a In the columns of "Production," the amount placed opposite the fiscal year is the production of the preceding calendar year, since the exports and consumption of cotton during the fiscal year are mainly of the production of the preceding calendar year.

b The Liverpool records of average net weight of American bales of cotton, run through a much longer period than American estimates of gross weight. A competent American authority has estimated the average gross weights, prior to 1860, at about 5 per cent. above the average Liverpool net weights. It is found that 6 per cent. will more nearly represent the difference between the foreign net and American gross averages of the weight per bale of each crop. This table is therefore calculated on the basis of 6 per cent. in addition to net weight, as the nearest available approximation to the true quantity. The exact difference is unattainable, as there is no complete annual record of American averages of weight of bales. As the exports are expressed in gross pounds (including the envelope or tare), the comparison can only be made with gross pounds.—J. R. D.

a In the column of "Production," the amount placed opposite the fiscal year is the production of the preceding calendar year. This is done in order that the year in which the wool is mainly marketed and consumed may correspond with the import and export year. The amounts in this column are based upon estimates made by J. R. Dodge, late Statistician of the Department of Agriculture.

a In the column of "Production," the amount placed opposite the fiscal year is the production of the preceding calendar year. For example: The quantity stated in the column of "Production" opposite the year 1878 is the production of the calendar year 1877, since the exports of wheat and of corn, during the year 1878, were principally of the respective crops of the calendar year 1877.

The production of both wheat and corn during the year 1869 is taken from the census report of the succeeding year. The production for the other years is taken from the annual reports of the Statistician of the Department of Agriculture.

NOTE.—The production of sugar and molasses in Louisiana is stated upon the authority of M. Champonier for the period prior to 1861, and for the later years upon the authority of M. Louis Boucheron. These authorities give both the number of hogsheads and the number of pounds for each year, with the exception of the year 1861–'62, for which year only the number of hogsheads is given. The number of pounds of sugar produced during that year has, however, been computed by estimating the weight of the hogshead at 1,150 pounds.

NOTE.—The consumption of tea and of coffee in the United States for each year, from 1830 to 1866, inclusive, is estimated by subtracting the amount exported from the amount imported. For the years 1867 to 1878, inclusive, the amounts of the respective articles entered for consumption at the custom-houses is taken as the consumption. The population is estimated for years other than the census years 1830, 1840, 1850, 1860, and 1870.

a In the column of "Production," the amount set opposite the fiscal year is the production of the preceding calendar year. This is done in order that the year in which the rails are mainly marketed and consumed, may correspond with the import and export year.

N. B.—The production of pig-iron and of iron and steel railroad bars, in the above tables, has bee computed by Mr. James M. Swank, Secretary of the American Iron and Steel Association.

a The natives of Ireland are partly estimated on the basis of data obtained by the Commissioners of Emigration of New York, who have made careful inquiries on this subject. The total from the British Isles, given above, is from official returns to the Bureau of Statistics.

NOTE.—It is estimated that the number of alien passengers arrived in the United States from 1789 to 1820 amounted to 250,000.

a Prior to the year 1864 the tonnage of British Columbia is combined with that of the British Possessions on the Atlantic; subsequent to that period they are shown in a separate column.

b A small portion of the tonnage from the United Kingdom during these years entered at lake ports, and has been deducted from the total tonnage entered from that country, which will account for the apparent discrepancy between these figures and those of the regular annual statements of navigation.

c No detailed statement of the trade of each port with foreign countries was published for these years, which renders it impossible to determine what amount of the tonnage of any foreign country may have entered at lake ports. The whole amount of tonnage from the countries herein enumerated has therefore been credited to seaports.

[a] This statement is the result of original estimates made by Mr. J. R. Dodge, from annual returns to the Department of Agriculture, of the comparative condition and area of the crop and price of product; and as to quantity of production, mainly from the official records of manufacture and exportation. It has been demonstrated that returns of production of tobacco, which bears a heavy tax, are uniformly under-estimates, whether census returns or those of the Department of Agriculture, a fact in accord with the experience of all governments with respect to voluntary statistical returns of taxed products. The prices are the average home or farm value of leaf tobacco.
