BUREAU OF THE CENSUS

Acknowledgments

Carmen DeNavas, prepared this report under the direction of **Edward J. Welniak, Jr.,** Chief, Income Statistics Branch, Housing and Household Economic Statistics Division. **John F. Coder** and **Lydia Scoon-Rogers** contributed to the preparation of this report. **Helen M. Ogle, Rose Mary Schade,** and **Shirley L. Smith** provided statistical assistance. **Susan S. Donohue** provided word processing assistance. **Charles T. Nelson,** Assistant Division Chief for Economic Characteristics, Housing and Household Economic Statistics Division, provided overall direction of this report.

Diana J. Lewis and **Angela M. Feldman-Harkins,** Housing and Household Economic Statistics Division, and **Susan S. Gajewski,** Demographic Surveys Division, programmed the detailed tables. Sampling review was conducted by **Anne C. Peterson,** of the Demographic Statistical Methods Division.

Paula J. Schneider, Chief, Field Division provided overall direction of field operations. Data collection was conducted by the Bureau of the Census field representatives and telephone interviewers. Without their hard work and dedication, the preparation of this report or any report from the Current Population Survey would be impossible.

The staff of Administrative and Publications Services Division, **Walter C. Odom,** Chief, provided publication planning, editorial review, design, composition, and printing planning and procurement. **Gail Farren** provided publication coordination and editing.

U.S. Bureau of the Census User Questionnaire

Dear user:
In an effort to improve the quality of this report, the following questionnaire has been included for your comments so we may direct our efforts to providing the information most needed by you, the user. Please take a few moments to fill out this questionnaire. To mail the questionnaire, fold A to A and fold B to B, then tape and drop it in the mail, postage paid. Your comments can be faxed to us on (301)763-8531. Thank you for your suggestions and cooperation.

2. Are you a frequent user of reports issued in this series?

☐ First time user ☐ Infrequent ☐ Frequent/routine user

3. Are you a user of similar data from:
Mark (X) all that apply.

☐ Other Census Bureau reports
☐ Reports issued by other government agencies – *Please specify organization and report title*
☐ Reports issued by private, nongovernmental organizations
Please specify organization and report title

Please cut along this line.

4. *The following asks two questions about specific sections of the report.*

Was the section useful to you? *(Did it contain information you were looking for?)*

Was the section easy to understand and use?

Please answer each question using the scale provided. Four (4) indicates useful or easy to understand; one (1) indicates not useful or hard to understand.

ERRATA

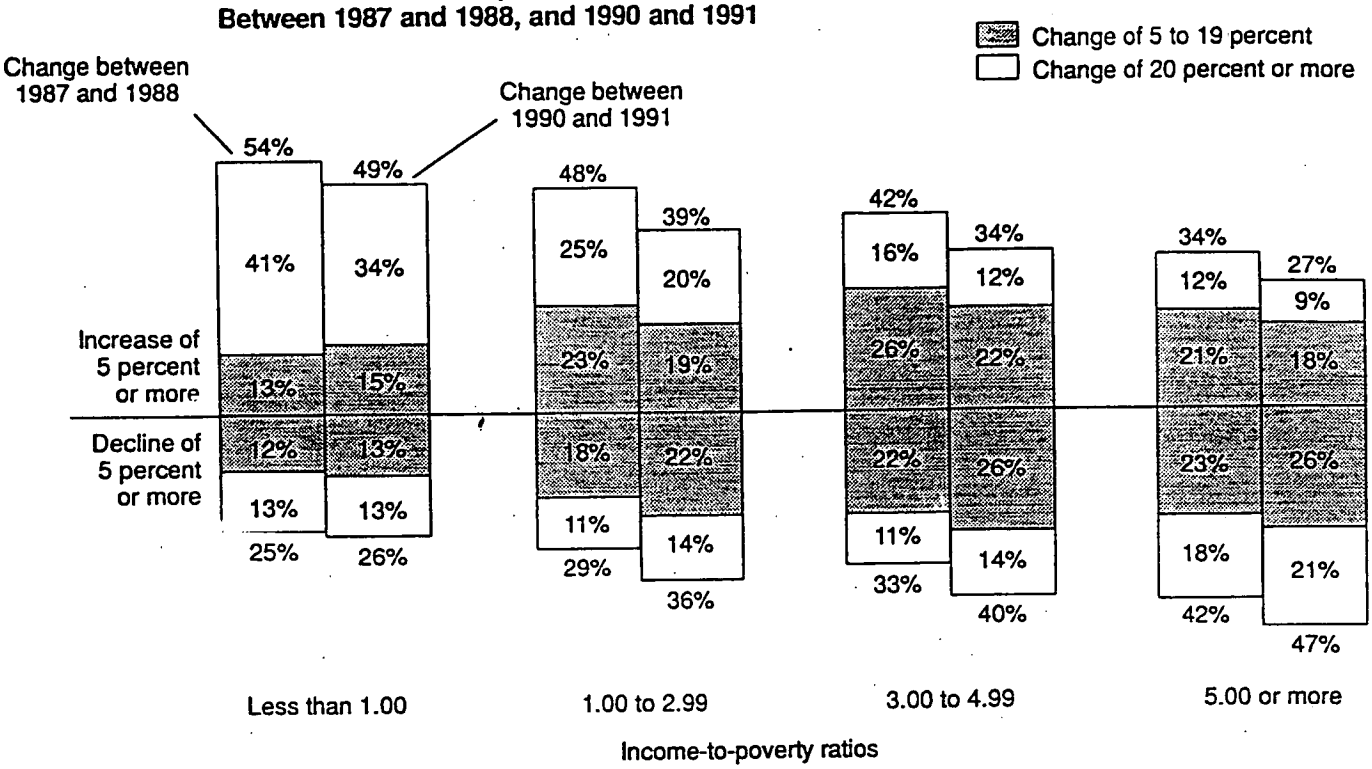
The Survey of Income and Program Participation data on declines of **5 to 19 percent** and **20 percent or more** in income-to-poverty ratios were inadvertently transposed. The data shown in text table B and figure 5, and the data quoted in the text on page xx are affected by this error. Following are the corrected versions of text table B and figure 5.

Table B. **Distribution of Percent Change in Income-to-Poverty Ratios Between 1990 and 1991, and 1987 and 1988: Survey of Income and Program Participation**

Characteristic	Total (thous.)	Change of 5 percent or more	Declined 5 percent or more			Increased 5 percent or more		
			Total	5 to 19 percent	20 percent or more	Total	5 to 19 percent	20 percent or more
1990 to 1991								
Total	235,811	74.6	38.3	23.1	15.1	36.3	19.5	16.9
Income-to-poverty ratios in 1990:								
Less than 1.00	23,849	75.4	26.2	13.5	12.7	49.1	15.0	34.2
1.00 to 2.99	96,313	74.9	35.7	21.8	13.9	39.2	19.3	19.9
3.00 to 4.99	67,828	73.8	39.9	26.1	13.8	34.0	22.1	11.8
5.00 or more	47,821	74.7	47.3	26.5	20.8	27.5	18.2	9.3
1987 to 1988								
Total	230,989	76.5	32.3	19.8	12.5	44.2	22.4	21.8
Income-to-poverty ratios in 1987:								
Less than 1.00	24,922	79.0	25.0	12.3	12.6	54.0	13.0	41.1
1.00 to 2.99	93,084	77.2	29.2	18.4	10.8	48.0	22.6	25.4
3.00 to 4.99	66,800	75.5	33.1	22.0	11.1	42.4	26.5	15.9
5.00 or more	46,184	75.2	41.5	23.4	18.1	33.7	21.3	12.4

Figure 5.

Percent of Persons Experiencing Changes in Income-to-Poverty Ratios Between 1987 and 1988, and 1990 and 1991



Source: Survey of Income and Program Participation

CORRECTION TO STATE MEDIAN HOUSEHOLD INCOME DATA

The information provided in, Table C. Median Income of Households (in 1992 CPI-U-X1 Adjusted Dollars), by State: 1990, 1991, and 1992, of Current Population Report, Series P60-184, is in error. A corrected table is attached.

The interpretation of these data should be as follows:

Based on 2-year averages, 1990-1991 and 1991-1992, real median household income declined significantly for 12 States. The states were Florida, Illinois, Kentucky, Maryland, Massachusetts, New Hampshire, New Jersey, New York, Rhode Island, South Carolina, Texas, and West Virginia. The same type of comparison showed no State had an increase in median household income. The median household income for the remaining 38 States and the District of Columbia did not change significantly.

Comparing the income among the States using the 3-year average of 1990-1992 shows that the median household income of Mississippi was lower than the income of the remaining 49 States and the District of Columbia. The relative standing of the remaining States and the District of Columbia is less clear because of sampling variability surrounding the estimates.

(CORRECTED COPY)

Table C. Median Income of Households (in 1992 CPI-U-X1 Adjusted Dollars), by State: 1990, 1991, and 1992

States	1992		1991		1990		Three-year average 1990-1992		Average median 1991-1992		Average median 1990-1991		Two-year moving averages 1991-92 vs 1990-91

Money Income of Households, Families, and Persons in the United States: 1992

NOTE: Estimates of 1991 income data shown in tables A, 1, 13, and 24 of this report may differ slightly from those shown in the Consumer Income report, Series P-60, No. 180, entitled, *Money Income of Households, Families, and Persons in the United States: 1991.* The data shown in the 1991 report were based on a computer tape file which omitted the supplement weights for nine person records. This omission was identified in time for the release of the March 1992 Annual Demographic File and is noted in User Note 2 of the file's technical documentation. The omission of the supplement weights, however, was not identified until after the release of the P-60, No. 180 report. Since the omission of the weights from the nine person records did not significantly affect income estimates, no further revisions were made to the historical data sets.

Information on income characteristics of the population by farm and nonfarm residence will no longer be included in the Consumer Income reports based on the Current Population Survey (CPS). As of January 1993, the control card item identifying farm and nonfarm residence was no longer asked in the CPS because of discontinued funding by the Department of Agriculture.

The estimates for March 1991, 1992, and 1993 in this report are inflated to national population controls by age, race, sex, and Hispanic origin. The population controls are based on results of the 1980 census carried forward to 1991, 1992, and 1993. The estimates in this report, therefore, may differ from estimates that would have been obtained using 1990 census results brought forward to the survey date. The Bureau of Labor Statistics, the sponsor of the CPS, made the decision not to use the 1990 census results as population controls for the 1993 CPS, however, population controls incorporating 1990 census results are planned to be used for survey estimation in 1994.

INTRODUCTION

This report presents data on the income of households, families, and persons in the United States for the calendar year 1992. These data were compiled from information collected in the March 1993 Current Population Survey (CPS) conducted by the Bureau of the Census. The survey consisted of approximately 60,000 households nationwide.

All demographic surveys, including the CPS, suffer from undercoverage of the population. This undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS undercoverage is about 7 percent. Undercoverage varies with age, sex, and race. For some groups, such as 20 to 24 year old Black males, the undercoverage is as high as about 35 percent. The weighting procedures used by the Census Bureau partially correct for the bias due to undercoverage. However, its final impact on estimates is unknown. For details, see appendix D.

The official income estimates in this report are based solely on money income before taxes and do not include the value of noncash benefits such as food stamps, Medicare, Medicaid, public housing, and employer-provided fringe benefits. For a discussion of the effects of taxes and noncash benefits on income in 1992, see Current Population Reports, Series P60-186RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1992.*

This report begins with a section discussing household income, highlighting year-to-year comparisons by region, age of householder, type of household, type of residence, race and Hispanic origin, and tenure. This is followed by sections discussing changes in family income by family composition, race and Hispanic origin, type of residence, and number of earners in the family. Discussion of the income of year-round, full-time workers, per capita income, income inequality, State income data, and health insurance coverage of persons follows the family section.

The CPS is a cross-sectional survey which can provide a series of snapshots of the socioeconomic conditions that exist at different fixed points in time. To demonstrate the extent to which individuals and population subgroups experience year-to-year changes in economic well-being, information from the Survey of Income and Program Participation (SIPP), an ongoing longitudinal survey, is also included in this report. See the section entitled "Distribution of Income-to-Poverty Ratios."

HIGHLIGHTS

(The figures in parentheses denote the 90-percent confidence intervals.)

Households

- Median household income in the United States remained unchanged in real terms between 1991 and 1992

after having declined for 2 consecutive years.[1] The median household income in 1992 was $30,786 (±$239), not statistically different from an inflation-adjusted 1991 median of $31,034 (±$243). The lack of change in median household income occurred in the first full year after the country came out of its most recent recessionary period which began in July 1990 and ended in March 1991. Between 1989 and 1992, real median household income declined by 5.9 (±1.1) percent.

- The Northeast was the only region to experience a decline in real median household income between 1991 and 1992. The median household income in the Northeast declined by 3.7 (±2.1) percent in real terms, going from $34,471 (±$655) in 1991 to $33,194 (±$622) in 1992. The median household income in the Midwest was $30,911 (±$498) in 1992, for the South it was $27,741 (±$447), and for the West, $33,621 (±$717).[2]

- The median income of households located inside metropolitan areas, $32,694 (±$352) did not change in real terms between 1991 and 1992, after two consecutive years of decline. The median income of households located outside metropolitan areas, $24,991 (±$544), has not changed significantly since 1986.

- Households located in central cities and suburbs of metropolitan areas of one million or more experienced significant declines in real median household income. The median income of households in these central cities declined by 3.0 (±2.1) percent between 1991 and 1992, to $26,872 (±$490). The median income of suburban households declined by 1.8 (±1.5) percent, to $40,460 (±$520).[3]

- There were no statistically significant changes in real median household income by race or Hispanic origin between 1991 and 1992. In 1992, the median income of White households was $32,368 (±$262), for Black households it was $18,660 (±$635), for Asian and Pacific Islander households it was $38,153 (±$1,872), and for households with householders of Hispanic origin (of any race) the median income was $22,848 (±$836).

- The real median income of nonfamily households (households maintained by persons living alone or with nonrelatives only) declined by 3.3 (±2.1) percent between 1991 and 1992 to $17,711 (±$352), while the median income of family households was unchanged in real terms at $37,222 (±$301). This was the second consecutive year in which nonfamily households experienced a decline in income.

Families

- The median income of families in the United States remained unchanged in real terms between 1991 and 1992 at $36,812 (±$306). The same is true for median family income by major type of family groupings. The median income of married-couple families was $42,064 (±$327), for families maintained by men with no wife present the median was $27,821 (±$1,301), and for families maintained by women with no husband present the median was $17,221 (±$449). In 1992, the median income of families maintained by women with no husband present represented only 41 (±1.1) percent of that of married-couple families, and 62 (±3.3) percent of the median of families maintained by men with no wife present.

- Change in real median family income between 1991 and 1992 varied by number of earners in the family. Families with two earners experienced an increase of 1.9 (±1.1) percent in median income to $45,779 (±$413). Families with no earners, one earner, and four earners or more experienced declines in real income. The income of families with no earners declined by 3.5 (±2.8) percent to $15,536 (±$385), the income of families with one earner declined by 1.7 (±1.7) percent to $26,292 (±$396) and the income of families with four or more earners declined by 3.1 percent to $69,923.[4] The income of families with three earners remained unchanged in real terms at $56,550 (±$975). This was the third consecutive year one-earner families experienced declines in real income.

- The change in real median family income between 1991 and 1992 differed by race and Hispanic origin. The real median income of families maintained by a Black householder declined by 4.7 (±3.7) percent between 1991 and 1992 from $22,197 (±$753) to $21,161 (±$739). The real median income of families maintained by White householders ($38,909 ±$355) and householders of Hispanic origin ($23,901 ±$944) remained unchanged. Prior to 1991, families maintained by White householders had experienced declines in real median income for 2 consecutive years.

Year-round, full-time workers

- The real median earnings of women who worked year-round, full-time increased by 1.3 (±0.9) percent

[1] Changes in real income refer to comparisons after adjusting for inflation. The percentage changes in prices between earlier years and 1992 were computed by dividing the annual average Consumer Price Index (CPI) for 1992 by the annual average for earlier years. See table B-1 in appendix B for the CPI's from 1947 to 1992.

[2] There is no statistically significant difference between the 1992 median household income of the Northeast and that of the West.

[3] There is no statistically significant difference between the percent change in income for households in central cities and for those in the suburbs.

[4] There is no statistically significant difference between the declines for families with no earners and that of families with one earner or four or more earners. In addition, there is no statistically significant difference between the decline for families with one earner and that for families with four or more earners.

between 1991 and 1992 to $21,440 (±$166). The median earnings of their male counterparts remained unchanged in real terms at $30,358 (±$186). The increase in the median earnings of women and the unchanged earnings of men produced a female-to-male earnings ratio of .71 (±0.01) in 1992, not statistically different from the all-time high of .72 (±0.01) reached in 1990.

Per capita income

- The per capita income for all persons, $15,033 (±$127), remained unchanged in real terms between 1991 and 1992 after declining for 2 consecutive years.

State data

- Comparing the median household income among the States using a 3-year average (1990-1992) shows that the median household income of Mississippi ($20,362 ± $1,148), was lower than the incomes of the remaining 49 States and the District of Columbia.

Health insurance

- Compared to 1991, two million (±998,015) more persons were without health insurance coverage in 1992. In 1992, 37.4 million (±714,000) persons lacked health insurance coverage, compared to 35.4 million (±698,000) in 1991. The proportion of persons without health insurance also increased from 14.1 (±0.3) percent to 14.7 (±0.3) percent between 1991 and 1992.

HOUSEHOLD INCOME

Median household income in the United States was unchanged in real terms between 1991 and 1992 after having declined for 2 consecutive years. The median household income in 1992 was $30,786, not statistically different from an inflation-adjusted 1991 median of $31,034. The lack of change in median household income occurred in the first full year after the country came out of its most recent recessionary period which began in July 1990 and ended in March 1991. Between 1989 and 1992, real median household income declined by 5.9 percent. (See tables A and 1.)

Region. The Northeast was the only region to experience a decline in median household income between 1991 and 1992. (See tables A and 1.) The median household income for this region declined in real terms by 3.7 percent from $34,471 in 1991 to $33,194 in 1992. The median household incomes for the other regions were unchanged.[5] In 1992 the median household income for the Midwest was $30,911; for the South, $27,741; and for the West, $33,621.[2] Even though the Northeast was the only region to experience a decline between 1991 and 1992, all regions experienced declines between 1989 and 1992. The decline since 1989 in the median household income for the Northeast, 10.1 percent, was twice as large as that for the Midwest, 5.0 percent, the West, 4.4 percent, and the South, 5.2 percent.[6]

Age of householder. Declines in real median household income between 1991 and 1992 were experienced by households maintained by the youngest and oldest of householders (see table 1). Households maintained by householders 15 to 24 years old experienced an income decline of 5.8 percent to $17,777. Householders 75 years old and over experienced an income decline of 5.1 percent to $13,622.[7] The median income of households with householders in each of the other age groups remained unchanged in real terms between 1991 and 1992.

