ACKNOWLEDGMENTS

This report was prepared by Herman P. Miller, Chief, Population Division, and Mary F. Henson of the Consumer Income Statistics Branch, Population Division. The computer programs for the tabulation of growth rate data were prepared by Norman E. Bakka, Statistical Information Division. Statistical assistance was provided by Gloria A. Thomas and Robert W. Cleveland of the Consumer Income Statistics Branch.

SUGGESTED CITATION

U.S. Bureau of the Census, Current Population Reports, Series P-60, No. 69, "Income Growth Rates in 1939 to 1968 for Persons by Occupation and Industry Groups, for the United States," U.S. Government Printing Office, Washington, D.C., 1970.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, $1.00. Current Population Reports issued in Series P-20, P-23, P-25, P-26, P-27, P-28 (summaries only), P-60, and P-65 are sold as a single consolidated subscription at $8.50 per year, $2.50 additional for foreign mailing.

INCOME GROWTH RATES IN 1939 TO 1968 FOR PERSONS BY OCCUPATION AND INDUSTRY GROUPS, FOR THE UNITED STATES

This report presents annual compound growth rates for persons 14 years old and over by current occupation and industry groups, race, and sex, by total money income and wage or salary income in current dollars, from 1939 to 1968. Included also are the median total money income and median wage or salary income as the basic data underlying the growth rates shown in this report.

RELATED REPORTS

Current Population Survey.--Other data based on the Current Population Survey showing the distributions of households, families, unrelated individuals, and persons, by income levels, have been published in the Series P-60 reports, Nos. 1 to 68. Occasionally, tables showing the cross-classification of income and other characteristics have been published in the Series P-20 reports of the Bureau of the Census and in the Bureau of Labor Statistics, Special Labor Force Reports.

A historical and analytical summary of the income data collected in the Current Population Survey appears in Technical Paper No. 8, Trends in the Income of Families and Persons in the United States: 1947 to 1960, published in 1963. This report contains detailed tables showing income distributions in constant (1959) dollars, mean incomes, fifths, and Gini Ratios of families and unrelated individuals cross-classified by various characteristics, for the United States, urban and rural. Similar data are also shown for males and females classified by the amount of their own income and various personal characteristics.

A report entitled Technical Paper No. 17, Trends in the Income of Families and Persons in the United States: 1947 to 1964, issued in 1967, updates the information contained in Technical Paper No. 8. This report includes essentially the same information as Technical Paper No. 8 except for the following: Technical Paper No. 8 shows income data in terms of constant 1959 dollars whereas this report updates and revises income information in terms of constant 1964 dollars. Income data and various characteristics are cross-classified by nonfarm and farm rather than by urban and rural categories. In addition, new income information covering work experience, occupation of longest job, and source of income has been added.

1960 Census.--Income data collected in the 1960 Census of Population appear in a number of published reports. Basic distributions of persons 14 years old and over, families, and unrelated individuals, by money income in 1959, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in 1960 Census of Population, Vol. I, Characteristics of the Population, chapter C, "General Social and Economic Characteristics." Statistics on income in 1959 by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., are presented in 1960 Census of Population, Vol. I, Characteristics of the Population, chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, large counties, and standard metropolitan statistical areas of 250,000 or more.

Detailed cross-classifications on the income in 1959 of families and persons by their social and economic characteristics, for the United States, regions, and type of residence are published in 1960 Census of Population, Subject Reports, Sources and Structure of Family Income, Series PC(2)-4C. Major emphasis is placed on the composition of family income and the major sources of this income, i.e., wages and salaries, self-employment, and other income. The tables for persons present information on the contribution to family income of the head, wife, children, and older family members and show the mean incomes for occupation groupings cross-classified by industry groupings, color, and sex.

Cross-tabulations by earnings in 1959, age, and educational attainment of males 18 to 64 years old, for the United States, the South, and the other three regions combined are published in 1960 Census of Population, Occupation by Earnings and Education, Series PC(2)-7B. Data on the income of families in which the head or the wife was 65 years old and over and on the income of persons 65 years old and over classified by a number of characteristics are presented for the United States, each of the States, and standard metropolitan statistical areas of 250,000 or more in 1960 Census of Population, Income of the Elderly Population, Series PC(2)-8B.

