Money Income of Households, Families, and Persons in the United States: 1984

U.S. Department of Commerce
BUREAU OF THE CENSUS

Acknowledgments

This report was prepared in Population Division by **Edward J. Welniak**, under the general direction of **John F. Coder**, Chief, Income Statistics Branch. The historical and summary tables were programmed by **Emmett F. Spiers** and **Robert W. Cleveland**. Statistical assistance was provided by **Helen Ogle** and **Rose Mary Schade**, and typing assistance was provided by **Shirley L. Smith**. Overall direction was provided by **Gordon W. Green, Jr.**, Assistant Division Chief (Socioeconomic Statistics Programs). Programming of the detailed tables was provided by **Thelma Varhach** and survey operations were coordinated by **Ronald Tucker** of the Demographic Surveys Division. Sampling review was conducted by **Cathy Mazur** of the Statistical Methods Division. The report was planned and produced in Publications Services Division.

DETAILED TABLES—Continued

Families--Continued

Page

11. Families and unrelated individuals, by total money income in 1947 to 1984 (in constant 1984 dollars), race, and Spanish origin of householder 33
12. Income at selected positions and percentage share of aggregate income in 1947 to 1984 received by each fifth and top 5 percent of families and unrelated individuals, by race of householder 37
13. Summary measures—selected family characteristics, by total money income in 1984, race, and Spanish origin of householder 40
14. Summary measures of family characteristics and income in 1984—selected characteristics of families, by race and Spanish origin of householder 41
15. Regions and divisions—families and unrelated individuals, by total money income in 1984, race, and Spanish origin of householder 49
16. Type of family and age of householder—families, by total money income in 1984 and race of householder 53
17. Age and sex—all unrelated individuals and nonfamily householders 15 years old and over, by total money income in 1984 and race 65
18. Size and type of family—families, by total money income in 1984, race, and Spanish origin of householder 70
19. Number of related children under 18 years old—families, by total money income in 1984 and type of family 74
20. Age of own children—families, by total money income in 1984 and type of family 75
21. Number of earners—families with civilian members, by total money income in 1984, race, and Spanish origin of householder 76
22. Earnings of wife, by earnings of husband in 1984—married-couple families, by work experience in 1984 78
23. Years of school completed—families with householder 25 years old and over, by total money income in 1984, age, and race of householder 79
24. Type of income, by income of specified type in 1984—families and unrelated individuals, by sex, race, and Spanish origin of householder 83
25. Type of income, by total money income in 1984—families and unrelated individuals, by age of householder 90

Persons

26. Selected characteristics of persons—number with income and median income in 1984 and 1983 of all persons 15 years old and over and persons working year round full time, by sex 96
27. Total CPS population and per capita money income in 1967 to 1984 (in current and constant dollars), work experience, race, and sex 98
28. Persons 14 years old and over, by total money income in 1947 to 1984 (in current dollars), work experience, race, and sex 99
29. Persons 14 years old and over, by total money income in 1947 to 1984 (in constant 1984 dollars), work experience, race, and sex 102
30. Regions and divisions—persons 15 years old and over, by total money income in 1984, race, Spanish origin, and sex 105
31. Marital status—persons 18 years old and over, by total money income in 1984, age, race, Spanish origin, and sex 113
32. Age—persons 15 years old and over, by total money income in 1984, race, and sex 121
33. Education and total money income in 1984—persons 25 years old and over, by age, race, and sex 126
34. Education and total money earnings in 1984—number with earnings, mean earnings, and standard errors in 1984 of persons 18 years old and over, by age, work experience, and sex 134
35. Type of income, by income of specified type in 1984—persons 15 years old and over, by race, Spanish origin, and sex 136

DETAILED TABLES—Continued

Persons—Continued

Money Income of Households, Families, and Persons in the United States: 1984

NOTE

Estimates in the report were developed from two sample frames: one from the 1970 census, the other from the 1980 census. Since this overlap in the sample design does not permit the development of estimates for metropolitan, nonmetropolitan, farm, and nonfarm categories that are comparable to either the 1980 or 1970 census definitions, figures for these residence categories have been omitted. In addition to this consideration, the estimates in this report for 1983 and 1984 reflect the introduction of new survey weighting procedures for the Spanish-origin population and a revised method of measuring interest income.

Since the initial release of these data on August 28, 1985, a minor revision has been made to the 1983 estimates. This revision affected the 1983 to 1984 comparisons. The data for 1984 were not affected. The data in this report reflect the revisions made in 1983 and, therefore, differ slightly from the data published in Current Population Reports, Series P-60, No. 149. See the section on revised survey procedures for a further explanation of these changes.

HIGHLIGHTS

For the second year in a row median family income increased faster than inflation according to results of the March 1985 Current Population Survey (CPS) conducted by the Bureau of the Census. In 1984, median family income was $26,430, 7.1 percent higher than the 1983 median of $24,670. After adjusting for the 4.3-percent increase in consumer prices between 1983 and 1984, real median family income still showed a significant gain of 2.8 percent.[1]

INCOME OF HOUSEHOLDS

Median household income in 1984 was $22,420, an increase of 6.6 percent over the 1983 median of $21,020. After adjusting for the increase in consumer prices between 1983 and 1984, real median household income increased by about 2.3 percent. The 1984 median income was $23,650 for White households, $13,470 for Black households, and $16,990 for Spanish-origin households. White and Black households showed an increase in real income between 1983 and 1984, but the change in Spanish-origin households was not statistically significant.[2]

INCOME OF FAMILIES

Increased employment and higher real earnings levels were important factors that helped boost real median family income between 1983 and 1984. Monthly civilian employment increased throughout 1984 continuing the trend that started in January of 1983. The annual average number of employed civilians rose from 100.8 million in 1983 to 105.0 million in 1984 and the employment-to-population ratio went from 58 to 60 percent. The proportion of families with a householder working year-round, full-time rose from 55 to 57 percent, and the proportion of families with two or more earners also increased slightly from 55 to 56 percent. Both men and women working year-round, full-time experienced significant increases in real earnings.

The net gain in median family income after adjusting for the 4.3-percent increase in consumer prices was 2.8 percent. The real increase in 1984 follows a 1.6-percent rise recorded for 1983.

Increases in real median incomes were experienced by both White and Spanish-origin families in 1984. Their median incomes were $27,690 and $18,830, respectively. The median for Black families, $15,430, showed no statistically significant change from 1983.

Families maintained by women with no husband present had a median income of $12,800, 3.8 percent higher than in 1983.[3] The median income of married-couple families was $29,610, up by about the same amount, 3.7 percent, over 1983.

Two-earner families now account for about 42 percent of all families. Their median income in 1984 was $31,710, 56 percent higher than the median of $20,290 for one-earner families which now make up 29 percent of all families.

The median income of families with a householder with 4 or more years of college rose by 1.8 percent in real terms to $43,170 in 1984. In contrast, families with a householder completing 4 years of high school experienced a 3.3-percent increase in median income.[4] Their median, however, was $26,530, well below that of the college educated group.

[1]Changes in real income refer to comparisons after adjusting for inflation. The percentage change in prices between 1983 and 1984 was computed by dividing the annual average Consumer Price Index (CPI) for 1984 by the annual average value of the CPI for 1983. See table A-2 of appendix A for CPI's from 1947 to 1984.

[2]The increase for Black households was singificant at the 90 percent confidence level.

[3]The 3.8-percent increase for families with a female houeholder, no husband present was significant at the 90 percent confidence level.

[4]The difference between the 1.8-percent increase and the 3.3-percent increase was not statistically significant.

Table A. Comparison of Median Family Money Income in 1984 and 1983, by Selected Characteristics

Characteristic	Median family money income			Percent change in real money income
		1983[r]		
	1984	Constant dollars	Current dollars	
All families	$26,433	$25,724	$24,674	*2.8
Race of Householder				
White	27,686	26,937	25,837	*2.8
Black	15,432	15,181	14,561	1.7
Spanish origin[1]	18,833	17,652	16,931	6.7
Education of Householder				
Elementary school	14,937	14,728	14,127	1.4
High school: 4 years	26,528	25,674	24,626	*3.3
College: 4 years or more	43,169	42,400	40,669	*1.8
Number of Earners				
None	11,377	10,974	10,526	*3.7
One	20,291	20,284	19,456	-
Two	31,707	31,101	29,831	*1.9
Three	39,828	38,914	37,325	*2.3
Four or more	50,278	49,824	47,790	0.9
Type of Family				
Married-couple	29,612	28,543	27,378	*3.7
Wife in paid labor force	34,668	33,518	32,150	*3.4
Wife not in paid labor force	23,582	22,991	22,052	*2.6
Male householder, no wife present	23,325	22,858	21,925	2.0
Female householder, no husband present	12,803	12,339	11,835	3.8

- Represents zero.
*Significant at the 95-percent confidence level.
[1]Persons of Spanish origin may be of any race.

EARNINGS OF PERSONS

The number of men and women with earnings rose substantially during 1984 as the number of employed Americans continued its expansion that began in 1983. The number of men with earnings rose to 66.5 million, up 1.5 million over 1983 and the number of women with earnings rose by 2.1 million to 55.2 million.

The proportion of male workers working year-round, full-time increased from 64 to 66 percent in 1984. The proportion for women remained at about 48 percent.

The median earnings of men and women working year-round, full-time rose at about the same rate during 1984, both up about 2.0 percent from their 1983 levels. Men had median earnings of $23,220, while the median for women was $14,780. The earnings level for women was 64 percent of the level for men, about the same as in 1983.

