ACKNOWLEDGMENTS

This report was prepared by **Edward J. Welniak** and **Mary F. Henson,** under the general direction of **John F. Coder,** Chief, Current Income Statistics Staff. The historical and summary tables were programmed by **Emmett F. Spiers** and **Robert W. Cleveland.** Statistical assistance was provided by **Ellen Yates, Helen Ogle, Rose Mary Schade,** and **Julia Carroll,** and typing assistance was provided by **Shirley L. Smith.** Publication review assistance was provided by **Marion Porter.** Overall direction was provided by **Gordon W. Green, Jr.,** Assistant Chief (Socioeconomic Statistics Programs), Population Division. Programming of the detailed tables was provided by **Thelma Varhach,** and survey operations were coordinated by **Kathleen Creighton** of the Demographic Surveys Division. Sampling review was conducted by **David Judkins** and **Donna Kostanich** of the Statistical Methods Division. The cover was illustrated by **Beverly Jo Jaquish,** Publications Services Division.

SUGGESTED CITATION

U.S. Bureau of the Census, Current Population Reports, Series P-60, No. 129, *Money Income of Families and Persons in the United States: 1979,* U.S. Government Printing Office, Washington, D.C., 1981.

For sale by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Postage stamps not acceptable; currency submitted at sender's risk. Remittances from foreign countries must be by international money order or by a draft on a U.S. bank. Current Population Reports are sold in two subscription packages: Series P-20, P-23, P-27, and P-60 are available for $70 per year ($17.50 additional for foreign mailing); Series P-25, P-26, and P-28 are available for $90 per year ($22.50 additional for foreign mailing). The single-copy price of this report is **$8.50.**

Money Income of Families and Persons in the United States: 1979

(Advance data on 1979 income of families and persons were issued in October 1980 in Current Population Reports, Series P-60, No. 125)

NOTE

As part of the Bureau's continuing effort to improve the quality and usefulness of its income and poverty data, several important modifications were made in the collection and presentation of data from the March Current Population Survey (CPS). All 1979 income amounts mentioned in the text are based on the full set of modifications made in the March 1980 CPS. However, all references to income changes between 1978 and 1979 are based on statistics derived using comparable procedures for both years. A detailed discussion of the modifications can be found in the section, "Modifications to the March 1980 CPS."

Also, the estimates in this report may differ slightly from those published in the 1979 advance report (P-60, No. 125) as a result of a correction to the weighting procedure. The most noticeable differences will appear in those estimates that are cross-classified by Spanish origin. A discussion of the correction can be found in the section, "Revision to Previously Published March 1980 Income Estimates."

HIGHLIGHTS

In 1979, the median family income was $19,660, 11 percent higher than the 1978 median of $17,640. However, after adjusting for the 11.3-percent increase in consumer prices between 1978 and 1979[1], there was no significant change in real median family income. Median income for unrelated individuals was $7,560 in 1979, not significantly different than the 1978 median in real terms.

MONEY INCOME IN 1979

The period since 1970 has been characterized by a series of erratic income changes, resulting in very slow growth in real income during the decade. Real median family income rose during the early part of the decade, declined during the 1973-75 recessionary period, and then increased in alternate years during the second half of the decade. As a result, median family income in 1979 ($19,660) was only 7 percent higher than the 1970 level ($18,440) after adjusting for inflation. This represents an average annual increase since 1970 of 0.7 percent, much less than the average annual increases experienced between 1960 and 1970 (3.0 percent) and 1950 and 1960 (3.3 percent). It should also be noted that the 1979 income figures do not reflect the influence of the recession which began in the spring of 1980.

There was no significant difference in the change in real income between 1978 and 1979 experienced by White or Spanish-origin families. There was some evidence of a 4-percent decrease for Black families. The ratio of Black median family income ($11,640) to White median family income ($20,500) in 1979 was 57 percent, not significantly different than the ratio for 1978 (59 percent). The ratio of Spanish median family income ($14,570) to White median family income in 1979 was about 71 percent, slightly higher than the comparable ratio for Blacks.

Only a few categories of families showed a significant change in real median family income between 1978 and 1979. There were decreases in real median family income for two-earner and three-earner families (1 percent and 4 percent, respectively), and there was a decrease of 4 percent in the real median income for families with a householder who completed 4 or more years of college ($30,020 in 1979). The survey also indicated a similar 3-percent decrease in median income for families whose householders were employed as professional, technical, and kindred workers, many of whom are college educated.

The real median income of the 2.0 million families with unemployed householders increased by about 12 percent between 1978 and 1979 (from $12,620 to $14,180). However, this change should be viewed with caution because employment status is determined as of the survey week (in March 1980), while income is based on the amount received during the previous calendar year (1979). Since the recession started in the early part of 1980, it is possible that a number of people were unemployed in March 1980 even though they worked during a substantial part of 1979. For example, the data show that about 20 percent of the unemployed householders in March 1979 worked year round full time during 1978, but the comparable percent for the March 1980 survey was 26 percent.

Of the 58.4 million families in the United States in March 1980, 20.2 million (34.6 percent) received incomes of $25,000 or more in 1979. There were 17.1 million families (29.3 percent) with incomes between $15,000 and $25,000, 9.1 million families (15.6 percent) with incomes between $10,000 and $15,000, 7.9 million families (13.5 percent) with incomes between $5,000 and $10,000 and 4.0 million families (6.9 percent) with incomes below $5,000.

[1] The percentage increase in prices between 1978 and 1979 is computed by dividing the annual average Consumer Price Index (CPI) for 1979 by the annual average value of the CPI for 1978.

Table A. Median Family Income in 1950 to 1979 in Current and Constant Dollars, and Percent Change

Year	Median family income: In current dollars	Median family income: In 1979 dollars	Year	Median family income: In current dollars	Median family income: In 1979 dollars

Median family income ($19,660 in 1979) is the amount which divides the income distribution in half: 50 percent of all families having incomes above this amount and 50 percent of all families having incomes below this amount. For some groups of the population, however, there were significant differences in their proportions in the lower half or upper half of the distribution. For example, the lower half of the distribution (below $20,000) encompassed 73 percent of families with a Black householder and 67 percent of families with a Spanish householder. In addition, 83 percent of families maintained by a female householder with no husband present, 78 percent of families in which the householder completed 8 or less years of school[2], 60 percent of farm families, and 92 percent of families with no earners had incomes below $20,000. About three-fourths of the families in which the householder was under 25 years of age or over 65 years of age were concentrated in the lower half of the distribution. However, some family groups tended to be concentrated in the upper half of the family income distribution, largely because of highly valued skills or additional work effort. About 78 percent of families with householders having 16 or more years of education, 61 percent of two-earner families, and 82 percent of those with three or more earners had incomes above $20,000 in 1979.

Aggregate family income increased by 13 percent between 1978 and 1979. However, after adjustment for inflation, there was some evidence that aggregate family income increased by only 1 percent. Aggregate family income amounted to $1,307.3 billion in 1979, compared with $1,161.3 billion in 1978.

The changes in real median income between 1978 and 1979 for persons showed some evidence of a 2-percent increase in median income for women ($4,350 in 1979, compared with $3,820 in 1978) and a 1-percent decrease in the median for men ($11,850 in 1979 versus $10,935 in 1978)[3]. For those who worked year round full time, women experienced a 1-percent decline in median income, while men experienced a 3-percent decline.

These are some of the income highlights obtained from the Census Bureau's Current Population Survey (CPS) of March 1980. The survey includes both the civilian noninstitutional population and an estimated 855,000 members of the Armed Forces living off post or with their families on post in the United States. The March 1980 CPS population was 218,101,000 persons, comprising 58,426,000 family householders, 132,992,000 other family members (including 49,261,000 children under 15 years old), 845,000 persons in unrelated subfamilies, and 25,838,000 unrelated individuals (including 253,000 children under 15 years old); unrelated individuals are persons living alone or not related to others in the household. The collection of income data in the survey, however, is restricted to persons 15 years old and over. (See table C.)

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting. For further details, see the section, "Reliability of the Estimates" in appendix B.

Data on consumer income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc. Money income is the sum of amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and workers' compensations; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that many families receive part of their income in the form of nonmoney transfers such as food stamps, health benefits, and subsidized housing; that many farm families receive nonmoney income in the form of rent-free housing and goods produced and consumed on the farm; or that nonmoney incomes are also received by some nonfarm residents, such as the use of business transportation and facilities, full or partial payments by business for retirement programs, and medical and educational expenses. These elements should be considered when comparing income levels.

The Bureau of the Census and the Department of Health and Human Services are currently involved in a research program designed to improve and expand the collection of income data. Over the past several years, this research has been carried out as part of the Income Survey Development Program and will provide the framework for the Survey of Income and Program Participation (SIPP), which is scheduled to begin in 1982. The SIPP is designed to provide broader measures of economic well-being and will include details on both cash and noncash income, program eligibility, wealth, and taxes.

Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income.[4] Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, unemployment compensation, public assistance, and net income from interest, dividends, and rentals. Overall, income earned from wages or salary is much better reported than other sources of income and, when dollar imputations are assigned for nonreporting, total wage and salary income approximates independently derived estimates.

A study which attempts to adjust the CPS data for underreporting and to impute government "in-kind" transfer

[2] The education data are restricted to families with householders 25 years old and over.

[3] For comparisons between 1978 and 1979, the 1978 estimates are based on a three-eighths sample for women and the full sample for men. This practice was followed because the three-eighths sample, which used a questionnaire similar to that used in the present survey, provided the most comparable estimate of income for women. However, the best estimate of income for women who worked year round full time is based on the full sample. Further discussion on this matter can be found in *Current Population Reports*, Series P-60, No. 123, p. 12.

[4] The accuracy of reported and imputed CPS earnings and property income is discussed in a paper, "Measuring the Impact on Income Statistics of Reporting Differences Between the Current Population Survey and Administrative Sources," by Roger A. Herriot and Emmett F. Spiers, published in American Statistical Association, *Proceedings of the Social Statistics Section*, 1975.

Table C. Derivation of the Current Population Survey (CPS) Universe and Population Characteristics of the March 1980 Current Population Survey

Population groupings	Number (thousands)	Percent distribution
Total resident population	221,507	100.0
Minus:		
Civilian institutional population	2,655	1.2
Armed Forces living without families on post in the United States	751	0.3
Equals:		
Population total for the CPS universe	218,101	98.5
Total CPS population	218,101	100.0
Civilian noninstitutional population	217,246	99.6
Armed Forces living off post or with their families on post in the United States	855	0.4
Total CPS population	218,101	100.0
In families	191,418	87.8
Family householders	58,426	26.8
Married-couple families	48,180	22.1
Male householder, no wife present	1,706	0.8
Female householder, no husband present	8,540	3.9
Other family members	132,992	61.0
Spouse of householder	48,180	22.1
Other related members 15 years old and over	35,552	16.3
Male	18,774	8.6
Female	16,778	7.7
Other related members under 15 years old	49,261	22.6
Male	25,132	11.5
Female	24,130	11.1
In unrelated subfamilies	845	0.4
Unrelated individuals	25,838	11.8
15 years old and over	25,585	11.7
Male	11,456	5.3
Female	14,129	6.5
Under 15 years old	253	0.1
Male	150	0.1
Female	102	-

- Represents zero or rounds to zero.

program benefits (such as food stamps, Medicare, and subsidized housing) to families in the survey has been prepared by the Congressional Budget Office (CBO).[5] This represents one attempt to measure and study the effects of adjusting for underreporting of money income and the inclusion of nonmoney transfer payments on the size distribution of income and poverty counts. Although the procedures used by the CBO provide one approach, there continues to be a general lack of agreement of how to measure and value "in-kind" income. The interested reader may wish to consult the report of a governmental interagency task force which discusses many of these issues.[6]

In March 1980, for the first time, the CPS income supplement included a group of questions on the receipt of selected noncash benefits in 1979. The means-tested benefits covered in the survey were food stamps, free or reduced-price school lunches, public or subsidized housing, and Medicaid. Questions were also asked about the following nonmeans-tested benefits: Medicare, CHAMPUS or other military health care, employer-provided pension plans, and employer-provided group health insurance plans. Preliminary data from this survey are contained in *Current Population Reports,* Series P-23, No. 110, *Characteristics of Households and Persons Receiving Noncash Benefits: 1979.* A report presenting analysis and detailed data collected in the March 1981 survey is planned for release in late 1981. In addition, researchers at the Census Bureau are currently investigating alternative methods to value selected noncash benefits. The results of this work will be published in a future technical paper.

