

# CURRENT POPULATION REPORTS

## CONSUMER INCOME

December 1958

Washington 25, D. C.

Series P-60, No. 30

### INCOME OF FAMILIES AND PERSONS IN THE UNITED STATES: 1957

(Advance data on family income in 1957 were issued in June 1958 in Current Population Reports, Series P-60, No. 29. Preliminary data on the 1957 income of persons appear in Series P-60, No. 28, issued in May 1958)

Average (median) family income in the United States was estimated at \$5,000 in 1957, or about 4 percent higher than in 1956, according to estimates released today by the Bureau of the Census, Department of Commerce. However, this \$200 gain in money income between 1956 and 1957 probably represented no significant change in purchasing power for the average family, since prices also rose substantially during this period.<sup>1</sup>

The average income of nonfarm families rose by about 3 percent over the year, largely because of further increases in wage rates in most industries. In the case of the farm population, other evidence indicates that a rise in income over the year was due partly to increased earnings from nonfarm work. A growing number of farm families derive at least part of their income from employment off the farm.

Of the Nation's 44 million families, about 4 million, or one-tenth, received incomes of \$10,000 or more and an additional 18 million, or two-fifths, had incomes ranging between \$5,000 and \$10,000. At the other end of the income scale, 6½ million, or 15 percent,

had incomes under \$2,000. The remaining 15½ million were in the \$2,000-to-\$5,000 bracket. The distribution of families (groups of two or more related persons) by their income in 1957 is shown in table A.

Sharp rises were recorded by year-round workers. Men who worked a full year had an average income of \$4,700--a gain of about \$260, or 6 percent, over the previous year. Women who worked around the year had an average income of \$3,000--a gain of about \$175, or 6 percent, over the year before.

Table A.--NUMBER OF FAMILIES BY FAMILY INCOME, FOR THE UNITED STATES: 1957

Family income	Number of families
Total.....	43,714,000
Under \$1,000.....	2,823,000
\$1,000 to \$1,999.....	3,712,000
\$2,000 to \$2,999.....	4,206,000
\$3,000 to \$3,999.....	5,160,000
\$4,000 to \$4,999.....	6,158,000
\$5,000 to \$5,999.....	6,352,000
\$6,000 to \$6,999.....	4,509,000
\$7,000 to \$9,999.....	7,126,000
\$10,000 to \$14,999.....	2,856,000
\$15,000 and over.....	812,000

<sup>1</sup> The Consumer Price Index of the Department of Labor averaged 116.2 in 1956 and 120.2 in 1957.

One-fourth of the men and two-fifths of the women with income in 1957 worked less than 50 weeks during the year. Unemployment was the most important reason for part-year work among men, accounting for two-fifths of those who worked less than a full year. Only one-seventh of the women who worked less than year-round did so because of unemployment, however.

These are some of the highlights of the results of the annual inquiry on consumer income made in connection with the Bureau's Current Population Survey in March 1958. The survey covered the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in continental United States.

This report covers money income only, prior to deductions for taxes. The facts that many farm workers do not pay rent for their living quarters and that many receive an important part of their income in the form of goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and non-farm residents.

The median income is the amount which divides the distribution into two equal groups, one having incomes above the median and the other having incomes below the median. In comparing median income data for 1957 with those for previous years, account should be taken of the fact that changes in income were accompanied by changes in prices. Therefore, an increase or decrease in income between selected years does not necessarily represent a similar change in economic well-being.

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases as well as small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.

#### UPWARD TREND IN FAMILY INCOME CONTINUES IN 1957

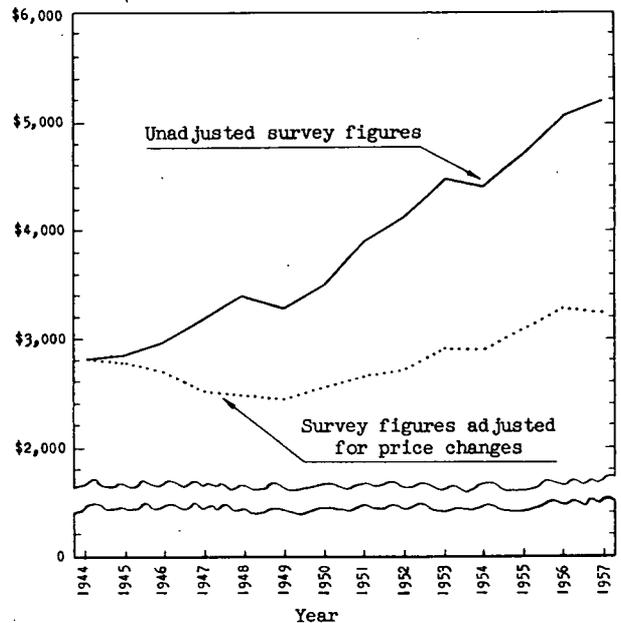

Average family income continued upward in 1957 though the increase was smaller than in the previous year. The median income for

all families was estimated at \$5,000<sup>2</sup> in 1957, about \$200, or 4 percent, above the 1956 average. Between 1955 and 1956, average family income had risen by about \$360, or 8 percent. This was one of the largest annual increases recorded since the end of World War II.

