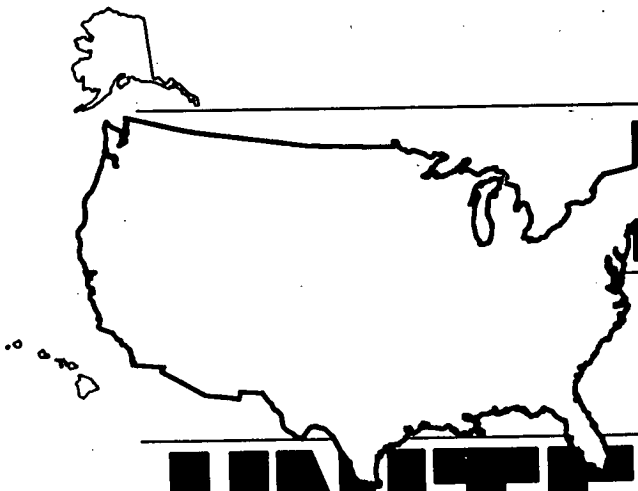
CURRENT POPULATION REPORTS
Consumer Income
Series P-60, No. 160



POVERTY IN THE UNITED STATES 1986

U.S. Department of Commerce
BUREAU OF THE CENSUS

Acknowledgments

This report was prepared by **Mark S. Littman** with the assistance of **Eleanor F. Baugher**, under the general direction of **John M. McNeil**, Chief of the Poverty and Wealth Statistics Branch in Population Division.

Robert Bennefield was responsible for the preparation of the historical detailed tables, and **Thelma N. Varhach**, Demographic Surveys Division, was responsible for the production of the detailed tables for 1986. Overall direction was provided by **Gordon W. Green, Jr.**, Assistant Division Chief (Socioeconomic Statistics Programs), Population Division.

The staff of Publications Services Division, **Walter C. Odom**, Chief, provided publication planning, design, composition, and printing planning and procurement. **Paula Coupe** edited and coordinated the publication.

DETAILED TABLES

Trends in Poverty Population

1. Poverty status of persons, by family relationship, race and Hispanic origin: 1959 to 1986 5
2. Poverty status of persons, by age, race and Hispanic Origin: 1959 to 1986 7
3. Poverty status of families, by type of family, presence of related children, race, and Hispanic origin: 1959 to 1986 9

Persons

4. Ratio of income to poverty level in 1986—persons, by family status, sex of householder and race 13
5. Farm-nonfarm residence and region—poverty status in 1986 of persons, by family status, sex of householder, and race 15
6. Metropolitan-nonmetropolitan and region—poverty status in 1986 of persons, by family status, type of family, and race 19
7. Age and sex—poverty status in 1986 of persons, by family relationship, type of family, race and Hispanic origin 27
8. Marital status—poverty status in 1986 of persons, family householders, and unrelated individuals 15 and over, by age, sex, and race 30
9. Educational attainment—poverty status in 1986 of persons 15 and over, by age, sex, and race 36
10. Work experience—poverty status in 1986 of persons 15 and over, by age, sex, and race 41
11. Selected characteristics of the aged—poverty status in 1986 of persons 60 years and over, by age and sex 55
12. Hispanics—poverty status in 1986 of persons, by type of Hispanic origin, type of residence, family status and type of family 61

Families

13. Size of family—poverty status in 1986 of families, by type of family and race of householder 64
14. Number of related children under 18 years-poverty status in 1986 of families, by type of family and sex and race of householder 65
15. Presence and age of related children—poverty status in 1986 of families, by type of family and age and race of householder 66
16. Poverty area residence—poverty status in 1986 of families, by selected characteristics 70

DETAILED TABLES—Continued

Families—Continued

Page

17. Tenure—poverty status in 1986 of families and nonfamily householders, by selected characteristics 81
18. Living arrangements—poverty status in 1986 of unrelated individuals 16 and over by age, sex, and race 83
19. Employment status in March 1986—poverty status in 1986 of family householders and unrelated individuals by sex, race, and Hispanic origin 85
20. Number of workers—poverty status in 1986 of families with civilian householders, by sex and race of householder 86
21. Work experience of householder—poverty status in 1986 of family householders, by presence of children, sex, and race 89
22. Work experience of unrelated individuals—poverty status in 1986 of unrelated individuals, by age, sex, and race 98
23. Working mothers—poverty status in 1986 of women with own children under 18, by work experience, age of children, type of family, and race 101
24. Own children—poverty status in 1986 of own children under 18, by age, type of family work experience, and race of mother 104
25. Total money income of families below the poverty level in 1986, by presence of related children under 18, and age, race, and Hispanic origin of householder 108
26. Total money income, by size of family—families and related children under 18 below the poverty level in 1986, by type of family and race of householder 111
27. Total money income of unrelated individuals below the poverty level in 1986, by age, sex, race and Hispanic origin 114
28. Type of income—poverty status in 1986 of families and unrelated individuals, by age, sex, and race of family householder or unrelated individuals 116
29. Size of income deficit—families and unrelated individuals below the poverty level in 1986, by presence of related children, and sex and race of family householder or unrelated individual 134
30. Selected characteristics of families below 125 percent of the poverty level in 1986 135
31. Selected characteristics of unrelated individuals below 125 percent of the poverty level in 1986 141
32. Poverty status in 1986 of Hispanic families and unrelated individuals, by type of Hispanic origin and other selected characteristics 144
33. Standard errors for selected characteristics of persons below the poverty level in 1986 148
34. Standard errors for selected characteristics of families below the poverty level in 1986 149

B-4. Factors (f_2) to be applied to all non-Hispanic standard errors for 1959 to present . 168
B-5. Parameters and factors (f_1) for estimated numbers and percentages of persons, by poverty status, age, sex, and race: 1980-86 168
B-6. Parameters and factors (f_1) for estimated numbers and percentages of persons of Hispanic origin, by poverty status, age, and sex: 1973-86 169
B-7. Parameters and factors (f_1) for estimated numbers and percentages of families or unrelated individuals, by poverty status and race: 1980-86 170
B-8. Parameters for estimated numbers and percentages of selected characteristics of families or unrelated individuals regardless of income status: 1980-85 170
B-9. Year-to-year correlation coefficients for poverty estimates 170
C-1. Comparison of CPS aggregate money income in 1983 with independent estimates of aggregate money income adjusted to CPS money income concepts, by type of income and reported and allocated CPS amounts 174

Poverty in the United States: 1986

INTRODUCTION

This report presents social and economic characteristics of the population below the poverty level in 1986 based on the March 1987 Current Population Survey (CPS). The poverty definition used here is that adopted for official Government use by the Office of Management and Budget and consists of a set of money income thresholds that vary by family size and composition. Families or individuals with income below their appropriate threshold are classified as below the poverty level. These poverty statistics exclude inmates of institutions, Armed Forces members in barracks, and unrelated individuals under 15 years of age. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index. For example, the average poverty threshold for a family of four was $11,203 in 1986 and $10,989 in 1985. These thresholds are based on money income only and do not include the value of noncash benefits such as employer-provided health insurance, food stamps, or Medicaid. For further discussion, see the section entitled "Collection and Limitations of Poverty Data."

