Money Income and Poverty Status of Families and Persons in the United States: 1982 (Advance Data From the March 1983 CPS)

HIGHLIGHTS

Median family income in 1982 was lower for the third consecutive year, however, the decline was significantly less than in the two previous years, according to results of the March 1983 Current Population Survey (CPS) conducted by the Bureau of the Census. In 1982, the median family income was $23,430, an increase of 4.7 percent before adjusting for the 6.1-percent increase in consumer prices.[1] After adjustment, however, median family income declined by 1.4 percent. This decline was significantly less than either the 1980-81 decline of 3.5 percent or the 1979-80 decline of 5.5 percent.

Between 1981 and 1982, the number of persons below the poverty level rose from 31.8 million to 34.4 million, an increase of 2.6 million or 8.1 percent. This was also the third consecutive annual increase in the number of persons below the poverty level. The poverty threshold in 1982 for a family of four was $9,862.

MONEY INCOME OF FAMILIES

Most economists agree that a major recession began in July of 1981 and continued through most of 1982. This recession included an increase from 7.5 to 9.5 in the average annual unemployment rate between 1981 and 1982, reaching 10.7 percent in the last quarter of 1982.[2] It was also accompanied by a slowing in the rate of increase in consumer prices. The decline of 1.4 percent in real median family income was smaller than in the previous two years when the rate of inflation exceeded 10 percent.

The declines in median family income took place for families in large metropolitan areas, married-couple families, families with a wife in the paid labor force, two-earner families, and three-person families. Families living in large metropolitan areas had their real median income decline by 3.2 percent to $26,440, while smaller metropolitan and nonmetropolitan areas showed no change. The 1982 median income for all married-couple families was $26,020 and $30,340 for those with wives in the paid labor force, both down 2.2 percent from the previous year. However, median income for male-householder families with no wives present ($20,140) and female-householder families with no husbands present ($11,480) were unchanged. Associated with the decline in median income for married-couple families with wives in the paid labor force was the decline in median income for two-earner families. Their 1982 median income was $28,070, down 1.5 percent from 1981 in real terms. The median income for three-person families was $24,190 in 1982. These families, which account for 23 percent of the total number of families, had their real median income decline by 2.6 percent.

White median family income was $24,600 in 1982, Black median family income was $13,600, and Spanish median family income was $16,230. No statistically significant change occurred in the real median income for Black families. White real median family income was down 1.4 percent and Spanish median family income was down 6.8 percent.

Regionally, Black families experienced a significant decline of 21.4 percent in median income for the North Central States. The median for Spanish families declined significantly in the South (8.0 percent) and West (6.5 percent).[3] The regional medians for

---

[1]Changes in real income refer to comparisons after adjusting for inflation. The percentage change in prices between 1981 and 1982 was computed by dividing the annual average Consumer Price Index (CPI) for 1982 by the annual average value of the CPI for 1981. See table A-2 of appendix A for CPI's from 1947 to 1982.

[2]U.S. Department of Labor, Bureau of Labor Statistics, Monthly Labor Review, Volume 106, Number 4, April 1983, page 53.

[3]The 8.0 percent and 6.5 percent declines were not statistically different from one another.

White families showed no statistically significant changes. Because of their relatively smaller sample size, it should be noted that income data for minorities by region are less reliable than that for Whites.

MONEY INCOME OF PERSONS

Results of the survey indicate that, as was the case in 1980 and 1981, the real median income for men declined while the real median income for women increased in 1982. The 1982 median income for men was $13,950, 2.4 percent below the 1981 median. The median income for women was $5,890, 1.6 percent higher than their 1981 median. Men and women in the 65-and-over age group showed a significant real increase over their 1981 median incomes, while the medians for other age categories declined or remained about the same. Women with 4 or more years of college experienced a gain in income of 5.1 percent. No statistically significant changes occurred in any of the other educational attainment categories shown in table 7. Men with 4 or more years of college showed a 2.2 percent decline in

Table A. Comparison of Median Family Money Income in 1982 and 1981, by Selected Characteristics

Characteristic	Median family money income			Percent change in real money income

[2]Excludes families with members in the Armed Forces.

real median income. Most other education categories for men also showed significant declines.

