therefore, the accuracy of the estimates depends on both the sampling and nonsampling errors measured by the standard error and biases and some additional nonsampling errors not measured by the standard error.

The sample estimate and its estimated standard error enable one to construct interval estimates such that the interval includes the average result of all possible samples with a known probability. For example, the average result would be included in the interval from one standard error below and above the sample estimate for about 68 out of 100 possible samples. For about 90 out of 100 possible samples, the interval from 1.6 standard errors below and above the sample estimate would include the average result; and for about 95 out of 100 possible samples, the interval from two standard errors below and above the sample estimate would include the average result.

All statements of comparison appearing in this report are significant at the 1.6 standard error level or higher, and most are significant at a level of more than 2.0 standard errors. This means that for most differences cited in the text, the estimated difference is greater than twice the standard error of the difference. Statements of comparison qualified in some way (e.g., by the use of the phrase, "some evidence") have a level of significance between 1.6 and 2.0 standard errors.

The figures presented in the tables below are approximations to the standard errors of various estimates shown in this report. In order to derive standard errors that would be applicable to a wide variety of items and also could be prepared at a moderate cost, a number of approximations were required. As a result, the tables of standard errors provide an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

Tables I and II present the standard errors applicable to housing unit estimates in this report. Table I shows the approximate standard errors applicable to all housing unit estimates in this report except those pertaining to selected items in the tables. The standard errors shown in table II should be used for those selected items. Linear interpolation should be used to determine standard errors for estimates not specifically shown in tables I and II.

TABLE I. **Standard Errors of Estimated Number of Housing Units: 1973 (Excludes estimates of housing units pertaining to Source of Water, Sewage Disposal, Basement, Public or Subsidized Housing, Mortgage on Property, Failures in Plumbing and Equipment, Owner or Manager on Property, Inclusion in Rent, Households With Negro Head, or Households With Head of Spanish Origin)**

(68 chances out of 100)

Size of estimate (000)	Standard error (000)	Size of estimate (000)	Standard error (000)
25	5	2,500	50
50	7	5,000	70
100	10	10,000	96
250	16	25,000	134
500	23	50,000	138
1,000	32		

TABLE II. **Standard Errors of Estimated Number of Housing Units Pertaining to Source of Water, Sewage Disposal, Basement, Public or Subsidized Housing, Mortgage on Property, Failures in Plumbing and Equipment, Owner or Manager on Property, Inclusion in Rent, Households With Negro Head, or Households With Head of Spanish Origin: 1973**

(68 chances out of 100)

Size of estimate (000)	Standard error (000)	Size of estimate (000)	Standard error (000)
25	6	1,000	40
50	9	2,500	63
100	13	5,000	87
250	20	10,000	119
500	28	25,000	165

The reliability of an estimated percentage depends upon the size of the percentage and the size of the total upon which the percentage is based. An approximation to the standard error of a percentage may be obtained by using the following formula:

Let x = the numerator
y = the denominator
σ_x = the standard error of the numerator
σ_y = the standard error of the denominator

The standard error of the percentage (i.e., (100) (x/y)) is approximately equal to

$$(100)\,(x/y)\,\sqrt{\left(\frac{\sigma_x}{x}\right)^2 - \left(\frac{\sigma_y}{y}\right)^2}$$

The standard errors of x and y should be obtained from the appropriate standard error tables. For ratios, where x is not a subclass of y, the above formula underestimates the standard error of the ratio when there is little or no correlation between x and y. For this type of ratio, a better approximation of the standard error may be obtained by changing the sign in the formula from minus (—) to plus (+).

Table III presents the standard errors associated with 50 percent items for different size bases and should be used when calculating the standard error of a median, as described below. The standard errors shown in row one of this table should be used for all medians (i.e., table I items) except those pertaining to selected items in the tables. The standard errors shown in row two should be used for these selected items (i.e., table II items).

Illustrations of the use of the standard error tables:—Illustration 1.—Table A-2 of this report shows that in the United States there were 9,179,000 owner-occupied housing units in the value universe with two bedrooms in 1973. Interpolation in table I above shows that the standard error of an estimate of this size is approximately 92,000. Consequently, the 68-percent confidence interval, as shown by these data, is from 9,087,000 to 9,271,000 housing units. Therefore, a conclusion that the average estimate of 1973 owner-occupied housing units with two bedrooms lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude that the average estimate, derived from all possible samples, lies within the interval from 9,032,000 to 9,326,000 housing units with 90 percent confidence; and that the average estimate lies within the interval from 8,995,000 to 9,363,000 housing units with 95 percent confidence.

