ACKNOWLEDGMENTS

This report was prepared by Emmett F. Spiers, Roger A. Herriot, and Mitsuo Ono, staff members and Chief, respectively, of the Consumer Income Statistics Branch, Population Division. Statistical assistance and review were provided by Marianne P. Witschy of the Consumer Income Statistics Branch. This report was completed under the general direction of Murray S. Weitzman, Assistant Chief (Economic Statistics Ptograms), Population Division.

SUGGESTED CITATION

U.S. Bureau of the Census, Current Population Reports, Series P-60, No. 66,. "Income in 1968 of Families and Persons in the United States," U.S. Government Printing Office, Washington, D.C., 1969.

For sale by the Superintendent of Documents, U.S. Government printing Office, Washington, D.C. 20402, $1.25. Current Population Reports issued in Series P-20, P-23, P-25, p-26, p-27, P-28 (summaries only), P-60, and P-65 are sold as a single consolidated subscription at $8.50 per year, $2.50 additional for foreign mailing.

INCOME IN 1968 OF FAMILIES AND PERSONS IN THE UNITED STATES

Average money income of families reached record levels in 1968, according to findings obtained from the inquiry on consumer income in the March 1969 Current Population Survey conducted by the Bureau of the Census. The median income of families was about $8,600 in 1968, a gain of $660, or about 8 percent, over 1967 (table A). About one-half of the increase in money income represented a real gain in purchasing power, however, as prices rose about 4 percent between 1967 and 1968.

The increase in family income for 1968 is a continuation of the general trend in rising family income during the past 21 years. Between 1947 and 1968, median family income nearly tripled, rising from $3,000 to $8,600. Much of this increase was eroded by rising prices, but the increase in real purchasing power is still substantial. In terms of constant (1968) dollars, median money income increased from about $4,700 in 1947 to $8,600 in 1968, or about $190 annually over the period.

This general rise in family income is reflected in an upward shift in the income distribution. For example, about 5.2 million families, or 10 percent of the total, had incomes below $3,000 in 1968. This represents a decrease of about 1 million since 1967 and a drop of 13.2 million since 1947. The proportion of families with incomes under $3,000 decreased from about one-half of the total in 1947 to about one-tenth in 1968. Even after adjusting for price changes, the percent of families with incomes under $3,000 in 1968 dropped to less than one-half of the 1947 figure of 26 percent.

FAMILY INCOMES IN METROPOLITAN AND NONMETROPOLITAN AREAS

Families in metropolitan areas have higher incomes than families in nonmetropolitan areas. In 1968, the median income of families residing in metropolitan areas was about $9,400, or about 28 percent higher than the median income of $7,300 for families living in nonmetropolitan areas (table B). However, the higher income of families in metropolitan areas does not necessarily connote proportionately greater economic well-being, because living costs in these areas also tend to be higher than in nonmetropolitan areas.

Median family income is higher in the larger metropolitan areas than in the smaller areas. Families living in metropolitan areas of 1,000,000 or more persons have a median income of $9,900, which is about 12 percent greater than the median of $8,900 for families residing in metropolitan areas of less than 1,000,000 inhabitants. This pattern exists for both white and Negro families; however, the percent difference in median family income between the larger and smaller metropolitan areas was greater for Negro families (23 percent) than for white families (13 percent).

The higher median incomes in the larger metropolitan areas are partly the result of the greater concentration of the higher paying professional and managerial occupations in these areas as well as the higher incomes received by persons in these occupations. For example, data for 1968 show that about 36 percent of the men working year round were in professional or managerial occupations in the larger metropolitan areas,

Table A.--FAMILIES BY TOTAL MONEY INCOME IN CURRENT AND CONSTANT DOLLARS, FOR THE UNITED STATES: 1968, 1967, AND 1947

Total money income	In current dollars			In constant 1968 dollars		
	1968	1967	1947	1968	1967	1947

Median income.....	$8,632	$7,974	$3,031	$8,632	$8,318	$4,716

whereas only about 32 percent were in these occupations in the smaller metropolitan areas. In addition, the median income of the men in these occupations in the larger metropolitan areas was about $900 more than it was in the smaller metropolitan areas.

Much of the difference between median incomes of families living in metropolitan areas of 1,000,000 or more and those in the smaller metropolitan areas was accounted for by families living outside the central cities. In the suburban areas of the larger metropolitan areas, family median income was about $10,800, or about 17 percent greater than the median income of $9,300 recorded for families residing in suburban areas in the smaller metropolitan areas. In both larger and smaller metropolitan areas, however, families living in the suburban areas had greater median incomes than those living within the central cities. For the larger metropolitan areas, median family income in suburban areas was about 26 percent greater than the central city median family income of $8,600, whereas in the smaller metropolitan areas, families residing in suburban areas had a median income of $9,300, which was about 12 percent greater than the median family income of $8,300 of central city residents.