Data for year-round, full-time workers reveal a lower median income for men in 1982 but a higher median for women. Men working year round, full time experienced a slight decline of 1.4 percent in their 1982 median income of $21,660. Women with the same work pattern posted a moderate gain of 3.3 percent, bringing their median income to $13,660.

POVERTY STATUS

The decline in real money income between 1981 and 1982 was accompanied by an increase in the number and percentage of persons below the poverty level. There were 34.4 million persons classified as poor in 1982, an increase of 2.6 million over 1981. During the same period, the poverty rate rose from 14.0 to 15.0 percent.

Among the factors contributing to the increase in poverty were the recession that persisted in 1982 and the associated rise in unemployment. In addition to the recession, another contributing factor may have been the tightening of eligibility standards for certain Government aid programs, such as Aid to Families with Dependent Children. One factor that may have moderated the increase in poverty was a substantial reduction in the rate of inflation, resulting in an increase in the poverty thresholds of only 6.1 percent, the smallest since 1976. The threshold for a family of four was $9,862 in 1982, compared with $9,287 in 1981.

The poverty rate in 1982 was at its highest level since 1966. However, poverty rates for the two years cannot be completely equated as measures of well-being. Families and unrelated individuals with low incomes had access to a greater number of Government benefits in 1982 than they did in 1966. Most of the growth in aid to the poor occurred in programs, such as food stamps and Medicaid, that provide benefits in a form other than cash. These benefits are not counted as income in determining poverty status, but make significant contributions to the well-being of recipients.

The increase in poverty between 1981 and 1982 affected many segments of the U.S. population. In 1982, there were 23.5 million Whites, 9.7 million Blacks, and 4.3 million persons of Spanish origin below the poverty level; all of these figures were higher than in 1981. Poverty rates increased to 12.0 percent for Whites and 29.9 percent for persons of Spanish origin; there was some evidence that the increase in the poverty rate for Blacks, to 35.6 percent, was statistically significant.

All of the younger age groups, up to age 55, experienced increases in poverty, while those 55 years and over did not. The number of poor children under 18 years old rose from 12.3 million in 1981 to 13.5 million in 1982, and their poverty rate rose from 19.8 to 21.7 percent. In contrast, the number and percentage of persons 65 years and over below the poverty level in 1982 (3.8 million and 14.6 percent, respectively) were essentially the same as in the previous year. In 1982, for the first time, there was no difference between the poverty rates for all persons and persons 65 years and over. This is attributable more to increases in the general poverty rate since 1979 than to changes in the poverty rate for the aged. One reason the aged have recently fared better than the total population may be that most are no longer working and, therefore, are less adversely affected by rising unemployment. In addition, the most important Government programs benefiting the elderly, including Social Security and Supplemental Security Income, are indexed to reflect changes in the price level.

The effects of the recession were visible in the work experience data for persons below the poverty level in 1982. There were 3.7 million poor persons 15 years and over who were unemployed at some time during the year, 14 percent more than in 1981. Of these 3.7 million persons, 2.5 million were unemployed 15 weeks or more, an increase of 30 percent from 1981.

Metropolitan areas experienced a substantial increase in the number of poor between 1981 and 1982, with the bulk of the increase taking place in their central cities. There were 12.7 million central-city residents below the poverty level in 1982, compared with 11.2 million in 1981. In the portions of metropolitan areas outside the central cities, there were 8.6 million poor persons in 1982, compared with 8.1 million the previous year; there was some evidence that the change was statistically significant. The poverty rate in 1982 was 19.9 percent for central cities, compared with 9.3 percent for areas outside central cities. There was some evidence of an increase in the number of nonmetropolitan poor in 1982, although their poverty rate (17.8 percent) was not significantly different from the 1981 figure. All of the four major regions had more poor persons in 1982 than in 1981. As in earlier years, the poverty rate was highest in the South (18.1 percent).

There were increases in 1982 in the total number of poor families and in the number of poor married-couple families. About 7.5 million families were below the poverty level in 1982; 3.8 million of these were married-couple families. There were 3.4 million poor families with a female householder, no husband present, in 1982; there was some evidence that this constituted an increase from

1981. The relatively small number of poor male-householder families with no wives present increased by about 40 percent, to 290,000. Poverty rates rose significantly for all family types. In contrast, neither the number nor the percentage of unrelated individuals below the poverty level changed significantly between 1981 and 1982, remaining at about 6.5 million and 23 percent, respectively. For female unrelated individuals, the poverty rate declined slightly, from 27.7 to 26.6 percent.

