ACKNOWLEDGMENTS

This report was prepared by **Mary F. Henson** and **David A. Olsen** under the general direction of **Gordon W. Green, Jr.**, Chief of the Income and Poverty Statistics Branch. The historical and summary tables were programmed by **Emmett F. Spiers, Angela M. Feldman,** and **Robert W. Cleveland.** Assistance in review of the text and tables was provided by **Ruth A. Sanders, Gloria A. Thomas, Helen M. Ogle, Rose Mary Schade,** and **Ellen M. Yates.** Income editing and allocation procedures were developed by **John F. Coder.** Editorial assistance was provided by **Vivian J. Brown.** Overall direction was provided by **Roger A. Herriot,** Assistant Division Chief (Socio-economic Statistics Programs), Population Division. **Thelma Varhach** of the Demographic Surveys Division was responsible for production of the detailed tables. Sampling review was conducted by **Robert F. O'Brien** and **Lawrence Cahoon** of the Statistical Methods Division.

SUGGESTED CITATION

U.S. Bureau of the Census, **Current Population Reports,** Series P-60, No. 118, "Money Income in 1977 of Families and Persons in the United States," U.S. Government Printing Office, Washington, D.C., 1979.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. **Current Population Reports** are sold in two subscription packages: Series P-20, P-23, P-27, and P-60 are available for $40.00 per year ($10 additional for foreign mailing); Series P-25, P-26, and P-28 are available for $70.00 per year ($17.50 additional for foreign mailing). The single-copy price of this report is $4.75.

Money Income in 1977 of Families and Persons in the United States

(Advance data on 1977 income of families and persons were issued in July 1978 in **Current Population Reports**, Series P-60, No. 116)

NOTE

In the 1980 census, the Bureau plans to discontinue the use of the terms "head of family" and "head of household." In this report, the term "householder" has been used in the text in place of the term "head." For technical reasons, however, the term "head" appears in the detailed tables. Further discussion of these changes can be found in the section "Head versus Householder."

HIGHLIGHTS

As indicated in the advance report, the 1977 median family income was $16,010, a 7-percent increase over the 1976 median ($14,960). However, after adjusting for the 6.5-percent increase in prices between 1976 and 1977,[1] there was no statistically significant change in real median family income for that period. The median income of unrelated individuals was $5,910 in 1977, about 3 percent (or $190) higher in real terms than the 1976 median.

Although real median income for all families did not change significantly between 1976 and 1977, there were some changes for families classified by selected characteristics of the householder. For instance, real median income of all families with a householder working year round full time increased 2 percent over the 1976 median to $20,080 in 1977.

There was very little change in real median family income by race or Spanish origin. White families had a median income of $16,740 in 1977, which represented a marginal increase (1 percent) over their 1976 median in real terms. The 1977 median income of Black families ($9,560) and Spanish families ($11,420) did not differ significantly from their respective 1976 median incomes after adjusting for inflation.

Region of residence has an impact upon both the size of the median family income and the magnitude of changes over time. The 1977 median income of families in the Northeast region ($16,800) represented a real increase of 2.5 percent over their 1976 median. This represents a recovery for the Northeast region, since it was the only region that did not experience an increase in real median family income between 1975 and 1976. In real terms, the 1977 median income of families in the North Central ($16,850) and West ($16,510) regions did not change significantly from 1976 to 1977, while there was some evidence of an increase in the South ($14,570).[2]

Of the 57.2 million families in the United States in March 1978, 12.8 million (22.4 percent) received incomes of $25,000 or more in 1977. There were 18.1 million families (31.7 percent) with incomes between $15,000 and $25,000, 10.6 million families (18.4 percent) with incomes between $10,000 and $15,000, 10.4 million (18.1 percent) with incomes between $5,000 and $10,000, and 5.3 million families (9.3 percent) with incomes below $5,000.

Median family income ($16,010 in 1977) is defined as the amount which divides the income distribution in half—50 percent of all families having incomes above and 50 percent having incomes below the amount. For some groups of the population, however, there were significant differences in their proportions in the lower half or upper half of the distribution. For example, the lower half of the distribution (below $16,000) encompassed 73 percent of Black families and 69 percent of Spanish families. In addition, 84 percent of families maintained by a female householder with no husband present, 75 percent of families in which the householder completed 8 or less years of schooling[3], 62 percent of farm families, and 92 percent of families with no earners had incomes below $16,000. Young and elderly families were also concentrated in the lower half of the distribution; 78 percent of families in which the householder was less than 25 years old and 77 percent of families in which the householder was 65 years old or older had incomes of less than $16,000. On the other hand, some family groups were concentrated in the upper half of the family income distribution, largely reflecting their contribution to the economy of highly

[1] The percentage increase in prices between 1976 and 1977 is computed by dividing the annual average Consumer Price Index (CPI) for 1977 by the annual average value of the CPI for 1976.

[2] At the 95-percent confidence level, the percent changes in real median family income in the four regions were not significantly different from one another except in the Northeast and North Central regions.

[3] The education data are restricted to families with householders 25 years old and over.

Table A. Families and Unrelated Individuals by Total Money Income in 1977

(Families and unrelated individuals as of March 1978. For meaning of symbols, see text)

Total money income	Families and unrelated individuals		Families		Unrelated individuals	
	Number (thousands)	Percent distribution	Number (thousands)	Percent distribution	Number (thousands)	Percent distribution

Standard error	$48	...	$57	...	$45	...
Mean income	$15,306	...	$18,264	...	$7,981	...
Standard error	$48	...	$58	...	$56	...

valued skills or additional work effort. Eighty percent of families with householders having 16 or more years of education, and 62 percent of two-earner and 82 percent of three-or-more-earner families had incomes above $16,000 in 1977.

Aggregate family income increased by 9.2 percent between 1976 and 1977, stemming from an 8.3 percent increase in mean family income and an evident 0.9-percent increase in the number of families (505,000 net additional families). In constant 1977 dollars, aggregate family income was up 2.6 percent in 1977 compared with the 1976 estimate. Aggregate family income amounted to $1,045 billion in 1977.

The survey showed that about 93 percent of all men and 75 percent of all women 14 years old and over received income in 1977. Men and women who were income recipients in 1977 had median incomes of $10,120 and $3,940, respectively. After adjustment for inflation, the median income of women was 4 percent higher in 1977 than in 1976, whereas there was no statistically significant change in the median income for men.

The survey also showed that 79 percent of all men and 53 percent of all women 14 years old and over had earnings in 1977. About 63 percent of men and 41 percent of women with earnings worked year round full time. Men working year round full time had median earnings of $14,630 in 1977. This represents an increase of about 2 percent in real terms above their 1976 median. The median earnings for women working year round full time were $8,620, not significantly different from their 1976 median in real terms.

These are some of the highlights obtained from the Census Bureau's Current Population Survey (CPS) of March 1978. The survey results cover both the civilian noninstitutional population and an estimated 874,000 members of the Armed Forces living off post or with their families on post in the United States. The March 1978 CPS population consists of 214,159,000 persons, of whom 57,215,000 were family householders, 133,542,000 were other family members (including 46,605,000 children under 14 years old), and 23,402,000 were unrelated individuals, i.e., persons living alone or not related to others in the household (including 292,000 children under 14 years old). The collection of income data in the survey, however, is restricted to persons 14 years old and over. (See table B.)

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases as well as small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting. For further details, see the section "Reliability of the Estimates" in the appendix.

Table B. Derivation of the Current Population Survey (CPS) Universe and Population Characteristics of the March 1978 Current Population Survey

Population groupings	Number (thousands)	Percent distribution
Total resident population	217,455	100.0
Minus:		
Civilian institutional population	2,541	1.2
Armed Forces living without families on post in the United States	755	0.3
Equals:		
Population total for the CPS universe	214,159	98.5
Total CPS population	214,159	100.0
Civilian noninstitutional population	213,285	99.6
Armed Forces living off post or with their families on post in the United States	874	0.4
Total CPS population	214,159	100.0
In families	190,757	89.1
Family householders	57,215	26.7
In husband-wife families	47,385	22.1
Male householder, no wife present	1,594	0.7
Female householder, no husband present	8,236	3.8
Other family members	133,542	62.4
Wife of householder	47,385	22.1
Other related members 14 years and over	39,552	18.5
Male	20,880	9.7
Female	18,673	8.7
Other related members under 14 years	46,605	21.8
Male	23,766	11.1
Female	22,839	10.7
Unrelated individuals	23,402	10.9
14 years and over	23,110	10.8
Male	10,005	4.7
Female	13,105	6.1
Under 14 years	292	0.1
Male	164	0.1
Female	128	0.1

Data on consumer income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc.[4] Money income is the sum of amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workmen's compensations; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents such as the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses. These elements should be considered when comparing income levels.

The Bureau of the Census and the Department of Health, Education, and Welfare are currently involved in a research program designed to improve and expand the collection of income data. The Income Survey Development Program is in the early stages of testing and will not be fully operational until sometime after 1980. In addition to the questions on various types of money income, this developmental program will also collect information on sources of nonmoney income, participation in major governmental programs, amount of taxes paid, and assets and liabilities.

[4] A facsimile of the income questions asked in the survey is shown in the appendix.

Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income.[5] Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, unemployment compensation, public assistance, and net income from interest, dividends, and rentals. Overall, income earned from wages or salary is much better reported than other sources of income and, when dollar imputations are assigned for nonreporting, total wage and salary income approximates independently derived estimates.

The Census Bureau is also conducting research to improve the collection of money income data from the CPS. A special supplement was conducted on a portion (one rotation group) of the April 1978 CPS using a questionnaire with more detailed income questions and probes for different income types. The data from this experiment will be analyzed to determine whether or not the new approach obtains more complete and accurate income data.

A study which attempts to adjust the CPS data for underreporting and to impute government "in-kind" transfer program benefits, such as food stamps, Medicare, and subsidized housing to families in the survey, has been prepared by the Congressional Budget Office (CBO).[6] This represents one attempt to measure and study the effects of adjusting for underreporting of money income and the inclusion of nonmoney transfer payments on the size distribution of income and poverty counts. Although the procedures used by the CBO provide one approach, there continues to be a general lack of agreement on how to measure

[5] The accuracy of reported and imputed CPS earnings and property income is discussed in a paper, "Measuring the Impact on Income Statistics of Reporting Differences Between the Current Population Survey and Administrative Sources," by Roger A. Herriot and Emmett F. Spiers, published in American Statistical Association, **Proceedings of the Social Statistics Section, 1975.**

and value "in-kind" income. The interested reader may wish to consult a report by a governmental interagency task force which discusses many of these issues.[7]

