

Census Bureau's proposal for data products from the 2020 Census is much less than from the 2010 Census

I use Census data daily and rely on both sub county level data as well as age groups of young children, specifically age 0-4.

I understand that there are recommendations to not have all these data products available from the 2020 Census and I ask that you reconsider this. These data are vital to those of us who focus on programs and policies related to young children and their families. Without the availability of these data we cannot be as strong an advocate for our most vulnerable populations. I ask that you please continue to provide data for both sub county level and age groups of young children for as many areas pertaining to children and their families as you possibly can.

Thank you.