SELECTED FAMILY INCOME CHARACTERISTICS

Type of family. In March 1980, there were approximately 58.4 million families in the United States. Of these families, about 82 percent were married-couple families, 15 percent had a female householder with no husband present, and the remaining 3 percent had a male householder with no wife present. The 1979 median income of all married-couple families was $21,500. For married-couple families in which the wife was not in the paid labor force, the median income was $17,750. Median income of married-couple families with the wife in the paid labor force was $24,960 in 1979.

There were about five times as many families with a female householder, no husband present (8.5 million) as there were families with a male householder, no wife present (1.7 million). The median income in 1979 of families with a female householder, no husband present ($9,930) was 59 percent of the median income for families with a male householder, no wife present ($16,870).

Approximately 24 percent of families with a female householder, no husband present were in the lower portion

[5] Background Paper No. 17, *Poverty Status of Families Under Alternative Definitions of Income,* Congress of the United States, Congressional Budget Office, Washington, D.C., June 1977.

[6] *The Measure of Poverty,* A Report to Congress as Mandated by the Education Amendments of 1974, and in particular, see Technical Paper VII, "In-kind Income and the Measurement of Poverty," prepared by Janice Peskin, U.S. Department of Health and Human Services, April 1976.

of the income distribution (under $5,000), compared with 9 percent of families maintained by a male with no wife present and 4 percent of married-couple families. In the upper portion of the income distribution, 17 percent of the families with a female householder, no husband present, 40 percent of the families with a male householder, no wife present, and 55 percent of the married-couple families had incomes of $20,000 or more. (See table D.)

It should be noted that the work experience patterns of the three types of families are very different. As an indication of this, the proportion of families in which the householder worked at some time during the year was 83 percent for married-couple families, 77 percent for families with a male householder, no wife present, and only 63 percent for families with a female householder, no husband present.

Number of earners. Median family income is highly correlated with the number of earners per family. In 1979, the median income for the 2.8 million families with four or more earners was $36,000 as compared with medians of $29,470 for the 5.7 million families with three earners, $22,690 for the 23.9 million families with two earners, and $15,610 for the 17.8 million families with one earner. For the 7.4 million families with no earners, the median income in 1979 was $7,650.

Twenty-eight percent of all families with no earners had incomes below $5,000 in 1979, compared with 8 percent for one-earner families and 2 percent for families with two or more earners. The pattern was reversed for families with incomes of $20,000 and over: 8 percent of no-earner families, 35 percent of one-earner families, 61 percent of two-earner families, 79 percent of three-earner families, and 89 percent of the families with four or more earners were in this income group. (See table D.)

Educational attainment.[7] Family income and the educational attainment of the householder have a strong positive relationship. In 1979, the median income for families maintained by householders 25 years old and over with 8 or less years of school was $11,500. For families with householders who were high school graduates, the median income was $20,680, compared with $28,070 for families with householders who had completed 4 years of college and $32,420 for families with householders who had completed 5 or more years of college.

About 15 percent of the families with householders who had completed 8 or less years of school had incomes below $5,000 in 1979, compared with 5 percent for families with householders who were high school graduates, and 1 percent for families in which the householder had completed 4 or more years of college. The reverse was true for families with incomes of $20,000 or more in 1979: 22 percent of families with householders having 8 or less years of education, 53 percent of families with householders who were high school graduates, 74 percent of families with householders having 4 years of college, and 81 percent of families with householders having 5 or more years of college had incomes above $20,000. (See table D.)

Age. Family life cycle studies indicate that, typically, income gradually increases with age and then declines after a certain age level. The 1979 income data show that the median income of families with householders 15 to 24 years of age was $13,020. Median income was highest for families with householders 45 to 54 years of age ($25,350). The lowest median income was for families whose householders were 65 years old and over ($11,310).

The survey data indicate a relatively large concentration in the lower income intervals of families with younger and older householders: 16 percent of families with householders 15 to 24 years of age and 11 percent of families with householders 65 years and over received less than $5,000 in 1979. In contrast, families with householders 45 to 54 years of age were more concentrated in higher income intervals; 65 percent of these families received incomes above $20,000 in 1979. (See table D.)

Work experience. Although many families derive their income from the efforts of more than one family member, the work experience of the family householder is still the principal factor in determining the level of family income. In March 1980, there were 57.8 million families with civilian householders, of whom 46.3 million (79 percent) worked at some time during 1979, 35.0 million (60 percent) worked 50 to 52 weeks at full-time jobs, and only 1.4 million (3 percent) worked year round at part-time jobs. There were approximately 11.4 million family householders who did not work at all during 1979, 57 percent of whom were 65 years old or older.

The relationship between work experience and family income is shown in table D. Only 4 percent of families in which the householders worked at some time during 1979 had incomes below $5,000. In contrast, 21 percent of families with householders who did not work had incomes below this amount. Families with householders who worked were much more concentrated in the income intervals above $20,000 than families with householders who did not work—57 percent as compared with 16 percent.

Tenure. Of the 58.4 million families in March 1980, 44.1 million (76 percent) lived in owner-occupied properties, 13.4 million (23 percent) were renters, and the remaining .9 million (2 percent) did not pay cash rent.

The median income in 1979 of families living in owner-occupied properties ($22,080) was about 74 percent higher than the median for families living in renter-occupied properties ($12,660). This relationship is consistent for families living inside or outside of metropolitan areas. In metropolitan areas, the median income of families living in owner-occupied properties ($24,100) was about 84 percent higher than the median income for families living in renter-occupied properties ($13,110). In areas outside of metropolitan areas, the 1979 median income for families

[7] The education data are restricted to families with householders 25 years old and over.

Table D. Percent Distribution of Families, by Selected Characteristics and Total Money Income in 1979

(Families as of March 1980)

Selected characteristics	Number (thousands)	Percent distribution: Total	Under $5,000	$5,000 to $19,999	$20,000 and over	Percent, by selected characteristics: Total	Under $5,000	$5,000 to $19,999	$20,000 and over	Median income (dol.)	Mean income (dol.)

[1] Persons of Spanish origin may be of any race.
[2] Excludes families with members who are in the Armed Forces.
[3] Families reporting "no income" are included in "Total" and "Under $5,000" categories.
[4] Excludes families with householders in the Armed Forces.

living in owner-occupied properties ($18,590) was 60 percent higher than the median for families living in renter-occupied properties ($11,640).

Type of residence. In 1979, the median income of families in metropolitan areas ($21,070) was about 24 percent higher than the median received by families in nonmetropolitan areas ($16,980).

For householders classified by type of residence, the highest median income in 1979 ($24,680) was for suburban families of large metropolitan areas (population of 1 million or more), while one of the lowest median incomes ($15,960) was for families on farms located outside metropolitan areas.

The income gap between central city families and suburban families was greater in large metropolitan areas than in smaller metropolitan areas. The median income for the 7.8 million families in the central cities of large metropolitan areas ($17,480) was approximately 71 percent of the median income for the 14.0 million families in the suburbs of these areas ($24,680). In smaller metropolitan areas (population of less than 1 million), the median income for the 7.7 million central city families ($18,520) was about 89 percent of the median income for the 9.5 million suburban families ($20,900).

Source of income. Although earnings are the major source of family income, only 7.3 million (13 percent) families indicated that their only source of income in 1979 was from earnings (wages, salaries, and net self-employment income). There were 43.7 million (75 percent) families who had other types of income in addition to earnings (interest, dividends, unemployment compensation, or pensions). The remaining 7.3 million (12 percent) families indicated that they received no earnings during 1979.[8]

The median income of families whose only source of income was earnings was $15,900 in 1979, in contrast to a median of $22,470 for families having both earnings and income other than earnings. Families with only nonearned income had a median of $7,770 in 1979.

As expected, families with income from only nonearned sources tended to be concentrated in the lower income brackets. There were 4.0 million families with incomes less than $5,000 in 1979, of which 49 percent had income solely from nonearned sources. Of the remaining families in this income category, 35 percent had income from earnings and other sources and 13 percent had income from earnings only.

The middle range of the income distribution was dominated by families that received earnings and income from other sources. Of the 8.7 million families with incomes between $15,000 and $20,000 in 1979, 78 percent had income from earnings and other sources. In this income range, the proportion of families with earnings only was 17 percent, while the proportion of families with only income from nonearned sources was 6 percent.

The higher income brackets were strongly dominated by families that received income from earnings and additional sources; about 91 percent of the 20.2 million families with income of $25,000 or more in 1979 had both sources of income. In this income category, the proportion of families with only earnings fell to 7 percent, while only about 2 percent of families received income solely from nonearned sources.

Type of income. Although most families receive more than one type of income, the proportion of total income varies greatly by each specific type. For example, the mean total money income in 1979 for the 48.8 million families that received wages or salaries was $24,360, whereas their mean wage or salary income was $20,480, or 84 percent of their average total income. For the 7.3 million families that received net nonfarm self-employment income, their mean total income was $27,100, whereas their mean for this type of income was $11,270, or 42 percent of their mean total income. The 1.7 million families with net farm self-employment income had a mean total income of $23,110 in 1979, although the mean for this type of income ($8,440) was only 37 percent of their total income.

The survey indicated that 24.6 million families (about 42 percent of all families) received some type of government transfer payment[9] in 1979. The mean total money income for all families that received government transfer payments was $17,880 in 1979. A large majority of these families had other sources of income in addition to the transfer payments. Families that received income from other sources in addition to government transfer payments had a mean total income of $19,180 in 1979. In contrast, the mean for families who received only government transfer payments was $4,920.

The reader is reminded that the reliability of reporting in the CPS varies considerably by income type. A detailed discussion of this matter can be found in the section, "Underreporting of Income."

REVISION TO PREVIOUSLY PUBLISHED MARCH 1980 INCOME ESTIMATES

The estimates shown in this report may differ from those published in the 1979 advance report on income and poverty (P-60, No. 125). A correction was made to the procedures for inflating the survey results to independent population estimates. This revision to earlier estimates most noticeably affected the Spanish origin data. A summary of the impact of the correction is shown in table E.