Statistics on income in 1959 of primary families or individuals by housing and household characteristics, such as tenure, household composition, condition and plumbing facilities, and gross rent and value, are presented in 1960 Census of Housing, Volume II, Metropolitan Housing, for the United States by geographic divisions and for

each standard metropolitan statistical area and place of 100,000 inhabitants or more. Additional data on income cross-tabulated by housing and household subjects are presented in 1960 Census of Housing, Volume V, Part 1, Residential Finance--Homeowner Properties; Volume VI, Rural Housing; and Volume VII, Housing of Senior Citizens. Also, a monograph, Income Distribution in the United States, sponsored jointly by the Bureau of the Census and the Social Science Research Council, was published in 1966. Technical Paper No. 16, Present Value of Estimated Lifetime Earnings, by H. P. Miller and R. Hornseth, published in 1967, presents estimates of the present value of estimated lifetime earnings for men in 10 major occupation groups classified by color, earnings, and years of school completed.

Statistics on income in 1959 collected in the Current Population Survey of March 1960 may differ from data for that year from the decennial census despite the fact that the same basic concept was used in both instances.

In the first place, the survey data exclude the institutional population and most members of the Armed Forces living on post. These two groups were included in the census. Secondly, college students are generally enumerated at their own homes in the Current Population Survey and classified as family members, but were enumerated at their college residence in the census, usually as secondary individuals. Thirdly, the small group of Current Population Survey enumerators were more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Moreover, income data in the Current Population Survey are based on responses to separate questions on eight detailed types of income, whereas in the census only three broad questions were used.

1950 Census.--Distributions of persons 14 years old and over by total money income in 1949 appear in the publication, U.S. Bureau of the Census, 1950 Census of Population, Volume II, chapter C. Similar data for families and unrelated individuals appear in Volume II, chapter B. Data for the United States and regions appear in Volume II, Part 1, United States Summary, whereas separate data for individual States are presented in the other parts. Various special reports contain additional income data; however, there is no special report dealing exclusively with income data. In addition, a monograph, Income of the American People, sponsored jointly by the Bureau of the Census and the Social Science Research Council, was published in 1955.

1940 Census.--Data relating to wage and salary income in 1939 have been presented in several different reports of the Sixteenth Decennial Census. A complete list of these reports is shown in earlier Current Population Survey reports on consumer income.

DEFINITIONS AND EXPLANATIONS

Population coverage.--This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces; the March 1969 survey included about 1,028,000 members.

Income.--For each person in the sample 14 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) Money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security; (5) dividends, interest (on savings or bonds), income from estates or trusts or net rental income; (6) public assistance or welfare payments; (7) unemployment compensation, government employee pensions, or veterans' payments; (8) private pensions, annuities, alimony, regular contributions from persons not living in this household, royalties, and other periodic income.

The amounts received represent income before deductions for personal taxes, Social Security, bonds, etc. When an indefinite amount was reported by the respondent, a specific value was assigned during processing wherever possible. If the indefinite amount was reported in terms of a range, the midpoint of the range was assigned (i.e., $10,000 to $15,000 was coded as $12,500). Open-ended amounts were converted to designated specific amounts; e.g., over $10,000 was coded as $16,000.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, labor force status, etc., and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected by the Bureau of the Census cover money income (exclusive of certain money receipts such as capital gains) prior to deductions for taxes. The fact that many farm families receive part of their income in the form of rent-free housing and goods produced and consumed on the farm, rather than in money, should be taken into consideration in comparing the income of farm and nonfarm residents. It should be noted that nonmoney incomes are also received by some nonfarm residents. They often take the form of business expense accounts, use of business transportation and facilities, full or partial compensation by business for medical and educational expenses, etc. In analyzing size distributions of income, it should be recognized that capital gains tend to be concentrated more among higher income units than among lower ones.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from his own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. The value of salable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government crop loans, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were not considered in determining net income; however, replies based on income tax returns of other official records do reflect inventory changes.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government.

