CONSUMER INCOME

June 26, 1963 | Washington 25, D.C. | Series P-60, No. 40

AVERAGE FAMILY INCOME UP 4 PERCENT IN 1962

(Preliminary data from March 1963 sample survey)

Average (median) family income in the United States was estimated at $6,000 in 1962, a gain of about $220, or 4 percent, over the previous year, according to estimates released today by the Bureau of the Census, Department of Commerce. For persons, the median income was $2,800; this was $100, or 4 percent, higher than a year earlier. Since consumer prices rose approximately 1 percent during this period, not all of the increase in the average family income represented a net gain in real income.[1]

An estimated 9½ million families, or 20 percent of the 47 million families in the Nation, received money incomes under $3,000 in 1962. The number of families in this income range declined by approximately one-half million from the previous year. About 9 million, or 19 percent, received incomes between $3,000 and $5,000 last year; and 10½ million, or 22 percent, had incomes between $5,000 and $7,000. The remaining 18 million families, or 39 percent, are estimated to have received incomes of $7,000 or more, representing an increase of about 1 million families over 1961.

Table A.--NUMBER OF FAMILIES BY 1962 FAMILY INCOME, FOR THE UNITED STATES

Family income	Number of families
Total	46,998,000
Under $1,000	1,950,000
$1,000 to $1,999	3,469,000
$2,000 to $2,999	3,901,000
$3,000 to $3,999	4,325,000
$4,000 to $4,999	4,669,000
$5,000 to $5,999	5,424,000
$6,000 to $6,999	5,100,000
$7,000 to $7,999	4,023,000
$8,000 to $9,999	5,804,000
$10,000 to $14,999	6,019,000
$15,000 and over	2,314,000

For men, last year's median income advanced to $4,400, up $180, or 4 percent, from the preceding year. At $1,300, the median income of women in 1962 remained substantially the same as in 1961 and 1960.

[1] See Monthly Labor Review, March 1963, Vol. 86, No. 3, table D-1, p. 358.

The 1962 income statistics presented in this report were obtained from the Bureau's Current Population Survey of March 1963. More detailed income data from the survey for families and persons will appear in a report to be issued later this year. Income statistics collected in the 1960 Census of Population appear in a number of published reports. Basic distributions of persons 14 years old and over, families, and unrelated individuals, by money income in 1959, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in U.S. Census of Population: 1960, "General Social and Economic Characteristics," Series PC(1)-1C to 52C. Statistics on income in 1959 by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., are presented in U.S. Census of Population: 1960, "Detailed Characteristics," Series PC(1)-1D to 52D for some or all of the following areas: United States, each of the States, large counties, and standard metropolitan statistical areas of 250,000 or more.

The information on income in 1962 was collected from the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Income data cover money income only, prior to deductions for taxes. The fact that many farm families receive part of their income in the form of rent-free housing and of goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm residents.

Total income is defined as the sum of money wage or salary income, net income from self-employment, and income other than earnings, such as net rents, interest, dividends, Social Security benefits, pensions, and public assistance or other governmental payments. Family income represents the combined total received from these sources by all family members during the calendar year. A year-round full-time worker is one who worked primarily at full-time jobs (35 hours or more per week) for 50 weeks or more during 1962.

The median income is the amount which divides an income distribution into two equal groups, one group having incomes above the median and the other having incomes below the

median. In comparing income data for 1962 with those for previous years, account should be taken of the fact that changes in income were accompanied by changes in prices. Therefore, an increase or decrease in income between selected years does not necessarily represent a comparable change in real income.

Other data relating to the income received by the population are available from the personal income series of the Department of Commerce, the Department of Agriculture's farm income series, Federal individual income tax tabulations, and Old-Age, Survivors, and Disability Insurance earnings records. These sets of statistics are collected for different purposes and differ with respect to coverage and definitions. For a discussion of the comparability of these statistics with survey data collected by the Bureau of the Census, and for more detailed definitions of the terms and concepts used in this report, see Current Population Reports, Series P-60, No. 39, "Income of Families and Persons in the United States: 1961."

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in interpreting medians and percents based on relatively small numbers of cases, as well as small differences between figures. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting.
