Section 1
Population

This section presents statistics on the growth, distribution, and characteristics of the population of the United States. The principal source of these data is the Bureau of the Census, which conducts a decennial census of the population and a monthly current population survey and also prepares periodic population estimates. For a listing of specific publications issued, see the Guide to Sources.

Decennial censuses.—The Constitution provides for a census of the population every 10 years, primarily to establish a basis for apportionment of Members of the House of Representatives among the States. For over a century after the first census in 1790, the census organization was a temporary one. In 1902, the Bureau of the Census was established as a permanent Federal Agency, responsible for enumerating the population and also for compiling statistics on other subjects and at other times.

In the 1960 Census, as in previous censuses, each person was counted as an inhabitant of his usual place of residence (the place where he lives and sleeps most of the time). While this place is not necessarily his legal residence, voting residence, or domicile, the use of these different bases of classification would usually produce substantially the same statistics.

In the last 3 decennial Censuses, some data were obtained from representative samples of the population rather than from a complete count, as follows: 5 percent in 1940, 20 percent in 1950, and 25 percent in 1960. Exact agreement is not to be expected among the various samples, nor between them and the complete count, but sample data may be used with confidence where large numbers are involved and assumed to indicate patterns and relationships where small numbers are involved.

Current Population Survey.—This is a monthly nationwide survey of a scientifically selected sample representing the noninstitutional civilian population. The sample is located in 357 areas comprising 701 counties and independent cities with coverage in every State. About 40,000 housing units and other quarters are designated for the sample at any time, of which about 35,000 (containing 80,000 persons 14 years old and over) are occupied by households eligible for interview; of these, in turn, about 4 to 6 percent are, for various reasons, unavailable for interview. For a discussion of the reliability of estimates based on the sample, see text, p. 217.

Population estimates and projections.—National estimates are derived by use of decennial census data as benchmarks and of data reflecting components of population change available from various agencies as follows: Births and deaths (Public Health Service); immigrants and emigrants (Immigration and Naturalization Service); the Armed Forces (Department of Defense); net migrants (Puerto Rico Planning Board); and Federal employees abroad (Civil Service Commission). State estimates are based on similar data and also on school statistics from State Departments of Education and parochial school systems.

National population projections indicate the approximate future level and characteristics of the population under given assumptions as to future fertility, mortality, and net immigration from abroad. The method used to develop the projections involved preparation of separate projections of each of the components of population change—births, deaths, and net immigration—and the combination of these with July 1 estimates of the current population. The projections by State incorporate further assumptions about population redistribution through interstate migration throughout the projection period.

For details concerning methodology, see the sources cited below the tables containing projections data.

Standard Metropolitan Statistical Areas (SMSA).—The entire territory of the United States has been classified by the Bureau of the Budget as either (*a*) metropolitan, or "inside SMSA's," and (*b*) nonmetropolitan, or "outside SMSA's." An SMSA is a county or group of contiguous counties (except in New England) which contains at least one central city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition, other contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, towns and cities rather than counties are used in defining SMSA's. Central cities are those named in the titles of the areas. For a more detailed explanation and a listing of the component areas of each SMSA, see Bureau of the Budget, *Standard Metropolitan Statistical Areas, 1964*. Data on metropolitan-nonmetropolitan residence obtained from the Current Population Survey relate to SMSA's as defined at the time of the 1960 Census of Population except as otherwise noted.

Urban and rural areas.—According to the 1960 Census definition, the urban population comprises all persons living in (*a*) places of 2,500 inhabitants or more incorporated as cities, boroughs, villages, and towns (except towns in New England, New York, and Wisconsin); (*b*) the densely settled urban fringe, whether incorporated or unincorporated, of urbanized areas; (*c*) towns in New England and townships in New Jersey and Pennsylvania which contain no incorporated municipalities as subdivisions and have either 25,000 inhabitants or more or a population of 2,500 to 25,000 and a density of 1,500 persons or more per square mile; (*d*) counties in States other than the New England States, New Jersey, and Pennsylvania that have no incorporated municipalities within their boundaries and have a density of 1,500 persons or more per square mile; and (*e*) unincorporated places of 2,500 inhabitants or more.

Substantially the same definition was used for the 1950 Census, the major difference being the designation in 1960 of urban towns in New England and urban townships in New Jersey and Pennsylvania. In censuses prior to 1950, the urban population comprised all persons living in incorporated places of 2,500 inhabitants or more and areas (usually minor civil divisions) classified as urban under somewhat different rules relating to population size and density. In all definitions, the population not classified as urban constitutes the rural population.

Changes in the size of the urban population from one census to another are affected by 2 components: (*a*) Growth in areas classified as urban at the beginning of the decade; and (*b*) reclassification of rural territory as urban. Between censuses, it is possible only to obtain measures of the first component from the Current Population Survey (see p. 1). Measures of the second are too costly. Since about 60 percent of the urban population growth between 1950 and 1960 was attributable to expansion of urban territory, data on the urban population from the Survey may be misleading. Consequently, regular publication of data on urban-rural residence from the Current Population Survey has been discontinued.