RECENT CHANGES IN REAL MEDIAN FAMILY INCOME

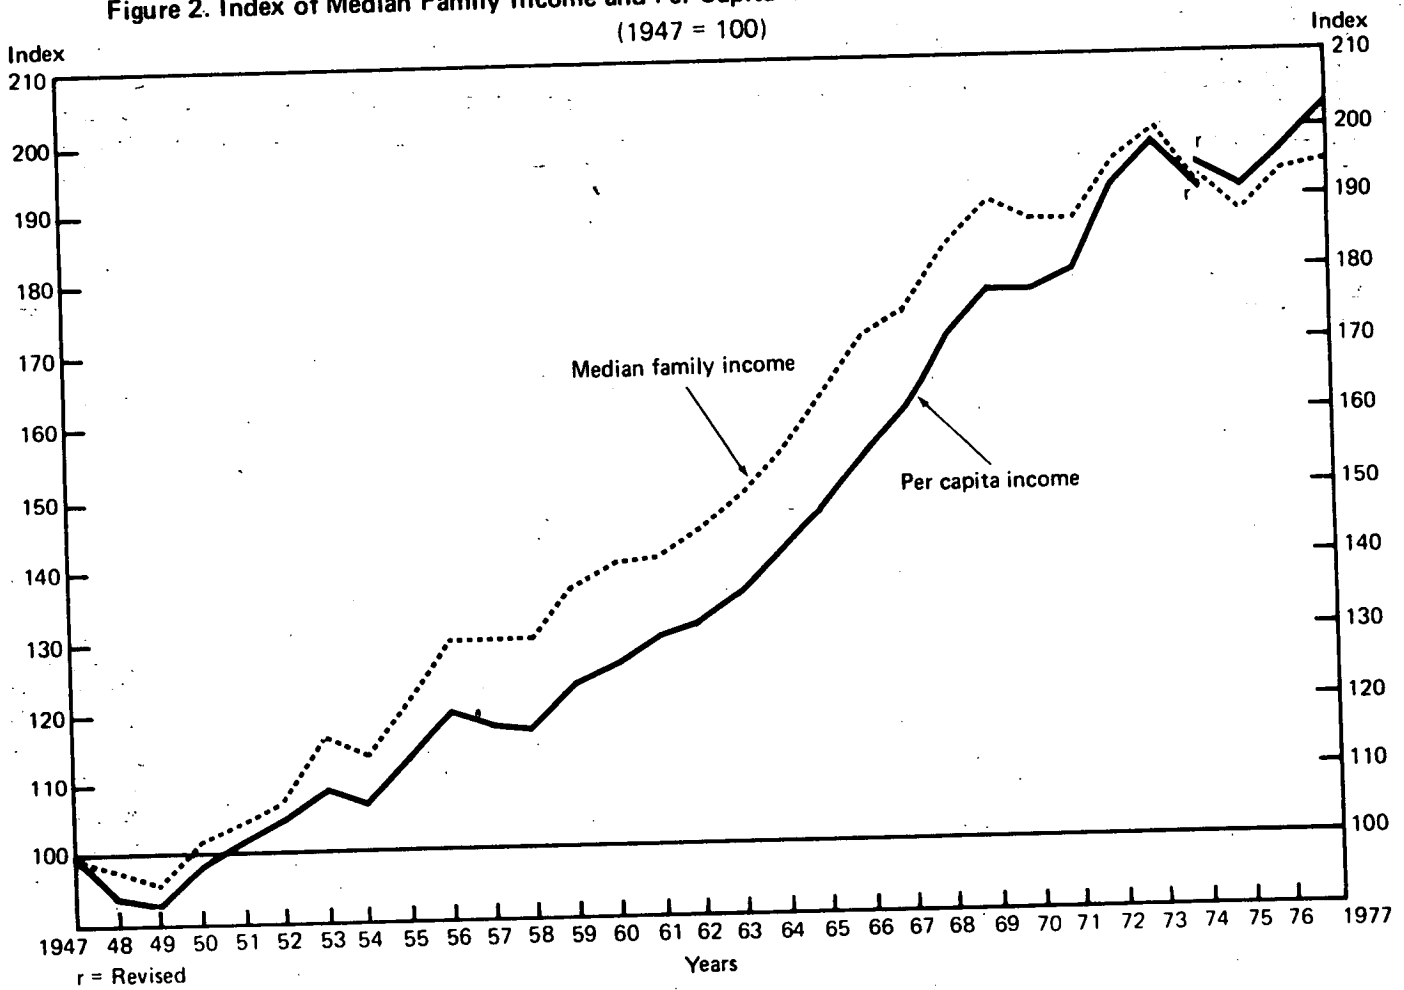
The absence of change in real median family income between 1976 and 1977 was a continuation of the sluggishness which has characterized family income changes during the 1970's. Real median family income has only increased by 4 percent between 1970 and 1977, from $15,400 to $16,010. The slowdown in growth was partly due to a large setback during the most recent recession, as indicated by the 6-percent decline in the median from its peak in 1973 ($16,430) to the 1975 level ($15,450). Although there was a 3-percent increase between 1975 and 1976, the 1977 median income remained $420 below the 1973 peak. In contrast, between 1960 and 1970 real median family income increased 34 percent, from $11,500 to $15,400. (See table C.)

[7] **The Measure of Poverty**, A Report to Congress as Mandated by the Education Amendments of 1974, and in particular, see Technical Paper VII, "In-kind Income and the Measurement of Poverty," prepared by Janice Peskin, U.S. Department of Health, Education and Welfare, April 1976.

In addition to the economic problems of recession and high-level inflation during the 1970's, there have been pronounced changes in family structure which have affected income levels. Between March 1970 and March 1978, there was a substantial increase in the proportion of families maintained by a female householder with no husband present (from 10.8 to 14.4 percent) and ~~a slight decrease in the average number of earners per family (from 1.69 to 1.66)~~. These changes have exerted a downward influence on income levels since families maintained by women and families with fewer earners tend to have lower income levels. The cumulative effect of these changes moved median family income substantially below its pre-1970 trend line. If the rate of growth from 1947 to 1969 had been maintained after 1970, real median family income in 1977 would have been 240 percent of its 1947 value, rather than the 195 percent that was realized (see figure 1 on front cover). These developments are not as disconcerting as they first appear if one considers income available per person, as measured by per capita income.

In contrast to median family income, per capita income has shown a higher rate of growth since 1970. Real per capita income has increased by 14 percent since 1970 compared to 4 percent for median family income. However, the average annual rate of growth in real per capita income during the

Figure 2. Index of Median Family Income and Per Capita Income in Constant Dollars: 1947 to 1977
(1947 = 100)



1970's (1.8 percent per year) has not been as rapid as during the 1960's (3.5 percent per year). The major cause for this was slower economic growth during the 1970's, not changes in family structure since these changes have less of an effect on per capita income than on median family income. Changes in per capita income vis-à-vis median family income in real terms are shown in figure 2. Three distinct periods appear in this chart: From 1947 to 1958, median family income grew at a faster rate than the per capita income; from 1958 to 1969, the two measures grew at about the same rate; after 1969 per capita income grew at a faster rate than the median family income, with the growth paths crossing during this period. If per capita income had continued to grow at the 1947-69 rate, by 1977 it would have been 220 percent of the 1947 value, rather than the 203 percent that was realized.

Although the Census Bureau has emphasized median income in the past, others have favored per capita income as a measure of economic well-being since it describes the income available per person, including men, women, and children.

SELECTED FAMILY INCOME CHARACTERISTICS

Type of family. In March 1978, approximately 75 percent of households contained families. Of these families, 83 percent were husband-wife families, 14 percent had a female householder with no husband present, and the remaining 3 percent had a male householder with no wife present. The 1977 median income of all husband-wife families was $17,620. For husband-wife families in which the wife was not in the paid labor force, the median income was $15,060. Median income of husband-wife families with the wife in the paid labor force was $20,270 in 1977.

There were about five times as many families with a female householder no husband present (8.2 million) as there were families with a male householder no wife present (1.6 million). The median income in 1977 of families with a female householder no husband present ($7,770) was slightly over one-half (53 percent) of the median income for families with a male householder no wife present ($14,520).

Families with a female householder no husband present are more concentrated in the lower portion of the income distribution (under $5,000) than families maintained by a male with no wife present or husband-wife families; 31 percent as compared to 12 and 6 percent, respectively. At the upper portion of the income distribution ($20,000 and over), there were only 9 percent of the families with a female householder, 30 percent of the families with a male householder no wife present, and 41 percent of the husband-wife families. (See table D.) It should be noted that the work experience patterns of the three types of familes are very different. As an indication of this, the proportion of families in which the householder worked at some time during the year was 84 percent for husband-wife families, 77 percent for families with a male householder no wife present, and only 60 percent for families with a female householder no husband present.

Number of earners. Median family income is highly correlated with the number of earners per family. In 1977, the median income for the 2.8 million families with four or more earners was $27,240 as compared with medians of $23,510 for the 5.5 million families with three earners, $18,700 for the 22.4 million families with two earners, and $13,150 for the 18.6 million families with one earner. For the 7.1 million families with no earners, the median income in 1977 was $6,020.

Thirty-eight percent of all families with no earners had incomes below $5,000 in 1977, compared to 11 percent for one-earner families and 2 percent for families with two or more earners. This pattern is reversed for families with incomes of $20,000 and over; 5 percent of no-earner families, 24 percent of one-earner families, 44 percent of two-earner families, 65 percent of three-earner families, and 78 percent of the families with four or more earners were in this income group. (See table D.)

Educational attainment.[8] Family income and educational attainment of the householder have a strong positive relationship. In 1977, the median income for families maintained by householder with 8 or less years of schooling was $9,610. For families with householders who were high school graduates, the median income was $17,110, compared to $23,410 for families with householders who had completed 4 years of college and $26,040 for families with householders who had completed 5 or more years of college.

About one-fifth of the families with householders who had completed 8 or less years of school had incomes below $5,000 in 1977, compared to 6 percent for families with householders who were high school graduates, and 2 percent for families in the 4 or more years of college category. The reverse was true for families with incomes of $20,000 or more in 1977; 15 percent of families in the 8 or less years of education category, 39 percent in the high school graduate category, 63 percent of families in the 4 years of college category and 71 percent in the 5 or more years of college category had incomes above $20,000. (See table D.)

Age. Family life cycle studies indicate that typically, income gradually increases with age and then declines after a certain age level. The 1977 income data show that the median income of families with householders 14 to 24 years of age was $10,380. Median income ($20,830) was highest for families with householders 45 to 54 years of age. The lowest median income was for families whose householder was 65 years old and over ($9,110).

The survey data indicate a relatively large concentration in the lower income intervals of families with younger and older householders. Twenty percent of families with householders 14 to 24 years of age and 17 percent of families with householders 65 years and over received less than $5,000 in 1977. In contrast, families with householders 45 to 54 years of age are more concentrated in higher income intervals. Slightly over half (54 percent) of these families received incomes above $20,000 in 1977. (See table D.)

[8] The education data are restricted to families with householders 25 years old and over.

[1]Persons of Spanish origin may be of any race.
[2]Excludes families with members who are in the Armed Forces.
[3]Excludes families with heads in the Armed Forces.
[4]Restricted to primary families.

Work experience. Although many families derive their income through the efforts of more than one family member, in most instances the work experience of the family householder is still the principal factor in shaping the level of family income. In March 1978, there were 56.5 million families with civilian householders, of whom 45.5 million (81 percent) worked at some time during 1977, 34.1 million (60 percent) worked 50 to 52 weeks at full-time jobs, and only 1.3 million (2 percent) worked year round at part-time jobs. There were approximately 11 million family householders who did not work at all during 1977, 55 percent of whom were 65 years old or older.

The relationship between work experience and family income is shown in table D. Only 5 percent of families in which the householders worked at some time during 1977 had incomes below $5,000. In contrast, almost 29 percent of families with householders who did not work had incomes below this amount. Families with householders who worked were much more concentrated in the income intervals above $20,000 than families with householders who did not work—43 percent as compared to 9 percent in 1977.

Tenure. Of the 57 million primary families in March 1978, 41.4 million (73 percent) lived in owner-occupied properties, 14.4 million (25 percent) were renters, and the remaining 1.1 million (2 percent) did not pay cash rent.[9]

The median income in 1977 of families living in owner-occupied properties ($18,300) was about 68 percent higher than the median for families living in renter-occupied properties ($10,920). This relationship is consistent for families living inside and those outside of metropolitan areas, but the difference is more pronounced for those living within metropolitan areas. In these areas, the median income of families living in owner-occupied properties ($20,150) was about 78 percent higher than the median income for families living in renter-occupied properties ($11,320). In areas outside of metropolitan areas, the 1977 median income for families living in owner-occupied properties ($15,250) was 55 percent higher than the median for families living in renter-occupied properties ($9,850).

Type of residence. In 1977, the median income of families in metropolitan areas ($17,370) was about 26 percent higher than the median received by families in nonmetropolitan areas ($13,790), and about 37 percent higher than the median income for farm families ($12,640).

For householders classified by type of residence, the highest median income in 1977 ($20,110) was associated with suburban families of large metropolitan areas (population of 1 million or more), while the lowest median income ($12,640) was associated with farm families.

The median income for the 8 million families located in central cities of large metropolitan areas ($14,680) was approximately 73 percent of the median income for the 13.6 million suburban families of these areas ($20,110). In smaller metropolitan areas (population of less than 1 million), the median income for the 7.4 million central city families ($15,190) was about 88 percent of the median income for the 8.9 million suburban families ($17,250).

Source of income. Although earnings comprise the largest source of family income, only 13.8 million (24 percent) families indicated that their only source of income in 1977 was from earnings (wages, salaries, and/or net self-employment income). There were 36.4 million (64 percent) families who had other types of income in addition to earnings (e.g., interest, dividends, unemployment compensation, or pensions). The remaining 7.1 million (12 percent) families indicated that they received no earnings during 1977. (See table 31.)