The data in the report consist of cross classifications of poverty status by such characteristics as age, race, sex, family relationship, educational attainment, work experience, and type of income received. Although the primary focus of these data is on the United States as a whole, some tables also show data by region and type of residence. The text under the heading "Poverty in 1986" was drawn from the advance report, Series P-60, No. 157, *Money Income and Poverty Status of Families and Persons in the United States: 1986.* In the text, the terms "poverty population," "poor," and "below the poverty level" are used interchangeably, as are the terms "nonpoor" and "above the poverty level." Characteristics such as age and marital status are as of the survey date (March 1987), while income, poverty, and work experience data refer to the whole previous calendar year (e.g., 1986). In the report, the reference year cited refers to the "income" year.

POVERTY IN 1986

The number of persons below the poverty level was 32.4 million in 1986 and the poverty rate was 13.6 percent.[1] The number of poor in 1986 was not statistically different from the 1985 figure, but was below the recent peak of 35.3 million recorded in 1983. The 1986 poverty rate of 13.6 percent was lower than the 1985 rate of 14.0 percent at the 90-percent confidence level but not at the 95-percent level. The poverty rate was 15.2 percent in 1983.

Poverty data using the official Government definition were first tabulated for 1959. The poverty rate fell dramatically in the 1960's, decreasing from 22 percent to 12 percent in 1969. During the same period, the number of poor declined from 39.9 million to 24.1 million. During the 1970-77 period, the size of the poverty population fluctuated between 23 and 26 million, and the poverty rate was in the 11 to 13 percent range. From 1978 to 1983, the number of persons in poverty increased by 44 percent, from 24.5 to 35.3 million, and the poverty rate rose from 11 to 15 percent.

Whites represented 69 percent of the poor in 1986, Blacks represented 28 percent, and the remainder were persons of other races (principally Asians and American Indians). The poverty rate in 1986 was 11 percent for Whites, 31 percent for Blacks, and 16 percent for persons of other races. The poverty rate for persons of Hispanic origin (who may be of any race) was 27 percent in 1986. Neither the number of poor nor the poverty rate changed significantly for Whites, Blacks, or persons of other races between 1985 and 1986. Among Hispanics, the number in poverty did not change between 1985 and 1986, but their poverty rate declined from 29 percent to 27 percent.

The poverty rate for Whites has declined since 1983 (the rate in that year was 12 percent), but the 1986 rate was higher than the 1978 rate of 9 percent (1978 was a recent low-point in the poverty rate).[2] Among Blacks, the 1986 poverty rate was lower than the 1983 figure of 36 percent and was at about the same level as the 1978 rate. The 1986 rate among persons of Hispanic origin was not statistically different from the 1983 rate but was well above the 1978 rate of 22 percent.

[1]At the 90-percent confidence level, the number of poor persons in 1986 could vary between 31.6 and 33.2 million. At the 90-percent confidence level, the poverty rate could vary between 13.3 and 13.9 percent.

[2]The poverty rate in 1978 was not statistically different from the surrounding years of 1977 and 1979.

The number of poor and the poverty rates in the Northeast and Midwest Regions declined between 1985 and 1986, but there were no significant changes in the South or West. Each of the four regions had a 1986 poverty rate that was lower than the 1983 rate.

The number of poor families in 1986 was about 7 million, not significantly different from the 1985 figure. About 44 percent of poor families were composed of married-couple families, and 51 percent were composed of families with a female householder, no husband present. The number of poor married-couple families decreased from 3.4 to 3.1 million between 1985 and 1986, but the number of poor families maintained by a woman with no husband present did not change significantly.

The number of poor families has decreased since 1983, when there were about 7.6 million, as has their poverty rate (12 percent in 1983; 11 percent in 1986). Similarly, the number of married-couple families below the poverty level decreased during the 1983-86 period, from 3.8 to 3.1 million and their poverty rate dropped from 8 to 6 percent. The number of poor families with a female householder and no spouse present was about 3.6 million in both 1983 and 1986, and their poverty rate was about 35 percent in both years.

Persons in families represented 76 percent of the poor in 1986 and persons living alone or with nonrelatives represented 21 percent (persons in unrelated subfamilies made up the remainder of the poverty population). Between 1985 and 1986, the number of family members in poverty declined by about 1 million but the number of poor unrelated individuals did not change significantly. Between 1983 and 1986, the number of poor family members declined by 3.2 million, but the number of poor unrelated individuals showed no statistically significant change.

The poverty rate in 1986 was about 20 percent for related children under 18 years old in families and 12 percent for persons 65 years and over. These rates were not statistically different from the 1985 rates, but were lower than the 1983 rates (22 percent and 14 percent, respectively).

The 1986 poverty rate was higher in central cities of metropolitan areas and in nonmetropolitan areas (both about 18 percent) than in suburban areas (about 8 percent). The poverty rate in central cities declined from 19 percent in 1985, while the rates for suburban and nonmetropolitan areas did not change significantly. The number of poor in central cities declined by about 900,000 between 1985 and 1986.

One-half of poor family householders worked at some time during 1986, and 17 percent worked year-round, full-time. Neither of these proportions changed between 1985 and 1986.

In 1986, the average amount of additional money needed to raise the incomes of poor families above their respective poverty threshold was about $4,400. For unrelated individuals the comparable figure was about $2,500.

COLLECTION AND LIMITATIONS OF POVERTY DATA

This report presents findings from the Income Supplement of the Census Bureau's Current Population Survey of March 1987. The information was collected from a sample of persons representing the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Because the collection of income data in the survey is restricted to persons 15 years old and over, unrelated individuals under 15 are excluded from this report. In addition, poverty numbers and rates exclude inmates of institutions, and Armed Forces members living in barracks.

The poverty definition used in this report is based on an index developed at the Social Security Administration (SSA) in 1964, and revised by Federal Interagency Committees in 1969 and 1981. A directive from the Office of Management and Budget, originally issued in 1969, established the Census Bureau's statistics on poverty as the standard data series to be used by all Federal agencies.[3]

The poverty concept is a statistical measure based on the Department of Agriculture's 1961 Economy Food Plan. It reflects the different consumption requirements of families in relation to their size and composition, and the age of the family householder. A ratio of food expenditures to income of one-third, based on the Department of Agriculture's 1955 Survey of Food Consumption, was used to derive the original poverty thresholds from the economy food plan. The poverty thresholds have been updated annually based on changes in the Consumer Price Index. For further details, see appendix A.

Data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest, and rent; unemployment and worker's compensation; government and private employee pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Readers should be aware that for many different reasons there is a tendency in household

[3]Statistical Policy Handbook, Directive 14, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, May 1978.

surveys for respondents to underreport their income. For additional information on this topic, see Appendix C, "Underreporting of Income."

Money income does not reflect the fact that many families received part of their income in the form of nonmoney transfers. Many low-income families received benefits such as food stamps, health benefits, and subsidized housing; other families received employer-provided benefits such as health insurance coverage, contributions to retirement plans, and payment for education expenses.

Beginning with the March 1980 survey, the CPS income supplement has included a group of questions on the receipt of selected noncash benefits during the previous year. The means-tested benefits covered in the March 1987 survey were food stamps, free or reduced-price school lunches, public or subsidized housing, and Medicaid. Questions were also asked about the following nonmeans-tested benefits: Medicare, CHAMPUS or other military health care, employer-provided insurance plans, and employer-provided group health insurance plans. Data on such benefits for 1985 are contained in Current Population Reports, Series P-60, No. 155, *Receipt of Selected Noncash Benefits: 1985.* That report shows that about 59 percent of all poor households received at least one of the following means-tested noncash benefits in 1985: food stamps, free or reduced-price school lunches, Medicaid, and publicly owned or other subsidized housing.