Dividends, interest (on savings or bonds), income from estates or trusts, or net rental income includes dividends from stockholdings or membership in associations, interest on savings or bonds, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, and receipts from boarders or lodgers.

Public assistance or welfare payments include public assistance payments such as old-age assistance, aid to families with dependent children, and aid to the blind or totally disabled.

Unemployment compensation, government employee pensions, or veterans' payments include: (1) Unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors; (3) money paid periodically by the Veterans' Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; also includes (4) workmen's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private pensions, annuities, alimony, regular contributions from persons not living in the household, royalties, and other periodic income include the following types of income: (1) Private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company; (2) periodic receipts from annuities or insurance; (3) alimony and child support; (4) contributions received periodically from persons not living in the household; (5) net royalties; and (6) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Receipts not counted as income.--Receipts from the following sources were not included as income: (1) Money received from the sale of property, such

as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings--the algebraic sum of money wages of salary and net income from farm and nonfarm self-employment; and

Income other than earnings--the algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income.--The algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings represents total money income.

Median income.--The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for persons are based on the distributions of persons with income. The medians for wage or salary income, income from nonfarm self-employment, income from farm self-employment, and income other than earnings are based on the distributions of persons having these types of income.

An increase or decrease in the median income values between years does not necessarily connote a significant change. The difference in the size of the income intervals used to compute median income can have a sizeable effect on the interpolated values. Since 1947 the size of the income intervals have been revised several times and therefore the median incomes are not directly comparable. For further explanation see Series P-60, No. 60, "Income in 1967 of Persons in the United States," pages 8 and 9 and P-60, No. 43, "Income of Families and Persons in the United States: 1963," page 6.

Growth rate.--A growth rate can be defined as the slope of the trend line of a historical series. The growth rates in this report were estimated by use of the compound-interest-rate formula.

$$X_t = X_1(1 + r)^n$$

Where: X_1 = the value for the initial year.

X_t = the value for the terminal year.

n = The difference in years between the terminal and initial years.

r = The average annual compound growth rate.

To obtain the average annual compound rate of change between any two years shown, find the column for the initial year at the top of the table and read the figure in that column opposite the terminal year shown at the left.

For more detailed definitions of growth rates and the growth rate conversion and compound interest rate tables, see "Long Term Economic Growth: 1860 to 1965", Appendix 1, pages 115 to 129.

Race.--The population is divided into three groups on the basis of race: white, Negro, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except white and Negro. "Other races" are usually shown in combination with the Negro population.

Labor force and employment status.--The definitions of labor force and employment status in this report relate to the population 14 years old and over.

Employed.--Employed persons comprise (1) all civilians who, during the specified week, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family, and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, painting or repairing own home, etc.) or volunteer work for religious, charitable, and similar organizations.

Unemployed.--Unemployed persons are those civilians who, during the survey week, had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off; or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force.--Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the

survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force.--All civilians 14 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work; seasonal workers for whom the survey week fell in an off season; and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours) are also classified as not in the labor force.

Occupation, industry, and class of worker.--The data on occupation, industry, and class of worker of employed persons refer to the civilian job held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week.

The occupation and industry groupings used here are mainly the major groups used in the 1960 Census of Population. The composition of these groups is shown in Volume I, Characteristics of the Population, Part 1, United States Summary, chapter D. The categories used are either detailed classifications or combinations thereof.

The occupational and industrial classification systems used in 1940 and 1950 are basically the same as those used in 1960. There are a number of differences, however, in the specific content of particular groups, as well as several differences in title; however, it is believed that the 1940-60 relationships shown by the data are not significantly affected by these differences. The 1940 classification by class of worker is comparable with the 1960 classification.