MODIFICATIONS TO THE MARCH 1980 CPS

As mentioned earlier, several changes were made in the collection and presentation of data from the March 1980 CPS. The changes include (1) the use of a more detailed income questionnaire for all sample households, (2) the use of an expanded sample, (3) the implementation of the "householder" concept rather than the traditional "head" concept, (4) the exclusion of a small number of "secondary

[8] Those receiving no earnings were not significantly different than those whose only source of income was earnings.

[9] Government transfer payments are limited in the Current Population Survey to cash payments under such programs as Social Security or Railroad Retirement, Supplemental Security income, public assistance or welfare, veterans' payments, unemployment and workers' compensations, and government sponsored pensions.

families" from the count of all families, (5) the use of more detailed income intervals in the upper range of the income distribution, (6) the introduction of the new farm definition, and (7) the restriction of the population with income to persons 15 years old and over.

These seven changes cause some complications when comparing income for 1979 with that for 1978. In the text, all income measures referenced are based on the full set of modifications that were made to the March 1980 CPS; these statistics are, in essence, the best estimates for 1979. However, in order to obtain a purer measure of change from 1978, we calculated some income estimates for 1979 that are comparable to the 1978 estimates in several important respects. For example, table F shows that based on the head concept and old income intervals, median income in 1979 was $35,600 for families in which the head was a self-employed professional, technical, or kindred worker, compared with a value of $38,860 after all of the new changes were made. Although the 1979 income amounts mentioned in the text are based on the modifications described earlier, all references to changes between 1978 and 1979 are based on statistics derived using comparable procedures for both years. The following discussion provides the details of the changes that were made and identifies, where possible, their impact on the income estimates.

Use of a More Detailed Income Questionnaire

A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting:

1. Probes were added to identify circumstances which could result in the receipt of specific income types. For example, a question concerning injuries or work-related illnesses was added to help identify persons likely to have received workers' compensation payments.

2. More detailed sources of income were enumerated.

3. The questionnaire was designed to facilitate the recording of income received jointly by husbands and wives, such as interest from savings accounts.

4. Because of the additional probing, most questions concerning "unearned" income sources were asked using household screener questions in order to reduce respondent burden.

An analysis of data from the March 1979 CPS indicated that the new approach brought about some improvements in reporting for certain types of income, particularly property income and some government transfer payments. There was an increase in recipiency for interest, dividends, rent, veterans' payments, unemployment compensation, and workers' compensation.

A detailed discussion of the experiment and its impact on the 1978 income data can be found in *Current Population Reports,* Series P-60, No. 123.

Use of an Expanded Sample

As part of an effort to increase the reliability of CPS data for specific geographical areas, the CPS sample has been periodically expanded. Income estimates from the March 1980 CPS are based on a sample which included 10,300 more households than the March 1979 CPS, thus raising the entire sample to 65,200 interviewed households. Since the March 1980 CPS was processed using only the expanded sample and the March 1979 CPS did not include the expansion, it is not possible to examine its impact on the income estimates. Although an expansion of the sample normally reduces sampling variability, the effect of this particular supplement on the national estimates was not great. Consequently, the parameters used for standard errors are the same as those used in the March 1979 CPS.

Implementation of the Householder Concept

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. According to past practices, the husband was always designated as the head in a husband-wife family. The March 1980 CPS indicated that approximately 1.6 million women (or 3 percent) identified themselves as the householder in married-couple families.

The use of the householder concept has a slight effect on selected family income estimates. The income of families classified by characteristics of the family, such as residence, region, and number of earners, is not affected by use of the householder concept. In contrast, the income of families classified by characteristics of the householder, such as age, occupation, and education, is affected by the householder concept. However, since so few women in married-couple families were designated as the householder, the effect on family incomes was very small for almost all characteristics of householders. (See tables F and G.)

Exclusion of Secondary Families

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, and unrelated subfamilies do not have a householder. However, unrelated subfamilies are presented separately, particularly since the size of this group has been growing recently. In the March 1980 CPS, there were an estimated 344,000 unrelated subfamilies.

The exclusion of unrelated subfamilies from the count of all families raised the median family income from $19,600 to $19,660 in the March 1980 CPS. This occurred because the median income of unrelated subfamilies ($6,750) is lower, on average, than the median income of all families.

Use of More Detailed Income Intervals

The March 1980 CPS results are presented according to more detailed income intervals in the upper range of the income distribution than were previously shown. This change was made because the rapid inflation of recent years has resulted in an increased number of families and persons in income intervals that were previously very broad, e.g., $25,000 to $49,999. For families, the previous distribution employed $1,000 increments up to $18,000, then used cutoffs at $20,000, $25,000, and $50,000. The new income distribution for families uses $2,500 increments up to $40,000, $5,000 increments up to $50,000, with cutoffs at $60,000 and $75,000. For persons, the previous income distribution employed $500 increments from over $1,000 to $4,000, then used $1,000 increments to $10,000. Above $10,000 there were cutoffs at $12,000, $15,000, $20,000, $25,000, and $50,000. The new income distribution incorporates $1,000 increments from $2,000 to $7,000. There is a cutoff at $8,500 with $2,500 increments from $10,000 to $20,000, $5,000 increments up to $35,000, and cutoffs at $50,000 and $75,000. For researchers who are interested in more detailed income intervals in the lower range of the income distribution, there will be a table in the final poverty report which shows $1,000 intervals for several characteristics of families.

The use of new income intervals has an influence on the level of median income where the size of the interval containing the median has changed. This occurs because median values are interpolated within an income interval, and the width of the interval has an influence on the derived value. For example, the 1979 median income for men who worked year round full time according to the old income intervals was $17,330, compared with $17,510 using the new income intervals. According to the old income intervals, the median would have fallen in an income interval from $15,000 to $20,000. With the new income intervals, the median is located in an interval from $17,500 to $20,000. For women, the 1979 median income value is the same ($4,350) using either the old or the new income intervals. This occurs because the median falls in the same size interval ($4,000 to $4,999) for both distributions.

Introduction of the New Farm Definition

In the March 1980 CPS, the definition of a farm was different than that used in the March 1979 CPS. According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage respons was "Yes" and sales amounted to $50 or

more, or (b) the acreage response was "No" and sales amounted to $250 or more. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any rural place from which $1,000 or more of agricultural products were sold in the reporting year.

The change to the new farm definition did not affect the overall median family income, but it did have an effect on the number of farm families and their median income. The change in the farm definition reduced the number of farm families from 2.0 million to 1.7 million in the March 1980 CPS. As a result of this change, the median income of farm families was lowered from $16,640 to $16,360.

Restriction of the Income Universe

The final change made in the March 1980 CPS was the decision to restrict the universe for income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes. Consequently, it is not possible to precisely determine the impact of this change on the overall income estimates. However, in the March 1979 CPS, there were about 3.9 million 14-year-olds and only 34 percent had some income. One would expect that the exclusion of these persons from the income universe would result in a very slight reduction in aggregate income and a very slight increase in average incomes, since most 14-year-olds have much lower than average incomes.

RELATED REPORTS

Current Population Survey. Other data based on the Current Population Survey showing the distributions of households, families, unrelated individuals, and persons by income levels have been published in Series P-60 reports, Nos. 1 to 107, 109, and 114 to 128. Frequently, tables showing the cross-classification of income and other characteristics have been published in the Series P-20 and P-23 reports of the Bureau of the Census and in the Special Labor Force Reports of the Bureau of Labor Statistics. An advance report showing 1979 income data cross-classified by selected characteristics of families, persons, households, and the poverty population was issued as Series P-60, No. 125.

Projections of money income size distributions have been prepared from the March 1978 Current Population Survey and appear in Series P-60, No. 122, *Illustrative Projections of Money Income Size Distributions for Households: 1980 to 1995.* This report contains projections of income distributions for households by type of household and age of householder in terms of constant 1977 dollars. For each of the years, separate projected distributions are shown for selected annual growth rates. The tables also contain projected aggregate income distributions in addition to the projected number of units. The P-60, No. 122 report updates information contained in Series P-23, No. 47, *Illustrative Projections of Money Income Size Distributions for Families and Unrelated Individuals.*

Data on the educational attainment and income of men have been assembled from information collected in the Current Population Survey. These data appear in Series P-60, No. 92, *Annual Mean Income, Lifetime Income, and Educational Attainment of Men in the United States, for Selected Years: 1956 to 1972.* Included in the report are annual mean income and estimates of expected lifetime income in current dollars and in constant (1972) dollars, by educational attainment and age group, for all males and for male year-round, full-time workers.

An historical and analytical summary of the income data collected in the Current Population Survey appears in Technical Paper No. 17, *Trends in the Income of Families and Persons in the United States: 1947 to 1964,* published in 1967. This report contains detailed tables showing income distributions in constant (1964) dollars, mean incomes, fifths, and Gini ratios of families and unrelated individuals cross-classified by various characteristics, for the United States, nonfarm, and farm populations. Similar data are shown for males and females classified by the amount of their own income and various personal characteristics.

Preliminary data on the receipt of noncash benefits in 1979 appear in *Current Population Reports,* Series P-23, No. 110, *Characteristics of Households and Persons Receiving Noncash Benefits: 1979.*

Decennial censuses. Income data collected in the 1970 Census of Population appear in a number of published reports. Basic distributions of families and unrelated individuals, by money income in 1969, for the United States, each of the States, counties, standard metropolitan statistical areas, urbanized areas, and urban places are presented in 1970 Census of Population, Volume I, *Characteristics of the Population,* Chapter C, "General Social and Economic Characteristics." Statistics on income of persons 14 years old and over, households, families, and unrelated individuals in 1969, by detailed characteristics, including cross-classifications by age, weeks worked, education, type of family, etc., are presented in 1970 Census of Population, Volume I, *Characteristics of the Population,* Chapter D, "Detailed Characteristics," for some or all of the following areas: United States, each of the States, and standard metropolitan statistical areas of 250,000 inhabitants or more.

Detailed cross-classifications of income of families and persons by social and economic characteristics are presented in Volume II, *Subject Reports,* 8A, "Sources and Structures of Family Income"; 8B, "Earnings by Occupation and Education"; and 8C, "Income of the Farm-Related Population." Other statistics on income are included in volume II reports on other subjects and in some reports of the 1970 Census of Housing. Reports of the 1960, 1950, and 1940 censuses also contain various statistics on income.

An important difference in the data content included in the 1970 reports versus the corresponding reports from the

1960 census is the cross-classification of most of the 1970 data for the Black population and the population of Spanish origin.

Statistics on income in 1969 collected in the March 1970 CPS differ from data from the 1970 decennial census despite the fact that the same basic concept was used in both instances. First, the CPS data excluded the institutional population and most members of the Armed Forces living on post; these two groups were included in the census. Secondly, college students were generally enumerated at their own homes in the CPS and classified as family members, but were enumerated at their college residence in the census, usually as secondary individuals. Thirdly, the small group of CPS enumerators was more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Furthermore, approximately 60 percent of the households were self-enumerated in the 1970 census. Moreover, income data in the CPS were based on responses to separate questions on eight types of income, as well as responses to additional yes-no circles within four of these questions, whereas, in the census, only six questions were used.