Table B.--NUMBER AND MEDIAN INCOME IN 1968 OF FAMILIES, BY TYPE OF RESIDENCE, FOR THE UNITED STATES

(Numbers in thousands)

Type of residence	All families		White families		Negro families	
	Number	Median income	Number	Median income	Number	Median income
United States	50,510	$8,632	45,437	$8,937	4,646	$5,360

Nonmetropolitan areas	17,911	7,342	16,564	7,624	1,243	3,686

INCOME OF PERSONS

For men with income, median income advanced in 1968 to an all-time high of about $6,000, up $410, or about 7 percent, from the previous year. Median income of Negro men with income was about $3,700 in 1968, up $360, or about 11 percent, over 1967. Median income of white men was about $6,300, an increase of $410, or about 7 percent, above 1967. Approximately 60 percent of all civilian male income recipients reported that they worked 50 weeks or more at full-time jobs in 1968; this rate is about the same as in previous years. The median earnings of these year-round full-time male workers in 1968 was about $7,700, which was about $480 (about 7 percent) above the 1967 median.

The median income of women with income ($2,000) increased by $200, or about 11 percent, over 1967. This relatively low median income results in part from the sizable proportion of females who worked only part time or intermittently during the year, or whose income is limited to small amounts from sources other than earnings. However, even among year-round full-time workers in 1968, the median earnings of women ($4,500) was substantially less than that of men ($7,700).

RELATED REPORTS

Current Population Survey.--Other data based on the Current Population Survey showing the distributions of households, families, unrelated individuals, and persons, by income levels, have been published in the Series P-60 reports, Nos. 1 to 62. Occasionally, tables showing the cross-classification of income and other characteristics have been published in the Series P-20 reports of the Bureau of the Census and in the Bureau of Labor Statistics, Special Labor Force Reports. Series P-60, No. 65, "Average Family Income Up 8 Percent in 1968," and P-20, No. 189, "Selected Characteristics of Persons and Families: March 1969," contain advance 1968 income data cross-classified by various characteristics.

A historical and analytical summary of the income data collected in the Current Population Survey appears in Technical Paper No. 17, Trends in the Income of Families and Persons in the United States: 1947 to 1964, published in 1967. This report contains detailed tables showing income distributions in constant (1964) dollars, mean incomes, fifths, and Gini Ratios of families and unrelated individuals cross-classified by various characteristics, for the United States, nonfarm and farm. Similar data are also shown for males and females classified by the amount of their own income and various personal characteristics. A previous report entitled Technical Paper No. 8, Trends in the Income of Families and Persons in the United States: 1947 to 1960, issued in 1963, includes essentially the same information except that the base for constant dollars is 1959 rather than 1964 and the data are by urban-rural rather than farm-nonfarm residence.

Decennial censuses.--Income data collected in the 1960 Census of Population appear in a number of published reports. Basic distributions of persons 14 years old and over, families, and unrelated individuals, by money income in 1959, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in 1960 Census of Population, Vol. I, Characteristics of the Population, chapter C, "General Social and Economic Characteristics." Statistics on income in 1959 by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., are presented in 1960 Census of Population, Vol. I, Characteristics of the Population, chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, large counties, and standard metropolitan statistical areas of 250,000 or more.

Detailed cross-classifications of income of families and persons by social and economic characteristics are presented in Volume II, Subject Reports: 4C, Sources and Structure of Family Income; 7B, Occupation by Earnings and Education; and 8B, Income of the Elderly Population. Some statistics on income are included in Volume II reports on other subjects and in some reports of the 1960 Census of Housing. Reports of the 1950 and 1940 censuses also contain some statistics on income.

Statistics on income in 1959 collected in the Current Population Survey of March 1960 may differ from data for that year from the decennial census despite the fact that the same basic concept was used in both instances. In the first place, the survey data exclude the institutional population and most members of the Armed Forces living on post. These two groups were included in the census. Secondly, college students are generally enumerated at their own homes in the Current Population Survey and classified as family members, but were enumerated at their college residence in the census, usually as secondary individuals. Thirdly, the small group of Current Population Survey enumerators were more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Moreover, income data in the Current Population Survey are based on responses to separate questions on eight detailed types of income, whereas in the census only three broad questions were used.