Farm and nonfarm residence.—The rural population is divided into "rural-farm," comprising all persons living on farms, and "rural-nonfarm," comprising the remainder. According to the 1960 Census definition, the farm population consists of all persons living in rural territory on places of less than 10 acres yielding agricultural products which sold for $250 or more in the previous year, or on places of 10 acres or more yielding agricultural products which sold for $50 or more in the previous year.

Color and race.—The concept of race as used by the Bureau of the Census is derived from that which is commonly accepted by the general public as reflected in the action of legislative and judicial bodies of the country. It does not, therefore, reflect clear-cut definitions of biological stock, and several categories refer to nationality. "Color" divides the population into white and nonwhite. The nonwhite population consists

of Negroes, American Indians, Japanese, Chinese, Filipinos, and all others not classified as white. Persons of Mexican birth or ancestry who are not definitely Indian or of other nonwhite stock are counted as white. Persons of mixed parentage are classified by the race or color of the nonwhite parent.

Mobility status.—Classification of the population by mobility status is based on comparison of an individual's place of residence at the survey or census date with that of a specified earlier date. *Mobile persons or movers* includes all persons living in different houses in the United States at the beginning and at the end of the period. According to their new location, they may be "same county movers" or "different county movers, or migrants." Migrants in turn are classified according to whether they moved within the same State or into a different State. *Nonmobile persons or nonmovers* includes all persons living in the same house in the United States at the beginning and end of the period. *Persons abroad* includes all persons living outside the United States at the beginning of the period.

Nativity.—The category "Native" comprises persons born in the United States, the Commonwealth of Puerto Rico, or a possession of the United States. It also includes persons born in a foreign country or at sea who have at least one parent born in the United States. Persons whose place of birth was not reported are assumed to be native unless their census report contains contradictory information, such as an entry of a language spoken prior to coming to the United States. Persons not having any of the foregoing qualifications are classified as "foreign born."

Household.—A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment or other group of rooms, or a room that constitutes "separate living quarters." A household includes the head of the household, others in the housing unit related to the head, and also the unrelated persons, if any, such as lodgers, foster children, wards, or employees who regularly live in the house. A person living alone or a group of unrelated persons sharing the same housing unit as partners is also counted as a household. Prior to 1960 a household was defined as all the persons occupying a "dwelling unit." See text, section 28, Construction and Housing, for definitions of "housing unit" and "dwelling unit."

Group quarters are living arrangements for persons who do not live in housing units. Examples of group quarters are: A house with at least five lodgers, an institution, a college dormitory, or a military barracks.

Family.—The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together. A primary family consists of the head of a household and all other persons in the household related to the head. A secondary family comprises two or more persons such as guests, lodgers, or resident employees and their relatives, living in a household or group quarters (other than such groups among inmates of institutions) and related to each other.

Subfamily.—A "subfamily" is a married couple with or without children, or one parent with one or more children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. Members of a subfamily are also members of the primary family with whom they live. The number of subfamilies, therefore, is not included in the number of families.

Married couple.—A "married couple" is defined as a husband and his wife living together, with or without children and other relatives.

Unrelated individuals.—"Unrelated individuals" refers to persons (other than inmates of institutions) who are not living with any relatives. A primary individual is a household head living alone or with persons all of whom are unrelated to him. A secondary individual is a person in a household or group quarters such as a guest, lodger, or resident employee (excluding inmates of institutions) who is not related to the head or to any other person in the household or group quarters.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

NA Not available. X Not applicable. Z Less than 0.5 square mile.

[1] Includes estimated population of the Philippines (16,356,000), not shown separately.

[2] Census taken as of Oct. 1, 1939.

[3] Puerto Rico was ceded to the United States by Spain in 1898. On July 25, 1952, pursuant to acts of Congress, it achieved the political status of the Commonwealth of Puerto Rico.

[4] Not enumerated.

[5] Enderbury Island uninhabited at time of enumeration.

[6] Sand Island uninhabited at time of enumeration.

[7] Little Swan Island uninhabited at time of enumeration.

[8] Includes Caroline, Christmas, Danger (Pukapuka), Flint, Funafuti, Kingman Reef, Malden, Manahiki, Navassa, Nukufetau, Nukulailai, Nurakita, Palmyra, Penrhyn, Rakahanga, Starbuck, Vostok, Phoenix Group (except Canton and Enderbury), and Union (Tokelau) Group, not enumerated in decennial censuses; and Baker, Howland, and Jarvis Islands not inhabited in 1950 and 1960. Quita Sueño Bank, Roncador Cay, and Serrana Bank, claimed by both the United States and Colombia, not enumerated.

[9] Population of Baker, Howland, and Jarvis Islands. Other islands not enumerated or uninhabited at time of enumeration.