Table A-2 also shows that of the 9,179,000 owner-occupied housing units with two bedrooms, 1,862,000 or 20.3 percent, were of value between $15,000 and $19,999. Table I above shows that the standard error for 1,862,000 is approximately 42,000. Therefore, using the formula for the standard error of a percentage (as shown in the paragraph following table II above), the standard error of the 20.3 percent is approximately .4 percentage points:

$$.4 = (100)\left(\frac{1{,}862{,}000}{9{,}179{,}000}\right)\sqrt{\left(\frac{42{,}000}{1{,}862{,}000}\right)^2 - \left(\frac{92{,}000}{9{,}179{,}000}\right)^2}$$

Consequently, the 68-percent confidence interval, as shown by these data, is from 19.9 to 20.7 percent; the 90-percent confidence interval is from 19.7 to 20.9 percent; and the 95-percent confidence interval is from 19.5 to 21.1 percent.

Illustration 2.—Table A-6 shows that in the Nation there were 470,000 renter-occupied housing units with Negro head with four persons in the gross rent universe. Interpolation in table II above shows that the standard error of an estimate of this size is approximately 27,000

TABLE III. **Standard Errors of 50 Percent Items: 1973**

(68 chances out of 100)

	Base of 50 percent (000)											
	10	25	50	100	250	500	1,000	2,500	5,000	10,000	25,000	50,000
Table I Items	13.2	8.8	7.1	4.9	3.0	2.2	1.7	1.0	.7	.5	.3	.2
Table II Items	22.4	12.5	7.9	6.2	4.0	2.9	2.0	1.2	.9	.6	.4	.3

(table II should be used since this estimate pertains to households with Negro head). Consequently, we could conclude with 68 percent confidence that the average estimate of 1973 Negro renter units with four persons lies within the interval from 443,000 to 497,000 housing units. Similarly, the 90-percent confidence interval is from 427,000 to 513,000 housing units, and the 95-percent confidence interval is from 416,000 to 524,000 housing units.

Table A-6 also shows that of the 470,000 Negro renters with four persons, 142,000 or 30.2 percent paid between $100 to $149 a month for rent. Table II above shows that the standard error for 142,000 is approximately 15,000. Therefore, using the formula for the standard error of a percentage, the standard error of the 30.2 percent is approximately 2.7 percentage points:

$$2.7 = (100)\left(\frac{142{,}000}{470{,}000}\right)\sqrt{\left(\frac{15{,}000}{142{,}000}\right)^2 - \left(\frac{27{,}000}{470{,}000}\right)^2}$$

Consequently, the 68-percent confidence interval is from 27.5 to 32.9 percent, the 90-percent confidence interval is from 25.9 to 34.5 percent, and the 95-percent confidence interval is from 24.8 to 35.6 percent.

Differences.—The standard errors shown are not directly applicable to differences between two sample estimates. The standard error of a difference between estimates is approximately equal to the square root of the sum of the squares of the standard errors of each estimate considered separately. This formula is quite accurate for the difference between estimates of the same characteristic in two different areas or the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error.

Illustration of the computation of the standard error of a difference.—Table A-2 of this report shows that in the United States in 1973 there were 1,797,000 owner-occupied housing units valued between $10,000 and $14,999 with two bedrooms. Thus, the apparent difference between the number of 1973 owner-occupied housing units, with two bedrooms, valued between $10,000 and $14,999 and those valued between $15,000 and $19,999 is 65,000. The standard error of 1,862,000 is 42,000, as is shown above. Table I shows that the standard error on an estimate of 1,797,000 is approximately 42,000. Therefore, the standard error of the estimated difference of 65,000 is about

$$59{,}000 = \sqrt{(42{,}000)^2 + (42{,}000)^2}$$

Consequently, the 68-percent confidence interval for the 65,000 difference is from 6,000 to 124,000 housing units. Therefore, a conclusion that the average estimate of the difference, derived from all possible samples, lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, the 90-percent confidence interval is from −29,000 to 159,000 housing units, and the 95-percent confidence interval is from −53,000 to 183,000. Thus, we *cannot* conclude with 95 percent confidence that the number of 1973 owner-occupied housing units, with two bedrooms, valued between $15,000 and $19,999 is *greater* than the number valued between $10,000 and $14,999 since the 95-percent confidence interval includes zero or negative values. We also *cannot* conclude with 90 percent confidence that there is *some evidence* that the 1,862,000 is greater than the 1,797,000, since the 90-percent confidence interval also includes zero or negative values.

Medians.—For the medians presented in certain tables, the sampling error depends on the size of the base and on the distribution upon which the median is based. An approximate method for measuring the reliability of the estimated median is to determine an interval about the estimated median such that there is a stated degree of confidence that the average median from all possible samples lies within the interval. The following procedure may be used to estimate confidence limits of a median based on sample data:

1. From table III determine the standard error of a 50-percent characteristic on the base of the median;
2. Add to and subtract from 50 percent the standard error determined in step 1; and
3. Using the distribution of the characteristic, read off the confidence interval corresponding to the two points established in step 2.

For about 68 out of 100 possible samples, the average median from all possible samples would lie between these two values.

