CURRENT POPULATION REPORTS
Consumer Income
Series P-60, No. 158

POVERTY IN THE UNITED STATES 1985

U.S. Department of Commerce
BUREAU OF THE CENSUS

Acknowledgments

This report was prepared in Population Division by **Mark S. Littman**, under the general direction of **John M. McNeil**, Chief, Poverty and Wealth Statistics Branch. Typing and clerical assistance was provided by **Mary Kisner, Diana J. Lewis, Anna H. Podany**, and **Eleanor F. Baugher. Robert Bennefield** prepared the historical detailed tables; **Thelma N. Varhach**, Demographic Survey Division, was responsible for production of the detailed tables for 1985. Sampling review was conducted by **Cathy Mazur** of the Statistical Methods Division. Overall direction was provided by **Gordon W. Green, Jr.**, Assistant Division Chief (Socioeconomic Statistics Programs), Population Division.

Data collection was conducted by Bureau of the Census interviewers, under the overall direction of **Stanley D. Matchett**, Chief, Field Division. Publication planning, design, composition, and printing planning was provided by the staff of Publications Services Division, **Walter C. Odom**, Chief. Publication editing and coordination was provided by **Paula Coupe**.

This report is dedicated to the memory of **Arno I. Winard**, who guided the compilation of poverty statistics during his career at the Bureau of the Census (1958 to 1986).

DETAILED TABLES

Trends in Poverty Population

1.	Poverty status of persons, by family relationship, race and Hispanic origin: 1959 to 1985	13
2.	Poverty status of persons, by age, race and Hispanic Origin: 1959 to 1985	15
3.	Poverty status of families, by type of family, presence of related children, race, and Hispanic origin: 1959 to 1985	17

Persons

4.	Ratio of income to poverty level in 1985—persons, by family status, sex of householder and race	21
5.	Farm-nonfarm residence and region—poverty status in 1985 of persons, by family status, sex of householder, and race	23
6.	Metropolitan-nonmetropolitan and region—poverty status in 1985 of persons, by family status, type of family, and race	27
7.	Age and sex—poverty status in 1985 of persons, by family relationship, type of family, race and Hispanic origin	35

8. Marital status—poverty status in 1985 of persons, family householders, and unrelated individuals 15 and over, by age, sex, and race 38
9. Educational attainment—poverty status in 1985 of persons 15 and over, by age, sex, and race 44
10. Work experience—poverty status in 1985 of persons 15 and over, by age, sex, and race 49
11. Selected characteristics of the aged—poverty status in 1985 of persons 60 years and over, by age and sex 63
12. Hispanics—poverty status in 1985 of persons, by type of Hispanic origin, type of residence, family status and type of family 69

Families

13. Size of family—poverty status in 1985 of families, by type of family and race of householder 72
14. Number of related children under 18 years-poverty status in 1985 of families, by type of family and sex and race of householder 73
15. Presence and age of related children—poverty status in 1985 of families, by type of family and age and race of householder 74
16. Poverty area residence—poverty status in 1985 of families, by selected characteristics 78
17. Tenure—poverty status in 1985 of families and nonfamily householders, by selected characteristics 89
18. Living arrangements—poverty status in 1985 of unrelated individuals 16 and over by age, sex, and race 91
19. Employment status in March 1986—poverty status in 1985 of family householders and unrelated individuals by sex, race, and Hispanic origin 93
20. Number of workers—poverty status in 1985 of families with civilian householders, by sex and race of householder 94
21. Work experience of householder—poverty status in 1985 of family householders, by presence of children, sex, and race 97
22. Work experience of unrelated individuals—poverty status in 1985 of unrelated individuals, by age, sex, and race 106
23. Working mothers—poverty status in 1985 of women with own children under 18, by work experience, age of children, type of family, and race 109
24. Own children—poverty status in 1985 of own children under 18, by age, type of family work experience, and race of mother 112
25. Total money income of families below the poverty level in 1985, by presence of related children under 18, and age, race, and Hispanic origin of householder 116
26. Total money income, by size of family—families and related children under 18 below the poverty level in 1985, by type of family and race of householder 119
27. Total money income of unrelated individuals below the poverty level in 1985, by age, sex, race and Hispanic origin 122
28. Type of income—poverty status in 1985 of families and unrelated individuals, by age, sex, and race of family householder or unrelated individuals 124
29. Size of income deficit—families and unrelated individuals below the poverty level in 1985, by presence of related children, and sex and race of family householder or unrelated individual 142
30. Selected characteristics of families below 125 percent of the poverty level in 1985 . 143
31. Selected characteristics of unrelated individuals below 125 percent of the poverty level in 1985 149
32. Poverty status of Hispanic families and unrelated individuals, by type of Hispanic origin and other selected characteristics 152
33. Standard errors for selected characteristics of persons below the poverty level in 1985 156
34. Standard errors for selected characteristics of families below the poverty level in 1985 157

B-5. Factors to be applied to all non-Hispanic standard errors for 1959 to present 176
B-6. Parameters for estimated numbers and percentages of persons, by poverty status, age, sex, and race: 1980-85 177
B-7. Parameters for estimated numbers and percentages of Hispanics, by poverty status, age, and sex: 1973-85 177
B-8. Parameters for estimated number and percentages of families or unrelated individuals by poverty status and race: 1980-85 177
B-9. Parameters for estimated numbers and percentages of selected characteristics of families or unrelated individuals regardless of income status 178
B-10. Parameters for estimated numbers and percentages of persons and families below the poverty level, by region and farm-nonfarm residence: 1980-85 179
B-11. Year-to-year correlation coefficients for poverty estimates 180
C-1. Comparison of CPS aggregate money income in 1983 with independent estimates of aggregate money income adjusted to CPS money income concepts, by type of income and reported and allocated CPS amounts 182

Characteristics of the Population Below the Poverty Level: 1985

INTRODUCTION

This report presents social and economic characteristics of the population below the poverty level in 1985 based on the March 1986 Current Population Survey (CPS). The poverty definition used here is that adopted for official Government use by the Office of Management and Budget and consists of a set of money income thresholds that vary by family size and composition. Families or individuals with income below their appropriate threshold are classified as below the poverty level. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index. For example, the average poverty threshold for a family of four was $10,989 in 1985 and $10,609 in 1984. These thresholds are based on money income only and do not include the value of noncash benefits such as employer-provided health insurance, food stamps or Medicaid. For further discussion, see the section entitled "Collection and Limitations of Poverty Data."

The data in the report consist of cross classifications of poverty status by such characteristics as age, race, sex, family relationship, educational attainment, work experience, and type of income received. Although the primary focus of these data is on the United States as a whole, some tables are also shown by region and type of residence. In the text, the terms "poverty population," "poor," and "below the poverty level" are used interchangeably, as are the terms "nonpoor" and "above the poverty level." Characteristics such as age and marital status are as of the survey date (e.g., March 1986), while income, poverty, and work experience data refer to the whole previous calendar year (e.g., 1985). In the report the reference year cited refers to the "income" year.

HIGHLIGHTS

- In 1985 the poverty population numbered 33.1 million, a figure not significantly different from that for 1984.
- About 14 percent of the Nation's population was poor in 1985, a poverty rate slightly lower (at the 90-percent confidence level) than the 1984 estimate of 14.4 percent.
- About 34 percent of the poor were children under age 15, and 43 percent were under 20 years old.
- Children under age 10 had a poverty rate higher than any other age group in 1985 (22 percent).
- There was considerable variation in poverty rates within the elderly population, with persons 65 to 69 years of age having a poverty rate only about one-half of that for persons 85 years and over (9.4 percent versus 18.7 percent in 1985).
- Although the Black and other-races populations are disproportionately represented among the poor, 69 percent of poor persons in 1985 were White.
- About 16 percent of the poor in 1985 were Hispanic, a historic high.
- The poverty rate remains highest in the South (16 percent in 1985) and lowest in the Northeast (11.6 percent).
- A smaller proportion of the poor than the nonpoor lived in metropolitan areas in 1985 (70 versus 79 percent).
- Within metropolitan areas, the majority of the nonpoor lived outside central cities (62 percent), while the majority of the poor lived in central cities (61 percent).
- About 48 percent of poor families were maintained by women with no husband present in 1985. This proportion has leveled off in the 1980's and was slightly higher in 1978.
- About 34 percent of the Nation's families maintained by a woman with no spouse present were poor in 1985, compared with 7 percent of married-couple families and 13 percent of families maintained by a man with no wife present.
- Unrelated individuals (persons living alone or with nonrelatives only) accounted for about 20 percent of the poor in 1985.
- Half of all poor family householders (25 years and older) had not graduated from high school.
- About half of poor family householders worked at sometime during 1985, and 16 percent worked year-round, full-time. About 80 percent of nonpoor family householders worked in 1985.

- About 38 percent of poor female householders with children under 6 and no husband present worked in 1985, compared with 87 percent of nonpoor female householders in this family situation.
- About 62 percent of the Nation's poor families gained at least some of their income in 1985 from their own earnings; earnings accounted for 49 percent of the aggregate money income of the poor in 1985. About 37 percent of poor families received public assistance (principally AFDC) with such assistance accounting for 24 percent of the aggregate money income of the poor.
- The average amount of money needed to raise the incomes of poor families above their respective poverty threshold was about $4,300 in 1985, and $2,400 for unrelated individuals.
- The total amount required to raise the incomes of all poor families and unrelated individuals above the poverty level in 1985 was $47.8 billion.

TRENDS IN THE NUMBER OF POOR

The number of persons below the poverty level showed no statistically significant change from 1984 to 1985 after declining by 1.6 million between 1983 and 1984. In 1985, the poverty population numbered 33.1 million, compared to a 1984 estimate of 33.7 million. (See table A.) From 1978 to 1983, the number of poor persons had increased by 44 percent, from 24.5 million to 35.3 million. Between 1970 and 1977, the size of the poverty population fluctuated between 23 and 26 million after a dramatic reduction in the number of persons below the poverty level in the 1960's (from 39.5 million in 1959 to 24.1 million in 1969). Poverty data using the Government's definition were first tabulated in 1959.

About 14.0 percent of the Nation's population were in poverty in 1985, a figure slightly lower (at the 90-percent but not 95-percent confidence level) than the 1984 estimate of 14.4 percent. During the 1978-83 period, the poverty rate had increased from 11.4 percent to 15.2 percent. The latter figure was the highest rate since the mid-1960's.[1] During the 1970-77 period, the poverty rate did not vary much (between 12.6 percent and 11.1 percent), while in the 1960's, the percentage of the population below the poverty level fell sharply from 22.4 percent in 1959 to 12.1 percent in 1969.

DEMOGRAPHIC AND SOCIAL CHARACTERISTICS OF THE POOR

Age. The most striking feature in the age distribution of the poor was the proportion composed of children: 34

[1]The poverty rate in 1982 (15.0) was not statistically different from the 1983 rate (15.2). The 1983 poverty rate was significantly higher than the 1966 poverty rate at the 90-percent level of confidence.

Table A. Number of Persons Below the Poverty Level and Poverty Rate, by Race and Hispanic Origin: 1959 to 1985

(Numbers in thousands. Persons as of March of the following year)

Year	All races		White		Black		Hispanic[1]	
	Number below the poverty level	Poverty rate	Number below the poverty level	Poverty rate	Number below the poverty level	Poverty rate	Number below the poverty level	Poverty rate
1985	33,064	14.0	22,860	11.4	8,926	31.3	5,236	29.0
1984	33,700	14.4	22,955	11.5	9,490	33.8	4,806	28.4

[1]Persons of Hispanic origin may be of any race.
[r]Revised to reflect changes in weighting and imputation procedures. See definitions section for additional information.

percent of the poverty population were under age 15, and 43 percent were under 20 years old in 1985. (See figure 1.) In contrast, only 20 percent of nonpoor persons were children under age 15 and only 27 percent were under age 20. A somewhat smaller proportion of the poor than the nonpoor was in the group between 25 and 69 years of age, and comparable proportions of poor and nonpoor were 70 years or older.