[10] Not enumerated or uninhabited at time of enumeration.

[11] Area is for Navassa (2 square miles), Baker, Howland, and Jarvis (combined area 3 square miles), and Palmyra (4 square miles). Excludes Kingman Reef, Quita Sueño Bank, Roncador Cay, and Serrana Bank (each less than 0.5 square mile); area of other islands listed in footnote 8 not available.

[12] Under jurisdiction of United States in accordance with treaty of Nov. 18, 1903, with Republic of Panama.

[13] Leased (1914) from the Republic of Nicaragua for 99 years.

[14] Figures from Government of Nicaragua. Little Corn Island uninhabited at time of enumeration.

[15] Under the United Nations Trusteeship System with the United States as administering authority since July 18, 1947.

[16] Population 1940, 131,258 (Census of Japan).

[17] Estimated civilian population as of June 30, 1950; see *Current Population Reports*, Series P-25, No. 238, for derivation of estimates.

[18] Census of 1958 conducted by the Office of the High Commissioner. Civilian population; see *Census Report, 1958: Trust Territory of the Pacific Islands*, Office of the High Commissioner, Agana, Guam, June 1959.

[19] See references in footnotes 17 and 18, above. Comprised of 687 square miles of land area and 7,797 square miles of water area.

[20] Excludes United States citizens temporarily abroad on private business, travel, etc. Such persons were enumerated at their usual place of residence in the United States as absent members of households.

[21] Excludes dependents of Federal employees and crews of merchant vessels.

[22] Based on 20-percent sample of reports received.

[23] Represents U.S. citizens abroad for extended periods of time. Since this population was enumerated on a voluntary basis, its coverage is probably less complete than that of other categories of Americans abroad.

No. 6. Current and Projected Population, by Age and Sex: 1960 to 1990

[**In thousands.** Estimates as of July 1. Includes Armed Forces abroad. See p. 1 for basis of estimates and projections. The underlying projections of fertility were computed by the "cohort" method and imply that completed fertility of all women (i.e., the average number of children per 1,000 women at end of childbearing) moves gradually toward the following levels: Series A, 3,350; Series B, 3,100; Series C, 2,775; and Series D, 2,450. Series A results do not differ substantially from those obtained by assuming that the average annual level of fertility in the 1962–66 period will persist throughout the projection period]

Year, series, and sex	Total, all ages	Under 5 years	5 to 9 years	10 to 14 years	15 to 19 years	20 to 24 years	25 to 34 years	35 to 44 years	45 to 54 years	55 to 64 years	65 and over	14 and over	18 and over	21 and over

No. 9. Center of Population: 1790 to 1960

["Center of population" is that point which may be considered as center of population gravity of the United States or that point upon which the United States would balance if it were a rigid plane without weight and the population distributed thereon with each individual being assumed to have equal weight and to exert an influence on a central point proportional to his distance from that point]

Year	North latitude			West longitude			Approximate location
Conterminous U.S.[1]	°	′	″	°	′	″	
1790	39	16	30	76	11	12	23 miles east of Baltimore, Md.
1800	39	16	6	76	56	30	18 miles west of Baltimore, Md.
1810	39	11	30	77	37	12	40 miles northwest by west of Washington, D.C. (in Virginia).
1820	39	5	42	78	33	0	16 miles east of Moorefield, W.Va.[2]
1830	38	57	54	79	16	54	19 miles west-southwest of Moorefield, W.Va.[2]
1840	39	2	0	80	18	0	16 miles south of Clarksburg, W.Va.[2]
1850	38	59	0	81	19	0	23 miles southeast of Parkersburg, W.Va.[2]
1860	39	0	24	82	48	48	20 miles south by east of Chillicothe, Ohio.
1870	39	12	0	83	35	42	48 miles east by north of Cincinnati, Ohio.
1880	39	4	8	84	39	40	8 miles west by south of Cincinnati, Ohio (in Kentucky).
1890	39	11	56	85	32	53	20 miles east of Columbus, Ind.
1900	39	9	36	85	48	54	6 miles southeast of Columbus, Ind.
1910	39	10	12	86	32	20	In the city of Bloomington, Ind.
1920	39	10	21	86	43	15	8 miles south-southeast of Spencer, Owen County, Ind.
1930	39	3	45	87	8	6	3 miles northeast of Linton, Greene County, Ind.
1940	38	56	54	87	22	35	2 miles southeast by east of Carlisle, Haddon township, Sullivan County, Ind.
1950	38	50	21	88	9	33	8 miles north-northwest of Olney, Richland County, Ill.
1960	38	37	57	88	52	23	4 miles east of Salem, Marion County, Ill.
United States							
1950	38	48	15	88	22	8	About 3 miles northeast of Louisville, Clay County, Ill.
1960	38	35	58	89	12	35	6½ miles northwest of Centralia, Ill., and approximately 50 miles east of East St. Louis, Ill.