DEFINITIONS AND EXPLANATIONS

Population coverage.--This report includes the civilian noninstitutional population of the United States and approximately 1,028,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Farm-nonfarm residence.--The farm population refers to rural residents living on farms. The method of determining farm-nonfarm residence in the present survey is the same as that used in the 1960 census and in the Current Population Surveys since 1960, but differs from that used in earlier surveys and censuses. According to the current definitions, the farm population consists of all persons living in rural territory on places of less than 10 acres yielding agricultural products which sold for $250 or more in the previous year, or on places of 10 acres or more yielding agricultural products which sold for $50 or more in the previous year. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are not classified as farm population. The nonfarm population, as the term is used here, comprises persons living in urban areas and rural persons not on farms.

Metropolitan-nonmetropolitan residence.--The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county, or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties. The metropolitan population in this report is based on SMSA's as defined in the 1960 census and does not include any subsequent additions or changes.

Central cities.--The population inside SMSA's is further classified as "in central cities" and "outside central cities." With a few exceptions, central cities are determined according to the following criteria:

1. The largest city in an SMSA is always a central city.

2. One or two additional cities may be secondary central cities on the basis and in the order of the following criteria:

a. The additional city or cities have at least 250,000 inhabitants.

b. The additional city or cities have a population of one-third or more of that of the largest city and a minimum population of 25,000.

Geographic regions.--The four major regions of the United States, for which data are presented in this report, represent groups of States, as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, Vermont.

North Central: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Mississippi, Maryland, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, West Virginia.

West: Arizona, Colorado, California, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, Wyoming, Alaska, and Hawaii.

Income.--For each person in the sample 14 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security; (5) dividends, interest (on savings or bonds), income from estates or trusts or net rental income; (6) public assistance or welfare payments; (7) unemployment compensation, government employee pensions, or veterans' payments; (8) private pensions, annuities, alimony, regular contributions from persons not living in this household, royalties, and other periodic income.

The amounts received represent income before deductions for personal taxes, Social Security, bonds, etc. When an indefinite amount was reported by the respondent, a specific value was assigned during processing wherever possible. If the indefinite amount was reported in terms of a range, the midpoint of the range was assigned (i.e., $10,000 to $15,000 was coded as $12,500). Open-ended amounts were converted to designated specific amounts; e.g., over $10,000 was coded as $16,000.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, labor force status, etc., and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family

income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected by the Bureau of the Census cover money income (exclusive of certain money receipts such as capital gains) prior to deductions for taxes. The fact that many farm families receive part of their income in the form of rent-free housing and goods produced and consumed on the farm, rather than in money, should be taken into consideration in comparing the income of farm and nonfarm residents. It should be noted that nonmoney incomes are also received by some nonfarm residents. They often take the form of business expense accounts, use of business transportation and facilities, full or partial compensation by business for medical and educational expenses, etc. In analyzing size distributions of income, it should be recognized that capital gains tend to be concentrated more among higher income units than among lower ones.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from his own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. The value of salable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were not considered in determining net income; however, replies based on income tax returns of other official records do reflect inventory changes.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government.

Dividends, interest (on savings or bonds), income from estates or trusts, or net rental income includes dividends from stockholdings or membership in associations, interest on savings or bonds, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, and receipts from boarders or lodgers.

Public assistance or welfare payments include public assistance payments such as old-age assistance, aid to families with dependent children, and aid to the blind or totally disabled.

Unemployment compensation, government employee pensions, or veterans' payments include: (1) Unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors; (3) money paid periodically by the Veterans' Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; also includes (4) workmen's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private pensions, annuities, alimony, regular contributions from persons not living in the household, royalties, and other periodic income include the following types of income: (1) Private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company; (2) periodic receipts from annuities or

insurance; (3) alimony and child support; (4) contributions received periodically from persons not living in the household; (5) net royalties; and (6) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Receipts not counted as income.--Receipts from the following sources were not included as income: (1) Money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings--the algebraic sum of money wages or salary and net income from farm and nonfarm self-employment; and

Income other than earnings--the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income.--The algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings represents total money income. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group (under $1,000) those that were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Many of these were living on income "in kind," savings, or gifts; or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole breadwinner had recently died or had left the household. However, many of the families and unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income.--The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for families and individuals are based on all families and individuals. The medians for persons are based on the distributions of persons with income. The medians for wage or salary income, income from nonfarm self-employment, income from farm self-employment, and income other than earnings are based on the distributions of persons or families and individuals having these types of income.

Mean income.--The mean income is the amount obtained by dividing the total income of a group by the number of families, unrelated individuals, or persons (as appropriate) in that group.