Class of worker.--Two or more of the major occupation groups are subdivided by class of worker into two groups: Wage and salary workers and self-employed workers. The former refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rates for a private employer, or for any governmental unit. The latter refers to persons working in their own business, profession or trade, for profit or fees. Included in the self-employed groups are unpaid family workers, i.e., persons working without pay in a business operated by a member of the household to whom they are related by blood, marriage, or adoption.

Year-round full-time worker.--A year-round full-time worker is one who worked primarily at full-time civilian jobs (35 hours or more per week) for 50 weeks or more during the calendar year.

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Office of Business Economics personal income series.--The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Office of Business Economics of the Department of Commerce (OBE). The lack of correspondence stems from the following differences in definition and coverage:

1. Income definition.--The personal income series includes, among other items, the following types of nonmoney income which are not included in the census definition: Wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 5 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. Source of data.--The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employers' wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households. As discussed in the section on "Source and reliability of the estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable total money income aggregates and about 97 percent of the comparable money wage or salary aggregates included in the personal income series prepared by the OBE.

3. Population coverage.--The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States. In addition

the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the OBE but is excluded from the OBE's family income distributions.

4. Average income.--Most of the average income figures published by the OBE represent mean personal incomes, i.e., they were obtained by dividing an aggregate personal income by a total number of persons (or families). The census averages in this report, on the other hand, are median incomes, representing the point on the money income scale above and below which one-half of the persons receiving income are to be found. Because of the shape of the income distribution curve, median incomes are considerably smaller than mean incomes. Furthermore, certain of the OBE average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for families, unrelated individuals or income recipients 14 years old and over.

Percent changes in average income from one period to the next, and percent differences in average income among component groups of the population within any one period, will not necessarily correspond for these various averages. This is so because the shape of the income distribution curve changes over time and varies among population groups at any given time.

Department of Agriculture farm income series.--The farm income data shown in the P-60 reports are not directly comparable with estimates of the aggregate amount of income received by the farm population and estimates of the aggregate farm income of farm operators which are prepared by the Economic Research Service of the Department of Agriculture. Data from the two sources differ in several respects for the reasons cited below:

1. The census data show distributions of persons by farm self-employment income levels and distributions of persons by total money income levels, but do not show estimates of the amount of aggregate income. Agriculture estimates provide information on the amount of aggregate income received by the population but do not provide distributions by income level.

2. The agriculture estimates are based on data derived from farm, business, and governmental sources. As indicated previously, the data presented in the P-60 reports are based on field surveys of households.

3. The definitions of income are different. The census definition includes, among others, the following items which are not included in the agriculture series: Contributions for support received from persons not residing in the same living quarters and government and business transfers of income.

4. The census data on the total money income of the farm population differ from the agriculture estimates of "net income of the farm population" for reasons other than those cited previously, as follows:

a. The census data do not include under the farm classification the incomes of those nonfarm residents who reported the receipt of some farm income while the agriculture series includes the total net farm income of all farm operators.

b. Income in kind--the imputed value of farm products grown and consumed directly in farm households, and the imputed rental value of owner-occupied farm dwellings--is included in the agriculture series but excluded from the census definition of income.

5. The census data on the civilian noninstitutional population's net income from the operation of a farm differ from the agriculture estimates of farm operators' "net cash income from farming" for reasons other than those cited above, as follows:

a. The census estimates are based on the answers to a single direct question on how much net income was derived from operation of a farm during the preceding calendar year. The agriculture series on "net cash income from farming" is derived by summing estimated cash receipts for a large number of crop and livestock items, and subtracting estimates of the various kinds of cash production expenses incurred.

b. The agriculture series includes the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

c. The agriculture definition of farm expenses used in deriving "net cash income from farming" includes actual expenditures on the repair, construction, or purchase of buildings, machinery, and other capital equipment added on the place while the census definition includes only the money spent on repairs. On the other hand, depreciation charges are treated as farm expenses under the census definition but not in the agriculture series on "net cash income from farming."