The median income of nonfarm families was \$5,200 in 1957. This median, which has been rising fairly steadily since the end of World War II, was \$170 higher than a year earlier and \$2,000 higher than in 1947. In contrast, the median money income of rural-farm families--at \$2,500--was only \$500, or 25 percent, higher than in 1947.

Although the monetary incomes of nonfarm families increased in 1957, their purchasing power probably did not change since prices also rose substantially over the year. Nevertheless, 1957 was the third successive year in the postwar period in which the average purchasing power of nonfarm families appears to have exceeded significantly the World War II level (figure 1). The price-adjusted data

Figure 1.--MEDIAN INCOME OF NONFARM FAMILIES,  
FOR THE UNITED STATES: 1944 TO 1957

<sup>2</sup> Medians cited in the text are taken from the detailed tables and rounded to hundreds of dollars.

shown in this figure were derived by dividing the median money income for each year by the Consumer Price Index compiled by the Bureau of Labor Statistics. The results of this fairly rough adjustment cannot be regarded as more than approximations.

#### PERSONAL INCOMES AT A PEAK IN 1957 DESPITE BUSINESS DOWNTURN

In 1957, the average income of men was at a peak of \$3,700, despite the business downturn in the second half of 1957. This was due largely to the continued rise in wage rates in most industries. The 1957 average was more

than double the level attained by men at the close of World War II (\$1,800 in 1945). The proportion of men whose incomes were \$6,000 and over rose from only 2 percent in 1945 to 18 percent in 1957.

Among women with income, the average (median) income was \$1,200 in 1957. Since 1945, the average income of women has increased by \$300, a gain of about 33 percent over the 12-year period. Although wage rates have increased sharply for women, their effect on average income has been somewhat offset by an increase in the proportion of women who work intermittently and whose annual earnings therefore tend to be low.

Figure 2.--MEDIAN INCOME OF MEN AND WOMEN, FOR THE UNITED STATES: 1945 TO 1957

#### SHARP INCREASES RECORDED BY YEAR-ROUND FULL-TIME WORKERS

Comparatively sharp gains were registered by year-round workers. Men who worked at full-time jobs for 50 weeks or more had an average income of \$4,700, a gain of about \$260, or 6 percent, over the previous year. In contrast, men with less than a full year's employment had an average income of \$2,000 in both years. Among women, year-round full-time workers had a median income of \$3,000 in 1957,

a gain of about \$175, or 6 percent, over the previous year, whereas the average income of other women workers was about the same (\$900) in each year. As might be expected, the monetary income of persons who did not work at all but depended entirely upon pensions, dividends, public assistance, or other such sources was not affected by increased unemployment and outbacks in the workweek in most industries. In both years, the median income of nonworkers with income was about \$1,000 for men and about \$600 for women.

## INCOMES DIFFER BY EXTENT OF EMPLOYMENT

About four-fifths of the 53 million men with income in 1957 were employed at full-time jobs, that is, jobs generally providing at least 35 hours of work per week. The median income of these men was \$4,300, as compared with \$800 for men who worked only at part-time jobs, and \$1,000 for those who were income recipients but did not work at all during the year because they were retired or disabled or for other reasons (table B). Three-fourths of the men who were employed at full-time jobs worked 50 weeks or more during the year. As might be expected, these men had higher incomes, on the average, than did other full-time workers, among whom the median ranged from \$600 for those who worked less than 3 months during the year to \$4,100 for those who were employed for 11 months.

A somewhat similar pattern of income by extent of employment occurs among women. About one-half of the 33 million women with income worked at full-time jobs. Their average income was \$2,200, in contrast to the \$500 received by women who worked at part-time jobs and \$600 for those who were income recipients but did not work at all. Most of the women who worked at full-time jobs were employed 50 weeks or more during the year. The median income of these women (\$3,000) was higher than that of other women who worked at full-time jobs, with medians that ranged from \$400 for those who worked less than 3 months during the year to \$2,300 for those who worked 11 months.

Table B.--MEDIAN INCOME OF MEN AND WOMEN, BY EXTENT OF EMPLOYMENT IN 1957, FOR THE UNITED STATES

Extent of employment	Percent distribution		Median income	
	Men	Women	Men	Women
Total with income.....	100	100	\$3,684	\$1,199
Worked at full-time jobs..	81	55	4,319	2,233

<sup>1</sup> Includes members of the Armed Forces living off post or with families on post, not shown separately.

## UNEMPLOYMENT MAJOR REASON FOR PART-YEAR WORK IN 1957 FOR MEN OF WORKING AGE

One-fourth of the men and two-fifths of the women with income in 1957 worked less than 50 weeks during the year. Unemployment was the most important reason for part-year work among men, accounting for two-fifths of those who worked less than a full year (table C). The employment of another two-fifths of these men was limited by their attendance at school or by illness or disability. As might be expected among women, taking care of home and family was their principal reason for working less than 50 weeks, accounting for one-half of the part-year workers. Unemployment, school attendance, and illness or disability did not permit full-year employment for another two-fifths of the women.