Technical Paper 57, *Estimates of Poverty Including the Value of Noncash Benefits: 1986,* focuses on five major noncash benefits: food stamps, free or reduced-price school lunches, Medicaid, Medicare, and publicly owned or subsidized housing. The paper presents two different methods for valuing these benefits: (1) market value, (2) recipient value. It is the fifth in a series of technical papers updating the estimates to 1986; Technical Papers 50, 51, 52, 55, and 56 contain estimates for the period 1979 through 1985. Since the same poverty thresholds were used as in the official definition, the resulting poverty estimates are all lower than the official estimates. The report for 1986 shows that if selected benefits had been counted as income, the official estimate of poverty would have been reduced by 8 to 34 percent, depending on the range of benefits valued and the method used.

It should be noted that there is no general agreement on how to value these benefits, which benefits should be valued or whether any noncash benefits should be valued without adjusting the poverty thresholds.[4] See *Proceedings of the Conference on the Measurement of Noncash Benefits,* Dec. 12-14, 1985, Vol. 1, and also Harold W. Watts, "Have Our Measures of Poverty Become Poorer?" *Focus,* Volume 9, No. 2, Summer 1986, University of Wisconsin-Madison, Institute for Research on Poverty.

[4]The Census Bureau's income concept does not assign a value to any noncash benefit, regardless of the persons' or family's income level. Benefits such as employer-provided health and life insurance, pension plans, stock options, and use of company automobiles are not valued and not included as income.

RELATED REPORTS

Current Population Survey. A detailed explanation of the poverty concept appears in "The Measure of Poverty, A Report to Congress as Mandated by the Education Amendments of 1974," prepared by a Poverty Studies Task Force under the auspices of the Department of Health, Education, and Welfare. This report also discusses limitations of the poverty definition and presents alternative methods for measuring poverty.

A detailed description of the original poverty index developed by the Social Security Administration appears in the following articles by Mollie Orshansky published in the *Social Security Bulletin,* "Counting the Poor: Another Look at the Poverty Profile," January 1965, and "Who's Who Among the Poor: A Demographic View of Poverty," July 1965.

Data on persons in poverty based on the original poverty definition appear in Current Population Reports, Series P-60, No. 54, *The Extent of Poverty in the United States: 1959 to 1966.* Data based on the revised definition of poverty appear in later reports in the P-60 series. Poverty data are also included in some reports in the P-20 and P-23 series of the Current Population Reports. All relevant titles are listed on the inside of the back cover of this report. Data based on the Current Population Survey showing the distribution of families and persons by income levels also appear in the P-60 series; the latest report is P-60, No. 156, *Money Income of Households, Families and Persons in the United States: 1985.*

Detailed data on the receipt of noncash benefits in 1986, including the poverty status of recipients appear in Current Population Reports, Series P-60, No. 155, *Receipt of Selected Noncash Benefits: 1985.* Several approaches to the valuation of these benefits are explored in Technical Paper 57, *Estimates of Poverty Including the Value of Noncash Benefits: 1986.*

Decennial census. Poverty data collected in the 1980 Census are available for all States on computer files (referred to as summary tape files, or STF's) as well as in published reports. Summary Tape File 3 contains poverty data cross classified by race, age, type of family, and presence of children, for States, standard metropolitan statistical areas (SMSA's), counties, county subdivisions, incorporated places, and census tracts.

Various subfiles of STF3 present information for neighborhoods, Congressional districts, school districts, and zip code areas. There are three report series based on STF3: Series PHC80-3, *Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas,* Series PHC80-4, *Congressional Districts of the 98th Congress,* and Series PHC80-S2, *Advance Estimates of Social, Economic, and Housing Characteristics.*

Summary Tape File 4 provides somewhat more detailed information on the age and family structure of the poverty population, and additional characteristics includ-ing receipt of Social Security and public assistance income, work experience, and ratio of income to the poverty level. All items in STF4 are repeated by race and Hispanic origin. Data are shown for States, SMSA's, counties, county subdivisions, places, and tracts. The three report series based on STF4 are Series PC80-1-C, *General Social and Economic Characteristics,* Series PHC80-2, *Census Tracts,* and Series HC80-1-B, *Detailed Housing Characteristics.*

More detailed poverty data for fewer geographic areas (States, SMSA's, counties, and cities of 50,000 or more inhabitants) are presented in STF5. This file is the basis for Series PC80-1-D, *Detailed Population Characteristics,* and Series HC80-2, *Metropolitan Housing Characteristics.* Inquiries concerning availability of printed reports, computer tapes, and microfiche may be addressed to Data User Services Division, Customer Services, Bureau of the Census, Washington, DC 20233.

[1] INCLUDES MEMBERS OF THE ARMED FORCES, NOT SHOWN SEPARATELY.
[2] OTHER TRANSFER PAYMENTS INCLUDE PUBLIC ASSISTANCE, UNEMPLOYMENT COMPENSATION, WORKMEN'S COMPENSATION, AND VETERANS' PAYMENTS.
[3] INCOME INCLUDES DIVIDENDS, INTEREST, RENT, PRIVATE PENSIONS, GOVERNMENT EMPLOYEE PENSIONS, ALIMONY, AND ANNUITY INCOME.
[4] DETAIL DOES NOT ADD TO TOTAL BECAUSE SOME PERSONS RECEIVE MORE THAN ONE OF THE SPECIFIED TYPES OF INCOME.

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. Unrelated individuals under 15 years old are also excluded.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. Beginning with the March 1980 survey, the CPS has employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population. The new definition and its impact on the size and composition of the farm population are discussed in Current Population Reports, Series P-27, No. 52.

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan areas. The population residing in metropolitan statistical areas (MSA's) as defined in June 1984 constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Nonmetropolitan areas. The territory outside metropolitan statistical areas is referred to here as nonmetropolitan.

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

Outside central cities. The territory outside central cities of metropolitan statistical areas but within MSA's is referred to here as outside central cities.

Geographic regions. The four major regions of the United States for which data are presented in this report represent groups of States as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada New Mexico, Oregon, Utah, Washington, and Wyoming.

North and West: Northeast, Midwest, and West Regions combined.

Poverty areas. For this report poverty areas are defined in terms of census tracts (in metropolitan areas) or minor civil divisions (townships, districts, etc. in nonmetropolitan areas) in which 20 percent or more of the population was below the poverty level in 1979 based on the 1980 census. See 1980 Census of Population report PC80-2-8D, *Poverty Areas in Large Cities.*

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or other investments which pay interest); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. However, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when

values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments, such as aid to families with dependent children and general assistance.

Dividends, interest (on savings or other investments which pay interest), income from estates or trusts, net rental income, or royalties include dividends from stockholdings or membership in associations, interest on savings or any type of investment which pays interest, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or worker's compensation include (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payments, and unemployment and worker's compensation.

Receipts not counted as income are receipts from the following sources were not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group those who were classified as having no income in the income year and those reporting a loss in net income from

farm and nonfarm self-employment or in rental income. Some of these were living on income "in-kind," savings, or gifts, or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families and unrelated individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons with income.

Income per family member. The income per family member is the average amount of income available to every man, woman, and child in a family. Income per family member is derived by dividing the total family income of a group by the number of family members in the same group.

Poverty definition. Poverty statistics presented in this report are based on a definition developed by the Social Security Administration in 1964 and revised in 1969 and 1981.