[1] Excludes Alaska and Hawaii.
[2] West Virginia was set off from Virginia Dec. 31, 1862, and admitted as a State June 19, 1863.

No. 11. Population Projections—States: 1975 and 1985

[**In thousands.** As of July 1. Roman numberals I and II indicate interstate migration assumptions based on *gross* migration patterns of the 1955–60 period. Under Series I, those patterns continue throughout the projection period. Series II allows for convergence of the gross migration rates during the projection period. Letters B and D represent national population projections series from table 6. See source for detailed explanation]

Z Less than 0.1 percent.

[2] For United States, population of U.S. has been divided by total land area. For each State and Puerto Rico, population at given census has been divided by land area as then constituted, except that 1930 figures are based on revised land areas used for 1940.

No. 13. Urban and Rural Places and Population, by Size of Place: 1910 to 1960

[Prior to 1960, excludes Alaska and Hawaii. "Previous urban definition" refers to the definition used prior to 1950 when a number of large and densely settled places were not included as urban because they were not incorporated. In 1950, the Bureau of the Census adopted the concept of the urbanized area and delineated boundaries for unincorporated places. All the population residing in urban-fringe areas and in unincorporated places of 2,500 or more is classified as urban according to the "current" definition. See also *Historical Statistics, Colonial Times to 1957*, series A 181-209]

No. 15. Population and Components of Population Change for Metropolitan Areas: 1960 and 1965

[In thousands, except as indicated. Areas as defined January 1, 1967. Minus sign (–) denotes decrease. For definition of standard metropolitan statistical area, see text, p. 2. For area components, see *Standard Metropolitan Statistical Areas, 1964* (as amended), issued by the Executive Office of the President, Bureau of the Budget. For New England, data refer to State Economic Areas, which consist of whole counties, because 1965 estimates were not available for the towns and cities comprising SMSA's in New England]

No. 16. White and Negro Population—By Residence: 1960 and 1966

[**In thousands, except percent.** 1960 based on enumerated population as of April 1, and includes all members of the Armed Forces resident in the United States. 1966 based on Current Population Survey, as of March, and includes members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces. See text, p. 1. Minus sign (−) denotes decrease]

No. 17. Cities With 100,000 Inhabitants or More in 1960—Population, 1910 to 1960, and Area, 1960

[Increase from census to census includes that due to annexation of territory as well as to direct growth. "Cities" refers to political subdivisions which are incorporated as cities, boroughs, towns, or villages with the exception that towns are not recognized as incorporated places in New England States, New York, and Wisconsin. Land area figures, generally supplied by city engineers, have been revised to agree with those in the Bureau of the Census, *Area Measurement Reports*, Series GE-20, where available]

[1] The cities of Madison, Wis., and Rockford, Ill., share the same rank of 96. In order to have the lowest rank equal to the number of cities presented, the number 97 is omitted.

[2] Revised population figure for Mobile is 202,779; for Norfolk, 304,869.

[3] Population shown is for New York City as now constituted.

[4] Omaha and South Omaha cities consolidated between 1910 and 1920. Combined population, 1910: 150,355.

[5] Not incorporated in 1910.

No. 36. Households, by Race of Head, and Population Per Household: 1890 to 1960

[Number in thousands. Prior to 1960, excludes Alaska and Hawaii. For definition of household, see p. 3. See also *Historical Statistics, Colonial Times to 1957*, series A 242 and A 255-263]

Date	Households				Race of head			
	Number	Annual increase over preceding date		Population per household [2]	White	Negro	Other	Percent white
		Number	Percent [1]					
1890 (June 1) [3]	12,690	(X)	(X)	4.93	11,255	1,411	24	88.7
1900 (June 1)	15,964	327	2.32	4.76	14,064	1,834	66	88.1
1910 (Apr. 15) [3]	20,256	434	2.44	4.54	[4] 18,002	2,173	[4] 81	88.9
1920 (Jan. 1) [3]	24,352	418	1.90	4.34	21,826	2,431	95	89.6
1930 (Apr. 1)	29,905	542	2.02	4.11	26,983	2,804	118	90.2
1940 (Apr. 1)	34,949	504	1.56	3.77	31,680	3,142	127	90.6
1950 (Apr. 1)	42,857	791	2.06	3.52	39,044	3,633	149	91.2
1960 (Apr. 1)	53,021	1,016	1.92	3.38	47,868	5,153		90.3

X Not applicable. [1] Computed by compound interest formula.
[2] Obtained by dividing total population by number of households; hence, not strictly average size of household because total population includes members of quasi-households.
[3] Includes small number of hotels, institutions, and other quasi-households. [4] Estimated.