The income estimates were obtained from the Census Bureau's Current Population Survey (CPS) of March 1985. The survey includes both the civilian noninstitutional population and an estimated 746,000 members of the Armed Forces living off post or with their families on post in the United States. The March 1985 CPS population was 234,066,000 persons, comprising 62,706,000 family householders, 139,582,000 other family members (including 50,988,000 children under 15 years old), 1,260,000 persons in unrelated subfamilies, and 30,518,000 unrelated individuals (including 250,000 children under 15 years old); unrelated individuals are persons living alone or not related to others in the household. The collection of income data in the survey, however, is restricted to persons 15 years old and over. (See table B.)

Household income differs from family income in that household income includes not only the income of all related persons in the household but also the income of any unrelated persons in the household. Household income also covers the income of one-person households. Family income is limited to the income of only related persons in a family household.

Since the estimates in this report are based on a sample, they are subject to sampling variability. Particular care should be exercised in the interpretation of figures based on relatively small numbers of cases. Moreover, as in all field surveys of income, the figures are subject to errors of response and nonreporting. For further details see the section, "Reliability of Estimates," in appendix B.

Data on consumer income collected in the CPS are limited to money income received before payments of Federal, State, local, or Social Security (FICA) taxes and before any other types of deductions such as union dues or Medicare premiums. Money income is the sum of amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and

Table B. Derivation of the CPS Universe and Population Characteristics of the March 1985 CPS

Population groups	Number (thous.)	Percent distribution
Total resident population	237,605	100.0
Minus:		
Civilian institutional population	2,793	1.2
Armed Forces living without families on post in the United States	746	0.3
Equals:		
Population total for the CPS universe	234,066	98.5
Total CPS population	234,066	100.0
Civilian noninstitutional population	233,141	99.6
Armed Forces living off post or with family on post in the United States	925	0.4
Total CPS population	234,066	100.0
In families	202,288	86.4
Family householders	62,706	26.8
Married-couple families	50,350	21.5
Male householder, no wife present	2,228	1.0
Female householder, no husband present	10,129	4.3
Other family members	139,582	59.6
Spouse of householders	50,350	21.5
Other related members 15 years old and over	38,244	16.3
Male	20,465	8.7
Female	17,779	7.6
Other related members under 15 years old	50,988	21.8
Male	26,085	11.1
Female	24,904	10.6
In unrelated subfamilies	1,260	0.5
Unrelated individuals	30,518	13.0
15 years old and over	30,268	12.9
Male	13,739	5.9
Female	16,529	7.1
Under 15 years old	250	0.1
Male	118	0.1
Female	132	0.1

worker's compensations; government and private employees pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents, such as the use of business transportation and facilities, full or partial payments by business for retirement programs, and medical and educational expenses. These elements should be considered when comparing income levels.

Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income.[5] Underreporting tends to be more pronounced for income sources that are not derived from earnings, such as Social Security, unemployment compensation, public assistance, and net income from interest, dividends, and rentals. Overall, income earned from wages or salary is much better reported than other sources of income, and when dollar imputations are assigned for nonreporting, total wage and salary income approximates independently derived estimates.

In recent years the Bureau of the Census has conducted research concerning alternative measures for valuing noncash or in-kind benefits. This research has focused on the valuation of in-kind food, housing, and medical care transfers received by the low-income population. Initial results of this research were published in 1982 in Technical Paper 50, *Alternative Methods for Valuing Selected In-Kind Transfer Benefits and Measuring Their Effect on Poverty.* The Bureau has continued to update estimates yearly, with the most recent data being published in Technical Paper 55, *Estimates of Poverty Including the Value of Noncash Benefits: 1984.*

REVISED SURVEY PROCEDURES

The note at the beginning of this report mentions revisions to survey procedures and estimation techniques introduced in the March 1985 CPS. The first was the change to a sample design based on the 1980 census. The second was the implementation of new survey weighting procedures for the Spanish population.

During the period from April 1984 through June 1985 the Bureau of the Census was systematically introducing a new sample design for the Current Population Survey. The purposes of this new sample design are to update the sampling frame to the 1980-census base, to improve survey efficiency, and to improve the quality of the survey estimates. By March 1985, approximately 60 percent of the sample was based on the new 1980-based sampling frame. Most geographic areas selected for the new sampling frame, about 80 percent, were also included in the 1970-based design.

While the effect of the new sample design is small on estimates of income, its introduction has temporarily prevented the development of estimates for metropolitan, nonmetropolitan, farm, and nonfarm residence categories. Since the mixed 1970-1980 based sampling frame cannot provide figures that are comparable to either the 1970 or 1980 census definitions for these geographic areas, they have been omitted from this report. Publication of data by residence categories will resume when estimates can be derived using the full sample from the 1980-based survey design.

The 1984 and 1983 estimates in this report are also based on revised survey weighting procedures for persons of Spanish origin. In previous years the estimation procedures used in this survey involved the inflation of weighted sample results to independent estimates of the noninstitutional population by age, sex, and race. There was, therefore, no specific control of the survey estimates for the Spanish population. During the last several years, the Bureau of the Census has developed independent population controls for the Spanish population by sex and detailed age groups and revised weighting procedures to incorporate these new controls. It should be noted that the independent population estimates include some, but not all, illegal immigrants.

[5]The accuracy of reported and imputed CPS earnings and property income is discussed in a paper, "Measuring the Impact on Income Statistics of Reporting Differences Between the Current Population Survey and Administrative Sources," by Roger A. Herriot and Emmett F. Spiers, published in the American Statistical Association, *Proceedings of the Social Statistics Section,* 1975.

Overall, the revised procedures increased the Spanish population estimate from the survey by approximately 1.6 million. Since the original weighting procedures yielded underestimates of the number of Spanish and since Spanish have lower incomes, on average, than the total population the net effects of the revised weighting were slightly lower median incomes. The data in table C illustrates the effect of introducing the new weighting methods by contrasting 1983 income estimates based on the "original" and revised procedures.

Table C. Median Income of Families and Persons Based on Revised and Original Weighting Procedures: 1983

Characteristic	Revised	Original	Percent difference
Families			
Total	$24,549	$24,580	-0.1
White	25,719	25,757	-0.1
Black	14,532	14,506	0.2
Spanish origin[1]	16,907	16,956	-0.3
Persons			
Males, total	14,590	14,631	-0.3
White	15,359	15,401	-0.3
Black	8,989	8,967	0.2
Spanish origin[1]	10,841	11,278	-3.9
Females, total	6,303	6,319	-0.3
White	6,403	6,421	-0.3
Black	5,542	5,543	-
Spanish origin[1]	5,371	5,402	-0.6

-Represents zero.
[1]Persons of Spanish origin may be of any race.

The 1983 income estimates in this report differ slightly from those previously published. A change in the procedure for imputing interest income to nonrespondents was incorporated in the March 1985 processing system (1984 income). The 1983 estimates in this report have been revised to reflect the changes in the way interest income was imputed in 1984. (See table D.)

REVISED HISTORICAL SERIES

In an effort to improve our historical income series, data for 1966-83 have been revised. In the past, the procedure used to display income data in our time series tables for both current and constant dollars was based on either linear or Pareto interpolation of grouped data. These methods have been found to give less than satisfactory results when converting earlier grouped data to fit the present intervals displayed and when adjusting grouped income data into constant dollars. The new procedure eliminates the use of interpolation by adjusting the microdata into constant dollars and tabulating into the present display intervals. This procedure was not used on data prior to 1966 because the microdata files are no longer available. Tables E through G exemplifies for the year 1974 the impact of the new procedure on the income distributions for households, families, and persons.

CONVERSION TO THE 1980 CENSUS OCCUPATIONAL CLASSIFICATION SYSTEM

In 1980, the Bureau of the Census revised the Standard Occupational Classification system (SOC) for use in its tabulation program for the 1980 census and subsequent published reports on occupational data. Consequently, the new

classification system was incorporated into the CPS tabulation program in January 1983. While the new system provides comparability between the CPS and other data sources, it causes a break in continuity for all CPS series containing occupational data.

Differences between the 1970 and 1980 occupational systems affect classifications at all levels. Such commonly used identifiers as white-collar, blue-collar, professional and technical, craft workers, and operative occupations have been eliminated. These identifiers have been replaced with new categories which represent conceptual as well as language changes. Moreover, many of the components of the former groupings have been shifted to such an extent that they cannot be made to correspond readily to the new categories. For a more complete explanation and description of the changes from the old to the new occupational classification system, see the February 1983 issue of Employment and Earnings by the Bureau of Labor Statistics.

RELATED REPORTS

Current Population Survey. Other data based on the Current Population Survey showing the distributions of households, families, unrelated individuals, and persons by income levels have been published in Series P-60 reports, Nos. 1 to 107, 109, and 114 to 146. Frequently, tables showing the cross-classification of income and other characteristics have been published in the Series P-20 and P-23 reports of the Bureau of the Census and in the Special Labor Force Reports of the Bureau of Labor Statistics. An advance report showing 1984 income data cross-classified by selected characteristics of families, persons, and households, and the poverty population was issued as Series P-60, No. 149.

Projections of money income size distributions have been prepared from the March 1978 Current Population Survey and appear in Series P-60, No. 122, *Illustrative Projections of Money Income Size Distributions for Households: 1980 to 1995.* This report contains projections of income distributions for households by type of household and age of householder in terms of constant 1977 dollars. For each of the years, separate projected distributions are shown for selected annual growth rates. The tables also contain projected aggregate income distributions in addition to the projected number of units. The P-60, No. 122 report updates information contained in Series P-23, No. 47, *Illustrative Projections of Money Income Size Distributions for Families and Unrelated Individuals.*

Data on the educational attainment of persons have been assembled from information collected in the Current Population Survey. These data appear in Series P-60, No. 139,

Lifetime Earnings Estimates for Men and Women in the United States: 1979. Included in the report are estimates of expected lifetime earnings in 1981 constant dollars (based upon 1979-centered data) by years of school completed, age, and sex, for all persons and for year-round, full-time workers.