Table C.--MEDIAN INCOME OF PART-YEAR WORKERS BY MAJOR REASON FOR WORKING LESS THAN 50 WEEKS IN 1957, BY SEX, FOR THE UNITED STATES

Major reason for part-year work	Percent distribution		Median income	
	Men	Women	Men	Women
Total.....	100	100	\$2,214	\$935
Unemployment.....	41	14	2,756	1,497
Illness or disability..	17	10	2,913	1,682

Going to school.....	19	15	644	613
Other reasons.....	14	3	1,881	1,557

<sup>1</sup> Not available separately but included in "Other reasons" for men.

Incomes of part-year workers varied a good deal depending on their reasons for not working a full year. These differences, however, mainly reflected variations in the average amount of working time lost during the year because of different factors. The highest incomes among part-year workers were received by those who were apparently willing to take "time off" from their jobs without pay (on the average \$4,100 for men and \$2,400 for women). The great bulk of these persons worked most of the year at full-time jobs. Two-thirds of the men and one-half of the women worked at full-time jobs for more than 9 months during the year (table D). In contrast, the lowest incomes were received by young men and women whose work activity was restricted by school attendance (on the average, \$600). In part at least, their low earnings stem from the fact

that one-half of these were part-time workers and another two-fifths worked full time for less than 6 months during the year.

The median income of those whose continuity of work was interrupted by unemployment was \$2,800 for men and \$1,500 for women.

Similar incomes, on the average, were received by those whose work activities were affected largely by illnesses or disabilities (\$2,900 for men and \$1,700 for women). One-half of the men and two-fifths of the women affected by unemployment or ill health worked full time for more than 9 months during the year.

Table D.--PART-YEAR WORKERS IN 1957 BY WEEKS WORKED, BY MAJOR REASON FOR WORKING LESS THAN 50 WEEKS AND SEX, FOR THE UNITED STATES

Major reason for part-year work and sex	Total	Worked at full-time jobs				Worked at part-time jobs
		Total	40 to 49 weeks	27 to 39 weeks	26 weeks or less	
<b>MEN</b>						
Total.....	100	77	36	18	23	24
Unemployment.....	100	87	45	24	19	13
Illness or disability.....	100	82	53	15	14	19
Unpaid absence.....	100	88	65	16	7	12
Going to school.....	100	49	3	7	40	51
Other reasons.....	100	68	16	18	34	32
<b>WOMEN</b>						
Total.....	100	64	18	15	31	36
Unemployment.....	100	81	36	21	24	19
Illness or disability.....	100	74	43	18	13	26
Unpaid absence.....	100	74	52	22	1	26
Taking care of home.....	100	60	7	14	39	40
Going to school.....	100	50	3	10	37	50
Other reasons.....	100	73	32	23	18	27

As might be expected, the men's reasons for part-year work differed considerably by age. Three-fifths of the young men (14 to 24 years old) did not work a full year because they were going to school (table E). Three-fifths of those between 25 and 44 years old

and one-half of those in the 45-to-64-year bracket were part-year workers because of unemployment. About three-fourths of the older men (65 and over) worked less than 50 weeks during 1957 because of illness, disability, or retirement.

Table E.--PART-YEAR WORKERS IN 1957 BY MAJOR REASON FOR WORKING LESS THAN 50 WEEKS, BY AGE AND SEX, FOR THE UNITED STATES

Major reason for part-year work	Men					Women				
	Total	Age (years)				Total	Age (years)			
		14 to 24	25 to 44	45 to 64	65 and over		14 to 24	25 to 44	45 to 64	65 and over
Total.....	100	100	100	100	100	100	100	100	100

Other reasons.....	14	12	9	11	50	3	3	2	3	5

<sup>1</sup> Not available separately but included in "Other reasons" for men.

Among part-year workers on full-time jobs, income varied by age, reaching a peak median of \$3,600 for men in the 25-to-44 group and declining to \$2,400 for those 65 years old and over (table F). In contrast, there was much less variation in the incomes received by part-time workers. The median income of such men ranged between \$1,000 and \$1,300 for men in all age groups except the youngest (14 to 24).

Among women, reasons for part-year work varied little by age. In every age group but the youngest, taking care of home or family was the prime reason for working less than a full year. As among men, median income increased with age reaching a peak of \$1,700 for full-time workers in the 45-to-64-year age group. Among part-time workers, the median ranged between \$500 and \$800.

Table F.--MEDIAN INCOME OF PART-YEAR WORKERS IN 1957, BY AGE AND SEX, FOR THE UNITED STATES

Age	Men			Women		
	Total	Full-time workers	Part-time workers	Total	Full-time workers	Part-time workers
Total, 14 years and over.....	\$2,214	\$2,844	\$740	\$935	\$1,321	\$654
14 to 24 years.....	787	1,169	565	740	931	541
25 to 44 years.....	3,418	3,581	1,265	1,015	1,393	688
45 to 64 years.....	2,957	3,291	1,034	1,239	1,705	736
65 years and over.....	1,815	2,405	1,276	994	( <sup>1</sup> )	836

<sup>1</sup> Median not shown where there were fewer than 100 cases in the sample reporting with income.