No. 39. Household and Family Units, 1960 and 1965, and Projections, 1970 to 1985, by Type

[**In thousands.** As of July 1, except as noted. Includes members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces. The projections are based on combinations of two different assumptions about the level of the marriage rates in future years and two different assumptions about trends in the proportions of the population in the various household and family status classes. Household projection Series 1 is the product of the higher marriage assumptions and the higher household and family status assumptions. Series 2 is the product of the lower marriage assumptions and the lower household and family assumptions. For additional explanation, see source]

No. 45. Religious Bodies—Church Membership, Number of Pastors, and Sunday School Enrollment

[Prior to 1959, excludes Alaska and Hawaii. Represents latest information available from religious bodies; excludes a few groups giving no data, such as Church of Christ, Scientist. Totals include, substantially, those religious bodies reporting to Bureau of the Census for Census of Religious Bodies in 1936. Not all groups follow same calendar year nor count membership in same way; some groups give only approximate figures. Roman Catholics count all baptized persons, including infants; Jews regard as members all Jews in communities having congregations; Eastern Orthodox Churches include all persons in their nationality or cultural groups; most Protestant bodies count only persons who have attained full membership, and previous estimates have indicated that all but a small minority of these are over 13 years of age; however, m ny Lutheran bodies and Protestant Episcopal Church now report all baptized persons, and not only those confirmed]

Religious body	Year	Churches reported	Membership (*1,000*)	Pastors with charges	Sunday school enrollment [1] (*1,000*)

Section 2

Vital Statistics, Health, and Nutrition

This section presents vital statistics—data on births, deaths, fetal deaths (stillbirths), marriages, divorces—and data on communicable diseases, mental illness, medical care, hospitals, and nutrition. Vital statistics are compiled and published by the Public Health Service in the annual report, *Vital Statistics of the United States*, in certain reports of the *Vital and Health Statistics* series, and in the *Monthly Vital Statistics Report*. Reports in this field are also issued by the individual State bureaus of vital statistics.

Births and deaths.—The collection of death statistics on an annual basis began in 1900. Then the death-registration States consisted of 10 States and the District of Columbia. In 1915, the collection of birth statistics began with 10 States and the District of Columbia. The changing composition of the two registration areas[1] makes it impossible to obtain geographically comparable birth and death data for the entire United States before 1933. However, the rates for the expanding groups of registration States are approximations of national rates, and general comparisons over a long period of years can be made. Beginning with 1933, the birth and death registration areas have comprised the entire United States, including Alaska beginning 1959 and Hawaii beginning 1960. National statistics on fetal deaths were compiled for 1918 and annually since 1922.

Prior to 1951, and in 1955, birth statistics were based on a complete count of the records received in the Public Health Service. From 1951 to 1954, and for 1956 and subsequent years, the figures were based on a 50-percent sample of all registered births. Adjustments shown for underregistration of births are based on the results of nationwide tests of registration completeness in 1940 and 1950. Such adjustments in the published data were discontinued in 1960.

Current provisional death statistics are based on a 10-percent sample of death certificates filed in State vital statistics offices. Fetal deaths (stillbirths) and deaths among Armed Forces abroad are excluded.

Mortality statistics are compiled in accordance with World Health Organization regulations, which specify that member nations classify causes of death according to the *International Statistical Classification of Diseases, Injuries, and Causes of Death*. The current classification, "Seventh Revision of the International Lists," has been used in the United States beginning with 1958. It has been the practice to revise the *International Lists* every 10 years to keep abreast of medical knowledge. Each revision has produced some break in the comparability of cause-of-death statistics. Comparability ratios which measure the net effect of changes in classifications according to the Fifth and Sixth Revisions are shown in *Vital Statistics–Special Reports*, Vol. 51, Nos. 2 and 3; and according to the Sixth and Seventh Revisions in *Vital Statistics of the United States, 1958*, Vol. 1, and in *Vital Statistics–Special Reports*, Vol. 51, No. 4. The extent of earlier changes is discussed in "The Effect of the Sixth Revision of the International Lists of Diseases and Causes of Death Upon Comparability of Mortality Trends," *Vital Statistics–Special Reports*, Vol. 36, No. 10, and *Vital Statistics of the United States, 1958*, Vol. 1.

Births, deaths, and fetal deaths are classified by place of occurrence and by place of residence of the mother or of the decedent.

Marriages and divorces.—National collections of statistics on marriages and divorces in the United States were made for the years 1867 to 1906, 1916, 1922 to 1932, 1937 to

[1] For coverage of these areas, see *Historical Statistics of the United States, Colonial Times to 1957*, series B 1–5.

1940, and each year since 1944. Estimates have been made for the intervening years as well as for years in which collections were not complete. A marriage-registration area was established by the Public Health Service in 1957, and a divorce-registration area in 1958. At the beginning of 1967, the marriage-registration area covered 36 States and 3 independent registration areas; the divorce-registration area, 22 States and 1 independent registration area.

Vital statistics rates.—Vital statistics rates computed by the Public Health Service are based upon the enumerated population figures as of April 1 for 1940, 1950, and 1960 and upon the estimated midyear population figures for other years, provided by the Bureau of the Census unless otherwise noted. Birth and divorce rates for 1940 and 1947 to 1960, and death and marriage rates for 1940 to 1960, for the United States and the individual States are based on total population present in the area.