The median income of families with earnings only was $15,180 in 1977 as contrasted with a median of $18,560 for families having both earnings and income other than earnings. Families with income solely from nonearned sources had a median income of $6,020 in 1977.

As expected, families with income from only nonearned sources tended to concentrate in the lower income brackets. There were 5.3 million families with income less than $5,000 in 1977, of which 50 percent had income solely from nonearned sources. Of the remaining families in this income category, 33 percent had earnings and other income sources and 16 percent had income only from earnings.

The middle range of the income distribution was dominated by families that received earnings and income from other sources. There were 10.2 million families that had incomes between $15,000 and $20,000 in 1977, of which 69 percent had earnings and other income sources. In this income range the proportion of families with earnings only was 28 percent while the proportion of families with income only from nonearned sources was 3 percent.

The higher income brackets were strongly dominated by families that received earnings and additional income sources; about 82 percent of the 12.8 million families with $25,000 or more in 1977 had these sources of income. The proportion of families with earnings only fell to 16 percent and only about 2 percent of families received income solely from nonearned sources.

Although most families receive more than one type of income, the proportion of total income varies greatly by each specific type. For example, the mean total money income for the 47.8 million families that received wages or salaries was $19,900 in 1977, whereas their mean wage or salary income was $16,860 or 85 percent of their average total income. For the 7.5 million families that received net nonfarm self-employment income, the mean total income was $22,930 compared to a mean for this type of $9,350, or 41 percent of their mean total income. The 2.5 million families with net farm self-employment income had a mean total income of $17,780 in 1977, although the mean for this type ($3,720) was only 21 percent of their total income.

The survey indicated that 23.4 million families (about 41 percent of all families) received some type of government

[9] Since the household universe is comprised of primary families and primary individuals, all of the family income comparisons by tenure in this section are restricted to primary families.

transfer payment[10] in 1977. The mean total money income for all families that received government transfer payments was $14,370 in 1977. A large majority of these families had other sources of income in addition to the transfer payments. Families that received other sources in addition to government transfer payments had a mean total income of $15,790 in 1977. In contrast, the mean for families who received only government transfer payments was $4,570.

The reader is reminded that the reliability of reporting in the CPS varies considerably by income type. A detailed discussion of this matter can be found in the section, "Underreporting of Income."

HEAD VERSUS HOUSEHOLDER

In the 1980 census the Census Bureau plans to discontinue the use of the terms "head of family" and "head of household." Recent social changes have resulted in a trend toward more nearly equal status for adult members of a household and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau is planning to change its longtime practice of always classifying the husband as head when he and his wife are living together.

In the 1980 census, a "householder" will be designated as the household reference person. The householder is to be the first adult household member listed on the census questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife may be listed first and thereby becomes the reference person, or householder, to whom the relationship of other household members is to be recorded. However, in order to provide some comparability with earlier years, the husband will be shown as the householder in a selected number of tables.

Beginning with the October 1978 CPS, the Bureau started to collect information based on the householder concept. The publication of data incorporating the new concept will begin after the necessary programming changes to the detailed tables have been made. The user of this report is cautioned that the term "householder" as used in the text refers to the "head," as defined in earlier reports; the term "head" is retained in the detailed tables.

RELATED REPORTS

Current Population Survey. Other data based on the Current Population Survey showing the distributions of households, families, unrelated individuals, and persons by income levels, have been published in the Series P-60 reports, Nos. 1 to 107, 109, and 114 to 117. Frequently, tables showing the cross-classification of income and other characteristics have been published in the Series P-20 and P-23 reports of the Bureau of the Census and in the **Special Labor Force Reports** of the Bureau of Labor Statistics. Series P-60, No. 116, "Money Income and Poverty Status of Families and Persons in the United States: 1977," contains advance 1977 income data cross-classified by various characteristics. Series P-60, No. 117, "Money Income in 1977 of Households in the United States," contains 1977 income data on households. For a detailed analysis of the low-income population in 1976 in the United States, see Series P-60, No. 115. Series P-60, No. 116 contains advance data on the low-income population in 1977.

Projections of money income size distributions have been prepared from the Current Population Survey and appear in Series P-23, No. 47, "Illustrative Projections of Money Income Size Distributions for Families and Unrelated Individuals." Projections have been prepared for families and unrelated individuals by age of the family head or of the individual in 1971 constant dollars for the following years: 1975, 1980, 1985, and 1990.

Data on the educational attainment and income of men have been assembled from information collected in the Current Population Survey. These data appear in Series P-60, No. 92, "Annual Mean Income, Lifetime Income, and Educational Attainment of Men in the United States, for Selected Years 1956 to 1972." Included in the report are annual mean income and estimates of expected lifetime income in current dollars and in constant (1972) dollars, by educational attainment and age group, for all males and for male year-round full-time workers.

An historical and analytical summary of the income data collected in the Current Population Survey appears in Technical Paper No. 17, **Trends in the Income of Families and Persons in the United States: 1947 to 1964**, published in 1967. This report contains detailed tables showing income distributions in constant (1964) dollars, mean incomes, fifths, and Gini Ratios of families and unrelated individuals cross-classified by various characteristics, for the United States, nonfarm and farm. Similar data are shown for males and females classified by the amount of their own income and various personal characteristics.

Decennial censuses. Income data collected in the 1970 Census of Population appear in a number of published reports. Basic distributions of families and unrelated individuals, by money income in 1969, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in **1970 Census of Population**, Vol. I, **Characteristics of the Population**, chapter C, "General Social and Economic Characteristics." Statistics on income of persons 14 years old and over, households, families, and unrelated individuals in 1969 by detailed characteristics, including cross-classifications by age, weeks worked, education; type of family, etc., are presented in **1970 Census of Population**, Vol. I, **Characteristics of the Population**, chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, and standard metropolitan statistical areas of 250,000 inhabitants or more.

[10] Government transfer payments are limited in the Current Population Survey to cash payments under such programs as Social Security or Railroad Retirement, Supplemental Security income, public assistance or welfare, veterans' payments, unemployment and workmen's compensations, and government sponsored pensions.

Detailed cross-classifications of income of families and persons by social and economic characteristics are presented in Vol. II, Subject Reports: 8A, **Sources and Structures of Family Income;** 8B, **Earnings by Occupation and Education;** and 8C, **Income of the Farm-Related Population.** Other statistics on income are included in Vol. II reports on other subjects and in some reports of the 1970 Census of Housing. Reports of the 1960, 1950, and 1940 censuses also contain various statistics on income.

An important difference in the data content included in the 1970 reports versus the corresponding reports from the 1960 census is the cross-classification of most of the 1970 data for the Black population and the population of Spanish origin.

Statistics on income in 1969 collected in the Current Population Survey (CPS) of March 1970 differ from data for that year from the decennial census despite the fact that the same basic concept was used in both instances. In the first place, the CPS data exclude the institutional population and most members of the Armed Forces living on post. These two groups were included in the census. Secondly, college students are generally enumerated at their own homes in the CPS and classified as family members, but were enumerated at their college residence in the census, usually as secondary individuals. Thirdly, the small group of CPS enumerators was more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Furthermore, approximately 60 percent of the households were self-enumerated in the 1970 census. Moreover, income data in the CPS were based on responses to separate questions on eight types of income, as well as responses to additional yes-no circles within four of these questions, whereas in the census only six questions were used.

In general, the level of income reported in the census is slightly higher than that reported in the Current Population Survey. Thus, median family income reported in the 1970 census was about $9,590, 1.7 percent above the comparable figure of $9,433 derived from the March 1970 Current Population Survey. This difference is smaller than the difference of 4.5 percent between the medians compiled from the 1960 census and the March 1960 Current Population Survey. For a more detailed discussion of these differences see, "Preliminary Evaluation of 1969 Money Income Data Collected in the 1970 Census of Population and Housing," by Mitsuo Ono, published in the American Statistical Association, **Proceedings of the Social Statistics Section,** 1972.

Survey of Income and Education. The Survey of Income and Education (SIE) was a one-time survey of approximately 151,000 interviewed households nationwide, conducted in each State by the Bureau of the Census between April and July 1976. The purpose of the SIE was to provide estimates of the number of children 5 to 17 years old in poverty families in each State and the District of Columbia, as required by the Education Amendments of 1974.

In addition to collecting income data needed to determine poverty status, the opportunity presented by such a large survey was also used to gather some additional income-related information not usually collected in the Census Bureau's current income surveys. Such data include the receipt of food stamps, housing costs for homeowners and renters, and estimated cash assets. Also, information relevant to a number of Department of Health, Education, and Welfare (HEW) programs was collected, including data on English language proficiency, school enrollment, food stamp and public assistance recipiency, housing tenure, liquid asset holdings, child and adult disability, and health insurance coverage.

Income and poverty data from the SIE have been published in a series of four reports (one for each of the four major regions in the Nation): **Current Population Reports,** Series P-60, No. 110 (Northeast); No. 111 (North Central); No. 112 (South); and No. 113 (West). Each report presents data for the divisions and States within the region and for the total United States. Contained in the reports are income distributions and poverty data for families, persons, and unrelated individuals, cross-classified by a broad range of socioeconomic and demographic characteristics similar in content to data published from the Current Population Survey. The income tables include such characteristics as residence, housing tenure, age, race, size and type of family, number of children under 18 years old, number of earners, and occupation, work experience, and education of head. In addition to many of the above characteristics, the poverty tables also include information on reasons for not working, type of income, subsidized housing of renters and living arrangements for unrelated individuals.

An additional report, **Current Population Reports,** Series P-60, No. 108, contains estimates of household money income in 1975 for the United States, regions, divisions, and States. The primary focus of this report is to show income distributions by housing tenure and type of residence, cross-classified by age of head and other key characteristics of households. Added emphasis has been placed on showing summary statistics; in addition to mean and median incomes, average household size and per capita income are shown along with each income distribution.

Data on income and poverty for calendar year 1975 from the SIE differ somewhat from those based on the CPS. In general, the estimates of median income from the SIE are slightly higher than comparable estimates from the CPS. For example, the median family income from the SIE was $14,094 compared to $13,719 from the CPS. Estimates of the number of persons below the poverty level by various characteristics from the SIE are generally lower than from the CPS. For example, there were 23,991,000 persons below the poverty level in 1975 from the SIE compared to 25,877,000 from the CPS.

Although two major aspects of these surveys were the same, the money income concept and the questionnaire wording and design, there were some significant procedural differences which probably cause the income estimates in these surveys to differ. For a detailed discussion of these differences, see the published SIE reports.

NOTE

In the past the Census Bureau has designated a head of household to serve as the central reference person for the collection and tabulation of data for each member of the household (or family). However, the trend toward recognition of equal status and roles for adult family members makes the term "head" less relevant in the analysis of household and family data. As a result, the Bureau is currently developing new techniques for the enumeration and presentation of data which will eliminate the concept "head." Although the data in this report are based on this concept, methodology for future Census Bureau reports will reflect a gradual movement away from this traditional practice.

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 9. Families and Unrelated Individuals by Total Money Income in 1947 to 1977, by Race of Head—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HEAD (1972=100).
[2]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 12. Families by Total Money Income in 1953 to 1977, in Constant Dollars, by Race of Head, for Regions

(IN 1977 DOLLARS. FAMILIES AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1977 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE "COMPUTATION OF AGGREGATE INCOME BY FIFTHS" IN THE APPENDIX.

Table 13. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1977, Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Head—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HEAD AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH									
FAMILIES AND UNRELATED INDIVIDUALS--CON.

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1977 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE "COMPUTATION OF AGGREGATE INCOME BY FIFTHS" IN THE APPENDIX.

Table 13. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1977, Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Head—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HEAD AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS) — UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		LOWEST	SECOND	MIDDLE	FOURTH		LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1977 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE "COMPUTATION OF AGGREGATE INCOME BY FIFTHS" IN THE APPENDIX.

Table 13. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1977, Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Head—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HEAD AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK AND OTHER RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1977 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE "COMPUTATION OF AGGREGATE INCOME BY FIFTHS" IN THE APPENDIX.