The original poverty index provided a range of income cutoffs adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 Survey of Food Consumption that families of three or more persons spent approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. Annual revisions of these SSA poverty cutoffs were based on price changes of the items in the economy food budget.

As a result of deliberations of a Federal Interagency Committee in 1969, the following two modifications to the original SSA definition of poverty were recommended: (1) that the SSA thresholds for nonfarm families be retained for the base year 1963, but that annual adjustments in the levels be based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of food included in the economy food plan; and (2) that the farm thresholds be raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase of 360,000 poor families and 1.6 million poor persons in 1967.

Table A-1. The Consumer Price Index and the Average Poverty Threshold for a Family of Four: 1959 to 1986

Year	Consumer Price Index (1967 = 100)	Average threshold for a family of four persons[1]
1986	328.4	$ 11,203
1985	322.2	10,989
1984	311.1	10,609
1983	298.4	10,178
1982	289.1	9,862
1981	272.4	9,287
1980	246.8	8,414
1979	217.4	7,412
1978	195.4	6,662
1977	181.5	6,191
1976	170.5	5,815
1975	161.2	5,500
1974	147.7	5,038
1973	133.1	4,540
1972	125.3	4,275
1971	121.3	4,137
1970	116.3	3,968
1969	109.8	3,743
1968	104.2	3,553
1967	100.0	3,410
1966	97.2	3,317
1965	94.5	3,223
1964	92.9	3,169
1963	91.7	3,128
1962	90.6	3,089
1961	89.6	3,054
1960	88.7	3,022
1959	87.3	2,973

[1]For years prior to 1981, average threshold for a nonfarm family of four is shown.

In 1980, another interagency committee recommended three additional modifications that were implemented in the March 1982 CPS as well as the 1980 census: (1) elimination of separate thresholds for farm families, (2) averaging of thresholds for female-householder and "all other" families, and (3) extension of the poverty matrix to families with nine or more members. For further details, see the section, "Changes in the Definition of Poverty," in Current Population Reports, Series P-60, No. 133.

The poverty thresholds rise each year by the same percentage as the annual average Consumer Price Index. Table A-1 shows the CPI and the corresponding thresholds for a family of four for the 1959-86 period.

Alternate level. Because the poverty definition currently in use by the Federal Government does not meet all the needs of the analysts of the data, a variation was introduced at the same time that modifications were made to the SSA poverty index. This alternate cutoff, set at 125 percent of the official government standard, is obtained by multiplying the income cutoffs at the poverty level by 1.25. Thus, the income cutoff for a family of four at 125 percent of the poverty level was $14,004 in 1986.

Weighted average thresholds at the poverty level. As shown in table A-2, the poverty cutoffs used by the Bureau of the Census to determine the poverty status of families and unrelated individuals consist of a set of 48 thresholds arranged in a two-dimensional matrix consisting of family size (from one person, i.e., unrelated indivuduals, to nine or more persons) cross-classified by presence and number of family members under 18 years old (from no children present to eight or more children present). Unrelated individuals and two-person families are further differentiated by the age of the individual or family householder (under 65 years and 65 years and over). The total family income of each family in the sample is tested against the appropriate dollar threshold to determine the poverty status of the family. If the family's total income is less than its corresponding cutoff, the family is classified as below the poverty level. The average thresholds shown in table A-2 were weighted by the presence and number of children. For a given size of family, the weighted average threshold for that group is obtained by multiplying the threshold for each presence and number of children category within the given family size by the number of families in that category. These products are then aggregated across the entire range of presence and number of children categories, and the total aggregate is divided by the total number of families in the group to yield the weighted average threshold at the poverty level for that size family. Because family composition does not remain constant from year to year, the weighted average thresholds for 1986 will not reflect, identically, the change in the CPI between 1986 and earlier years.

Since the basic thresholds used to determine the poverty status of families and unrelated individuals are applied to all families and unrelated individuals, the weighted poverty thresholds are derived using all families and unrelated individuals rather than just those families and unrelated individuals classified as below the poverty level. To obtain the weighted poverty thresholds for families and unrelated individuals below 125 percent of the poverty level, the weighted thresholds may be multiplied directly by 1.25.

Income deficit. Income deficit is the difference between the total income of families and unrelated individuals below the poverty level, and their respective poverty thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the deficit is equal to the poverty threshold. This measure provides an estimate of the amount which would be required to raise the incomes of all poor families and unrelated individuals to their respective poverty thresholds. The income deficit is thus a measure of the degree of impoverishment of a family or unrelated individual. However, caution must be exercised in comparing the average deficit of

Table A-2. Poverty Thresholds in 1986, by Size of Family and Number of Related Children Under 18 Years Old

Size of family unit	Weighted average thresholds	Related children under 18								
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual)	$5,572									
Under 65 years	5,701	$5,701								
65 years and over	5,255	5,255								
Two persons	7,138									
Householder under 65 years	7,372	7,338	$7,553							
Householder 65 years and over	6,630	6,623	7,524							
Three persons	8,737	8,571	8,820	$ 8,829						
Four persons	11,203	11,302	11,487	11,113	$11,151					
Five persons	13,259	13,630	13,828	13,405	13,077	$12,877				
Six persons	14,986	15,677	15,739	15,415	15,104	14,642	$14,368			
Seven persons	17,049	18,039	18,151	17,763	17,492	16,988	16,400	$15,755		
Eight persons	18,791	20,175	20,353	19,986	19,665	19,210	18,632	18,030	$17,877	
Nine or more persons	22,497	24,269	24,386	24,062	23,790	23,343	22,728	22,171	22,033	$21,185

families classified by the race or sex of the householder. Since the poverty thresholds used in this report are based on family size and composition, apparent differences in the average income deficits may, to some extent, be a function of the differences in these characteristics.

Median income deficit. The median income deficit is the amount which divides the distribution into two equal groups, one having an income deficit above the median and the other having an income deficit below the median.

Mean income deficit. The mean income deficit is the amount obtained by dividing the total income deficit of a group below the poverty level by the number of families or unrelated individuals (as appropriate) in that group.

Deficit per family member. The deficit per family member is the average amount of money necessary to raise every man, woman and child in a family out of poverty. The deficit per family member is derived by dividing the total family income deficit of a group by the number of family members in the same group.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households. Beginning with the 1980 CPS, the Bureau of the Census began using the terms "householder" and "family householder" instead of "head of household" and "head of family."

Family. The term "family" refers to a group of two or more persons related by birth, marriage, or adoption who reside together; all such persons are considered as members of one family. For example, if the son of the person who maintains the household and the son's wife are members of the household, they are treated as members of the parent's family. Every family must include a householder; two or more people living in the same household who are related to one another, but are not related to the householder, form an "unrelated subfamily" and are not included in the count of families.

Subfamily. A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old living in a household but not including among its members the person or couple maintaining the household. Because a subfamily does not include a householder, it is by definition excluded from the count of families. There are two kinds of subfamilies, related and unrelated.

Related subfamily. A related subfamily is a subfamily whose members are related to the person or couple maintaining the household. The most common example of a related subfamily is a young married couple sharing the home of the husband's or wife's parents. Members of a related subfamily are also members of the householder's family.