Morbidity.—Annual data on notifiable diseases, based on reports from State health departments, are compiled by the Public Health Service at its Communicable Disease Center in Atlanta, Georgia, and published as a supplement to its *Morbidity and Mortality Weekly Report.* The list of notifiable diseases is revised biennially and includes those which, by mutual agreement of the States and the Public Health Service, are communicable diseases of national importance.

General health statistics, including morbidity, disability, and the utilization of health services, are provided by the various surveys that make up the National Health Survey of the Public Health Service. They are published in *Vital and Health Statistics,* Series 10 and 11. Morbidity statistics for members of the Armed Forces are prepared and published by the Departments of the Army, Navy, and Air Force. The Department of Labor compiles statistics of industrial injuries (see p. 245).

Medical care.—Data on persons receiving inpatient care in short-stay hospitals, resident patients in mental hospitals, and residents of homes for the aged and chronically ill, are collected by the Public Health Service and presented in *Vital and Health Statistics,* Series 12 and 13; data on patient visits to physicians, dentists, and other providers of health care are furnished in Series 10.

Another aspect of medical care is provided by statistics on patients in hospitals for mental disease, psychiatric services of general hospitals, outpatient psychiatric clinics, and institutions for the mentally retarded. From 1923 to 1946, data on mental health were collected annually by the Bureau of the Census. Since 1946 they have been issued by the Public Health Service. Beginning with 1947, hospital data appear annually in *Patients in Mental Institutions,* and beginning with 1959, clinic data appear in *Data on Patients of Outpatient Psychiatric Clinics in the United States.*

Statistics on institutional population based on the 1960 Census of Population include information on number and characteristics of persons in long-term hospitals, in homes and schools for the mentally and physically handicapped, and in homes for the aged and dependent (*U.S. Census of Population, 1960,* PC(2)–8A).

Statistics of hospitals are obtained from the American Hospital Association's annual survey of hospitals. They are published annually in *Hospitals,* Guide Issue, and cover all hospitals accepted for registration by the Association. To be accepted for registration, a hospital must meet certain requirements, as follows: It must have at least 6 beds for the care of nonrelated patients for an average stay of over 24 hours per admission; be constructed and equipped to insure safety of patients and to provide sanitary facilities for their treatment; have an organized medical staff, registered nurse supervision, and nursing care for round-the-clock patient care; maintain clinical records on all patients and submit evidence of patient care by doctors; provide minimal surgical and obstetrical facilities or relatively complete diagnostic and treatment facilities; have diagnostic X-ray and clinical laboratory services readily available; and offer services more intensive than those required merely for room, board, personal services, and general nursing care.

Statistics supporting comprehensive, long-range plans for construction of hospitals and related medical facilities authorized under Title VI of the Public Health Service Act, as amended, are submitted annually by the Hill-Burton State Agencies to the Public Health Service. National data on hospital beds in 1948 to 1962 and detailed State data as of January 1, 1962, appear in *Hill-Burton State Plan Data: A National Summary as of January 1, 1962*, Public Health Service Publication No. 930–F–2.

Data on physicians, dentists, nurses, and other providers of health services are published in the *Health Manpower Source Book Series*, Public Health Service Publication Number 263. A comprehensive compilation of data on some 35 categories of health occupations is presented in *Health Resources Statistics: Health Manpower, 1965*, Public Health Service Publication Number 1509.

Nutrition.—Statistics on the apparent per capita consumption of food and its nutrient value are estimated by the Department of Agriculture and published quarterly (nutrient value, annually) in the *National Food Situation*. A discussion of methods used to compute these figures and more detailed information appear in Statistical Bulletin No. 364, *U.S. Food Consumption; Sources of Data and Trends, 1909–63*, and the annual supplements. Data on Federal food distribution programs, quantity and cost of food commodities distributed, and number of persons participating in the programs are published annually in *Agricultural Statistics*.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1957*. See preface.

No. 52. Live Births, by Sex of Child and by Attendant: 1940 to 1965

[**In thousands, except rate.** Prior to 1960, excludes Alaska and Hawaii. Represents registered births. For total estimated births prior to 1960, see table 49]

Year	Total	Number of live births			Attended by—		
		Male	Female	Males per 1,000 females	Physician, in hospital [1]	Physician, not in hospital	Midwife, other, and not specified
1940	2,360	1,212	1,149	1,055	1,317	825	218
1945	2,735	1,405	1,331	1,056	2,156	403	177
1950	3,554	1,824	1,731	1,054	3,126	252	177
1955	4,047	2,074	1,974	1,051	3,819	101	128
1960	4,258	2,180	2,078	1,049	4,114	49	94
1961	4,268	2,186	2,082	1,050	4,135	44	90
1962	4,167	2,132	2,035	1,048	4,049	36	82
1963	4,098	2,102	1,996	1,053	3,989	33	76
1964	4,027	2,060	1,967	1,047	3,925	28	75
1965	3,760	1,927	1,833	1,051	3,661	33	66

[1] It is assumed that all births in hospitals or institutions are attended by physicians.