Poverty rates tended to decrease up to the 45-to-54-year-old age group but increased thereafter. For example, the poverty rate in 1985 was 23.1 percent for children under 5 years, 17.3 percent for 15- to 19-year-olds, 10.4 percent for 30- to 34-year-olds, and 8.4 percent for 45- to 54-year-olds. The rate was 9.9 percent for 55- to 59-year-olds and increased to 18.7 percent for persons 85 years of age and older. (See table B.) Historically, the poverty rate for persons 65 years and older has been higher than that for the total population, but this relationship reversed in 1983, and in both 1984 and 1985, the poverty rate was about 12.5 percent for the elderly, the lowest estimates yet recorded for that age group. There was a considerable difference, however, within subgroups of the elderly population, with persons 65 to 69 years old having a poverty rate only about one-half of that for persons 85 years and over (9.4 percent versus 18.7 percent in 1985). The poverty rate for the nonelderly was 14.1 percent in 1985.

Race and Hispanic origin. Although the Black and other-races populations are disproportionately represented among the poor, 69 percent of poor persons in 1985 were White (figure 2). This figure has actually risen slightly since 1979, when it was 66 percent. Whites accounted for 81 percent of the net increase in the poverty population between 1979 and 1985. Part of this recent rise in the proportion of the poverty population that is White may be attributable to an increase in the proportion of the poor who are Hispanic. Though Hispanics may be of any race, 97 percent of persons of Hispanic origin were reported as White in the March 1986 CPS. About 16 percent of the poor in 1985 were Hispanic, a historic high, up from 11 percent of the poor in 1979. Persons of Hispanic origin accounted for 6 percent of the nonpoor in 1985. The proportion of the Hispanic poor who are recent immigrants cannot be determined from existing tabulations. The 8.9 million poor Blacks in 1985 represented 27 percent of the poverty population, down from the 31 percent they represented in 1979 but still a disproportionate figure as compared with their share of the population. (They accounted for 10 percent of the nonpoor in 1985.) Persons of other races (Asians, Pacific Islanders, and American Indians) represented the remaining 4 percent of the poverty population (1.3 million persons); this group constituted 3 percent of the nonpoor.

Table B. Age Distribution of Persons, by Poverty Status

Age	Total	Number below the poverty level	Percent below the poverty level
Total	236,594	33,064	14.0
Under 5 years	18,062	4,170	23.1
5 to 9 years	17,062	3,702	21.7
10 to 14 years	16,643	3,239	19.5
15 to 19 years	18,274	3,156	17.3
20 to 24 years	19,949	3,207	16.1
25 to 29 years	21,619	2,642	12.2
30 to 34 years	20,434	2,119	10.4
35 to 39 years	18,341	1,795	9.8
40 to 44 years	14,166	1,343	9.5
45 to 49 years	11,814	985	8.3
50 to 54 years	10,849	926	8.5
55 to 59 years	11,212	1,104	9.8
60 to 64 years	10,849	1,221	11.3
65 to 69 years	9,415	881	9.4
70 to 74 years	7,466	901	12.1
75 to 79 years	5,283	782	14.8
80 to 84 years	3,122	508	16.3
85 years and over	2,038	381	18.7

In 1985, the poverty rate was 11.4 percent for Whites, 31.3 percent for Blacks, and 17.8 percent for the population of other races. The poverty rate for Hispanics was 29.0 percent in 1985. Though this latter rate remains below that for Blacks (at the 90-percent confidence level), the percentage point difference in poverty rates for the Hispanic and Black populations has narrowed in the 1980's, from a 9.2 percentage point gap in 1979 to the 1985 figure of 2.3 percentage points. Within the Hispanic community, there is considerable variation in poverty rates. In 1985, the poverty rate was, for example, 43.3 percent for Hispanics who reported their origin as Puerto Rican, 28.8 percent for those of Mexican origin, and 22.1 percent for other Hispanic persons (principally composed of persons of Cuban, and Central and South American origin).

Regional distribution of the poor. There have been recent increases in the proportion of the population above the poverty level living in the South and West, reflecting the fact that the Nation's population growth as a whole has been concentrated in those regions. In the 1980's, about half of the growth in these regions has been due to net inmigration at the expense of the Northeast and Midwest. The regional distribution of the poor, which historically has been disproportionately concentrated in the South, moved opposite that of the nonpoor between 1969 and 1985, with the proportion of the poverty population living in the South decreasing from 46 percent to 39 percent. However, the poor are still more concentrated in the South than the nonpoor—the proportion of the nonpoor living in the South was 33

Figure 1.
Distribution of the Population Above and Below the Poverty Level, by Age: 1985

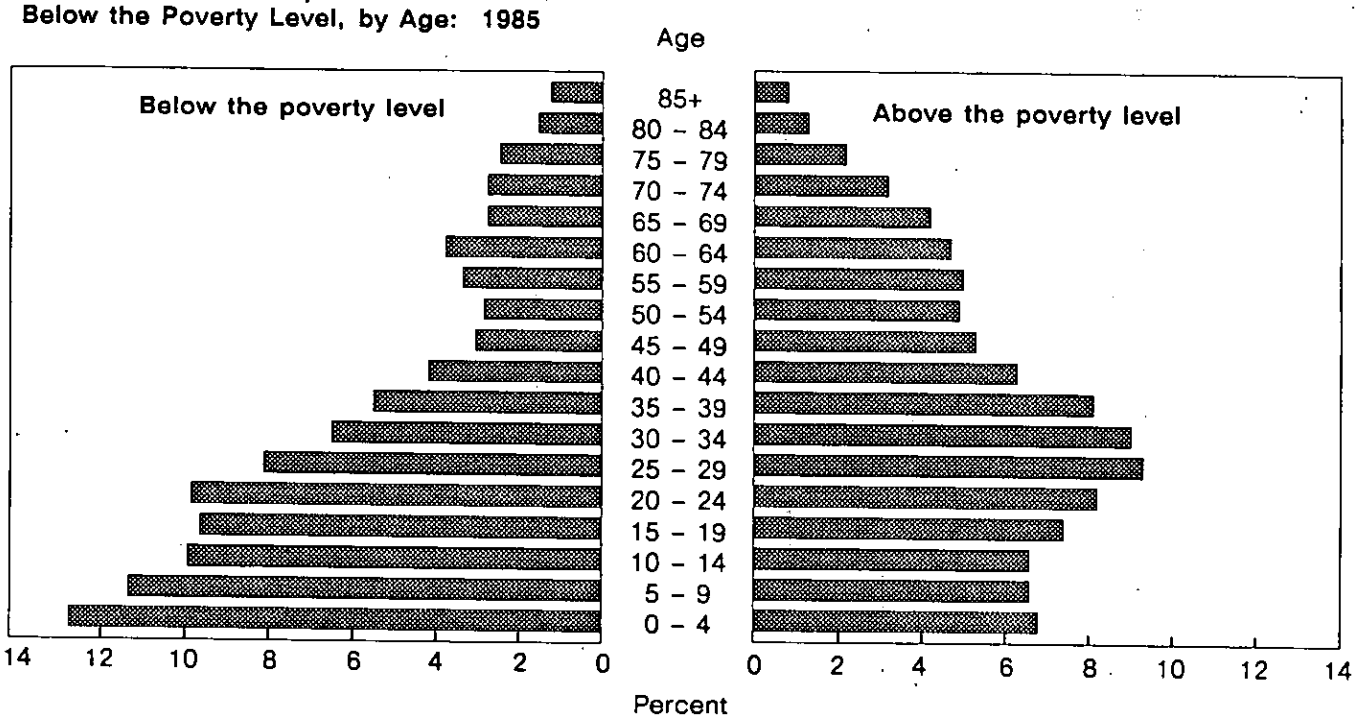

Figure 2.
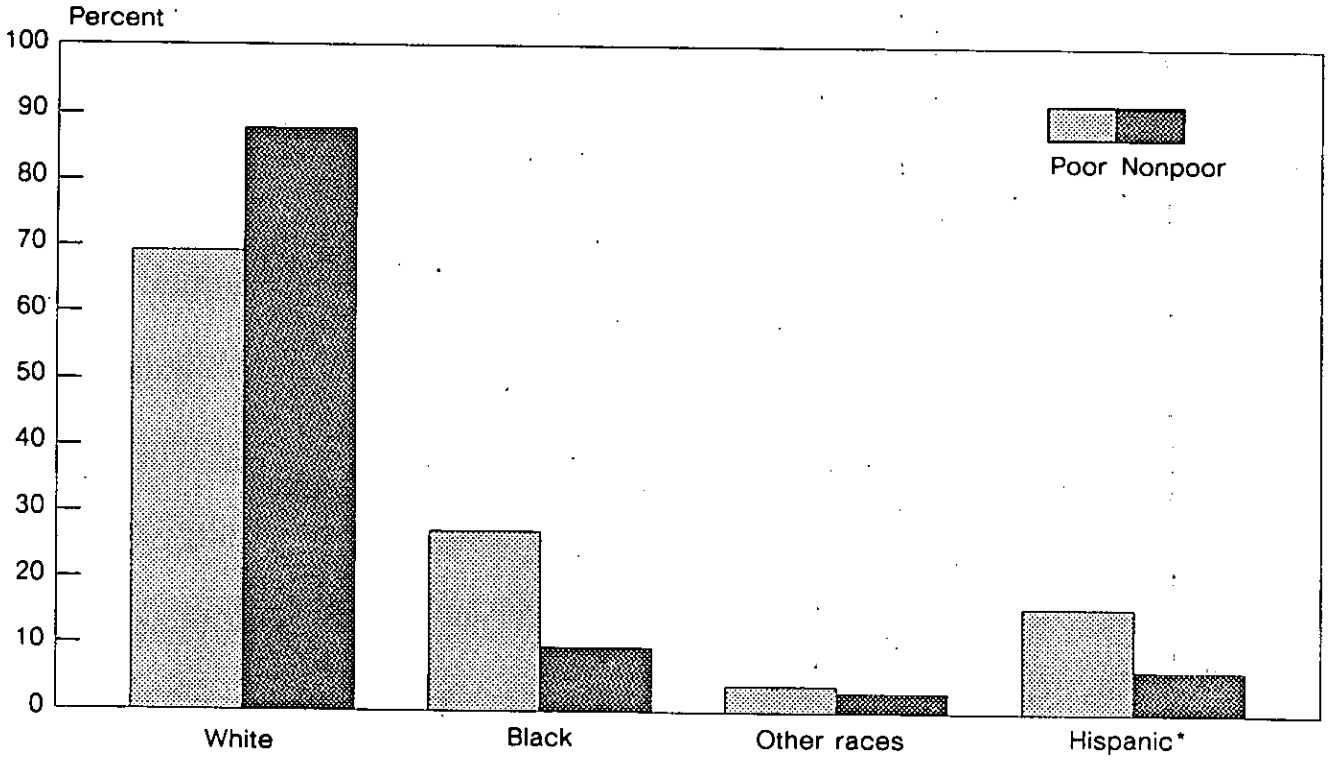
Distribution of the Population Above and Below the Poverty Level, by Race and Hispanic Origin: 1985



* Adds to more than 100% since persons of Hispanic origin may be of any race.

percent. (See figure 3). According to one study, migration has played a smaller role than have generally improving economic conditions in the deconcentration of poverty in the South, and in fact, the South had net inmigration of poor persons during the late 1970's.[2] It should also be noted that according to the same study most poor persons were native to the region in which they lived at the time of the study; only in the West region did inmigrants constitute a majority of the poverty population. In 1985, the poor were less likely than the nonpoor to live in the West (19 percent versus 21 percent) and Northeast (17 percent versus 22 percent), while similar proportions lived in the Midwest (25 percent).[3]

The poverty rate remains highest in the South (16 percent in 1985) and lowest in the Northeast (12 percent). The rates in the Midwest (14 percent) and West (13 percent) were not significantly different from each other. The higher poverty rate in the South is in part associated with the racial composition of that region (19 percent of the population in the South is Black, compared with 12 percent in the United States as a whole). About 57 percent of the Nation's poor Blacks lived in the South in 1985. The poverty rate for Blacks living in the South (33 percent) was not statistically different from that for Blacks living in the Midwest in 1985 (35 percent), but higher than the poverty rate for Blacks in the Northeast (28 percent) or in the West (20 percent).