#### VETERANS' RISING INCOMES OUTSTRIP THOSE OF NONVETERANS

During the past decade, the income of World War II veterans has increased more rapidly than that of nonveterans. In 1947, shortly after the end of World War II, the median income of veterans in the 25-to-34-year age bracket (which included a majority of the veterans) was slightly lower than that of nonveterans in the same age group. Between 1947 and 1957, the average income of these veterans (now 35 to 44 years of age) more than doubled (from \$2,400 to \$5,000) and that of the nonveterans rose by about 65 percent (from \$2,600 to \$4,300). Thus, in 1957, the average income of these veterans was about 15 percent higher than that of the nonveterans.

The more rapidly rising incomes of the veterans may reflect their higher level of education as well as other factors such as veterans' preference laws and perhaps differences in health and other characteristics.

Table G.--MEDIAN INCOME OF MEN 35 TO 44 YEARS OF AGE IN MARCH 1958 BY WORLD WAR II VETERAN STATUS, FOR THE UNITED STATES: 1957 AND 1947

Veteran status	1957 <sup>1</sup>	1947 <sup>2</sup>	Percent change
Veteran of World War II.....	\$4,985	\$2,401	+108
Not a veteran of World War II..	4,279	2,585	+66

<sup>1</sup> 35 to 44 years old.

<sup>2</sup> 25 to 34 years old.

#### OTHER INCOME PUBLICATIONS

Current Population Survey.--Other data based on the Current Population Survey showing the distributions of families, unrelated individuals, and persons, by income levels, have been published in the Series P-60 reports, Nos. 1 to 29. In addition, income data for 1944 and 1945 appear in the report, "Family and Individual Money Income in the United States: 1945 and 1944," Series P-S, No. 22. Occasionally, tables have been published in reports of the P-20 or P-50 series showing the cross-classification of income and other characteristics.

1950 Census.--Distributions of persons 14 years of age and over by total money income in 1949 appear in the publication, U. S. Bureau of the Census, 1950 Census of Population, Volume II, Chapter C. Similar data for families and unrelated individuals appear in Volume II, Chapter B. Data for the United States and regions appear in Volume II, Part 1, United States Summary, while separate data for individual States are presented in the other parts. Various special reports contain additional income data; however, there is no special report dealing exclusively with income data. A preliminary report, "Estimated Distribution of Family Income in 1949 for the United States, Regions, and Selected States," Series PC-7, No. 5, presents the distribution of aggregate income among families and unrelated individuals.

In addition, a monograph, Income of the American People, sponsored jointly by the Bureau of the Census and the Social Science Research Council, was published in 1955.

1940 Census.--Data relating to wage and salary income in 1939 have been presented in several different reports of the Sixteenth Decennial Census. A complete list of these reports is shown in earlier Current Population Survey reports on consumer income.

#### DEFINITIONS AND EXPLANATIONS

Urban and rural residence.--The definition of urban and rural areas used in the March 1958 survey was the same as that used in the annual income surveys since April 1951 and in the 1950 Census. This definition differs slightly from that used in the March 1950 Current Population Survey, but it is markedly different from that used in earlier surveys and censuses. The territory classified as urban is the same as that in the 1950 Census. According to the new definition, the urban population comprises all persons living in (a) places of 2,500 inhabitants or more incorporated as cities, boroughs, and villages; (b) incorporated towns of 2,500 inhabitants or more except in New England, New York, and Wisconsin, where "towns" are minor civil divisions of counties; (c) the densely settled urban fringe, including both incorporated and unincorporated areas, around cities of 50,000 or more; and (d) unincorporated places of 2,500 inhabitants or more outside of any urban fringe. The remaining population is classified as rural.

According to the definition used prior to March 1950, the urban population comprised all persons living in incorporated places of 2,500 inhabitants or more and in areas (usually minor civil divisions) classified as urban under special rules relating to population size and density.

Size of place.--The urban population is classified as living in urbanized areas or in urban places outside urbanized areas. According to the definition used in the 1950 Census and in the Current Population Survey since April 1951, the population in urbanized areas comprises all persons living in (a) cities of 50,000 inhabitants or more in 1940 or according to a special census taken between 1940 and 1950; and (b) the densely settled urban fringe, including both incorporated and unincorporated areas, surrounding these cities. Residents of

urbanized areas were classified according to the size of the entire area rather than by the size of the place in which they lived. The remaining urban population is classified as living in the smaller urban places not in the urbanized areas.

Farm and nonfarm residence.--The rural population is subdivided into the rural-farm population, which comprises all rural residents living on farms, and the rural-nonfarm population, which comprises the remaining rural population. The method of determining farm and nonfarm residence in the March 1958 survey is the same as that used in the 1950 Census and in the Current Population Survey since March 1950, but differs from that used in earlier surveys and censuses. Persons on "farms" who were paying cash rent for their house and yard only were classified as nonfarm; furthermore, persons in institutions, summer camps, motels, and tourist camps were classified as nonfarm.