CONVERSION TO THE 1980 CENSUS OCCUPATIONAL CLASSIFICATION SYSTEM

In 1980, the Bureau of the Census revised the Standard Occupational Classification System (SOC) for use in its tabulation program for the 1980 census and subsequent published reports on occupational data. Consequently, the new classification system was incorporated into the CPS tabulation program in January 1983. While the new system provides comparability between the CPS and other data sources, it causes a break in continuity for all CPS series containing occupational data.

Differences between the 1970 and 1980 occupational systems affect classifications at all levels. Such commonly used identifiers as white-collar, blue-collar, professional and technical, craft workers, and operative occupations have been eliminated. These identifiers have been replaced with new categories which represent conceptual as well as language changes. Moreover, many of the components of the former groupings have been shifted to such an extent that they cannot be made to correspond readily to the new categories. Tables 1 and 7 of this report show comparisons by occupation from the March 1982 and the March 1983 CPS. Since occupational data from the March 1982 CPS were coded using the old system, a Monte Carlo technique was used to simulate coding using the new system to allow year-to-year comparisons. For a more complete explanation and description of the changes from the old to new occupational classification system see the February 1983 issue of Employment and Earnings by the Bureau of Labor Statistics.

[r]BASED ON REVISED METHODOLOGY.
[1]BEGINNING WITH 1979, INCLUDES MEMBERS OF UNRELATED SUBFAMILIES NOT SHOWN SEPARATELY. FOR EARLIER YEARS, UNRELATED SUBFAMILY MEMBERS ARE INCLUDED IN THE 'IN FAMILIES' CATEGORIES.
[2]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEAR 1959, DATA FOR PERSONS 65 YEARS AND OVER AND FOR BLACKS ARE BASED ON 1-IN-1,000 SAMPLE OF THE 1960 CENSUS. BEGINNING WITH 1979[r], DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 15. Persons Below the Poverty Level, by Family Status, Type of Family, Race, and Spanish Origin: 1959, 1960, and 1965 to 1982—Continued

(NUMBERS IN THOUSANDS. PERSONS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

[r]BASED ON REVISED METHODOLOGY.
[1]BEGINNING WITH 1979, INCLUDES MEMBERS OF UNRELATED SUBFAMILIES NOT SHOWN SEPARATELY. FOR EARLIER YEARS, UNRELATED SUBFAMILY MEMBERS ARE INCLUDED IN THE 'IN FAMILIES' CATEGORIES.
[2]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.
[3]INCLUDES FEMALE UNRELATED INDIVIDUALS.

NOTE: FOR THE YEAR 1959, DATA FOR PERSONS 65 YEARS AND OVER AND FOR BLACKS ARE BASED ON 1-IN-1,000 SAMPLE OF THE 1960 CENSUS. BEGINNING WITH 1979[r], DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 15. Persons Below The Poverty Level, By Family Status, Type of Family, Race, and Spanish Origin: 1959, 1960, and 1965 to 1982—Continued

(NUMBERS IN THOUSANDS. PERSONS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR	NUMBER BELOW POVERTY LEVEL							POVERTY RATE						
	TOTAL[1]		IN FAMILIES				UNRELATED INDIVIDUALS	TOTAL[1]		IN FAMILIES				UNRELATED INDIVIDUALS
	ALL PERSONS	65 YEARS AND OVER	TOTAL	HOUSEHOLDER	RELATED CHILDREN UNDER 18	OTHER FAMILY MEMBERS		ALL PERSONS	65 YEARS AND OVER	TOTAL	HOUSEHOLDER	RELATED CHILDREN UNDER 18	OTHER FAMILY MEMBERS

Appendix A. Definitions and Explanations

Population coverage. This report includes the civilian noninstitutional population of the United States (the 50 States and the District of Columbia) and members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces.