Distribution by type of residence. The poverty population in 1985 was less concentrated in the Nation's metropolitan areas than were persons above the poverty level.[4] About 70 percent of the poor lived in one of the Nation's 280 metropolitan statistical areas (MSA's), compared with 79 percent of persons above the poverty level (table C). In the South, the least metropolitan of regions, 61 percent of the poor and 74 percent of the nonpoor lived in MSA's. Within metropolitan areas, the majority (62 percent) of persons with income above the poverty level in 1985 lived in suburban areas while the majority of the poor (61 percent) lived in central cities.

For the Nation as a whole, the poverty rate was lowest in suburban areas (8 percent), while the rates for central cities (19 percent) and nonmetropolitan areas (18 percent) were not statistically different from each other. There was, however, some regional variation in

[2]See Larry H. Long, *Interregional Migration of the Poor: Some Recent Changes*, U.S. Bureau of the Census, Current Population Reports, Series P-23, No. 73, 1978.

[3]There was no significant difference in the proportions of the poor living in the West (19 percent) and Northeast (17 percent).

[4]The metropolitan area definition used here refers to the population living in metropolitan statistical areas (MSA's) defined as of October 12, 1984. See the definitions section for further discussion. For convenience's sake, the territory inside metropolitan areas but outside central cities is referred to here as "suburban." It should be remembered, however, that some MSA's include considerable territory and some population beyond what would ordinarily be considered "suburban" since they are by definition generally composed of whole counties.

Figure 3.
Regional Distribution of the Population, by Poverty Status: 1985

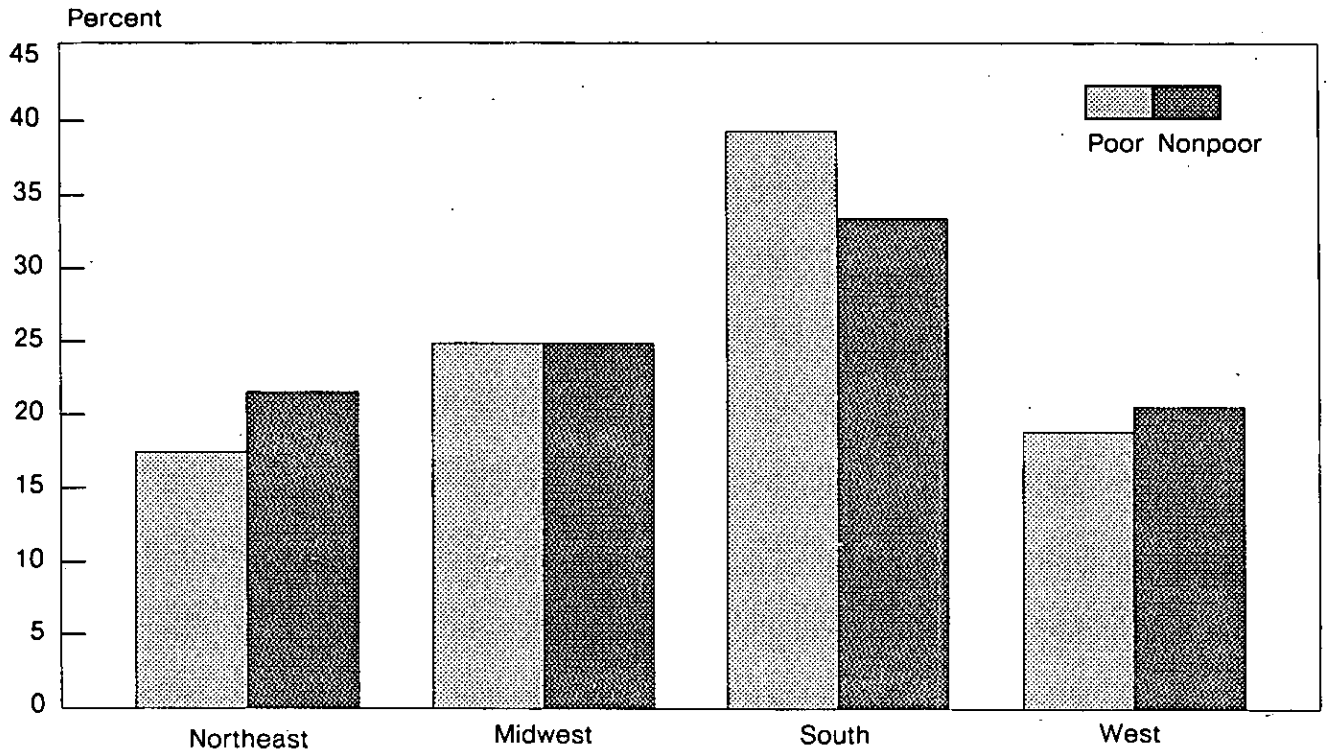


Table C. Distribution of the Population, by Type of Residence and Region: 1985

Characteristic	Number		Percent distribution		Percent poor
	Poor	Nonpoor	Poor	Nonpoor	
United States					
Total	33,064	203,530	100.0	100.0	14.0
In metropolitan areas	23,275	159,822	70.4	78.5	12.7
In central cities	14,177	60,296	42.9	29.6	19.0

In central cities	9,815	40,542	48.7	29.8	19.5
Outside central cities	5,533	69,546	27.5	51.2	7.4
Outside metropolitan areas	4,795	25,759	23.8	19.0	15.7
South					
Total	12,921	67,683	100.0	100.0	16.0
In metropolitan areas	7,927	49,735	61.3	73.5	13.7
In central cities	4,362	19,754	33.8	29.2	18.1
Outside central cities	3,565	29,980	27.6	44.3	10.6
Outside metropolitan areas	4,994	17,949	38.7	26.5	21.8

the rates, with the poverty rate in the nonmetropolitan South (22 percent) being higher than that for central cities of that region (18 percent). The South's nonmetropolitan area poverty rate was also higher than the nonmetropolitan rate in the other regions combined (16 percent).

Families. Between 1969 and 1985 the number of families maintained by women with no husband present increased from 11 percent to 16 percent of all families, from 8 to 12 percent of nonpoor families, and from 36 percent to 48 percent of all poor families (table D). However, the proportion of female householder families among all poor families leveled off in the 1980's and was actually slightly lower in 1985 than in 1978. Such families have a considerably higher poverty rate than other family types: 34 percent of the Nation's families maintained by a woman with no husband present had incomes below their poverty threshold, compared with about 7 percent of married-couple families and 13 percent of families maintained by a man with no wife present. The majority (54 percent) of the Nation's 12.5 million poor children under 18 years of age were in families maintained by a woman alone.

The proportion of poor families that had a female householder with no husband present was higher in 1985 for Blacks than for Whites (73 percent versus 39 percent). The comparable figures were considerably lower in 1969 (54 percent for Blacks and 30 percent for Whites) but neither the proportion of poor Black nor White families that were maintained by women has changed much during the 1980's, and both were as high in the latter half of the 1970's as they were in 1985. The poverty rate for White families maintained by a woman with no spouse present was about 27 percent in 1985; for Blacks the figure was about 51 percent.

Regardless of the age group of the householder, families maintained by women with no spouse living in the household had higher poverty rates than other families. For example, 74 percent of families with a female householder under age 25 had income below the poverty level in 1985, compared with 16 percent of other families with a householder of this age. Families with a female householder and no spouse present accounted for 61 percent of all poor families with householders under age 25 and 57 percent of poor families with a householder in the 25-34 age group.

Householders in poor families tended to be younger than those in nonpoor families. For example, 13 percent of poor families had a householder under age 25, compared with 4 percent of nonpoor families (about 30 percent of families in this age category had income below the poverty level). Only 10 percent of poor families had a householder 65 years old and older, compared with 17 percent of nonpoor families; the poverty rate for families in this age group was 7 percent in 1985.

Reflecting, in part, this younger age composition of householders, about 77 percent of the Nation's poor families had related children under 18 years living in the household, compared with 50 percent of nonpoor families in 1985. For families with children under 18 years, the mean number of children per family was 2.23 for the poor and 1.77 for nonpoor families in 1985.

Unrelated individuals. In 1985, there were about 6.7 million unrelated individuals in the Nation with incomes below the poverty level. Unrelated individuals are per-

sons who live alone or with nonrelatives only (each unrelated person's income is treated separately in determining their poverty status).[5] While most unrelated individuals live alone, poor unrelated individuals are somewhat less likely to live alone than those who are not poor (62 versus 69 percent). The poverty rate for all unrelated individuals was 21 percent in 1985, 20 percent for those living alone, and 25 percent for those sharing living quarters.

Unrelated individuals have become an increasingly large share of the total population during the 1970's and 1980's, increasing from 7 percent of the U.S. total in 1969 to 13 percent in 1985. While unrelated individuals account for a disproportionate share of the poverty population (20 percent in 1985), the proportion of the poor accounted for by this group has changed little during the past 15 years (varying between 19 and 22 percent).[6]

Years of school completed. Half of all poor family householders 25 years old and over (by which age most persons have completed their formal education) had not graduated from high school, compared with only 23 percent of family householders above the poverty level. The poverty rate in 1985 was 21 percent for families with a householder who did not complete high school, 10 percent for those householders with high school but no years of college completed, and 4 percent for families with householders with 1 or more years of college completed. This general relationship (poverty rates decreasing as years of school completed increase) holds for householders regardless of race or Hispanic origin, although large differences exist between these groups within education category. For example, 25 percent of Black family householders with a high school diploma but no college completed had income below the poverty level, compared with only 8 percent of White family householders and 15 percent of Hispanic family householders.

ECONOMIC CHARACTERISTICS

Work experience. About half of the Nation's family householders with income below the poverty level in 1985 worked at some time during the year, and 16 percent worked year-round, full-time.[7] Of those who did

[5]Unrelated individuals under age 15 are excluded from the poverty universe. They are not included in either the numerator or denominator of poverty rates.

[6]It should be noted that the CPS is primarily a household survey, and thus, poor persons who are homeless are generally not included in these poverty figures.

[7]A person working year-round, full-time at the current minimum wage— $3.35 per hour— earns about $6,970 per year. Although this annual income is above the average poverty threshold for an unrelated individual ($5,469), it is below the poverty level for families of any size except two-person families with a householder aged 65 and over, whose average threshold was $6,503 in 1985.

Table D. Number of Families Below the Poverty Level and Poverty Rate: 1959 to 1985

(Numbers in thousands. Families as of March of the following year)

Year	Number of poor families	Poverty rate for families	Number of poor families with female (NSP) as householder	Poverty rate for families with female householder	Families with females householder as a percent of all poor families	Families with female householder as a percent of all non-poor families	Families with female householder as a percent of all families

[r]Revised to reflect changes in weighting and imputation procedures. See definitions section for additional information.

not work in 1985, about 24 percent indicated the reason as illness or disability, 15 percent indicated that they were retired, 14 percent reported that they could not find work, 40 percent reported that they were "keeping house," and the remaining 6 percent were going to school or gave some other reason.