Dwelling unit and household.--A dwelling unit is defined, in general, as a house, apartment, or other group of rooms, or a single room, occupied or intended for occupancy as separate living quarters by a family or other group of persons living together or a person living alone. A household consists of the entire group of persons who occupy a dwelling unit. Persons occupying living quarters which are not dwelling units, such as large rooming houses, dormitories, and YMCA buildings, are not regarded as households.

Family.--The term "family," as used in this report, refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son of the head of the household and the son's wife are in the household, they are treated as part of the head's family. On the other hand, a lodger and his wife not related to the head of the household or an unrelated servant and his wife are considered as additional families, and not as part of the household head's family.

Unrelated individual.--The term "unrelated individuals," as used in this report, refers to persons (other than inmates of institutions) who are not living with any relatives. An unrelated individual may constitute a one-person household by himself, or he may be part of a household including one or more other families or unrelated individuals, or

he may reside in a quasi household such as a hotel. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the head of the household or anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Primary families and individuals.--The term "primary family" refers to the head of a household and all other persons in the household related to the head by blood, marriage, or adoption. If nobody in the household is related to the head, then the head himself constitutes a "primary individual." A household can contain one and only one primary family or primary individual. The number of "primary" families and individuals is identical with the number of households. The expression "primary families and individuals" is used in this report with the same meaning as the term "families" in the 1940 Census. It excludes lodgers, servants, and persons occupying living quarters which are not dwelling units. However, such families and individuals are included in all tables not specifically restricted to "primary" families and individuals.

Income.--For each person in the sample 14 years of age and over, questions were asked on the amount of money income received in 1957 from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security, veterans' payments, or other government or private pensions; (5) interest (on bonds or savings), dividends, and income from annuities, estates, or trusts; (6) net income from boarders or lodgers, or from renting property to others; (7) all other sources such as unemployment benefits, public assistance, alimony, etc.

The amounts received represent income before deductions for personal taxes, Social Security, bonds, etc. If any amount was \$10,000 or more, it was recorded as a specific amount wherever possible. Where the specific amount was not known, the information was recorded as "\$10,000 to \$14,999," "\$15,000 to \$24,999," or as "\$25,000 or more" depending upon the respondent's best estimate. It should be noted that although income refers to receipts during 1957, the characteristics of the person, such as age, labor force status, etc., refer to March 1958.

Money wages or salary.--This is defined as the total money earnings received for work performed as an employee during the calendar year 1957. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment.--This is defined as net money income (gross receipts minus expenses) from a business or professional enterprise in which a person was engaged on his own account. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were not considered in determining net income; however, replies based on income tax returns or other official records do reflect inventory changes. The value of salable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment.--This is defined as net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include costs of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not poll taxes or personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were not considered in determining net income; however, replies based on income tax returns, or other official records, do reflect inventory changes.

Social Security, veterans' payments, or other government or private pensions.--This category includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Bureau of Old-Age and Survivors Insurance (BOASI), military pensions paid to retired members of the Arme

Forces and Civil Service pensions including retirement pensions paid by Federal, State, or local governments to former employees, and other private pensions or retirement benefits paid by a former employer or by a union, either directly or through an insurance company.

Interest (on bonds or savings), dividends, and income from annuities, estates, or trusts.--This category includes interest on bonds or savings, dividends from stockholdings or membership in associations and cooperatives, and periodic receipts from annuities, estates, trust funds, or insurance.

Net income from boarders or lodgers or from renting property to others.--This is defined as net income from rental of a house, store, or other property to others, royalties, and receipts from boarders or lodgers.

All other sources--unemployment or sickness benefits, public assistance, alimony, etc.--The following types of income are included in this group: (1) Receipts of unemployed persons from government agencies, unions, or other organizations and periodic workmen's compensation payments received by persons injured on the job; (2) public assistance payments, such as old-age assistance, welfare payments, aid to dependent children and aid to the blind; (3) alimony, military dependency allotments, and other periodic contributions for support from persons not residing in the same household; and (4) other kinds of periodic income other than earnings.

Receipts not counted as income.--Receipts from the following sources were not included as income: (1) Money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

Income other than earnings.--This is defined as the algebraic sum of all sources of money income except wages and salaries and income from self-employment. The various types of income other than earnings are not shown separately in any of the tables in this report. Separate data are shown for the total amount of income other than earnings in tables 14 and 27.

Total money income.--This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

Color.--Families are classified as white or nonwhite in accordance with the color of the head.

Head of family.--One person in each family was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey. Married couples related to the head of a family are included in the head's family and are not classified as separate families.

Size of family.--The term "size of family" refers to the number of persons who are living together and who are related to each other by blood, marriage, or adoption.

Age.--The age classification is based on the age of the person at his last birthday.

Number of children under 18 years of age.--This number includes all persons in the family under 18 years old related to the head of the family by blood, marriage, or adoption.

Number of earners.--This number includes all persons in the family with \$1 or more in wages and salaries, or \$1 or more or a loss in net income from farm or nonfarm self-employment.

Veteran of World War II.--A veteran of World War II is defined as a person who had been a member of the Armed Forces of the United States on active duty at any time between September 16, 1940, and July 25, 1947. This report shows separate data for male, but not female, veterans of World War II. Veterans of World War I or other wars, or those with peacetime service, are shown as nonveterans unless they are also veterans of World War II.