In general, the level of income reported in the census is slightly higher than that reported in the CPS. Thus, median family income reported in the 1970 census was about $9,586, 2.8 percent below the comparable figure of $9,867 derived from the March 1970 CPS. For a more detailed discussion of these differences, see "Preliminary Evaluation of 1969 Money Income Data Collected in the 1970 Census of Population and Housing," by Mitsuo Ono, published in the American Statistical Association, *Proceedings of the Social Statistics Section,* 1972.

Income data collected in the 1980 Census of the Population for States and their subdivisions will become available in 1982. Current plans call for the published 1980 census income data to be basically comparable with data presented in 1970.

Survey of Income and Education. The Survey of Income and Education (SIE) was a one-time survey of approximately 151,000 interviewed households nationwide, and was conducted in each State by the Bureau of the Census between April and July 1976. The purpose of the SIE was to provide estimates of the number of children 5 to 17 years old in poverty families in each State and the District of Columbia, as required by the Education Amendments of 1974.

In addition to collecting income data needed to determine poverty status, the opportunity presented by such a large survey was also used to gather some additional income-related information not usually collected in the Census Bureau's current income surveys. Such data include the receipt of food stamps, housing costs for homeowners and renters, and estimated cash assets. Also, information relevant to a number of Department of Health and Human Services (HHS) programs was collected, including data on English language proficiency, school enrollment, food stamp and public assistance recipiency, housing tenure, liquid asset holdings, child and adult disability, and health insurance coverage.

Income and poverty data from the SIE have been published in a series of four reports (one for each of the four major regions in the Nation): *Current Population Reports,* Series P-60, No. 110 (Northeast); No. 111 (North Central); No. 112 (South); and No. 113 (West). Each report presents data for the divisions and States within the region and for the total United States. Contained in the reports are income distributions and poverty data for families, persons, and unrelated individuals, cross-classified by a broad range of socioeconomic and demographic characteristics similar in content to data published from the Current Population Survey. The income tables include such characteristics as residence, housing tenure, age, race, size and type of family, number of children under 18 years old, number of earners, and occupation, work experience, and education of head. In addition to many of the above characteristics, the poverty tables also include information on reasons for not working, type of income, subsidized housing of renters, and living arrangements for unrelated individuals.

An additional report, *Current Population Reports,* Series P-60, No. 108, contains estimates of household money income in 1975 for the United States, regions, divisions, and States. The primary focus of this report is to show income distributions by housing tenure and type of residence, cross-classified by age of head and other key characteristics of households. Added emphasis has been placed on showing summary statistics; in addition to mean and median incomes, average household size and per capita income are shown along with each income distribution.

Another report was published from the SIE *(Current Population Reports,* Series P-20, No. 334) and contained data by selected characteristics, such as family status, migration, income, and poverty. Where appropriate, this report includes comparisons between SIE and 1970 census data.

A report of the evaluation study entitled "Assessment of the Accuracy of the Survey of Income and Education," has been submitted to Congress in accordance with section 822(b) of the Education Amendments of 1974. This report outlines principal conclusions from the reinterview study.

Data on income and poverty for calendar year 1975 from the SIE differ somewhat from those based on the CPS. In general, the estimates of median income from the SIE are slightly higher than comparable estimates from the CPS. For example, the median family income from the SIE was $14,094, compared with $13,719 from the CPS. Estimates of the number of persons below the poverty level by various characteristics from the SIE are generally lower than from the CPS. For example, there were 23,991,000 persons below the poverty level in 1975 from the SIE, compared with 25,877,000 from the CPS.

Although two major aspects of these surveys were the same, the money income concept and the questionnaire wording and design, there were some significant procedural differences which probably cause the income estimates in these surveys to differ. For a detailed discussion of these differences, see the published SIE reports.

Table 1. Summary Measures—Selected Family Characteristics, by Total Money Income in 1979, Race, and Spanish Origin of Householder

(FAMILIES AS OF MARCH 1980. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.
[1]BASED ON HOUSEHOLDER CONCEPT.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 10. Families and Unrelated Individuals, by Total Money Income in 1947 to 1979 and Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN (1972=100).
[2]BASED ON HOUSEHOLDER CONCEPT. RESTRICTED TO PRIMARY FAMILIES.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 11. Families and Unrelated Individuals, by Total Money Income in 1947 to 1979, Race, and Spanish Origin of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION												MEDIAN INCOME	
		TOTAL	UNDER $2,500	$2,500 TO $4,999	$5,000 TO $7,499	$7,500 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 TO $34,999	$35,000 TO $49,999	$50,000 AND OVER	VALUE (DOL.)	INDEX[1]

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN (1972=100).
[2]BASED ON HOUSEHOLDER CONCEPT. RESTRICTED TO PRIMARY FAMILIES.
[3]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 11. Families and Unrelated Individuals, by Total Money Income in 1947 to 1979, Race, and Spanish Origin of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN (1972=100).
[3]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

Table 12. Families and Unrelated Individuals, by Total Money Income in 1947 to 1979 in Constant Dollars, Race, and Spanish Origin of Householder

(IN 1979 DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION: TOTAL	UNDER $2,500	$2,500 TO $4,999	$5,000 TO $7,499	$7,500 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 TO $34,999	$35,000 TO $49,999	$50,000 AND OVER	MEDIAN INCOME: VALUE (DOL.)	INDEX[1]

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 14. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1979 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOL.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

[r]BASED ON REVISED METHODOLOGY.
[1]BASED ON HOUSEHOLDER CONCEPT. RESTRICTED TO PRIMARY FAMILIES.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 14. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1979 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOL.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

[r]BASED ON REVISED METHODOLOGY.
[1]BASED ON HOUSEHOLDER CONCEPT. RESTRICTED TO PRIMARY FAMILIES.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 14. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1979 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOL.)	INDEX OF INCOME CONCEN-TRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH									
UNRELATED INDIVIDUALS

rBASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS. THESE CONTROLS ARE NOT AVAILABLE BY RACE.

DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1947 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 14. Income at Selected Positions and Percentage Share of Aggregate Income in 1947 to 1979 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOL.)	INDEX OF INCOME CONCEN-TRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

[r]BASED ON REVISED METHODOLOGY.
[1]BASED ON HOUSEHOLDER CONCEPT. RESTRICTED TO PRIMARY FAMILIES.

NOTE: DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1953 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 15. Income at Selected Positions and Percentage Share of Aggregate Income in 1953 to 1979 Received by Each Fifth and Top 5 Percent of Families, by Region—Continued

(IN CURRENT DOLLARS. FAMILIES AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

REGION AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOL.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

[r]BASED ON REVISED METHODOLOGY.
[1]BASED ON HOUSEHOLDER CONCEPT. RESTRICTED TO PRIMARY FAMILIES.

NOTE: DATA FOR 1959 THROUGH 1979 WERE CALCULATED USING UNGROUPED DATA WHILE THE DATA FOR 1953 THROUGH 1957 WERE CALCULATED USING GROUPED DATA. DATA FOR 1958 WERE CALCULATED BOTH WAYS, FOR DETAILS SEE 'COMPUTATION OF AGGREGATE INCOME BY FIFTHS' IN THE APPENDIX.

Table 16. Type of Residence and Race of Householder—All Families and Families With Female Householder, No Husband Present, and All Unrelated Individuals, by Total Money Income in 1979 and Region of Residence

(NUMBERS IN THOUSANDS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH 1980. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.

NOTE: MEDIANS WERE CALCULATED USING MORE DETAILED INTERVALS THAN THOSE SHOWN ABOVE, THEREFORE THEY WILL NOT BE THE SAME AS THOSE CALCULATED USING THE ABOVE INTERVALS.

Table 67. Total Money Income in 1947 to 1979—Persons 14 Years Old and Over, by Work Experience, Race, and Sex—Continued

(IN CURRENT DOLLARS. PERSONS 15 YEARS OLD AND OVER AS OF MARCH 1980 AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)
BOTH SEXES--CONTINUED																		
BLACK AND OTHER RACES

[r]BASED ON REVISED METHODOLOGY.

NOTE: MEDIANS WERE CALCULATED USING MORE DETAILED INTERVALS THAN THOSE SHOWN ABOVE, THEREFORE THEY WILL NOT BE THE SAME AS THOSE CALCULATED USING THE ABOVE INTERVALS.

Table 67. Total Money Income in 1947 to 1979—Persons 14 Years Old and Over, by Work Experience, Race, and Sex—Continued

(IN CURRENT DOLLARS. PERSONS 15 YEARS OLD AND OVER AS OF MARCH 1980 AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)

[r]BASED ON REVISED METHODOLOGY.

NOTE: MEDIANS WERE CALCULATED USING MORE DETAILED INTERVALS THAN THOSE SHOWN ABOVE, THEREFORE THEY WILL NOT BE THE SAME AS THOSE CALCULATED USING THE ABOVE INTERVALS.

Table 67. Total Money Income in 1947 to 1979—Persons 14 Years Old and Over, by Work Experience, Race, and Sex—Continued

(IN CURRENT DOLLARS. PERSONS 15 YEARS OLD AND OVER AS OF MARCH 1980 AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)

rBASED ON REVISED METHODOLOGY.

NOTE: MEDIANS WERE CALCULATED USING MORE DETAILED INTERVALS THAN THOSE SHOWN ABOVE, THEREFORE THEY WILL NOT BE THE SAME AS THOSE CALCULATED USING THE ABOVE INTERVALS.

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population Coverage. This report includes the civilian noninstitutional population of the United States and approximately 855,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The March 1980 CPS employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population.

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan-nonmetropolitan residence. The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contain at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in a SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

This report contains data for the 20 largest SMSA's and their central cities; these figures are based on SMSA's as defined in the 1970 census. The counties (or towns and cities) which comprised these SMSA's in the 1970 census can be found in 1970 Census of Population, Vol. 1, *Characteristics of the Population, Part A,* "Number of Inhabitants."

Central cities. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) the additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

Geographic regions. The four major regions and nine Census divisions of the United States for which data are presented in this report represent groups of States as follows:

Northeast:

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Middle Atlantic: New Jersey, New York, and Pennsylvania.

North Central:

East North Central: Illinois, Indiana, Michigan, Ohio, and Wisconsin.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.

South:

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.

East South Central: Alabama, Kentucky, Mississippi, and Tennessee.

West South Central: Arkansas, Louisiana, Oklahoma, and Texas.

West:

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.

Pacific: Alaska, California, Hawaii, Oregon, and Washington.

North and West:

Northeast, North Central, and West combined.

Federal regions. The 10 standard Federal administrative regions represent groups of States as follows:

Region I, Boston: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Region II, New York: New Jersey and New York.

Region III, Philadelphia: Delaware, District of Columbia, Maryland, Pennsylvania, Virginia, and West Virginia.

Region IV, Atlanta: Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee.

Region V, Chicago: Illinois, Indiana, Michigan, Minnesota, Ohio, and Wisconsin.

Region VI, Dallas-Fort Worth: Arkansas, Louisiana, New Mexico, Oklahoma, and Texas.

Region VII, Kansas City: Iowa, Kansas, Missouri, and Nebraska.

Region VIII, Denver: Colorado, Montana, North Dakota, South Dakota, Utah, and Wyoming.

Region IX, San Francisco: Arizona, California, Hawaii, and Nevada.