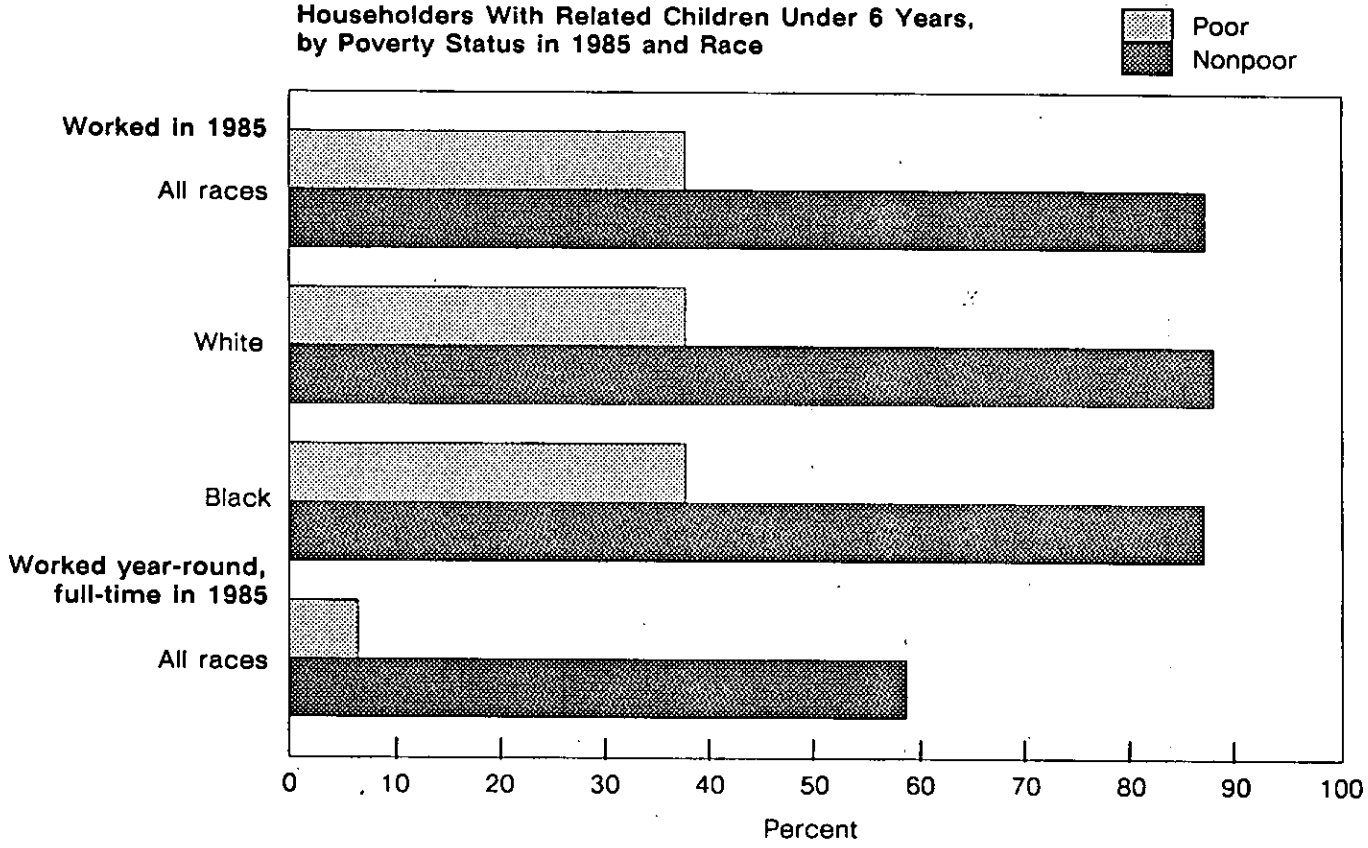
The proportion of poor family householders who worked has changed little during the 1980's, after falling slightly during the 1970's (from 55 percent in 1969). The proportion of poor family householders who worked year-round, full-time declined from 22 percent in 1969 to 16 percent in 1985. The proportion of family householders above the poverty level who worked was 80 percent in 1985 and 87 percent in 1969, an even steeper decline than the figures for poor family householders. Among female householders with children under age 6 and no husband present there was a large difference in the 1980's in the work experience of those who were poor versus those who were not. (See figure 4.) Only about 38 percent of poor women in this family situation worked in 1985 (7 percent year-round, full-time), compared with 87 percent of nonpoor women householders in a comparable family type (59 percent year-round, full-time). These large differences in the work experience of poor and nonpoor female householders with children under 6 years remained even after controlling for the number of children (one, or two or more).[8] In 1985, there were about 1.8 million poor families with children under 6 years of age maintained by a woman with no spouse present, representing 25 percent of all poor families.

Of the 3.7 million poor families composed of a married couple or a male householder with no wife present, 61 percent of the householders worked at some time in 1985, and 25 percent worked year-round, full-time. The householder in 1.4 million of these families did not work in 1985. The reason given for not working was that they were ill or disabled (34 percent), retired (32 percent), could not find work (18 percent), or some other reason (17 percent).

Type of income. About 62 percent of the Nation's poor families gained at least some of their income in 1985 from their own earnings, and earnings accounted for 49 percent of the aggregate money income of the poor in 1985. (For nonpoor families, 89 percent received some amount of earnings which accounted for 82 percent of their total income.) Income other than earnings was received by 77 percent of the poor (about half of those who received income from a source other than earnings also had some earnings income). Public assistance (principally Aid to Families with Dependent Children) was the

[8]Based on a special tabulation of 1986 CPS data.

Figure 4.
Work Experience in 1985 of Female Householders With Related Children Under 6 Years, by Poverty Status in 1985 and Race



most frequently received source of nonearnings income for the poor: 37 percent received such income. Public assistance accounted for 24 percent of the aggregate income of poor families. About 3.7 million families received some form of public assistance income in 1985. Even with this assistance, the money incomes of 2.7 million of these families remained below the poverty level.[9] Most of these families were recipients of income from the Aid to Families with Dependent Children (AFDC) program. About 38 percent of the 1 million families that received public assistance and had incomes above the poverty level would have had incomes below the poverty level in 1985 without public assistance (other things being equal).

Income deficit. The average amount of additional money needed to raise the incomes of poor families above their respective poverty threshold was about $4,300 in 1985. Although there was no significant difference for White families in the average income deficit for families with a female householder with no husband present and all other families (both about $4,100), there was a large difference for Black families: those with a female householder had an average deficit of $5,100, and the deficit for all other family types was about $3,800.

The average income deficit for poor unrelated individuals was about $2,400 in 1985, lower for women ($2,100) than for men ($2,800).

About 38 percent of 7.2 million poor families in 1985 had incomes which were less than half of their poverty threshold, 30 percent had incomes between 50 percent and 74 percent of their respective poverty threshold, and the incomes of 32 percent of poor families were 75 percent or more of their threshold.

In absolute dollar terms, there were about 560,000 poor families in 1985 within $500 of having income sufficient to lift them above the poverty level, while a similar number of families (570,000) had income in 1985 above their respective poverty threshold but within $500 of the poverty level.

It would have taken an additional $47.8 billion to raise the money incomes of all poor families and unrelated individuals above the poverty level in 1985.

COLLECTION AND LIMITATIONS OF POVERTY DATA

This report presents findings from the Income Supplement of the Census Bureau's Current Population Survey of March 1986. The information was collected from a sample of persons representing the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Because the collection of income data in the survey is restricted to persons 15 years old and over, unrelated individuals under 15 are excluded from this report.

The poverty definition used in this report is based on an index developed at the Social Security Administration (SSA) in 1964, and revised by Federal Interagency Committees in 1969 and 1981. A directive from the Office of Management and Budget, originally issued in 1969, established the Census Bureau's statistics on poverty as the standard data series to be used by all Federal agencies.[10]

The poverty concept is a statistical measure based on the Department of Agriculture's 1961 economy food plan. It reflects the different consumption requirements of families in relation to their size and composition, and the age of the family householder. A ratio of food expenditures to income of one-third, based on the Department of Agriculture's 1955 Survey of Food Consumption, was used to derive the original poverty thresholds from the economy food plan. The poverty thresholds have been updated annually based on changes in the Consumer Price Index. For further details, see appendix A.

Data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and worker's compensation; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. For additional information on this topic, see Appendix C, "Underreporting of Income."

Money income does not reflect the fact that many families received part of their income in the form of nonmoney transfers. Many low-income families received benefits such as food stamps, health benefits, and subsidized housing; other families received employer-provided benefits such as health insurance coverage, contributions to retirement plans, and payment for education expenses.

Beginning with the March 1980 survey, the CPS income supplement has included a group of questions

[9]Such noncash assistance as food stamps and subsidized housing are not taken into account in the poverty definition. About 59 percent of poor households received this type of means-tested noncash government benefit in 1985. See Current Population Reports, Series P-60, No. 155, *Characteristics of Households Receiving Selected Noncash Benefits: 1985.*

[10]*Statistical Policy Handbook,* Directive 14, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, May 1978.

on the receipt of selected noncash benefits during the previous year. The means-tested benefits covered in the March 1986 survey were food stamps, free or reduced-price school lunches, public or subsidized housing, and Medicaid. Questions were also asked about the following nonmeans-tested benefits: Medicare, CHAMPUS or other military health care, employer-provided insurance plans, and employer-provided group health insurance plans. Data on these benefits are contained in Current Population Reports, Series P-60, No. 155, *Characteristics of Households and Persons Receiving Selected Noncash Benefits: 1985.* That report shows that about 59 percent of all poor households received at least one of the following means-tested noncash benefits in 1985: food stamps, free or reduced-price school lunches, Medicaid, and publicly owned or other subsidized housing.

Technical Paper 56, *Estimates of Poverty Including the Value of Noncash Benefits: 1985,* focuses on five major noncash benefits: food stamps, free or reduced-price school lunches, Medicaid, Medicare, and publicly owned or subsidized housing. The paper presents three different methods for valuing these benefits: (1) market value, (2) recipient value, and (3) a poverty budget share approach. It is the fifth in a series of technical papers updating the estimates to 1985; Technical Papers 50, 51, 52, and 55 contain estimates for the period 1979 through 1984. The report for 1985 shows that if selected benefits had been counted as income, the official estimate of poverty would have been reduced by 8 to 35 percent, depending on the range of benefits valued and the method used.

It should be noted that there is no general agreement on how to value these benefits, or even which benefits should be valued. See the *Proceedings of the Conference on the Measurement of Noncash Benefits,* Dec. 12-14, 1985, Vol. 1, and also Harold W. Watts, "Have Our Measures of Poverty Become Poorer?" *Focus,* Volume 9, No. 2, Summer 1986, University of Wisconsin-Madison, Institute for Research on Poverty.

RELATED REPORTS

Current Population Survey. A detailed explanation of the poverty concept appears in "The Measure of Poverty, A Report to Congress as Mandated by the Education Amendments of 1974," prepared by a Poverty Studies Task Force under the auspices of the Department of Health, Education, and Welfare. This report also discusses limitations of the poverty definition and presents alternative methods for measuring poverty.

A detailed description of the original poverty index developed by the Social Security Administration appears in the following articles by Mollie Orshansky published in the *Social Security Bulletin,* "Counting the Poor: Another Look at the Poverty Profile," January 1965, and "Who's Who Among the Poor: A Demographic View of Poverty," July 1965.