Household.--A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

All persons who are not members of households are regarded as living in group quarters. Group quarters are living arrangements for institutional inmates or for other groups containing five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses, military and other types of barracks, college dormitories, fraternity and sorority houses, hospitals, homes for nurses, convents, monasteries, and ships.

Family.--The term "family," as used in this report, refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son of the head of the household and the son's wife are in the household, they are treated as part of the head's family. On the other hand, a lodger and his wife not related to the head of the household or an unrelated servant and his wife are considered as additional families, and not a part of the household head's family.

Subfamily.--A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old, living in a household and related to, but not including, the head of the household or his wife.

The most common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a subfamily are also members of a primary family. The number of subfamilies, therefore, is not included in the number of families.

Unrelated individual.--The term "unrelated individuals," as used in this report, refers to persons 14 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may constitute a one-person household by himself, or he may be part of a household including one or more other families or unrelated individuals, or he may reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the head of the household or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Primary families and individuals.--The term "primary family" refers to the head of a household and all other persons in the household related to the head by blood, marriage, or adoption. If nobody in the household is related to the head, then the head himself constitutes a "primary individual." A household can contain one and only one primary family or primary individual. The number of "primary" families and individuals is identical with the number of households.

Secondary individual.--A secondary individual is a person, such as a lodger, guest, or resident employee, who is not related to any other person in the household or group quarters.

Head of family.--One person in each family was designated as the head. The head of a family is usually the person regarded as the head by members of the family. Women are not classified as heads if their husbands are resident members of the family at the time of the survey. Married couples related to the head of a family are included in the head's family and are not classified as separate families.

Married, wife present.--A man was classified as "married, wife present" if his wife was reported as a member of the household or group quarters, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration.

Married couple.--A "married couple" is a husband and his wife enumerated as members of the same household or group quarters. In table 40 the category "married couples 62 years old and over" includes all couples of which either member is 62 years old or over. In the P-20 reports on Household and Family Characteristics married couples are classified by the age of the husband only.

Size of family.--The term "size of family" refers to the number of persons who are living together and are related to each other by blood, marriage, or adoption.

Own children and related children.--"Own" children in a family are sons and daughters, including stepchildren and adopted children, of the family head. "Related" children in a family include own children and all other children in the household who are related to the family head by blood, marriage, or adoption.

Number of earners.--This number includes all persons in the family with $1 or more in wages and salaries, or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age.--The age classification is based on the age of the person at his last birthday.

Race.--The population is divided into three groups on the basis of race: white, Negro, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except white and Negro. "Other races" are usually shown in combination with the Negro population.

Years of school completed.--Data on years of school completed in this report were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate or a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0

represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status.--The definitions of labor force and employment status in this report relate to the population 14 years old and over.

Employed.--Employed persons comprise (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

Unemployed.--Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force.--Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force.--All civilians 14 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work; seasonal workers for whom the survey week fell in an off season; and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

Paid labor force.--Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week or were looking for work at the time and had last worked as wage and salary or self-employed workers.

Occupation, industry, and class of worker.--The data on occupation, class of worker, and employment status in tables 23 and 42 refer to the job held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week.

The data on occupation and industry in tables 29 and 45 refer to the job held longest during the income year.

In several tables two or more of the major occupation groups are subdivided by class of worker into two groups: Wage and salary workers and self-employed workers. The former refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rates for a private employer, or for any governmental unit. The latter refers to persons working in their own business, profession or trade, for profit or fees. Included in the self-employed groups in these tables are unpaid family workers, i.e., persons working without pay in a business operated by a member of the household to whom they are related by blood, marriage, or adoption.

The occupation and industry groupings used here are mainly the major groups used in the 1960 Census of Population. The composition of these groups is shown in Volume I, Characteristics of the Population, Part 1, United States Summary, chapter D.

Work experience.--A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year.--Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs.--A person is classified as having worked at part-time jobs, during the preceding calendar year, if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified

as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round full-time worker.--A year-round full-time worker is one who worked primarily at full-time civilian jobs (35 hours or more per week) for 50 weeks or more during the preceding calendar year.

Nonworker.--A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Rounding.--Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures.--An estimate of the size of the base (number of families, individuals, or persons) of each percentage distribution by income is shown in most of the tables in this report.

The base figures shown in this report for 1961 through the present income year were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1960 census, whereas the base figures for years prior to 1961 were prepared by weighting the sample figures to agree with statistics updated from the 1950 census.