Unrelated subfamily. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members. An unrelated subfamily is a subfamily whose members are not related to the person or couple maintaining the household. Members of unrelated subfamilies may include such persons as guests, lodgers, or resident employees and their relatives living in a household. Unrelated subfamily members are not part of the householder's family. Even though unrelated subfamilies are not counted as families, they are treated as families for the purpose of determining whether their members are above or below the poverty level.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married

couple may or may not have children living with them. The expression "husband-wife" or "married-couple" before the term "household," or "family," indicates that the household, or family, is maintained by a husband and wife.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years old and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals. The poverty status of unrelated individuals is determined independently of other household members' incomes.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary individual. A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily householders and inmates of institutions) who is not related to any other person in the household or group quarters.

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Age. The age classification is based on the age of the person at his last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes Indians, Japanese, Chinese, and any other race except White and Black. "Other races" are sometimes shown in combination with the Black population.

Persons of Hispanic origin. Persons of Hispanic origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Central or South American, or some other Hispanic origin. It should be noted that persons of Hispanic origin may be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools included public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to school in the regular school system.

The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling

and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Labor force and employment status. The definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific jobseeking activity *within the past 4 weeks* such as registering at a public or private employment office, meeting with employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" comprises all civilians classified as employed or unemployed.

Not in the labor force. All civilians 15 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group of persons who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the survey week) are also classified as not in the labor force.

Occupation and class of worker. Persons are classified according to the civilian job held longest during the year. Persons who held two jobs or more were reported in the job at which they worked the greatest number of weeks.

The occupation groupings included in this report are based on the classification system used in the 1980 census. The data included in previous Current Population Reports in the P-60 series, starting with No. 81 and ending with No. 138, were based on the classification system used in the 1970 census. For an explanation and description of the changes from the old to the new system, see the February 1983 issue of "Employment and Earnings," published by the Bureau of Labor Statistics.

Class of worker refers to the subdivision of workers into three groups: wage and salary workers, self-employed workers, and unpaid family workers. The first group refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rate for private employer or for any government unit. The second group refers to persons working in their own business, profession, or trade, for profit or fees. The third group refers to persons working without pay in a business operated by a member of the household to whom they are related by birth or marriage.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in the income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which he worked during the year. He is classified as having worked at full-time jobs if he worked 35 hours or more per week during a majority of the weeks in which he worked.

Year-round, full-time worker. A year-round, full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Number of workers. The number includes all persons in the family who worked at anytime during the year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question, "What were you doing most of last year?"

Symbols. A dash (—) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol "X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1980 and later years were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1980 census. The base figures shown for 1969 to 1979 were based on statistics updated from the 1970 census, whereas the figures for the years 1961 to 1968 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey," Employment and Earnings, Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

The introduction of population controls and estimation procedures based on the 1980 census raised the number of persons from 217.8 million to 222.9 million in the March 1980 CPS and the number of families from 58.4 to 59.6 million. The number of persons and families below the poverty level rose proportionately, from 25.3 to 26.1 million, and from 5.3 to 5.5 million, respectively.

COMPARABILITY OF ESTIMATES FROM MARCH 1987 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1987 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

POPULATION CONTROLS

Beginning with 1979, the data shown in this report are based on population controls derived from the 1980 census. The data for 1969 to 1978 reflect 1970 census-based population controls, while figures for previous years are tied in with 1960 census-based controls. Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and poverty rates. However, the changes may have more impact on the population levels in different subgroupings such as the total number of persons or families either overall, within some particular income interval, or below the poverty level. A detailed description of these changes appears in the Bureau of Labor Statistics report, Employment and Earnings, Vol. 18, No. 8, February 1972.

Undocumented immigrants. The 1980 census counted about two million undocumented immigrants according to Census Bureau estimates. Beginning in January 1986, the independent population controls included an allowance for growth in the undocumented population for every year since 1980. This methodological change was partially offset by another change that increased the allowance for emigration of legal residents. Data shown for Current Population Surveys with controls based on pre-1986 methods have not been revised to take into account these methodological changes. Consequently, direct comparisons of

CPS figures for months before January 1986 with later months will not be consistent. Series P-25, No. 985 reviews the postcensal population estimates methodology currently in use.

COMPARABILITY OF METROPOLITAN AND NONMETROPOLITAN DATA FROM THE MARCH 1987 CPS WITH DATA FOR PREVIOUS YEARS

Estimates by type of residence categories (metropolitan, nonmetropolitan, central cities, outside central cities) were omitted from the 1984 reports because of the mixed 1970 and 1980 census sampling frame used for the 1985 CPS. Estimates by type of residence were resumed in the 1985 poverty report (Current Population Reports, Series P-60, No. 158) since the March 1986 CPS was totally based on the 1980 census sampling frame. The type of residence categories reflect metropolitan statistical areas (MSA's) defined as of June 1984. (For the definition of MSA's, see the definition's section under the heading "metropolitan areas".)

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. There are important differences in the population classified as metropolitan using the 1970 and 1984 definitions.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. For example, between July 1985 and August 1986 the magnitude of the monthly differences varied from 900,000 to 2.5 million persons, so that the proportion of the population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Noninterviews, Nonresponses, and Allocations In the March 1987 CPS, no interview was obtained for approximately 4 percent of the 60,500 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. In many cases, even though an interview is obtained, complete information for all of the income questions is not available, unknown or refused. In March 1987, the income data were incomplete for about 27 percent of the persons 15 years old and over. About 32 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Although nonresponse rates for families by poverty status are not available, it is known that families in the lower income intervals tend to have lower nonresponse rates than those in the middle and upper income intervals. This is due in part to the fact that lower income families have less complicated financial arrangements than those in other income groups. For a more detailed discussion of this topic see "Income Nonresponses in the Current Population Survey" by Mitsuo Ono and Herman P. Miller published in *Proceedings of the Social Statistics Section,* American Statistical Association, 1969.

QUESTIONNAIRE WORDING AND PROCEDURES

A modified version of an experimental questionnaire which was tested on three-eights of the March 1979 sample was used for the full sample beginning in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" in Current Population Reports, Series P-60, No. 130.

Modifications in collecting income data in the March 1980 Current Population Survey. A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications

designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" in Current Population Reports, Series P-60, No. 130.

CHANGES IN SAMPLE SIZE

Starting with the March 1977 CPS, the basic monthly sample was expanded from about 56,000 housing units to 68,000. The expanded sample was used until the March 1982 survey, when the sample size was reduced to about 62,000 households. Neither of these changes in sample size had any major effect on the data for the poverty population.

DEFINITION OF THE INCOME UNIVERSE

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series, P-60, No. 130.

REVISIONS TO THE EARNINGS QUESTION

The Census Bureau has made a revision to the March CPS income supplement questionnaire in an effort to adapt to continually rising levels of annual income. Beginning with the March 1986 CPS, question number 48, which covers the amount of earnings received from the employer or own business for which the respondent worked the longest during the previous calendar year, was modified to permit coding of earnings amounts to a maximum of $299,999. Prior to March 1986, procedures allowed for coding of amounts to a maximum of $99,999. In March 1977, about 127,000 weighted sample persons reported receiving earnings in the previous calendar year in excess of the $99,999 maximum. In March 1986, when the revision was made, about 627,000 weighted sample persons reported receiving earnings in excess of this maximum. About 16,000 weighted sample persons reported earnings amounts that exceeded the revised maximum of $299,999.

This change in the questionnaire causes a break in the time series for some income measures. Overall the revision added about $22.9 billion to the total aggregate income that would have gone undetected had the $99,999 limit continued. Mean income, per capita income, shares of aggregate income by quintile and the index of income concentration (GINI Index) were all affected by the revision and caution should be used when comparing the 1986 data to earlier years.