Employed.--Employed persons comprise those who, during the survey week, were either (1) "at work"--those who did any work for pay or profit, or worked without pay for 15 hours or more on a family farm or business; or (2) "with a job but not at work"--those who did

not work and were not looking for work but had a job or business from which they were temporarily absent because of vacation, illness, industrial dispute, or bad weather, or because they were taking the week off for various other reasons.

Unemployed.--Unemployed persons include those who did not work at all during the survey week and were looking for work. Also included as unemployed are those who did not work at all during the survey week and (1) were waiting to be called back to a job from which they had been laid off; or (2) were waiting to report to a new wage or salary job scheduled to start within the following 30 days (and were not in school during the survey week); or (3) would have been looking for work except that they were temporarily ill or believed no work was available in their line of work or in the community. Prior to 1957, those whose layoffs were for definite periods of less than 30 days were classified as employed (with a job but not at work) rather than as unemployed, as were all of the persons waiting to start new jobs within 30 days.

Labor force.--Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "experienced civilian labor force" comprises employed workers and experienced unemployed workers. The 1939 data shown in the tables on the experienced civilian labor force include the relatively small number of persons in the Armed Forces in 1940.

Not in labor force.--All civilians 14 years of age and over who are not classified as employed or unemployed are defined as "not in labor force." These persons include those "engaged in own home housework," "in school," "unable to work" because of long-term physical or mental illness, and "other," the latter group including for the most part retired persons, those too old to work, seasonal workers for whom the survey week fell in an "off" season, and the voluntarily idle. Persons doing only incidental unpaid family work (less than 15 hours) are also classified as not in the labor force. In March 1958, persons attending school during the survey week who had new jobs to which they were scheduled to report within 30 days were also included among those not in the labor force. In tables 8, 9, 20, and 21, persons in the Armed Forces are included with those not in the labor force.

Occupation, industry, and class of worker.--The data on occupation, industry, and class of worker of employed persons refer to the job held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week. Persons who were unemployed during the survey week are classified according to their last civilian job. The occupation and industry groupings used here are largely the same as the major groups in the classification systems used in the 1950 Census of Population. The composition of each major group in terms of detailed occupations and industries is shown in Volume II of the reports of the 1950 Census of Population.

In tables 8 and 20, two of the major occupation groups are subdivided by class of worker into two groups: wage or salary workers and self-employed workers. The former refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece-rates for a private employer, or for any governmental unit. The latter refers to persons working in their own business, profession or trade, for profit or fees. Included in the self-employed groups in tables 8 and 20 are unpaid family workers, i.e., persons working without pay in a business operated by a member of the household to whom they are related by blood or marriage.

The occupational and industrial classification systems used in 1940 are basically the same as those used in 1958. There are a number of differences, however, in the specific content of particular groups, as well as several differences in title. The occupation and industry data shown here for 1940 have not been entirely adjusted for comparability with the 1958 classification system; however, available evidence indicates that the 1940-1958 relationships shown by the data are not significantly affected by these differences. The 1940 classification by class of worker is comparable with the 1958 classification.

Work experience in 1957.--A person with work experience in 1957 is one who did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in 1957.--Persons are classified according to the number of different weeks during 1957 in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs.--A person is classified as having worked at part-time jobs during 1957 if he worked at jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round full-time worker.--A year-round full-time worker is one who worked primarily at full-time jobs for 50 weeks or more during 1957.

Part-year worker.--A part-year worker is one who worked from 1 to 49 weeks in 1957 either at full-time or part-time jobs.

Major reason for part-year work.--Each part-year worker is classified according to the way in which he spent most of the weeks in which he did not work. A person with more than one reason is classified in the activity at which he spent the greatest number of weeks away from work. These activities are categorized as unemployment; illness or disability; unpaid absence from work; taking care of home or family; going to school; and other activities. The "school" question was restricted to persons under 30 years of age and the "taking care of home or family" question was restricted to women.

Median income.--The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for families and individuals are based on all families and individuals. The medians for persons are based on the distributions of persons with income. The medians for wage or salary income, income from nonfarm self-employment, income from farm self-employment, and income other than earnings are based on the distributions of persons or families and individuals having these types of income.

Percentages.--Percentages are shown as calculated; therefore, they do not always add up to exactly 100.0 percent. The totals, however, are always shown as 100.0 percent.

Base figures.--An estimate of the size of the base (number of families or individuals, or number of persons) of each percent distribution by income in 1957 is shown in most of the tables in this report.

## COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Office of Business Economics personal income series.--The income data presented in this report are not directly comparable with the estimates of personal income prepared by the Office of Business Economics of the Department of Commerce. The two sets of data were designed to accomplish different purposes and, accordingly, differ in several important respects which are discussed below.

The primary purpose of the census data is to show the distribution of persons by income levels. This report does not show estimates of the amount of aggregate income received by the population. The Office of Business Economics estimates, on the other hand, provide information on the amount of aggregate income received by the population. If an estimate of the amount of aggregate income were derived from the Bureau of the Census data, it would be smaller than that shown in the personal income series for the following reasons:

1. The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employers' wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The data presented in this report, on the other hand, are based on a field survey of households. As indicated below in the section on the source and reliability of the estimates, income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 86 percent of the comparable total income aggregates and about 94 percent of the comparable wage or salary aggregates prepared by the Office of Business Economics.

