Statement of Purpose

The Tract Level Planning Database with 2010 Census and 2010 – 2014 American Community Survey Data (also called the PDB) is a database that assembles a range of housing, demographic, socioeconomic, and census operational data. The PDB variables have been extracted from census and American Community Survey (ACS) databases and summarized for all tracts in the country, including Puerto Rico. This database updates the planning database created using 2010 – 2014 American Community Survey data and will continue to be updated annually and made available to both internal and external users.

A planning database containing data from the 2000 decennial census at the tract level was used during the 2010 decennial census to plan for field and mail activities¹. This newer version was created to be used for similar operational functions, as well as for research purposes. The database can be used in many ways, including the following:

- Identifying areas where special outreach and promotion efforts could be considered
- Linking spatial map data files to create thematic maps
- Generating reports, cross tabulations, and simple analyses
- Planning recruitment activities by Regional Census Centers, and Local Census Offices

Limitations of the Data

The 2016 PDB is based on Census 2010 geographical boundaries. Data contained in the PDB are subject to nonsampling error. In addition, the ACS data are also subject to sampling error.

¹ See “Census 2000 Planning Database” at http://www.census.gov/research/data/planning_database/2000/

Description of Variables in the Database

This section contains descriptions of all variables in the PDB. More details for these variables are available in additional documentation for the source material. For decennial data, Appendices A and B of the *2010 Census Summary File 2 Technical Documentation* (<http://www.census.gov/prod/cen2010/doc/sf2.pdf>) are useful, and for ACS data, the *American Community Survey and Puerto Rico Community Survey 2013 Subject Definitions* (https://www.census.gov/acs/www/Downloads/data_documentation/SubjectDefinitions/2013_ACSSubjectDefinitions.pdf) is useful.

The PDB contains one record per tract. Except where noted, counts enable the user to aggregate the data to the county level or to higher units of geography. When aggregating to higher geographies, the user should be aware that tracts with missing values may not be represented in the resulting summary. While both count estimates and percentage estimates have been provided, the appropriate variables to be used as denominators when calculating percentages from count variables are noted. A blank percentage value indicates that the numerator or denominator used in its calculation was missing, or the denominator had a value of zero. Selected median values are also provided for household income and house value.

For variables in which both census and ACS estimates are available, both are provided. Because the PDB is updated annually, the ACS estimates show estimated change in these measures since 2010 as the decade progresses. The 2010 – 2014 ACS 5-year estimates are based on data collected between January 2010 and December 2014. They represent average characteristics over the 5-year period, and thus have a larger sample size than 1-year ACS estimates but are less current than 1-year ACS estimates.

ACS estimates appear with the margin of error (MOE) associated with the estimate. Some custom measures were created by aggregating published estimates; the MOEs of such aggregates were derived from published MOEs and may differ from MOEs in other data products. Variable labels indicate which MOEs were derived. Please see Appendix A. Margin of Error Calculations of this document for more information about how these derived MOEs were calculated and how to calculate MOEs when creating custom aggregate estimates.

In addition, a Low Response Score (LRS) is provided that is similar in purpose to the Hard-to-Count scores issued after past censuses. This score identifies block groups and tracts whose characteristics predict low census mail return rate and are highly correlated (negatively) with census and survey participation. A discussion of the LRS methodology can be found in “The U.S. Census Bureau Mail Return Rate Challenge: Crowdsourcing to Develop a Hard-to-Count Score,” found here: <http://www.census.gov/srd/papers/pdf/rrs2014-08.pdf>.

The geographic vintage of the tracts in this file are from 2010 Census geography. The Census Bureau updates geographic identifiers and boundaries between censuses in rare instances. Data from the 2010 – 2014 ACS 5-year estimates use the most recent geographic identifiers, and a handful of geographies

could not be matched between vintages. More information about geographic variables can be found in Appendix D of this document, as well as here: <http://www.census.gov/geo/reference/terms.html>.