Region X, Seattle: Alaska, Idaho, Oregon, and Washington.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Mobility status. The population of the United States 5 years old and over has been classified according to mobility status on the basis of a comparison of the place of residence of each individual at the time of the March 1980 CPS and place of residence 5 years earlier. Nonmovers are all persons who were living in the same house at the beginning and end of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or other investments which pay interest); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. On the other hand, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments, such as aid to families with dependent children and general assistance.

Dividends, interest (on savings or other investments which pay interest), income from estates or trusts, net rental income, or royalties include dividends from stockholdings or membership in associations, interest on savings or any type of investment which pays interest, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or worker's compensation include (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payments, and unemployment and worker's compensations.

Receipts not counted as income. Receipts from the following sources were not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total

income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrealted individuals include in the lowest income group (under $2,500) those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Some of these were living on income "in kind," savings, or gifts; or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for families and unrelated individuals are based on all families and unrealted individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for families and unrelated individuals are based on all families and unrelated individuals. The means for persons are based on persons with income.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population (excluding patients or inmates in institutional quarters) in that group.

Index of income concentration. The index of income concentration (or Gini index) is a statistical measure of income equality ranging from 0 to 1. A measure of 0 indicates perfect inequality, i.e., one person having all the wealth and the rest having none. A measure of 1 indicates perfect equality, i.e., all persons having equal shares of the wealth. For a more detailed discussion see *Current Population Reports,* Series P-60, No. 123.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Family. The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered as members of the same family. Thus, if the son and the son's wife are in the household, they are treated as part of the householder's family. On the other hand, a lodger and his wife not related to the householder or an unrelated servant and his wife are considered as unrelated subfamilies (in households) and not as part of the householder's family. Unrelated subfamilies are not included in the count of families.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Primary families and individuals. The term "primary family" refers to the householder and all other persons in the household related to the householder by blood, marriage, or adoption. If nobody in the household is related to the householder, then the householder is a "primary individual." A household can contain one and only one primary family or primary individual. The number of "primary" families and individuals is identical with the number of households.

Secondary individual. A secondary individual is a person, such as a lodger, guest, or resident employee, who is not related to any other person in the household or group quarters and is not the householder.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households.

Size of family. The term "size of family" refers to the number of persons living together and who are related to the householder by blood, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Number of earners. This number includes all persons in the household with $1 or more in wage and salaries or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Spanish origin. Persons of Spanish origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flashcard" listing ethnic origins. Persons of Spanish origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Cuban, Central or South American, or some other Spanish origin. It should be noted that persons of Spanish origin may be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week containing March 12, 1980, did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week containing March 12, 1980, had no employment but were available for work and (1) had engaged in any specific jobseeking activity *within the past 4 weeks*, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, who were attending school or were unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle.

Persons doing only unpaid family work (less than 15 hours during the specified week) are also classified as not in the labor force.

Paid labor force. Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week containing March 12, 1980, or were looking for work at the time and had last worked as wage and salary or self-employed worker.

Occupation. The data on occupation in tables 38, 55, 60, and 61 refer to the civilian jobs held during the survey week. Persons employed at two or more jobs were reported in the job at which they worked the greatest number of hours during the week. The data on occupation in tables 39, 40, 56, 58, and 59 refer to the job held longest during the income year.

The occupation groupings were derived from occupation subgroups delineated on the basis of the classification system used in the 1970 census. For information, see Bureau of the Census Technical Paper No. 26, *1970 Occupation and Industry Classification in Terms of Their 1960 Occupation and Industry Elements,* by John A. Priebe, Joan Heinkel, and Stanley Greene, July 1972.

Starting with the March 1972 survey, a supplemental question, "What were your most important activities or duties?" was added in the questionnaire and provided additional information for classifying persons by occupation. In general, the major impact of this supplemental question was to reclassify some persons from the "managers" classification into other types of occupations (primarily into the major occupation group of "craft and kindred workers").

The major occupation groups are combined into four divisions, as follows:

White-collar workers. Professional, technical, and kindred workers; managers and administrators, except farm; sales workers; and clerical and kindred workers.

Blue-collar workers. Craft and kindred workers; operatives, except transport; transport equipment operatives; and laborers, except farm.

Farm workers. Farmers and farm managers; and farm laborers and supervisors.

Service workers. Service workers, excluding private households; and private household workers.

The sequence in which these four divisions appears is not intended to imply that any division has a higher social or skill level than another.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round full-time worker. A year-round full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question, "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question, "What were you doing most of last year?"

Symbols. A dash (–) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol "X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1971 to 1979 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years from 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed explanation of this change can be found in an article entitled "Revisions in Current Population Survey," *Employment and Earnings,* Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

Computation of aggregate income by fifths. The data shown on aggregate income and dollar cutoffs for fifths (and top 5 percent) of families, ranked by size of their total money income, were calculated using two different procedures. In table 3, aggregate income and dollar cutoffs by fifths were derived directly from the Current Population Survey microdata file using actual income amounts.

In contrast, the data shown in tables 13 and 14 were calculated using estimates from grouped data, as described below:

1. In calculating the aggregate income by fifths (and top 5 percent) of families using grouped data, the underlying aggregate income distribution by size of income was estimated initially. The aggregate income distributions were obtained by multiplying the number of units in each income interval by an estimated mean income for the corresponding income interval. For the top open-end interval ($75,000 and over), a Pareto distribution was fitted to the data in the interval just below the open-interval ($50,000 to $74,999). This fitted distribution was then extrapolated to estimate the number of families with incomes greater than $100,000. The mean income of families with greater than $100,000 was assumed to be $100,000 exactly.[1] The mean income for the $75,000 to $100,000 interval was estimated from the same fitted Pareto distribution. Below the "$75,000 and over" interval, a Pareto distribution was fitted to each separate income interval. If the absolute value of the slope parameter of the fitted Pareto distribution was greater than 1, the mean income of the interval was estimated from the fitted Pareto distribution. If the absolute value of the slope parameter was less than or equal to 1, the midpoint of the interval was used as the estimated mean of the interval.

2. The upper income levels (quantiles) of each fifth and the top 5 percent of families were estimated using either linear or Pareto interpolation depending upon the methods used to estimate the mean income in the interval in which the quantile was located (reference interval). After determining a particular quantile, the aggregate income above this quantile was calculated by estimating the aggregate income of the subinterval between the quantile and the next higher actual income interval and adding the result to the aggregate income above the reference interval. The aggregate income of the subinterval was determined using the method (either Pareto or linear interpolation) consistent with that used for estimating the quantile and the mean income of the reference interval. The aggregate incomes between the quantiles were determined by disaccumulating the aggregate income distribution.

The two methods for determining aggregate income and dollar cutoffs for fifths of families produce some slight discrepancies, particularly for the highest fifth and top 5 percent of families. For the current year, the data shown in table 3 are preferable, since no interpolation was involved.

For more information on the use of Pareto techniques, see "Estimation of Summary Measures of Income Size Distribution from Grouped Data," by Emmett F. Spiers, published in the American Statistical Association *Proceedings of the Social Statistic Section,* 1977.

[1] Individual income amounts greater than or equal to $100,000 are recorded as $99,999 in the Current Population Survey.

Computation of constant dollar distributions. The adjustment for price change was made by converting the income distribution for families for each year (1947 to 1978) into 1979 dollars on the basis of the change in the Consumer Price Index. The indices used to make the constant dollar conversions are shown in table A-1. In choosing a procedure to make this conversion, two fundamental assumptions concerning income data were made: (1) price changes have the same proportional effect on various income levels and (2) the distribution within each income interval follows a Pareto distribution. The following procedure satisfies these two assumptions.

The first step required the accumulation of the income distribution starting with the highest income interval and cumulating to the lowest income interval. Next, the limits of each income interval were converted into 1979 dollars by adjusting them by a factor representing the change on the basis of that year's price index (1979 = 100). Finally, the number of families in each of the detailed class intervals were computed by logarithmic interpolation and then combined into broad income intervals.

The Consumer Price Index is basically a measure of changes in prices of the goods and services bought by urban "wage earner and clerical worker families" representing about three-fifths of all persons living in urban places and about two-fifths of the total U.S. population. The same index was used for all groups of families because separate price indices have not been developed for families in different income class intervals. In addition, the available data did not permit adjustment for the fact that the price index is strictly applicable to consumer expenditures for goods and services, whereas the family income data cover also household savings and income tax payments. For these and other reasons, the constant dollar figures, particularly in the income range over $10,000, are to be regarded as approximations.

Table A-1. Consumer Price Index: 1947 to 1979

(1977 = 100)

Year	CPI	Year	CPI
1947	36.9	1963	50.5
1948	39.7	1964	51.2
1949	39.3	1965	52.1
1950	39.7	1966	53.6
1951	42.9	1967	55.1
1952	43.8	1968	57.4
1953	44.1	1969	60.5
1954	44.4	1970	64.1
1955	44.2	1971	66.8
1956	44.8	1972	69.0
1957	46.4	1973	73.3
1958	47.7	1974	81.4
1959	48.1	1975	88.8
1960	48.9	1976	93.9
1961	49.4	1977	100.0
1962	49.9	1978	107.7
		1979	119.8

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis (formerly the Office of Business Economics), Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. **Income definition.** The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. **Source of data.** The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employer's wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households.

   As discussed in the section, "Source and Reliability of the Estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable total money income aggregates and about 97 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

   For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see "Size Distribution of Family Personal Income: Methodology and Estimates for 1964" by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. **Population coverage.** The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post).

   In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

4. **Average income.** The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for households, families, unrelated individuals, or income recipients 15 years old and over.

Department of Agriculture farm income series. The farm income data are not directly comparable to that published by the Department of Agriculture for several reasons. The Department of Agriculture publishes two major series on income of the farm population: (1) personal income of the farm population and (2) realized net farm income of farm operators.

Because of the following reasons, the estimates of total money income of the farm population as published by the Bureau of the Census are not directly comparable to estimates of personal income data of the farm population as published by the Department of Agriculture:

1. The estimates of total money income exclude the value of farm crops and other noncash income as well as income from capital gains, whereas estimates of personal income include both of these items.

2. Estimates of total money income include contributions for social insurance by farmers and farm laborers and contributions from persons living outside the household, while estimates of personal income exclude these two sources of income.

For reasons listed below, the estimates of farm self-employment income per person or per family as published by the Bureau of the Census differ from estimates of operators' realized net farm income per farm as published by the Department of Agriculture:

1. The estimates of farm self-employment income as published by the Bureau of the Census exclude nonmoney income such as crops grown for home consumption. However, these are included in the estimates of operators' realized net farm income per farm.

2. The estimates of the Bureau of the Census include in their universe, persons who do not live on a farm but who do have farm income, while the estimates of the Department of Agriculture exclude these people from their universe.

3. The agriculture series includes the net income of farm operators from the rental of farms to other farmers but

the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

The estimates of the Department of Agriculture differ from the estimates of the Bureau of the Census methodologically as well as conceptually. The Department of Agriculture estimates are based on data derived from farm, business, and governmental sources, while the Bureau of the Census estimates are compiled from data collected in sample surveys. As noted later, the latter estimates are subject not only to sampling variation but also to errors of response and nonreporting.

For a more detailed discussion of the concepts and methodology used in the Department of Agriculture estimates, see U.S. Department of Agriculture Handbook No. 365, *Major Statistical Series of the U.S. Department of Agriculture,* Vol. 3, "Gross and Net Farm Income," September 1969.