2. The definitions of income are slightly different. The personal income series includes, among others, the following items which are not included in the census definition: Income in kind and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. The census definition of income includes contributions for support received from persons who do not reside in the same living quarters which are not included in the personal income series.

3. The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the continental United States. In addition, the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of both of these groups is included in the personal income estimates.

Department of Agriculture farm income series.--The farm income data shown in this report are not directly comparable with estimates of the aggregate amount of income received by the farm population and estimates of the aggregate farm income of farm operators which are prepared by the Agricultural Marketing Service of the Department of Agriculture. Data from the two sources differ in several respects for the reasons cited below:

1. The census data show distributions of persons by farm self-employment income levels and distributions of persons by total money income levels, but do not show estimates of the amount of aggregate income. Agriculture estimates provide information on the amount of aggregate income received by the population but do not provide distributions by income level.

2. The agriculture estimates are based on data derived from farm, business, and governmental sources. As indicated previously, the data presented in this report are based on a field survey of households.

3. The definitions of income are different. The census definition includes, among others, the following items which are not included in the agriculture series: Contributions for support received from persons not residing in the same living quarters and government and business transfers of income.

4. The census data on the total money income of the rural-farm population differ from the agriculture estimates of "net income of the farm population" for reasons other than those cited previously, as follows:

a. The census data do not include under the rural-farm classification the incomes of urban residents who report that they live on a farm while the agriculture series includes the incomes of all persons living on farms, urban or rural.

b. Income in kind--the imputed value of farm products grown and consumed directly in farm households, and the imputed rental value of owner-occupied farm dwellings--is included in the agriculture series but excluded from the census definition of income.

5. The census data on the civilian noninstitutional population's net income from the operation of a farm differ from the agriculture estimates of farm operators' "net cash income from farming" for reasons other than those cited above, as follows:

a. The census estimates are based on the answers to a single direct question on how much net income was derived from operation of a farm during the preceding calendar year. The agriculture series on "net cash income from farming" includes the farm incomes of all persons operating farms, as defined in the Census of Agriculture according to the number of acres on the place and the value of products grown.

b. The agriculture series includes the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

c. The agriculture definition of farm expenses includes actual expenditures on the repair, construction, or purchase of buildings, machinery, and other capital equipment added on the place while the census definition includes only the money spent on repairs. On the other hand, depreciation charges are treated as farm expenses under the census definition but not in the agriculture series.

Federal Reserve Board Surveys of Consumer Finances.--In each year since 1945, the Federal Reserve Board has conducted a survey of consumer finances which provides, among other data, information on the size distribution of income. These surveys are based on nationwide samples that cover all persons in private households. Several important differences between the Federal Reserve Board Surveys of Consumer Finances and the present report may be noted:

1. The income-receiving unit in the Federal Reserve Board estimates is the spending unit or the family, whereas the data in the present report relate to persons 14 years old and over and to families.

2. The Federal Reserve Board estimates are based on a sample which is different from and smaller (approximately 3,000 spending units in 2,800 dwelling units in 66 areas) than the census sample. Differences between the results are subject to sampling variability arising from each survey. This factor alone could account for moderate discrepancies between the two sets of data.

3. There are some differences in the estimating procedure. The Bureau of the Census inflated its weighted sample results to agree with independent estimates of the civilian population of the United States by age, color, and sex, whereas the Survey of Consumer Finances weighted sample results were inflated to agree with independent estimates of occupied dwelling units.

4. Only a few income questions (usually between three and seven) are asked for each person in the Bureau of the Census sample whereas numerous detailed questions on income and other financial items are asked of the head of the spending unit and all other members in the spending unit in each household in the Federal Reserve Board sample.

Federal income tax data.--The Federal income tax coverage is incomplete because of the exemptions of persons receiving less than \$600; therefore, its coverage differs from the census coverage.

Since some of the income tax returns are filed as separate returns and others as joint returns, the income reporting unit is not consistently on the basis of either families or persons.

Income as defined for tax purposes differs from the census concept. For example, certain types of receipts such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. On the other hand, capital gains and losses which are excluded from the census definition of income are included in income tax returns.

Old-Age and Survivors Insurance earnings record data.--Census data shown in this report and the distributions made upon the basis of Old-Age and Survivors Insurance earnings record data differ for the reasons listed below:

1. The earnings of such groups as self-employed physicians, most government employees, some employees of nonprofit organizations, some farm operators, some domestic servants, and workers covered under the Railroad Retirement Act are not covered by the earnings record data.

2. Employees' earnings in excess of \$4,200 per employer are not covered by the earnings record data.

3. Income other than earnings is not covered by the earnings record data.

4. The earnings record data are based upon employers' Social Security tax reports

and the Federal income tax returns of self-employed persons, whereas the data presented in this report are obtained by household interviews.