Data on persons in poverty based on the original poverty definition appear in Current Population Reports, Series P-60, No. 54, *The Extent of Poverty in the United States: 1959 to 1966.* Data based on the revised definition of poverty appear in later reports in the P-60 series. Poverty data are also included in some reports in the P-20 and P-23 series of the Current Population Reports. All relevant titles are listed on the inside of the back cover of this report. Data based on the Current Population Survey showing the distribution of families and persons by income levels also appear in the P-60 series; the latest report is P-60, No. 156, *Money Income of Households, Families and Persons in the United States: 1985.*

Detailed data on the receipt of noncash benefits in 1985, including the poverty status of recipients appear in Current Population Reports, Series P-60, No. 155, *Characteristics of Households and Persons Receiving Selected Noncash Benefits: 1985.* Several approaches to the valuation of these benefits are explored in Technical Paper 56, *Estimates of Poverty Including the Value of Noncash Benefits: 1985.*

Decennial census. Poverty data collected in the 1980 Census are available for all States on computer files (referred to as summary tape files, or STF's) as well as in published reports. Summary Tape File 3 contains poverty data crossclassified by race, age, type of family, and presence of children, for States, standard metropolitan statistical areas (SMSA's), counties, county subdivisions, incorporated places, and census tracts. Various subfiles of STF3 present information for neighborhoods, congressional districts, school districts, and zip code areas. There are three report series based on STF3: Series PHC80-3, "Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas," Series PHC80-4, "Congressional Districts of the 98th Congress," and Series PHC80-S2, "Advance Estimates of Social, Economic, and Housing Characteristics.

Summary Tape File 4 provides somewhat more detailed information on the age and family structure of the poverty population, and additional characteristics including receipt of Social Security and public assistance income, work experience, and ratio of income to the poverty level. All items in STF4 are repeated by race and Hispanic origin. Data are shown for States, SMSA's, counties, county subdivisions, places, and tracts. The

three report series based on STF4 are Series PC80-1-C, "General Social and Economic Characteristics," Series PHC80-2, "Census Tracts," and Series HC80-1-B, "Detailed Housing Characteristics."

More detailed poverty data for fewer geographic areas (States, SMSA's, counties, and cities of 50,000 or more inhabitants) are presented in STF5. This file is the basis for Series PC80-1-D, "Detailed Population Characteristics," and Series HC80-2, "Metropolitan Housing Characteristics." Inquiries concerning availability of printed reports, computer tapes, and microfiche may be addressed to Data User Services Division, Customer Services, Bureau of the Census, Washington, DC 20233.

[1] INCLUDES MEMBERS OF THE ARMED FORCES, NOT SHOWN SEPARATELY.
[2] OTHER TRANSFER PAYMENTS INCLUDE PUBLIC ASSISTANCE, UNEMPLOYMENT COMPENSATION, WORKMEN'S COMPENSATION, AND VETERANS' PAYMENTS.
[3] "ALL OTHER" INCOME INCLUDES DIVIDENDS, INTEREST, RENT, PRIVATE PENSIONS, GOVERNMENT EMPLOYEE PENSIONS, ALIMONY, AND ANNUITY INCOME.
[4] DETAIL DOES NOT ADD TO TOTAL BECAUSE SOME PERSONS RECEIVE MORE THAN ONE OF THE SPECIFIED TYPES OF INCOME.

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. Unrelated individuals under 15 years old are also excluded.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. Beginning with the March 1980 survey, the CPS has employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population. The new definition and its impact on the size and composition of the farm population are discussed in Current Population Reports, Series P-27, No. 52.

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan areas. The population residing in metropolitan statistical areas (MSA's) as defined in June 1984 constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Nonmetropolitan areas. The territory outside metropolitan statistical areas is referred to here as nonmetropolitan.

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

Outside central cities. The territory outside central cities of metropolitan statistical areas but within MSA's is referred to here as outside central cities.

Geographic regions. The four major regions of the United States for which data are presented in this report represent groups of States as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada New Mexico, Oregon, Utah, Washington, and Wyoming.

North and West: Northeast, Midwest, and West Regions combined.

Poverty areas. For this report poverty areas are defined in terms of census tracts (in metropolitan areas) or minor civil divisions (townships, districts, etc. in nonmetropolitan areas) in which 20 percent or more of the population was below the poverty level in 1979 based on the 1980 census. See 1980 Census of Population report PC80-2-8D, *Poverty Areas in Large Cities.*

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or other investments which pay interest); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. However, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account,

as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments, such as aid to families with dependent children and general assistance.

Dividends, interest (on savings or other investments which pay interest), income from estates or trusts, net rental income, or royalities include dividends from stockholdings or membership in associations, interest on savings or any type of investment which pays interest, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or worker's compensation include (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payments, and unemployment and worker's compensation.

Receipts not counted as income are receipts from the following sources were not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Some of these were living on income "in-kind," savings, or gifts, or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other

having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families and unrelated individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons with income.

Income per family member. The income per family member is the average amount of income available to every man, woman, and child in a family. Income per family member is derived by dividing the total family income of a group by the number of family members in the same group.

Poverty definition. Poverty statistics presented in this report are based on a definition developed by the Social Security Administration in 1964 and revised in 1969 and 1981.

The original poverty index provided a range of income cutoffs adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spent approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. Annual revisions of these SSA poverty cutoffs were based on price changes of the items in the economy food budget.

As a result of deliberations of a Federal Interagency Committee in 1969, the following two modifications to the original SSA definition of poverty were recommended: (1) that the SSA thresholds for nonfarm families be retained for the base year 1963, but that annual adjustments in the levels be based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of food included in the economy food plan; and (2) that the farm thresholds be raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase of 360,000 poor families and 1.6 million poor persons in 1967.

In 1980, another interagency committee recommended three additional modifications that were implemented in the March 1982 CPS as well as the 1980 census: (1) elimination of separate thresholds for farm families, (2) averaging of thresholds for female-householder and "all other" families, and (3) extension of the poverty matrix to families with nine or more members. For further details, see the section, "Changes in the Definition of Poverty," in Current Population Reports, Series P-60, No. 133.

The poverty thresholds rise each year by the same percentage as the annual average Consumer Price Index. Table A-1 shows the CPI and the corresponding thresholds for a family of four for the 1959-85 period.

Table A-1. The Consumer Price Index and the Average Poverty Threshold for a Family of Four: 1959 to 1985

Year	Consumer Price Index (1967 = 100)	Average threshold for a family of four persons[1]
1985	322.2	$ 10,989
1984	311.1	10,609
1983	298.4	10,178
1982	289.1	9,862
1981	272.4	9,287
1980	246.8	8,414
1979	217.4	7,412
1978	195.4	6,662
1977	181.5	6,191
1976	170.5	5,815
1975	161.2	5,500
1974	147.7	5,038
1973	133.1	4,540
1972	125.3	4,275
1971	121.3	4,137
1970	116.3	3,968
1969	109.8	3,743
1968	104.2	3,553
1967	100.0	3,410
1966	97.2	3,317
1965	94.5	3,223
1964	92.9	3,169
1963	91.7	3,128
1962	90.6	3,089
1961	89.6	3,054
1960	88.7	3,022
1959	87.3	2,973

[1]For years prior to 1981, average threshold for a nonfarm family of four is shown.

Alternate level. Because the poverty definition currently in use by the Federal Government does not meet all the needs of the analysts of the data, a variation was introduced at the same time that modifications were made to the SSA poverty index. This alternate cutoff, set at 125 percent of the official government standard, is obtained by multiplying the income cutoffs at the poverty level by 1.25. Thus, the income cutoff for a family of four at 125 percent of the poverty level was $13,736 in 1985.

Weighted average thresholds at the poverty level. As shown in table A-2, the poverty cutoffs used by the Bureau of the Census to determine the poverty status of families and unrelated individuals consist of a set of 48 thresholds arranged in a two-dimensional matrix consisting of family size (from one person, i.e., unrelated indivuduals, to nine or more persons) cross-classified by presence and number of family members under 18 years old (from no children present to eight or more children present). Unrelated individuals and two-person families are further differentiated by the age of the individual or family householder (under 65 years and 65 years and over). The total family income of each family in the sample is tested against the appropriate dollar threshold to determine the poverty status of the family. If the family's total income is less than its corresponding cutoff, the family is classified as below the poverty level. The average thresholds shown in table A-2 were weighted by the presence and number ofchildren. For a given size of family, the weighted average threshold for that group is obtained by multiplying the threshold for each presence and number of children category within the given family size by the number of families in that category. These products are then aggregated across the entire range of presence and number of children categories, and the total aggregate is divided by the total number of families in the group to yield the weighted average threshold at the poverty level for that size family. Because family composition does not remain constant from year to year, the weighted average thresholds for 1985 will not reflect, identically, the change in the CPI between 1985 and earlier years.

Since the basic thresholds used to determine the poverty status of families and unrelated individuals are applied to all families and unrelated individuals, the weighted poverty thresholds are derived using all families and unrelated individuals rather than just those families and unrelated individuals classified as below the poverty level. To obtain the weighted poverty thresholds for families and unrelated individuals below 125 percent of the poverty level, the weighted thresholds may be multiplied directly by 1.25.

Income deficit. Income deficit is the difference between the total income of families and unrelated individuals below the poverty level, and their respective poverty thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the deficit is equal to the poverty threshold. This measure provides an estimate of the amount which would be required to raise the incomes of all poor families and unrelated individuals to their respective poverty thresholds. The income deficit is thus a measure of the degree of impoverishment of a family or unrelated individual. However, caution must be exercised in comparing the average deficit of families classified by the race or sex of the householder. Since the poverty thresholds used in this report are based on family size and composition, apparent differences in the average income deficits may, to some extent, be a function of the differences in these characteristics.

Median income deficit. The median income deficit is the amount which divides the distribution into two equal groups, one having an income deficit above the median and the other having an income deficit below the median.

Mean income deficit. The mean income deficit is the amount obtained by dividing the total income deficit of a group below the poverty level by the number of families or unrelated individuals (as appropriate) in that group.

Deficit per family member. The deficit per family member is the average amount of money necessary to raise every man, woman and child in a family out of poverty.

Table A-2. Poverty Thresholds in 1985, by Size of Family and Number of Related Children Under 18 Years Old

Size of family unit	Weighted average thresholds	Related children under 18								
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual)	$5,469									
Under 65 years	5,593	$5,593								
65 years and over	5,156	5,156								
Two persons	6,998									
Householder under 65 years	7,231	7,199	$7,410							
Householder 65 years and over	6,503	6,498	7,382							
Three persons	8,573	8,410	8,654	$ 8,662						
Four persons	10,989	11,089	11,270	10,903	$10,941					
Five persons	13,007	13,373	13,567	13,152	12,830	$12,634				
Six persons	14,696	15,381	15,442	15,124	14,819	14,365	$14,097			
Seven persons	16,656	17,698	17,808	17,428	17,162	16,667	16,090	$15,457		
Eight persons	18,512	19,794	19,969	19,609	19,294	18,847	18,280	17,690	$17,540	
Nine or more persons	22,083	23,811	23,926	23,608	23,341	22,902	22,298	21,753	21,617	$20,785

The deficit per family member is derived by dividing the total family income deficit of a group by the number of family members in the same group.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households. Beginning with the 1980 CPS, the Bureau of the Census began using the terms "householder" and "family householder" instead of "head of household" and "head of family."

Family. The term "family" refers to a group of two or more persons related by birth, marriage, or adoption who reside together; all such persons are considered as members of one family. For example, if the son of the person who maintains the household and the son's wife are members of the household, they are treated as members of the parent's family. Every family must include a householder; two or more people living in the same household who are related to one another, but are not related to the householder, form an "unrelated subfamily" and are not included in the count of families.

Subfamily. A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old living in a household but not including among its members the person or couple maintaining the household. Because a subfamily does not include a householder, it is by definition excluded fromn the count of families. There are two kinds of subfamilies, related and unrelated.

Related subfamily. A related subfamily is a subfamily whose members are related to the person or couple maintaining the household. The most common example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a related subfamily are also members of the householder's family.