A historical and analytical summary of the income data collected in the Current Population Survey appears in Technical Paper 17, *Trends in the Income of Families and Persons in the United States: 1947 to 1964,* published in 1967. This report contains detailed tables showing income distributions in constant (1964) dollars, mean incomes, fifths, and Gini ratios of families and unrelated individuals cross-classified by various characteristics, for the United States, nonfarm, and farm populations. Similar data are shown for males and females classified by the amount of their own income and various personal characteristics. An update to Technical Paper 17 is forthcoming. This report will contain income summary measures such as means, medians, shares of aggregate income, and Gini ratios for families and persons by various demographic characteristics for the years 1947 through 1979 in constant 1977 dollars.

Data on the receipt of noncash benefits in 1984 appear in Current Population Reports, Series P-60, No. 150, *Characteristics of Households and Persons Receiving Selected Noncash Benefits: 1984.*

Decennial census. Income data collected in the 1980 Census of Population appear in PHC80-S1-1, Supplementary Report, *Provisional Estimates of Social, Economic, and Housing Characteristics.* The report shows basic distributions of households, families, and unrelated individuals by total money income in 1979, for the United States, each of the States, and standard metropolitan statistical areas of 1 million or more. Summary income statistics for households, families, and persons are presented in PHC80-2, Parts 2 to 53, *Census Tracts;* PHC80-3, Parts 2 to 53, *Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas;* PHC80-4, Parts 2 to 53, *Congressional Districts of the 98th Congress;* PHC80-S2, Parts 2 to 53, *Advance Estimates of Social, Economic, and Housing Characteristics;* PC80-1-C, Parts 2 to 53, *General Social and Economic Characteristics;* and PC80-1-D, Parts 2 to 53, *Detailed Population Characteristics.*

Statistics on income in 1979 collected in the March 1980 CPS differ from data from the 1980 decennial census despite the fact that the same basic concept was used in both instances. First, the CPS data excluded the institutional population and most members of the Armed Forces living on post; these two groups were included in the census. Second, college students were generally enumerated at their own homes in the CPS and classified as family members, but were enumerated at their college residence in the census, usually as secondary individuals.

Third, the small group of CPS enumerators was more experienced and had more intensive training and supervision than the large number of temporary census enumerators and may have more often obtained more accurate answers from respondents. Furthermore, approximately 95 percent of the households were self-enumerated in the 1980 census.

In general, the census provides higher estimates of income than the CPS. Median family income reported in the 1980 census was about $19,917, 1.7 percent higher than the comparable figure of $19,587 derived from the March 1980 CPS.

[r]BASED ON REVISED METHODOLOGY.
[1]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEARS 1967 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES HOUSEHOLDS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 3. Households, by Total Money Income in 1967 to 1984 (in Constant 1984 Dollars), Race, and Spanish Origin of Householder

(HOUSEHOLDS AS OF MARCH OF THE FOLLOWING YEAR)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS)	PERCENT DISTRIBUTION												MEDIAN INCOME		MEAN INCOME	
		TOTAL	UNDER $2,500	$2,500 TO $4,999	$5,000 TO $7,499	$7,500 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 TO $34,999	$35,000 TO $49,999	$50,000 AND OVER	VALUE (DOL.)	STANDARD ERROR (DOL.)	VALUE (DOL.)	STANDARD ERROR (DOL.)

[F]BASED ON REVISED METHODOLOGY.
[1]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: FOR THE YEARS 1967 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES HOUSEHOLDS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 4. Summary Measures of Characteristics and Income in 1984—Selected Characteristics of Households, by Race and Spanish Origin of Householder

(HOUSEHOLDS AS OF MARCH 1985. FOR MEANING OF SYMBOLS, SEE TEXT)

CHARACTERISTIC	ALL HOUSEHOLDS		PERSONS IN HOUSEHOLDS		AVERAGE NUMBER OF PERSONS PER HOUSEHOLD	AGGREGATE MONEY INCOME		MEAN HOUSEHOLD INCOME (DOLS.)		INCOME PER HOUSEHOLD MEMBER

[r] BASED ON REVISED METHODOLOGY.
[1] ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).

NOTE: BEGINNING WITH THE YEAR 1979, DATA ARE BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES. FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBER FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).

NOTE: BEGINNING WITH THE YEAR 1979, DATA ARE BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES. FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 10. Families and Unrelated Individuals, by Total Money Income in 1947 to 1984 (in Current Dollars), Race, and Spanish Origin of Householder—Continued

(FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION: TOTAL	UNDER $2,000	$2,000 TO $2,999	$3,000 TO $3,999	$4,000 TO $4,999	$5,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME: VALUE (DOL.)	INDEX[1]

[r] BASED ON REVISED METHODOLOGY.
[1] ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).
[2] PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: BEGINNING WITH THE YEAR 1979, DATA ARE BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES. FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 11. Families and Unrelated Individuals, by Total Money Income in 1947 to 1984 (in Constant 1984 Dollars), Race, and Spanish Origin of Householder

(FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION: TOTAL	UNDER $2,500	$2,500 TO $4,999	$5,000 TO $7,499	$7,500 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 TO $34,999	$35,000 TO $49,999	$50,000 AND OVER	MEDIAN INCOME: VALUE (DOL.)	INDEX[1]

[E] BASED ON REVISED METHODOLOGY.
[1] ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).

NOTE: FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILITIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBERS FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESES CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 11. Families and Unrelated Individuals, by Total Money Income in 1947 to 1984 (in Constant 1984 Dollars), Race, and Spanish Origin of Householder—Continued

(FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE AND SPANISH ORIGIN OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	PERCENT DISTRIBUTION: TOTAL	UNDER $2,000	$2,000 TO $2,999	$3,000 TO $3,999	$4,000 TO $4,999	$5,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME: VALUE (DOL.)	INDEX[1]

[r]BASED ON REVISED METHODOLOGY.
[1]ALL RACES, WHITE, BLACK AND OTHER RACES (1947=100); BLACK (1967=100); AND SPANISH ORIGIN OF HOUSEHOLDER (1972=100).
[2]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

NOTE: BEGINNING WITH THE YEAR 1979, DATA ARE BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES. FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBER FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 12. Income at Selected Positions and Percentage Share of Aggregate Income in 1947-84 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH

rBASED ON REVISED METHODOLOGY.

NOTE: BEGINNING WITH THE YEAR 1979, DATA ARE BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES. FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBER FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 12. Income at Selected Positions and Percentage Share of Aggregate Income in 1947-84 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.)	INCOME AT SELECTED POSITIONS (DOLLARS)					PERCENT DISTRIBUTION OF AGGREGATE INCOME						MEAN INCOME (DOLS.)	INDEX OF INCOME CONCENTRATION
		UPPER LIMIT OF EACH FIFTH				TOP 5 PERCENT	LOWEST FIFTH	SECOND FIFTH	MIDDLE FIFTH	FOURTH FIFTH	HIGHEST FIFTH	TOP 5 PERCENT		
		LOWEST	SECOND	MIDDLE	FOURTH									
FAMILIES --CON.

[r]BASED ON REVISED METHODOLOGY.

NOTE: BEGINNING WITH THE YEAR 1979, DATA ARE BASED ON HOUSEHOLDER CONCEPT AND RESTRICTED TO PRIMARY FAMILIES. FOR THE YEARS 1960 TO 1970, THE NUMBER OF WHITE AND BLACK-AND-OTHER-RACES FAMILIES AND UNRELATED INDIVIDUALS WILL NOT ADD TO ALL RACES BECAUSE THE NUMBER FOR ALL RACES WERE ADJUSTED TO POPULATION CONTROLS BASED ON THE 1970 CENSUS; THESE CONTROLS ARE NOT AVAILABLE BY RACE. FOR THE YEARS 1979 TO 1984, DATA ARE BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 12. Income at Selected Positions and Percentage Share of Aggregate Income in 1947-84 Received by Each Fifth and Top 5 Percent of Families and Unrelated Individuals, by Race of Householder—Continued

(IN CURRENT DOLLARS. FAMILIES AND UNRELATED INDIVIDUALS AS OF MARCH OF THE FOLLOWING YEAR. FOR MEANING OF SYMBOLS, SEE TEXT)

RACE OF HOUSEHOLDER AND YEAR	NUMBER (THOUS.) [F]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1979 TO 1984, BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 28. Persons 14 Years and Over, by Total Money Income in 1947 to 1984 (in Current Dollars); Work Experience, Race, and Sex—Continued

(PERSONS 15 YEARS OLD AND OVER BEGINNING WITH MARCH 1980, AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)
MALE--CON.

[r]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1979 TO 1984, BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 28. Persons 14 Years and Over, by Total Money Income in 1947 to 1984 (in Current Dollars); Work Experience, Race, and Sex—Continued

(PERSONS 15 YEARS OLD AND OVER BEGINNING WITH MARCH 1980, AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)

[F]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1979 TO 1984, BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 29. Persons 14 Years Old and Over, by Total Money Income in 1947 to 1984 (In Constant 1984 Dollars). Work Experience, Race, and Sex

(PERSONS 15 YEARS OLD AND OVER BEGINNING WITH MARCH 1980, AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)

[F]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1979 TO 1984, BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 29. Persons 14 Years Old and Over, by Total Money Income in 1947 to 1984 (in Constant 1984 Dollars). Work Experience, Race, and Sex—Continued

(PERSONS 15 YEARS OLD AND OVER BEGINNING WITH MARCH 1980, AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PER-CENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)

[E]BASED ON REVISED METHODOLOGY.