Computation of aggregate income by fifths.--Aggregate incomes were obtained by multiplying the number of families and unrelated individuals in each income level by an estimated mean income. For income intervals below $15,000, the midpoint of each class interval was used. A value of $19,000 was used for the $15,000 to $24,999 interval. For the $25,000 and over interval, the interpolation was from a Pareto Curve fitted to the data for the upper income range. The aggregate amount of income received by fifths of families or unrelated individuals ranked by income was estimated by cumulating the number of families or unrelated individuals in successive income intervals, determining by linear interpolation the top income limit of each fifth, and deriving the total income of the fifth by adding the aggregate income in the income intervals included between the lower and upper income limits of the fifth. For a more detailed description of the method of computing aggregate incomes by fifths, see Technical Paper No. 8, Trends in the Income of Families and Persons in the United States: 1947 to 1960, pages 16 to 26, or its revision, Technical Paper No. 17, Trends in the Income of Families and Persons in the United States: 1947 to 1964.

Computation of constant-dollar distributions.--The adjustment for price change was made by converting the income distribution for families and unrelated individuals for each year (1947 through 1967) into 1968 dollars on the basis of the change in the Consumer Price Index. The first step required the subdivision of broad income intervals, such as $7,000 to $9,999 and $10,000 to $14,999, into smaller intervals to provide a more refined basis for interpolation to convert to constant dollars. This subdivision was accomplished from generalized tables that were prepared from Pareto Curves that were fitted to frequency distributions having varying degrees of concentration in the open-end limits.

After the detailed frequency distributions were obtained, the procedure was then to convert the limits of each income interval into 1968 dollars adjusted by a factor representing the change on the basis of that year's price index (1968 = 100); next, to compute by interpolation the number of families and unrelated individuals in each of the detailed class intervals; and then to combine the estimates into broad income brackets.

The Consumer Price Index is basically a measure of changes in prices of the goods and services bought by urban "wage earner and clerical worker families" representing about two-thirds of all persons living in urban places and about two-fifths of the total U.S. population. The same index was used for all groups of families because separate price indices have not been developed for families in different income class intervals. Neither did the available data permit adjustment for the fact that the price index is strictly applicable to consumer expenditures for goods and services, whereas the family income data cover also family savings and income tax payments. For these and other reasons, the constant-dollar figures, particularly in the income range over $10,000, are to be regarded as approximations.

The constant-dollar distributions in tables 5 and 7 were obtained by applying the same procedure as used for the country as a whole to the current-dollar family income for each region. Previous studies indicated that regional price indices differed only slightly from the U.S. Index. The limitations noted earlier for the United States distributions in terms of constant dollars apply also to the regional distributions. It should also be noted that the adjustments for price change have been introduced in order to measure changes in real incomes within a region over time, and that they

have limited use for the purpose of interregional comparisons. The available consumer price indices measure the relative change in price levels in each region and make possible a comparison of the relative changes of constant-dollar income between regions. These indices do not, however, reflect geographical differentials in price levels and do not, therefore, make it possible to compare the absolute levels of constant-dollar income between regions.

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Office of Business Economics personal income series.--The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Office of Business Economics of the Department of Commerce (OBE), nor with the distributions of families and unrelated individuals by family personal income brackets published by that Office. The lack of correspondence stems from the following differences in definition and coverage:

1. Income definition.--The personal income series includes, among other items, the following types of nonmoney income which are not included in the census definition: Wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 5 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. Source of data.--The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employers' wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households. As discussed in the section "Source and reliability of the estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 87 percent of the comparable total money income aggregates and about 95 percent of the comparable money wage or salary aggregates included in the personal income series prepared by the OBE.

3. Population coverage.--The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States. In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the OBE but is excluded from the OBE's family income distributions.

4. Average income.--The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for families (or for unrelated individuals or income recipients 14 years old and over).

Department of Agriculture farm income series.--The farm income data shown in this report are not directly comparable with estimates of the aggregate amount of income received by the farm population and estimates of the aggregate farm income of farm operators which are prepared by the Economic Research Service of the Department of Agriculture. Data from the two sources differ in several respects for the reasons cited below:

1. The census data show distributions of persons by farm self-employment income levels and distributions of persons by total money income levels, but do not show estimates of the amount of aggregate income. Agriculture estimates provide information on the amount of aggregate income received by the population but do not provide distributions by income level.

2. The agriculture estimates are based on data derived from farm, business, and governmental sources. As indicated previously, the data presented in this report are based on a field survey of households.

3. The definitions of income are different. The census definition includes, among others, the following items which are not included in the agriculture series: Contributions for support received from persons not residing in the same living quarters and government and business transfers of income.