Federal income tax data. For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts, such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because single persons receiving less than $3,300 (less than $4,300 of 65 years old or over) and married couples receiving less than $5,400 ($6,400 if one spouse is 65 years old or over; $7,400 if both are 65 or over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data. Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the reasons listed below.

1. The earnings of the following groups are not covered by the earnings record data: many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers, and domestic servants.
2. Employees' earnings in excess of $22,900 per employer are not covered by the earnings record data.
3. Income other than earnings is not covered by the earnings record data.
4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, while the data presented in this report are obtained by household interviews.

COMPARABILITY OF ESTIMATES FROM THE MARCH 1980 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1980 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

The data for 1971 through 1979 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the overall national level is the introduction of population controls based on the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes. (See table 3, Current Population Reports, Series P-60, No. 91.) Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings, such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings,* Vol. 18, No. 8, February 1972.

The figures shown in this report for metropolitan areas are based on the standard metropolitan statistical areas (SMSA's) as defined on the basis of the 1970 census; those published prior to the March 1973 CPS referred to SMSA's as defined on the basis of the 1960 census. There are significant differences in the population classified as metropolitan from each of these definitions. For the 1970 definition of SMSA's, see U.S. Census of Population: 1970, *Number of Inhabitants,* PC(1)-A1, United States Summary.

Comparability of metropolitan and nonmetropolitan data from the March 1980 CPS with data for previous years. Changes in CPS design and procedures over the last several years have made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures

should be avoided. Trends in metropolitan and nonmetropolitan population growth over the 1970-80 period should not be appreciably affected by the procedural changes.

The major revisions to the CPS sample design and estimation methods have involved the expansion of the number of sample units from 55,000 housing units to 68,000 occupied households. This incorporation of approximately 10,000 supplemental housing units into the March CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined subsequent to the introduction of the additional sample that the new inflating (weighting) procedures used for processing both the March 1977 and March 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. For the March 1979 CPS, another revision of the weighting process was introduced to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to March 1978 CPS levels.

The March 1980 CPS and March 1979 CPS metropolitan/nonmetropolitan population estimates also reflect other operational changes including the introduction of a coverage improvement sample designed to provide greater accuracy in survey estimation. The net effect of all changes in procedure was to increase the metropolitan area estimates. Research and detailed analysis of the impact of each procedural change on the population estimates is underway and the results will be issued in a forthcoming technical report.

Collection of Income and Work Experience Data

This report presents data showing income of persons and family householders with varying amounts of work experience. In the Surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. In order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together beginning with the March 1970 survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions. It should be noted that the proportions of year-round, full-time workers shown in the Series P-60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, *Special Labor Force Reports,* "Work Experience of the Population". The difference exists because the proportions are not based on exactly the same groups. The proportions presented in the Special Labor Force Reports relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P-60 reports relate to civilians who received income, including not only workers but also many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings.

Noninterviews, Nonresponses, and Allocations

In the March 1980 CPS, no interview was obtained for approximately 4 percent of the 68,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or refused. In March 1980, the income data were incomplete for about 27 percent of the persons 15 years old and over. About 33 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March 1979 Current Population Survey. As part of the March 1979 CPS, the Bureau conducted an experiment in an effort to improve the reporting of income data. An alternative questionnaire was used on the remaining five rotation groups. The experimental questionnaire used more probing questions and inquired about more detailed sources of income. The results of the experiment and its subsequent impact on the estimates are discussed in the Current Population Reports, Series P-60, No. 123, page 12.

Modifications in collecting income data in the March 1980 Current Population Survey. A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in

March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" presented earlier.

Definition of the Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS."

UNDERREPORTING OF INCOME

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources, such as the Bureau of Economic Analysis, the Social Security Administration, and the Veterans Administration. The difference between the survey estimate and the independent estimate is termed "underreporting".

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA. A publication covering the general topic of income underreporting is *The Distribution of Personal Income, A Study of Statistics on the Size Distribution of Personal Income in the United States,* prepared by T. Paul Schultz for use by the Subcommittee on Economic Statistics of the Joint Economic Committee, Congress of the United States, 1964. For more details regarding the procedures for developing independent estimates of aggregate income, see "Appraisal of Basic Data Available for Constructing Income Size Distributions" by Selma F. Goldsmith, published in *Studies in Income and Wealth,* Volume 13, National Bureau of Economic Research, 1951; and "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-021, June 1973.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table A-2 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, and (4) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should also be kept in mind that the independent estimates are, themselves, subject to errors and conceptual differences for which no adequate adjustment is possible.

The data in table A-2 showing comparisons of CPS aggregate money income in 1978 with independent estimates do not correspond to the income data in this report. The information required to compute the independently estimated aggregates for 1979 were not available in time to be included in this report. The magnitude of underreporting in 1979 is expected to be similar to that of 1978.

Comparisons of the 1979 CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 10 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 62 percent for interest income to only about 3 percent for wage and salary income. Both reported and allocated proportions of CPS aggregate incomes are shown in table A-2.

In 1978, $272.0 billion, or about 20 percent of the total aggregate income was allocated as a result of nonresponses to the income questions. About 16 percent of the $9.1 billion of the CPS public assistance or welfare income in 1978 was allocated, while about 32 percent of the $88.6 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 30 percent or above include interest, dividends, and estates and trusts.

The reasons for underreporting of income in the 1979 CPS and in other household surveys are many and varied. Some of the more important of these reasons include (1) respondent's overlooking income received (especially small amounts not regularly received), (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For more details on income underreporting in censuses and surveys, see (1) *Income Distribution in the United States* (a 1960 Census Monograph), by Herman P. Miller, Bureau of the Census, 1966; (2) *The Structure of Income,* by Irving B. Kravis, University of Pennsylvania, 1962; and (3) "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," cited earlier in this section.

Appendix B. Source and Reliability of the Estimates

SOURCE OF DATA

The estimates are based on data obtained annually in March of 1948 through 1980 from the Current Population Survey (CPS) of the Bureau of Census and from supplementary questions to the CPS. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member 14 years old and over in every sample household. In addition, supplementary questions are asked every March about money income for the previous year. In order to obtain more reliable data for the Spanish-origin population, the March CPS sample was enlarged to include all households from the previous November sample which contained at least one sample person of Spanish origin. For this report, persons in the Armed Forces living off post or with their families on post are included. In an effort to improve income and poverty estimates, a new income questionnaire was introduced beginning with the March 1980 sample. The new questionnaire was tested on three-eighths of the March 1979 sample. A more detailed discussion of this questionnaire and its impact on the estimates is given in the text of this report.

The present CPS sample was initially selected from the 1970 census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. The current CPS sample is located in 629 areas comprising 1,133 counties, independent cities, and minor civil divisions in the Nation. In this sample, approximately 68,000 occupied households were eligible for interview. Of this number, about 3,000 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason.

The following table provides a description of some aspects of the CPS sample designs in use during the referenced data collection periods.

The estimation procedure used in this survey involved the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from decennial censuses; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The estima-

Description of the Current Population Survey

Time period	Number of sample areas[1]	Housing units eligible	
		Interviewed	Not interviewed
January 1980 to April 1981	629	65,000	3,000
January 1978 to December 1979	614	54,500	3,000
August 1972 to December 1977	[2]461	45,000	2,000
August 1971 to July 1972	449	45,000	2,000
January 1967 to July 1971	449	48,000	2,000
March 1963 to December 1966	357	33,500	1,500
January 1960 to February 1963	[3]333	33,500	1,500
May 1956 to December 1959	330	33,500	1,500
February 1954 to April 1956	230	21,000	500-1,000
August 1947 to January 1954	68	21,000	500-1,000

[1]Beginning in May 1956, these areas were chosen to provide coverage in each State and the District of Columbia.

[2]The 614 area design was used in March of 1977 for the income supplement before it was used for labor force data.

[3]Three sample areas were added in 1960 to represent Alaska and Hawaii after statehood.

Note: Prior to 1966, income data were collected from approximately 75 percent of occup d households in the CPS.

tion procedure in March for the data in the report also involved a further adjustment so that husband and wife of a household received the same weight.

RELIABILITY OF THE ESTIMATES

Since the CPS estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey—sampling and nonsampling. The standard errors provided for this report primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of the respondents to provide correct information, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage, as compared to the level of the 1970 decennial census, is about 5 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races than for Whites. Ratio estimation to independent age-sex-race population controls partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the 1970 census, which was estimated at 2.5 percent of the population, with similar undercoverage differentials by age, sex, and race as in CPS.

A coverage improvement sample was included in computing the estimates for 1978 in order to provide coverage of mobile homes and new construction housing units which had no chance for selection under the 461 area CPS design. This sample is composed of approximately 450 sample household units which represent 237,000 occupied mobile homes and 600,000 new construction housing units. These new construction units are composed of those units where building permits were issued prior to January 1970 and construction was not completed by the time of the 1970 census (i.e., April 1970). The extent of other sources of housing undercoverage is unknown but believed to be small. The inclusion of this coverage improvement sample in the CPS does not have a significant effect on the estimates.

In most cases the schedule entries for income are based on the memory or knowledge of one person. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding as to the scope of the income concept. See also the section entitled "Underreporting of Income."

Comparability with other data. In using metropolitan and nonmetropolitan data, particular care should be exercised in comparing estimates from March 1977 and later years to each other and to those from earlier years. Methodological and sample design changes have occurred in these recent years, resulting in relatively large differences in the metropolitan and nonmetropolitan area estimates.

A number of changes were made in data collection and estimation procedures for the March 1980 CPS. The major changes were the use of a new more detailed income questionnaire, the use of the "householder" concept instead of the traditional "head" concept, and the use of more detailed income intervals in the upper range of the income distribution. Because of these and other changes, caution should be used in comparing estimates for 1979 with estimates for earlier years. A description of these changes and their effect on the data are given in the section, "Modifications to the March 1980 CPS." Tables F, G, H, and I of the text illustrate the effect of these changes for some of the major estimates and illustrate where comparisons of year-to-year changes in income should be made only with considerable caution.

Estimation of median incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto Interpolation or linear interpolation. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families. (That is where the width of the income interval containing the estimate is greater than $2,500.) Estimates of median income for 1976, 1977 and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families. (That is where the width of the income interval containing the estimate is greater than $1,000.) All other estimates of median income and associated standard errors for 1976 through 1979 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Thus, caution must be exercised when comparing median incomes above $12,000 for persons or $18,000 for families for different years. Median incomes below those levels are more comparable from year to year since they have always been calcu-

lated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see P-60, No. 114, *Money Income in 1976 of Families and Persons in the United States.*

Sampling variability. The standard errors given in the following tables are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its estimated standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these was surveyed under essentially the same general conditions and using the same sample design, and an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.

2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

All the statements of comparison in the text which indicate some degree of difference are significant at a level of 0.10 or better, and most are significant at a level of 0.05 or better. This means that for most differences cited in the text the estimated difference is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison will be qualified in some way (e.g., by use of the phrase "some evidence").