Type of household. The real median income of nonfamily households (households maintained by persons living alone or with nonrelatives only) declined for the second consecutive year, while change in median income of family households leveled off after having experienced 2 years of decline (see table 1). Between 1991 and 1992, the median income of nonfamily households declined by 3.3 percent to $17,711. The median income of family households remained unchanged at $37,222. Between 1989 and 1992, the median income of nonfamily households declined by 8.5 percent and for family households by 5.0 percent.[8]

Among family households, those maintained by men with no wife present experienced a 4.5 percent decline in household income to $30,492. The median income for married-couple family households and households maintained by women with no husband present did not change in real terms between 1991 and 1992. The median income of married-couple family households in 1992 was $42,140, more than twice as large as the median income of households maintained by women with no husband present, $18,587.

---

[5]Labor market changes in major geographic regions of the country from 1990 through 1992 contributed to the changes in income by region. For an examination of these changes see Mary C. Dzialo, Susan E. Shank, and David C. Smith, "Atlantic and Pacific Coasts'-Labor Markets Hit Hard in Early 1990's," U.S. Department of Labor, Bureau of Labor Statistics, *Monthly Labor Review,* February 1993, Volume 116, Number 2, U.S. Government Printing Office, Washington, D.C.

[6]The differences were not statistically significant between the declines in the median household incomes of the Midwest, West and South regions.

[7]There is no statistically significant difference between the percent change in income for households with householders 15 to 24 years old and those with householders 75 years old and over.

[8]There is no statistically significant difference between the declines in income for nonfamily households between 1991 and 1992 and that for family households between 1989 and 1992.

Table A. Comparison of Income Summary Measures by Selected Characteristics: 1989, 1991, and 1992

[Households, families, and persons as of March 1993]

Characteristic	1992		Median income (in 1992 dollars)		Percent change in real income

*Statistically significant change at the 90-percent confidence level.
[1]Persons of Hispanic origin may be of any race.

Between 1989 and 1992, family households experienced a decline in real median income of 5.0 percent. The income of married-couple family households declined by 3.7 percent; for family households maintained by a male with no wife present, 11.2 percent; and for those maintained by a female with no husband present, 5.5 percent. The income of nonfamily households declined by 8.5 percent between 1989 and 1992.[9]

Type of residence. After having experienced declines in income for the past 2 years, the median income of households located in metropolitan areas showed no change between 1991 and 1992. (See tables A and 1.) The median income of households in metropolitan areas remained at $32,694. For households located outside metropolitan areas, the median income also remained unchanged at $24,991. A real change in the median income of households located outside metropolitan areas has not occurred since 1986.

Significant declines in real median income were noted for households located in the central cities and suburbs of large metropolitan areas (areas of one million or more) (see table A). The median income of households located in these central cities declined by 3 percent, from $27,700 in 1991 to $26,872 in 1992. For those located in the suburbs (outside central cities), the median household income declined by 1.8 percent, from $41,206 to $40,460.[3]

Between 1989 and 1992, the median income of households located in metropolitan areas declined, regardless of the size of the metropolitan area or whether they were located in the suburbs or in central cities. The median income of households in metropolitan areas declined by 7.2 percent, the median income of those located in large metropolitan areas declined by 6.6 percent, and those in metropolitan areas of under 1 million experienced a decline of 4.9 percent.[10]

Race and Hispanic origin. Median household income by race and Hispanic origin remained unchanged in real terms between 1991 and 1992 (see tables A and 1). In 1992, the median household income of White households was $32,368, for Black households it was $18,660, for Asian and Pacific Islander households[11] it was $38,153, and for households maintained by a householder of Hispanic origin[12] the median income was $22,848. Between 1989 and 1992, the median household incomes for all these groups declined. White households experienced a 5.9 percent decline; Black households an 8.8 percent decline; Asian and Pacific Islander households, 6.6 percent; and Hispanic-origin households, 7.9 percent.[13]

This is the first March CPS income report to include information on the White, not Hispanic population group. The data on this population group are being provided in this and future CPS reports in response to comments and requests from data users. The White, not Hispanic population shown in this report is not an ethnic group but rather the group that is left after Hispanics who identified themselves as White in the race question are removed.

As shown in table A, the median income of White, not Hispanic households in 1992 was $33,388, unchanged in real terms from their 1991 income of $33,296. The income of the White, not Hispanic households in 1992 was 3.2 percent higher than the median income for all White households.[14]

Tenure. Change in real median household income varied by housing tenure. (See tables A and 1.) Households who rented their homes experienced a decrease of 2.8 percent in median household income between 1991 and 1992, going from $21,321 to $20,731. For households who owned their homes, a change in income was not evident. The median income for owner-occupied households in 1992 was $38,088. Between 1989 and 1992, declines in income were evident for both types of households. Households who rented their homes experienced a 9.8 percent decline, and households who owned their homes experienced a 5.1 percent decline.

FAMILY INCOME

The median income of families in the United States remained unchanged in real terms between 1991 and

[9]There was no statistically significant difference between the declines in the median incomes of family households maintained by male householders with no wife present and the declines for families maintained by females with no husband present, and that for nonfamily households. In addition, there was no statistically significant difference between the declines in the median incomes of family households maintained by a female with no husband present, and the declines for total family households, married-couple family households, and nonfamily households. The difference between the declines for total family households and married-couple family households were also not statistically significant.

[10]The differences were not statistically significant between the declines in median household income for total metropolitan areas, those of 1 million or more persons, and those under 1 million persons.

[11]The Asian and Pacific Islander population, like the Hispanic population, is comprised of many distinct groups who differ in socioeconomic characteristics, culture, and recency of immigration. Since there are differences among the individual groups, caution should be exercised when interpreting aggregate data for these population groups. In addition, income data from the CPS for the Asian and Pacific Islander population is currently limited. Income data in this report for this population group is limited to a discussion of the change in median household income. Generalized references regarding differences among the race groups in the remainder of the report should not be interpreted as referring to the Asian and Pacific Islander population.

[12]Persons of Hispanic origin may be of any race.

[13]The differences between the declines in median household income for White, Black, Asian and Pacific Islander, and Hispanic origin households were not statistically significant.

[14]Detailed tabulations on the income characteristic of the White, not Hispanic population can be obtained by contacting the Income Statistics Branch, Housing and Household Economic Statistics Division of the Census Bureau.

1992 at $36,812. (See tables A and 13.) This leveling off came after 2 years of continuous decline in median family income. Between 1989 and 1992 median family income declined by 4.9 percent.

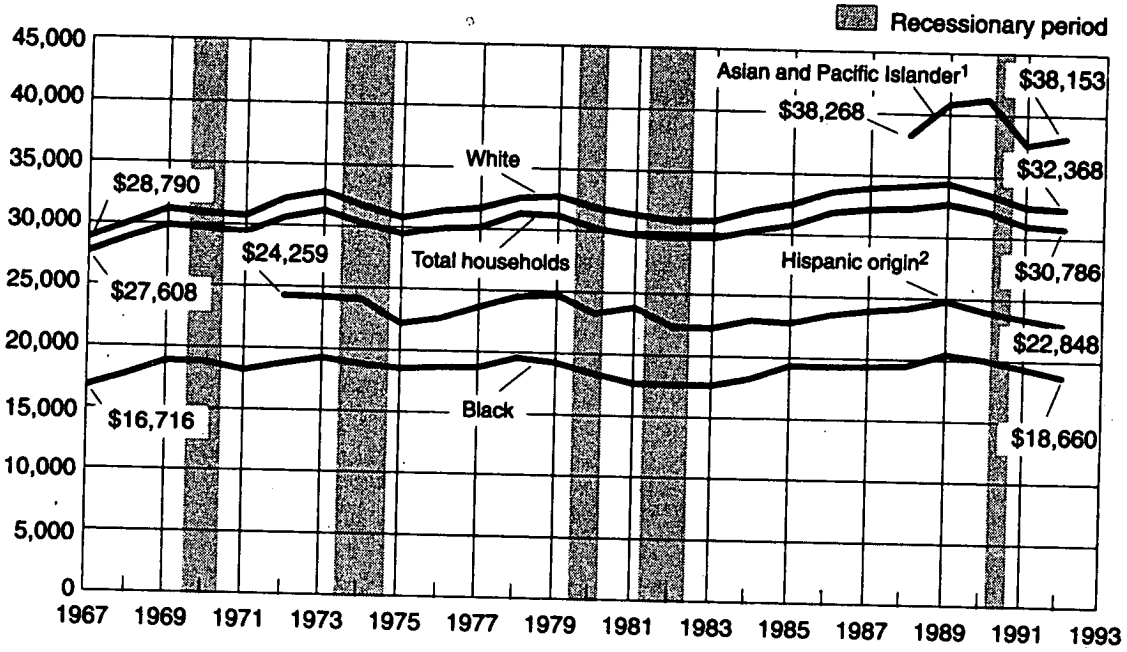
Family composition, race, and Hispanic origin. The median family income of married-couple families with the wife in the paid labor force, and families maintained by men and women with no spouses present remained unchanged in real terms between 1991 and 1992 (see table 13). Change in median family income was evident, however, for married-couple families in which the wife was not in the paid labor force. The median income of these families decreased by 2.1 percent, from $30,980 in 1991 to $30,326 in 1992. The median income of married-couple families with the wife in the paid labor force was $49,984 in 1992, for families maintained by a man with no spouse present it was $27,821, and for families maintained by a woman with no husband present, $17,221.

Declines in median family income between 1989 and 1992 were experienced by all family types. The income of all married-couple families declined by 3.6 percent; for those with a wife in the paid labor force, 2.4 percent; and for those with a wife not in the paid labor force, 6.8 percent. The decline for families maintained by a male with no wife present was 11.7 percent, for those maintained by a female with no husband present, 7.4 percent.[15]

Change in median family income was not consistent across racial and ethnic origin groups. Families maintained by a Black householder experienced a 4.7 percent decline in real median income, from $22,197 in 1991 to $21,161 in 1992. Overall, White families and families maintained by householders of Hispanic origin did not experience changes in median family income between 1991 and 1992. The 1992 median family income for White families was $38,909; for Hispanic-origin families the median was $23,901. Declines in the median incomes of White, Black, and Hispanic-origin families were experienced between 1989 and 1992. The decline for White families was 4.4 percent, for Blacks

[15]The decline in income of all married-couple families was not statistically different from that for married-couple families with a wife in the paid labor force. In addition, the decline in income for married-couple families with the wife not in the paid labor force was not statistically different from that for families maintained by a male or female with no spouse present. The difference was not statistically significant between the declines in income of families maintained by a male with no spouse present and that of families maintained by a female with no spouse present.

Figure 1.
Median Household Money Income, by Race and Hispanic Origin: 1967 to 1992
(In 1992 CPI-U-X1 Dollars)



NOTE: The data points represent the midpoints of the respective years.
[1]Median income of Asian and Pacific Islander households is not available prior to 1988.
[2]Persons of Hispanic origin may be of any race. Median income of Hispanic-origin households is not available prior to 1972.

families it was 7.5 percent, and for Hispanic-origin families, 9.9 percent.[16]

Changes in income between 1991 and 1992 were evident by type of family among the racial and ethnic origin groups. White married-couple families in which the wife was not in the paid labor force experienced a decline of 2.2 percent, from $31,719 in 1991 to $31,013 in 1992. Black families maintained by a male with no wife present experienced an 18.1 percent decline in median family income between 1991 and 1992, going from $25,246 to $20,678. For Hispanic-origin families, those maintained by married-couples with the wife not in the paid labor force and those maintained by a male with no wife present experienced declines of 8.5 percent and 13.1 percent, respectively.[17] In 1992, the median income of Hispanic married-couple families with the wife not in the paid labor force was $20,673, and for Hispanic families maintained by a male with no wife present the median income was $19,468.

Type of residence. Between 1991 and 1992, the only residential grouping of families which experienced a change in income were those located inside central cities of metropolitan areas with a population of one million or more persons. (See table 13.) These families experienced a 3-percent decline in median family income, from $32,608 in 1991 to $31,624 in 1992. Families located in the suburbs of these metropolitan areas had the highest family income of the residential groupings shown, $47,417. Families located outside metropolitan areas had the lowest median income, $29,864.

Between 1989 and 1992, the median income of families located in metropolitan areas declined, regardless of the population size or whether they were located in the suburbs or central cities. The median income of families in metropolitan areas declined by 5.5 percent, the median income of those located in large metropolitan areas declined by 5.7 percent, and those in metropolitan areas of under 1 million experienced a decline of 5.0 percent.[18]

[16]There was no statistically significant difference between the 1989-1992 declines for White and Black families, and the declines for Black and Hispanic-origin families.

[17]There is no statistically significant difference between the declines in income of Black families maintained by a male with no wife present and the declines in incomes of Hispanic married-couple families with the wife not in the paid labor force and those maintained by a male with no wife present. In addition, there was no statistically significant difference between the declines in income of Hispanic married-couple families with no wife in the paid labor force and those maintained by a male with no wife present. A statistical difference was not evident between the 1992 income of Black families maintained by a male with no wife present, Hispanic married-couple families with the wife not in the paid labor force and Hispanic families maintained by males with no wife present.

[18]There was no statistically significant difference between the 1989-1992 declines in median income for families residing in metropolitan areas, those residing in large metropolitan areas, and those in metropolitan areas of under 1 million.

Number of earners. Changes in median family income varied by the number of earners in the family. (See table 13.) The median income of families with two earners increased by 1.9 percent from $44,936 in 1991 to $45,779 in 1992. Families with no earners, one earner, and four earners or more experienced declines in income. Three-earner families showed no significant change. Families with no earners experienced a 3.5 percent decline to $15,536, families with one earner experienced a 1.7 percent decline to $26,292, and families with four earners or more a 3.1 percent decline to $69,923.[4] One-earner families have endured declines in median income every year since 1989, declining a total of 7.9 percent.

YEAR-ROUND, FULL-TIME WORKERS

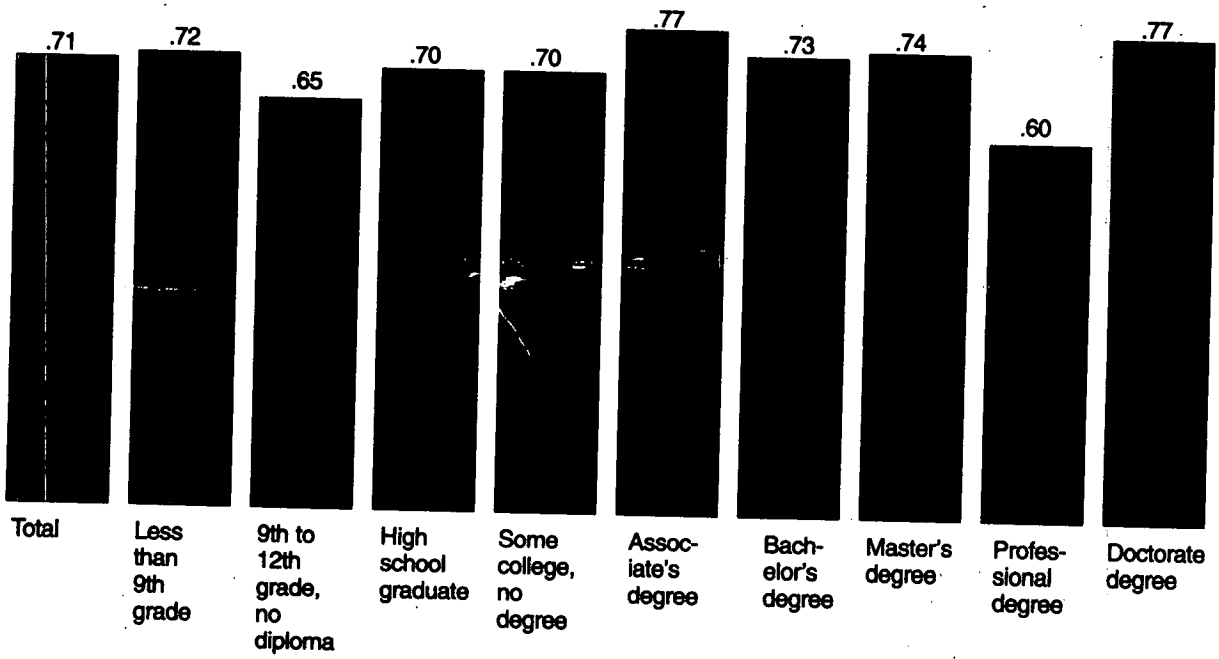
The median earnings of female year-round, full-time workers increased by 1.3 percent in real terms between 1991 and 1992, rising from $21,170 to $21,440. The median earnings of their male counterparts remained unchanged at $30,358. (See tables A and 24.) The increase in the median earnings of female year-round, full-time workers follows 2 years of no real growth in their earnings, while the unchanged earnings for their male counterparts follows a 2-percent increase between 1990 and 1991.

The increase in the median earnings of female year-round, full-time workers combined with the unchanged earnings for males produced a female-to-male earnings ratio of .71 in 1992. The ratio was not statistically different from the all-time high ratio of .72 reached in 1990.

Educational attainment. The relationship between educational attainment and median earnings of year-round, full-time workers 25 years old and over is strong. Data in table 29 show that the median earnings of persons increases sharply as educational attainment increases. This relationship exists for both men and women. For men, the 1992 median earnings of high school graduates was $26,766; for those with an Associate's degree the median earnings was $32,349. For men with a Bachelor's degree or post-graduate degree such as a Master's, median earnings were $40,381 and $47,260, respectively. The same pattern is evident for women. Women who were high school graduates had median earnings of $18,648; those with an Associate's degree, $24,849; those with a Bachelor's degree, $29,284; and those with a Master's degree, $35,018.