#### SOURCE AND RELIABILITY OF THE ESTIMATES

Source of data.--The estimates presented in this report are based on data obtained in connection with the monthly population sample survey of the Bureau of the Census. The 1957 income statistics, collected in March 1958, are based on a sample design instituted in May 1956. This sample is spread over 330 areas comprising 638 counties and independent cities, with coverage in each of the 48 States and the District of Columbia.<sup>3</sup>

Data on income were collected from approximately 26,000 representative households, or about 75 percent of the households included in the March 1958 survey. Persons in the following categories were not included:

1. Members of the Armed Forces living in barracks, etc., on military reservations. (Members of the Armed Forces living off post or with their families on military reservations were included.)

2. Inmates of penal and mental institutions and homes for the aged, infirm, and needy.

On approximately 4 percent of the 26,000 schedules, no information was recorded because no interview could be obtained during the week in which the enumeration was conducted. In order to account for these schedules, the weights assigned to other schedules for households of similar characteristics residing in the same sample areas were increased accordingly. In addition, complete income information was not reported for about 11 percent of the households. Substitutions were not made for these schedules. Punch cards which were prepared from these schedules were included in the tabulations which provided the base numbers for families and persons 14 years of age and over shown in the published tables. The distributions by income levels for each group, however, are based only on those cases which reported complete income information. Complete income information was not reported for approximately 7 percent of the persons and 11 percent of the families and unrelated individuals.

<sup>3</sup> The previous sample design, in use from January 1954 through April 1956, was spread over 230 sample areas and, for prior periods, in only 68 areas.

The estimating procedure used in this survey involved the inflation of weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, color, and sex for March 1958, March 1957, March 1956, April 1955, and April 1954, and by age, sex, and veteran status (for men) for earlier years. The independent estimates for surveys taken since April 1953 were based on statistics from the 1950 Census of Population; statistics of births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces. To these totals were added the population in the Armed Forces living off post or with their families on post. For the years prior to April 1953, the independent estimates of the population were based on the 1940 Census data brought forward to the survey month to take account of births, deaths, net immigration, and aging of the population.

Cross-classification of income and work experience data.--This report presents data showing the median income of persons with varying amounts of work experience in 1957. Information about the work experience of persons in the United States was obtained in the February 1958 Current Population Survey. For approximately 75 percent of these households, information on income and other characteristics of household members was obtained in the regular March 1958 survey. The information obtained in February was matched with the data secured in March for the 26,000 households which were included in both surveys.

Estimates of the proportion of year-round full-time workers in specified subgroups in the population are shown in various tables in this report. These proportions differ slightly from those shown for the same subgroups in the report, "Work Experience in 1957," Current Population Reports, Series P-50, No. 84. For example, the latter report indicates that 55.1 percent of all workers worked at full-time jobs for 50 to 52 weeks. In comparison, table 16 of the present report shows that 48.5 percent of all income recipients were year-round full-time workers. This difference is due largely to the

fact that the proportions are not based on exactly the same groups. The proportions presented in the Series P-50, No. 84, report relate to persons who worked at some time during the year. In contrast, the proportions shown in the present report relate to all persons who received income in 1957, including not only workers but also many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings. A further source of difference between the proportions in the two reports lies in the fact that the data in the report on work experience are based on the full sample, whereas the data on work experience in the present report are based on three-quarters of the sample.

Reliability of the estimates.--Since the income distributions shown in this report are based on estimates from a sample survey, they are subject to sampling variability. The standard error is a measure of sampling variability. The chances are about 2 out of 3 that the difference due to sampling variability between an estimate and the figure that would have been obtained from a complete count of the population is less than the standard error. The amount by which the standard error must be multiplied to obtain other odds deemed more appropriate can be found in most statistical textbooks. For example, the chances are about 19 out of 20 that the difference is less than twice the standard error and 99 out of 100 that it is less than 2½ times the standard error. For the statements in the text of this report, the criterion of twice the standard error (odds of 19 in 20 or better) has generally been used in determining that differences between sample estimates are not likely to have occurred by chance.

The reliability of an estimated percentage depends upon both the size of the percentage and the size of the total on which it is based. Table H presents approximate standard errors of estimated percentages for odds of 2 out of 3.

Estimated percentages based upon urban and rural residence and nonwhite distributions are subject to somewhat greater sampling variability than that shown in table H.

Table H.--STANDARD ERROR OF ESTIMATED PERCENTAGE

(Range of 2 chances out of 3)

Estimated percentage	Base of percentage						
	500,000	1,000,000	2,000,000	5,000,000	10,000,000	25,000,000	50,000,000
2 or 98.....	1.3	0.9	0.6	0.4	0.3	0.2	0.1
5 or 95.....	2.0	1.4	1.0	0.6	0.4	0.3	0.2
10 or 90.....	2.8	2.0	1.4	0.9	0.6	0.4	0.3
25 or 75.....	4.0	2.8	2.0	1.3	0.9	0.6	0.4
50.....	4.6	3.3	2.3	1.5	1.0	0.7	0.5

The reliability of an estimated median depends upon both the form and the size of the distribution on which it is based. The range within which the

true median is expected to fall is shown in table J for selected medians, separately for 2 chances out of 3 and for 19 chances out of 20.