4. The census data on the total money income of the farm population differ from the agriculture estimates of "net income of the farm population" for reasons other than those cited previously, as follows:

a. The census data do not include under the farm classification the incomes of those nonfarm residents who reported the receipt of some farm income while the agriculture series includes the total net farm income of all farm operators.

b. Income in kind--the imputed value of farm products grown and consumed directly in farm households, and the inputed rental value of owner-occupied farm dwellings--is included in the agriculture series but excluded from the census definition of income.

5. The census data on the civilian noninstitutional population's net income from the operation of a farm differ from the agriculture estimates of farm operators' "net cash income from farming" for reasons other than those cited above, as follows:

a. The census estimates are based on the answers to a single direct question on how much net income was derived from operation of a farm during the preceding calendar year. The agriculture series on "net cash income from farming" is derived by summing estimated cash receipts for a large number of crop and livestock items, and subtracting estimates of the various kinds of cash production expenses incurred.

b. The agriculture series includes the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

c. The agriculture definition of farm expenses used in deriving "net cash income from farming" includes actual expenditures on the repair, construction, or purchase of buildings, machinery, and other capital equipment added on the place while the census definition includes only the money spent on repairs. On the other hand, depreciation charges are treated as farm expenses under the census definition but not in the agriculture series on "net cash income from farming."

Surveys of Consumer Finances.--The Survey of Consumer Finances which has been conducted annually by the Survey Research Center of the University of Michigan provides, among other data, information on the size distribution of income. These surveys are based on nationwide samples that cover all persons in private households. Several important differences between the Survey of Consumer Finances and the present report may be noted:

1. The income-receiving unit in the Survey of Consumer Finances estimates is the spending unit or the family, whereas the data in the present report relate to persons 14 years old and over and to families.

2. The Survey of Consumer Finances estimates are based on a sample which is different from and smaller (approximately 2,000 spending units in 66 areas) than the census sample. Differences between the results are subject to sampling variability arising from each survey. This factor alone could account for moderate discrepancies between the two sets of data.

3. There are some differences in the estimating procedure. The Bureau of the Census inflated its weighted sample results to agree with independent estimates of the civilian population of the United States by age, race, and sex, whereas the Survey of Consumer Finances weighted sample results were inflated to agree with independent estimates of occupied dwelling units.

4. Only eight income questions are asked for each person in the Bureau of the Census sample whereas numerous detailed questions on income and other financial items are asked of the head of the spending unit and all other members in the spending unit in each household in the Survey of Consumer Finance sample.

Federal income tax data.--For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because persons receiving less than $600 (less than $1,200, if 65 years old and over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; and, consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability and Health Insurance earnings record data.--Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability and Health Insurance earnings record data differ for the reasons listed below:

1. The earnings of the following groups are not covered by the earnings record data: Many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers and domestic servants.

2. Employees' earnings in excess of $7,800 per employer are not covered by the earnings record data.

3. Income other than earnings is not covered by the earnings record data.

4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, whereas the data presented in this report are obtained by household interviews.

SOURCE AND RELIABILITY OF THE ESTIMATES

Source of data.--The estimates are based on data obtained in the Current Population Survey of the Bureau of the Census. Most of the data were collected in March 1969 though some tables contain data collected in March of other years. For 1967 through 1969 the sample is spread over 449 areas comprising 863 counties and independent cities, with coverage in each of the 50 states and the District of Columbia. Approximately 50,000 households are designated in the Current Population Survey for interview each month. Of this number, 2,250 occupied units, on the average, are visited but interviews are not obtained because the occupants are not found at home after repeated calls or are unavailable for some other reason. In addition to the 50,000 there are also about 8,500 sample units in an average month which are visited but are found to be vacant or otherwise not to be enumerated. For the years prior to 1967, the sample was spread over fewer areas with fewer interviewed households. Prior to the March 1966 survey, income data were collected from only 75 percent of the households included in the CPS. See Current Population Reports, Series P-23, No. 22, "Concepts and Methods Used in Manpower Statistics from the Current Population Survey," June 1967, pp. 7-10, for more information about the sample design.

The estimation procedure used in this survey involved the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from the 1960 Census of Population; statistics of births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces. To these totals were added the population in the Armed Forces living off post or with their families on post. A further adjustment was made so that all members of a household got the same weight while at the same time leaving unchanged the estimates for certain basic labor force categories.

Reliability of the estimates.--Since the estimates in this report are based on a sample, they differ somewhat from the figures that would have been obtained from a complete census, using the same schedules, instructions, and enumerators. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting and to sampling variability.

In most cases the schedule entries for income are based on memory rather than on records, and in the majority of cases on the memory or knowledge of one person, usually the wife of the family head. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept.