Unrelated subfamily. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members. An unrelated subfamily is a subfamily whose members are not related to the person or couple maintaining the household. Members of unrelated subfamilies may include such persons as guests, lodgers, or resident employees and their relatives living in a household. Unrelated subfamily members are not part of the householder's family. Even though unrelated subfamilies are not counted as families, they are treated as families for the purpose of determining whether their members are above or below the poverty level.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or "married-couple" before the term "household," or "family," indicates that the household, or family, is maintained by a husband and wife.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals. The poverty status of unrelated individuals is determined independently of other household members' incomes.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary individual. A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily householders and inmates of institutions) who is not related to any other person in the household or group quarters.

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Hispanic origin. Persons of Hispanic origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Central or South American, or some other Hispanic origin. It should be noted that persons of Hispanic origin may be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools included public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular-schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific jobseeking activity *within the past 4 weeks* such as registering at a public or private employment office, meeting with employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" comprises all civilians classified as employed or unemployed.

Not in the labor force. All civilians 15 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group of persons who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the survey week) are also classified as not in the labor force.

Occupation and class of worker. Persons are classified according to the civilian job held longest during the year. Persons who held two jobs or more were reported in the job at which they worked the greatest number of weeks.

The occupation groupings included in this report are based on the classification system used in the 1980 census. The data included in previous Current Population Reports in the P-60 series, starting with No. 81 and ending with No. 138, were based on the classification system used in the 1970 census. For an explanation and description of the changes from the old to the new system, see the February 1983 issue of "Employment and Earnings," published by the Bureau of Labor Statistics.

Class of worker refers to the subdivision of workers into three groups: wage and salary workers, self-employed workers, and unpaid family workers. The first group refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rate for private employer or for any government unit. The second group refers to persons working in their own business, profession, or trade, for profit or fees. The third group refers to persons working without pay in a business operated by a member of the household to whom they are related by birth or marriage.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round, full-time worker. A year-round, full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Number of workers. The number includes all persons in the family who worked at anytime during the year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question, "What were you doing most of last year?"

Symbols. A dash (—) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol "X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0.

Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1980 and later years were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1980 census. The base figures shown for 1969 to 1979 were based on statistics updated from the 1970 census, whereas the figures for the years 1961 to 1968 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey," Employment and Earnings, Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

The introduction of population controls and estimation procedures based on the 1980 census raised the number of persons from 217.8 million to 222.9 million in the March 1980 CPS and the number of families from 58.4 to 59.6 million. The number of persons and families below the poverty level rose proportionately, from 25.3 to 26.1 million, and from 5.3 to 5.5 million, respectively.

COMPARABILITY OF ESTIMATES FROM MARCH 1986 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1986 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

POPULATION CONTROLS

Beginning with 1979, the data shown in this report are based on population controls derived from the 1980 census. The data for 1969 to 1978 reflect 1970 census-based population controls, while figures for previous years are tied in with 1960 census-based controls. Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and poverty rates. However, the changes may have more impact on the population levels in different subgroupings such as the total number of persons or families either overall, within some particular income interval, or below the poverty level. A detailed description of these changes appears in the Bureau of Labor Statistics report, Employment and Earnings, Vol. 18, No. 8, February 1972.

Undocumented immigrants. The 1980 census counted about two million undocumented immigrants according to Census Bureau estimates. Beginning in January 1986, the independent population controls included an allowance for growth in the undocumented population for every year since 1980. This methodological change was partially offset by another change that increased the allowance for emigration of legal residents. Data shown for Current Population Surveys with controls based on pre-1986 methods have not been revised to take into account these methodological changes. Consequently, direct comparisons of CPS figures for months before January 1986 with later months will not be consistent. Series P-25, No. 985 reviews the postcensal population estimates methodology currently in use.

COMPARABILITY OF METROPOLITAN AND NONMETROPOLITAN DATA FROM THE MARCH 1986 CPS WITH DATA FOR PREVIOUS YEARS

Estimates by type of residence categories (metropolitan, nonmetropolitan, central cities, outside central cities) were omitted from the 1984 reports because of the mixed 1970 and 1980 census sampling frame used for the 1985 CPS. Estimates by type of residence have been resumed in this 1985 report since the March 1986 CPS was totally based on the 1980 census sampling frame. The type of residence categories reflect metropolitan statistical areas (MSA's) defined as of June 1984. (For the definition of MSA's, see the definition's section under the heading "metropolitan areas".)

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. There are important differences in the population classified as metropolitan using the 1970 and 1984 definitions.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. For example, between July 1985 and August 1986 the magnitude of the monthly differences varied from 900,000 to 2.5 million persons, so that the proportion of the

population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Noninterviews, Nonresponses, and Allocations

In the March 1986 CPS, no interview was obtained for approximately 4 percent of the 60,500 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. In many cases, even though an interview is obtained, complete information for all of the income questions is not available, unknown or refused. In March 1986, the income data were incomplete for about 27 percent of the persons 15 years old and over. About 32 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Although nonresponse rates for families by poverty status are not available, it is known that families in the lower income intervals tend to have lower nonresponse rates than those in the middle and upper income intervals. This is due in part to the fact that lower income families have less complicated financial arrangements than those in other income groups. For a more detailed discussion of this topic see "Income Nonresponses in the Current Population Survey" by Mitsuo Ono and Herman P. Miller published in *Proceedings of the Social Statistics Section,* American Statistical Association, 1969.

QUESTIONNAIRE WORDING AND PROCEDURES

A modified version of an experimental questionnaire which was tested on three-eights of the March 1979 sample was used for the full sample beginning in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" in Current Population Reports, Series P60, No. 130.

Modifications in collecting income data in the March 1980 Current Population Survey. A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" in Current Population Reports, Series P-60, No. 130.

CHANGES IN SAMPLE SIZE

Starting with the March 1977 CPS, the basic monthly sample was expanded from about 56,000 housing units to 68,000. The expanded sample was used until the March 1982 survey, when the sample size was reduced to about 62,000 households. Neither of these changes in sample size had any major effect on the data for the poverty population.

DEFINITION OF THE INCOME UNIVERSE

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion

on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series, P-60, No. 130.

REVISIONS TO THE EARNINGS QUESTION ON THE MARCH 1986 CPS

The Census Bureau has made a revision to the March CPS income supplement questionnaire in an effort to adapt to continually rising levels of annual income. Beginning with the March 1986 CPS, question number 48, which covers the amount of earnings received from the employer or own business for which the respondent worked the longest during the previous calendar year, was modified to permit coding of earnings amounts to a maximum of $299,999. Prior to March 1986, procedures allowed for coding of amounts to a maximum of $99,999. In March 1977, about 127,000 weighted sample persons reported receiving earnings in the previous calendar year in excess of the $99,999 maximum. In March 1986, when the revision was made, about 627,000 weighted sample persons reported receiving earnings in excess of this maximum. About 16,000 weighted sample persons reported earnings amounts that exceeded the revised maximum of $299,999.

This change in the questionnaire causes a break in the time series for some income measures. Table C has been included to indicate the effect of the questionnaire revision on selected income measures. Overall the revision added about $22.9 billion to the total aggregate income that would have gone undetected had the $99,999 limit continued. Mean income, per capita income, shares of aggregate income by quintile and the index of income concentration (GINI Index) were all affected by the revision and caution should be used when comparing the 1985 data to earlier years.

Appendix B. Source and Reliability of Estimates

SOURCE OF DATA

The estimates in this report are based on data obtained annually in March 1960 through March 1986 from the Current Population Survey (CPS) conducted by the Bureau of the Census and from supplementary questions to the CPS. Also, some estimates are based on data from the 1960 decennial census. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member in every sample household. In addition, supplementary questions are asked every March about money income for the previous year. In order to obtain more reliable data for the Hispanic population, the March CPS sample was enlarged to include all households from the previous November which contained at least one sample person of Hispanic origin. For this report, persons in the Armed Forces living off post or with their families on post are also included.

Current Population Survey (CPS). The present CPS sample was selected from the 1980 decennial census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. The current CPS sample is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions in the Nation. In this sample, approximately 60,500 occupied households were eligible for interview. Of this number, about 2,500 occupied units were visited by interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason.

CPS estimation procedure. The estimation procedure used in this survey involves the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, sex, race and Hispanic/ non-Hispanic categories. These independent estimates are based on statistics from the decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The independent population estimates used to obtain data for money income for 1979 and later are based on the 1980 decennial census. In earlier reports in this series (P-60), data for 1979 were obtained using independent population estimates based on the 1970 decennial census. For more details on this change, see the section of the text, "Introduction of 1980 Census Population Controls" in an earlier report (Series P-60, No. 133). The estimation procedure for the data from the March supplement involved a further adjustment so that husband and wife of a household received the same weight.

The estimates in this report for 1983 through 1985 are also based on revised survey weighting procedures for persons of Spanish origin. In previous years the estimation procedures used in this survey involved the inflation of weighted sample results to inde pendent estimates of the noninstitutional population by age, sex, and race. There was, therefore, no specific control of the survey estimates for the Hispanic population. During the last several years, the Bureau of the Census has developed independent population controls for the Hispanic population by sex and detailed age groups and has adopted revised weighting procedures to incorporate these new controls. It should be noted that the independent population estimates include some, but not all, illegal immigrants.

The following table provides a description of some aspects of the CPS sample design in use during the referenced data collection periods.

Description of the Current Population Survey

Time period	Number of sample areas[1]	Housing units eligible[3]	
		Interviewed	Not interviewed
1986	729	57,000	2,500
1985	629/729	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	[2]333	33,500	1,500
1959	330	33,500	1,500

[1]Beginning in May 1956, these areas were chosen to provide coverage in each State and the District of Columbia.

[2]Three sample areas were added in 1960 to represent Alaska and Hawaii after statehood.

[3]Does not include enlargements for Hispanic households.

NOTE: Prior to 1966, income data were collected from approximately 75 percent of occupied households in CPS.

RELIABILITY OF ESTIMATES

Since the CPS estimates were based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. The accuracy of a survey result depends on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates. The standard errors provided for the CPS estimates primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure any systematic biases in the data. (Bias is the difference averaged over all possible samples, between the estimate and the desired value.)

Nonsampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of respondents to provide correct information, inability to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage as compared to the level of the 1980 decennial census is about 7 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. Ratio estimation to independent age-sex-race-Hispanic population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Further, the independent population controls used have not been adjusted for undercoverage in the 1980 census.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey,* Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978; and Technical Paper 40, *The Current Population Survey: Design and Methodology,* Bureau of the Census, U.S. Department of Commerce.

Sampling variability . The standard errors given in the following tables are primarily measures of sampling variability, that is, of the variations that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct confidence intervals, ranges that would include the average results of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypotheses appearing in this report is that the population parameters are different. An example of this would be comparing the poverty rate for Whites to the poverty rate for Blacks. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical.

To perform the most common test, let x and y be sample estimates for two characteristics of interest. Let the standard error on the difference x-y be S_{DIFF}. If the ratio $R = (x-y)/S_{DIFF}$ is between -2 and +2, no conclusion about the difference between the characteristics is justified at the 0.05 level of significance. If, however , this ratio is smaller than -2 or larger than +2, the observed difference is significant at the 0.05 level. In this event, it is commonly accepted practice to say that the characteristics are different. Of course, sometimes this conclusion will be wrong. When the characteristics are, in fact, the same, there is a 5 percent chance of concluding that they are different. All statements of

comparison in the text have passed a hypothesis test at the 0.10 level of significance or better, and most have passed a hypothesis test at the 0.05 level of significance or better. This means that, for most differences cited in the text, the estimated difference between characteristics is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference between characteristics is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison is qualified, e.g., by the use of the phrase "some evidence."