Tracts containing land deemed uninhabitable are indicated with the Flag variable. These tracts have a zero census population but, due to the nature of the ACS estimates, contain ACS population estimates.

Sources of all variables are indicated; “2010 Census” refers to data items from the 2010 decennial census, “ACS” refers to ACS data items asked of the persons and housing units in the 2010 to 2014 ACS samples, and “Census geography” refers to the basic geographic data associated with the items. The database layout and description of each variable for tracts are as follows:

Var. #	Variable Name	Label	Definitions	Unit Level	Source	Denominator Note
		GEOGRAPHY VARIABLES				
1	GIDTR	State County Tract: 11-digit code	An 11 digit code including State/County/Tract where the first two digits denote State, the next three digits denote County, and the next six digits denote Tract.		Census geography	
2	State	FIPS State: 2-digit code	FIPS code of State or statistically equivalent entity (Puerto Rico, D.C., American Samoa, Commonwealth of Northern Mariana Islands, Guam, U.S. Virgin Islands)		Census geography	
3	State_name	State Name	Name of State or statistically equivalent entity (Puerto Rico, D.C., American Samoa, Commonwealth of Northern Mariana Islands, Guam, U.S. Virgin Islands)		Census geography	
4	County	FIPS County: 3-digit code	FIPS code of county (primary legal division of a state) or statistically equivalent entity		Census geography	
5	County_name	County Name	Name of County or statistically equivalent entity		Census geography	
6	Tract	Census Tract: 6-digit code	Subdivision of a County or statistically equivalent entity (0 to over 25,000 people per Tract with an average size of 4,200)		Census geography	
7	Flag	Tract containing only block groups with block group code 0 (zero), representing areas that are not habitable	If a tract contains only uninhabitable land, this variable is filled. Otherwise, this variable is blank.		Census geography	
8	Num_BGs_in_Tract	Number of block groups in the tract	Number of block groups in the tract		Census geography	
9	LAND_AREA	Land area (sq.mi.)	Land area of geographical entity in square miles		Census geography	
10	AIAN_LAND	Number of block groups in the tract that are located on any part of an American Indian, Alaska Native, or Native Hawaiian area	The number of block groups in this tract that are located on any part of an American Indian, Alaska Native, or Native Hawaiian area		Census geography	Num_BGs_in_Tract

		OPERATIONAL VARIABLES				
285	MailBack_Area_Count_CEN_2010	Number of addresses in mailback areas in the 2010 Census	Total number of addresses at the start of 2010 Census operations where a Census form was expected to be delivered for mail return to Census. These include addresses in Mailout/Mailback areas (street address available for postal delivery) and addresses in Update/Leave enumeration areas (areas without mailboxes for individual address units). Note: Some of the addresses included in this variable's count were removed from the 2010 Census Universe as a result of actions in subsequent Census operations. For example, an address may have been deleted because it was determined to not correspond to a valid housing unit, or an address may have been added through the BeCounted program. Therefore, this variable represents the universe of addresses at the start of the 2010 Census, and may not be equal to the number of addresses in the final census count.	Addresses	2010 Census

297	Mail_Return_Rate_CEN_2010	2010 Census Mail Return Rate	The number of mail returns received out of the total number of valid occupied housing units (HUs) in the Mailout/Mailback universe which excludes deleted, vacant, or units identified as undeliverable as addressed. Therefore, variable 294 can be less than variable 287 because of these exclusions. A small number of tracts contain only HUs that do not meet the requirement to be considered a valid, occupied HU. This variable will have a missing value for these tracts.	Addresses		
298	Low_Response_Score	Prediction of low census mail return rate	A score predicting that a block group will produce a low mail return rate. This score is negatively associated with Mail_Return_Rate_CEN_2010.	Addresses

File Structure of the Database

The PDB is available in a .CSV format. The data file contains 74,023 total observations. The first row of the data file contains variable numbers for each column that can be used to match the variable names against the variable numbers used in this document. The value of variables in the PDB may not be shown for tracts containing small populations or few housing units; variables with missing data are denoted by blank values. Data suppression of ACS estimates limits the disclosure of information about individual respondents and reduces the number of estimates with unacceptable levels of statistical reliability. More information about data suppression in ACS data can be found here:

http://www.census.gov/acs/www/Downloads/data_documentation/data_suppression/ACSO_Data_Suppression.pdf.