Note when using small estimates. Summary measures (such as means, medians, and percent distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for the corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in tables B-1 through B-4 are approximations to standard errors of estimated numbers and estimated percentages for families, unrelated individuals, and persons in the United States. Estimated standard errors for specific characteristics cannot be obtained from tables B-1 through B-4 without the use of the f-factors in table B-5. The factors in table B-5 must be applied to the generalized standard errors in order to adjust for the combined effect of sample design and the estimating procedure on the value of the characteristic. Standard errors for intermediate values not shown in the generalized tables of standard errors may be approximated by linear interpolation. Standard errors of estimated means and medians are provided in the detailed tables.

Two parameters (denoted "a" and "b") are used to calculate standard errors for each type of characteristics; they are presented in table B-5. These parameters were used to derive the f-factors in table B-5 which must be used in order to derive standard errors from tables B-1 through B-4. They also may be used to directly calculate the standard errors for estimated numbers and percentages. Methods for direct computation are given in the following sections.

Standard errors of estimated numbers. The approximate standard error, σ_x, of an estimated number can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f\sigma \qquad (1)$$

where f is the appropriate factor from table B-5, and σ is the standard error on the estimate obtained by interpolation from tables B-1 or B-3. Alternatively, standard errors may be approximated by using formula (2), from which the standard errors were calculated in tables B-1 and B-3. Use of this formula will provide more accurate results than the use of the formula (1).

$$\sigma_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table B-5 associated with the particular type of characteristic.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the

Table B-1. Standard Errors of Estimated Numbers of Families, Unrelated Individuals, and Persons: 1966 to 1979

Total, White, or Spanish Origin

(Numbers in thousands)

Size of estimate	Standard error[1]	Size of estimate	Standard error[1]
75	11	7,500	111
100	13	10,000	127
250	21	15,000	154
500	29	25,000	192
1,000	41	50,000	247
2,000	58	100,000	269
3,000	71	125,000	243
5,000	91	160,000	139

[1]These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2. For 1978 data tabulated from the three-eighths sample, multiply by 1.63; and data tabulated from the five-eighths sample, multiply by 1.26.

Table B-2. Standard Errors of Estimated Percentages of Families, Unrelated Individuals, and Persons: 1966 to 1979

Total, White, or Spanish Origin

Base of estimated percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.1	3.3	4.5	6.6	7.6
100	1.8	2.9	3.9	5.7	6.6
250	1.2	1.8	2.5	3.6	4.1
500	0.8	1.3	1.8	2.5	2.9
1,000	0.6	0.9	1.2	1.8	2.1
2,000	0.4	0.6	0.9	1.3	1.5
3,000	0.3	0.5	0.7	1.0	1.2
5,000	0.3	0.4	0.6	0.8	0.9
7,500	0.2	0.3	0.5	0.7	0.8
10,000	0.2	0.3	0.4	0.6	0.7
15,000	0.15	0.2	0.3	0.5	0.5
25,000	0.12	0.2	0.2	0.4	0.4
50,000	0.08	0.13	0.2	0.3	0.3
100,000	0.06	0.09	0.12	0.2	0.2
125,000	0.05	0.08	0.11	0.2	0.2
160,000	0.05	0.07	0.10	0.14	0.2

[1]These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2. For 1978 data tabulated from the three-eighths sample, multiply by 1.63; and data tabulated from the five-eighths sample, multiply by 1.26.

size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameters from table B-5 indicated by the numerator. The approximate standard error, $\sigma_{(x,p)}$, of the estimated percentage can be obtained by use of formula

$$\sigma_{(x,p)} = f\sigma \qquad (3)$$

In this formula, f is the appropriate factor from table B-5 and σ is the standard error on the estimate from tables B-2 or

B-4. Alternatively, standard errors may be approximated by using formula (4), from which the standard errors in tables B-2 and B-4 were calculated. Use of this formula will provide more accurate results than use of formula (3).

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot p(100-p)} \qquad (4)$$

Here x is the size of the subclass of persons or families and unrelated individuals which is the base of the percentage, p is the percentage ($0 < p < 100$), and b is the parameter in table B-5 associated with the particular type of characteristic in the numerator of the percentage.

Illustration of the use of standard error tables. Table D of the text shows that in 1979 there were 6,042,000 Black families in the United States. Table B-5 indicates that the appropriate "a" and "b" parameters to use in calculating a standard error for this estimate are a = -0.000087 and b = 1255. Using formula (2), the approximate standard error is

$$\sqrt{(-0.000087)\ (6{,}042{,}000)^2 + 1255\ (6{,}042{,}000)} = 66{,}000$$

Table B-3. Standard Errors of Estimated Numbers of Families, Unrelated Individuals, and Persons: 1966 to 1979

Black and/or Other Races

(Numbers in thousands)

Size of estimate	Standard error[1]	Size of estimate	Standard error[1]
75	12	3,000	69
100	14	5,000	85
250	22	7,500	95
500	30	10,000	99
1,000	42	15,000	90
2,000	58	20,000	44

[1]These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2. For 1978 data tabulated from the three-eighths sample, multiply by 1.63; and data tabulated from the five-eighths sample, multiply by 1.26.

Table B-4. Standard Errors of Estimated Percentages of Families, Unrelated Individuals, and Persons: 1966 to 1979

Black and/or Other Races

Base of estimated percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.2	3.4	4.7	6.8	7.9
100	1.9	3.0	4.1	5.9	6.8
250	1.2	1.9	2.6	3.8	4.3
500	0.9	1.3	1.8	2.7	3.1
1,000	0.6	0.9	1.3	1.9	2.2
2,000	0.4	0.7	0.9	1.3	1.5
3,000	0.4	0.5	0.8	1.1	1.3
5,000	0.3	0.4	0.6	0.8	1.0
10,000	0.2	0.3	0.4	0.6	0.7
15,000	0.2	0.2	0.3	0.5	0.6
20,000	0.14	0.2	0.3	0.4	0.5

[1]These values must be multiplied by the appropriate factor in table B-5 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2. For 1978 data tabulated from the three-eighths sample, multiply by 1.63; and data tabulated from the five-eighths sample, multiply by 1.26.

Table B-5. "a" and "b" Parameters and "f" Factors for Calculating Approximate Standard Errors of Estimated Numbers and Percentages of Families, Unrelated Individuals, and Persons: 1966 to 1979

Type of Characteristic[1]	Parameter		f factor
	a	b	
INCOME			
Number of families or unrelated individuals:			
Total or white	-0.000010	1,721	1.00
Black and/or other races	-0.000089	1,876	1.00
Spanish origin	-0.000014	2,420	1.19
Number of farm families or unrelated individuals	-0.000011	3,167	1.36
Number of persons:

Number of farm families or unrelated individuals	-0.000011	2,556	1.22
Number of persons:			
Total or white	-0.000017	3,500	1.43
Black and/or other races	-0.000210	5,020	1.64
Spanish origin	-0.000026	4,432	1.60

[1]For metropolitan and nonmetropolitan areas, multiply the "a" and "b" parameters by 2. To obtain the appropriate "f" factor, multiply by 1.4. For estimates from Federal Region VIII (Denver), multiply the "a" and "b" parameters by 0.5. To obtain the appropriate "f" factor, multiply by 0.7.

[2]The "f" factor for Black families or unrelated individuals for nonincome characteristics is to be used for calculating standard errors of percentages only. For standard errors of estimated numbers, the appropriate "a" and "b" parameters and formula (2) must be used.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2. For 1978 data tabulated from the three-eighths sample, multiply the "a" and "b" parameters by 2.66, and multiply the "f" factor by 1.63; and data tabulated from the five-eighths sample, multiply the "a" and "b" parameters by 1.59, and multiply the "f" factor by 1.26.

The 68-percent confidence interval as shown by the data is from 5,976,000 to 6,108,000. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. Similarly, we could conclude that the average estimate derived from all possible samples lies within the interval 5,910,000 to 6,174,000 (using twice the standard error) with 95 percent confidence.

Table D also shows that 26.8 percent of these 6,042,000 Black families had income greater than $20,000 in 1979. Table B-4 indicates the standard error on this percentage to be 0.8 percent. Using formula (3) with the appropriate "f" factor from table B-5, the approximate standard error is (1.0) (0.8) = 0.8 percent. (Note that the standard error could also have been obtained using formula (4).) Consequently, the 68-percent confidence interval as shown by these data range from 26.0 to 27.6 percent, and the 95-percent confidence interval is from 25.2 to 28.4 percent.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2 - 2\rho\,\sigma_x\,\sigma_y} \qquad (5)$$

where σ_x and σ_y are the standard errors of the estimates x and y, and ρ represents the correlation between the two estimates. The estimates can be of numbers, percents, ratios, etc. For estimates of year-to-year change for income char-

acteristics (e.g., number of families with income less than $5,000), use the correlations given in table B-6. For all other differences, ρ should be zero.

Table B-6. Year-to-Year Correlation Coefficients for Income Characteristics: 1953 to 1979

Characteristic	Families and unrelated individuals	Persons
Total, White, Black and/or other races	0.35	0.30
Spanish origin.....	0.55	0.45

Note: These correlations are for comparisons of consecutive years. For comparisons of nonconsecutive years, all correlations should be assumed zero. For comparisons involving years prior to 1953, all correlations are zero.

Illustration of the computation of the standard error of a difference. Table F of the text shows that the median income for Black families in 1979 using the head concept and old income intervals was $11,604 and the corresponding median in 1978 was $10,879. The estimates of the standard errors of these medians (see following section) are $230 and $219, respectively. Therefore, the standard error of the estimated difference of $725 is

$$\sqrt{(230)^2 + (219)^2 - 2\ (.35)\ (230)\ (219)} = 256$$

This means that the 68-percent confidence interval on the difference of $725 as shown by these data is from $469 to $981. Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 68 percent of all possible samples. The corresponding 95-percent confidence interval is from $213 to $1,237. Since this interval does not contain zero, we can conclude with 95 percent confidence that income for Black families was higher in 1979 than in 1978.

Standard error of a ratio. Certain mean values for persons in families shown in the tables were calculated as the ratio of two numbers. For example, the mean number of persons per family is calculated as

$$\frac{x}{y} = \frac{\text{total number of persons in families}}{\text{total number of families}}$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families.

Case 1: There is at least one person having the characteristic in every family of the class: as for example, the mean number of persons per family or the mean number of persons per family with a male householder. For ratios of this kind, the standard errors are approximately by the following formula:

$$\sigma\left(\frac{x}{y}\right) = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{\sigma_y}{y}\right)^2 + \left(\frac{\sigma_x}{x}\right)^2 - 2\,\rho\left(\frac{\sigma_x}{x}\right)\left(\frac{\sigma_y}{y}\right)\right]} \qquad (6)$$

The standard error of the estimated number of families, σ_y, and the standard error of the estimated number of persons with the characteristic in those families, σ_x, may be calculated by the methods described above. In formula (6), ρ represents the correlation coefficient between the numerator and the denominator of the estimate. In the above examples, and for other ratios of this kind, use 0.7 as an estimate of ρ.

Case 2: The number of persons having the characteristic in a given family may be 0, 1, 2, 3, or more: for example, the mean number of persons under 18 years of age. For ratios of this kind the standard error is approximated by formula (6) but ρ is assumed to be zero. If ρ is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio.

STANDARD ERRORS OF ESTIMATED MEANS AND MEDIANS

Estimated standard errors are provided for the means and medians of the published income distributions and do not need to be calculated by the user. However, because of the approximations used in developing the formula used to estimate the standard error of the mean, the standard error reported for this statistic will generally be an underestimate. Since some users may wish to combine two or more income distributions and compute means and medians for the combined distribution, the following sections are provided to enable the user to calculate standard errors for these statistics.