A two-standard-error confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step 1. For about 95 out of 100 possible samples, the average median from all possible samples would lie between these two values.

Illustration of the computation of the standard error of a median.—Table A-2 of this report shows the median value of owner-occupied housing units with two bedrooms was $18,000 in 1973. The base of the distribution, from which this median was determined, is 9,179,000 housing units.

1. Row one in table III shows that the standard error of 50 percent on a base of 9,179,000 is .5 percentage points.
2. To obtain a two-standard-error confidence interval on the estimated median, add to and subtract from 50 percent twice the standard error determined in step 1. This yields percentage limits of 49.0 and 51.0.
3. From table A-2, it can be seen by cumulating the frequencies for the first three categories that 3,475,000 owner-occupied housing units with 2 bedrooms or 37.9 percent, had a value less than $15,000 and that an additional 1,862,000 owner-occupied housing units with 2 bedrooms, or 20.3 percent, had a value between $15,000 and $19,999. By linear inter-

polation, the lower limit of the 95-percent confidence interval is found to be about

$$\$15{,}000 + (\$19{,}999 - \$15{,}000)\left(\frac{49.0 - 37.9}{20.3}\right) = \$17{,}730$$

Similarly, the upper limit of the 95-percent confidence interval is found to be about

$$\$15{,}000 + (\$19{,}999 - \$15{,}000)\left(\frac{51.0 - 37.9}{20.3}\right) = \$18{,}230$$

Thus, the 95-percent confidence interval ranges from $17,730 to $18,230.

Nonsampling errors.—In general, nonsampling errors can be attributed to many sources: Inability to obtain information about all cases, definitional difficulties, differences in the interpretation of questions, inability or unwillingness to provide correct information on the part of respondents, mistakes in recording or coding the data, and other errors of collection, response, processing, coverage, and estimation for missing data. As can be seen from the above list, nonsampling errors are not unique to sample surveys since they can, and do, occur in complete censuses as well.

Obtaining a measurement of the total nonsampling error associated with the estimates from a survey is very difficult, considering the number of possible sources of error.

However, for the 1973 AHS-National sample, a study was conducted to obtain a measurement of the nonsampling error associated with the AHS estimates. A reinterview program was conducted for a sample of the AHS households. These households were revisited and answers to some of the questions on the AHS questionnaire were obtained again. The original interview and the reinterview were assumed to be two independent readings and thus were the basis for the measurement of the accuracy of the AHS estimates.

As part of the reinterview, a check was made at each of these households to determine if the following was done during the original interview:

1. The correct unit was visited.
2. The correct number of housing units was interviewed at that address.
3. The correct information on "Year Built" was obtained.
4. The correct information on "Tenure" was obtained.
5. The correct information on "Household Composition" was obtained.
6. The correct information on "Type of Housing Unit" was obtained.
7. The correct information on "Occupancy Status" was obtained.

This check was for interviewer evaluation and control; i.e., tolerance limits were derived to determine which interviewer passed or failed this reinterview with regard to the above items.

The results of the reinterview study are presented in the following internal memorandum: **Reinterview Results for the Annual Housing Survey-National Sample: 1973.** Some of these results are:

1. "Overall, the results showed a fairly consistent response between the original interview and the reinterview."
2. "For most of the basic survey items or categories within them, the measure of inconsistent response was in the 20-50 range, which is moderate and indicates there is some problem with inconsistent reporting." (The range is from 0-100 with a high index being associated with a high level of response variability.)

The results of this study were based on sample data, so there is sampling error associated with the estimates of nonsampling error. The possibility of such errors should be taken into account when considering the results.

With respect to errors of coverage and estimation for missing data, the AHS new construction sample had deficiences with regard to the representation of both conventional new construction in permit-issuing areas and new construction mobile homes (see section on estimation). During the sampling of building permits, only those issued January 1, 1970, or later were eligible to be sampled to represent conventional new construction in permit-issuing areas. It had been assumed that units with permits issued prior to 1970 would have been completed by the time of the 1970 census (i.e., April, 1970) and therefore would have been represented in the sample selected from 1970 census units. This assumption, however, has been found to be invalid since there were an estimated 600,000 units with permits issued before 1970 but which were completed after the 1970 census. Therefore, these conventional new construction units had no representation in the AHS sample of conventional new construction. Secondly, unlike the procedure for conventional new construction, there is no sampling procedure connected with the representation of new construction mobile homes. New mobile homes in area segments, however, do come into the AHS sample. In addition, new mobile homes in address segments also come into sample if the mobile homes are located in mobile home parks identified as such in the 1970 census. However, new mobile homes in address segments that are located in mobile home parks, not in existence at the time of the 1970 census or not identified as such in the 1970 census, have no chance of coming into the AHS sample. It has been estimated that the AHS sample misses about one-half of all new mobile homes (i.e., about 700,000 units). The second-stage ratio estimation procedure was employed to correct both these deficiencies.