NOTE: FOR THE YEARS 1979 TO 1984, BASED ON 1980 CENSUS POPULATION CONTROLS.

Table 29. Persons 14 Years Old and Over, by Total Money Income in 1947 to 1984 (in Constant 1984 Dollars). Work Experience, Race, and Sex—Continued

(PERSONS 15 YEARS OLD AND OVER BEGINNING WITH MARCH 1980, AND PERSONS 14 YEARS OLD AND OVER AS OF MARCH OF THE FOLLOWING YEAR FOR PREVIOUS YEARS. FOR MEANING OF SYMBOLS, SEE TEXT)

YEAR, RACE, AND SEX	ALL PERSONS															YEAR-ROUND, FULL-TIME WORKERS		
	NUMBER (THOUS.)	NUMBER WITH INCOME (THOUS.)	PERCENT DISTRIBUTION: TOTAL WITH INCOME	$1 TO $1,999 OR LOSS	$2,000 TO $3,999	$4,000 TO $5,999	$6,000 TO $7,999	$8,000 TO $9,999	$10,000 TO $12,499	$12,500 TO $14,999	$15,000 TO $19,999	$20,000 TO $24,999	$25,000 AND OVER	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)	PERCENT	MEDIAN INCOME (DOL.)	MEAN INCOME (DOL.)

[1]PERSONS OF SPANISH ORIGIN MAY BE OF ANY RACE.

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and approximately 925,000 members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The March 1980 CPS to March 1985 CPS employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population.

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan-nonmetropolitan residence. The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contain at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, SMSA's consist of towns and cities, rather than counties.

Central cities. Each SMSA must include at least one central city, and the complete title of an SMSA identifies the central city or cities. If only one central city is designated, then it must have 50,000 inhabitants or more. The area title may include, in addition to the largest city, up to two city names on the basis and in the order of the following criteria: (1) the additional city has at least 250,000 inhabitants or (2) the additional city has a population of one-third or more of that of the largest city and a minimum population of 25,000. An exception occurs where two cities have contiguous boundaries and constitute, for economic and social purposes, a single community of at least 50,000, the smaller of which must have a population of at least 15,000.

Geographic regions. The four major regions and nine Census divisions of the United States for which data are presented in this report represent groups of States as follows:

Northeast:

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Middle Atlantic: New Jersey, New York, and Pennsylvania.

Midwest (formerly North Central):

East North Central: Illinois, Indiana, Michigan, Ohio, and Wisconsin.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.

South:

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.

East South Central: Alabama, Kentucky, Mississippi, and Tennessee.

West South Central: Arkansas, Louisiana, Oklahoma, and Texas.

West:

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.

Pacific: Alaska, California, Hawaii, Oregon, and Washington.

North and West:

Northeast, Midwest, and West combined.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Mobility status. The population of the United States 1 year old and over has been classified according to mobility status on the basis of a comparison of the place of residence of each individual at the time of the March 1985 CPS and place of residence 1 year earlier. Nonmovers are all persons who were living in the same house at the beginning and end of the period. Movers are all persons who were living in a different house at the end of the period than at the beginning of the period. Movers from abroad include all persons, either citizens or aliens, whose place of residence was outside the United States at the beginning of the period, that is, in an outlying area under the jurisdiction of the United States or in a foreign country.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or other investments which pay interest); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. However, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that non-cash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments, such as aid to families with dependent children and general assistance.

Dividends, interest (on savings or other investments which pay interest), income from estates or trusts, net rental income, or royalties include dividends from stockholdings or membership in associations, interest on savings or any type of investment which pays interest, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or worker's compensation include (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payments, and unemployment and worker's compensations.

Receipts not counted as income. Receipts from the following sources were not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group (under $2,500) those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Some of these were living on income "in-kind," savings, or gifts, or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families and unrelated individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons with income.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population (excluding patients or inmates in institutional quarters) in that group.

Index of income concentration. The index of income concentration (or Gini index) is a statistical measure of income equality ranging from 0 to 1. A measure of 1 indicates perfect inequality, i.e., one person having all the income and the rest having none. A measure of 0 indicates perfect equality, i.e., all persons having equal shares of the income. For a more detailed discussion see Current Population Reports, Series P-60, No. 123.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is either (1) direct access from the outside or through a common hall or (2) a kitchen or cooking equipment for the exclusive use of the occupants.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households.

Family. A family is a group of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family household. A family household is a household maintained by a family (as defined above), and any unrelated persons (unrelated subfamily members and/or secondary individuals) who may be residing there are included. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of family.)

Unrelated subfamily. An unrelated subfamily (formerly called a secondary family) is a group of two persons or more who are related to each other by birth, marriage, or adoption, but who are not related to the householder. The unrelated subfamily may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of unrelated subfamilies. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with data for 1968 (and beginning with census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or "married-couple" before the term "household," or "family," indicates that the household, or family, is maintained by a husband and wife.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one

or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary individual. A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily householders and inmates of institutions) who is not related to any other person in the household or group quarters. (See section on unrelated subfamily for slight change in coverage of secondary individuals in 1968.)

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Related persons and family members. In the classification of households by number of related persons, the person or couple who maintains the household (or housing unit) and all persons in the household related to them are included. In the classification of families by number of family members, all persons in the family are included. The number of family members is the same as the size of the family.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Number of earners. This number includes all persons in the household with $1 or more in wage and salaries or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Spanish origin. Persons of Spanish origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Spanish origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Central or South American, or some other Spanish origin. It should be noted that persons of Spanish origin may be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools included public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week containing March 12, 1985 did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week containing March 12, 1985, had no employment but were available for work and (1) had engaged in any specific jobseeking activity *within the past 4 weeks,* such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in the labor force. All civilians who are not classified as employed or unemployed are defined as "not in the labor force." This group who are neither employed nor seeking work includes persons engaged only in own home housework, who were attending school or were unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the specified week) are also classified as not in the labor force.

Paid labor force. Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week containing March 12, 1985, or were looking for work at the time and had last worked as wage and salary or self-employed worker.

Occupation. The data on occupation in tables 9, 14, 26, 37, and 38 refer to the job held longest during the income year.

The occupation groupings were derived from occupation subgroups delineated on the basis of the classification system used in the 1980 census. For more detailed information, see the February 1983 issue of Employment and Earnings by the Bureau of Labor Statistics.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round, full-time worker. A year-round, full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Symbols. A dash (—) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol 'X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1979 to 1984 are based on civilian noninstitutional population controls for age, race, and sex established by the 1980 census. The base figures shown for 1971 to 1978 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years from 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census.

Computation of aggregate income by fifths. The data shown on aggregate income and dollar cutoffs for fifths (and top 5

percent) of families, ranked by size of their total money income, were calculated using estimates from grouped data, as described below:

1. In calculating the aggregate income by fifths (and top 5 percent) of families using grouped data, the underlying aggregate income distribution by size of income was estimated initially. The aggregate income distributions were obtained by multiplying the number of units in each income interval by an estimated mean income for the corresponding income interval. For the top open-end interval ($75,000 and over), a Pareto distribution was fitted to the data in the interval just below the open-end interval ($60,000 to $74,999). This fitted distribution was then extrapolated to estimate the number of families with incomes greater than $100,000. The mean income of families with greater than $100,000 was assumed to be $100,000 exactly.[1] The mean income for the $75,000 to $100,000 interval was estimated from the same fitted Pareto distribution. Below the "$75,000 and over" interval, a Pareto distribution was fitted to each separate income interval. If the absolute value of the slope parameter of the fitted Pareto distribution was greater than 1, the mean income of the interval was estimated from the fitted Pareto distribution. If the absolute value of the slope parameter was less than or equal to 1, the midpoint of the interval was used as the estimated mean of the interval.
2. The upper income levels (quantiles) of each fifth and the top 5 percent of families were estimated using either linear or Pareto interpolation depending upon the methods used to estimate the mean income in the interval in which the quantile was located (reference interval). After determining a particular quantile, the aggregate income above this quantile was calculated by estimating the aggregate income of the subinterval between the quantile and the next higher actual income interval and adding the result to the aggregate income above the reference interval. The aggregate income of the subinterval was determined using the method (either Pareto or linear interpolation) consistent with that used for estimating the quantile and the mean income of the reference interval. The aggregate incomes between the quantiles were determined by disaccumulating the aggregate income distribution.

For more information on the use of Pareto techniques, see "Estimation of Summary Measures of Income Size Distribution from Grouped Data," by Emmett F. Spiers, published in the American Statistical Association *Proceedings of the Social Statistics Section,* 1977.

Computation of constant dollar distributions. For the years 1968 to 1983, adjustment for price change was made by converting the incomes of households, families, or persons on the microdata file into 1984 dollars on the basis of the Consumer Price Index (CPI). The microdata was then tallied into the appropriate income interval. Data prior to 1968 was converted using existing grouped data. In choosing a procedure to make this conversion, two fundamental assumptions concerning income data were made: (1) price changes have the same proportional effect on various income levels and (2) the distribution within each income interval follows a Pareto distribution. The following procedure satisfies these two assumptions.

The first step required the accumulation of the income distribution starting with the highest income interval and cumulating to the lowest income interval. Next, the limits of each income interval were converted into 1984 dollars by adjusting them by a factor representing the change on the basis of that year's price index (1977 = 100). Finally, the number of families in each of the detailed class intervals were computed by logarithmic interpolation and then combined into broad income intervals.