The PDB contains data from three major source files:

1. 2010 Census data – Population and housing
2. 2010 – 2014 5-year ACS sample data – Population, housing, and socioeconomic
3. 2010 Census operational data – Mail returns by type of enumeration area, which can be used to generate the return and response rates. Return rates are included in this file.

The first 296 variables in the 2016 PDB are estimates directly taken or derived from the three sources mentioned above. The remaining variables are estimated percentages calculated by dividing estimates by their given denominator. All percentages were calculated using variables in this file, and the accompanying MOEs were calculated using the method published in Appendix 3 of *A Compass for Understanding and Using American Community Survey Data: What General Data Users Need to Know* (<http://www.census.gov/acs/www/Downloads/handbooks/ACSGeneralHandbook.pdf>).

Appendix A. Margin of Error Calculations and Nonsampling Error

The Tract Level Planning Database provides ACS small area estimates that are easily accessible by a wide range of users. It is important to note that these small area estimates are *estimates*, with accompanying sampling error. The Margin of Error (MOE) for any estimate needs to be considered when using any single estimate, as it provides the best indicator of the variability across units within the estimate. There are various accepted formulas for calculating MOEs. An advisory group in the development of the Tract PDB decided to use the formula noted in *A Compass for Understanding and Using American Community Survey Data: What General Data Users Need to Know* (<http://www.census.gov/acs/www/Downloads/handbooks/ACSGeneralHandbook.pdf>) for calculating MOEs from grouped summary data.

A review of the coefficients of variation (which measure the standard deviation of an estimate relative to the mean) reveals those estimates with a large CV, which suggests a less reliable estimate. Generally, small sample sizes are more prone to large MOEs, which in turn lead to larger CVs. The small sample can be the result of a characteristic of low incidence in the population or the result of subpopulations within a population.

As a result, we caution against taking any single estimate with a large MOE as absolute. The key is that unstable estimates should not be used for decisions about individual tracts. We recognize the importance of small area data to aid in planning and operational activities. However, we make these data available for summing to higher levels of geography where the data can be useful, such as Census Designated Places, Local Census Offices, or any collection of tracts that bear on the activity at hand. We ask that the user of the tract data note the limitations of the estimates to those who may be using the data for decision purposes.

The margin of error around an estimate is important because it helps you draw conclusions about the reliability of the data. Small differences between two estimates may not be statistically significant if the confidence intervals of those estimates overlap. However, the Census Bureau cautions data users not to rely on overlapping confidence intervals as a test for statistical significance, because this method will not always produce accurate results. Instead, the Census Bureau recommends following the detailed instructions for conducting statistical significance tests in Appendix 4 of *A Compass for Understanding and Using American Community Survey Data: What General Data Users Need to Know* (<http://www.census.gov/acs/www/Downloads/handbooks/ACSGeneralHandbook.pdf>). In some cases, data users will need to construct custom ACS estimates by combining data across multiple geographic areas or population subgroups or it may be necessary to derive a new percentage, proportion, or ratio from published ACS data. In such cases, additional calculations are needed to produce confidence intervals and margins of error for the derived estimates. Appendix 3 of *A Compass for Understanding and Using American Community Survey Data: What General Data Users Need to Know* (<http://www.census.gov/acs/www/Downloads/handbooks/ACSGeneralHandbook.pdf>) provides detailed instructions on how to make these calculations. Please note that published margins of error, when available, should always be used over calculated measures of error.