Money income. Income distributions and income summary measures (such as medians and means) shown in this report are limited to money income before payment of Federal, State, local, or Social Security (FICA) taxes and before any other types of deductions, such as union dues and Medicare premiums. Total money income is the sum of the amounts received from wages and salaries, self-employment income (including losses), Social Security, Supplemental Security Income, public assistance, interest, dividends, rent, royalties, estates or trusts, veterans' payments, unemployment and workers' compensations, private and government retirement and disability pensions, alimony, child support, and any other source of money income which was regularly received. Capital gains (or losses) and lump sum or one-time payments such as life insurance settlements are excluded.

Underreporting. As in most household surveys, the estimates of the number of money income recipients and the total amount of money income derived from the March CPS are somewhat less than comparable estimates derived from independent sources, such as the Bureau of Economic Analysis, Social Security Administration, and Veterans Administration. The difference between the survey estimate and the independent estimate is generally termed "underreporting." Underreporting tends to be more pronounced for income sources such as public assistance and welfare, unemployment compensation, and property income (interest, dividends, and net rental income). Estimates of income from wages and salaries tend to have less underreporting than most income types. For 1979 (the latest year for which estimates of underreporting are available), underreporting of total money income was about 11 percent. For further details concerning the reporting of money income, see Current Population Reports, Series P-60, No. 137.

Poverty definition. Families and unrelated individuals are classified as being above or below the poverty level using the poverty index originated at the Social Security Administration in 1964 and revised by Federal Interagency Committees in 1969 and 1980. The poverty index is based solely on money income and does not reflect the fact that many low-income persons receive noncash benefits such as food stamps, Medicaid, and public housing. The index is based on the Department of Agriculture's 1961 Economy Food Plan and reflects the different consumption requirements of families based on their size and composition. It was determined from the Department of Agriculture's 1955 Survey of Food Consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the Economy Food Plan. For smaller families and persons living alone, the cost of the Economy Food Plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). The average poverty threshold for a family of four was $9,862 in 1982, about 6.1 percent higher than the comparable 1981 cutoff of $9,287. Weighted average poverty thresholds by size of family are shown in table A-1. For further details, see Current Population Reports, Series P-60, No. 138.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or

through a common hall or (2) a kitchen or cooking equipment for the exlusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit or a group of unrelated persons sharing a housing unit as partners is also counted as a household. The count of households excludes group quarters.

Family. The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together; all such persons are considered members of the same family. Thus, if the son of the householder and the son's wife are in the household, they are treated as part of the householder's family. However, a lodger and his wife not related to the householder or an unrelated servant and his wife are considered as additional families, not a part of the householder's family. These unrelated subfamilies are not included in the count of total families.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters (such as a rooming house). Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Table A-1. Weighted Average Poverty Thresholds in 1982

Size of family unit	Threshold
1 person (unrelated individual)...	$ 4,901
15 to 64 years.....	5,019
65 years and over.....	4,626
2 persons.....	6,281
Householder 15 to 64 years.....	6,487
Householder 65 years and over...	5,836
3 persons.....	7,693
4 persons.....	9,862
5 persons.....	11,684
6 persons.....	13,207
7 persons.....	15,036
8 persons.....	16,719
9 persons or more.....	19,698

Table A-2. Annual Average Consumer Price Index (CPI): 1947 to 1982

(1977 = 100)

Year	CPI	Year	CPI
1947.	36.9	1965.	52.1
1948.	39.7	1966.	53.6
1949.	39.3	1967.	55.1
1950.	39.7	1968.	57.4

Appendix B. Source and Reliability of the Estimates

SOURCE OF DATA

The estimates are based on data obtained annually in March of 1948 through 1983 from the Current Population Survey (CPS) conducted by the Bureau of Census and from supplementary questions to the CPS. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member 14 years old and over in every sample household. In addition, supplementary questions are asked every March about money income and work experience for the previous year. In order to obtain more reliable data for the Spanish population, the March CPS sample was enlarged to include all households from the previous November which contained at least one sample person of Spanish origin. For this report, persons in the Armed Forces living off post or with their families on post are included.

The present CPS sample was initially selected from the 1970 census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. The current CPS sample is located in 629 areas comprising 1,148 counties, independent cities, and minor civil divisions in the Nation. In this sample, approximately 61,500 occupied households were eligible for interview. Of this number, about 2,500 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. For a description of the previous CPS sample designs see the detailed reports in this series, Current Population Reports, Series P-60.