The standard error is primarily a measure of sampling variability, that is, of the variations that occur by chance because a sample rather than the entire population is surveyed. As calculated for this report, the standard error also partially measures the effect of response and enumeration errors, but it does not measure, as such, any systematic biases in the data. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census figure by less than the standard error. The chances are about 95 out of 100 that the difference would be less than twice the standard error.

The figures presented in table C are approximations to the standard errors of various estimates shown in this report. In order to derive standard errors that would be applicable to a wide variety of items and could be prepared at a moderate cost, a number of approximations were required. As a

result, the table of standard errors provides an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item.

The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which the percentage is based. Estimated percentages are relatively more reliable than the corresponding absolute estimates of the numerator of the percentage, particularly if the percent is large (50 percent or greater).

Table C shows the standard errors of the estimated percentage of families in a given category.

Illustration of use of the table of standard errors of percentages.--Table 18 shows that an estimated 15.4 percent of families with three earners had an income of $10,000 to $11,999 in 1968. Since the base of this percentage is 5,074,000 families with three earners, interpolation in table C shows that the standard error of the estimated 15.4 percent is approximately 0.7 percent. The chances are about 68 out of 100 that a census would have shown the percentage to be greater than 14.7 percent, but less than 16.1 percent. The chances are about 95 out of 100 that the census result would have differed from the sample estimate by less than 1.4 percent.

The tables in this report present estimates of median income as well as the corresponding distributions. The sampling variability of an estimated median depends upon the distribution as well as on the size of the base.

Confidence limits of a median based on sample data may be estimated as follows: (1) From table C using the appropriate base, determine the standard error of a 50-percent characteristic, (2) add to and subtract from 50 percent the standard error determined in step (1), and (3) the confidence interval for the median corresponding to the two points established in step (2) are then read off the distribution of the characteristic. A two-standard-error confidence limit may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error shown in table C.

Table C.--STANDARD ERRORS OF ESTIMATED PERCENTAGE OF FAMILIES

Estimated percentage	Base of estimated percentage (thousands)							
	250	500	1,000	2,500	5,000	10,000	25,000	50,000
2 or 98	1.3	0.9	0.6	0.4	0.3	0.2	0.1	0.1
5 or 95	2.0	1.4	1.0	0.6	0.4	0.3	0.2	0.1
10 or 90	2.7	1.9	1.3	0.8	0.6	0.4	0.3	0.2
25 or 75	3.9	2.8	2.0	1.3	0.8	0.6	0.4	0.3
50	4.5	3.2	2.3	1.4	1.0	0.7	0.4	0.4

Illustration of the computation of the standard error of a median.--The median income of families with five children was $8,274 in 1968 (table 14). There were an estimated 1,314,000 families of this type.

1. From table C, the standard error of 50 percent of these families expressed as a percentage is about 2 percent.

2. As we are usually interested in the confidence interval for the median at the two-standard-error level, we add and subtract twice the standard error obtained in step (1). This yields percentage limits of 45.8 and 54.2.

3. Since 38.4 percent of these families had incomes below $7,000 and 9.4 percent had incomes between $7,000 and $7,999, the dollar value of the lower limit may be found by linear interpolation to be

$$\frac{45.8 - 38.4}{9.4} \times \$1,000 + \$7,000 = \$7,787.$$

Since 47.8 percent of these families had incomes below $8,000 and 7.7 percent had incomes between $8,000 and $8,999, the dollar value of the upper limit is found to be

$$\frac{54.2 - 47.8}{7.7} \times \$1,000 + \$8,000 = \$8,831.$$

The chances are about 95 out of 100 that a census would have shown the median to be greater than $7,787 but less than $8,831.

Table D contains 68 percent and 95 percent confidence intervals for various medians of differing magnitudes and bases. A 68 percent confidence interval is defined such that if many samples are taken and a one-standard-error confidence interval is formed for each sample median, about 68 out of 100 of these intervals will contain the median which would be found if a complete census were taken. For a two-standard-error confidence interval, about 95 out of 100 of the intervals formed would contain the census median.

Table D.--SAMPLING VARIABILITY OF SELECTED MEDIANS

Table and characteristics of families and persons	Median income	Base (thousands)	Confidence interval	
			68 percent	95 percent

[1]Limited to families with head 25 years old or over.
[2]Limited to persons 25 years old and over.

Cross-classification of income and work experience data.--This report presents data showing income of persons with varying amounts of work experience. Information about the civilian work experience of persons in the United States was obtained in the February and April Current Population Surveys. Information obtained in February and April was matched with the data secured in March for the 50,000 households. In income reports prior to 1965 only persons included in the February and March Surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person within a given classification, but no respondent with similar economic and demographic characteristics.