Note that these error measures do not tell us about the magnitude of nonsampling errors, which can affect the 2010 census data as well as the ACS estimates. To learn more about nonsampling error in the 2010 Census, please see Chapter 7 of *2010 Census Summary File 2: Technical Documentation* (www.census.gov/prod/cen2010/doc/sf2.pdf). To learn more about nonsampling error in the 2010 – 2014 ACS, please see the section titled “Control of Nonsampling Error” in *American Community Survey Multiyear Accuracy of the Data (5-year 2010-2014)* (https://www.census.gov/acs/www/Downloads/data_documentation/Accuracy/MultiyearACSAccuracyofData2014.pdf).

Appendix B. Calculating Response Rates

The mail response rate for the 2010 census was calculated in the following way:

$$\frac{\text{UURRUUUURRNNUUUMRRRUU} \quad \text{NNRRRNMMRRNN} \quad \text{MMMMMM} \quad \text{RRRRUUURRRR}}{\text{MMMMMM} \quad \text{RRRRRRRRRRRR} \quad \text{RRMRRR}} \times 100$$

=

The 2010 mail response rate included housing units who had a valid mail return in the form of a paper mail return, a Be Counted form, or a Telephone Questionnaire Assistance return. While the official 2010 mail response rates cannot be calculated from the Planning Database, users who wish to approximate the response rate can use the following variables from the Planning Database:

- “Unduplicated Nonblank Mail Returns” corresponds to the variable Census_Mail_Returns_CEN_2010 in the PDB. It represents all of the housing units that returned a paper mail form.
- “Mailback Universe” corresponds to the variable Mailback_Area_Count_CEN_2010 in the PDB. It represents all housing units that are in an area that was sent a mail form.

The mail return rate can be calculated in the following way:

$$\frac{\text{UURRUUUURRMMMUUMRRRUU} \quad \text{NNRRRNMMRRNN} \quad \text{MMMMMM} \quad \text{RRRRUUURRRR}}{\text{MMMMMM} \quad \text{RRRRUUURRR} \quad \text{RRMRRR}} \times 100$$

=

$$\frac{\text{MMMMMMNNMUUN} \quad \text{UURRMUUURRRRR} - (\text{VMMUUMRRRR} + \text{UUUUUR} + \text{DDRRMRRRRRR})}{\text{DDRRMRRRRRR}}$$

- “Unduplicated Nonblank Mail Returns” corresponds to the variable Census_Mail_Returns_CEN_2010 in the PDB (variable 290). It represents all of the housing units that returned a mail form.
- “Mailback Universe” corresponds to the variable Mailback_Area_Count_CEN_2010 in the PDB (variable 287). It represents all housing units that are in an area that were sent a mail form.
- “Vacants” corresponds to the variable Vacants_CEN_2010 in the PDB (variable 291). It represents all housing units that were sent a mail form but that were later confirmed to be vacant.
- “UAAs” corresponds to the variable Census_UAA_Cen_2010 (variable 293). It represents all mail form that were returned to the Census Bureau because they were identified as undeliverable as addressed.
- “Deletes” corresponds to the variable Deletes_CEN_2010 in the PDB (variable 292). It represents all housing units that were deleted for reasons other than being vacant or undeliverable as addressed.

Appendix C. Key Estimates of the Planning Database

Eighteen variables were identified as key estimates of the 2015 PDB. To assess the quality of these estimates, the median coefficient of variation and the median item nonresponse rate were calculated. The results are presented in the following table. Of the 18 variables, all 17 have a median coefficient of variation below 30.00, and all have a median item missing rate below 30.00.