Surveys of Consumer Finances.--The Survey of Consumer Finances which has been conducted annually by the Survey Research Center of the University of Michigan provides, among other data, information on the size distribution of income. These surveys are based on nationwide samples that cover all persons in private households. Several important differences between the Survey of Consumer Finances and the present report may be noted:

1. The income-receiving unit in the Survey of Consumer Finances estimates is the spending unit or the family, whereas the data in the present report relate to persons 14 years old and over.

2. The Survey of Consumer Finances estimates are based on a sample which is different from and smaller (approximately 2,000 spending units in 66 areas) than the census sample. Differences between the results are subject to sampling variability arising from each survey. This factor alone could account for moderate discrepancies between the two sets of data.

3. There are some differences in the estimating procedure. The Bureau of the Census inflated its weighted sample results to agree with independent estimates of the civilian population of the United States by age, color, and sex, whereas the Survey of Consumer Finances weighted sample results were inflated to agree with independent estimates of occupied dwelling units.

4. Only eight income questions are asked for each person in the Bureau of the Census sample whereas numerous detailed questions on income and other financial items are asked of the head of the spending unit and all other members in the spending unit in each household in the Survey of Consumer Finances sample.

Federal income tax data.--For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because persons receiving less than $600 (less than $1,200, if 65 years old and over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; and, consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data.--Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the reasons listed below:

1. The earnings of the following groups are not covered: many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers and domestic servants.

2. Employees' earnings in excess of $7,800 per employer are not covered by the earnings record data.

3. Income other than earnings is not covered by the earnings record data.

4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, whereas the data presented in this report are obtained by household interviews.

SOURCE AND RELIABILITY OF THE ESTIMATES

Source of data.--The estimates are based on data obtained in the Current Population Survey of the Bureau of the Census. For 1967, 1968 and 1969 the sample is spread over 449 areas comprising 863 counties and independent cities, with coverage in each of the 50 States and the District of Columbia. Approximately 50,000 households are designated in the Current Population Survey for interview each month. Of this number 2,250 occupied units, on the average, are visited but interviews are not obtained because the occupants are not found at home after repeated calls or are unavailable for some other reason. In addition to the 50,000 there are also about 8,500 sample units in an average month which are visited but are found to be vacant or otherwise not to be enumerated. For the years prior to 1967, the sample was spread over fewer areas with fewer interviewed households. Prior to the March 1966 survey, income data were collected from only 75 percent of the households included in the CPS. See Current Population Reports, Series P-23, No. 22, "Concepts and Methods Used in Manpower Statistics from the Current Population Survey," June 1967, pp. 7-10, for more information about the sample design.

The estimation procedure used in this survey involved the inflation of the weighted sample results

to independent estimates of the civilian noninstitutional population of the United States by age, color, and sex. These independent estimates were based on statistics from the 1960 Census of Population; statistics of births, deaths, immigration, and emigration; and statistics on the strength of the Armed Forces. To these totals were added the population in the Armed Forces living off post or with their families on post. A further adjustment was made so that all members of a household got the same weight while at the same time leaving unchanged the estimates for certain basic labor force categories.

Reliability of the estimates.--Since the estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained from a complete census, using the same schedules, instructions, and enumerators. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases as well as small differences between figures. As in any survey work, the results are subject to errors of response and nonreporting as well as being subject to sampling variability.

In most cases the schedule entries for income are based on memory rather than on records, and in the majority of cases on the memory or knowledge of one person, usually the wife of the family head. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept.

The standard error is primarily a measure of sampling variability, that is, of the variations that occur by chance because a sample rather than the entire population is surveyed. As calculated for this report, the standard error also partially measures the effect of response and enumeration errors, but it does not measure, as such, any systematic biases in the data.

In order to derive standard errors that would be applicable to a wide variety of items and could be prepared at a moderate cost, a number of approximations were required. As a result, the table of standard errors provides an indication of the order of magnitude of the standard errors rather than the precise standard error for any specific item. The reliability of an estimated percentage, computed by using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which the percentage is based. Tables of standard errors for the survey years included in this report have been published in the Series P-60 reports, Nos. 1 to 68.