Estimating the standard error of the mean. The standard error of a mean can be approximated by formula (7). Because of the approximations used in developing formula (7), an estimate of the standard error of the mean obtained from that formula will generally underestimate the true standard error. The formula used to estimate the standard error of a mean is

$$s_{\bar{x}} = \sqrt{\frac{b}{y}\, s^2} \qquad (7)$$

where y is the size of the base and b is a parameter which

depends on the sample size, the sample design, the estimation procedure, and the type of characteristic. The b values are given in table B-5. The variance, s^2, is given by formula (8):

$$s^2 = \sum_{i=1}^{c} p_i \bar{x}_i^2 - \bar{x}^2 \qquad (8)$$

where $\bar{x}$ is the mean of the distribution.

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i = (Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group i.

$\bar{x}_i$ is assumed to be the most representative value for the characteristic for families or persons in group i. Group c is open-ended, i.e., no upper interval boundary exists. For this group an approximate average value is $\bar{x}_c = \frac{3}{2} Z_{c-1}$.

When two or more distributions are combined the mean of the combined distribution is:

$$\bar{x} = \frac{1}{y} \sum_j \bar{x}_j y_j$$

where $\bar{x}_j$ is the mean of the jth distribution, y_j is the base of the jth distribution, and $y = \sum_j y_j$. This mean must be computed by the user.

Standard error of a median. The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for measuring the reliability of a median is to determine a confidence interval. (See the section on sampling variability for a general discussion of confidence intervals.) The following procedure may be used to estimate the 68-percent confidence limits of a median based on sample data.

1. Determine, using the standard error tables and factors or formula (4), the standard error of the estimate of 50 percent from the distribution;

2. Add to and subtract from 50 percent the standard error determined in step (1);

3. Using the distribution of the characteristic, calculate the confidence interval corresponding to the two points established in step (2).

For calculation of the confidence interval use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise.

A 95-percent confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step (1).

The formulae used to implement step (3) for Pareto or linear interpolation are:

$$\text{Pareto: } x_{pN} = A_1 \exp\left[\ln\left(\frac{pN}{N_1}\right) \ln\left(\frac{A_2}{A_1}\right) \Big/ \ln\left(\frac{N_2}{N_1}\right)\right] \qquad (9)$$

$$\text{Linear: } x_{pN} = \frac{N_1 - pN}{N_1 - N_2} (A_2 - A_1) + A_1 \qquad (10)$$

where N = total number of families or persons in the distribution.

x_{pN} = estimated income for which the number pN, $(0 < p < 1)$ of families or persons in the distribution have larger incomes. For the purposes of calculating the confidence interval, p takes on the two values in step (2). Note that the median can be approximated by using p = .50 in the formulae.

A_1 and A_2 = the estimated incomes which are the lower and upper bounds, respectively, on the interval in which x_{pN} falls.

N_1 and N_2 = the estimated number of families or persons with incomes greater than A_1 and A_2, respectively.

exp refers to the exponential function.

ln refers to the natural logarithm function.

It should be noted that a mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

Since the new, more detailed income intervals used in this report have $2,500 increments up to $40,000, and since Pareto interpolation will only be used when a median income falls in an interval of width larger than $2,500 (beginning with March 1980 CPS), this type of interpolation will now be needed very infrequently (i.e., only in cases where the estimated median income exceeds $40,000). For this reason an illustration of the use of Pareto interpolation in computing a confidence interval for a median has been omitted. Illustrations of this procedure can be found, however, in the Source and Reliability section of previous reports in the P-60 Series.

Illustration of the computation of a confidence interval for a median using linear interpolation. Table B of the text shows that the median income in 1979 for all families is estimated to be $19,661. Table B also shows that the base of the distribution from which this median was determined is 58,426,000.

1. Using formula (4), the standard error of 50 percent on a base of 58,426,000 is about 0.3 percentage points.

2. To obtain a 95-percent confidence interval on the estimated median, add to and subtract from 50 percent twice the standard error found in step (1). This yields percent limits of 49.4 and 50.6.

3. From table B, the income of 32,949,000 (or 56.4 percent) of these families was at least $17,500 and the income of 28,627,000 (or 49.0 percent) of these families was at least $20,000.

   Thus, the entire 95-percent confidence interval falls in the income interval $17,500 to $19,999. Therefore, the median income and the upper and lower limits on the confidence interval are to be calculated using linear interpolation. Using formula (10), the lower limit on the estimate is found to be about

$$\frac{32{,}949{,}000 - (0.506)\,(58{,}426{,}000)}{32{,}949{,}000 - 28{,}627{,}000}\,(\$20{,}000 - \$17{,}500) + \$17{,}500 = \$19{,}458$$

Similarly, the upper limit is found by linear interpolation to be about

$$\frac{32{,}949{,}000 - (0.494)\,(58{,}426{,}000)}{32{,}949{,}000 - 28{,}627{,}000}\,(\$20{,}000 - \$17{,}500) + \$17{,}500 = \$19{,}864$$

Thus, the 95-percent confidence interval on the estimated median is from $19,458 to $19,864.

VACATION REMINDER
Next month, during the week of the 19th we will again be calling on you. Is there any reason why we would not be able to contact you here?

16. LIVING QUARTERS (indicate type, access and kitchen facilities)

16a. HOUSING UNIT
☐ House, apartment, flat
☐ HU in nontrans. hotel, motel, etc.
☐ HU-perm. in trans. hotel, motel, etc.
☐ HU in rooming house
☐ Mobile home or trailer
☐ HU not specified above – *Describe in notes*

16b. ACCESS ☐ Direct ☐ Thru another unit

16c. COMPLETE KITCHEN FACILITIES
☐ For this unit only
☐ Also used by another household
☐ None

If "NONE," and unit vacant, did last occupants have complete kitchen facilities?
☐ For this unit only
☐ Also used by another household
☐ None

16d. OTHER UNIT
☐ Quarters not HU in rooming or boarding house
☐ Unit not permanent in transient hotel, motel, etc.
☐ Vacant tent site or trailer site
☐ Not specified above – *Describe in notes*

NOTES

30. USE OF TELEPHONE

	30a. What is your telephone number?	30b. Is a telephone interview acceptable?
1st mo.	No. ___ ☐ No phone	1st month Y N
5th mo.	☐ No phone ☐ Same No. ___	5th month Y N

31. What is the best time to call or visit?

33. TOTAL FAMILY INCOME IN PAST 12 MONTHS *(Show flashcard)*
Which category on this card represents the total combined income of all members of this FAMILY during the past 12 months? This includes money from jobs, net income from business, farm or rent, pensions, dividends, interest, social security payments and any other money income received by members of this FAMILY who are 14 years of age or older?

A ☐ Under $1,000	F ☐ $ 5,000 to $ 5,999	K ☐ $15,000 to $19,999
B ☐ $1,000 to $1,999	G ☐ 6,000 to 7,499	L ☐ 20,000 to 24,999
C ☐ 2,000 to 2,999	H ☐ 7,500 to 9,999	M ☐ 25,000 to 49,999
D ☐ 3,000 to 3,999	I ☐ 10,000 to 11,999	N ☐ 50,000 and over
E ☐ 4,000 to 4,999	J ☐ 12,000 to 14,999

Yes ○ No ○

INTRODUCTION
(Optional)

We have just completed the questions about employment and unemployment. Each March, the Census Bureau also collects information about the economic situation of Americans and their families for the previous year. I am going to ask these questions now. We don't expect all answers to be perfect, but please think about each question and answer it the best you can.

77. INTERVIEWER CHECK ITEM
TENURE *(from Control Card Item 9)*
- Owned or being bought ○
- Rented ..... ○
- No cash rent ..... ○

78. How many housing units are in this structure?
1 ○ 5–9 ○
2 ○ 10+ ○
3–4 ○

29A. Did . . . work at a job or business at any time during 1979?
Yes O *(Skip to 33)* No O

29B. Did . . . do any temporary, part-time, or seasonal work even for a few days during 1979?
Yes O *(Skip to 33)* No O

30. Even though . . . did not work in 1979, did he/she spend any time trying to find a job or on layoff?
Yes O No O *(Skip to 32)*

31. How many different weeks was . . . looking for work or on layoff from a job?
(Mark weeks)

32. What was the main reason . . . did not work in 1979? Was he/she . . . *(Read list until "Yes" reply is received)*
- Ill or disabled and unable to work O
- Taking care of home or family . . . O
- Going to school . . . O
- Could not find work . . . O
- Retired . . . O
- Doing something else . . . O
- In Armed Forces . . . O

(Skip to 53)

33. During 1979 in how many weeks did . . . work even for a few hours? Include paid vacation and sick leave as work.
(Mark weeks and Go to 34)

34. INTERVIEWER CHECK ITEM
Number of weeks in item 33 is:
1–49 O *(Skip to 36)*
50–51 O *(Ask 35)*
52 O *(Skip to 39)*

35. Did . . . lose any full weeks of work in 1979 because he/she was on layoff from a job or lost a job?
Yes O No O *(Skip to 39)*

36. You said . . . worked about *(entry in item 33)* weeks in 1979. How many of the remaining *(52 minus entry in item 33)* weeks was . . . looking for work or on layoff from a job?
(Mark weeks and ask 37)
None O *(Skip to 38)*

37. Were the *(entry in item 36)* weeks . . . was looking for work *(or on layoff)* all in one stretch?
Yes – 1 stretch O
No – 2 stretches O
No – 3+ stretches O
(Go to 38)

(If the entries in items 33 and 36, add to 52 weeks, skip to item 39 If not, ask 38)

38. What was . . . doing most of the remaining weeks in 1979? Was he/she . . . *(Read list until "Yes" reply is received.)*
- Ill or disabled and unable to work O
- Taking care of home or family . . . O
- Going to school . . . O
- In Armed Forces . . . O
- Retired . . . O
- Doing something else O

(Go to item 39)

39. For how many employers did . . . work in 1979? If more than one at same time, only count it as one employer.
1 O *(Skip to 41)*
2 O
3+ O
(Ask 40)

40. Did . . . look for work between jobs in 1979?
Yes O No O

41. In the weeks that . . . worked, how many hours did . . . usually work per week?
(Mark hours)
(Go to 42)

42. INTERVIEWER CHECK ITEM
Number of hours in item 41 is:
1–34 O *(Skip to 44)*
35+ O *(Ask 43)*

43. Did . . . work less than 35 hours for at least one week in 1979? Exclude time off with pay because of holidays, vacation, days off, or sickness.
Yes O *(Ask 44)*
No O *(Skip to 46)*

44. How many weeks did . . . work less than 35 hours in 1979?
(Mark weeks)

45. What was the main reason . . . worked less than 35 hours per week?
- Could only find part time job . . . O
- Wanted to work part time or could work only part time O
- Slack work or material shortage O
- Other . . . O

(Ask 46)

46. What was . . . 's longest job in 1979? *(Compare with entry in CPS-1 item 23)*
Same as item 23 or Armed Forces O *(Skip to 48A)*
Different from item 23 or item 23 blank . . . O *(Specify in 47A–47E)*

47A. EMPLOYER