The female-to-male earnings ratio for persons 25 years old and over was .71 in 1992. This ratio varied considerably by educational attainment category. (See figure 2.) The lowest female-to-male earnings ratios were for those with a Professional degree (.60) and for those that completed some high school but did not

Figure 2.
Female-to-Male Earnings Ratios for Year-Round, Full-Time Workers 25 Years Old and Over, by Educational Attainment: 1992



graduate (.65).[19] The female-to-male earnings ratios which were relatively high compared to the overall female-to-male earnings ratio of .71 were for those persons with an Associate's degree (.77), and for those with a Master's degree (.74).[20]

PER CAPITA INCOME

The per capita income for all persons, $15,033, remained unchanged in real terms between 1991 and 1992 after declining for the 2 previous years (see tables A and B-19). Per capita incomes by race and Hispanic origin also remained unchanged. The per capita income for the White population was $15,981, for the Black population it was $9,296, and for the Hispanic-origin population, $8,874. Between 1989 and 1992, the per capita income of each of these groups showed significant declines. (See table A.) Overall per capita income declined by 5.5 percent, for Whites by 5.2 percent, for Blacks by 6.1 percent, and for the Hispanic-origin population by 6.5 percent.[21]

INCOME INEQUALITY

Several methods are used to measure income inequality. Traditionally, the Census Bureau has used two of the more common methods: the shares of aggregate income received by households (or other income recipient units) and the Gini index (or index of income concentration).[22] In the shares approach, households or families are ranked from lowest to highest on the basis of income and then divided into equal population groups,

[19]The difference between the ratio for the Professional degree and the 9th to 12th grade, non-graduates categories is not statistically significant.

[20]The difference was not statistically significant between the female-to-male earnings ratios for persons with an Associate's degree and that for those with a Master's degree. In addition, the difference was not statistically significant between the overall ratio and the ratio for those with a Doctorate degree.

[21]There was no statistically significant difference between the 1989-1992 declines in per capita income of the total population, the White population, the Black population, and that of the Hispanic-origin population.

[22]A new measure of income dispersion called relative income, recently introduced by the Census Bureau, was designed to measure how far the income of an individual is from the middle of the distribution after adjustments have been made for differences in family size. See John McNeil, *Trends in Relative Income: 1964 to 1989*, U.S. Bureau of the Census, Current Population Reports, Series P-60, No. 177, U.S. Government Printing Office, Washington, D.C., 1991.

typically quintiles. The aggregate income of each group is then divided by the overall aggregate income to derive shares. The Gini index, incorporates more detailed shares data into a single statistic which summarizes the dispersion of the income shares across the whole income distribution. The Gini index ranges from 0, indicating perfect equality (where everyone receives an equal share), to 1, perfect inequality (where all the income is received by only one recipient).

Comparing the shares of aggregate income received by quintile between 1991 and 1992 shows that the amount of inequality in the income distributions of households and families remained mostly unchanged. A significant decline in the share of aggregate income was evident for the second fifth, or quintile, for both households and families. However, statistically significant changes were not evident in any of the other quintiles. In 1992, households in the second fifth received 9.4 percent of the aggregate income available to households, lower than the 9.6 percent received in 1991. A similar change was evident for families. In 1992, 10.5 percent of the aggregate income available to families was received by the second fifth, down from 10.7 percent in 1991.

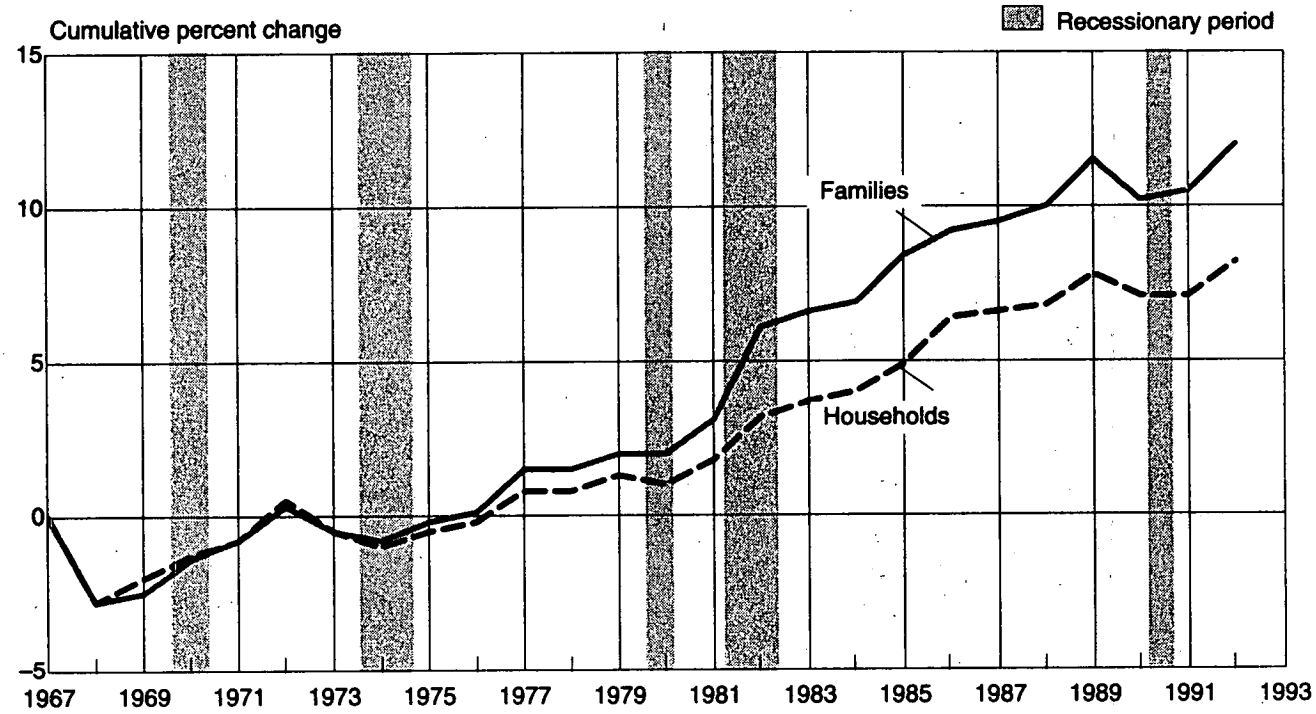
Between 1991 and 1992, the Gini index also indicates that, overall, the amount of inequality in the income distributions of households and families remained unchanged. (See tables B-3 and B-7.) In 1992, the Gini index for households was .433, and for families it was .403; neither were statistically different from the Gini indexes for 1991. (The Gini index for households is higher than for families since the former contain unrelated individuals living alone or with other unrelated individuals who tend to have low incomes, thereby causing more dispersion of income.)

Significant changes in the Gini index and shares data are unlikely to occur on a year-to-year basis, however, significant changes are evident over longer periods of time. Figure 3, which shows changes in the household and family Gini indexes over time, reveals that the Gini index for both households and families rose slowly during the 1970's, and then accelerated in the early 1980's. However, since 1987 no statistically significant change has occurred in the Gini index prompting some researchers to question whether or not the long-run trend towards greater inequality in the income distribution has come to an end.[23]

Looking at change over time for the aggregate income received by the highest fifth of households reveals a

[23]See Paul Ryscavage, "Has Growing Income Inequality Come To An End?" presented at the 68th Annual Conference of the Western Economic Association, Lake Tahoe, Nevada, June 23, 1993.

Figure 3.
Percent Change in Household and Family Gini Indexes: 1967 to 1992



NOTE: The data points represent the midpoints of the respective years.

similar pattern (see figure 4 and table B-3). The share of aggregate income received by the highest fifth of households rose between 1972 and 1992. However, between 1987 and 1992 no statistically significant change occurred. In 1972, the highest fifth of households received 43.9 percent of the income available to households, increasing to 46.9 percent in 1992. Between 1987 and 1992, the difference between the shares of aggregate income received by the highest fifths (46.2 percent and 46.9 percent, respectively) was not statistically significant.

DISTRIBUTION OF INCOME-TO-POVERTY RATIOS

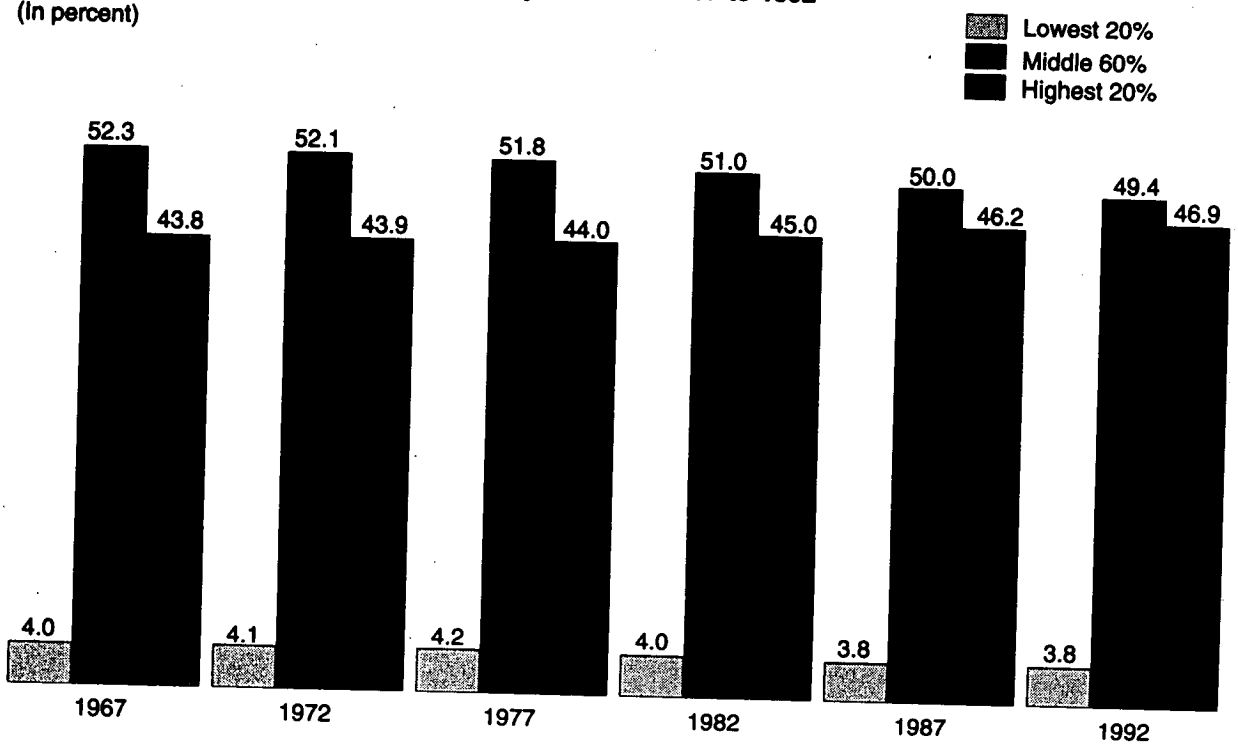
Comparisons of income used throughout this report, for the most part, do not take into account differences in the number of family members with whom resources are shared or the economies of scale available to family members living together. A four-person family, for example, with an income of $25,000 is not as well-off as a two-person family with the same income. Furthermore, economies of scale take into account such things as the sharing of rent and other fixed expenses which allow two people to live more cheaply together than separately.

In order to measure differences in income while accounting for differences in family size and economies of scale, comparisons of family incomes in this section are made using income-to-poverty ratios. Income-to-poverty ratios adjust the family income by using poverty thresholds as an "equivalence scale."[24] For example, a four-person family containing two related children under 18 with an income in 1992 of $25,000 would have an income-to-poverty ratio of 1.76 (i.e., $25,000/$14,228).[25] A two-person family with a householder under 65 years old and no related children with an income of $25,000 in 1992 would have a much higher ratio of 2.66 ($25,000/$9,395). A ratio under 1.00 indicates that the family was below the poverty level during the calendar year. Income-to-poverty ratios, presented in tables B-8 and B-9, adjust

[24]Equivalence scales are used generally to bring the incomes of households or families of different size and composition to the same level of economic well-being. For information about assumptions implicit in poverty thresholds, see Orshansky, Mollie, "Counting the Poor: Another Look at the Poverty Profile," reprinted from January 1965 in Social Security Bulletin, October 1988. Volume 51, Number 10, pages 25-51.

[25]For information on poverty thresholds and guidelines, see Current Population Reports, Series P60-185, *Poverty in the United States: 1992.*

Figure 4.
Share of Aggregate Household Income, by Quintile: 1967 to 1992
(In percent)



for family size and economies of scale, enabling more reasonable comparisons of economic well-being between families.

Income-to-poverty ratios are also useful for comparing the economic well-being of families over time. In terms of economic well-being, a family's income could change while their income-to-poverty ratio remained the same if there was a concurrent change in family size. For example, in 1992 the income-to-poverty ratio of a four-person family with two related children under 18 years old and a total family income of $25,000 was 1.76. If the family income decreased to $19,900 and the family also lost an adult member, the income-to-poverty ratio would remain at 1.76 ($19,900/$11,304). Thus this family would be characterized as having no change in economic well-being as measured by income-to-poverty ratios. In terms of family income alone, this family would be characterized as experiencing a 20-percent decline. The benefit of using income-to-poverty ratios, rather than family income alone, to examine changes in economic well-being over time is based on the assumption that family resources are shared among its members.

The distribution of average income-to-poverty ratios for families by income quintile, presented in table B-8, shows that in 1992 for families with incomes in the lowest quintile, the average income-to-poverty ratio was .91. This implies that, on average, families in this quintile had incomes below the poverty level (a ratio of less than 1.00). At the opposite end of the distribution, the average income-to-poverty ratio for families in the highest quintile was 8.43.

The percent changes between 1989 (the year before the July 1990-March 1991 recession) and 1992 (one year after the end of the last recession) in the average income-to-poverty ratios for families varied by quintile. Families with incomes in the lowest quintile experienced the largest decline of all quintiles, 9.9 percent. Those with incomes in the second quintile experienced a 5.7 percent decline. The declines for the middle, fourth, and fifth quintiles were 4.1 percent, 4.4 percent, and 5.3 percent, respectively (the differences between the latter declines are not statistically significant).[26]

Since the CPS is a cross-sectional survey, it can only provide a series of snapshots of the socioeconomic conditions that exist at different fixed points in time. The Survey of Income and Program Participation (SIPP), a longitudinal survey, provides information making it possible to measure the extent to which individuals and population subgroups experience year-to-year changes in economic well-being.[27]

In order to incorporate the effect of possible month-to-month changes in family composition, data from the SIPP are presented for persons rather than families. Persons are characterized by the income of their respective family unit based on living arrangements each month during the calendar year. Table B shows the percent changes in income-to-poverty ratios between 1990 and 1991 and between 1987 and 1988 from the SIPP.

While aggregate data from the CPS rarely show large increases or decreases in incomes, data from the SIPP show that economic conditions of families and persons can vary greatly from 1 year to the next. For example, while data from the CPS indicate that between 1990 and

[26]The difference between the declines for the second and fifth quintiles is not statistically significant.

[27]See appendix C, "Definitions, Explanations, and Comparability of Data," for a discussion of the concepts used in the SIPP; and Current Population Reports, Series P-70, No. 24, *Transitions in Income and Poverty Status: 1987-88,* for an overview of the SIPP and a detailed explanation of the concepts used in that survey.

Table B. **Distribution of Percent Change in Income-to-Poverty Ratios Between 1990 and 1991, and 1987 and 1988: Survey of Income and Program Participation**

Characteristic	Total (thous.)	Change of 5 percent or more	Declined 5 percent or more			Increased 5 percent or more		
			Total	5 to 19 percent	20 percent or more	Total	5 to 19 percent	20 percent or more
1990 to 1991								
Total	235,811	74.6	38.3	15.1	23.1	36.3	19.5	16.9
Income-to-poverty ratios in 1990:								
Less than 1.00	23,849	75.4	26.2	12.7	13.5	49.1	15.0	34.2
1.00 to 2.99	96,313	74.9	35.7	13.9	21.8	39.2	19.3	19.9
3.00 to 4.99	67,828	73.8	39.9	13.8	26.1	34.0	22.1	11.8
5.00 or more	47,821	74.7	47.3	20.8	26.5	27.5	18.2	9.3
1987 to 1988								
Total	230,989	76.5	32.3	12.5	19.8	44.2	22.4	21.8
Income-to-poverty ratios in 1987:								
Less than 1.00	24,922	79.0	25.0	12.6	12.3	54.0	13.0	41.1
1.00 to 2.99	93,084	77.2	29.2	10.8	18.4	48.0	22.6	25.4
3.00 to 4.99	66,800	75.5	33.1	11.1	22.0	42.4	26.5	15.9
5.00 or more	46,184	75.2	41.5	18.1	23.4	33.7	21.3	12.4

1991 income-to-poverty ratios by quintile showed no changes higher than 5.1 percent,[28] data from the SIPP show that 38.3 percent of persons experienced declines of 5-percent or more in their income-to-poverty ratios. About 15.1 percent experienced declines of 5 to 19 percent, and 23.1 percent experienced declines of 20 percent or more. (See table B.) On the other hand, 36.3 percent of persons experienced increases of 5 percent or more in their income-to-poverty ratios. About 19.5 percent experienced increases of 5 to 19 percent, and 16.9 percent experienced increases of 20 percent or more.

The changes in the income-to-poverty ratios between 1990 and 1991 obtained from the SIPP reflect the effect of the most recent recessionary period which lasted from July 1990 to March 1991. These changes differed significantly from the changes that occurred in the income-to-poverty ratios experienced during the time period prior to the recession. Data from the 1987 SIPP panel, showing changes in income-to-poverty ratios between 1987 and 1988, show that a smaller proportion of persons experienced declines of 5 percent or more in the average income-to-poverty ratios, 32.3 percent, and a larger proportion experienced increases of 5 percent or more, 44.2 percent. The comparable proportions for the change between 1990 and 1991 were 38.3 percent and 36.3 percent, respectively.

The effect of the recession was particularly noticeable at the tails of the distribution of change in income-to-poverty ratios. Specifically, a larger proportion of persons experienced declines of 20 percent of more during the 1990-1991 period (23.1 percent) than during the 1987-1988 period (19.8 percent), while a smaller proportion of persons experienced increases of 20 percent or more (16.9 percent during the 1990-1991 period versus 21.8 percent).