The indices used to make the constant dollar conversions are shown in table A-1. The Consumer Price Index (CPI) is an index designed to measure changes in family purchasing power. While the CPI is a good measure of the changes in prices paid by the average family represented in the index (urban consumers), it is not necessarily a good measure of the changes in prices faced by consumers of different characteristics and income levels. These limitations should be noted when comparing income figures adjusted to constant dollars using the CPI since the same index was used for all families and all income levels.

Table A-1. Annual Average Consumer Price Index (CPI): 1947 to 1984

Year	CPI	Year	CPI
1947	36.9	1966	53.6
1948	39.7	1967	55.1
1949	39.3	1968	57.4
1950	39.7	1969	60.5
1951	42.9	1970	64.1
1952	43.8	1971	66.8
1953	44.1	1972	69.0
1954	44.4	1973	73.3
1955	44.2	1974	81.4
1956	44.8	1975	88.8
1957	46.4	1976	93.9
1958	47.7	1977	100.0
1959	48.1	1978	107.0
1960	48.9	1979	119.8
1961	49.4	1980	136.0
1962	49.9	1981	150.1
1963	50.5	1982	159.3
1964	51.2	1983	164.4
1965	52.1	1984	171.4

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis (formerly the Office of

[1]Individual income amounts greater than or equal to $100,000 are recorded as $99,999 in the Current Population Survey.

Business Economics), Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. *Income definition.* The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, on the other hand, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. *Source of data.* The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employer's wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households.

   As discussed in the section, "Source and Reliability of Estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 90 percent of the comparable total money income aggregates and about 98 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

   For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. *Population coverage.* The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post). In addition the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

4. *Average income.* The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for households, families, unrelated individuals, or income recipients 15 years old and over.

Department of Agriculture farm income series. The farm income data are not directly comparable to that published by the U.S. Department of Agriculture (USDA) for several reasons. The USDA publishes two major series on income of farms: (1) net farm income and (2) net cash farm income.

For reasons listed below, the estimates of farm self-employment income per person or per family as published by the Bureau of the Census differ from estimates of operators' net farm income or net cash farm income per farm as published by the Department of Agriculture:

1. The unit of analysis in the USDA estimates is an establishment (farm) rather than a household as in the Bureau of the Census estimate.

2. The estimates of farm self-employment income as published by the Bureau of the Census and USDA's net cash income series exclude the nonmoney income items of crops grown for home consumption and an imputed rental value for farm dwellings. However, these are included in the estimates of operators' net farm income per farm.

3. The USDA estimate of net farm income includes the value of the change in inventories of commodities from the beginning to the end of the year. The USDA net cash farm income and the Bureau of the Census farm self-employment income do not.

4. The USDA series include the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.

5. The USDA series is based on income from farms which are organized as proprietorships, partnerships, and corporations. The Bureau of the Census excludes corporate farm income. (The Bureau of Economic Analysis does estimate the proportions of the USDA estimate which are earned by corporate and noncorporate farms for inclusion in the National Income and Product Account.)

The estimates of the USDA differ from the estimates of the Bureau of the Census methodologically as well as conceptually. The USDA estimates are based on data derived from the Census of Agriculture, farm surveys, business, and governmental sources, and are not available at a farm or household

level, while the Bureau of the Census estimates are compiled from data collected in sample surveys. As noted later, the latter estimates are subject not only to sampling variation but also to errors of response and nonreporting.

For a more detailed discussion of the concepts and methodology used in the USDA estimates, see U.S. Department of Agriculture Handbook No. 365, *Major Statistical Series of the U.S. Department of Agriculture,* Vol. 3, "Gross and Net Farm Income," September 1969.

Federal income tax data. For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differ somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts, such as veterans' payments, Social Security benefits, and relief payments, which constitute the main income source for some families, are excluded from income tax coverage. Moreover, the coverage of income tax statistics is less inclusive because single persons receiving less than $3,300 (less than $4,300 if 65 years old or over) and married couples receiving less than $5,400 ($6,400 if one spouse is 65 years old or over; $7,400 if both are 65 or over) are not required to file returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data. Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the reasons listed below.

1. The earnings of the following groups are not covered by the earnings record data: many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers, and domestic servants.
2. Employees' earnings in excess of $37,800 per employer are not covered by the earnings record data.
3. Income other than earnings is not covered by the earnings record data.
4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, while the data presented in this report are obtained by household interviews.

COMPARABILITY OF ESTIMATES FROM MARCH 1985 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1980 CPS to the March 1985 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

The data for 1971 through 1984 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey. The estimates for 1979 to 1984 are based on civilian noninstitutional population established by the 1980 census. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the overall national level is the introduction of population controls based on the 1970 census. The data for 1971 through 1978 are based on civilian noninstitutional population established by the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes. (See table 3, Current Population Reports, Series P-60, No. 91.) Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings, such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings,* Vol. 18, No. 8, February 1972.

Comparability of metropolitan and nonmetropolitan data from the March 1980 CPS with data for previous years. Changes in the CPS design and procedures over the last several years have made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures should be avoided. Trends in metropolitan and nonmetropolitan population growth over the 1970-83 period should not be appreciably affected by the procedural changes. Data for 1984 have been omitted from this report because of the phasing in of a new sample design based on the 1980 census.

The major revisions to earlier CPS sample design and estimation methods have involved the varying of the number of sample units. Incorporation of approximately 10,000 supplemental housing units into the March CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined

subsequent to the introduction of the additional sample that the new inflating (weighting) procedures used for processing both the March 1977 and March 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. For the March 1979 CPS, another revision of the weighting process was introduced to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to March 1978 CPS levels.

Collection of Income and Work Experience Data

This report presents data showing income of persons and family householders with varying amounts of work experience. In the surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. In order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together beginning with the March 1970 survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions. It should be noted that the proportions of year-round, full-time workers shown in the Series P-60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, *Special Labor Force Reports,* "Work Experience of the Population." The difference exists because the proportions are not based on exactly the same groups. The proportions presented in the Special Labor Force Reports relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P-60 reports relate to civilians who received income, including not only workers but also many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings.

Noninterviews, Nonresponses, and Allocations

In the March 1985 CPS, no interview was obtained for approximately 4 percent of the 59,500 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or refused. In March 1985, the income data were incomplete for about 30 percent of the persons 15 years old and over. About 36 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March 1979 Current Population Survey. As part of the March 1979 CPS, the Bureau conducted an experiment in an effort to improve the reporting of income data. An alternative questionnaire was used on three of the eight rotation groups. The experimental questionnaire used more probing questions and inquired about more detailed sources of income. The results of the experiment and its subsequent impact on the estimates are discussed in the Current Population Reports, Series P-60, No. 123, page 12.

Modifications in collecting income data in the March 1980 Current Population Survey. A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" presented earlier.

Definition of the Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series P-60, No. 129.

UNDERREPORTING OF INCOME

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources, such as the Bureau of Economic Analysis, the Social Security Administration, and the Veterans Administration. The difference between the survey estimate and the independent estimate is termed "underreporting."

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA. A publication covering the general topic of income underreporting is *The Distribution of Personal Income, A Study of Statistics on the Size Distribution of Personal Income in the United States,* prepared by T. Paul Schultz for use by the Subcommittee on Economic Statistics of the Joint Economic Committee, Congress of the United States, 1964. For more details regarding the procedures for developing independent estimates of aggregate income, see "Appraisal of Basic Data Available for Constructing Income Size Distributions" by Selma F. Goldsmith, published in *Studies in Income and Wealth,* Volume 13, National Bureau of Economic Research, 1951; and "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-021, June 1973.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table A-2 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, (4) general assistance, and (5) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should also be kept in mind that the independent estimates are, themselves, subject to errors and conceptual differences for which no adequate adjustment is possible.

The data in table A-2 show comparisons of CPS aggregate money income in 1983 with independent estimates. Data for 1984 were not available at the time this publication went to print. Comparisons of the 1984 CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 10 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 45 percent for interest income to only about 1 percent for wage and salary income. Both reported and allocated proportions of CPS aggregate incomes are shown in table A-2.

In 1983, $442.2 billion, or about 20 percent of the total aggregate income was allocated as a result of nonresponses to the income questions. About 13 percent of the $10.5 billion of the CPS public assistance or welfare income in 1983 was allocated, while about 33 percent of the $119.8 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 30 percent or above include interest and dividends.

The reasons for underreporting of income in the 1985 CPS and in other household surveys are many and varied. Some of the more important of these reasons include (1) respondent's overlooking income received (especially small amounts not regularly received), (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For more details on income underreporting in censuses and surveys, see (1) *Income Distribution in the United States* (a 1960 Census Monograph), by Herman P. Miller, Bureau of the Census, 1966; (2) *The Structure of Income,* by Irving B. Kravis, University of Pennsylvania, 1962; and (3) "Size Distribution of Family Personal Income: Methodology and Estimates for 1964," cited earlier in this section.

Table A-2. Comparison of CPS Aggregate Money Income in 1983 With Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Allocated CPS Amounts

Source of income	Independent source		CPS

Appendix B. Source and Reliability of Estimates

SOURCE OF DATA

Most of the estimates in this report are based on data obtained in March 1985 from the Current Population Survey (CPS) conducted by the Bureau of the Census and from supplementary questions to the CPS. Some estimates are based on data obtained from the CPS in earlier years. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member in every sample household. In addition, supplementary questions are asked every March about money income for the previous year. In order to obtain more reliable data for the Spanish-origin population, the March CPS sample was enlarged to include all households from the previous November sample which contained at least one person of Spanish origin. For this report, persons in the Armed Forces living off post or with their families on post are also included.