Table 14. Income at Selected Positions and Percentage Share of Aggregate Income in 1953 to 1977, Received by Each Fifth and Top 5 Percent of Families, by Regions

(IN CURRENT DOLLARS. FAMILIES AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

REGION AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

[r]BASED ON REVISED METHODOLOGY.

NOTE: DATA FOR 1959 THROUGH 1977 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1953 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS. FOR DETAILS SEE "COMPUTATION OF AGGREGATE INCOME BY FIFTHS" IN THE APPENDIX.

Table 15. Type of Residence and Race of Head—All Families and Families With Female Head, and All Unrelated Individuals by Total Money Income in 1977, and Region of Residence

(NUMBERS IN THOUSANDS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH 1978. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.

NOTE: MEDIANS WERE CALCULATED USING MORE DETAILED INTERVALS THAN THOSE SHOWN ABOVE, THEREFORE THEY WILL NOT BE THE SAME AS THOSE CALCULATED USING THE ABOVE INTERVALS.

Table 61. Total Money Income in 1947 to 1977—Persons 14 Years Old and Over by Work Experience, Race and Sex—Continued

(IN CURRENT DOLLARS. PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS														YEAR-ROUND FULL-TIME WORKERS		
			PERCENT DISTRIBUTION														
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	TOTAL WITH INCOME	$1 TO $999 OR LOSS	$1,000 TO $1,999	$2,000 TO $2,999	$3,000 TO $4,999	$5,000 TO $6,999	$7,000 TO $9,999	$10,000 TO $14,999	$15,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOLS.)	MEAN INCOME (DOLS.)	PER-CENT	MEDIAN INCOME (DOLS.)	MEAN INCOME (DOLS.)

[r]BASED ON REVISED METHODOLOGY.

NOTE: MEDIANS WERE CALCULATED USING MORE DETAILED INTERVALS THAN THOSE SHOWN ABOVE, THEREFORE THEY WILL NOT BE THE SAME AS THOSE CALCULATED USING THE ABOVE INTERVALS.

Table 61. Total Money Income in 1947 to 1977—Persons 14 Years Old and Over by Work Experience, Race and Sex—Continued

(IN CURRENT DOLLARS. PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS														YEAR-ROUND FULL-TIME WORKERS		
			PERCENT DISTRIBUTION										MEDIAN INCOME (DOLS.)	MEAN INCOME (DOLS.)			
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	TOTAL WITH INCOME	$1 TO $999 OR LOSS	$1,000 TO $1,999	$2,000 TO $2,999	$3,000 TO $4,999	$5,000 TO $6,999	$7,000 TO $9,999	$10,000 TO $14,999	$15,000 TO $24,999	$25,000 AND OVER			PER-CENT	MEDIAN INCOME (DOLS.)	MEAN INCOME (DOLS.)

Appendix

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and approximately 900,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The definition of farm and nonfarm residence in the present survey and in the Current Population Surveys since March 1960 is the same as that used in the 1960 and 1970 censuses but differs from that used in earlier surveys and censuses. In the present survey, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?," and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as in the farm population if either (a) the acreage response was "Yes" and sales amounted to $50 or more, or (b) the acreage response was "No" and sales amounted to $250 or more. All other households were classified as in the nonfarm population, which comprises persons living in urban areas and rural persons not on farms. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming, are classified as nonfarm population.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm. However, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

For detailed information on the effect of the above definitional change, see Series P-60, No. 35, pages 10 and 11.

In August 1975, the U.S. Department of Agriculture and the Bureau of the Census announced a change in the official definition of a farm. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place from which $1,000 or more of agricultural products were sold, or would normally be sold, in the reporting year. However, for purposes of comparability, the figures presented in this report are based on the definition in use from 1960 to 1975.

Metropolitan-nonmetropolitan residence. The population residing in standard metropolitan statistical areas (SMSA's) as defined in the 1970 census constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contain at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

This report contains data for the 20 largest SMSA's and their central cities; these figures are based on SMSA's as defined in the 1970 census. The counties (or towns and cities) which comprised these SMSA's in the 1970 census can be found in **1970 Census of Population,** Vol. 1, Characteristics of the Population, Part A, "Number of Inhabitants."

Central cities. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) The additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

Geographic regions. The four major regions and nine Census divisions of the United States for which data are presented in this report represent groups of States as follows:

Northeast:

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

Middle Atlantic: New Jersey, New York, Pennsylvania.

North Central:

East North Central: Illinois, Indiana, Michigan, Ohio, Wisconsin.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

South:

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia.

East South Central: Alabama, Kentucky, Mississippi, Tennessee.

West South Central: Arkansas, Louisiana, Oklahoma, Texas.

West:

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming.

Pacific: Alaska, California, Hawaii, Oregon, Washington.

North and West:

Northeast, North Central, and West regions combined.

Federal regions. The 10 standard Federal administrative regions for which data are presented in this report represent groups of States, as follows:

Region I, Boston: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont.

Region II, New York: New Jersey, New York.

Region III, Philadelphia: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, West Virginia.

Region IV, Atlanta: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, Tennessee.

Region V, Chicago: Illinois, Indiana, Michigan, Minnesota, Ohio, Wisconsin.

Region VI, Dallas-Fort Worth: Arkansas, Louisiana, New Mexico, Oklahoma, Texas.

Region VII, Kansas City: Iowa, Kansas, Missouri, Nebraska.

Region VIII, Denver: Colorado, Montana, North Dakota, South Dakota, Utah, Wyoming.

Region IX, San Francisco: Arizona, California, Hawaii, Nevada.

Region X, Seattle: Alaska, Idaho, Oregon, Washington.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Mobility status. The population of the United States 3 years old and over has been classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the March 1978 CPS and the place of residence 3 years earlier. Nonmovers are all persons who were living in the same house at the beginning and end of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

Income. For each person in the sample 14 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or bonds); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and workmen's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

When an indefinite amount was reported by the respondent, a specific value was assigned during processing wherever possible. If the indefinite amount was reported in terms of a range, the mid-point of the range was assigned (e.g., $10,000 to $15,000 was coded as $12,500). Open-ended amounts were converted to designated specific amounts; e.g., over $10,000 may be coded as $15,000.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, labor force status, etc., and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses. These elements should be considered when comparing income levels. Moreover, readers should be aware

that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of salable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes, otherwise, inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. "Medicare" reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments such as aid to families with dependent children and general assistance. Separate payments received for hospital or other medical care (vendor payments) are excluded from this item.

Dividends, interest (on savings or bonds), income from estates or trusts, net rental income or royalties include dividends from stockholdings or membership in associations, interest on savings or bonds, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or workmen's compensation include: (1) Unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) workmen's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include: (1) Private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company; (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include the following types of income: (1) Periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payment, and unemployment and workmen's compensations.

Receipts not counted as income. Receipts from the following sources were not included as income: (1) Money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings—the algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings—the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. The algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings represents total money income. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group (under $1,000) those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Many of these were living on income "in kind," savings, or gifts; or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole breadwinner had recently died or had left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

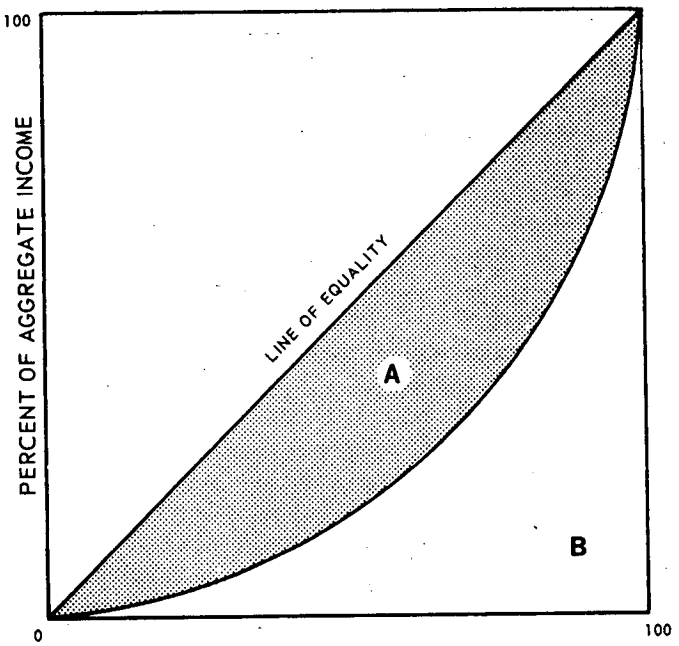
Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for families and individuals are based on all families and individuals. The medians for persons are based on the distributions of persons with income. The medians for wage or salary income, income from nonfarm self-employment, income from farm self-employment, and income other than earnings are based on the distributions of persons or families and individuals having these types of income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group (families, unrelated individuals, or persons). The means for families and unrelated individuals are based on all families and individuals. The means for persons are based on the number of persons with income. The mean for a particular type of income is based on the number of persons or families with that particular type of income.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population (excluding patients or inmates in institutional quarters) in that group.

Index of income concentration. The index of income concentration (or Gini index) is a statistical measure derived from the Lorenz Curve. The Lorenz Curve is obtained by plotting the cumulative percent of units (families or unrelated individuals) on the abscissa against the cumulative percent of aggregate income on the ordinate as accounted for by these units. If all units had exactly the same relative income, perfect equality would be represented by the diagonal shown in the diagram. Curves drawn to actual data invariably fall below this line and the greater the inequality in the distribution of income, the greater the area between the diagonal line and the Lorenz Curve.

The index of income concentration is defined as the ratio of the area between the diagonal and the Lorenz Curve to the total area under the diagonal. This relationship can be expressed as follows, using the notation in the diagram below.



$$L = \frac{A}{A + B} = \frac{\text{area betw. curve and diagonal}}{\text{area under diagonal}}$$

The index of income concentration ranges from 0.0 to 1.0. As the index approaches the limit of 1.0, the inequality of

the income distribution increases. For more detailed information on this measure, see **Trends in the Income of Families and Persons in the United States 1947 to 1964,** Technical Paper No. 17, published in August 1967 by the Bureau of the Census.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters are living arrangements for groups containing five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates by institutions were excluded from the survey.

Family. The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son of the head of the household and the son's wife are in the household, they are treated as part of the head's family. On the other hand, a lodger and his wife not related to the head of the household or an unrelated servant and his wife are considered as additional families, and not a part of the household head's family.

Subfamily. A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a subfamily are also members of a primary family. The number of subfamilies, therefore, is not included in the number of families.

Unrelated individuals. The term "unrelated individuals," refers to persons 14 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household; (2) be part of a household including one or more other families or unrelated individuals; or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the head of the household or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Primary families and individuals. The term "primary family" refers to the head of a household and all other persons in the household related to the head by blood, marriage, or adoption. If nobody in the household is related to the head, then the head constitutes a "primary individual." A household can contain one and only one primary family or primary individual. The number of "primary" families and individuals is identical with the number of households.

Secondary individual. A secondary individual is a person, such as a lodger, guest, or resident employee, who is not related to any other person in the household or group quarters.

Head of family. One person in each family was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey. Married couples related to the head of a family are included in the head's family and are not classified as separate families.

Married, wife present. A man was classified as "married, wife present" if his wife was reported as a member of the household or group quarters, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration.

Size of family. The term "size of family" refers to the number of persons who are living together and are related to each other by blood, marriage, or adoption.

Own children and related children. "Own" children in a family are sons and daughters, including stepchildren and adopted children, of the family head. "Related" children in a family include own children and all other children in the household who are related to the family head by blood, marriage, or adoption.

Number of earners. This number includes all persons in the family with $1 or more in wages and salaries, or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Spanish origin. Persons of Spanish origin were determined on the basis of a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (or the origin of some other household member) from a "flash card" listing ethnic origins. Persons of Spanish origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Spanish origin. It should be noted that persons of Spanish origin can be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 14 years old and over.

Employed. Employed persons include (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force. All civilians 14 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work; seasonal workers for whom they survey week fell in an off season; and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the week surveyed) are also classified as not in the labor force.

Paid labor force. Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week or were looking for work at the time and had last worked as wage and salary or self-employed workers.