No. 53. Live Birth Rate, by Color and Age of Mother: 1940 to 1965

[**Births per 1,000 women in each specified group.** Prior to 1959, excludes Alaska, and 1960, Hawaii. Data for 1940 to 1955 are adjusted for underregistration; 1959 data are shown for both adjusted and registered births; beginning 1960, registered births only. For 1940, 1950, and 1960, based on enumerated population as of April 1; for all other years, on estimated population as of July 1. See also *Historical Statistics, Colonial Times to 1957*, series B 22-23]

Year	15 to 44 years [1]			Age of mother							
	Total	White	Nonwhite	10 to 14 years	15 to 19 years	20 to 24 years	25 to 29 years	30 to 34 years	35 to 39 years	40 to 44 years	45 to 49 years [2]

White	40.3	56.4	53.5	64.2	82.5	[2] 102.2	114.3	123.7
Nonwhite	49.2	60.9	88.1	119.2	141.8	[2] 150.7	161.3	167.5

[1] Rate per 1,000 unmarried (never married, widowed, and divorced) women aged 15 to 44 years enumerated as of April 1 for 1940 and 1950 and estimated as of July 1 for all other years. [2] See footnote 1, table 54.

No. 56. Net and Gross Reproduction Rate, by Color: 1905 to 1965

[Prior to 1959, excludes Alaska, and 1960, Hawaii. Prior to 1960, based on births adjusted for underregistration; beginning 1960, on registered births. Rates computed using annual vital statistics life tables and population estimates by age, except as noted for earlier years. A net reproduction rate of 1,000 means that each generation would just replace itself, if birth and death rates of a specified period were to continue indefinitely, in the absence of net immigration. A rate above 1,000 implies a potentially gaining population, and a rate below 1,000, a potentially declining population. A gross reproduction rate of 1,000 means that if all women born at the beginning of a generation were to live through their reproductive period and continue birth rates existing at the time of their birth, they would barely reproduce themselves, assuming no migration from outside the area. A comparison of the net rate with the gross rate affords an indication of the loss sustained by the potential childbearing population through mortality. See also *Historical Statistics, Colonial Times to 1967*, series B 31-36]

PERIOD OR YEAR	NET RATE			GROSS RATE		
	Total	White	Nonwhite	Total	White	Nonwhite
1905 to 1910 [1]	1,336	1,339	1,329	1,793	1,740	2,240

NA Not available. X Not applicable.

[1] The standard is the distribution of women ever married, by age, in the United States in 1950.

[2] For composition of regions, see fig. I, p. xii.

[3] Excludes school years not reported.

[4] Partly estimated.

[5] Represents wives of household heads; 1960 also includes the relatively few wives of subfamily heads and secondary family heads.

[6] Includes husbands in the Armed Forces, unemployed, or not in the labor force.

NA Not available.
[1] Includes only fetal deaths (stillbirths) for which period of gestation was 20 weeks (or 5 months) or more, or was not stated.
[2] Represents deaths of infants under 28 days old, exclusive of fetal deaths.
[3] Represents deaths of infants under 1 year old, exclusive of fetal deaths.
[4] Per 100,000 live ~~deaths~~ from deliveries and complications of pregnancy, childbirth, and the puerperium. Beginning 1959, deaths are classified according to seventh revision of *International Lists of Diseases and Causes of Death*; see text, p. 45.
[5] Figures by color exclude data for residents of New Jersey.
[6] Provisional.

[1] Figures by color exclude data for residents of New Jersey.
[2] Includes deaths for which age was not stated.
[3] Adjusted for age with the age distribution of the population as enumerated in 1940 used as the standard.
[4] Based on enumerated population adjusted for age bias in nonwhite population at ages 55 to 69 years.

No. 70. Death Rate for the 10 Leading Causes of Death—States: 1965

[**By place of residence.** Refers only to deaths occurring within the U.S. Rates per 100,000 estimated midyear population in each area. Causes of death classified according to seventh revision of *International Lists of Diseases and Causes of Death;* see text, p. 45. For method of selecting the leading causes of death, see *Vital Statistics of the United States, 1960*, Vol. II, Part A]

– Represents zero. NA Not available.

[1] Excess of patients released alive from hospital (direct discharges plus leave placements) over those returning to hospital. National data on placements and returns from extramural care are not available, but net releases may be computed from less detailed movement data as follows: Net release equals resident patients beginning of year, plus all admissions excluding transfers, minus deaths in hospital, minus resident patients end of year.