Appendix B. Source and Reliability of Estimates

SOURCE OF DATA

The estimates in this report are based on data obtained annually in March of years 1960 through 1987 from the Current Population Survey (CPS) conducted by the Bureau of the Census and from supplementary questions to the CPS. Also, some estimates are based on data from the 1960 Decennial Census. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member in every sample household. In addition, supplementary questions are asked every March about money income for the previous year. In order to obtain more reliable data for the Hispanic population, the March CPS sample was enlarged to include all households which contained at least one person of Hispanic origin from the previous November sample. For this report, persons in the Armed Forces living off post or with their families on post are also included.

Current Population Survey (CPS). The present CPS sample was selected from the 1980 decennial census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to reflect new construction. The current CPS sample is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions in the Nation. In this sample, approximately 59,500 occupied households were eligible for interview. Of this number, about 2,500 occupied units were visited but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason.

Estimation procedure. The estimation procedure used in this survey involves the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, sex, race and Hispanic/ non-Hispanic categories. These independent estimates are based on statistics from the decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The independent population estimates used to obtain data for money income for 1979 and later are based on the 1980 decennial census. In earlier reports in this series (P-60), data for 1979 were obtained using independent population estimates based on the 1970 decennial census. For more details on this change, see the section of the text, "Introduction of 1980 Census Population Controls" in an earlier report (Series P-60, No. 133). The estimation procedure for the data from the March supplement involved a further adjustment so that husband and wife of a household received the same weight.

The estimates in this report for 1983 through 1986 are also based on revised survey weighting procedures for persons of Spanish origin. In previous years the estimation procedures used in this survey involved the inflation of weighted sample results to independent estimates of the noninstitutional population by age, sex, and race. There was, therefore, no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups and adopted revised weighting procedures to incorporate these new controls. It should be noted that the independent population estimates include some, but not all, illegal immigrants.

The following table provides a description of some aspects of the CPS sample designs in use during the referenced data collection periods.

Description of the Current Population Survey

Time period	Number of sample areas[1]	Housing units eligible[2]	
		Interviewed	Not interviewed
1986 to 1987	729	57,000	2,500
1985	[3]629/729	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966[4]	357	33,500	1,500
1960 to 1962	[5]333	33,500	1,500
1959	330	33,500	1,500

[1]Beginning in May 1956, these areas were chosen to provide coverage in each State and the District of Columbia.
[2]Does not include the approximately 2,500 Hispanic households added from the previous November sample.
[3]The CPS was redesigned following the 1980 Census of Population and Housing. During phase-in of the new design with the old, housing units from both designs were in the sample.
[4]Prior to 1966, income data were collected from approximately 75 percent of occupied households in CPS.
[5]Three sample areas were added in 1960 to represent Alaska and Hawaii after statehood.

RELIABILITY OF ESTIMATES

Since the CPS estimates were based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey: sampling and nonsampling. The accuracy of a survey result depends on both types of errors, but the full extent of the nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates. The standard errors provided for the CPS estimates primarily indicate the magnitude of the sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure any systematic biases in the data. (Bias is the difference averaged over all possible samples, between the sample estimates and the desired value.)

Nonsampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness on the part of respondents to provide correct information, inability to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage as compared with the level of the 1980 decennial census is about 7 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. Ratio estimation to independent age-sex-race-Hispanic population controls, as described previously, partially corrects for the bias due to survey undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Further, the independent population controls used have not been adjusted for undercoverage in the 1980 census.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey,* Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology,* Bureau of the Census, U.S. Department of Commerce.

Sampling variability. The standard errors given in the following tables are primarily measures of sampling variability, that is, of the variations that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average results of all possible samples with a known probability. For example, if all possible samples were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples is or is not contained in any particular computed interval. However, for a particular sample, one can say with specified confidence that the average estimate derived from all possible samples is included in the confidence interval.

Some statements in the report may contain estimates followed immediately by a number in parentheses. For those statements one has only to add to and subtract from the estimate the number in parentheses to calculate upper and lower bounds of the 90 percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (± 1.0 percent)" the 90-percent confidence interval for the estimate, 1.7 percent, would be from 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the poverty rate for Whites to the poverty rate for Blacks.

Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the characteristics are different when, in fact, they are identical. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that, for most differences cited in the text, the absolute value of the estimated difference between characteristics is greater than 1.6 times the standard error of the difference.

Comparability of data. Data obtained from the CPS and other sources are not entirely comparable. This is due in large part to differences in interviewer training

and experience and in differing survey processes. This is an additional component of error not reflected in the standard error tables. Therefore, caution should be used in comparing results between these different sources. Caution should also be used when comparing estimates in this report, which reflect 1980 census-based population controls, with estimates for 1979 and earlier years which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percent distributions, but did have a significant impact on levels. For example, use of 1980-based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1981 and later will differ from those for earlier years by more than could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

As stated earlier, no independent population control totals for persons of Hispanic origin were used prior to 1985. Therefore, care must also be taken when comparing Hispanic estimates over time.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept instead of the traditional "head" concept, the introduction of the new farm definition, and use of more detailed income intervals in the upper range of the income distribution. Due to these and other changes, caution should be used in comparing estimates for 1979 through 1986 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 130).

Another major change is that income and poverty estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence categories such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 CPS income supplement was revised to allow the coding of larger earnings amounts on the questionnaire.

Note when using small estimates. Summary measures (such as medians and percent distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each data user's needs. Also, care must be taken in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Standard error tables and their use. In order to derive standard errors that would be applicable to a large number of estimates and could be prepared at a moderate cost, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result, the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in table B-1 provide approximations to the standard errors of estimates of the number of persons and families by poverty status, income and race for the years 1980 through 1986 for Total, White and Black. Table B-2 provides approximations to the standard errors of estimates of the number of persons and families by poverty and income for Hispanics for the years 1973 through 1986. Table B-3 contains approximations to standard errors of estimated percentages of persons below the poverty level. Table B-4 presents factors (f_2) to be used to adjust for differences in standard errors for estimates for the years 1959 to the present.

To obtain the approximate standard error for a specific characteristic, the appropriate standard error in tables B-1 through B-3 must be multiplied by the factor (f_1) for that characteristic. These factors are given in tables B-5 through B-8. The factors must be applied to the generalized standard errors in order to adjust for the combined effect of the sample design and the estimating procedure on the value of the characteristic.

Standard errors for intermediate values not shown in the generalized tables of standard errors (B-1 through B-3) may be approximated by linear interpolation.

Two parameters (denoted "a" and "b") are used to calculate standard errors for the major characteristics in this report. They are presented in tables B-5 through B-8. These parameters were used to calculate the standard errors in tables B-1 through B-3, and to calculate the f_1 factors in tables B-5 through B-8. They also may be used directly to calculate the standard

Table B-1. Standard Errors of Estimated Numbers of Persons and Families, by Poverty Status and Race: 1980-86
Total, White, and Black

(Numbers in thousands.Regional factors to be used to adjust the standard errors are 0.94, 0.95, 0.94 and 0.90 for the Northeast, Midwest, South, and West, respectively.
To estimate standard errors for the years 1959 to 1979 multiply the above standard errors by the appropriate factor in table B-4)

Size of estimate	Persons				Families and unrelated individuals	
	All income levels		Below poverty level			
	Total	65 years and over	Total	65 years and over	All income levels	Below poverty level
Total or White

errors for estimated numbers and percentages. Methods for computation are given in the following sections.