Variable Number	Estimate Name	Definitions	Median Coefficient of Variation	Median Item Missing Rate
153	College_ACS_10_14	Number of people ages 25 years and over at the time of interview with a college degree or higher in the ACS population	14.92	4.98
157	Prs_Blw_Pov_Lev_ACS_10_14	Number of people classified as below the poverty level given their total family income within the last year, family size, and family composition in the ACS population	27.28	*
221	MrdCple_Fmly_HHD_ACS_10_14	Number of ACS households in which the householder and his or her spouse are listed as members of the same household; does not include same-sex married couples	9.82	*
230	NonFamily_HHD_ACS_10_14	Number of ACS households where a householder lives alone or with nonrelatives only; includes same-sex couples where no relatives of the householder are present	14.66	*
233	Sngl_Prns_HHD_ACS_10_14	Number of ACS households where a householder lives alone	16.53	*
242	Rel_Child_Under_6_ACS_10_14	Number of ACS families with related children under 6 years old	26.50	*
248	Med_HHD_Inc_ACS_10_14	Median ACS household income for the tract	9.28	29.17
261	Renter_Occp_HU_CEN_2010	Number of 2010 Census occupied housing units that are not owner occupied, whether they are rented or occupied without payment of rent	15.20	0.70
265	Owner_Occp_HU_ACS_10_14	Number of ACS housing units where owner or co-owner lives in it	7.35	0.81
267	Single_Unit_ACS_10_14	Number of ACS housing units in which the structure contains only that single unit	6.41	0.73
269	MLT_U2_9_STRC_ACS_10_14	Number of ACS housing units in which the structure contains 2 or more housing units	28.88	0.73
271	MLT_U10p_ACS_10_14	Number of ACS housing units in which the structure contains 10 or more housing units	31.65	0.73
283	Med_House_Value_ACS_10_14	Median of ACS respondents' house value estimates for the tract	5.48	11.13
165	Civ_labor_16plus_ACS_10_14	Number of civilians ages 16 years and over at the time of the interview that are in the labor force in the ACS	7.27	*
167	Civ_emp_16plus_ACS_10_14	Number of civilians ages 16 years and over at the time of the interview that are unemployed in the ACS	7.69	5.90
159	One_Health_Ins_ACS_10_14	Number of people with one type of health insurance coverage in the ACS	7.22	10.67

161	Two_Plus_Health_Ins_ACS_10_14	Number of people with two or more types of health insurance coverage in the ACS	14.48	10.67
163	No_Health_Ins_ACS_10_14	Number of people with no health insurance coverage in the ACS	21.61	10.67

* - No item missing rate could be calculated directly for these estimates. These items are composed of multiple questions from the ACS. We examined the item missing rate of questions that compose these estimates (age, sex, relationship, marital status), and none were above 2.00.

Appendix D. Changes to Geography

Geographic numbering and definitions can change over time. Generally, major changes to geographic boundaries are made during the decennial census, but errors in boundary definitions or numbering may lead to updates in the intervening years. The census tract changes in Madison and Oneida Counties in New York are the result of corrections to the Oneida American Indian Reservation boundary after the 2010 Census tract definitions had been finalized. The change to the census tracts in Richmond County, New York, corrects a tract boundary definition error. There are tract numbering corrections to seven census tracts in Pima County, Arizona. In addition, one deleted census tract is restored in Los Angeles County, California, eliminating one 2010 tract and changing the geographic definition of another census tract involved.

In the 2016 PDB the changes to geography are below. Changes to geography that were made in the 2014 PDB and carried over into 2015 and 2016 are described below as well.

Tracts that were simply renumbered since the 2010 Census have been renumbered in the 2014, 2015, and 2016 PDB files. This applies to the following tracts:

- Pima County, Arizona
 - Census Tract 27.01 is now 27.04
 - Census Tract 29.03 is now 29.06
 - Census Tract 4105.01 is now 41.18
 - Census Tract 4105.02 is now 41.21
 - Census Tract 4105.03 is now 41.25
 - Census Tract 4704.00 is now 52.00
 - Census Tract 4705.00 is now 53.00
- Madison County, New York
 - Census Tract 9401.01 is now 0301.01
 - Census Tract 9401.02 is now 0301.02
 - Census Tract 9401.03 is now 0301.03
 - Census Tract 9402.00 is now 0302.00
 - Census Tract 9403.00 is now 0303.00
 - Census Tract 9404.01 is now 0304.01
 - Census Tract 9404.03 is now 0304.03
 - Census Tract 9406.00 is now 0306.00
 - Census Tract 9407.00 is now 0304.02
- Oneida County, New York
 - Census Tract 9400.00 is now 0248.00
 - Census Tract 9401.00 is now 0247.00
- Richmond County, New York: Census Tract 0089.00 merged into Census Tract 0097.00. The area merged into Census Tract 0097.00 is entirely water.
- Bedford City, Virginia, formerly an independent city (county equivalent), was absorbed as a municipality within Bedford County, Virginia. Its former FIPS State and County codes 51-515

have ceased to exist and are now 51-019, but the corresponding tract and block group designations remain the same.