Comparability of data. Caution should be used when comparing estimates for 1979 and later, which reflect 1980 census-based population controls, to those for 1969 through 1978, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percent distributions, but did have a significant impact on levels. For example, use of 1980-based population controls resulted in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for 1979 and later will differ from those for earlier years more than what could be attributed to actual changes in the population and these differences could be disproportionately greater for certain subpopulation groups than for the total population.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept instead of the traditional "head" concept, the introduction of the new farm definition, and use of more detailed income intervals in the upper range of the income distribution. Due to these and other changes caution should be used in comparing estimates for 1979 through 1985 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 130).

Another major change is that income and poverty estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence categories such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 CPS income supplement was revised to allow the coding of larger earnings amounts on the questionnaire.

Note when using small estimates. Summary measures (such as medians and percent distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each data user's needs. Also, care must be taken in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus, distorting a seemingly valid hypothesis test.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in table B-1 provide approximations to the standard errors of estimates of the number of persons and families by poverty status and race for the years 1980 through 1985 for Total, White and Black. Table B-2 provides approximations to the standard errors of estimates of the number of persons and families by poverty for Hispanics for the years 1973 through 1985. Table B-3 contains approximations to standard errors of estimated percentages of persons below the poverty level. Table B-4 presents the factors (f_1) to be used to calculate standard errors for selected characteristics. Table B-5 presents the factors (f_2) to be used to estimate standard errors for the years 1959 to 1979.

To calculate standard errors for estimated numbers and percentages of persons and families in poverty it was necessary to use two parameters (denoted as "a" and "b") which are presented in tables B-6 through B-10. These parameters were used to calculate the standard errors in tables B-1, B-2 and B-3 and to calculate the "f_1" factors in table B-4. Direct computation of the standard errors will give more accurate results than the use of the standard error tables. Methods for direct computations are given in the following sections.

Data based on 1960 census 1-in-1,000 sample. Standard errors for data based on the 1960 census 1-in-1,000 sample are estimated by applying the appropriate factor given in table B-5 to the standard errors shown in tables B-1 and B-3.

Table B-1. Standard Errors of Estimates Number of Persons and Families, by Poverty Status and Race: 1980-85 Total, White, and Black
(Numbers in thousands)

Size of estimate	Standard error for persons				Standard error for families and unrelated individuals	
	All income levels		Below poverty level			
	Total	65 years and over	Total	65 years and over	All income levels	Below poverty level
Total or White[1]						
100	14	14	31	18	14	16
250	23	23	49	29	22	26
500	32	32	69	40	31	36
1,000	45	45	98	57	43	52
2,500	72	69	154	87	68	84
5,000	101	92	217	116	96	123
10,000	141	115	304	145	135	186
25,000	215	67	464	86	206	343
50,000	285	(X)	616	(X)	273	583
100,000	343	(X)	744	(X)	331	1049
Black[1]						
100	15	15	31	18	14	14
250	24	23	49	27	23	23
500	34	31	69	37	32	32
1,000	48	39	97	46	45	46
2,500	74	23	150	27	69	75
5,000	101	(X)	203	(X)	94	112
10,000	131	(X)	263	(X)	122	170
15,000	143	(X)	289	(X)	134	223

X Not applicable.
[1]To estimate standard errors for the years 1959 to 1979 multiply the above standard errors by the appropriate factor in table B-5.

Standard errors of estimated numbers. The approximate standard errors S_x, of an estimated number shown in this report can be obtained in two ways. It may be obtained by use of the formula

$$S_x = f_2 s \qquad (1)$$

where f_2 is the appropriate factor from table B-5 to be used for estimates for the years 1959 to 1979, and S is the standard error of the estimate obtained by interpolation from tables B-1 or B-2. Alternatively, the standard errors may be approximated by formula (2), from which the standard errors were calculated in tables B-1 and B-2. Use of this formula will provide more accurate results than the use of formula (1) above.

$$S_x = f_2\sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in tables B-6 through B-10 associated with the particular type of characteristic, and f_2 is the appropriate factor from table B-5. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration of the computation of the standard error of an estimated number. Text table A of this report shows that in 1985 there were 33,064,000 persons below the poverty level. Using formula (2) with a = -0.000041 and b = 9628 from table B-6 and f_2 = 1.0 from table B-5, the approximate standard error is:

$$1.0\sqrt{(-0.000041)(33{,}064{,}000)^2 + (9628)(33{,}064{,}000)} = 523{,}000^1$$

This means that a 68-percent confidence interval for the number of persons that reported they were below the poverty level in 1985 is from 32,541,000 to 33,587,000. A 95-percent confidence interval is from 32,018,000 to 34,110,000.

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, partic-

[1]Using formula (1), table B-1, and the appropriate f_2, 1.0 from table B-5, the approximate standard error is 513,000.

Table B.2 Standard Errors of Estimated Numbers of Persons and Families, by Poverty Status: 1973-85 (Hispanic)

((Numbers in thousands)

Size of estimate	Standard error for persons				Standard error for families and unrelated individuals	
	All income levels		Below poverty level			
	Total	65 years and over	Total	65 years and over	All income levels	Below poverty level
Hispanic (1973-82)[1]						
100	17	17	34	21	16	16
250	27	27	54	33	25	25
500	39	38	76	47	35	35

250	24	23	49	27	23	23
500	34	30	68	37	32	32
1,000	47	36	95	45	44	46
2,500	71	(X)	144	14	66	75
5,000	93	(X)	187	(X)	85	112
10,000	103	(X)	207	(X)	93	170

X Not applicable.

[1]Income data for persons of Hispanic origin were not published before 1973 because of the reliability of the estimates.

ularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter indicated by the numerator. The approximate standard error, $S_{(x,p)}$, of an estimated percentage can be obtained by use of the formula

$$S_{(x,p)} = f_1 f_2 s \qquad (3)$$

Table B-3. Standard Errors of Estimated Percentages of Persons Below the Poverty Level: 1980-85

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	5.0	7.8	10.7	15.5	17.9
100	4.3	6.8	9.3	13.4	15.5
250	2.7	4.3	5.9	8.5	9.8
500	1.9	3.0	4.2	6.0	6.9
1,000	1.4	2.1	2.9	4.2	4.9
2,500	0.9	1.4	1.9	2.7	3.1
5,000	0.6	1.0	1.3	1.9	2.2
10,000	0.4	0.7	0.9	1.3	1.6
25,000	0.3	0.4	0.6	0.8	1.0
50,000	0.2	0.3	0.4	0.6	0.7
100,000	0.1	0.2	0.3	0.4	0.5

Note: To estimate the standard errors for a specific characteristic, multiply the above standard errors by the appropriate factor in table B-4. To estimate standard errors for the years 1959 to 1979, multiply the above standard errors by the appropriate factor in table B-5.

Table B-4. Factors to be Applied to Generalized Standard Errors in Table B-3

Characteristic	Factor (f_1)
Persons below the poverty level:	
Total or White	1.0
Black	1.0
Hispanic (1972-82)	1.1
Hispanic (1983-84)	1.2
Hispanic(1985)	1.0
Families or unrelated individuals below the poverty level:	
Total or White	[1]
Black	[1]
Hispanic (1972-82)	0.5
Hispanic (1983-84)	0.5
Hispanic (1985)	[1]
Persons of all income levels:	
Total or White	0.5
Black	0.5
Hispanic (1972-82)	0.6
Hispanic (1983-84)	0.6
Hispanic (1985)	0.5
Families or unrelated individuals of all income levels:	
Total or White	0.4
Black	0.5
Hispanic (1972-82)	0.5
Hispanic (1983-84)	0.5
Hispanic (1985)	0.5
Age of householder	[2]0.4
Number of related children under 18 years	[2]0.4
Size of family	[2]0.4
Educational attainment of householder	[2]0.4

[1]Factors do not exist for these characteristics. Standard errors must be calculated using formula (4) and appropriate parameters in table B-8.

[2]Use these factors to obtain standard errors of these characteristics by race.

Note: For characteristics not appearing in this table, $f_1 = \sqrt{\text{appropriate b parameter}/9628}$.

In this formula, f_1 and f_2 are the appropriate factors from tables B-4 and B-5, and S is the standard error of the estimate obtained by interpolation from table B-3. Alternatively, the standard errors may be approximated by formula (4). Use of this formula will provide more accurate results than use of formula (3) above.

$$S_{(x,p)} = f_2 \sqrt{(b/x) \bullet p\,(100-p)} \qquad (4)$$

Here x is the size of the subclass of persons, or families and unrelated individuals which is the base of the percentage, p is the percentage ($0 < p < 100$), b is the parameter in tables B-6 through B-10 associated with the particular type of characteristic in the numerator of the percentage, and f_2 is the appropriate factor from table B-5.

Illustration of the computation of the standard error of a percentage. Text table A also shows that of the 33,064,000 persons below the poverty level, 8,926,000 or 27.0 percent were Black. Using formula (4) with b = 9628 from table B-6, and f_2 = 1.0 from table B-5, the approximate standard error on an estimate of 27.0 percent is

$$1.0 \sqrt{\frac{9{,}628}{33{,}064{,}000}\,(27.0)\,(73.0)} = 0.8 \text{ percent}^{2}$$

This means that a 68-percent confidence interval for the percentage of Black persons below the poverty level in 1985 is from 26.2 to 27.8 percent. A 95-percent confidence interval is from 25.4 to 28.6 percent.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$S_{(x,y)} = \sqrt{S_x^2 + S_y^2 - 2r\,S_x S_y} \qquad (5)$$

where S_x and S_y are the standard errors of the estimates x and y. The estimates can be numbers, percents, ratios, etc. The correlation coefficient r can be determined from table B-11 for year-to-year comparisons for poverty estimates of numbers and proportions; for other comparisons assume that r equals zero. Making this assumption will result in accurate estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the computation of the standard error of a difference. Text table A shows that the number of families below the poverty level in 1985 was 7,223,000 and in 1984 was 7,277,000. The apparent difference is 54,000. Using formula (2), the appropriate parameters from table B-8 (a = +0.000084 and b = 2067), the standard errors on 7,223,000 and 7,277,000 are 139,000 and 140,000, respectively.

[2]Using formula (3), table B-3, and the appropriate f_1 and f_2 from tables B-4 and B-5, the approximate standard error is 0.7.

Table B-5. Factors to be Applied to All Non-Hispanic Standard Errors for 1959 to Present

Year	Source of data	Factor (f_2)
1959	1-in-1,000 sample of 1960 census	0.6
1959 to 1964	CPS	1.4
1965	CPS	1.2
1966 to 1979	CPS	0.9
1980 to present	CPS	1.0

Table B-6. Parameters for Estimated Numbers and Percentages of Persons, by Poverty Status, Age, Sex, and Race: 1980-85

Characteristic	Below the poverty level				All income levels			
	Total or White		Black		Total or White		Black	
	a	b	a	b	a	b	a	b
Total persons[1]	-0.000041	9628	-0.000270	9628	-0.000009	2077	-0.000067	2374
Male	-0.000110	9628	-0.000825	9628	-0.000018	2077	-0.000142	2374

25 to 44	(X)	(X)	(X)	(X)	-0.000397	3319	(X)	(X)	(X)	(X)	-0.000284	2374

X not applicable.
[1]For 1985, the first three age groups should be under 15, 15 and over, and 15 to 24.
Note: Income data for Hispanics were not published before 1973 due to the reliability of the estimates. These parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

Table B-8. Parameters for Estimated Numbers and Percentages of Families or Unrelated Individuals, by Poverty States and Race: 1980-85

Race	Below the poverty level		All income levels	
	a	b	a	b
Total or White[1]	+0.000084	2067	-0.000008	1896
Black[1]	+0.000084	2067	-0.000058	2067
Hispanic:				
1973-82	-0.000014	2420	-0.000014	2420
1983-84	-0.000237	2713	-0.000237	2713
1985	-0.000084	2067	-0.000121	2067

[1]To estimate these standard errors for 1959 to 1979, use the appropriate factor in table B-5.
Note: These parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

Therefore, using formula (5) with r = 0.35 from table B-11, the standard error of the estimated difference of 54,000 is about

$$\sqrt{(139{,}000)^2 + (140{,}000)^2 - 2(0.35)(139{,}000)(140{,}000)} = 157{,}000$$

This means that the 95-percent confidence interval around the 54,000 difference is from -264,000 to 372,000, i.e., 54,000 ± 2(159,000). Therefore a conclusion that the average estimate of the difference derived from all possible samples lies within a range computed in this way would be correct for roughly 95-percent of all possible samples. Since the interval contains zero, we cannot conclude with 95-percent confidence that the number of families below the poverty level in 1985 is different than the figure for 1984.