Between 1990 and 1991, persons with initial income-to-poverty ratios in 1990 at the higher end of the scale were less likely to experience large increases and more likely to experience large decreases in their income-to-poverty ratios than persons with initial income-to-poverty ratios at the lower end of the scale. Specifically, the proportion of persons with initial income-to-poverty ratios of 3.00 to 4.99 and 5.00 or more who experienced declines of 20 percent or more in their income-to-poverty ratio were 26.1 percent and 26.5 percent, respectively. For those with initial income-to-poverty ratios of less than 1.00 and 1.00 to 2.99, the comparable proportions were 13.5 percent and 21.8 percent, respectively. In contrast, of those with initial income-to-poverty ratios of less than 1.00 and 1.00 to 2.99, the proportions which experienced increases of 20 percent of more were 34.2 percent and 19.9 percent, respectively. For those with income-to-poverty ratios of 3.00 to 4.99 and 5.00 or more, the comparable percentages were 11.8 percent and 9.3 percent, respectively.[29]

With the exception of those with initial income-to-poverty ratios of less than 1.00, declines of 5 percent or more were more prevalent during the 1990-1991 period than during the 1987-1988 period for persons in each of the income-to-poverty ratio categories. (See figure 5.) In contrast, the proportion of the population experiencing increases of 5 percent or more was lower during the 1990-1991 period than during the 1987-1988 period for persons in each of the specific income-to-poverty ratio categories.

STATE INCOME DATA

Text table C and table B-20 of this report show information on median household income by State. These data are being made available to meet the large number of requests received from data users for sub-national income estimates.

The CPS is designed to collect reliable data on income primarily at the national level and secondarily at the regional level. When the income data are tabulated by State and metropolitan area, the estimates are considered less reliable and, therefore, particular caution should be used when trying to interpret the results. To reduce the chances of misinterpreting annual changes in State and metropolitan area income estimates, the Census Bureau chose to evaluate changes based on 2-year averages.

Median income of households and the respective standard errors for States and Los Angeles and New York Consolidated Metropolitan Statistical Areas (CMSA's) for 1990, 1991, and 1992 (in 1992 constant dollars) are shown in table C. This table also includes two 2-year averages of median household income, for 1990-1991 and 1991-1992 along with the numerical differences and percent changes between the 2-year averages by State.

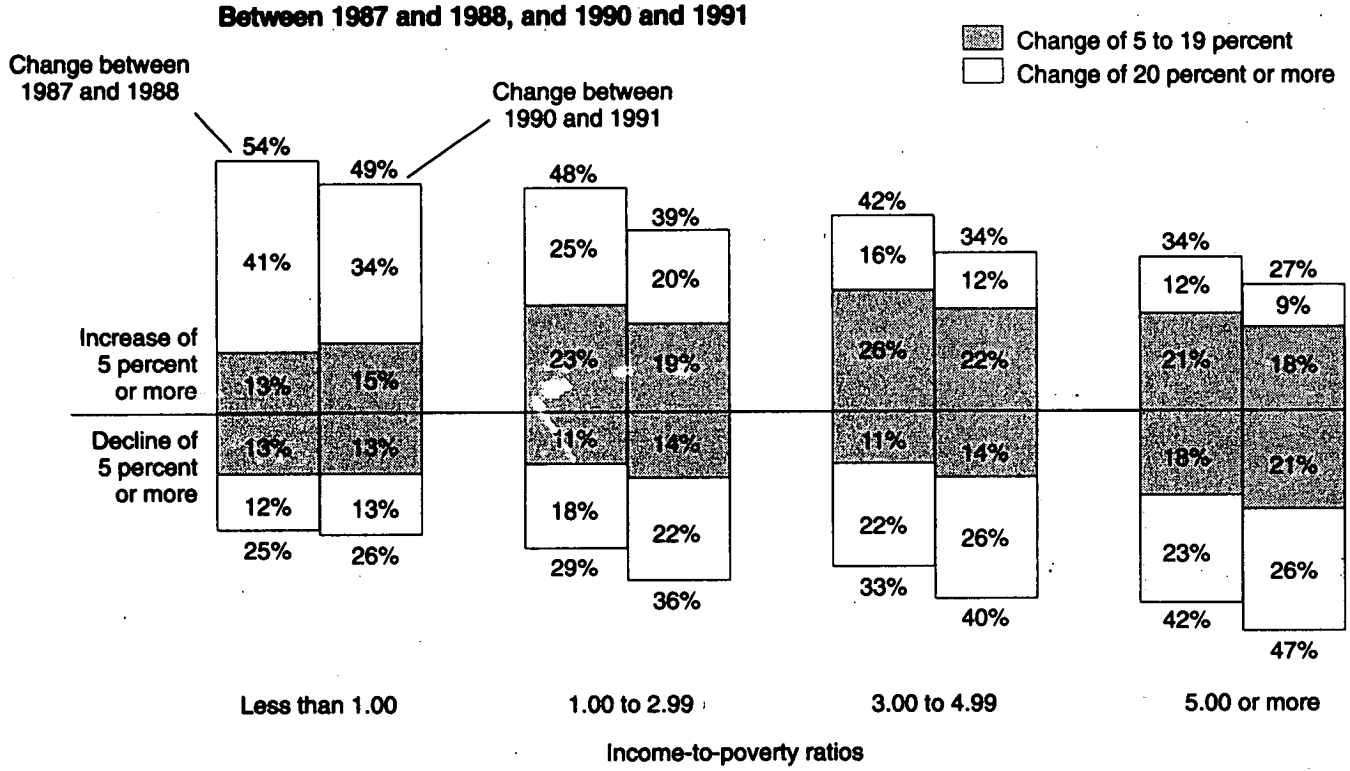
Appendix B also includes a table showing median household income data by State. Table B-20 shows the median income of households by State for 1984-1992.

Based on the two 2-year averages, 1990-1991 and 1991-1992, real median household income declined significantly for three States. (See table C.) These

[28]Between 1990 and 1991 the declines in the income-to-poverty ratios by quintile were, 5.1 percent for the lowest quintile, 2.2 percent for the second quintile, 2.1 percent for the third, 2.1 percent for the fourth, and 2.4 percent for the highest quintile. Only the differences between the decline for the lowest quintile and each of the other quintiles were statistically significant.

[29]There was no statistically significant difference between the proportion of persons experiencing declines of 20 percent or more in their income-to-poverty ratios for persons with initial income-to-poverty ratios of 3.00 to 4.99 and 5.00 or more. In addition, there was no statistically significant difference between the proportion of persons with initial income-to-poverty ratios of less than 1.00 who experienced a decline of 20 percent or more in their income-to-poverty ratio and the proportion of persons with initial income-to-poverty ratios of 3.00 to 4.99 who experienced increases of 20 percent or more in their income-to-poverty ratios.

Figure 5.
Percent of Persons Experiencing Changes in Income-to-Poverty Ratios Between 1987 and 1988, and 1990 and 1991



Source: Survey of Income and Program Participation

States were Illinois, New York, and West Virginia. The same type of comparison shows that median household income increased for three States: Delaware, Montana, and Utah. The median household income for the remaining 44 States and the District of Columbia did not change significantly.

Comparing the income among the States using the 3-year average of 1990-1992 shows that the median household income of Mississippi was lower than the incomes of the remaining 49 States and the District of Columbia. The relative standing of the remaining States and the District of Columbia is less clear because of sampling variability surrounding the estimates.

HEALTH INSURANCE COVERAGE

Health insurance coverage is important to overall well-being. Thus, it is important to examine year-to-year changes in health insurance coverage, just as we examine annual changes in income, to provide a comprehensive picture of changes in economic status.[30] A discussion of the change in health insurance coverage between 1991 and 1992 is presented below.

Compared to 1991, two million more persons were without health insurance coverage in 1992. In 1991, 35.4 million persons lacked health insurance coverage, compared to 37.4 million in 1992 (see table D). The proportion of persons without health insurance also increased from 14.1 percent to 14.7 percent between 1991 and 1992.

The decrease in the proportion of persons covered by health insurance between 1991 and 1992 was reflected in the decrease in the proportion of persons covered by private health insurance and military health care. The proportion of persons covered by private health insurance declined from 72.1 percent to 71.1 percent, and the proportion of persons covered by military health care declined from 3.9 percent to 3.7 percent. In contrast, the proportion of persons covered by Medicaid increased between 1991 and 1992 from 10.7 percent to 11.2 percent. Note that the percentages shown by type

[30]For a discussion of the effect of valuing employer-subsidized health insurance, Medicaid, and Medicare on income, see the Current Population Reports, Series P60-186RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1992.*

Table C. Median Income of Households (in 1992 CPI-U-X1 Adjusted Dollars), by State: 1990, 1991, and 1992

[1]Includes CHAMPUS (Comprehensive Health and Medical Plan for Uniformed Services), Veterans, and military health care.

of health insurance coverage are not mutually exclusive; persons can be covered by more than one type of health insurance.

Health insurance coverage varied by age group. Persons 18 to 24 years old had the highest proportion lacking health insurance coverage, 28.9 percent. In contrast, persons 65 years old and over had the lowest proportion lacking health insurance coverage, 1.2 percent. The low proportion of uninsured persons 65 years old and over is a result of their eligibility for Medicare. In 1992, 96.2 percent of the elderly were covered by Medicare. A large majority of the elderly, 67.7 percent, were covered by private health insurance in 1992, an indication of the extent to which the elderly supplement their Medicare coverage with private health plans.

Table E shows the percent of persons not covered by health insurance by State and the District of Columbia for 1990, 1991, and 1992. Based on changes in 2-year averages, ten States showed significant changes in the percent of the population without health insurance coverage. Montana and Pennsylvania showed greater health insurance coverage while less coverage was evident for eight States: Georgia, Illinois, Nevada, New Jersey, New York, South Dakota, Utah, and Wisconsin.

While the CPS estimates in the preceding section provide information on health insurance coverage at some time in the calendar year, they do not examine the dynamics of health insurance coverage, and the extent to which persons experience a lapse in coverage during a given time period. This type of information can only be obtained from a longitudinal data set such as the Survey of Income and Program Participation (SIPP).

From the 1987 SIPP panel file, it is possible to examine the number of months persons were covered by health insurance over a 28-month period. Interviews from this panel were conducted between February 1987 and May 1989. During this period, it was found that 74 percent of all persons had health insurance coverage for the entire period; 26 percent, or 61 million persons, lacked coverage for at least 1 month. For a complete discussion of health care coverage data from the SIPP, see Current Population Report, Series P-70, No. 29, *Health Insurance Coverage: 1987-1990.*

SYMBOLS USED IN TABLES

-	Represents zero or rounds to zero.
B	Base less than 75,000.
NA	Not available.
r	Revised.
X	Not applicable.

Appendix A. Bureau of Labor Statistics' Statement on the Use of the CPI-U-X1

The Bureau of Labor Statistics (BLS) developed an experimental Consumer Price Index (CPI-U-X1) for researchers who wish to make historical comparisons with the current Consumer Price Index for All Urban Consumers (CPI-U) which uses the rental equivalence approach to measuring shelter services. Prior to 1983, the measurement of homeowner costs included changes in the asset value of homes. Recognizing that this approach mixed the investment and consumption aspects of homeownership, the BLS initiated an extensive research effort in the early 1970's to develop a better methodology. Following extensive study and testing, the CPI-U was officially converted to a rental equivalence measure in 1983. This rental equivalent approach is a methodology that isolates the shelter services component and, therefore, is a superior measure.

When the new methodology was introduced, the historical series were not revised. Price indexes are used for escalation and other contractual purposes that require the parties to agree on one official series. Moreover, the BLS did not have the basic data or the resources to convert all of its historical series (including local area indexes) to the new methodology. The refinements that were ultimately developed before the methodology was officially introduced into the CPI—notably a larger sample of renters and a reweighting of the shelter component—could not be incorporated into the CPI-U-X1. Nonetheless, for many purposes the CPI-U-X1 can serve as an adequate proxy for what the national index would have been using the rental equivalence measure. Therefore, BLS recommends the use of the CPI-U-X1 to those who need to use a CPI series that treats homeowner costs consistently over time.

Bureau of Labor Statistics

July 1989

Appendix B. Time Series Estimates of Income (Using CPI-U-X1 Price Deflators) and State Income Data

Included in this appendix are time series estimates of income by selected characteristics of households, families, and persons; per capita income; and household income by State. In order to accurately assess changes over time in economic well-being, an adjustment for changes in the cost of living is required. The Census Bureau uses the experimental Consumer Price Index (CPI-U-X1), provided by the Bureau of Labor Statistics for 1967 through 1992, to adjust for changes in the cost of living.[1] Some earlier reports in this series used the CPI-U to adjust income when making comparisons over time. See Appendix A, "Bureau of Labor Statistics' Statement on the Use of the CPI-U-X1," and the Current Population Report, P-60, No. 174, *Money Income of Households, Families, and Persons in the United States: 1990,* for a discussion of the uses of the CPI-U-X1 and CPI-U as price deflators.

The indexes used to make the constant dollar conversions are shown in table B-1. Tables B-2 through B-5 show inflation adjusted median incomes of households by selected characteristics. Tables B-6 through B-8 and B-10 through B-13 show median incomes of families by selected characteristics. Table B-9 shows income-to-poverty ratios for unrelated individuals. Tables B-14 through B-18 show median incomes of persons by selected characteristics. Table B-19 shows per capita income in 1967 to 1992 by race and Hispanic origin. Table B-20 shows the median income of households by State for the time period 1984 through 1992. Periods of recession from 1948 to present are shown below.

[1]The experimental Consumer Price Indexes (CPI-U-X1) included in this appendix for years prior to 1967 were derived by applying the CPI-U-X1-to-CPI-U ratio for 1967 to the 1947 through 1966 CPI-U indexes.

1969	39.4	1992	140.3

[1]Prior to 1967, the CPI-U-X1 indexes included in this table were derived by applying the CPI-U-X1 to CPI-U ratio calculated for 1967 to the 1947 to 1966 CPI-U indexes.

NOTE: The percentage change in prices between earlier years data and 1992 should be computed by dividing the annual average Consumer Price Index (CPI-U-X1) for 1992 by the annual average for the earlier year(s).

Table B-2. Households, by Total Money Income, Race, and Hispanic Origin of Householder: 1967 to 1992

[Income in 1992 CPI-U-X1 adjusted dollars. Households as of March of the following year. For meaning of symbols, see text]

Race and Hispanic origin of householder and year	Number (thous.)	Percent distribution										Median income		Mean income	
		Total	Under $5,000	$5,000 to $9,999	$10,000 to $14,999	$15,000 to $24,999	$25,000 to $34,999	$35,000 to $49,999	$50,000 to $74,999	$75,000 to $99,999	$100,000 and over	Value (dollars)	Standard error (dollars)	Value (dollars)	Standard error (dollars)

[1]Implementation of a new March CPS processing system.
[2]Implementation of Hispanic population weighting controls.
[3]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[4]First year medians are derived using both pareto and linear interpolation. Prior to this year all medians were derived using linear interpolation.
[5]These estimates were derived using pareto interpolation and may differ from published data which were derived using linear interpolation.
[6]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[7]Implementation of a new March CPS processing system.
[8]Persons of Hispanic origin may be of any race. Income data for Hispanic origin households are not available prior to 1972.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-4. Age of Householder—Median Money Income of Households: 1967 to 1992

[1] Implementation of a new March CPS processing system.
[2] Implementation of Hispanic population weighting controls.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-6. Families, by Total Money Income, Race, and Hispanic Origin of Householder: 1967 to 1992

[Income in 1992 CPI-U-X1 adjusted dollars. Families as of March of the following year. For meaning of symbols, see text]

Race and Hispanic origin of householder and year	Number (thous.)	Percent distribution										Median income		Mean income	
		Total	Under $5,000	$5,000 to $9,999	$10,000 to $14,999	$15,000 to $24,999	$25,000 to $34,999	$35,000 to $49,999	$50,000 to $74,999	$75,000 to $99,999	$100,000 and over	Value (dollars)	Standard error (dollars)	Value (dollars)	Standard error (dollars)

[1]Implementation of a new March CPS processing system.
[2]Implementation of Hispanic population weighting controls.
[3]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[4] First year medians are derived using both pareto and linear interpolation. Prior to this year all medians were derived using linear interpolation.
[5] These estimates were derived using pareto interpolation and may differ from published data which were derived using linear interpolation.
[6]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[7]Implementation of a new March CPS processing system.
[8]Persons of Hispanic origin may be of any race. Income data for Hispanic origin families are not available prior to 1972.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-8. Average Income-to-Poverty Ratios for Families, by Income Quintile, Race, and Hispanic Origin: 1967 to 1992

(Families as of March of the following year. For meaning of symbols, see text)

Year	Average income-to-poverty ratios											
	All races						White

[1]Implementation of a new March CPS processing system.
[2]Implementation of Hispanic population weighting controls.
[3]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[4]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[5]Implementation of a new March CPS processing system.
[6]Persons of Hispanic origin may be of any race.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

NOTE: Average income-to-poverty ratios are computed by dividing the mean income of families in each quintile by the mean poverty threshold of the families. For information on the derivation of poverty thresholds, see Current Population Reports, Series P60-185, *Poverty in the United States: 1992.*

Table B-9. **Average Income-to-Poverty Ratios for Unrelated Individuals, by Income Quintile, Race, and Hispanic Origin: 1967 to 1992**

[1]Implementation of a new March CPS processing system.
[2]Implementation of Hispanic population weighting controls.
[3]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[4]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[5]Implementation of a new March CPS processing system.
[6]Persons of Hispanic origin may be of any race.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

NOTE: Average income-to-poverty ratios are computed by dividing the mean income of unrelated individuals in each quintile by the mean poverty threshold of unrelated individuals. For information on the derivation of poverty thresholds, see Current Population Reports, Series P60-185, *Poverty in the United States: 1992.*

Table B-10. Age of Householder—Median Money Income of Families: 1947 to 1992

(Numbers in thousands as of March of the following year. Income years 1979 and earlier include householders 14 years old and over. Income in 1992 CPI-U-X1 adjusted dollars)

Year	15 to 24 years		25 to 34 years		35 to 44 years		45 to 54 years		55 to 64 years		65 years and over	
	Number of families	Median income	Number of families	Median income	Number of families	Median income	Number of families	Median income	Number of families	Median income	Number of families	Median income

[1]Implementation of a new March CPS processing system.
[2]Implementation of Hispanic population weighting controls.
[3]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[4]First year medians are derived using both pareto and linear interpolation. Prior to this year all medians were derived using linear interpolation.
[5]These estimates were derived using pareto interpolation and may differ from published data which were derived using linear interpolation.
[6]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[7]Implementation of a new March CPS processing system.
[8]Questionnaire expanded to ask eight income questions.
[9]Implementation of new procedures to impute missing data only.
[10]Implementation of first hot deck procedure to impute missing income entries (all income data imputed if any missing).
[11]Implementation of expanded income questions to show wage and salary, farm self-employment, nonfarm self-employment, and all other nonearned income separately.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-11. Type of Family—Median Money Income of Families: 1947 to 1992

(Numbers in thousands. Families as of March of the following year. Income in 1992 CPI-U-X1 adjusted dollars. For meaning of symbols, see text)

Year	Number of families					Median income				
	Married-couple families			Male householder, no wife present	Female householder, no husband present	Married-couple families			Male householder, no wife present	Female householder, no husband present
	Total	Wife in paid labor force	Wife not in paid labor force			Total	Wife in paid labor force	Wife not in paid labor force

Table B-13. Work Experience of Husband and Wife—Median Money Income of Married-Couple Families: 1987 to 1992

(Numbers in thousands. Married-couple families as of March of the following year. Income in 1992 CPI-U-X1 adjusted dollars)

Work experience	1992		1991		1990		1989		1988		1987 [1]	
	Number	Median income	Number	Median income	Number	Median income	Number	Median income	Number	Median income	Number	Median income
Married-couple families ...	53,171	$42,064	52,457	$42,229	52,147	$42,825	52,317	$43,614	52,100	$43,156	51,675	$43,077
Husband worked	42,247	47,674	42,015	47,380	42,241	47,603	42,419	48,439	41,504	48,304	41,102	48,170
Wife worked	31,327	51,258	31,159	50,658	30,994	50,811	31,080	51,761	30,150	51,618	29,299	51,582
Wife worked year-round, full-time	17,375	56,283	16,863	56,028	16,324	56,509	16,258	57,666	15,894	57,755	15,162	57,162
Wife did not work	10,920	37,045	10,857	37,331	11,247	38,131	11,339	39,828	11,353	38,804	11,803	39,622
Husband worked year-round, full-time	33,024	51,652	32,424	51,600	33,322	51,071	33,931	52,181	33,099	51,935	32,564	52,096
Wife worked	24,962	54,681	24,496	54,294	25,060	53,984	25,351	55,002	24,616	55,097	23,814	55,000
Wife worked year-round, full-time	14,316	59,286	13,625	58,811	13,656	59,113	13,735	59,959	13,457	60,354	12,681	60,380
Wife did not work	8,062	41,435	7,928	41,738	8,262	41,954	8,580	43,561	8,483	42,867	8,750	43,913
Husband did not work	10,924	23,058	10,442	23,779	9,907	23,963	9,898	23,125	10,596	23,673	10,573	23,745
Wife worked	2,769	30,020	2,514	29,416	2,296	29,810	2,265	29,731	2,836	31,355	2,858	31,684
Wife worked year-round, full-time	1,407	35,070	1,232	35,310	1,113	35,037	1,109	34,350	1,330	37,114	1,241	38,011
Wife did not work	8,154	21,105	7,927	22,267	7,610	22,335	7,633	21,467	7,760	21,388	7,715	21,334

[1] Implementation of a new March CPS processing system.

