[1] For 1916 figures of previous years are repeated for those countries from which no returns were received.

[2] For 1917 official figures are lacking for many countries; estimates are based on the most reliable data available.

[3] The figures are those of the Director of the Mint, but do not represent the footings of the respective columns, as that official, for the period from 1871 to 1885, employs Soetbeer's averages upon a somewhat different basis from that used in this table.

[1] Based on an estimate by A. De Foville, 1909.
[2] The figures for the stock of gold in Germany represent the amount held by the Reichsbank and the estimated amount of coined gold in circulation only.

NOTE.—The blank spaces in this table signify that no satisfactory information is available. In some instances the amount of gold in banks and public treasuries is carried out as the total stock in the country, although an unknown amount is in circulation. The per capita circulation is based upon known amounts only. All estimates of stock of money in circulation must be accepted with reserve.