Occupation, industry, and class of worker. The data on occupation, class of worker, and employment status in tables 35, 51, 56, and 57, refer to the job held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week.

The data on occupation, class of worker, and industry in tables 36, 37, 52, 54, and 55 refer to the job held longest during the income year.

In several tables two or more of the major occupation groups are subdivided by class of worker into two groups: Wage and salary workers and self-employed workers. The former refers to persons working for wages, salaries, commissions, tips, or at piece rates for a private employer, or for any governmental unit. The latter refers to persons working in their own business, profession, or trade, for profit or fees. Included in the self-employed groups in these tables are unpaid family workers, i.e., persons working without pay in a business operated by a member of the household to whom they are related by blood, marriage, or adoption.

The occupation and industry groupings included in the income reports beginning with 1971 were based on the classification systems used in the 1970 Census of Population. These groupings, with minor differences in the group titles,

were also used in the 1970 income report containing data compiled from the March 1971 survey. Between the 1970 and 1969 income reports which included data obtained from the March 1971 and March 1970 surveys, respectively, there were changes in the industry and occupation classification systems. The income reports from 1961 through 1969 utilized the 1960 census classification systems. However, beginning with the 1970 income reports, the 1970 census systems were used. For major groupings, especially for the industrial groupings, there is relatively little difference in comparability between the systems used in the 1960 and 1970 Censuses of Population. A detailed comparison of these two systems can be found in the Bureau of the Census Technical Paper 26, **1970 Occupation and Industry Classification Systems in Terms of Their 1960 Occupation and Industry Elements.** Additional information may be obtained from a paper, "Changes Between the 1960 and 1970 Census of Population" by Stanley Greene and John Priebe presented at the August 1972 American Statistical Association meeting held in Montreal, Canada. Also see "Revisions in Occupational Classifications for 1971" by John E. Bregger in **Employment and Earnings,** Volume 17, No. 8, page 5, published by the Bureau of Labor Statistics, United States Department of Labor.

Starting with the March 1972 survey, a supplemental question, "What were your most important activities or duties?" was added in the questionnaire which provided additional information for classifying persons by occupation. In general, the major impact of this supplemental question was to reclassify some persons from the "managers" classification into other types of occupations (primarily into the major occupation group of "craft and kindred workers").

The major occupation groups are combined into four divisions, as follows:

White-collar workers.—Professional, technical, and kindred workers; managers and administrators, except farm; sales workers; and clerical and kindred workers.

Blue-collar workers.—Craft and kindred workers; operatives, except transport; transport equipment operatives; and laborers, except farm.

Farm workers.—Farmers and farm managers; and farm laborers and supervisors.

Service workers.—Service workers, excluding private households; and private household workers.

The sequence in which these four divisions appear is not intended to imply that any division has a higher social or skill level than another.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year, if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round full-time worker. A year-round full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported that they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question "What were you doing most of last year?"

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Symbols. A dash "—" represents or rounds to zero. The symbol "B" means that the base for the derived figure is less than 75,000. Three dots ". . ." mean not applicable, "NA" means not available, and the symbol "r" means revised.

Base figures. The base figures shown for 1971 to 1977 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey" **Employment and Earnings,** Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

Computation of aggregate income by fifths. The data shown on aggregate income and dollar cutoffs for fifths (and

top 5 percent) of families, ranked by size of their total money income, were calculated using two different procedures. In table 3, aggregate income and dollar cutoffs by fifths were derived directly from the Current Population Survey microdata file using actual income amounts. In contrast, the data shown in tables 13 and 14 were calculated using estimates from grouped data, as described below.

In calculating the aggregate income by fifths (and top 5 percent) of families using grouped data, the underlying aggregate income distribution by size of income was estimated initially. The aggregate income distributions were obtained by multiplying the number of units in each income interval by an estimated mean income for the corresponding income interval. For the top open-end interval ($50,000 and over), a Pareto distribution was fitted to the data in the interval just below the open-end interval ($25,000 to $49,999). This fitted distribution was then extrapolated to estimate the number of families with incomes greater than $100,000. The mean income of families with greater than $100,000 was assumed to be $100,000 exactly.[1] The mean income for the $50,000 to $100,000 interval was estimated from the same fitted Pareto distribution. Below the "$50,000 and over" interval, a Pareto distribution was fitted to each separate income interval. If the absolute value of the slope parameter of the fitted Pareto distribution was greater than 1, the mean income of the interval was estimated from the fitted Pareto distribution. If the absolute value of the slope parameter was less than or equal to 1, the midpoint of the interval was used as the estimated mean of the interval.

The upper income levels (quantiles) of each fifth and the top 5 percent of families were estimated using either linear or Pareto interpolation depending upon the methods used to estimate the mean income in the interval in which the quantile was located (reference interval). After determining a particular quantile, the aggregate income above this quantile was calculated by estimating the aggregate income of the subinterval between the quantile and the next higher actual income interval and adding the result to the aggregate income above the reference interval. The aggregate income of the subinterval was determined using the method (either Pareto or linear interpolation) consistent with that used for estimating the quantile and the mean income of the reference interval. The aggregate incomes between the quantiles were determined by disaccumulating the aggregate income distribution.

The two methods of determining aggregate income and dollar cutoffs for fifths of families produce some slight discrepancies, particularly for the highest fifth and top 5 percent of families. For the current year, the data shown in table 3 are preferable, since no interpolation was involved.

For more information on the use of Pareto techniques, see "Estimation of Summary Measures of Income Size Distribution From Grouped Data," by Emmett F. Spiers, published in the American Statistical Association, **Proceedings of the Social Statistics Section, 1977.**

[1] Individual income amounts greater than or equal to $100,000 are recorded as $99,999 in the Current Population Survey.

Computation of constant dollar distributions. The adjustment for price change was made by converting the income distribution for families and unrelated individuals for each year (1947 to 1976) into 1977 dollars on the basis of the change in the Consumer Price Index. The indices used to make the constant dollar conversions are shown in table A-1. In choosing a procedure to make this conversion, two fundamental assumptions concerning income data were made: (1) Price changes have the same proportional effect on various income levels and (2) the distribution within each income interval follows a Pareto distribution. The following procedure satisfies these two assumptions.

The first step required the accumulation of the income distribution starting with the highest income interval and cumulating to the lowest income interval. Next, the limits of each income interval were converted into 1977 dollars by adjusting them by a factor representing the change on the basis of that year's price index (1977 = 100). Finally, the number of families and unrelated individuals in each of the detailed class intervals were computed by logarithmic interpolation and then combined into broad income intervals.

The Consumer Price Index is basically a measure of changes in prices of the goods and services bought by urban "wage earner and clerical worker families" representing

about three-fifths of all persons living in urban places and about two-fifths of the total U.S. population. The same index was used for all groups of families because separate price indices have not been developed for families in different income class intervals. In addition, available data did not permit adjustment for the fact that the price index is strictly applicable to consumer expenditures for goods and services, whereas the family income data cover also family savings and income tax payments. For these and other reasons, the constant-dollar figures, particularly in the income range over $10,000, are to be regarded as approximations.

The constant-dollar distributions in table 12 were obtained by applying the same procedures as used for the Country as a whole to the current-dollar family income for each region. Previous studies indicated that regional price indices differed only slightly from the U.S. Index. The limitations noted earlier for the United States distributions in terms of constant dollars apply also to the regional distributions. It should also be noted that the adjustments for price change have been introduced in order to measure changes in real incomes within a region over time, and that they have limited use for the purpose of interregional comparisons. The available consumer price indices measure the relative change in price levels in each region and make possible a comparison of the relative changes of constant-dollar income between regions. These indices do not, however, reflect geographical differentials in price levels. Therefore, caution should be used when comparing the absolute levels of constant-dollar income between regions.

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis (formerly the Office of Business Economics), Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. **Income definition.** The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: Wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. **Source of data.** The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employers' wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households. As discussed in the section "Source and Reliability of the Estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable total money income aggregates and about 97 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see "Size Distributions of Family Personal Income: Methodology and Estimates for 1964" by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. **Population coverage.** The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post). In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

4. **Average income.** The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for families (or for unrelated individuals or income recipients 14 years old and over).

Department of Agriculture farm income series. The farm income data are not directly comparable to that published by the Department of Agriculture for several reasons. The Department of Agriculture publishes two major series on income of the farm population: (1) Personal income of the farm population and (2) realized net farm income of farm operators.

Because of the following reasons, the estimates of total money income of the farm population as published by the Bureau of the Census are not directly comparable to estimates of personal income data of the farm population as published by the Department of Agriculture:

1. The estimates of total money income exclude the value of farm crops and other noncash income as well as income from capital gains, whereas estimates of personal income include both of these items.

2. Estimates of total money income include contributions for social insurance by farmers and farm laborers and contributions from persons living outside the household, while estimates of personal income exclude these two sources of income.

For reasons listed below, the estimates of farm self-employment income per person or per family as published by the Bureau of the Census differ from estimates of operators' realized net farm income per farm as published by the Department of Agriculture.

1. The estimates of farm self-employment income as published by the Bureau of the Census exclude nonmoney income such as crops grown for home consumption. However, these are included in the estimates of operators' realized net farm income per farm.

2. The estimates of the Bureau of the Census include in their universe, persons who do not live on a farm but who do have farm income, while the estimates of the Department of Agriculture exclude these people from their universe.

3. The agriculture series includes the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

The estimates of the Department of Agriculture differ from the estimates of the Bureau of the Census methodologically as well as conceptually. The Department of Agriculture estimates are based on data derived from farm, business, and governmental sources, while the Bureau of the Census estimates are compiled from data collected in sample surveys. As noted later, the latter estimates are subject not only to sampling variation but also to errors of response and nonreporting.

For a more detailed discussion of the concepts and methodology used in the Department of Agriculture estimates, see U.S. Department of Agriculture Handbook No. 365, **Major Statistical Series of the U.S. Department of Agriculture,** Vol. 3, "Gross and Net Farm Income" released in Sept. 1969.

Federal income tax data. For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because single persons receiving less than $2,950 (less than $3,700 if 65 years old or over) and married couples receiving less than $4,700 ($5,450 if one spouse is 65 years old or over; $6,200 if both are 65 or over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data. Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the following reasons:

1. The earnings of the following groups are not covered by the earnings record data: Many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers, and domestic servants.

2. Employees' earnings in excess of $16,500 per employer are not covered by the earnings record data.

3. Income other than earnings is not covered by the earnings record data.

4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, whereas the data presented in this report are obtained by household interviews.

COMPARABILITY OF ESTIMATES FROM MARCH 1978 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1978 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in: (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; and (5) change in sample size and interpolation procedures. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

The data for 1971 through 1977 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the over all national level is the introduction of population controls based on the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes (see table 3, **Current Population Reports,** Series P-60, No. 91).

Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, **Employment and Earnings,** Vol. 18, No. 8, February 1972.

The figures shown for metropolitan areas are based on standard metropolitan statistical areas (SMSA's) as defined on the basis of the 1970 census; those published prior to the March 1973 CPS referred to SMSA's defined on the basis of the 1960 census. There are significant differences in the population classified as metropolitan from each of these definitions. For the 1970 definition of SMSA's, see **1970 Census of Population,** Vol. 1, Characteristics of the Population, Part A, "Number of Inhabitants."

The median income in 1969 of families residing in metropolitan areas based on the 1970 definitions and procedures is 0.5 percent lower than that based on the 1960 definitions and procedures. This difference arises partly as a result of the inclusion of new and smaller SMSA's with lower income relative to previously defined SMSA's. The median incomes of men and women were 0.3 percent and 1.5 percent lower, respectively, based on the 1970 census definitions relative to those based on the 1960 census definitions.

Collection of Income and Work Experience Data

This report presents data for persons and family heads with varying amounts of work experience. In the surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. Beginning with the March 1970 survey, in order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together in the March survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions.

Estimates of the proportion of year-round full-time workers in specified subgroups in the population are shown in various tables in this report. All persons in the Armed Forces included in the March survey are excluded from the computation of the proportions of year-round full-time workers.

It should be noted that the proportions of year-round full-time workers shown in the Series P-60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, Special Labor Force Reports, "Work Experience of the Population." The difference exists because the proportions are not based on exactly the same groups. The proportions presented in the **Special Labor Force Reports** relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P-60 reports relate to civilians who received income, including not only workers but, also, many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings.