NOTE: The change listed above is discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-14. Persons, by Total Money Income, Race, Hispanic Origin, and Sex: 1967 to 1992

[Income in 1992 CPI-U-X1 adjusted dollars. Persons 15 years old and over beginning with March 1980, and persons 14 years old and over as of March of the following year for previous years. For meaning of symbols, see text]

Race, Hispanic origin, sex, and year	Number (thous.)	With income									Median income		Mean income	
		Number with income (thous.)	Percent distribution											
			Total	$1 to $2,499 or loss	$2,500 to $4,999	$5,000 to $9,999	$10,000 to $14,999	$15,000 to $24,999	$25,000 to $49,999	$50,000 to $74,999	$75,000 and over	Value (dollars)	Standard error (dollars)	Value (dollars)	Standard error (dollars)

[1]Implementation of a new March CPS processing system.
[2]Implementation of Hispanic population weighting controls.
[3]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[4]First year medians are derived using both pareto and linear interpolation. Prior to this year all medians were derived using linear interpolation.
[5]These estimates were derived using pareto interpolation and may differ from published data which were derived using linear interpolation.
[6]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[7]Implementation of a new March CPS processing system.
[8]Questionnaire expanded to ask eight income questions.
[9]Implementation of new procedures to impute missing data only.
[10]Implementation of first hot deck procedure to impute missing income entries (all income data imputed if any missing).
[11]Implementation of expanded income questions to show wage and salary, farm self-employment, nonfarm self-employment, and all other nonearned income separately.

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-17. Year-Round, Full-Time Workers—Median Money Earnings by Race and Hispanic Origin: 1960 to 1992—Continued

(Numbers in thousands. Persons 15 years old and over with earnings beginning with March 1980 and persons 14 years old and over as of March of the following year for previous years. Prior to 1989 earnings are for civilian workers only. Earnings in 1992 CPI-U-X1 adjusted dollars. For meaning of symbols, see text)

Year	Male				Female			
	All races	White	Black	Hispanic origin[1]	All races	White	Black	Hispanic origin[1]
MEDIAN EARNINGS								
1992	$30,358	$31,012	$22,369	$20,049	$21,440	$21,659	$19,819	$17,138

[1]Persons of Hispanic origin may be of any race.
[2]Implementation of a new March CPS processing system.
[3]Implementation of Hispanic population weighting controls.
[4]Implementation of 1980 census population controls. Questionnaire expanded to show 27 possible values from 51 possible sources of income.
[5]First year medians are derived using both pareto and linear interpolation. Prior to this year all medians were derived using linear interpolation.
[6]These estimates were derived using pareto interpolation and may differ from published data which were derived using linear interpolation.
[7]Implementation of a new March CPS processing system. Questionnaire expanded to ask eleven income questions.
[8]Implementation of a new March CPS processing system.
[9]Questionnaire expanded to ask eight income questions.
[10] Implementation of new procedures to impute missing data only.
[11]Implementation of first hot deck procedure to impute missing income entries (all income data imputed if any missing).

NOTE: The changes listed above are discussed in more detail in a paper, "Effects of the March Current Population Survey's New Processing System on Estimates of Income and Poverty," by Edward J. Welniak, Jr., published in the American Statistical Association Meeting Proceedings, 1990.

Table B-18. Ratio of Female-to-Male Median Earnings for Year-Round, Full-Time Workers by Race and Hispanic Origin: 1960 to 1992

(Prior to 1989 earnings are for civilian workers only. For meaning of symbols, see text)

Appendix C. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The March 1980 CPS to March 1993 CPS employed a different definition of a farm than used in Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population. According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) as defined in June 1984 constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's). References to metropolitan-nonmetropolitan residence by size are based on the population of the CMSA.

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

Geographic regions. The four major regions and nine Census divisions of the United States for which data are presented in this report represent groups of States as follow:

Northeast:

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Middle Atlantic: New Jersey, New York, and Pennsylvania.

Midwest (formerly North Central):

East North Central: Illinois, Indiana, Michigan, Ohio, and Wisconsin.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.

South:

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.

East South Central: Alabama, Kentucky, Mississippi, and Tennessee.

West South Central: Arkansas, Louisiana, Oklahoma, and Texas.

West:

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.

Pacific: Alaska, California, Hawaii, Oregon, and Washington.

North and West:

Northeast, Midwest, and West combined.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," or "occupied without payment of cash rent". For some tabulations, the latter of the groups are combined into a single "renter occupied" group.

Income. (For the definition of income used in the SIPP, see the "Comparability of Current Population Survey Income Data with other Data" section of this appendix.) For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: 1) earnings from longest job (or self-employment); 2) earnings from jobs other than longest job; 3) unemployment compensation; 4) worker's compensation; 5) Social Security; 6) Supplemental Security income; 7) public assistance; 8) veterans' payments; 9) survivor benefits; 10) disability benefits; 11) pension or retirement income; 12) interest; 13) dividends; 14) rents, royalties, and estates and trusts; 15) educational assistance; 16) alimony; 17) child support; 18) financial assistance from outside of the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics such as age, labor force status, and family or household composition are as of the survey date. The income of the family/household does not include amounts received by persons who were members during all or part of the income year if these persons no longer resided in the family/household at the time of interview. However, income data are collected for persons who are current residents but did not reside in the household during the income year.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that non-cash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Longest job and other employment earnings can be classified into the three types:

1. *Money wage or salary income* is the total received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

2. *Net income from nonfarm self-employment* is the net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

3. *Net income from farm self-employment* is the net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, rent received from farm property if payment is made based on a percent of crops produced and incidental receipts from the sale of wood, sand,

gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise, inventory changes were not taken into account.

Unemployment compensation includes payments received from government unemployment agencies or private companies during periods of unemployment and any strike benefits received from union funds.

Workers compensation includes payments received periodically from public or private insurance companies for injuries received at work.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) 65 years old or over, (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments made to low-income persons, such as aid to families with dependent children and general assistance.

Veterans' payments include payments made periodically by the Department of Veterans Affairs to disabled members of the Armed Forces or to survivors of deceased veterans for education and on-the-job training, and means-tested assistance to veterans.

Survivor benefits include payments from survivor or widows' pensions, estates, trusts, annuities, or any other types of survivor benefits. Payments can be reported from 10 different sources: 1) private companies or unions; 2) Federal government (Civil Service); 3) military; 4) state or local governments; 5) railroad retirement; 6) workers' compensation; 7) Black lung payments; 8) estates and trusts; 9) annuities or paid-up insurance policies; and 10) other survivor payments.

Disability benefits include all payments received as a result of a health problem or disability. Payments can be reported from 10 sources: 1) workers' compensation; 2) companies or unions; 3) Federal government (Civil Service); 4) U.S. Military; 5) state or local governments; 6) railroad retirement; 7) accident or disability insurance; 8) Black lung payments; 9) state temporary sickness; or 10) other disability payments.

Retirement benefits include payments reported from 8 sources: 1) companies or unions; 2) Federal government (Civil Service); 3) U.S. Military; 4) state or local governments; 5) railroad retirement; 6) annuities or paid-up insurance policies; 7) IRA, KEOGH, or 401(k) payments; or 8) other retirement income.

Interest income includes payments received or credited to: savings accounts, bonds, Treasury notes, IRA's, certificates of deposit, interest-bearing checking accounts, and all open investments that pay interest.

Dividends include income received from stockholdings and mutual fund shares. Capital gains from the sale of stockholdings are not included as dividends.

Rents, royalties, and estates and trusts include the net income from the rental of a house, store, or other property, receipts from boarders or lodgers, net royalty income, and periodic payments from estate or trust funds.

Educational assistance includes Pell Grants, other government educational assistance, any scholarships or grants, or financial assistance from employers, friends, or relatives not residing in the students household.

Child support includes all periodic payments paid by parents for the support of children, even if these payments are made through a state or local government office.

Alimony includes all periodic payments to ex-spouses. One-time property settlements are not included.

Financial assistance from outside of the household includes periodic payments from nonhousehold members. Gifts or sporadic assistance are not included.

Government transfers include payments from the following sources: 1) Unemployment compensation, 2) State workers compensation, 3) Social Security, 4) Supplemental Security Income (SSI), 5) Public assistance, 6) Veterans' benefits, 7) government survivor benefits, 8) government disability benefits, 9) government pensions, and 10) government educational assistance.

Other income includes all other regularly received payments that are not included elsewhere on the questionnaire. Some examples include: state programs such as foster child payments, military family allotments, income received from foreign government pensions, etc.

Receipts not counted as income include: (1) capital gains such as money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings is the algebraic sum of money wages and salary and net income from farm and nonfarm self-employment.

Income other than earnings is the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Median income. Median income is the amount which divides the income distribution into two equal groups, half having incomes above the median, half having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The medians for persons are based on persons 15 years old and over with income.

Mean income. Mean income is the amount obtained by dividing the total aggregate income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons 15 years old and over with income.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population in that group (excluding patients or inmates in institutional quarters).

Index of income concentration or Gini index. This is a statistical measure of income inequality. A measure of 0 indicates perfect equality, i.e., all persons having equal shares of the income. A measure of 1 indicates perfect inequality, i.e., one person has all the income and the rest have none. For a more detailed discussion see Current Population Reports, Series P-60, No. 123.

Average Income-to-Poverty Ratios. These ratios represent the average ratio of family or unrelated individual income to their appropriate poverty threshold. Ratios below 1.00 mean that the average income for the respective families or unrelated individuals is below the official poverty definition, while a ratio of 1.00 or greater indicates income above the poverty level. A ratio of 2.25, for example, indicates that on average, income was 125 percent above the appropriate poverty threshold. For a definition of poverty and the poverty thresholds in 1991, see Current Population Reports, Series P-60, No . 181.

Households. Households consist of all persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. All persons who are not members of households are regarded as living in group quarters. Persons living in military barracks and inmates of institutions were excluded from the survey.

Householder. The person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

Families. (For the definition of families used in the SIPP see the "Comparability of Current Population Survey Income Data With Other Data" section of this appendix.) Families are groups of two persons or more (one of

whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) were no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family households. Family households are households maintained by a family (as defined above). Members of family households include any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of family.)

Unrelated subfamilies. Formerly called secondary families, unrelated subfamilies include two persons or more who are related to each other by birth, marriage, or adoption, but who are not related to the householder. An unrelated subfamily may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of unrelated subfamilies. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with data for 1968 (and beginning with census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

Married couples. As defined for census purposes, married couples consist of a husband and wife enumerated as members of the same family household. A married couple may or may not have children living with them.

Unrelated individuals. These are persons (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Nonfamily householders. Formerly called primary individuals, nonfamily householders are persons maintaining a household while living alone or with nonrelatives only.

Secondary individuals. Secondary individuals are persons in households or group quarters such as guests, roomers, boarders, or resident employees (excluding nonfamily householders and inmates of institutions) who are not related to any other person in the household or group quarters. (See section on unrelated subfamily for slight change in coverage of secondary individuals in 1968.)

Size of household or family. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Related children under 18 years of age. In a family, related children under 18 years of age include sons and daughters, including stepchildren and adopted children, of the householder and all other children in the household who are related to the householder by blood, marriage, or adoption.

Related persons and family members. This includes all persons in the household related to the householder.

Marital status. This classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of interview.

The category "married" is further divided into "married, spouse present," "separated," and "other married, spouse absent." A householder is classified as "married, spouse present" if their spouse is reported as a member of the household, even though he or she might be temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the interview. Persons reported as "separated" includes those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The group "other married, spouse absent" includes married persons living apart because either the wife or the husband is employed and living a considerable distance from home, is residing in an institution, has moved to another area, or has a different place of residence for any other reason except separation as defined above.

Number of earners. This includes all persons in the household with $1 or more in wages and salaries or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age. This classification is based on the age of the person at his/her last birthday.

Race. Race is based on five groups: (1) White, (2) Black, (3) Asian or Pacific Islander, (4) American Indian, Aleut, or Eskimo, and (5) other.

Hispanic origin. Persons of Hispanic origin are identified by a question that asks for self-identification of the person's origin or descent. Respondents are asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, are those who indicate that their origin is Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. It should be noted that persons of Hispanic origin may be of any race.

Educational Attainment. This classification refers to the highest level of school completed or the highest degree received. The category, "Associate degree" includes persons whose highest degree is an associate degree either in (1) an occupational program that prepares them for a specific occupation, and the course work may or may not be creditable toward a bachelor's degree or (2) an academic program primarily in the arts and sciences, and the course work is transferrable to a bachelor's degree. Some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology, but specifically exclude barber school, cosmetology, or other training for a specific trade.

Data on educational attainment are derived from a question that asks, "What is the highest level of school . . . has completed or the highest degree . . . has received?" The question on educational attainment applies only to progress in "regular" schools. Such schools include public, private and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to schools in the regular school system.

Beginning in January 1992, the CPS began using an educational attainment question similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1992 CPS are not directly comparable to CPS data for prior years. Prior to 1992, the CPS educational attainment data were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. For a discussion of the change in the form of the question and some of the motivating factors behind the change, see the introductory text of the report, *Money Income of Households, Families, and Persons in the United States: 1991,* Current Population Reports, Series P-60, No. 180.

Paid labor force. Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week or were looking for work at the time and had last worked as a wage and salary or self-employed worker.

Occupation. Occupation classification is based on the kind of work the person does on his/her job. If the person changed jobs, the data refer to the occupation of the job held longest during the previous calendar year. The current occupational groupings were derived from the classification system used in the 1990 Census of Population. Changes to the occupation classification system have occurred most recently for the income years 1991, 1982, and 1970.

Work experience. Work experience is based on work for pay or profit or work without pay on a family-operated farm or business at any time during the previous year, on a part time or full time basis.

Weeks worked in the income year. This is based on the number of different weeks, during the preceding calendar year, in which a person did any work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time employment. Defined as follows: part-time indicates less than 35 hours of work per week in a majority of the weeks worked during the year. Full-time indicates 35 hours or more per week during a majority of the weeks worked.

Year-round, full-time. Indicates 50 or more weeks of full-time employment during the previous calendar year.

Nonworkers. Nonworkers are persons who did not do any work in the calendar year preceding the survey.

Workers. Persons who worked one or more days during the previous calendar year.

Symbols. A dash (-) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol "X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent.

The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. Since 1979, base figures are based on civilian noninstitutional population controls for age, race, and sex established by the 1980 census. The base figures shown for 1971 to 1978 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years from 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census.

Computation of aggregate income by fifths. The data shown on aggregate income and dollar cutoffs for fifths (and top 5 percent) of households and families, ranked by size of their total money income, were calculated using sorted microdata.

Computation of constant dollar distributions. For the years since 1967, adjustments for price change have been made by converting the incomes of households, families, or persons on the microdata file into constant dollars on the basis of the Consumer Price Index (CPI-U-X1). The microdata were then tallied into the appropriate income interval.

The indexes used to make the constant dollar conversions are shown in table B-1. The Consumer Price Index (CPI-U-X1) is an index designed to measure changes in family purchasing power. While the CPI is a good measure of the changes in prices paid by the average family represented in the index (urban consumers), it is not necessarily a good measure of the changes in prices faced by consumers of different characteristics and income levels. These limitations should be noted when comparing figures adjusted to constant dollars using the CPI since the same index was used for all families and all income levels.

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Survey of Income and Program Participation (SIPP) data.

The concepts used in the SIPP and the March supplement to the Current Population Survey (CPS), though similar, differ in some regards. These differences occur primarily between components of the income definition used in each survey and the manner in which certain reference units are categorized. An explanation of these differences follows.

Two basic units of reference common to both the SIPP and CPS are persons and households. Groups of persons living together, when combined based on relationship, form family units. A family refers to a group of two or more persons related by birth, marriage, or adoption who reside together (one of whom is the householder). Two or more people who live together and are related to one another, but not related to the householder, form an unrelated subfamily. Persons in unrelated subfamilies are not included in the count of family members in the CPS, but are included as family members for the SIPP.