All the tables in this report present estimates of median income or estimates of growth rates which are based on estimates of median income. The sampling variability of an estimated median income depends upon the income distribution and the size of the base.

Table A shows 68 percent and 95 percent confidence intervals for an illustrative group of medians presented in appendix table A-3. The illustrations indicate the effect of the size of the base on the confidence intervals for the medians. A 68-percent confidence interval is defined such that if many samples are taken and a one-standard error confidence interval is formed for each sample median, about 68 out of 100 of these intervals will contain the median which would be found if a full census were taken. For a two-standard error

Table A.--SAMPLING VARIABILITY OF SELECTED MEDIANS

Characteristic	Year	Base (thousands)	Median	Confidence interval of median	
				68 percent	95 percent
MALE					
Total with income	1968	62,501	$5,980	$5,930 - $6,020	$5,880 - $6,070
Professional, technical, and kindred workers	1968	6,758	9,960	9,850 - 10,130	9,720 - 10,300
Self-employed	1968	672	16,356	15,000 - 17,650	14,020 - 18,970
Salaried	1968	6,086	9,715	9,590 - 9,820	9,470 - 9,940
Operatives and kindred workers	1967	9,521	5,858	5,810 - 5,920	5,760 - 5,970
FEMALE					
Total with income	1968	48,544	$2,019	$1,990 - $2,050	$1,970 - $2,080
Operatives and kindred workers	1967	4,048	3,218	3,170 - 3,260	3,120 - 3,310

Source: Appendix table A-3.

or 95-percent confidence interval, about 95 out of 100 of the intervals formed would contain the census median. For an explanation of how these confidence intervals are formed, see Series P-60, No. 60 "Income in 1967 of Persons in the United States."

NONRESPONSES AND ALLOCATIONS

In the March 1969 CPS, no information was recorded for approximately 5 percent of the 50,000 households because no interview could be obtained during the week in which the enumeration was conducted. In order to account for these households, the weights assigned to other sample households of similar characteristics residing in the same sample areas were increased accordingly. In addition, complete income information was not reported for about 19 percent of all families and about 14 percent of all persons 14 years old and over in households that were interviewed.

In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics. Beginning with the March 1962 survey, when a respondent did not answer one or more of the income items, all of his income data were imputed.

Beginning with the March 1966 survey, however, in the event a respondent did not answer one or more of the income questions, the missing income data for this person were imputed for only those income items which were not answered. Each of the earnings items was handled individually, whereas income items other than earnings were handled as a group. Characteristics used in this imputation are age, family status, color, residence, weeks worked, and major occupation group. The income amount assigned to a nonrespondent is that observed for another person with similar demographic and economic characteristics who did respond and who has been selected systematically in the order in which individual records are processed.

In the tabulation of income from surveys prior to 1962, the distributions by income levels had been based only on those cases which reported complete income information. The assumption implicit in this method was that persons who do not provide income information have the same income distribution as those who do provide such information. Using income data for 1958, a comparison was made of the income distributions obtained before and after the assignment of income to nonrespondents on the basis of known demographic and economic characteristics. This comparison indicated that the procedure for making individual assignments of income to nonrespondents resulted in slightly higher estimates of the proportion of families and individuals in the upper income classes than those obtained from the distributions based solely on those reporting on income. (See Current Population Reports, Series P-60, No. 33, tables F and G.)

The use of more advanced electronic equipment has enabled the Bureau of the Census to introduce improved income edit and allocation procedures for the March 1968 and 1969 CPS data. The main feature of the new procedures was a more refined method for imputing missing income data which expands the use of information already known about that person. Among the major improvements made affecting the income data are the following: (1) an expanded set of social and economic characteristics within which the imputations are made; in addition to age, color, occupation, and weeks worked, the new procedures include sex and type of family member as major variables within which the missing income items are imputed; (2) the elimination of inconsistent reporting which resulted in having workers with no earnings and earners with no weeks worked; and (3) the new imputation procedure assigns missing earnings entries first and then utilizes the earnings information to assign missing sources of income other than earnings.