The estimation procedure used in this survey involves the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, and sex. The estimation procedure also involved a further adjustment so that husband and wife of a household received the same weight. These independent estimates are based on statistics from the decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. Beginning with reports containing income data for 1980, the independent population estimates used for 1979 and later years are based on the 1980 census. In earlier reports in this series (P-60), data for 1971 through 1979 were obtained using independent population estimates based on the 1970 census. For more details on this change, see the section of the text, "Introduction of 1980 Census Population Controls," in the upcoming Current Population Reports, Series P-60, No. 132.

RELIABILITY OF THE ESTIMATES

Since the CPS estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. The standard errors provided for this report primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Sampling variability. The standard errors that may be obtained using this appendix are primarily measures of sampling variability; that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its estimated standard error enable one to construct confidence intervals--ranges that would include the average result of all possible samples with a known probability. For example, if all possible

samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its estimated standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.

2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common types of hypotheses are 1) the population parameters are identical, versus 2) they are different. An example of this would be comparing the mean annual income of men versus the mean annual income of women. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the parameters are different when, in fact, they are identical.

All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better, and most have passed a hypothesis test at the 0.05 level of significance or better. This means that, for most differences cited in the text, the estimated difference between parameters is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference between parameters is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison will be qualified in some way; e.g., by use of the phrase "some evidence."

Note when using small estimates. Summary measures (such as means, medians, and percent distributions) are shown in the report only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard errors for data based on CPS. Since this is an advance report, standard error parameters are provided in table B-1 for estimated numbers and estimated percentages of households, families, unrelated individuals, and persons for only certain characteristics which are considered the most important among the data in the report.

Standard error tables for each characteristic of interest for estimated numbers and estimated percentages of households, families, unrelated individuals, and persons are provided in the detailed report for 1981 income in this series. A more complete source and reliability statement will be published in the forthcoming detailed reports on income and poverty for 1982.

Standard errors of estimated numbers and estimated percentages. Standard errors of estimated numbers and estimated percentages can be computed directly with formulas (1) and (2), respectively. The formulas are

$$\sigma_x = \sqrt{ax^2 + bx} \qquad (1)$$

Here x is the size of the estimate and a and b are the parameters associated with the characteristic.

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot p \cdot (100 - p)} \qquad (2)$$

Here x is the size of the subclass of the population which is the base of the percentage, p is the percentage ($0<p<100$), and b is the parameter associated with the characteristic.

Table B-1 provides the values of the a and b parameters that are used in formulas (1) and (2) to create standard errors of estimated numbers and estimated percentages of households, families, unrelated individuals, and persons.

Standard error of a difference. The formula for approximate standard error of the

difference between two estimates x and y, is given by

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2 - 2\rho\sigma_x\sigma_y} \qquad (3)$$

where σ_x and σ_y are the standard errors of the estimates x and y, and ρ represents the correlation between the two estimates.

For the year-to-year comparisons of income and poverty estimates the correlation coefficients, ρ, are contained in the detailed reports in this series, (Current Population Reports, P-60, Nos. 137 and 138). For other comparisons, assume ρ equals zero. Making this assumption will result in accurate estimates of the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Table B-1. Parameters for Direct Computation of Standard Errors of Estimated Numbers and Percentages of Households, Families, Unrelated Individuals, and Persons: 1966 to 1982

Characteristic	Parameters	
	a	b
Number of households, families, and unrelated individuals:		
All races or White	-0.000010	1,721
Black and/or other races	-0.000089	1,876
Spanish origin	-0.000014	2,420
Number of persons:		
All races or White	-0.000009	1,885
Black and/or other races	-0.000077	2,155
Spanish origin	-0.000020	3,000
Families below poverty level:		
All races or White	0.000076	1,876
Black and/or other races	0.000076	1,876
Spanish origin	-0.000014	2,420
Persons below poverty level:		
All races or White	-0.000031	7,946
Black and/or other races	-0.000270	7,946
Spanish origin	-0.000063	11,528

Note: For years prior to 1966, a standard error estimate computed with these parameters must be adjusted. For 1947 to 1954, multiply the standard error by 1.8; for 1955 to 1964, multiply by 1.4; and for 1965 multiply by 1.2.