Noninterviews, Nonresponses, and Allocations

In the March 1978 CPS, no interview was obtained for approximately 5 percent of the 56,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of head and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or refused. In March 1978, the income data were incomplete for about 18 percent of the persons 14 years old and over. About 24 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Tables A-2 and A-3 show families and persons by total money income and allocation status. The categories shown in the tables give the number of persons or families with (1) no items allocated; (2) some but not all items allocated; and (3) all items allocated; i.e., the responses to all 11 income items were missing and, therefore, required allocation.

As indicated by comparing medians and means in these tables, the after-allocation incomes of families and persons needing allocations of missing responses are higher than families and persons reporting complete income information (no items allocated). Since the allocation procedure assigns amounts to nonrespondents from persons with similar demographic and economic characteristics who did respond,

it is evident that many nonrespondents tend to be persons with high income characteristics such as high paying occupations, high educational attainment, etc. For a detailed discussion of the characteristics of nonrespondents, see "Characteristics of Income Nonrespondents in the March Current Population Survey," by Emmett Spiers, John Coder, and Mitsuo Ono, American Statistical Association, **Proceedings of the Social Section, 1971.**

The history of imputing missing responses to the income questions on the March CPS began in 1962. Prior to this time, income tabulations were based solely on persons for which complete income information was obtained. In the survey years from 1962 to 1965, all of the income items were imputed for persons who did not answer one or more of the income items, even though some items may have been answered.

Beginning with the March 1966 survey, in the event a respondent did not answer one or more of the income questions, the missing income data for this person were imputed for only those income items which were not answered. Each of the earnings items was handled individually, whereas income items other than earnings were handled as a group. Characteristics used in this imputation were age, family status, race, residence, weeks worked, and major occupation group. The income amount assigned to a nonrespondent was that observed for another person with similar demographic and economic characteristics who did respond and who was selected systematically in the order in which individual records were processed.

Starting with the 1967 CPS, the Bureau of the Census introduced improved income edit and allocation procedures. The main feature of these procedures was a more refined

Table A-2. Families, by Total Money Income and Income Allocation Status: March 1978 CPS

(Numbers in thousands. For meaning of symbols, see text)

method for imputing missing income data which expanded the use of information already known about that person. Among the major improvements made affecting the income data were the following: (1) An expanded set of social and economic characteristics within which the imputations were made; in addition to age, race, occupation, and weeks worked, the procedures included sex and type of family member as major variables within which the missing income items are imputed; (2) the elimination of inconsistent reporting which resulted in having workers with no earnings and earners with no weeks worked; and (3) the imputation procedure assigned missing earnings entries first and then utilized the earnings information to assign missing sources of income other than earnings. A more detailed description of the computer editing and allocation procedures may be found in a paper, "Computer Method to Process Missing Income and Work Experience Information in the Current Population Survey," by Emmett F. Spiers and Joseph J. Knott, published in the American Statistical Association, **Proceedings of the Social Statistics Section,** 1969. See also "Current Developments on Collecting Income Data in the Current Population Survey," by Mitsuo Ono, published in the American Statistical Association, **Proceedings of the Social Statistics Section,** 1971.

However, because of coding errors in the processing of the 1968 CPS data, in that year alone it was not possible to apply all the aforementioned improvements to the editing and allocation procedures. Since these errors produced an under-estimate of income, they had the effect of over-stating the number of poor.

In processing the data collected in the March 1976 Current Population Survey, the Bureau of the Census utilized a new computer processing system designed to take maximum advantage of the Bureau's expanded computer capabilities. The revised system incorporated many improvements in the income edit and allocation procedures. The main feature of these procedures was a more refined method for inputing missing responses to the income and work experience questions on the March CPS questionnaire.

There were two main objectives in the revisions of the imputation procedures for income, work experience, and longest job. The first objective was to expand the detail and number of demographic and economic characteristics used in making imputations. Since nonrespondents are assigned information from respondents with "similar" characteristics, the degree of bias due to nonresponse may be reduced by incorporating more detailed information in the imputation procedures. The second objective was to maintain—wherever possible — observed relationships for respondents among income, work experience, and longest job variables in imputing missing information for nonrespondents. A detailed discussion of these improvements and the subsequent revisions to the 1974 income data (for comparability with 1975 data) can be found in **Current Population Reports,** Series P-60, No. 105. In addition to the major revisions that occurred in March 1967 and March 1976, procedures have been modified from time to time in order to refine the allocation models.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March-April 1969 CPS. Several modifications were introduced in the collection of income data in the March and April CPS supplements. These include (1) extension of the interview period of the six rotation groups for which income questions were asked in March and the use of follow-up forms in these six groups to accommodate household respondents who needed more time to obtain the required income information (it is estimated that some members of approximately 4,400 households, or 9 percent of the total relevant households, made use of these follow-up forms); (2) modification of the design and content of the questionnaire to allow for more detailed questioning of certain income items; thus, boxes for gross receipts, business expense, and net income have been added to the self-employment income questions to help the interviewer and respondent determine net income, and "yes-no" circles were added to the questions on income other than earnings in order to ascertain whether the respondent received or did not receive income; (3) field office editing procedures were extended to a 100 percent income edit of the CPS schedules; (4) training instructions were strengthened by including more detailed explanations and more examples; and (5) the interview group training session was shifted from February to March.

Modifications in collecting income data in the March 1970 Current Population Survey. The Bureau introduced modifications in the collection of income data for the March 1970 CPS supplement. These were: (1) An advance letter informing households about the collection of income data was mailed to all households except those in the first and fifth months. The latter households received special letters which explained the need for collecting both CPS and census data; (2) information on work experience and income was collected simultaneously for the full sample (in previous years, work experience information was collected separately from income data); (3) the interview period was extended one week for three-fourths of the sample (using follow-up calls and separate questionnaires). In addition, modified procedures which were incorporated in the March 1969 CPS supplement were also implemented in the March 1970 CPS. Overall, data indicate that the use of these procedures has resulted in some improvement in the collection of income data. The family income nonresponse rate has not only dropped by 5 percentage points (from 19 to 14 percent) but also it appears that the proportion of aggregate income amounts collected increased slightly in the March 1970 CPS supplement as compared with the proportion collected in the March 1969 CPS supplement.

Modifications in collecting income data in the March 1971 Current Population Survey. The Bureau continued to use the improved procedures which were incorporated in the March

1970 CPS. Procedural changes that were instituted in the March 1971 CPS, among others, were:

1. The interview period was extended one week for all households in the sample (using follow-up calls and separate questionnaires). In the previous year's survey, the interview period was extended for only three-fourths of the sample.

2. Income from net royalties was included in the question covering estates, trusts, or dividends, interest on savings accounts or bonds, and net rental income. In previous surveys, income from net royalties was included in the question covering private pensions, annuities, alimony, regular contributions from persons not living in this household, and anything else.

3. An additional regional office follow-up was made by telephone to obtain income amounts for all follow-up cases containing one or more persons who were not interviewed during the original follow-up period, except for refusal.

Modifications in collecting income data in the March 1975 Current Population Survey. Several modifications in the design and content of the questionnaire were introduced in the March 1975 CPS to allow for more detailed questioning of certain income items. These changes were:

1. In the March 1974 CPS, income from aid to families with dependent children, old age assistance, and aid to the blind or totally disabled were asked in one combined question on welfare payments. Beginning in January 1974, the programs for old age assistance and aid to the blind or totally disabled were replaced by the Supplemental Security program. Therefore, in the March 1975 CPS a separate question was asked for the receipt of Supplemental Security income. Income from aid to families with dependent children or any other assistance was asked under the general category of public assistance or welfare payments.

2. In the March 1974 CPS, income from interest, net rental income or income from estates, trusts, or dividends was asked in one question. In the 1975 CPS these income types were asked as two questions with income received from interest on savings accounts or bonds included in one question and income from estates, trusts, or dividends in the other.

3. In the March 1974 CPS, income received from private pensions was asked along with alimony and certain other income items while income from government employee pensions was asked along with veterans' payments, unemployment compensation and workmen's compensation. In the March 1975 CPS, incomes received from both private and government employee pensions (including military retirement) were extracted from their previous categories and asked as one combined question.

Modifications in collecting income data in the March 1977 Current Population Survey. In the March 1977 CPS there were two modifications in the wording of the questionnaire. These two changes were:

1. In the March 1976 CPS, the respondent was asked if he or she received any income from "interest on saving accounts, bonds, etc." In the March 1977 CPS, the wording was changed to "interest on savings or bonds, etc. Include even small amounts credited to . . .'s account."

2. In the March 1976 CPS, income from "anything else" was asked along with alimony or child support and other regular contributions from persons not living in the household. In the March 1977 CPS, the wording "anything else" was changed to "any other money income."

Changes in Sample Size and Interpolation Procedures

The income statistics tabulated from the March 1977 CPS reflect two important modifications of procedures from those used in previous surveys. These changes involved the use of (1) an expanded sample of housing units; and (2) refined interpolation procedures for calculating median incomes and their respective standard errors.

Along with the new processing system in the March 1976 CPS, there were also revisions to the display tables including an expanded set of income intervals above $10,000. As a result, estimates of median income exceeding $10,000 are not strictly comparable to the previously published values because interpolation calculations are now performed using different size income intervals than used before the March 1976 CPS. For more details on this matter refer to **Current Population Reports,** Series P-60, No. 105, page 11.

UNDERREPORTING OF INCOME

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources such as the Bureau of Economic Analysis, the Social Security Administration, Veterans Administration, etc. The difference between the survey estimate and the independent estimate is termed "underreporting".

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA. A publication covering the general topic of income underreporting is **The Distribution of Personal Income, A study of Statistics on the Size Distribution of Personal Income in the United States;** prepared by T. Paul Schultz for use of the Subcommittee on Economic Statistics of the Joint Economic Committee, Congress of the United States, 1964. For more details regarding the procedures for developing independent estimates of aggregate income, see "Appraisal of Basic Data Available for Constructing Income Size Distributions" by Selma F. Goldsmith, published in **Studies in Income and Wealth,** Volume 13, National Bureau of Economic Research, 1951; and "Size Distribution of Family Personal Income: Methodology and

Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-021, June 1973.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table A-4 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, and (4) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should also be kept in mind that the independent estimates are, themselves, subject to errors and conceptual differences for which no adequate adjustment is possible.

Table A-4 shows comparisons of CPS aggregate income amounts and independently estimated aggregate income amounts for each source of income collected in the CPS for 1977. Estimates are shown for each individual source of income specified on the March CPS questionnaire with the exception of those four sources for which no independent estimates are available. CPS proportions of the total independent estimates are also shown by reported and allocated status.

Comparisons of the CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 10 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 41 percent for interest income to only about 3 percent for wage and salary income.

Both the reported and allocated portions of CPS aggregate incomes are shown in table A-4. In 1977, $223.5 billion, or about 17 percent of the total CPS aggregate was allocated as a result of nonresponses to the income questions. The data in this table reveal that the allocated portion of CPS aggregate income varies widely by income source. About 11 percent of the $9.1 billion of the CPS public assistance or welfare income in 1977 was allocated whereas about 31 percent of the $78.3 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 25 percent or above include interest, dividends, and estates and trusts.

The reasons for underreporting of income in the CPS and in other household surveys are many and varied. Some of the more important of these reasons include: (1) respondent's overlooking income received, especially small amounts not regularly received, (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information

Table A-4. Comparison of CPS Aggregate Money Income in 1977 with Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Allocated CPS Amounts

(For meaning of symbols, see text)

Sources of income	Independent Sources		CPS						CPS reported and allocated as a percent of CPS total			CPS as a percent of Independent sources		
			Total		Reported		Allocated

especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For more details on income underreporting in censuses and surveys, see: (1) **Income Distribution in the United States** (a 1960 Census Monograph), by Herman P. Miller, Bureau of the Census, 1966, (2) **The Structure of Income**, by Irving B. Kravis, University of Pennsylvania, 1962 and, (3) "Size Distribution of Family Personal Income: Methodology and Estimates for 1964" cited earlier in this section.