Data based on 1960 decennial census 1-in-1,000 sample. Standard errors for data based on the 1960 census 1-in-1,000 sample are estimated by applying the appropriate factor given in table B-4 to the standard errors shown in tables B-1 through B-3.

Standard errors of estimated numbers. The approximate standard error, S_x, of an estimated number shown in this report can be obtained in two ways. It may be obtained by use of the formula

$$S_x = f_1 f_2 s \qquad (1)$$

where f_1 is a factor from tables B-5 through B-8, f_2 is the appropriate factor from table B-4, and s is the standard error of the estimate obtained by interpolation from table B-1 or B-2. Alternatively, the standard errors may be approximated by formula (2), from which the standard errors were calculated in tables B-1 and B-2. Use of this formula will provide more accurate results than the use of formula (1) above.

$$S_x = f_2 \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate, a and b are the parameters in tables B-5 through B-8 associated with the particular type of characteristic, and f_2 is the appropriate factor from table B-4. When calculating standard errors for numbers from cross tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration of the computation of the standard error of an estimated number. Suppose that in 1986 there were 33,064,000 persons below the poverty level. Using formula (2) with a = -0.000041 and b = 9,628 from table B-5 and f_2 = 1.0 from table B-4, the approximate standard error is:

$$= 1.0\sqrt{(-0.000041)(33{,}064{,}000)^2 + (9{,}628)(33{,}064{,}000)} \doteq 523{,}000^1$$

[1]Using formula (1), table B-1, with f_1 and f_2 both equal to 1.0, the approximate standard error is 513,000. B-4 and B-5, the approximate standard error is 0.7.

Table B-2. Standard Errors of Estimated Numbers of Persons and Families, by Poverty Status: 1973-86
Hispanic Origin

(Numbers in thousands. Regional factors to be used to adjust the standard errors are 0.94, 0.95, 0.94, and 0.90 for the Northeast, Midwest, South, and West, respectively)

Size of estimate	Persons				Families and unrelated individuals

X Not applicable.
[1]Income data for persons of Hispanic origin were not published before 1973 because of the reliability of the estimates.

This means that a 90-percent confidence interval for the number of persons who reported that they were below the poverty level in 1986 is from 32,227,000 to 33,901,000, i.e., 33,064,000 ± 1.6 (523,000).

Standard errors of estimated percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on both the size of the percentage and the size of the total upon which this percentage is based.

Table B-3. Standard Errors of Estimated Percentages of Persons Below the Poverty Level: 1980-86

(To estimate standard errors for the years 1959 to 1979, multiply the above standard errors by the appropriate factor in table B-4. Regional factors to be used to adjust the standard errors are 0.94, 0.95, 0.94 and 0.90 for the Northeast, Midwest, South and West, respectively.
To estimate the standard errors for a specific characteristic, multiply the above standard errors by the appropriate factor in table B-5)

Base of estimated percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
100	4.3	6.8	9.3	13.4	15.5
250	2.8	4.3	5.9	8.5	9.8
500	1.9	3.0	4.2	6.0	6.9
1,000	1.4	2.1	2.9	4.2	4.9
2,500	0.9	1.4	1.9	2.7	3.1
5,000	0.6	1.0	1.3	1.9	2.2

50,000	0.2	0.3	0.4	0.6	0.7
100,000	0.14	0.2	0.3	0.4	0.5
150,000	0.11	0.2	0.2	0.4	0.4

Table B-4. Factors (f_2) to be Applied to All Non-Hispanic Standard Errors for 1959 to Present

Year	Source of data	(f_2)
1959	1-in-1,000 sample of 1960 decennial census	0.6
1959 to 1964	CPS	1.4
1965	CPS	1.2
1966 to 1979	CPS	0.9
1980 to present	CPS	1.0

Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter (from tables B-5 through B-8) indicated by the numerator. The approximate standard error, $S_{(x,p)}$, of an estimated percentage can be obtained by use of the formula

$$S_{(x,p)} = f_1 f_2 s \qquad (3)$$

In this formula, f_1 and f_2 are the appropriate factors from tables B-5 through B-8 and B-4, respectively, and s is the standard error of the estimate obtained by interpolation from table B-3. Alternatively, the standard errors may be approximated by formula (4). Use of this formula will provide more accurate results than use of formula (3) above.

$$S_{(x,p)} = f_2 \sqrt{\frac{b}{x} p (100-p)} \qquad (4)$$

Here x is the size of the subclass of persons, or families and unrelated individuals which is the base of the percentage, p is the percentage (0 p 100), b is the parameter in tables B-5 through B-8 associated with the particular type of characteristic in the numerator of the percentage, and f_2 is the appropriate factor from table B-4.

Illustration of the computation of the standard error of a percentage. Suppose that of 33,064,000 persons below the poverty level in 1986, 8,926,000 or 27.0 percent were Black. Using formula (4) with b = 9,628 from table B-5, and f_2 = 1.0 from table B-4, the approximate standard error on an estimate of 27.0 percent is

$$1.0 \sqrt{\frac{9{,}628}{33{,}064{,}000} (27.0)(73.0)} \doteq 0.8 \text{ percent}^2$$

This means that a 90-percent confidence interval for the percentage of Black persons below the poverty level in 1986 is from 25.7 to 28.3 percent, i.e., 27.0 ± 1.6 (0.8).

[2]Using formula (3), table B-3, and the appropriate f_1 and f_2 from tablesl B-4 and B-5, the approximate standard error is 0.7.

Table B-5. Parameters and Factors (f_1) for Estimated Numbers and Percentages of Persons, by Poverty Status, Age, Sex, and Race: 1980-86

(For 1959-79, calculate standard errors using the a and b parameters. Then multiply the standard errors by the appropriate factor from table B-4.
Regional factors to be used to adjust the a and b parameters are 0.88, 0.91, 0.89, 0.81 for the Northeast, Midwest, South, and West, respectively.

[1]Since ratio estimation for Hispanics began in 1985, all references to 14-year-olds have been changed to 15-year-olds. Therefore, where 14 appears in the stublines, treat it as 15 years.

Standard error of a difference. For a difference between two sample estimates, the standard error is approximately equal to

$$S_{(x-y)} = \sqrt{S_x^2 + S_y^2 - 2r\,S_x S_y} \qquad (5)$$

where S_x and S_y are the standard errors of the estimates, x and y. The estimates can be numbers, percents, ratios, etc. The correlation coefficient, r, can be determined from table B-9 for year-to-year comparisons for poverty estimates of numbers and proportions; for other comparisons assume that r equals zero. Making this assumption will result in accurate estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the computation of the standard error of a difference Suppose that the number of families below the poverty level in 1986 was 7,223,000 and in 1985 was 7,277,000. The apparent difference is 54,000. Using formula (2), the appropriate parameters from table B-7 (a = +0.000084 and b = 2,067), the standard errors on 7,223,000 and 7,277,000 are 139,000 and 140,000, respectively.

Therefore, using formula (5) with r = 0.35 from table B-9, the standard error of the estimated difference of 54,000 is about

$$\sqrt{(139{,}000)^2 + (140{,}000)^2\ 2(0.35)\ (139{,}000)\ (140{,}000)} = 159{,}000.$$

This means that the 90-percent confidence interval around the 54,000 difference is from -200,000 to 308,000, i.e., 54,000 ± 1.6 (159,000). Therefore, a conclusion that the average estimate of the difference derived from all possible samples lies within a range computed in this way would be correct for roughly 90-percent of all possible samples. Since the interval contains zero, we cannot conclude with 90-percent confidence that the number of families below the poverty level in 1986 is different from the figure for 1985.