No. 107. Selected Medicinal Chemicals—Production and Sales: 1945 to 1965

[**Production and sales in thousands of pounds; value in thousands of dollars.** Production in terms of 100-percent chemical content, exclusive of materials used in mixing or compounding tablets, solutions, and suspensions for consumer use. Sales include only that part of original production sold in undiluted or uncompounded form except as noted]

CHEMICAL	1945	1950	1955	1960	1962	1963	1964	1965
Amino acids: [1]

Value	48,933	58,714	82,811	68,684	67,964	64,474	60,578	65,366

– Represents zero.
D Withheld to avoid disclosing figures for individual producers.
[1] Excludes alicyclic and heterocyclic compounds for 1960; excludes methionine for 1964 and 1965.
[2] Excludes benzenoid compounds.
[3] Excludes small amounts of benzenoid barbiturates.
[4] Includes most, but not all, choline salts. [5] Choline chloride only.
[6] For human or veterinary use only through 1960. Sales include both diluted and undiluted forms through 1964; dosage-form products for 1965.
[7] Excludes derivatives. [8] Excludes derivatives other than salts.
[9] Includes benzenoid skeletal muscle relaxants; excludes small amounts of nonbenzenoid tranquilizers.
[10] Excludes K vitamins through 1960.

No. 108. Days of Disability, by Acute Condition Group: 1966

[For year ending June 30. Data refer to civilian noninstitutional population and contain some duplications, since time lost because of several concurrent conditions is counted under each contributing condition. Based on a sample and subject to sampling variability; see source for detailed explanation]

Acute condition group [1]	Cases		Total disability days				Days per 100 persons			
	Number (millions)	Per 100 persons	Restricted activity [2]	Bed disability [3]	Work loss [4]	School loss [5]	Restricted activity [2]	Bed disability [3]	Work loss [4]	School loss [5]
Infective and parasitic	47.9	25.1	197.5	103.5	21.0	43.4	103.5	54.3	28.7	102.1
Respiratory	240.1	125.9	750.4	374.3	120.0	122.4	393.5	196.3	164.1	288.3
Digestive	19.9	10.4	68.1	37.4	12.4	5.0	35.7	19.6	16.9	11.8
Injuries	48.4	25.4	322.9	89.7	88.6	10.5	169.3	47.0	121.2	24.7
All other	48.1	25.2	224.0	92.4	28.8	15.2	117.4	48.4	39.4	25.9

[1] Excludes all conditions involving neither restricted activity nor medical attention.
[2] A day when a person cut down on his usual activities for the whole day because of illness or injury. Includes bed-disability, work-loss, and school-loss days.
[3] A day when a person was kept in bed either all or most of the day because of illness or injury. Includes those work-loss and school-loss days actually spent in bed.
[4] A day when a person lost the entire work day because of illness or injury. Computed for persons 17 years of age and over who were working or had a job or business from which they were not on layoff during the 2-week period preceding the week of interview.
[5] A day when a child lost the entire school day because of illness or injury. Computed for children 6 to 16 years of age.

Source: Dept. of Health, Education, and Welfare, Public Health Service; *Vital and Health Statistics*, Series 11–No. 13.

No. 116. Specified Reportable Diseases—Cases Reported: 1945 to 1965

[Prior to 1960, excludes Alaska and Hawaii, except as noted. Figures should be interpreted with caution. Reporting of some of these diseases is known to be incomplete. The figures, however, are of value in indicating trends of disease incidence. See *Historical Statistics, Colonial Times to 1957*, series B 275–281, for rates for selected diseases]

No. 119. Nutrition—Nutrients Available for Civilian Consumption Per Capita Per Day: 1940 to 1966

[Prior to 1960, excludes Alaska and Hawaii. Based on Bureau of the Census estimated population as of July 1. Computed on basis of estimates of apparent civilian consumption (retail basis) including consumption from home gardens. No deductions have been made in nutrient estimates for loss or waste in home or for destruction or loss of nutrients during preparation of food. Deductions have been made for inedible refuse. Data include quantities of iron, thiamine, riboflavin, and niacin added to flour and cereal products; quantities of vitamin A value added to margarine and milk of all types; quantities of ascorbic acid added to fruit juices and drinks. See also *Historical Statistics, Colonial Times to 1957*, series G 546–551]

X Not applicable.
[1] Represents cost to the Federal Government of the commodity as delivered to the State distributing agency; includes cost of purchase, handling, warehousing, and transportation, but excludes administrative costs.
[2] For 1940, represents School Milk Program, which was merged with indemnity plan in July 1943. See also headnote, table 123. Cost refers to subsidy payments by the Federal Government; excludes administrative costs.
[3] Initiated in September 1954 to increase the consumption of fluid milk in schools and child-care institutions authorized under the Agricultural Act of 1954, as amended.

No. 123. School Lunch Program (Indemnity Plan)—Schools and Children Participating, States and Other Areas: 1966

[Comprises elementary and secondary schools. The indemnity plan is a subsidy program to expand markets for agricultural products, maintain outlets for government-owned commodities, and support school-lunch programs. Sponsors of school-lunch programs are reimbursed by the Federal Government for local purchases of food on a basis of quality and quantity of meals served]