A unique feature of a longitudinal survey, such as SIPP, is its ability to capture change over time. A cross-sectional survey, such as CPS, does not have this feature and can only provide a series of snapshots of the socio-economic conditions that exist at different fixed points in time. The CPS data presented in this report are based on the demographic characteristics as they existed at the time the survey was conducted, March 1993, and are applied to the economic characteristics that existed for the previous calendar year. The demographic data in the SIPP are collected with the economic data throughout the calendar year and are likely to have changed during the year. In order to incorporate the effect of changes over time in family composition in measures of SIPP income data, the data are presented for persons rather than families. Persons are characterized by the income of their respective family unit based on living arrangements each month during the calendar year.

The definition of income used in the SIPP is basically the same as in the CPS. It reflects money income before taxes and does not include the value of noncash benefits such as employer-provided health insurance, food stamps, or Medicaid. Differences do exist however, they are:

- **Accrued interest** on Individual Retirement Accounts (IRA's), KEOGH retirement plans, 401(k), and U.S. saving bonds; and **educational assistance** are excluded in SIPP and counted in the CPS.

- **Lump-sum** or **one-time payments** such as inheritances or insurance settlements are counted in the SIPP and excluded in the CPS.

- **Self-employment income** (both farm and nonfarm) is counted in the CPS as a net amount, gross receipts minus operating expenses. In the SIPP, earning from self-employment is based on the salary or draw received by the owner over the accounting period (4-month intervals).

For an overview of the SIPP and a detailed explanation of the concepts used in that survey, see *Current Population Reports,* Series P-70, No. 24, *Transitions in Income and Poverty Status: 1987-88.*

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis, Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. *Income definition.* The personal income series include, among other items, the following types of nonmoney income which are not included in the Census definition: wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, however, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. *Source of data.* The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employer's wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households.

   As discussed in the section, "Source and Accuracy of Estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 89 percent of the comparable total money income aggregates and about 99 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

   For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see *Size Distribution of Family Personal Income: Methodology and Estimates for 1964,* by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. *Population coverage.* The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post). In addition, the income of persons who died or emigrated prior to the date of interview was not reported in the Census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

4. *Average income.* The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the Census averages, in contrast, are for households, families, unrelated individuals, or income recipients 15 years old and over.

Department of Agriculture farm income series. The farm income data are not directly comparable to that published by the U.S. Department of Agriculture (USDA) for several reasons. The USDA publishes two major series on income of farms: (1) net farm income and (2) net cash farm income.

For reasons listed below, the estimates of farm self-employment income per person or per family as published by the Bureau of the Census differ from estimates of operators' net farm income or net cash farm income per farm as published by the Department of Agriculture:

1. The unit of analysis in the USDA estimates is an establishment (farm) rather than a household as in the Bureau of the Census estimate.

2. The estimates of farm self-employment income as published by the Bureau of the Census and USDA's net cash income series exclude the nonmoney income items of crops grown for home consumption and an imputed rental value for farm dwellings. However, these are included in the estimates of operators' net farm income per farm.

3. The USDA estimate of net farm income includes the value of the change in inventories of commodities from the beginning to the end of the year. The USDA net cash farm income and the Bureau of the Census farm self-employment income do not.

4. The USDA series include the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

5. The USDA series is based on income from farms which are organized as proprietorships, partnerships, and corporations. The Bureau of the Census excludes corporate farm income. (The Bureau of Economic Analysis does estimate the proportions of the USDA estimate which are earned by corporate and noncorporate farms for inclusion in the National Income and Product Account.)

   The estimates of the USDA differ from the estimates of the Bureau of the Census methodologically as well as conceptually. The USDA estimates are based on data derived from the Census of Agriculture, farm surveys, business, and governmental sources, and are not available at a farm or household level, while the Bureau of the Census estimates are compiled from data collected in sample surveys. As noted later, the latter estimates are subject not only to sampling variation but also to errors of response and nonreporting.

   For a more detailed discussion of the concepts and methodology used in the USDA estimates, see U.S. Department of Agriculture Handbook No. 365, Major Statistical Series of the U.S. Department of Agriculture, Vol. 3, *Gross and Net Farm Income,* September 1969.

Federal income tax data. For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts, such as veterans' payments, SSI, and AFDC, are not reported on Federal tax returns. Moreover, the coverage of income tax statistics is less inclusive because many persons with low incomes are not required to file tax returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data. Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the reasons listed below.

1. The earnings of the following groups are not covered by the earnings record data: many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers, and domestic servants.
2. Employees' earnings in excess of $51,300 per employer are not covered by the earnings record data.
3. Income other than earnings is not covered by the earnings record data.
4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, while the data presented in this report are obtained by household interviews.

COMPARABILITY OF CURRENT CPS ESTIMATES WITH THOSE FROM PREVIOUS YEARS

Estimates from the CPS are in some instances not strictly comparable with those from previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 20, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan area as defined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

The data for 1971 through 1992 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. The estimates for 1979 to 1992 are based on civilian noninstitutional population established by the 1980 census. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the overall national level is the introduction of population controls based on the 1970 census. The data for 1971 through 1978 are based on civilian noninstitutional population established by the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes. (See table 3, Current Population Reports, Series P-60, No. 91.) Basically, these changes should have no substantial impact on summary measures, such

as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings, such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings,* Vol. 18, No. 8, February 1972.

Comparability of metropolitan and nonmetropolitan data from the March 1980 CPS with data for previous years. Changes in the CPS design and procedures made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures should be avoided. Trends in metropolitan and nonmetropolitan population growth over the 1970-83 period should not be appreciably affected by the procedural changes. The major revisions to earlier CPS sample design and estimation methods have involved the varying of the number of sample units. Incorporation of approximately 10,000 supplemental housing units into the March CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined subsequent to the introduction of the additional sample that the new inflating (weighting) procedures used for processing both the March 1977 and March 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. For the March 1979 CPS, another revision of the weighting process was introduced to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to March 1978 CPS levels.

Collection of Income and Work Experience Data

This report presents data showing income of persons and family householders with varying amounts of work experience. In the surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the Surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. In order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together beginning with the March 1970 survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions. It should be noted that the proportions of year-round, full-time workers shown in the Series P60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, Special Labor Force Reports, *Work Experience of the Population.* The difference exists because the proportions are not based on exactly the same groups. The proportions presented in the Special Labor Force Reports relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P60 reports relate to civilians who received income, including not only workers but also many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings.

Noninterviews, Nonresponses, and Allocations

In the March 1993 CPS, no interview was obtained for approximately 5.0 percent of the 60,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or refused. In March 1992, for example, an interview was not completed for approximately 10.5 percent of all income supplements. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March 1979 Current Population Survey. As part of the March 1979 CPS, the Bureau conducted an experiment in an effort to improve the reporting of income data. An alternative questionnaire was used on three of the eight rotation groups. The experimental questionnaire used more probing questions and inquired about more detailed sources of income. The results of the experiment and its subsequent impact on the estimates are discussed in the Current Population Reports, Series P-60, No. 123, page 12. Beginning in March of 1980, this new questionnaire was used for the full CPS sample; with few modifications, this questionnaire is still in use.

Definition of Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series P-60, No. 129.

REVISIONS TO MARCH 1989 CPS PROCESSING SYSTEM

Between 1988 and 1989 a new computer processing system was introduced for the March Current Population Survey. This processing system rewrite was long overdue; the system in use before this year was first introduced in March 1976 and was never fully updated to reflect the numerous questionnaire changes that have taken place since that time. In addition, the programs used to process the CPS files were written in a computer language that is being phased out of use at the Census Bureau.

Since the Census Bureau began imputing for missing income data on the CPS in 1962, there have been three major revisions to the processing system (in 1967, 1976, and 1989). Through all of these revisions, the basic strategy used to make imputations has remained the same. This approach, commonly referred to as "hot deck" imputation, assigns missing responses to sample persons with information from matched sample persons with similar demographic and economic information who answered these questions.

Under the new March processing system, there were three main modifications to the income imputation programs:

1. The edits and imputations were expanded to reflect the full detail of the March income questionnaire. The original processing system was still based on a less detailed CPS income questionnaire that has not been in use since 1980.
2. Under the revised processing procedures, entire sets of March income and noncash benefits data were imputed to supplement noninterviews from the same interviewed person. Under the original processing procedures, earnings, unearned income, and noncash benefits were imputed in separate stages during the processing system. Thus, the new processing system imputes noninterviews more efficiently and is better able to preserve the correlation between earnings, unearned income, and noncash benefits.
3. Both the old and new processing systems employ what are called "statistical matches" to link sample cases with reported data to those requiring imputation for missing responses. In the original processing system, under certain circumstances, reported data were removed and replaced with imputed data during the statistical matching process. Under the new system, reported data are never removed. This was accomplished by expanding the number of statistical matches in the income imputation system.

Table C-1. Comparison of CPS Aggregate Money Income Concepts in 1990 With Independent Estimates

(Independent estimates of aggregate money income adjusted to CPS money income concepts)

Source of income	Independent source		CPS					
			Total		Reported		Imputed	
	Billions of dollars	Percent distribution	Billions of dollars	Percent distribution	Billions of dollars	Percent distribution	Billions of dollars	Percent distribution
Total income	(NA)	(X)	3558.8	(X)	2767.8	(X)	791.1	(X)
Total income, independent estimates	3998.5	100.0	3518.0	100.0	2735.0	100.0	783.1	100.0
Sources With Independent Estimates								
Wages or salaries	2695.6	67.4	2613.8	74.3	2102.9	76.9	511.0	65.3
Nonfarm self-employment	295.5	7.4	211.0	6.0	145.3	5.3	65.7	8.4
Farm self-employment	45.9	1.1	17.1	0.5	13.3	0.5	3.8	0.5

Federal government and military retirement	100.0	80.3	19.7	83.0	66.7	16.4
State and local government retirement	100.0	79.2	20.8	77.3	61.2	16.1
Sources Without Independent Estimates						
Estates and trusts[1]	100.0	87.3	12.7	(X)	(X)	(X)
Alimony and child support	100.0	83.9	16.1	(X)	(X)	(X)
Contributions from persons not living in household	100.0	77.6	22.4	(X)	(X)	(X)
All other money income	100.0	72.8	27.2	(X)	(X)	(X)

[1]Only includes estates and trusts reported as survivor benefits. Other estates and trusts are included with rent and royalty income.

For details on the results of the revised processing procedures, see Current Population Reports, Series P-60, No. 166, *Money Income and Poverty Status in the United States: 1988.*

QUALITY OF INCOME DATA

The quality of the income data derived from the March Current Population Survey (CPS) is affected by five main sources of error. The first, sampling errors, are errors attributable to the fact that a sample rather than a census was taken. Discussion of these errors is included in appendix D of this report. The other four main sources of error, usually termed collectively as nonsampling errors, result from 1) use of a sampling frame that does not include all units for which the survey was intended to provide data, 2) failure to contact all sample units selected, i.e., noninterview and undercoverage problems, 3) poor quality of responses, and 4) missing data problems.

Over the years evaluations of the quality of the March CPS income estimates have revealed downward biases when the survey estimates are compared to independent estimates derived from sources such as the National Income and Product Accounts (NIPA), statistics based on Federal individual income tax returns, data from the Social Security Administration (SSA), etc.

Most analyses of the magnitude of nonsampling errors in the March CPS income estimates have been made at the "aggregate" level since the kind of data needed to make such comparisons are relatively easy to obtain. Some studies have also been conducted at the "micro" level by matching the data provided by individuals with data obtained from administrative records systems for those same individuals. These studies, such as the March 1973 CPS-IRS-SSA exact match, have shown that the nonsampling error problem is much more complex than that measured at the aggregate level. For example, a significant number of respondents provide responses to the amounts of income received that appear to exceed the actual amount received. These are offset by larger errors in the other direction by a somewhat higher proportion of other respondents.

Deriving independent estimates of aggregate income for purposes of evaluating the survey data is difficult. The survey and administrative sources use different definitions, cover different universes, and are based on concepts that are not exactly the same. Therefore, adjustments to the administrative sources must be made to help correct for these inconsistencies and arrive at a valid independent estimate that can be used to make fair and accurate estimates of the quality of the survey estimates. These adjustments attempt to 1) remove income that is received by the institutional population, the deceased, and persons not residing in the United States at the time of the interview, 2) remove any components of income that are received as "in-kind" payments or benefits, and 3) remove any lump-sum or one-time payments, withdrawals, etc.

A degree of uncertainty must be attached to the independent estimates for several reasons. First, not all of the information needed to make some of these adjustments mentioned above are available. Second, administrative sources are also subject to estimation problems resulting from the lack of adequate data, and in the case of the NIPA, periodically undergo significant revision to correct for some of these errors when more recent or more accurate information become available. Third, even though attempts are made to include income received by those operating in the legal "informal" economy in the NIPA these estimates are subject to some unknown degree of error. Fourth, no attempt is made to include estimates of income received through illegal means.

In spite of this uncertainty regarding development of independent estimates it is important to attempt to monitor the quality of the income estimates using these sources. Table C-1 contains comparisons of survey and independent estimates of aggregate income by type of income for 1990. The estimates shown in this table are not directly comparable to those for 1987, which was the last year for which independent estimates were made. Major revisions to the NIPA and some revisions in the methods for arriving at the CPS concepts make most comparisons for these years inconsistent. Because of the difficulties in deriving adequate independent estimates, the table does not cover all types of income identified in the March CPS.

Overall, the survey estimate of $3.518 trillion was about 88 percent of the independent estimate. This result is achieved mainly because the survey estimate of wage and salary income was 97 percent of the independent estimate and this income source accounts for 74 percent of the CPS income estimate from all sources. For the other sources of income the survey estimates range from 33 percent of the independent estimate for dividend income to 103 percent for private pensions and annuities.

As shown in table C-1, the CPS continues to have serious underreporting problems for interest and dividend income where the survey estimates are 51 and 33 percent of the independent estimates. Inclusion of interest or dividend income from IRA and Keogh accounts in the independent estimates contributed to the differences. Although the CPS questions on interest and dividends attempt to capture income from IRA's and Keogh accounts, we feel only a small portion of this income is reported in the CPS. A more appropriate measure would be to omit these sources of interest and dividend income from the independent source estimates.

The apparent extreme underreporting problem for farm income helps to illustrate the difficulty in developing meaningful independent estimates. The estimate of $45.9 billion shown in table C-1 for farm income was derived directly from the NIPA which bases its estimates on data from the United States Department of Agriculture. In contrast, farm income reported on Federal individual income tax returns for 1990 was only $11.4 billion.

Benefits from the means-tested program, Aid to Families With Dependent Children (AFDC), also exhibits a significant survey underestimate at 72 percent of the independent estimate. A significant portion of this problem is associated with misclassification of the source of income. In the CPS, AFDC benefits are often reported by survey respondents as having come from other sources of welfare payments, mainly General Assistance.

Benefits from the Veterans' Administration and unemployment compensation, both of which have a past history of underestimation in the March CPS, continue to have such a problem. Veterans' payments have also been shown to be subject to errors of misclassification with a proportion of these benefits being reported incorrectly by respondents as military retirement.

Pension income estimates from the survey show different patterns of reporting. For State and local government retirement and Federal government and military retirement, the survey estimates represented 77 percent and 83 percent of the independent source estimate, respectively. For private pensions and annuities the survey estimate is 103 percent of that derived from independent sources. The proportion the Federal government and military retirement pension income represents of the independent source is somewhat low and may still be overstated because of the misreporting problem that exists between Veteran's benefits and military retirement. The high level of reporting for private pensions may be, in part, due to some persons incorrectly reporting lump sum amounts in the survey and also to inadequate accounting of pension income in the independent source.

Table C-2 has been included in this report to illustrate the wide variation between income estimates based on Federal individual income tax returns and the NIPA. The NIPA estimates adjusted to survey concepts (column 3 of table C-2) were used as the basis for the calculations in table C-1. In some cases these income amounts differ significantly from those shown in the other columns of table C-2. The first column labeled "IRS AGI as reported" represents the amounts as computed from unaudited Federal tax returns. The second column labeled "AGI after BEA reconciliation" are estimates of adjusted gross income (AGI) for Federal individual tax returns derived by adjusting the NIPA amounts to AGI concepts. This reconciliation is performed annually by the Bureau of Economic Analysis (BEA).

The NIPA estimates used to evaluate the quality of the survey data differ from AGI income for five main reasons. First, the NIPA estimates include the income of persons who are not required to file tax returns. Second, the NIPA estimates reflect both taxable and nontaxable income amounts. Third, the accounting methods used in the NIPA, such as the treatment of depreciation, differ from those used by the IRS. Fourth, the NIPA does not use individual income tax return data extensively in its estimation methodology because of concerns regarding high levels of misreporting. Fifth, some attempts have been made to adjust the NIPA estimates to exclude lump-sum payment, withdrawals, etc. that are sometimes included as income for tax purposes.

Table C-2. **Comparison of Independent Sources of Income for 1990**

(Figures in billions of dollars)

Source of income	IRS AGI as reported	AGI after BEA reconciliation	NIPA adjusted to survey concept
Wages and salary	[1]2,615.3	[1]2,728.3	2,695.6
Nonfarm self-employment	138.6	297.2	295.5
Farm self-employment	−0.8	34.3	45.9
Interest	[2]223.0	[2]240.6	338.8
Dividends	[3]80.1	[3]145.7	118.8
Net rents and royalties	4.8	37.6	44.1
Pensions and annuities	161.0	214.1	[4]157.0

[1]Excludes $10.3 in nontaxable military wages, $1.7 in Thrift savings income, and $41.0 in estimated 401(k) income.

[2]Excludes $30.5 in IRA-Keogh interest and $38.7 in tax-exempt interest income.

[3]Excludes $15.8 in IRA-Keogh dividend income.

[4]Excludes $66.5 in private pension lump sum payments.

Appendix D. Source and Accuracy of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in March of years 1968 through 1993 in the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses only March data for its estimates. The March survey uses two sets of questions, the basic CPS and the supplement.

Some estimates in this report come from data obtained from the 1987 and 1990 Panels of the Survey of Income and Program Participation (SIPP). The Bureau of the Census also conducts the SIPP every month.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Field representatives ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The present CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 60,000 occupied households are eligible for interview every month. Field representatives are unable to obtain interviews at about 2,600 of these units because the occupants are not home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and reliability of the data and to satisfy changing data needs. The most recent changes were completely implemented in July 1985.

Table D-1 summarizes changes in the CPS designs for the years for which data appear in this report.