Confidence interval and standard error of a median. The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for measuring the reliability of an esti mated median is to determine a confidence interval about it. The following procedure may be used to estimate a 68-percent confidence interval and hence the standard error of a median based on sample data.

1. Determine, using the standard error tables and factors or formula (4), the standard error of the estimate of 50 percent from the distribution.
2. Add to and subtract from 50 percent the standard error determined in step (1).
3. Using the distribution of the characteristic, calculate the values from the distribution corresponding to the two points established in step (2). These values will be the limits for the 68-percent confidence interval.
4. Divide the difference between the two points determined in step (3) by two to obtain the standard error of the median.

A 95-percent confidence interval may be determined by finding the values corresponding to 50 percent plus and minus twice the standard error determined in step (1).

The formula used to implement step (3) for linear interpolation is:

$$\text{Linear: } X_pN = \frac{N_1 - pN}{N_1 - N_2}(A_2 - A_1) + A_1 \qquad (6)$$

where N = total number of families or persons in the distribution.

x_pN = estimated upper and lower limits for the confidence interval ($0 < p < 1$). For the purposes of calculating the confidence interval, p takes on the two values in step (2).

A_1 and A_2 = The estimates which are the lower and upper limits, respectively, for the interval in which the median falls.

N_1 and N_2 = the estimated number of families or persons with incomes (or deficits) greater than or equal to A_1 and A_2, respectively.

Illustration of the computation of a confidence interval for a median. Using the estimates from table 29 it can be shown that the median income deficit for poor White families with a female householder (no husband present) was $3,700 in 1985. The size, or base, of the distribution from which this median was determined is 2,093,000 families.

1. Using formula (4) with b = 2067 and f_2 = 1.0, the standard error of 50 percent on a base of 2,093,000 is about 1.6 percent.
2. To obtain a 68-percent confidence interval on an estimated median, add to and subtract from 50 percent the standard error found in step (1). This yields percent limits of 48.4 and 51.6.
3. From table 29, the lower and upper limits for the interval in which the median falls are $3,000 and $4,000, respectively. From the same table, the estimated numbers of poor White families with a female householder with an income deficit greater than or equal to $3,000 and $4,000 are 1,291,000 and 942,000, respectively.

Table B-9. Parameters for Estimated Numbers and Percentages of Selected Characteristics of Families or Unrelated Individuals Regardless of Income Status

Characteristic of family	Total or White, 1973-85[1]		Black, 1973-85[1]		Hispanic					
					1973-82		1983-84		1985	
	a	b	a	b	a	b	a	b	a	b
Age of householder...	-0.000010	1778	-0.000066	1606	-0.000010	1820	-0.000108	1820	-0.000137	1606
Employment status of householder	-0.000025	2013	-0.000243	2013	(X)	(X)	(X)	(X)	-0.000222	1241
Work experience of householder	-0.000025	2013	-0.000243	2013	-0.000007	1241	-0.000222	1241	-0.000222	1241
Number of related children under 18 ...	-0.000010	1778	-0.000066	1606	-0.000010	1820	-0.000108	1820	-0.000137	1606
Size of family	-0.000010	1778	-0.000087	1606	-0.000010	1820	-0.000104	1820	-0.000137	1606
Number of workers ..	-0.000016	2327	-0.000144	2327	-0.000007	1241	-0.000109	1241	-0.000109	1241
Educational attainment of householder	-0.000010	1778	-0.000146	1606	-0.000010	1820	-0.000108	1820	-0.000137	1606

[1]To obtain standard errors for data prior to 1973, see parameters provided in earlier reports.
Note: These parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

Table B-10. Parameters for Estimated Numbers and Percentages of Persons and Families Below the Poverty Level, by Region and Farm-Nonfarm Residence: 1980-85

Region	Persons[1]		Families or unrelated individuals			
			Below poverty level		All income levels	
	a	b	a	b	a	b
North and West	-0.000047	8761	0.000076	1877	-0.000007	1722
Northeast	-0.000039	7221	0.000063	1552	-0.000006	1424
North Central	-0.000048	8858	0.000077	1897	-0.000007	1740
West	-0.000056	10302	0.000090	2221	-0.000008	2037
South	-0.000054	9917	0.000086	2119	-0.000009	1944
Farm[2]	-0.000071	18389	-0.000094	3803	-0.000009	3489
Nonfarm[2]	-0.000041	9628	0.000084	2067	-0.000008	1896

[1]To estimate standard errors for persons at all income levels divide these parameters by 4.3 and use the appropriate formula given in the text.
[2]Introduction of the new sample design temporarily prevented the development of farm-nonfarm estimates in 1984.
Note: To estimate standard errors fo1959 to 1979 use the appropriate factor in table B-5. These parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

Using formula (6), the lower limit for the confidence interval of the median is found to be about

$$\frac{1{,}291{,}000 - (.516)(2{,}093{,}000)}{1{,}291{,}000 - 942{,}000}(4{,}000 - 3{,}000) + 3{,}000 = \$3{,}605$$

Similarly, the upper limit is found to be about

$$\frac{1{,}291{,}000 - (.484)(2{,}093{,}000)}{1{,}291{,}000 - 941{,}000}(4{,}000 - 3{,}000) + 3{,}000 = \$3{,}797$$

Thus, a 68-percent confidence interval for the median income deficit for poor White families with a female householder is from $3,605 to $3,797.

The standard error of the median is, therefore,

$$\frac{3{,}797 - 3{,}605}{2} = \$96$$

Standard error of an estimated arithmetic mean. The standard error of an arithmetic mean can be approximated by formula (7). Because of the approximations used in developing formula (7), an estimate of the standard error of the mean obtained from that formula will generally underestimate the true standard error. The formula used to estimate the standard error of a mean is

$$S_x = f_2\sqrt{b/y \bullet S^2} \qquad (7)$$

In this formula, f_2 is the appropriate factor from table B-5, y is the size, or the base, of the distribution and b is the parameter in tables B-6 to B-10. The variance, S^2, is given by the following formula:

$$S^2 = \sum_{i=1}^{c} p_i x_i^2 - \bar{x}^2$$

where x is the mean of the distribution, defined by

$$\bar{x} = \sum_{i=1}^{c} p_i x_i$$

c is the number of intervals; i indicates a specific interval, taking on values 1 through c; p_1 is the percentage of total cases in the ith interval; and x_1 is the midpoint of the ith interval (or discrete value of the ith interval.)[3]

Standard error of a ratio. Certain mean values for persons in families or households shown in tables of this report were calculated as the ratio of two numbers. For example, the mean number of children per family with children is calculated as

$$\frac{x}{y} = \frac{\text{total number of children in families}}{\text{total number of families with children}}$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families or households of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families or households.

Case 1: There is at least one person having the characteristic in every family or household of the class: for example, the mean number of persons per family or the mean number of children per family with children. For ratios of this kind, the standard errors are approximated by the following formula:

$$S_{x/y} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{S_y}{y}\right)^2 + \left(\frac{S_x}{x}\right)^2 - 2r\frac{S_x}{x}\frac{S_y}{y}\right]} \qquad (8)$$

[3]For income table of families below the poverty level, use -$2,500 as the mid-point for "loss" and $20,600 as the mid-point for "$20,000 and over." For incomes of unrelated individuals below the poverty level, use -$9,100 as the mid-point for "loss" and $5,200 as the mid-point for "$5,000 and over." For income tables for all families, use -$5,000 for "loss" and $68,000 for "50,000 and over." For the income deficit table, use $7,400 as the mid-point of the "$5,000 of more" interval and $4,900 for the "$1,500 or more" interval.

Table B-11. Year-to-Year Correlation Coefficients for Poverty Estimates

Characteristic	1983-84[1]		1972-73 to 1982-1983 or 1984-85		1971-72		1970-71	
	Persons	Families	Persons	Families	Persons	Families	Persons	Families
Total	0.39	0.30	0.45	0.35	0.15	0.14	0.31	0.28
White	0.30	0.26	0.35	0.30	0.14	0.13	0.28	0.25
Black	0.39	0.30	0.45	0.35	0.17	0.16	0.35	0.32
Other races	0.39	0.30	0.45	0.35	0.17	0.16	0.35	0.32
Hispanic origin	0.56	0.47	0.65	0.55	0.17	0.16	0.35	0.32

[1]Correlation coefficients for 1983-84 are lower than those for 1982-83 or 1984-85 because of the phase-in of the new sample design.

Note: These correlation coefficients are for estimates of consecutive years. For estimates of nonconsecutive years, all correlation coefficients should be assumed zero.

The standard error of the estimated number of families, S_y, and the standard error of the estimated number of persons with the characteristic, S_x, may be obtained from tables B-1 and B-2 . Alternatively, formula (2) may be used. In formula (8), r represents the correlation coefficient between the numerator and the denominator of the estimate. In the above example, and for other ratios of this kind, use 0.7 as an estimate of r.

Case 2: The number of persons having the characteristic in a given family may be 0, 1, 2, 3, or more; for example, the mean number of children per family. For ratios of this kind the standard error is approximated by formula (8) but r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the true standard error of the ratio.

Appendix C. Underreporting of Income

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources, such as the Bureau of Economic Analysis, the Social Security Administration, and the Veterans Administration. The difference between the survey estimate and the independent estimate is termed "underreporting."

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table C-1 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, (4) general assistance, and (5) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should be noted that the independent estimates are themselves subject to errors because there is no precise method of measuring the amounts of certain types of income (e.g. interest, dividends and rent) that are received by households. In addition, the independent estimates probably understate certain types of income because they only partially take into account income received throught the underground economy.

The data in table C-1 show comparisons of CPS aggregate money income in 1983 with independent estimates. Comparisons of the CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 10 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 45 percent for interest income to only about 1 percent for wage and salary income. Both reported and allocated proportions of CPS aggregate incomes are shown in table C-1. The estimates of underreporting are shown for the total population. Comparable estimates are not available for the poverty population.

In 1983, $442.2 billion, or about 20 percent of the total aggregate income was allocated as a result of nonresponses to the income questions. About 13 percent of the $10.5 billion of the CPS public assistance or welfare income in 1983 was allocated, while about 33 percent of the $119.8 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 30 percent or above include interest and dividends.

The reasons for underreporting of income in the CPS and in other household surveys are many and varied. Some of the more important of these reasons include (1) respondent's overlooking income received (especially small amounts not regularly received), (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For additional information on reporting accuracy, see "Income Reported in the 1970 Census Versus Income Reported in Federal Income Tax Returns: A Case-by-Case Comparison," by Douglas K. Sater, *Proceedings of the Social Statistics Section,* American Statistical Association: 1978.

Table C-1. Comparison of CPS Aggregate Money Income in 1983 With Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Allocated CPS Amounts

Source of income	Independent source		CPS					
			Total		Reported		Allocated	
	Millions of dollars	Percent distribution	Millions of dollars	Percent distribution	Millions of dollars	Percent distribution	Millions of dollars	Percent distribution