In the 2016 PDB, geographical units that were redefined since the 2010 Census have both 2010 geography and current geography. Because the geographical boundaries have changed, we cannot match the 2010 Census estimates, which are based on 2010 geography, with the 2010-2014 ACS estimates, which are based on 2014 geography. Thus, in the 2016 PDB, the affected block groups each have a record for the 2010 Census data and a record for the 2010-2014 ACS data. This applies to the following areas:

- Petersburg Census Area, Alaska had a legal status change resulting in a name change to Petersburg Borough, Alaska. This change also involved reassignment of some territory with neighboring areas as described below:
 - Hoonah-Angoon Census Area, Alaska, Census Tract 0003.00, Block Group 3 lost a portion of territory to Petersburg Borough, Alaska, Census Tract 0002.00, Block Group 4
 - Prince of Wales-Hyder Census Area, Alaska, Census Tract 0001.00, Block Group 1 gained a portion of territory from Petersburg Borough, Alaska, Census Tract 0002.00, Block Group 4.
- Los Angeles County, California: The deletion of Census 2000 Tract 1370.00 is now corrected, and the tract is reinstated with its former boundaries.
 - Census Tract 1370.00, Block Group 1 now contains portions of former Census Tract 9304.01, Block Group 1
 - Census Tract 1370.00, Block Group 2 now contains portions of former Census Tract 9304.01, Block Group 1 and all of Census Tract 8002.04, Block Group 3
- Leon County, Florida: Census Tract 25.13, Block Group 1 now contains portions of Census Tract 25.10, Block Group 3
- Volusia County, Florida: Census Tract 908.03, Block Group 3 now contains part of Census Tract 907.02, Block Group 4
- Oneida County, New York
 - Census Tract 9402.00 is now 0249.00
 - Census Tract 0249.00, Block Group 1 now contains part of Census Tract 0230.00, Block Group 2
 - Census Tract 0249.00, Block Group 3 now contains part of Census Tract 0230.00, Block Group 2
- Okmulgee County, Oklahoma: Census Tract 1, Block Group 2 now contains parts of Census Tract 5, Block Group 1.

The Census Bureau discovered geocoding errors in the 2010 Census that affected 2010 Census data products, including the Summary File 1, which is the source of the 2010 Census values in the 2014 PDB. These geocoding errors resulted in some people in a small number of blocks to be placed in the incorrect block. Since the 2010 Census values in the 2014 PDB do not include corrections to the misgeocoded persons but the 2008-2012 ACS estimates do have corrected geocoding, we cannot

match the 2010 Census estimates with the 2008-2012 ACS estimates. Thus, in the 2014 PDB, the affected block groups each have a record for the 2010 Census data and a record for the 2008-2012 ACS data. This applies to the following areas:

- Norfolk City, Virginia: Military ships that should belong in Census Tract 0009.02, Block Group 1, were incorrectly placed in Census Tract 0038.00, Block Group 1
- New London County, Connecticut: Military ships that should belong in Census Tract 9800.00, Block Group 1, were incorrectly placed in Census Tract 7026.00, Block Group 1
- Strafford County, New Hampshire: Military ships that should belong in Census Tract 0691.00, Block Group 1, were incorrectly placed in Census Tract 0650.07, Block Group 1
- Snohomish County, Washington: Military ships that should belong in Census Tract 0401.00, Block Group 4, were incorrectly placed in Census Tract 0404.00, Block Group 3