CPS DESIGN PHASE-IN

Since the inception of the CPS in 1940, the sample has been redesigned several times, most recently in the early 1970's, to upgrade the quality and reliability of the data and to meet changing data needs. Beginning in April 1984, a new design was phased in through a series of changes that was completed in July 1985. The March 1985 CPS sample consisted of three rotation groups from the 1970 census-based sampling frame, four rotation groups from the 1980 census-based sampling frame, and one rotation group from both sampling frames. The sample covered all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. Due to the phase-in of the new design, the March 1985 CPS sample had three rotation groups located in 629 sample areas comprising 1,148 counties, independent cities, and minor civil divisions and five rotation groups located in 729 sample areas comprising 1,973 counties and equivalent geographic areas in the United States. This current number of sample areas is not completely comparable to the old number of sample areas since many of the sample areas have been redefined. In this sample, approximately 59,500 occupied households were eligible for interview. Of this number, about 2,500 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. There were approximately 11,000 households visited but not eligible. The following table provides a description of some aspects of the CPS sample designs in use during the referenced data collection periods.

Description of the March Current Population Survey

Time period	Sample areas	Housing units eligible	
		Interviewed	Not interviewed
1985	729	57,000	2,500
1982 to 1984	629	58,000	2,500
1980 to 1981	629	63,000	3,000
1978 to 1979	614	53,500	2,500
1973 to 1977	461	45,000	2,000
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	333	33,500	1,500
1957 to 1959	330	33,500	1,500
1954 to 1956	230	21,000	500-1,000
1947 to 1953	68	21,000	500-1,000

Note: Prior to 1966, income data were collected from approximately 75 percent of occupied households in CPS.

The estimation procedure used in this survey involves the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, sex, and Hispanic/non-Hispanic categories. These independent estimates are based on statistics from the decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. Beginning with reports containing income data for 1980, the independent population estimates used to obtain data for years 1979 and later are based on the 1980 census. In earlier reports in this series (P-60), data for 1971 through 1979 were obtained using independent population estimates based on the 1970 decennial census, 1979 being the bridge year. Similar procedures were used in earlier decades. For more details on this change, see the section of the text, "Introduction of 1980 Census Population Controls," Series P-60, No. 132. The estimation procedure also involved a further adjustment so that husband and wife of a household received the same weight.

RELIABILITY OF ESTIMATES

Since the CPS estimates in this report are based on a sample, they may differ somewhat from the figures that would have been obtained had a complete census been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a

sample survey: sampling and nonsampling. The standard errors primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. Bias is the difference, averaged over all possible samples, between the estimate and the desired value. Obviously, the accuracy of a survey result depends on the sampling and nonsampling errors measured by the standard error and on the bias and other types of nonsampling error not measured by the standard error. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of the respondents to provide correct information, inability to recall information, errors made in collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall CPS undercoverage, as compared to the level of the 1980 decennial census, is about 7 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races than for Whites. Ratio estimation to independent age-sex-race population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the decennial census.

In most cases the questionnaire entries for income are based on the memory or knowledge of one person, usually the wife. The memory factor in data derived from field surveys of income probably produces underestimates because the tendency is to forget minor or irregular sources of income. Other errors of reporting are due to misrepresentation or to misunderstanding of the scope of the income concept. See also the section entitled "Underreporting of Income."

Sampling variability. The standard errors given in tables B-1 through B-6 are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct confidence intervals—ranges that would include the average result of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average result of all possible samples.

2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common types of hypotheses appearing in this report are 1) the population parameters are identical, and 2) the population parameters are different. An example of this would be comparing the income of Whites versus the income of Blacks. Tests may be performed at various levels of significance, where a level of

Table B-1. Standard Errors of Estimated Numbers of Households, Families, Unrelated Individuals, and Persons: 1966-84 (Total and White)

(Numbers in thousands)

Size of estimate	Standard error[1]
75	11
100	13
250	21
500	29
1,000	41
2,000	58
3,000	71
5,000	91
7,500	111
10,000	127
15,000	154
25,000	192
50,000	247
100,000	269
125,000	243
160,000	139

[1]These values must be multiplied by the appropriate factor in table B-7 to obtain the correct standard error.

Note: To estimate standard errors for 1947-54, multiply the above standard errors by 1.8; for 1955-64, multiply by 1.4; and for 1965 multiply by 1.2.

significance is the probability of concluding that the parameters are different when, in fact, they are identical.

To perform the most common test, let x and y be sample estimates for two characteristics of interest. A subsequent section explains how to derive a standard error on the difference x-y. Let that standard error be σ DIFF. Compute the ratio R = (x-y)/σ DIFF. If this ratio is between -2 and +2, no conclusion about the parameters is justified at the 0.05 level of significance. If, however, this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 0.05 level. In this event, it is commonly accepted practice to say that the parameters are different. Of course, sometimes this conclusion will be wrong. When the parameters are, in fact, the same, there is a 5 percent chance of concluding that they are different.

All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better, and most have passed a hypothesis test at the 0.05 level of significance or better. This means that, for most differences cited in the text, the estimated difference between parameters is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference between parameters is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison will be qualified in some way, e.g., by use of the phrase "some evidence."

Comparability of data. Caution should be used when comparing estimates for 1980 and later, which reflect 1980 census-based population controls, to those for 1971 through 1979, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percent distribution, but did have a significant impact on levels. For example, use of 1980-based population controls resulted in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for 1980 and later will differ from those for earlier years by more than what could be attributed to actual changes in the population and these differences could be disproportionately greater for certain subpopulation groups than for the total population.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept instead of the traditional "head" concept, the introduction of the new farm definition, and use of more detailed income intervals in the upper range of the income distribution. Due to these and other changes, caution should be used in comparing estimates for 1979 through 1984 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 129).

Previously, the only postcensal figures for the size of the Hispanic population came from the CPS itself (i.e., the old procedure did not have a separate population control for Hispanics). These figures proved to be low relative to the census and not stable over time. The new CPS procedure for Hispanics makes use of independent postcensal estimates for the Hispanic population as control totals to solve these problems. One consequence of the use of the new procedure is that besides the expected increase in the levels of the Hispanic population, there were changes in the income summary measure of households, families, and persons. Thus, this change in procedure will affect comparisons across years, and caution should be used when comparing current estimates with those for earlier years. The data for 1983 were retabulated using the new procedure. Thus, year-to-year change from 1983 to 1984 was based on the new Hispanic controls. Data

Table B-2. Standard Errors of Estimated Percentages of Households, Families, Unrelated Individuals, and Persons: 1966-84 (Total and White)

Base of estimated percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.1	3.3	4.5	6.6	7.6

125,000	0.05	0.08	0.11	0.2	0.2
160,000	0.05	0.07	0.10	0.14	0.2

[1]These values must be multiplied by the appropriate factor in table B-7 to obtain the correct standard error.

Note: To estimate standard errors for 1947-54, multiply the above standard errors by 1.8; for 1955-64, multiply by 1.4; and for 1965, multiply by 1.2.

Table B-3. Standard Errors of Estimated Numbers of Households, Families, Unrelated Individuals, and Persons: 1966-84 (Black and/or Other Races)

(Numbers in thousands)

Size of estimate	Standard error[1]
75	12
100	14
250	22
500	30
1,000	42
2,000	58
3,000	69
5,000	85
7,500	95
10,000	99
15,000	90
20,000	44

[1]These values must be multiplied by the appropriate factor in table B-7 to obtain the correct standard error.

Note: To estimate the standard errors for 1947-54, multiply the above standard errors by 1.8; for 1955-64, multiply by 1.4; and for 1965, multiply by 1.2.

for earlier years were not retabulated. For a further discussion of the effect this new procedure has had on the data, see table D in Series P-60, No. 149.

Note when using small estimates. Summary measures (such as means, medians, and percent distributions) are shown in the report only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs. Also, care must be taken in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Estimation of median incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto interpolation or linear interpolation. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 through 1984 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families and households. (That is where the width of the income interval containing the estimate is greater than $2,500.) Estimates of median income for 1976, 1977, and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families and households. (That is where the width of the income interval containing the estimate is greater than $1,000.) All other estimates of median income and associated standard errors for 1976 through 1984 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Thus, caution must be exercised when comparing median incomes above $12,000 for persons or $18,000 for families and households for different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see Series P-60, No. 114, "Money Income in 1976 of Families and Persons in the United States."

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of

Table B-4. Standard Errors of Estimated Percentages of Households, Families, Unrelated Individuals, and Persons: 1966-84 (Black and/or Other Races)

Base of estimated percentage (thousands)	Estimated percentage[1]				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.2	3.4	4.7	6.8	7.9
100	1.9	3.0	4.1	5.9	6.8
250	1.2	1.9	2.6	3.8	4.3
500	0.9	1.3	1.8	2.7	3.1
1,000	0.6	0.9	1.3	1.9	2.2
2,000	0.4	0.7	0.9	1.3	1.3
3,000	0.4	0.5	0.8	1.1	1.3
5,000	0.3	0.4	0.6	0.8	1.0
10,000	0.2	0.3	0.4	0.6	0.7
15,000	0.2	0.2	0.3	0.5	0.6
20,000	0.14	0.2	0.3	0.4	0.5

[1]These values must be multiplied by the appropriate factor in table B-7 to obtain the correct standard error.

Note: To estimate standard errors for 1947-54, multiply the above standard errors by 1.8; for 1955-64, multiply by 1.4; and for 1965, multiply by 1.2.

approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in tables B-1 through B-6 are approximations to standard errors of various CPS estimates shown in this report for the years 1966 through 1984. To obtain the approximate standard error for a specific characteristic the appropriate standard error in tables B-1 through B-6 must be multiplied by the "f" factor for that characteristic given in table B-7. These factors must be applied to the generalized standard errors in order to adjust for the combined effect of the sample design and the estimating procedure on the value of the characteristic.