SOURCE AND RELIABILITY OF THE ESTIMATES

Source of Data

The estimates are based on data obtained annually in March of 1948 through 1978 from the Current Population Survey (CPS) of the Bureau of the Census and from supplementary questions to the CPS. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member 14 years old and over in every sample household. In addition, supplementary questions are asked every March about money income for the previous year. In order to obtain more reliable data for the Spanish origin population, the March CPS sample was enlarged to include all households from the November 1976 sample which contained at least one person of Spanish origin. This resulted in almost doubling the number of sample persons of Spanish origin. For this report, persons in the Armed Forces living off post or with their families on post are also included. Brief descriptions of the sources and the procedures by which the data were obtained are presented below.

The present CPS sample was initially selected from the 1970 census files and is continuously updated to reflect new construction where possible (see section "Nonsampling variability"). Samples for previous sample designs were selected from files from the most recently completed census. The monthly CPS sample is spread over 461 areas with coverage in each of the 50 States and the District of Columbia. A supplementary sample of housing units in 24 States and the District of Columbia was incorporated with the monthly CPS sample to produce the March 1977 and March 1978 income data. The expanded CPS sample is located in 614 areas comprising 1,113 counties, independent cities, and divisions in the Nation. The 614 sample areas used in March include 461 areas from the monthly CPS and 153 supplementary areas.

The estimation procedure used for the monthly CPS data involved the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from decennial censuses; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The estimation procedure in March for the data in the report also involved a further adjustment so that husband and wife in a household receive the same weight.

Reliability of the Estimates

Since the CPS estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey—sampling and nonsampling. The standard errors provided for this report primarily indicate the magnitude of the sampling

Brief Description of the Current Population Survey

Time period	Number of sample areas	Housing units eligible		Housing units visited, not eligible[1]
		Interviewed	Not interviewed	
Supplemental sample.....	153	8,500	500	1,500
Aug. 1972 to present.....	461	45,000	2,000	8,000
Aug. 1971 to July 1972.....	449	45,000	2,000	8,000
Jan. 1967 to July 1971.....	449	48,000	2,000	8,500
Mar. 1963 to Dec. 1966.....	357	33,500	1,500	6,000
Jan. 1960 to Feb. 1963.....	[2]333	33,500	1,500	6,000
May 1956 to Dec. 1959.....	[3]330	33,500	1,500	6,000
Feb. 1954 to Apr. 1956.....	230	21,000	500-1,000	3,000-3,500
Aug. 1947 to Jan. 1954.....	68	21,000	500-1,000	3,000-3,500

[1] These are housing units which were visited, but were found to be vacant or otherwise not eligible for interview.

[2] Three sample areas were added in 1960 to represent Alaska and Hawaii after statehood.

[3] Beginning in May 1956, these areas were chosen to provide coverage in each State and the District of Columbia (with the exception of the supplementary sample used for March 1977).

Note: Prior to 1966, income data were collected from approximately 75 percent of occupied households in CPS.

error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability. As in any survey work, the results are subject to errors of response and nonreporting in addition to sampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of respondents to provide correct information, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage, as compared to the level of the decennial census, is about 5 percent. It is known that the CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races than for Whites. Ratio estimation to independent age-sex-race population controls partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the 1970 census, which was estimated at 2.5 percent of the population, with similar undercoverage differentials by age, sex, and race as in CPS.

The approximate magnitude of the two sources of undercoverage of housing units is known. Of the 83,000,000 housing units in the United States about 600,000 conventional new construction housing units are not represented in the CPS sample because they were assigned building permits prior to January 1970, but the building was not completed by the time of the 1970 census, (i.e., April 1970). Almost all conventional new construction, for which building permits were issued after 1969, is represented. About 290,000 occupied mobile homes are not represented in CPS; these units were either missed in the census or have been built or occupied since the census. These estimates of missed units are relevant to the present sample only and not to earlier designs where the extent of undercoverage was generally less. The extent of other sources of undercoverage of housing units is unknown but believed to be small.

In most cases the schedule entries for income are based on the memory or knowledge of one person. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept.

Comparability with other data. Caution should be used in comparing income estimates for 1977 and 1976, when the supplemental sample was used, to those for 1975 and earlier years. Some relatively large differences in estimates of population in metropolitan and nonmetropolitan areas have been observed between the 461 and the 614 area samples. These differences reflect a relatively large increase in variance on those estimates and do not represent actual changes in the population.

Estimation of median incomes. Starting with the March 1977 CPS, for income intervals greater than $1,000, estimates of median income and associated standard errors have been calculated using Pareto interpolation. Pareto interpolation assumes a decreasing density of population within an income interval, whereas, linear interpolation assumes a constant density of population within an income interval. In past reports from the CPS, linear interpolation was used almost exclusively to calculate median incomes. Thus, caution must be used in comparing the 1977 and 1976 medians with the medians for previous years when the 1977 and 1976 medians are larger than $12,000 for persons and $18,000 for families. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see P-60, No. 114, "Money Income in 1976 of Families and Persons in the United States".

Sampling variability. The standard errors given in the following tables are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its estimated standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these surveyed under essentially the same general conditions and using the same sample design, and an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

All the statements of comparison appearing in the text are significant at a 1.6 standard error level or better, and most are significant at a level of more than 2.0 standard errors. This means that for most differences cited in the text, the estimated difference is greater than twice the standard error of the difference. Statements of comparison qualified in some way (e.g., by use of the phrase, "some evidence") have a level of significance between 1.6 and 2.0 standard errors.

Note when using small estimates. Summary measures (such as means, medians, and percent distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown however, even though the relative standard errors of these numbers are larger than those for the corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in tables A-5 through A-8 are approximations to standard errors of various estimates for families, unrelated individuals, and persons in the United States. Estimated standard errors for specific characteristics cannot be obtained from tables A-5 through A-8 without the use of the factors in table A-9. These factors must be applied to the generalized standard errors in order to adjust for the combined effect of sample design and the estimating procedure on the value of the characteristic. Standard errors for intermediate values not shown in the generalized tables of standard errors may be approximated by linear interpolation. Standard errors of estimated means and medians are provided in the detailed tables.

Two parameters (denoted as "a" and "b") are used to calculate standard errors for each type of characteristic; they are presented in table A-10. These parameters were used to calculate the standard errors in tables A-5 through A-8 and to calculate the factors in table A-9. They also may be used to directly calculate the standard errors for estimated numbers and percentages. Methods for direct computation are given in the following sections.

Standard errors of estimated numbers. The approximate standard error, σ_x, of an estimated number can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f\sigma \qquad (1)$$

where f is the appropriate factor from table A-9, and σ is the standard error on the estimate obtained by interpolation from tables A-5 or A-7. Alternatively, standard errors may be approximated by using formula (2), from which the standard errors in tables A-5 and A-7 were calculated. Use of this formula will provide more accurate results than the use of formula (1).

$$\sigma_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table A-10 associated with the particular type of characteristic.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameters from table A-9 or A-10 indicated by the numerator. The approximate standard error, $\sigma_{(x,p)}$, of an estimated percentage can be obtained by use of the formula

$$\sigma_{(x,p)} = f\sigma \qquad (3)$$

In this formula f is the appropriate factor from table A-9 and σ is the standard error on the estimate from table A-6 or A-8. Alternatively, standard errors may be approximated by using formula (4) from which the standard errors in table A-6 and A-8 were calculated. Use of this formula will provide more accurate results than use of formula (3).

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot p(100 - p)} \qquad (4)$$

Here x is the size of the subclass of persons or families and unrelated individuals which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter in table A-10 associated with the particular type of characteristic in the numerator of the percentage.

Illustration of the use of standard error tables. Table 15 shows that in 1977 there were 2,132,000 families in the United States with incomes of $10,000 to $10,999. Table A-5 shows the standard error on an estimate of this size to be approximately 47,000. Applying the appropriate factor from table A-9 and using formula (1), the approximate standard error is 1.0 x 47,000 = 47,000.[2] The 68-percent confidence interval as shown by the data is from 2,085,000 to 2,179,000. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly we could conclude that the average estimate derived from all possible samples lies within the interval from 2,038,000 to 2,226,000 (using twice the standard error) with 95 percent confidence.

Table 15 also shows that these 2,132,000 families represented 3.7 percent of the 57,215,000 total families in the United States. Since the numerator of this percentage is families with incomes of $10,000 to $10,999 and the characteristic related income, the appropriate b parameter from table A-10 is 1063. Using formula (4), the standard error on an estimate of 3.7 percent is

$$\sqrt{\frac{1063}{57{,}215{,}000}(3.7)(100-3.7)} = 0.08 \text{ percent}^3$$

[2] Formula (2) gives a standard error of 47,000.

[3] Table A-6. and formula (3) give a standard error of 0.08 percent.

Table A-5. Standard Errors of Estimated Numbers of Families and Unrelated Individuals: 1966 to 1977

(Numbers in thousands)

Size of estimate	Standard error	Size of estimate	Standard error
75	9	7,500	87
100	10	10,000	99
250	16	15,000	119
500	23	25,000	147
1,000	32	50,000	182
2,000	46	60,000	187
3,000	56	80,000	184
5,000	72		

Note: To estimate standard errors for 1947 to 1954 multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

Table A-6. Standard Errors of Estimated Percentages of Families and Unrelated Individuals: 1966 to 1977

Base of estimated percentage (thousands)	Estimated percentages				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	1.7	2.6	3.6	5.2	6.0
100	1.4	2.2	3.1	4.5	5.2
250	0.9	1.4	2.0	2.8	3.3
500	0.6	1.0	1.4	2.0	2.3
1,000	0.5	0.7	1.0	1.4	1.6
2,500	0.3	0.4	0.6	0.9	1.0
5,000	0.2	0.3	0.4	0.6	0.7
10,000	0.14	0.2	0.3	0.4	0.5
25,000	0.09	0.14	0.2	0.3	0.3
50,000	0.06	0.10	0.14	0.2	0.2
60,000	0.06	0.09	0.13	0.2	0.2
80,000	0.05	0.08	0.11	0.2	0.2

Note: To estimate standard errors for 1947 to 1954 multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

Consequently, the 68-percent confidence interval as shown by these data is from 3.6 to 3.8 percent, and the 95-percent confidence interval is 3.5 to 3.9 percent.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2} \qquad (5)$$

where σ_x and σ_y are the standard errors of the estimates x and y; the estimates can be of numbers, percents, ratios, etc. This will represent the actual standard errors quite accurately for the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive correlation between the two characteristics, the formula will overestimate the true standard error.

Illustration of the computation of the standard error of a difference. Table 42 shows that the median income in 1977 for males in the Northeast Region was estimated to be $10,572 while the estimated median income for males in the South was $8,948. Table 42 also shows that the approximate standard errors on these estimated medians to be $111 and $104, respectively. Therefore, the standard error of the estimated difference of $1,624 is

$$152 = \sqrt{(111)^2 + (104)^2}$$

This means the 68-percent confidence interval as shown by these data is from $1,471 to $1,777. Therefore a conclusion

Table A-7. Standard Errors of Estimated Numbers of Persons: 1966 to 1977

(Numbers in thousands)

Size of estimate	Standard error	Size of estimate	Standard error
75	11	7,500	105
100	12	10,000	121
250	20	15,000	146
500	28	25,000	184
1,000	39	50,000	243
2,000	55	100,000	289
3,000	67	160,000	257
5,000	87		

Note: To estimate standard errors for 1947 to 1954 multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

Table A-8. Standard Errors of Estimated Percentages of Persons: 1966 to 1977

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.0	3.1	4.3	6.2	7.1
100	1.7	2.7	3.7	5.4	6.2
250	1.1	1.7	2.4	3.4	3.9
500	0.8	1.2	1.7	2.4	2.8
1,000	0.6	0.9	1.2	1.7	2.0
2,500	0.4	0.5	0.7	1.1	1.2
5,000	0.3	0.4	0.5	0.8	0.9
10,000	0.2	0.3	0.4	0.5	0.6
25,000	0.11	0.2	0.2	0.3	0.4
50,000	0.08	0.12	0.2	0.2	0.3
100,000	0.05	0.09	0.12	0.2	0.2
160,000	0.04	0.07	0.09	0.13	0.15

Note: To estimate standard errors for 1947 to 1954 multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

that the average estimate derived from all possible samples lies within a range computed this way would be correct for roughly 68 percent of all possible samples. The corresponding 95-percent confidence interval is $1,318 to $1,930. Thus, we can conclude with 95 percent confidence that there is a difference between the 1977 median incomes for males in the two regions.