CPS March Supplement. In addition to the basic CPS questions, field representatives asked supplementary questions in March about money income received the previous calendar year.

To obtain more reliable data for the Hispanic-origin population, the March CPS sample was increased by about 2,500 eligible housing units, interviewed the previous November, that contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

Table D-1. **Description of the March Current Population Survey**

Time period	Number of sample areas	Housing units eligible[1]	
		Interviewed	Not interviewed
1990 to 1993	729	57,400	2,600
1989	729	53,600	2,500
1986 to 1988	729	57,000	2,500
1985	[2]629/729	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1968 to 1971	449	48,000	2,000

[1]Excludes about 2,500 Hispanic households added from the previous November sample. (See "CPS March Supplement.")

[2]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

CPS Estimation Procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces. The independent population estimates used for 1981 (1980 for income estimates) to present were based on updates to controls established by the 1980 Decennial Census. Data previous to 1981 were based on independent population estimates from the most recent decennial census. For more details on the change in independent estimates, see the section entitled "Introduction of 1980 Census Population Controls" in an earlier report (Series P-60, No. 133). The estimation procedure for the March supplement included a further adjustment so husband and wife of a household received the same weight.

The estimates in this report for 1983 (from March 1984 CPS) and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population

by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

Basic SIPP. The sample from the SIPP, 1987 and 1990 panels, is located in 230 Primary Sampling Units (PSU's) each consisting of a county or a group of contiguous counties. Within these PSU's, expected clusters of two or four housing units (HU's) were systematically selected from lists of addresses prepared for the 1980 Decennial Census to form the bulk of the sample. Similar to CPS, the SIPP sample is continually updated to account for HU's built after the 1980 census.

The 1990 panel differs from the other panels as a result of oversampling for low income. The oversample was constructed by taking a small subsample from the 1989 panel and combining it with the 1990 panel. Variables such as race, ethnicity, and sex were used for the oversampling since low income data for 1989 panel households were unavailable. The 1989 panel subsample contains all Black households, all Hispanic households, all households with the householder having no spouse present, living with relatives, and a random sample of all the other household types. The latter random sample was done in an attempt to avoid bias in the sample.

The period covered by the SIPP 1987 longitudinal panel consists of 28 interview months (seven interviews) conducted from February 1987 to May 1989. The first interview was conducted during February, March, April, and May of 1987. The period covered by the 1990 panel consists of 32 interview months (8 interviews) conducted from February 1990 to September 1992. The first interview was conducted during February, March, April, and May of 1990. Each sample person was visited every 4 months after the first interview. At each interview the reference period was the four months preceding the interview month. In general, one cycle of four interviews covering the entire sample, using the same questionnaire is called a wave. For subsequent interviews, only original sample persons (those in Wave 1 sample households and interviewed in Wave 1) and persons living with them were eligible to be interviewed. Original sample persons were followed if they moved to a new address, unless the new address was more than 100 miles from a SIPP sample area. Then, telephone interviews were attempted. All first wave noninterviewed households were automatically designated as noninterviews for all subsequent interviews. When original sample persons moved to remote parts of the country and couldn't be reached by telephoning, moved without leaving a forwarding address, or refused to be interviewed, additional noninterviews resulted.

Approximately 33,100 persons were initially eligible to be interviewed; 24,400 were classified as interviewed for the life of the 1987 panel. The person nonresponse rate was 26 percent.

Approximately 61,200 persons were initially eligible to be interviewed for the 1990 panel. About 43,700 were classified as interviewed for the life of the 1990 panel. The person nonresponse rate was 29 percent.

SIPP Estimation Procedure. Several stages of weight adjustments were involved in the estimation procedure used to derive the SIPP longitudinal person weights. Each person received a base weight equal to the inverse of the probability of selection. Two noninterview adjustment factors were applied. One adjusted the weights of interviewed persons in interviewed households to account for households which were eligible for the sample but could not be interviewed at the first interview. The second was applied to compensate for person noninterviews occurring in subsequent interviews. The Bureau has used complex techniques to adjust the weights for nonresponse, but the success of these techniques in avoiding bias is unknown.

Another factor was applied to each interviewed person's weight to account for the SIPP sample areas not having the same population distribution as the strata from which they were selected.

An additional stage of adjustment to longitudinal person weights was performed to reduce the mean square error of the survey estimates. This was accomplished by ratio adjusting the sample estimates to agree with Current Population Survey (CPS) type estimates of the civilian (and some military) noninstitutional population of the United States by demographic characteristics including age, sex, and race, as of the specified control date. For the 1987 Panel, the control date is March 1, 1987. For the 1990 Panel, the control date is March 1, 1990. The CPS estimates by age, race, and sex, were brought into agreement with estimates from the 1980 Decennial Census which have been adjusted to reflect births, deaths, immigration, emigration, and changes in the Armed Forces since 1980. Also, SIPP estimates were controlled to independent Hispanic controls.

ACCURACY OF ESTIMATES

Since the CPS and SIPP estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: nonsampling and sampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS and SIPP estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. Nonsampling errors can be attributed to several sources including the following:

- Inability to obtain information about all cases in the sample.
- Definitional difficulties.
- Differences in the interpretation of questions.
- Respondents' inability or unwillingness to provide correct information.
- Respondents' inability to recall information.
- Errors made in data collection such as in recording or coding the data.
- Errors made in processing the data.
- Errors made in estimating values for missing data.
- Failure to represent all units with the sample (undercoverage).

CPS and SIPP undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS and SIPP undercoverage is about 7 percent. Undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

A common measure of survey coverage is the coverage ratio, the estimated population before ratio adjustment divided by the independent population control. Table D-2 shows CPS coverage ratios for age-sex-race groups for a recent month. The CPS coverage ratios can exhibit some variability from month to month, but these are a typical set of coverage ratios. Other Census Bureau household surveys like the SIPP experience similar coverage.

Answers to questions about money income often depend on the memory or knowledge of one person in a household. Recall problems can cause underestimates of income in survey data, because it is easy to forget minor or irregular sources of income. Respondents may also misunderstand what the Census Bureau considers money income, or may simply be unwilling to answer these questions correctly because the questions are considered too personal. See Appendix C, "Quality of Income Data ," for more discussion.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

For additional information on nonsampling error found in the SIPP data, refer to the *Quality Profile for the Survey of Income and Program Participation*, Bureau of the Census, May 1990.

Comparability of Data. Data obtained from the CPS, SIPP, and other sources are not entirely comparable. This results from differences in field representative training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

Caution should also be used when comparing CPS estimates in this report, which reflect 1980 census-based population controls, with estimates for 1979 (from March 1980 CPS) and earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions, but did have a significant impact on levels. For example, use of 1980-based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1981 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1983, compare Hispanic estimates over time cautiously.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept, the introduction of the new farm definition, and use of more detailed income intervals in the upper range of the income distribution. Due to these and other changes, one should use caution when comparing estimates for 1979 through 1992 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 129).

Another major change is that CPS income estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design.

Table D-2. **CPS Coverage Ratios**

Age	Non-Black		Black		All persons		
	Male	Female	Male	Female	Male	Female	Total
0 to 14 years	0.948	0.960	0.913	0.930	0.943	0.955	0.949
15 years	0.953	0.986	0.975	1.025	0.956	0.993	0.974
16 years	0.877	0.997	0.886	0.963	0.879	0.991	0.934
17 years	0.958	0.956	0.860	0.932	0.942	0.952	0.947
18 years	0.950	0.958	0.931	0.692	0.947	0.916	0.931
19 years	0.882	0.953	0.773	0.740	0.866	0.920	0.893
20 to 24 years	0.889	0.918	0.645	0.820	0.856	0.904	0.881
25 to 26 years	0.867	0.964	0.687	0.820	0.844	0.943	0.894
27 to 29 years	0.919	0.941	0.700	0.834	0.892	0.926	0.909
30 to 34 years	0.884	0.947	0.667	0.865	0.859	0.936	0.898
35 to 39 years	0.892	0.936	0.693	0.928	0.871	0.935	0.903
40 to 44 years	0.895	0.933	0.781	0.889	0.884	0.928	0.906
45 to 49 years	0.933	0.955	0.842	0.938	0.925	0.953	0.939
50 to 54 years	0.953	0.958	0.845	0.869	0.942	0.948	0.945
55 to 59 years	0.918	0.905	0.797	0.906	0.906	0.905	0.905
60 to 62 years	0.926	0.874	0.702	0.779	0.904	0.864	0.883
63 to 64 years	0.851	0.960	0.814	0.944	0.848	0.959	0.906
65 to 67 years	0.891	0.945	0.785	0.991	0.881	0.950	0.918
68 to 69 years	0.876	0.986	0.741	0.810	0.864	0.970	0.922
70 to 74 years	0.955	1.020	0.866	0.949	0.948	1.014	0.985
75 to 99 years	0.983	1.019	0.713	0.861	0.962	1.006	0.990
15 years and older	0.911	0.951	0.752	0.877	0.893	0.942	0.919
0 years and older	0.919	0.953	0.802	0.891	0.905	0.945	0.926

NOTE: These coverage ratios are for May 1993.

Estimates by type of residence category such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 CPS supplement questionnaire was revised to enable the coding of higher amounts of earnings from longest job.

Note When Using Small Estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater for CPS; 200,000 or greater for SIPP. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Estimation of Median Incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto interpolation or linear interpolation. Currently, linear interpolation is used to estimate all medians. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 through 1987 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families and households. This is because the width of the income interval containing the estimate is greater than $2,500. Estimates of median income for 1976, 1977, and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families and households. This is because the width of the income interval containing the estimate is greater than $1,000. All other estimates of median income and associated standard errors for 1976 through 1992 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Thus, use caution when comparing median incomes above $12,000 for persons or $18,000 for families and households for different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see Series P-60, No. 114, *Money Income in 1976 of Families and Persons in the United States.*

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors,

as calculated by methods described in "Standard Errors and Their Use," are primarily measures of sampling variability, although they may include some nonsampling error.

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics.

Tables D-3 and D-4 provide CPS standard errors of estimated numbers and estimated percentages, respectively. The standard errors in both tables are of persons, households, families, and unrelated individuals for Total or White, Black, and Hispanic. For Asian and Pacific Islanders, use the standard errors for Total or White from these two tables. Table D-5 has CPS standard error parameters for various types of characteristics. Table D-6 provides factors to approximate CPS standard errors for estimates prior to 1992. Table D-7 provides CPS Hispanic parameters for estimates prior to 1984. Table D-8 provides CPS Asian and Pacific Islander parameters for income and nonincome characteristics. Table D-9 has the year-to-year CPS correlation coefficients for income characteristics.

Tables D-10, D-11, D-13, and D-14 provide SIPP standard errors of estimated numbers and percentages, respectively. Tables D-12 and D-15 have SIPP standard error parameters by race and sex.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 (±1.0) percent," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the median annual income of Black families to the median annual income of White families.

Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference.

Standard Errors of Estimated Numbers. There are two ways to compute the approximate standard error, s_x, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from table D-5, D-8, D-12, or D-15 and s is the standard error of the estimate obtained by interpolation from table D-3, D-10, or D-13. The second method uses formula (2), from which the standard errors in table D-3, D-10, or D-13 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table D-5, D-8, D-12, or D-15 associated with the particular type of characteristic. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration

Table 1 shows that there were 68,144,000 family households in 1993. Use the appropriate parameters from table D-5 and formula (2) to get

Estimate, x	68,144,000
a parameter	-0.000012
b parameter	1,899
Standard error	271,000
90% confidence interval	67,698,000 to 68,590,000

The standard error is calculated as

$$s_x = \sqrt{(-0.000012)\,(68{,}144{,}000)^2 + (1{,}899)\,(68{,}144{,}000)} = 271{,}000$$

The 90-percent confidence interval for the estimated number of family households in 1993 is calculated as 68,144,000 ± 1.645x271,000.

Table D-3. **CPS Standard Errors of Estimated Numbers**

(Numbers in thousands)

Size of estimate	Persons			Households, families, and unrelated individuals		
	Total or White	Black	His-panic	Total or White	Black	His-panic
75	13	14	14	12	13	13
100	15	16	16	14	15	15
250	24	25	25	23	24	23
500	34	35	35	32	33	33
1,000	47	50	49	45	46	45
3,000	82	81	78	78	76	72
5,000	105	99	91	100	92	83
10,000	146	116	87	139	107	70
15,000	176	106	(X)	168	95	(X)
25,000	221	(X)	(X)	210	(X)	(X)
50,000	288	(X)	(X)	270	(X)	(X)
100,000	325	(X)	(X)	293	(X)	(X)
150,000	261	(X)	(X)	197	(X)	(X)
175,000	164	(X)	(X)	(X)	(X)	(X)

X Not applicable

Note: See table D-5 or D-8 for the appropriate factor to apply to the above standard errors. For Asian and Pacific Islanders, use the standard errors for Total or White.

The alternate calculation of the standard error, using formula (1) with f = 1.0 from table D-5 and s = 278,000 by interpolation from table D-3, is

$$s_x = 1.0 \times 278{,}000 = 278{,}000$$

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table D-5, D-8, D-12, or D-15 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from table D-5, D-8, D-12, or D-15 and s is the standard error of the estimate obtained by interpolation from table D-4, D-11, or D-14.

Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{\frac{b}{x}\, p(100 - p)} \qquad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals which is the base of the percentage, p is the percentage ($0 \leq p \leq 100$), and b is the parameter in table D-5, D-8, D-12, or D-15 associated with the characteristic in the numerator of the percentage.

Illustration

Table 1 shows that 11,947,000 or 17.5 percent of the 68,144,000 family households were maintained by female householders with no husband present. Use the appropriate parameter from table D-5 and formula (4) to get

Estimate, p	17.5
Base, x	68,144,000
b parameter	1,899
Standard error	0.2
90% confidence interval	17.2 to 17.8

The standard error is calculated as

$$s_{x,p} = \sqrt{\frac{1{,}899}{68{,}144{,}000}\,(17.5)\,(100.0 - 17.5)} = 0.2$$

The 90-percent confidence interval for the estimated percentage of family households that were maintained by female householders with no husband present is calculated as $17.5 \pm 1.645 \times 0.2$.

The alternate calculation of the standard error, using formula (3) with f = 1.0 from table D-5 and s = 0.2 by interpolation from D-4, is

$$s_{x,p} = 1.0 \times 0.2 = 0.2$$

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2 - 2rs_xs_y} \qquad (5)$$

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. The correlation coefficient, r, can be determined from table D-9 for year-to-year comparisons for CPS income estimates of numbers and proportions; for other comparisons and for SIPP assume that r equals zero. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Table D-4. **CPS Standard Errors of Estimated Percentages**

Base of percentage (thousands)	Estimated percentage									
	Persons					Families/Households				
	2 or 98	5 or 95	10 or 90	25 or 75	50	2 or 98	5 or 95	10 or 90	25 or 75	50
Total or White

1,000	0.7	1.1	1.5	2.2	2.5	0.7	1.0	1.0	2.1	2.4
3,000	0.4	0.6	0.9	1.3	1.5	0.4	0.6	0.8	1.2	1.4
5,000	0.3	0.5	0.7	1.0	1.1	0.3	0.5	0.6	0.9	1.1
10,000	0.2	0.3	0.5	0.7	0.8	0.2	0.3	0.4	0.6	0.7
15,000	0.18	0.3	0.4	0.6	0.7	0.17	0.3	0.4	0.5	0.6

Note: See table D-5 or D-8 for the appropriate factor to apply to the above standard errors. For Asian and Pacific Islanders, use the standard errors for Total or White.

Illustration

Table 24 shows that the median income of all males in 1992, x, was $20,654 and the median income of all females in 1992, y, was $10,774. The apparent difference between the median income of males and females in 1992 was $9,880. Table 24 also shows the approximate standard errors, s_x and s_y, are $106 and $70, respectively. Use formula (5) with r=0 to get

	x	y	difference
Estimate	$20,654	$10,774	$9,880
Standard error	$106	$70	$127
90% confidence interval	$20,480 to $20,828	$10,659 to $10,889	$9,671 to $10,089

The standard error of the difference is calculated as

$$s_{x-y} = \sqrt{(106)^2 + (70)^2} = 127$$

The 90-percent confidence interval for the estimated difference between the median income of males and females in 1992 is calculated as $9,880 ± 1.645x $127. Because this interval does not contain zero, we can conclude with 90-percent confidence that the median income of males in 1992 was larger than the median income of females in 1992.

Standard Error of a Median. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the reliability of an estimated median by determining a confidence interval about it. (See the section "Standard Errors and Their Use" for a general discussion of confidence intervals.)

Estimate the 68-percent confidence limits of a median based on sample data using the following procedure.

1. Determine, using formula (4), the standard error of the estimate of 50 percent from the distribution.
2. Add to and subtract from 50 percent the standard error determined in step 1.
3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2.

   Use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise. The formulas for interpolation are:

$$\text{Pareto: } X_{pN} = \exp\left[\frac{\text{Ln}(pN/N_1)}{\text{Ln}(N_2/N_1)}\,\text{Ln}(A_2/A_1)\right]A_1 \quad (6)$$

$$\text{Linear: } X_{pN} = \frac{pN - N_1}{N_2 - N_1}(A_2 - A_1) + A_1 \quad (7)$$

where

Notes: To estimate standard errors prior to 1992, multiply by the appropriate factor in table D-6. For regional estimates multiply the a and b parameters by 0.74, 0.98, 1.04 and 1.06 for Northeast, Midwest, South and West, respectively.

The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

X_{pN} = estimated upper and lower bounds for the confidence interval ($0 \leq p \leq 1$). For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_{pN} estimates the median when $p = 0.50$.

N = *for distribution of numbers*: the total number of units (persons, households, etc.) for the characteristic in the distribution.

= *for distribution of percentages*: the value 1.0.

p = the values obtained in step 2.

A_1, A_2 = the lower and upper bounds, respectively, of the interval containing X_{pN}.

N_1, N_2 = *for distribution of numbers*: the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A_1 and A_2, respectively.

= *for distribution of percentages*: the estimated percentage of units (persons, households, etc.) having values of the characteristic greater than or equal to A_1 and A_2, respectively.

exp is the exponential function.

Ln is the natural logarithm function.

A mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

4. Divide the difference between the two points determined in step 3 by two to obtain the standard error of the median.

Use of the above procedure could result in standard errors which differ from those given in the detailed tables. The reasons for this discrepancy are the use of a more detailed distribution than that given in the tables in determining the published standard errors, and the rounding of the numbers to thousands in the published tables. Linear interpolation was almost always used to compute the published medians and standard errors. Occasionally, a median may lie in an open-ended interval. To calculate its standard error the user must call Housing and Household Economic Statistics Division of the Census Bureau to obtain the methodology.