Standard errors for intermediate values not shown in the generalized tables of standard errors may be approximated by linear interpolation. Standard errors of estimated means and medians are provided in the detailed tables.

Two parameters (denoted as "a" and "b") are used to calculate standard errors for each type of characteristic; they are presented in table B-7. These parameters were used to calculate the standard errors in tables B-1 through B-6 and to calculate the "f" factors in table B-7. They also may be used directly to calculate the standard errors for estimated numbers and percentages. Methods for direct computation are given in the following sections.

Standard errors of estimated numbers. The approximate standard error, σ_x, of an estimated number shown in this report can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f\sigma \qquad (1)$$

where f is the appropriate "f" factor from table B-7 and σ is the standard error on the estimate obtained by interpolation from table B-1, B-3, or B-5. Alternatively, the standard error may be approximated by formula (2) from which the standard errors in tables B-1, B-3, and B-5 were calculated. Use of this formula will provide more accurate results than the use of formula (1) above.

$$\sigma_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table B-7 associated with the particular type of characteristic.

Illustration of the computation of the standard error of an estimated number. Table 7 shows that in 1984 there were 9,480,000 Black households in the United States. Table B-7 indicates that the appropriate "a" and "b" parameters to use in calculating a standard error for this estimate are a = -0.000066 and b = 1,606. Using formula (2), the approximate standard error is

$$96{,}000 \doteq \sqrt{(-0.000066)\,(9{,}480{,}000)^2 + 1{,}606\,(9{,}480{,}000)}$$

The 95-percent confidence interval is from 9,288,000 to 9,672,000 (using twice the standard error). Therefore, a conclusion that the average estimate derived from all possible samples lies within a range computed in this way would be correct for roughly 95 percent of all possible samples.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table B-7 indicated by the numerator. The approximate standard error, σ (x,p), of an estimated percentage can be obtained by use of the formula

$$\sigma(x,p) = \sigma f \qquad (3)$$

In this formula, f is the appropriate factor from table B-7 and σ is the standard error on the estimate from table B-2, B-4, or B-6. Alternatively, the standard error may be approximated by the following formula from which the standard

Table B-5. Standard Errors of Estimated Numbers of Households, Families, Unrelated Individuals, and Persons: 1966-84 (Spanish Origin)

(Numbers in thousands)

Size of estimate	Standard error[1]
10	5
25	8
50	11
100	16
250	25
500	35
1,000	49
2,500	77
5,000	108
7,500	132
10,000	151
15,000	182

[1]These values must be multiplied by the appropriate factor in table B-7 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

errors in tables B-2, B-4, and B-6 were calculated. Use of this formula will give more accurate results than using formula (3) above.

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot p\,(100 - p)} \qquad (4)$$

Here x is the size of the subclass which is the base of the percentage, p is the percentage ($0<p<100$), and b is the parameter in table B-7 associated with the particular type of characteristic in the numerator of the percentage.

Illustration of the computation of the standard error of an estimated percentage. Table 2 shows that 6.4 percent of the 86,789,000 households in the United States had incomes between $10,000 and $12,499 in 1984. Using formula (3) with f = 1.0 and σ = 0.1 from table B-2, the standard error of 6.4 percent is (1.0) (0.1) = 0.1. Alternatively, using formula (4) with the appropriate b parameter of 1,721 from table B-7, the standard error of 6.4 percent is given by

$$0.1 \doteq \sqrt{\frac{1{,}721}{86{,}789{,}000}(6.4)(93.6)}$$

Consequently, the 95-percent confidence interval as shown by these data is from 6.2 to 6.6.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$\sigma_{(x-y)} = \sqrt{\sigma_x^2 + \sigma_y^2 - 2\varrho\sigma_x\sigma_y} \qquad (5)$$

where σ_x and σ_y are the standard errors for the estimates x and y as calculated above. The estimates can be numbers, percents, ratios, etc. The correlation coefficient ϱ can be determined from table B-8 for year-to-year comparisons for income estimates (e.g., number of families with income less than $5,000). For all other comparisons assume that ϱ equals zero. Making this assumption will result in accurate estimates of standard errors for the difference between two estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the computation of the standard error of a difference in estimates. Table 2 shows that the median income in current dollars for all households in 1984 was $22,415 and in 1983 was $21,018. The apparent difference is $1,397. The estimates of the standard errors of these medians (see the following section) are $102 and $95, respectively. From table B-8 we obtain the correlation coefficient, ϱ = 0.35. The standard error associated with the estimated difference of $1,397 is

$$112 \doteq \sqrt{(102)^2 + (95)^2 - 2\,(0.35)(102)(95)}$$

This means that the 95-percent confidence interval on the difference of $1,397 as shown by these data is from $1,173 to $1,621. Therefore, a conclusion that the average estimate of the difference derived from all possible samples lies within a range computed in this way would be correct for roughly 95 percent of the time. Since this interval does not contain zero, we can conclude with 95-percent confidence that income for all households was larger in 1984 than in 1983.

Standard error of a ratio. Certain mean values for persons in families or households shown in the tables of this report were calculated as the ratio of two numbers. For example, the mean number of persons per family or household is calculated as

$$\frac{x}{y} = \frac{\text{total number of persons in families or households}}{\text{total number of families or households}}$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families or

Table B-6. Standard Errors of Estimated Percentages of Households, Families, Unrelated Individuals, and Persons: 1966-84 (Spanish Origin)

Base of estimated percentage (thousands)	Estimated percentage[1]					
	1 or 99	2 or 98	5 or 95	10 or 90	25 or 75	50
75	1.8	2.5	3.9	5.4	7.8	9.0
100	1.5	2.2	3.4	4.7	6.7	7.8
250	1.0	1.4	2.1	3.0	4.3	4.9
500	0.7	1.0	1.5	2.1	3.0	3.5
1,000	0.5	0.7	1.1	1.5	2.1	2.5
2,500	0.3	0.4	0.7	0.9	1.3	1.6
5,000	0.2	0.3	0.5	0.7	1.0	1.1
7,500	0.2	0.3	0.4	0.5	0.8	0.9
12,000	0.14	0.2	0.3	0.4	0.6	0.7

[1]These values must be multiplied by the appropriate factor in table B-7 to obtain the correct standard error.

Note: To estimate standard errors for 1947 to 1954, multiply the above standard errors by 1.8; for 1955 to 1964 multiply by 1.4; and for 1965 multiply by 1.2.

households of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families or households.

Case 1: There is at least one person having the characteristic in every family or household of the class; for example, the mean number of persons per family or the mean number of persons per family with a male householder. For ratios of this kind, the standard error is approximated by the following formula:

$$\sigma_{\frac{x}{y}} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{\sigma_y}{y}\right)^2 + \left(\frac{\sigma_x}{x}\right)^2 - 2\varrho \left(\frac{\sigma_x}{x}\right)\left(\frac{\sigma_y}{y}\right)\right]} \qquad (6)$$

The standard error of the estimated number of families or households, σ_y, and the standard error of the estimated number of persons with the characteristic in those families or households, σ_x, may be calculated by formula (1). Alternatively, formula (2) and table B-7 may be used by the method described above.

In formula (6), ϱ represents the correlation coefficient between the numerator and the denominator of the estimate. In the above example, and for other ratios of this kind, use 0.7 as an estimate of ϱ.

Case 2: The number of persons having the characteristic in a given family or household may be 0, 1, 2, 3, or more; for example, the mean number of persons under 18 years of age per household. For ratios of this kind the standard error is approximated by formula (6) but ϱ is assumed to be zero. If ϱ is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio.

Note: When computing the approximate standard error of a ratio and the numerator of the ratio is income, use formula (7) for the standard error of an arithmetic mean. If the ratio has persons in the numerator and households in the denominator, then formula (6) with the appropriate value of ϱ will give a result preferable to that of formula (7).

STANDARD ERRORS OF ESTIMATED MEANS AND MEDIANS

Estimated standard errors are provided for the means and medians of the published income distributions and do not need to be calculated by the user. However, because of the approximations used in developing the formula used to estimate the standard error of the mean, the standard error reported for this statistic will generally be an underestimate. Since some users may wish to combine two or more income distributions and compute means and medians for the combined distribution, the following sections have been provided to enable the user to calculate standard errors for these statistics.

Standard error of the mean. The formula used to estimate the standard error of a mean is

$$\sigma_{\bar{x}} = \sqrt{\frac{b}{y} s^2} \qquad (7)$$

In this formula, y is the size of the base of the distribution and b is a parameter which depends on the sample size, the sample design, the estimation procedure, and the type of characteristic. The b values are given in table B-7. The variance, s^2, is given by the following formula:

$$s^2 = \sum_{i=1}^{c} p_i \bar{x}_i^2 - \bar{x}^2 \qquad (8)$$

where $\bar{x}$ is the mean of the distribution, and is estimated by $\sum_{i=1}^{c} p_i \bar{x}_i$.

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of households, families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i = (Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group i. $\bar{x}_i$ is assumed to be the most representative value for the characteristic for households, families or persons in group i. Group c is open-ended, i.e., no upper interval boundary exists. For this group the approximate average value is $\bar{x}_c = \frac{3}{2} Z_{c-1}$.

When two or more distributions are combined, the mean of the combined distribution is:

$$\bar{x} = \frac{1}{y} \sum_j \bar{x}_j y_j$$

where $\bar{x}_j$ is the mean of the jth distribution, y_j is the base of the jth distribution, and $y = \sum_j y_j$. This mean must be computed by the user.

Standard error of a median. The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for measuring the reliability of an estimated median is to determine a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.) The following procedure may be used to estimate the 68-percent confidence limits and hence the standard error of a median based on sample data.