Standard error of a ratio. Certain mean values for persons in families shown in the tables were calculated as the ratio of two numbers. For example, the mean number of persons per family is calculated as

$$\frac{x}{y} = \frac{\text{total number of persons in families}}{\text{total number of families}}$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families.

Case 1: There is at least one person having the characteristic in every family of the class: as for example, the mean number of persons per family or the mean number of persons per family with a male head. For ratios of this kind, the standard error is approximated by the following formula:

$$\sigma_{\left(\frac{x}{y}\right)} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{\sigma_y}{y}\right)^2 + \left(\frac{\sigma_x}{x}\right)^2 - 2\rho\left(\frac{\sigma_x}{x}\right)\left(\frac{\sigma_y}{y}\right)\right]} \qquad (6)$$

The standard error of the estimated number of families, σ_y, and the standard error of the estimated number of persons with the characteristic in those families, σ_x, may be calculated by the methods described above. In formula (6), ρ represents the correlation coefficient between the numerator and the denominator of the estimate. In the above examples, and for other ratios of this kind, use 0.7 as an estimate of ρ.

Case 2: The number of persons having the characteristic in a given family may be 0,1,2,3, or more: for example, the mean number of persons under 18 years of age. For ratios of this kind the standard error is approximated by formula (6) but ρ is assumed to be zero. If ρ is actually negative, then this procedure will provide an underestimate of the standard error of the ratio.

Standard errors of estimated means and medians. Estimated standard errors are provided for the means and medians of the published income distribution and do not need to be calculated by the user. However, some users may wish to combine two or more income distributions to compute means and medians for the combined distribution. The following sections are provided to enable the user to calculate standard errors for estimates of means and medians for the combined distributions.

Estimating the standard error of the mean. The standard error of a mean can be approximated by formula (7). Because of the approximations used in developing formula (7), an estimate of the standard error of the mean obtained from that formula will generally underestimate the true standard deviation. The formula used to estimate the standard error of a mean is

$$s_{\bar{x}} = \sqrt{\frac{b}{y} s^2} \qquad (7)$$

where y is the size of the base and b is a constant which depends on the sample size, the sample design, the estimation procedure, and the type of characteristic. The b values are given in table A-10. The variance, s^2, is given by formula (8):

$$s^2 = \sum_{i=1}^{c} p_i \bar{x}_i^2 - \bar{x}^2 \qquad (8)$$

where $\bar{x}$ is the mean of the distribution;

c is the number of groups; i indicates a specific group, thus taking on values 1 through c,

p_i is the estimated proportion of families or persons whose values, for the characteristic (x-values) being considered fall in group i.

$\bar{x}_i = (Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively for group i.

$\bar{x}_i$ is assumed to be the most representative value for the characteristic for families or persons in group i. Group c is open-ended, i.e., no upper interval boundary exists. For this group an approximate average value is $\bar{x}_c = \frac{3}{2} Z_{c-1}$.

When two or more distributions are combined the mean of the combined distribution is:

$$\bar{x} = \frac{1}{y} \sum_j \bar{x}_j y_j$$

where $\bar{x}_j$ is the mean of the jth distribution, y_j is the base of the jth distribution, and $y = \sum_j y_j$.

Standard error of a median. The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for

measuring the reliability of a median is to determine an interval about the estimated median, such that there is a stated degree of confidence that the average median derived from all possible samples lies within the interval. The following procedure may be used to estimate the 68-percent confidence limits of a median based on sample data.

1. Determine, using the standard error tables and factors or formula (4), the standard error of the estimate of 50 percent from the distribution;
2. Add to and subtract from 50 percent the standard error determined in step (1);
3. Using the distribution of the characteristic, calculate the confidence interval corresponding to the two points established in step (2).

For calculation of the confidence interval use Pareto interpolation for any point in an income interval greater than $1,000 in width, and linear interpolation otherwise. For the purpose of calculating standard errors linear interpolation gives approximately the same result as Pareto interpolation.

A 95-percent confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step (1).

The formulae used to implement step (3) for Pareto or linear interpolation are:

$$\text{Pareto: } x_{pN} = A_1 \exp\left[\ln\left(\frac{pN}{N_1}\right)\ln\left(\frac{A_2}{A_1}\right)\Big/\ln\left(\frac{N_2}{N_1}\right)\right] \tag{9}$$

$$\text{Linear: } x_{pN} = \frac{N_1 - pN}{N_1 - N_2}(A_2 - A_1) + A_1 \tag{10}$$

where N = total number of families or persons in the distribution.

x_{pN} = estimated income for which the number pN, $(0 < p < 1)$ of the families or persons in the distribution have larger incomes. For the purposes of calculating the confidence interval, p takes on the two values in step (2). Note that the median can be approximated by using $p = .50$ in the formulae.

A_1 and A_2 = the estimated incomes which are the lower and upper bounds, respectively, on the interval in which x_{pN} falls.

N_1 and N_2 = The estimated number of families or persons with incomes greater than A_1 and A_2, respectively.

exp = refers to the exponential function.

ln = refers to the natural logarithm function.

It should be noted that a mathematically equivalent result is obtained by using common logarithms (base 10) and antilogs.

Illustration of the computation of a confidence interval for a median using Pareto interpolation. Table 20 shows the median income in 1977 for families whose head is age 45 to 54 was estimated to be $20,832. Table 20 also shows that the base for the distribution from which the median was determined is 10,888,000 families.

1. Using formula (4) the standard error of 50 percent on a base of 10,888,000 is about 0.5 percent.
2. To obtain a 95-percent confidence interval on an estimated median, add to and subtract from 50 percent twice the standard error found in step (1). This yields percent limits of 49.0 and 51.0.
3. From table 20, the income of 5,832,000 (53.6 percent) of these families was at least $20,000 and the income of 3,998,000 (36.7 percent) of these families was at least $25,000. Thus, the entire 95-percent confidence interval falls in the income interval of $20,000 to $25,000. Therefore, the median income and the upper and lower limits on the confidence interval are to be calculated using Pareto interpolation. Thus, using formula (9), the lower limit on the estimate is found to be about

$$\$20{,}000 \exp\left[\ln\left(\frac{.510 \times 10{,}888{,}000}{5{,}832{,}000}\right)\ln\left(\frac{\$25{,}000}{\$20{,}000}\right)\Big/\ln\left(\frac{3{,}998{,}000}{5{,}832{,}000}\right)\right] = \$20{,}588$$

Similarly, the upper limits may be found by Pareto interpolation to be about

$$\$20{,}000 \exp\left[\ln\left(\frac{.490 \times 10{,}888{,}000}{5{,}832{,}000}\right)\ln\left(\frac{\$25{,}000}{\$20{,}000}\right)\Big/\ln\left(\frac{3{,}998{,}000}{5{,}832{,}000}\right)\right] = \$21{,}081$$

Thus, the 95-percent confidence interval on the estimated median is from $20,588 to $21,081.

Illustration of the computation of a confidence interval for a median using linear interpolation. Table 20 shows that the median income in 1977 of families whose head is age 18 to 24 is estimated to be $10,458. Table 20 also shows that the base of the distribution from which this median was determined is 3,812,000.

1. Using formula (4), the standard error of 50 percent on a base of 3,812,000 is about 0.8 percent.
2. To obtain a 95-percent confidence interval on the estimated median, add to and subtract from 50 percent twice the standard error found in step 1. This yields percent limits of 48.4 and 51.6.
3. From table 20, the income of 2,002,000 (or 52.5 percent) of these families is at least $10,000 and the income of 1,791,000 (or 47.0 percent) of these families is at least $11,000. Thus, the entire 95-percent confidence interval falls in the income

Table A-9. Factors to be Applied to Generalized Standard Errors in Tables A-5 Through A-8

Type of characteristics	Factor (f)	Type of characteristics	Factor (f)
Number of families and unrelated individuals in the United States:		Number of farm or nonmetropolitan farm families, unrelated individuals, and persons in the United States	1.4
Total or White	1.0		
Black and/or other races	0.9		
Spanish origin	1.2		
Number of persons in the United States:		Number of metropolitan and nonmetropolitan families, unrelated individuals, and persons in the United States	1.4
Total or White	1.0		
Black and/or other races	1.0		
Spanish origin	1.2		
Number of families, unrelated individuals, and persons by region and division[1]:		Number of families, unrelated individuals, and persons by the 10 Federal regions[1]:	
North and West	1.1		
Northeast	1.1		
New England	1.5	I (Boston)	1.5
Middle Atlantic	1.6	II (New York)	1.6
North Central	1.2	III (Philadelphia)	1.9
East North Central	1.6	IV (Atlanta)	1.9
West North Central	2.1	V (Chicago)	1.7
South	1.2	VI (Dallas-Fort Worth)	2.1
South Atlantic	1.6	VII (Kansas City)	2.2
East South Central	1.8	VIII (Denver)	3.2
West South Central	1.9	IX (San Francisco)	1.9
West	1.1	X (Seattle)	2.6
Mountain	2.8		
Pacific	1.9		

[1]These factors are provided for use in calculating standard errors of percentages only. For standard errors of estimated numbers, the parameters in table A-10 and formula (2) must be used.

Note: Standard errors for families, unrelated individuals, and persons by region and residence do not vary by race or Spanish origin; therefore, for "Black and other races" or "Spanish origin" data by region or residence, use the appropriate region or residence factors above.

Table A-10. "a" and "b" Parameters for Estimated Numbers and Percentages of Persons, Families, and Unrelated Individuals: 1966 to 1977

Characteristics	Parameters		Characteristics	Parameters	
	a	b		a	b
FAMILIES AND UNRELATED INDIVIDUALS			PERSONS		
Number of families in the United States:			Numbers of persons in the United States:

Numbers of families or unrelated individuals by the 10 Federal regions:			Numbers of persons by the 10 Federal regions:		
I (Boston)	0.005900	2,456	I (Boston)	0.008640	3,542
II (New York)	0.002533	2,701	II (New York)	0.003654	3,897
III (Philadelphia)	0.003046	3,864	III (Phildelphia)	0.004393	5,574
IV (Atlanta)	0.001163	3,696	IV (Atlanta)	0.001678	5,331
V (Chicago)	0.001651	3,139	V (Chicago)	0.002382	4,527
VI (Dallas-Fort Worth)	0.002481	4,788	VI (Dallas-Fort Worth)	0.003578	6,906
VII (Kansas City)	0.007714	5,132	VII (Kansas City)	0.011127	7,402
VIII (Denver)	0.033380	11,179	VIII (Denver)	0.048146	16,124
IX (San Francisco)	0.003410	3,710	IX (San Francisco)	0.004919	5,352
X (Seattle)	0.022743	7,224	X (Seattle)	0.032804	10,421
Numbers of farm or nonmetropolitan farm families and unrelated individuals in the United States	0.000143	2,285	Numbers of farm or nonmetropolitan farm persons in the United States	0.000206	2,929

Note: For years prior to 1966, a standard error estimate computed with these parameters must be adjusted. For 1947 to 1954, multiply the standard error by 1.8: for 1955 to 1964, multiply by 1.4; and for 1965 multiply by 1.2.

interval $10,000 to $11,000. Therefore, the median income and the upper and lower limits on the confidence intervals are to be calculated using linear interpolation. Using formula (10), the lower limit on the estimate is found to be about

$$\frac{2{,}002{,}000-(.516)\ (3{,}812{,}000)}{2{,}002{,}000-1{,}791{,}000}\ (\$11{,}000-\$10{,}000)$$

$$+\ \$10{,}000 = \$10{,}166$$

Similarly, the upper limit is found by linear interpolation to be about

$$\frac{2{,}002{,}000-(.484)\ (3{,}812{,}000)}{2{,}002{,}000-1{,}791{,}000}\ (\$11{,}000-\$10{,}000)$$

$$+\ \$10{,}000 = \$10{,}744$$

Thus, the 95-percent confidence interval on the estimated median is from $10,166 to $10,744.