Illustration

Table 31 shows that the median earnings for male workers was $22,173 in 1992. Table 31 also shows that the size, or base, of the distribution from which this median was determined was 72,318,000 male workers.

1. Using formula (4) with b = 2,254 from table D-5, the standard error of 50 percent on a base of 72,318,000 is about 0.3 percent.

2. To obtain a 68-percent confidence interval on the estimated median, add to and subtract from 50 percent the standard error found in step 1. This yields percentage limits of 49.7 and 50.3.

3. The lower and upper limits for the interval in which the median falls are $20,000 and $22,500, respectively (from table 31). The estimated numbers of male workers with an income greater than or equal to $20,000 and $22,500 are 39,966,000 and 35,588,000, respectively. Using formula (7), the lower limit for the confidence interval of the median is

$$\frac{(.503)\,(72{,}318{,}000) - 39{,}966{,}000}{35{,}588{,}000 - 39{,}966{,}000}(22{,}500 - 20{,}000) + 20{,}000 = 22{,}050$$

Similarly, the upper limit is approximately

$$\frac{(.497)\,(72{,}318{,}000) - 39{,}966{,}000}{35{,}588{,}000 - 39{,}966{,}000}(22{,}500 - 20{,}000) + 20{,}000 = 22{,}298$$

Thus, a 68-percent confidence interval for the median income for male workers is from $22,050 to $22,298.

1. Therefore, the standard error of the median is

$$\frac{(22{,}298 - 22{,}050)}{2} = 124$$

Standard Error of a Mean for Grouped Data. The formula used to estimate the standard error of a mean for grouped data is

$$s_{\bar{x}} = \sqrt{(b/y)S^2} \qquad (8)$$

In this formula, y is the size of the base of the distribution and b is a parameter from table D-5, D-8, D-12, or D-15. The variance, S^2, is given by the following formula:

$$S^2 = \sum_{i=1}^{c} p_i\bar{x}_i^2 - \bar{x}^2 \qquad (9)$$

where $\bar{x}$, the mean of the distribution, is estimated by

$$\bar{x} = \sum_{i=1}^{c} p_i\bar{x}_i \qquad (10)$$

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of households, families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i$ is $(z_{i-1} + z_i)/2$ where z_{i-1} and z_i are the lower and upper interval boundaries, respectively, for group i. $\bar{x}_i$ is assumed to be the most representative value for the characteristic for households, families, and unrelated individuals or persons in group i.

Table D-6. **CPS Factors to Apply to a and b Parameters for Estimates Prior to 1992**

Characteristic	Factor
Non-Hispanic	
1989-1991	1.00
1988	1.11
1981-1987	0.94
1967-1980	0.82
Hispanic	
1989-1991	1.00
1988	1.30
1984-1987	0.94

Group c is open-ended, i.e., no upper interval boundary exists. For income tables for all families, use -$5,000 for "Loss" and $150,000 for "$100,000 and over." Otherwise, the approximate average value for an open-ended interval is

$$\bar{x}_c = \frac{3}{2}z_{c-1} \qquad (11)$$

Standard Error of a Ratio. Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio, x/y, may be computed using

$$s_{x/y} = \frac{x}{y}\sqrt{\left[\frac{s_x}{x}\right]^2 + \left[\frac{s_y}{y}\right]^2 - 2r\frac{s_x s_y}{xy}} \qquad (12)$$

The standard error of the numerator, s_x, and that of the denominator, s_y, may be calculated using formulas described earlier.

In formula (12), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the mean number of children per family with children.

For all other types of ratios, r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. Examples of this type are the mean number of children per family and the family poverty rate.

Table D-7. CPS Standard Error Parameters for Income and Nonincome Characteristics of Hispanics: 1972 to 1983

Characteristics	1972 - 1980			1981 - 1983

Table D-12. SIPP Generalized Variance Parameters for Estimates Using Panel Weights - 1987 Longitudinal Panel File

Characteristics	a	b	f
PERSONS			
Total or White			
Both Sexes	-0.0001654	38,147	1.00
Male	-0.0003421	38,147	1.00
Female	-0.0003203	38,147	1.00
Black			
Both Sexes	-0.0005115	14,113	0.61
Male	-0.0010991	14,113	0.61
Female	-0.0009565	14,113	0.61

NOTE: For estimates expressed as the ratio of x per 100 y or x per 1,000 y, multiply formula (12) by 100 or 1,000, respectively, to obtain the standard error.

Illustration

Table 24 shows the median earnings for year-round, full-time female workers in 1992, x, was $21,440 and the median earnings for year-round, full-time male workers in 1992, y, was $30,358. The ratio of the median earnings is 0.71. Table 24 also shows the approximate standard errors, s_x and s_y, are $101 and $113, respectively. Using formula (12) with r = 0 to get

	x	y	ratio
Estimate	$21,440	$30,358	.71
Standard error	$101	$113	.89
90% confidence interval	$21,274 to $21,606	$30,172 to $30,544	0.70 to 0.72

The standard error is calculated as

$$s_{x/y} = \frac{21,440}{30,358}\sqrt{\left[\frac{101}{21,440}\right]^2 + \left[\frac{113}{30,358}\right]^2} = .0042$$

The 90-percent confidence interval for the ratio of the median earnings for year-round, full-time female workers to the median earnings for year-round, full-time male workers is calculated as .71 ± 1.645x.0042.

Table D-13. **SIPP Standard Errors of Estimated Numbers of Persons for 1990 Panel File**

[Numbers in thousands]

- Indefinite layoff *(30 days or more or no def. recall date)* . . . . . ○ *(Skip to 22C3)*
- Other (Specify) . . . ○

21B. Is . . . receiving wages or salary from his/her employer for any of the time off LAST WEEK?
Yes ○
No ○

21C. Does . . . usually work 35 hours or more a week at this job?
Yes ○
No ○
(Skip to 23 and enter job held last week)

22. *(If LK in 19, skip to 22A.)* Has . . . been looking for work during the past 4 weeks?
Yes ○ No ○ *(Go to 24)*

22A. What has . . . been doing in the last 4 weeks to find work? *(Mark all methods used; do not read list.)*
Checked with –
- pub. employ. agency ○
- pvt. employ. agency ○
- employer directly . . ○
- friends or relatives ○
- Placed or answered ads . . . . . ○
- Nothing (Skip to 24) . . . . . ○
- Other (Specify in notes, e.g., JTPA, union or prof. register, etc.) . . . . . ○

22B. At the time . . . started looking for work, was it because he/she lost or quit a job or was there some other reason?
- Lost job . . . . . ○
- Quit job . . . . . ○
- Left school . . . . . ○
- Wanted temporary work . . . ○
- Change in home or family responsibilities ○
- Left military service . . . . . ○
- Other (Specify in notes) . . . . ○

22C. 1) How many weeks has . . . been looking for work? 00 / 11 / 22 / 33 / 44 / 55 / 66 / 77 / 88 / 99
2) How many weeks ago did . . . start looking for work?
3) How many weeks ago was . . . laid off?

22D. Has . . . been looking for full-time or part-time work?
Full ○ Part ○

22E. Could . . . have taken a job LAST WEEK if one had been offered?
Yes ○ No ○ Why not?
- Already has a job . . . . ○
- Temporary illness . . . . ○
- Going to school . . . . . ○
- Other (Specify in notes) ○

22F. When did . . . last work at a full-time job or business lasting 2 consecutive weeks or more?
Within last 12 months (Specify) . . . ○
(Month) _____
- 1 to 5 years ago . . . . . ○
- More than 5 years ago . . . . . ○
- Never worked full-time 2 wks. or more . . . . . ○
- Never worked at all . . . . . ○

(SKIP to 23. If layoff entered in 21A, enter job, either full- or part-time, from which last off. Else enter last full-time job lasting 2 weeks or more, or "never worked.")

24. CHECK ITEM: *(Rotation number)*
First digit of SEGMENT number is:
○ 2, 3, 4, 6, 7 or 8 *(Skip to 28)*
○ 1 or 5 *(Go to 24A)*

24A. When did . . . last work for pay at a regular job or business, either full-or part-time?
- Within past 12 months ○
- 1 up to 2 years ago . ○
- 2 up to 3 years ago . ○
- 3 up to 4 years ago . ○
- 4 up to 5 years ago . ○ *(Go to 24B)*
- 5 or more years ago . ○
- Never worked . . . . . ○ *(Skip to 24C)*

24B. Why did . . . leave that job?
- Personal, family (incl. pregnancy) or school . . . . ○
- Health . . . . . ○
- Retirement or old age . . . . . ○
- Seasonal job completed . . . . . ○
- Slack work or business conditions ○
- Temporary nonseasonal job completed . . . ○
- Unsatisfactory work arrangements (Hours, pay, etc.) ○
- Other . . . . . ○

24C. Does . . . want a regular job now, either full-or part-time?
- Yes . . . . . ○
- Maybe – it depends (Specify in notes) ○ *(Go to 24D)*
- No . . . . . ○
- Don't know . . . . . ○ *(Skip to 24E)*

24D. What are the reasons . . . is not looking for work? *(Mark each reason mentioned)*
- Believes no work available in line of work or area ○
- Couldn't find any work . . . . . ○
- Lacks nec. schooling, training, skills or experience . . . . . ○
- Employers think too young or too old . . . . . ○
- Other pers. handicap in finding job ○
- Can't arrange child care . . . . . ○
- Family responsibilities . . . . . ○
- In school or other training . . . . . ○
- Ill health, physical disability . . . . . ○
- Other (Specify in notes) . . . . . ○
- Don't know . . . . . ○

24E. Does . . . intend to look for work of any kind in the next 12 months?
- Yes . . . . . ○
- It depends (Specify in notes) ○
- No . . . . . ○
- Don't know . . . . . ○

(If entry in 24B describe job in 23, otherwise, skip to 28)

25. CHECK ITEM: *(Rotation number)*
First digit of SEGMENT number is:
○ 2, 3, 4, 6, 7 or 8 *(Skip to 28)*
○ 1 or 5 *(Go to 25A)*

25A. How many hours per week does . . . USUALLY work at this job? 00 / 11 / 22 / 33 / 44 / 55 / 66 / 77 / 88 / 99

Yes ○ No ○

FORM CPS-665 — U.S. DEPARTMENT OF COMMERCE, BUREAU OF THE CENSUS — 2.

CPS-665
INCOME SUPPLEMENT

Form Approved – O.M.B. No. 0607-0354 – Expires 9-30-93 — MARCH 1993

INTRODUCTION
(Optional)

We have just completed the questions about employment and unemployment. Each March, the Census Bureau also collects information about the economic situation of Americans and their families for the previous year. I am going to ask these questions now. We don't expect all answers to be perfect, but please think about each question and answer it the best you can.

(Begin with item 29A on page 3.)

3. CONTROL NUMBER

6. PSU NO.	7. SEGMENT NO.	8. SERIAL NO.	9. HOUSEHOLD NO.

77. CHECK ITEM
TENURE *(from Control Card item 10)*
Owned or being bought 1
Rented 2
No cash rent 3

78. How many housing units are in this structure?
1 ○ 5–9 ○
2 ○ 10+ ○
3–4 ○

79. CHECK ITEM
Some household members under age 15 ○ *(Ask 80)*
No household members under age 15 ○ *(Skip to 82)*

80. During 1992, how many of the children under age 15 in this household were covered by Medicare or Medicaid?
○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

81. During 1992, how many of the children under age 15 in this household were covered by a health insurance plan ***(Excluding Medicaid and Medicare)?***
○ All ..... *(Ask 81A)*
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None *(Skip to 82)*

81A. How many of these children were covered by the health insurance plan of someone not residing in this household?
○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

82. CHECK ITEM
Some household members 5–18 years old ○ *(Ask 83)*
No household members 5–18 years old ○ *(Skip to 84)*

83. During 1992, how many of the children, 5–18 years old in this household, usually ate a complete hot lunch offered at school?
○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9
○ None

84. CHECK ITEM
Entry in Control Card item 29 is:
Under $50,000, NA or Ref.. ○ *(Fill 85)*
$50,000 or more ..... ○ *End questions*

85. CHECK ITEM
All or some marked in 83 ○ *(Ask 86)*
None marked in 83 or 83 blank ○ *(Skip to 87)*

86. During 1992, how many of the children in this household received free or reduced price lunches because they qualified for the Federal School Lunch Program?
○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

87. CHECK ITEM
Owned marked in 77 ○ *(Skip to 90)*
Rented or no cash rent marked in 77 ○ *(Ask 88)*

88. Is this house in a public housing project, that is, is it owned by a local housing authority or other public agency?
Yes ○ *(Skip to 90)*
No ○ *(Ask 89)*

89. Are you paying lower rent because the Federal, State, or local government is paying part of the cost?
Yes ○
No ○

29A. Did ... work at a job or business at any time during 1982?
Yes ○ (Skip to 33) No ○

29B. Did ... do any temporary, part-time, or seasonal work even for few days during 1982?
Yes ○ (Skip to 33) No ○

30. Even though ... did not work in 1982, did he/she spend any time trying to find a job or on layoff?
Yes ○ No ○ (Skip to 32)

31. How many different weeks was ... looking for work or on layoff from a job?
(Mark weeks)

32. What was the main reason ... did not work in 1982?
Ill or disabled and unable to work ○
Retired ○
Taking care of home or family ○
Going to school ○
Could not find work ○
Doing something else ○
(Skip to 52A)

33. During 1982 in how many weeks did ... work even for a few hours? Include paid vacation and sick leave as work.
(Mark weeks and Go to 34)

34. CHECK ITEM
Number of weeks in item 33 is:
1–49 ○ (Skip to 36)
50–51 ○ (Ask 35)
52 ○ (Skip to 39)

35. Did ... lose any full weeks of work in 1982 because he/she was on layoff from a job or lost a job?
Yes ○
No ○ (Skip to 39)

36. You said ... worked about (entry in item 33) weeks in 1982. How many of the remaining (52 minus entry in item 33) weeks was ... looking for work or on layoff from a job?
(Mark weeks and ask 37)
None ○ (Skip to 38)

37. Were the (entry in item 36) weeks ... was looking for work (or on layoff) all in one stretch?
Yes – 1 stretch ○
No – 2 stretches ○
No – 3+ stretches ○
(Go to 38)

(If the entries in items 33 and 36 add to 52 weeks, skip to item 39. If not, ask 38)

38. What was the main reason ... was not working or looking for work in the remaining weeks of 1982?
Ill or disabled and unable to work ○
Taking care of home or family ○
Going to school ○
Retired ○
No work available ○
Other (Specify) ○

39. For how many employers did ... work in 1982? If more than one at same time, only count it as one employer.
1 ○
2 ○
3+ ○
(Ask 40)

40. In the weeks that ... worked, how many hours did ... usually work per week?
(Mark hours)
(Go to 41)

41. CHECK ITEM
Number of hours in item 40 is:
1–34 ○ (Skip to 43)
35+ ○ (Ask 42)

42. During 1982, were there one or more weeks in which ... worked less than 35 hours? Exclude time off with pay because of holidays, vacation, days off, or sickness.
Yes ○ (Ask 43)
No ○ (Skip to 45)

43. How many weeks did ... work less than 35 hours in 1982?
(Mark weeks)

44. What was the main reason ... worked less than 35 hours per week?
Could not find a full time job ○
Wanted to work part time or only able to work part time ○
Slack work or material shortage ○
Other ○
(Ask 45)

45. What was ...'s longest job during 1982?
(Compare with entry in CPS-1 item 23)
Same as item 23 ○ (Skip to 47)
Different from item 23 or item 23 blank ○
Current Armed Forces ○
(Specify in 46A-46E)

46A. For whom did ... work?

46B. What kind of business or industry is this?
Ref. ○ UNC ○

46C. What kind of work was ... doing?

46D. What were ...'s most important activities or duties?

46E. CLASS OF WORKER
Private ... P ○
Federal Gov't. F ○
State Gov't. S ○
Local Gov't. L ○
(Ask 47)
Self-employment Inc. — Yes ... I ○ / No ... SE ○
Without pay WP ○
(Ask 47)

47. Counting all locations where this employer operates, what is the total number of persons who work for ...'s employer? (Read categories if necessary)
Under 10 ○
10–24 ○
25–99 ○
100–499 ○
500–999 ○
1000+ ○
(Ask 48A or 48B)

48A. How much did ... earn from this employer before deductions during 1982?

48B. What was ... net earnings from this business/farm after expenses during 1982?

48C. Does this amount include all tips, bonuses, overtime pay or commissions ... may have received?
Yes ○ No ○ (Probe and make corrections to 48A)
Lost money ○

49A. Did ... earn money from any other work he/she did during 1982?
Yes ○ No ○ (Skip to 50)

49B. How much did ... earn from:
All other employers? Yes ○ No ○
His/her own business after expenses? Yes ○ No ○
His/her farm after expenses? Yes ○ No ○
Lost money ○ Lost money ○

50. CHECK ITEM Longest job (item 45) is former?
Yes ○ No ○ (Skip to 52A)

51. Other than the farm income we have already talked about, did ... receive any income from agricultural work done for others, recreational services, or government farm programs other than loans?
Yes ○ (Probe and make corrections to 48B or 49B)
No ○ (Ask 52A)

52A. At any time during 1982 did ... receive any State or Federal unemployment compensation?
Yes ○ No ○ (Skip to 53A)
Any Supplemental Unemployment Benefits (SUB)? Yes ○ No ○
Any Union unemployment or strike benefits? Yes ○ No ○

52B. How much did ... receive in unemployment benefits during 1982?

53A. During 1982 did ... receive any Worker's Compensation payments or other payments as a result of a job related injury or illness? (Exclude sick pay and disability retirement)
Yes ○ No ○ (Skip to 54)

53B. What was the source of these payments?
State Workers Compensation ○
Employer or employer's insurance ○
Own insurance ○
Other ○

53C. How much compensation did ... receive during 1982?

Now I want to ask some questions about where ... lived 1 year ago.

54. Was ... living in this house (apt.) 1 year ago, that is on March 1, 1982?
Yes ○ (Next person) No ○ (Ask 55A)

55A. Where did ... live on March 1, 1982?
1. Name of State, foreign country, U.S. possession, etc.
2. Name of county
3. Name of city, town, village, etc.
B. Did ... live inside the limits of that city, town, village, etc.?
Yes ○ No ○