1. Determine, using the standard error tables and factors or formula (4), the standard error of the estimate of 50 percent from the distribution;

2. Add to and subtract from 50 percent the standard error determined in step (1);

Table B-7. "a" and "b" Parameters and "f" Factors for Calculating Approximate Standard Errors of Estimated Numbers and Percentages of Households, Families, Unrelated Individuals, and Persons: 1966 to 1984

Type of characteristic	Parameters		f factor
	a	b

1984	-0.000237	2,713	1.06
Number of persons:			
Total or White	-0.000009	1,885	1.05
Black and/or other races	-0.000077	2,155	1.07
Spanish origin:			
1966 to 1983	-0.000020	3,000	1.11
1984	-0.000294	3,363	1.18
Nonincome			
Number of households,families, or unrelated individuals:			
Total or White	-0.000010	1,778	1.02
Black and/or other races	-0.000066	1,606	0.93
Spanish origin:			
1966 to 1983	-0.000020	1,422	0.77
1984	-0.000159	1,820	0.87
Number of persons:			
Total or White	-0.000025	4,480	1.61
Black and/or other races	-0.000265	6,426	1.85
Spanish origin:			
1966 to 1983	-0.000026	4,432	1.35
1984	-0.000497	5,673	1.53
Number of persons in households or families:			
Total or White:			
Some household or family members	-0.000025	4,480	1.61
All household or family members	-0.000031	5,444	1.78
Black and/or other races:			
Some household or family members	-0.000265	6,426	1.85
All household or family members	-0.000391	9,475	2.25
Spanish origin:			
Some household or family members:			
1966 to 1983	-0.000026	4,432	1.35
1984	-0.000548	6,426	1.63
All household or family members:			
1966 to 1983	-0.000044	8,917	1.92
1984	-0.000807	9,475	1.99

Note: For years prior to 1966, a standard error estimate computed with the "a" and "b" parameters or with the "f" factor must be adjusted. For 1947 to 1954, multiply the standard error by 1.8; for 1955 to 1964, multiply by 1.4; and for 1965 multiply by 1.2.

3. Using the distribution of the characteristic, calculate the values from the distribution corresponding to the two points established in step (2). These values will be the limits for the 68-percent confidence interval;

4. Divide the difference between the two points determined in step (3) by two to obtain the standard error of the median.

For calculations of the confidence interval in step (3), use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise.

A 95-percent confidence interval may be determined by finding the values corresponding to plus and minus twice the standard error determined in step (4).

The formulas used to implement step (3) for Pareto or linear interpolation are:

$$\text{Pareto:}\quad x_{pN} = A_1 \exp\left[\ln\left(\frac{pN}{N_1}\right) \ln\left(\frac{A_2}{A_1}\right) \Big/ \ln\left(\frac{N_2}{N_1}\right)\right] \qquad (9)$$

$$\text{Linear:}\quad x_{pN} = \frac{pN - N_1}{N_2 - N_1}\left(A_2 - A_1\right) + A_1 \qquad (10)$$

where N = total number of households or persons in the distribution.

x_{pN} = estimated upper and lower bounds for the confidence interval ($0<p<1$). For the

purposes of calculating the confidence interval, p takes on the values determined in step (2). Note that X_{pN} estimates the median when p = 0.50 is used in the formulae.

A_1 and A_2 = the lower and upper bounds, respectively, on the interval in which x_{pN} falls.

N_1 and N_2 = the estimated number of households or persons with incomes greater than A_1 and A_2, respectively.

exp is the exponential function.

ln is the natural logarithm function.

It should be noted that a mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

Since the new, more detailed income intervals used in this report have $2,500 increments up to $40,000 for households and families and up to $20,000 for persons, and since Pareto interpolation will only be used when a median income falls in an interval of width larger than $2,500 (beginning with March 1980 CPS), this type of interpolation will now be needed very infrequently (i.e., only in cases where the estimated median income exceeds $40,000 for households and families and $20,000 for persons). For this reason an illustration of the use of Pareto interpolation in computing a confidence interval for a median has been omitted. Illustration of this procedure can be found in the Source and Reliability section of Current Population Reports, Series P-60, No. 123.

Use of the above procedure could result in standard errors which differ from those given in the detailed tables. The main reason for this discrepancy is due to use of a more detailed distribution in determining the published standard errors. Linear interpolation was almost always used to compute the published medians and standard errors. Note that when combining distributions the resulting median may lie in an open-ended interval. To calculate its standard error the user must call Population Division of the Census Bureau to obtain the detailed distribution.

Illustration of the computation of a confidence interval and the standard error for a median. Table 7 of this report shows that the median income in 1984 for all households in the United States is estimated to be $22,415. Table 7 also shows that the base of the distribution from which this median was derived is 86,789,000.

Table B-8. Year-to-Year Correlation Coefficients for Income Characteristics: 1953 to 1984

Characteristic	Families and unrelated individuals	Persons
Total, White, Black and/or other races	0.35	0.30
Spanish origin	0.55	0.45

Note: These correlations are for comparisons of consecutive years. For comparisons of nonconsecutive years, all correlations should be assumed zero. For comparisons involving years prior to 1953, all correlations are zero.

1. Using formula (4), the standard error of 50 percent on a base of 86,789,000 is about 0.2 percentage points.

2. To obtain a 68-percent confidence interval on the estimated median, add to and subtract from 50 percent the standard error found in step (1). This yields percent limits of 49.8 and 50.2.

3. From table 7, the income of 43,231,000 (49.8 percent) of all households was greater than $22,500 and the income of 48,003,000 (55.3 percent) of all households was greater than $20,000.

Thus, the entire 68-percent confidence interval falls into the income interval $20,000 to $22,499. The upper limit of the confidence interval and the lower limit of the confidence interval are calculated using linear interpolation. Using formula (10), the lower limit on the estimate is found to be about

$$\frac{(0.502)(86{,}789{,}000) - 48{,}003{,}000}{43{,}231{,}000 - 48{,}003{,}000}\,(\$22{,}499 - \$20{,}000) + \$20{,}000 = \$22{,}323$$

Thus, the 68-percent confidence interval on the estimated median is from $22,323 to $22,499.

4. The standard error of the median is, therefore, ($22,499 − $22,323)/2, i.e., $88. (Note: Published standard errors are calculated by the same method as above. However, a different standard error may be obtained because of rounding, e.g., for the above illustration, table 7 gives a standard error of $102.)

7c Is this your mailing address?
☐ Yes
☐ No – Specify below including ZIP Code

7d Special Place name | Type code | Sample No.

ALL SEGMENTS

8a When was this structure originally built? Mo. | Yr.
☐ 4/1/80 or later
☐ 1975–3/31/80
☐ 1970–1974
☐ 1960–1969
☐ 1959 or earlier

IF AREA SEGMENT, GO TO 8b; OTHERWISE GO TO 10.

CHECK ITEM
8b For Area Segments only
☐ Fill 8c during first month based on entry in 8a
☐ Do not fill 8c – Ask 9

8c YEAR BUILT
☐ Before 4/1/80 – Continue interview
☐ After 4/1/80 – Complete 9c and 11a–11b when required; END INTERVIEW.

9 ASK (in 1st and 5th month):

	1st	5th
☐ a. Are there any occupied or vacant living quarters beneath your own in this building?	Y N Fill Table X	Y N Fill Table X
☐ b. Are there any occupied or vacant living quarters besides your own on this floor?	Y N Fill Table X	Y N Fill Table X
☐ c. Is there any other building on this property for people to live in – either occupied or vacant?	Y N Fill Table X	Y N Fill Table X
☐ d. None		

10 TENURE

	1st	5th
Are your living quarters –		
Owned or being bought by you or someone in your household?		
Rented for cash?		
Occupied without payment of cash rent?		

11a
☐ URBAN – SKIP to item 12
☐ RURAL
- Regular units and Special Place units coded 85–88 in item 7d – ASK item 11b.
- Special Place units not coded 85–88 in item 7d – Mark "Less than $1,000" in item 11b without asking, then go to item 12.

NOTE: Transcribe to CPS-1, item 5a.

11b During the past 12 months did sales of crops, livestock, and other farm products from this place amount to $1,000 or more or less than $1,000?

1st	5th
☐ $1,000 or more	☐ $1,000 or more
☐ Less than $1,000	☐ Less than $1,000

NOTE: Transcribe to CPS-1, item 5b.

CHECK ITEM
12a (Refer to item 7d)
☐ Unit is in a special place – Refer to Table A in part C of the manual and mark 12c or 12d accordingly.
☐ Unit is not in a Special Place

12b ACCESS
☐ Direct
☐ Through another unit – Not a separate HU: combined with unit through which access is gained – Apply "merged unit" procedures if appropriate.

12c HOUSING UNIT
☐ House, apartment, flat
☐ HU in nontransient hotel, motel, etc.
☐ HU permanent in transient hotel, motel, etc.
☐ HU in rooming house
☐ Mobile home or trailer with no permanent room added
☐ Mobile home or trailer with one or more permanent rooms added
☐ HU not specified above – Describe

12d OTHER UNIT
☐ Quarters not HU in rooming or boarding house
☐ Unit not permanent in transient hotel, motel, etc.
☐ Unoccupied tent site or trailer site
☐ Student quarters in college dormitory
☐ Other unit not specified above – Describe

FOR PERSONS WITH "YES" IN ITEM 14c

INCOME SUPPLEMENT

Form Approved – O.M.B. No. 0607-0354

MARCH 1985

INTRODUCTION
(Optional)

We have just completed the questions about employment and unemployment. Each March, the Census Bureau also collects information about the economic situation of Americans and their families for the previous year. I am going to ask these questions now. We don't expect all answers to be perfect, but please think about each question and answer it the best you can.