Estimates of the proportion of year-round full-time workers in specified subgroups in the population are shown in various tables in this report. All persons in the Armed Forces in February, March, and April of the survey year are excluded from the computation of the proportions of year-round full-time workers.

It should be noted that the proportions of year-round full-time workers shown in the Series P-60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, Special Labor Force Reports, "Work Experience of the Population." The difference is due largely to the fact that the proportions are not based on exactly the same groups. The proportions presented in the Special Labor Force Reports relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P-60 reports relate to civilians who received income, including not only workers but also many persons who did not work but recieved income from pensions, interest, dividends, or other sources aside from earnings.

NONRESPONSES AND ALLOCATIONS

In the March 1969 CPS, no information was recorded for approximately 5 percent of the 50,000 households because no interview could be obtained during the week in which the enumeration was conducted. In order to account for these households, the weights assigned to other sample households of similar characteristics residing in the same sample areas were increased accordingly. In addition, complete income information was not reported for about 19 percent of all families and about 14 percent of all persons 14 years old and over in households that were interviewed.

In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics. Beginning with the March 1962 survey, when a respondent did not answer one or more of the income items, all of his income data were imputed.

Beginning with the March 1966 survey, however, in the event a respondent did not answer one or more of the income questions, the missing income data for this person were imputed for only those income items which were not answered. Each of the earnings items was handled individually, whereas income items other than earnings were handled as a group. Characteristics used in this imputation are age, family status, race, residence, weeks worked, and major occupation group. The income amount assigned to a nonrespondent is that observed for another person with similar demographic and economic characteristics who did respond and who has been selected systematically in the order in which individual records are processed.

In the tabulation of income from surveys prior to 1962, the distributions by income levels had been based only on those cases which reported complete income information. The assumption implicit in this method was that persons who do not provide income information have the same income distribution as those who do provide such information. Using income data for 1958, a comparison was made of the income distributions obtained before and after the assignment of income to nonrespondents on the basis of known demographic and economic characteristics. This comparison indicated that the procedure for making individual assignments of income to nonrespondents resulted in slightly higher estimates of the proportion of families and individuals in the upper income classes than those obtained from the distributions based solely on those reporting on income. (See Current Population Reports, Series P-60, No. 33, tables F and G.)

Beginning with the 1968 CPS, the Bureau of the Census introduced inproved income edit and allocation procedures. The main feature of the new procedures is a more refined method for imputing missing income data which expands the use of information already known about that person. Among the major improvements made affecting the income data are the following: (1) an expanded set of social and economic characteristics within which the imputations are made; in addition to age, race, occupation, and weeks worked, the new procedures include sex and type of family member as major variables within which the missing income

items are imputed; (2) the elimination of inconsistent reporting which resulted in having workers with no earnings and earners with no weeks worked; and (3) the new imputation procedure assigns missing earnings entries first and then utilizes the earnings information to assign missing sources of income other than earnings. A more detailed description of the new computer editing and allocation procedures may be found in a paper, "Computer Method to Process Missing Income and Work Experience Information in the Current Population Survey," by Emmett F. Spiers and Joseph J. Knott, to be published in Proceedings of the Social Statistics Section, American Statistical Association, 1969.

Modifications in collecting income data in the March-April 1969 CPS.--Several modifications were introduced in the collection of income data in the March and April CPS supplements. These include (1) extension of the interview period of the six rotation groups for which income questions were asked in March and the use of followup forms in these six groups to accommodate household respondents who needed more time to obtain the required income information (it is estimated that some members of approximately 4,400 households, or 9 percent of the total relevant households, made use of these followup forms); (2) modification of the design and content of the questionnaire to allow for more detailed questioning of certain income items, thus, boxes for gross receipts, business expense, and net income have been added to the self-employment income questions to help the interviewer and respondent determine net income, and "yes-no" circles were added to the questions on income other than earnings in order to ascertain whether the respondent received or did not receive income; (3) field office editing procedures were extended to a 100-percent income edit of the CPS schedules; (4) training instructions were strengthened by including more detailed explanations and more examples; and (5) the interview group training session was shifted to March (from February).

A detailed evaluation of the impact of these modifications on income data is currently in process. However, a preliminary review indicates that these modifications have resulted in slight improvements in the collection of income data. For a more detailed statement of these changes see the paper by Mitsuo Ono and Herman P. Miller entitled "Income Nonresponses in the Current Population Survey," to be published in Proceedings of the Social Statistics Section, American Statistical Association, 1969.