Standard error of a median. The sampling variability of an estimated median depends upon the form of the distribution as well as the size of its base. An approximate method for measuring the reliability of an estimated median is to determine a confidence interval about it. (See the section on sampling variability for a general discussion of confidence intervals.)

The following procedure may be used to estimate the 68-percent confidence limits of a median based on sample data.

Table B-7. Parameters and Factors (f_1) for Estimated Numbers and Percentages of Families or Unrelated Individuals, by Poverty Status and Race: 1980-86

(The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories.
Regional factors to be used to adjust the a and b parameters are 0.88, 0.91, 0.89, and 0.81 for the Northeast, Midwest, South, and West, respectively)

Race	Below the poverty level			All income levels		
	a	b	f_1	a	b	f_1
Total or White[1]	+0.000084	2,067	1.0	-0.000008	1,896	1.0
Black[1]	+0.000084	2,067	1.0	-0.000058	2,067	1.0
Hispanic:						
1973-82	-0.000014	2,420	1.1	-0.000014	2,420	1.1
1983-84	-0.000237	2,713	1.1	-0.000237	2,713	1.1
1985-86	+0.000084	2,067	1.0	-0.000121	2,067	1.0

[1]For 1959-79, calculate standard errors using the a and b parameters. Then multiply the standard errors by the appropriate factor from table B-4.

Table B-8. Parameters for Estimated Numbers and Percentages of Selected Characteristics of Families or Unrelated Individuals Regardless of Income Status

(These parameters should be multiplied by 1.5 for nonmetropolitan residence categories.
Regional factors to be used to adjust the above parameters are 0.88, 0.91, 0.89, and 0.81 for the Northeast, Midwest, South and West, respectively)

[1]Correlation coefficients for 1983-84 are lower than those for 1982-83 or 1984-85 because of the phase-in of the new sample design.

1. Determine, using the standard error tables and factors or formula (4), the standard error of the estimate of 50 percent from the distribution.
2. Add to and subtract from 50 percent the standard error determined in step (1).
3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step (2).

   Use the following formula to calculate the upper and lower limits.

$$X_{pN} = \frac{pN - N_1}{N_2 - N_1}(A_2 - A_1) + A_1 \qquad (6)$$

where

N = *for distribution of numbers*: the total number of units (persons, households, etc.) for the characteristic in the distribution.

= *for distribution of percents*: the value 1.0.

p = the values obtained in step (2).

A_1 and A_2 = the lower and upper bounds, respectively, on the data interval in which the median falls.

N_1 and N_2 = *for distribution of numbers*: the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A_1 and A_2, respectively.

= *for distribution of percents*: the estimated percent of units (persons, households, etc.) having values of the characteristic greater than or equal to A1 and A2, respectively.

4. Once the limits of the 68-percent confidence interval are computed, the standard error of a median can be computed by the formula:

$$S_{median} = \frac{U\text{-}L}{2} \qquad (0)$$

where

U = Upper limit of the 68-percent confidence interval,

L = Lower limit of the 68-percent confidence interval.

Illustration of the computation of a confidence interval for a median. In table 29, the median income deficit for poor White families with a female householder (no husband present) was $3,841 in 1986. The size, or base, of the distribution from which this median was determined was 2,241,000 families.

1. Using formula (4) with b = 2,067 and f_2 = 1.0, the standard error of 50 percent on a base of 2,241,000 is about 1.5 percent.
2. To obtain a 68-percent confidence interval on an estimated median, add to and subtract from 50 percent the standard error found in step (1). This yields percent limits of 48.5 and 51.5.
3. The lower and upper limits for the interval in which the median falls are $3,000 and $4,000, respectively (from table 29). Then, by addition, the estimated numbers of poor White families with a female householder with an income deficit greater than or equal to $3,000 and $4,000 are 1,390,000 and 1,070,000, respectively.

Using formula (6), the upper limit for the confidence interval of the median is found to be about

$$\frac{(0.485)\,(2{,}241{,}000) - 1{,}390{,}000}{1{,}070{,}000 - 1{,}390{,}000}(4{,}000 - 3{,}000) + 3{,}000 \doteq \$3{,}947.$$

Similarly, the lower limit is found to be about

$$\frac{(0.515)\,(2{,}241{,}000) - 1{,}390{,}000}{1{,}070{,}000 - 1{,}390{,}000}(4{,}000 - 3{,}000) + 3{,}000 \doteq \$3{,}737.$$

Thus, a 68-percent confidence interval for the median income deficit for poor White families with a female householder is from $3,737 to $3,947.

The standard error of the median is, therefore,

$$\frac{3{,}947 - 3{,}737}{2} \doteq \$105.$$

Standard error of a mean for grouped data. The formula used to estimate the standard error of a mean for grouped data is

$$S_x = \sqrt{b/y\, S^2} \qquad (7)$$

In this formula, y is the size of the base of the distribution and b is a parameter from tables B-5 through B-8. The variance, S^2, is given by the following formula:

$$S^2 = \sum_{i=1}^{c} p_i x_1^2 - x^2 \qquad (8)$$

where x is the mean of the distribution and is estimated by

$$\bar{x} = \sum_{i=1}^{c} p_i \bar{x}_i \qquad (9)$$

c = the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i = the estimated proportion of households, families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i$ = $(Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group i.

x_i is assumed to be the most representative value for the characteristic for households, families or persons in group i. Group c is open-ended, i.e., no upper interval boundary exists. For this group the approximate average value is

$$\bar{x}_c = \frac{3}{2} Z_{c-1} \qquad (10)$$

Standard error of a ratio. Certain values for persons in families or households may be calculated as the ratio of two numbers. For example, the mean number of children per family with children is calculated as

$$\frac{x}{y} = \frac{\text{total number of persons in families or households}}{\text{total number of families or households}} \qquad (11)$$

Standard errors for these means may be approximated as shown below. There are two cases to consider. In either case, the denominator y represents a count of families or households of a certain class, and the numerator x represents a count of persons with the characteristic under consideration who are members of these families or households.

Case 1: There is at least one person having the characteristic in every family or household of the class: as an example, the mean number of persons per family or the mean number of children per family with children. For ratios of this kind, the standard errors are approximated by the following formula:

$$S_{x/y} = \sqrt{\left(\frac{x}{y}\right)^2 \left[\left(\frac{S_x}{x}\right)^2 + \left(\frac{S_y}{y}\right)^2 - 2r\left(\frac{S_x}{x}\right)\left(\frac{S_y}{y}\right)\right]} \qquad (12)$$

The standard error of the estimated number of families, Sy, and the standard error of the estimated number of persons with the characteristic in those households, S_x, may be obtained from formula (2). Alternatively, formula (1) and tables B-5 through B-8 may be used. In formula (12), r represents the correlation coefficient between the numerator and the denominator of the estimate. In the above example, and for other ratios of this kind, use 0.7 as an estimate of r.

Case 2: The number of persons having the characteristic in a given family may be 0, 1, 2, 3, or more; for example, the mean number of children per family. For ratios of this kind the standard error is approximated by formula (12) but r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the true standard error of the ratio.

NOTE: For estimates expressed as the ratio of x per 100y or x per 1,000y, formula (12) must be multiplied by 100 or 1,000, respectively, to obtain the standard error for Case 1 and Case 2.

Illustration of the computation of the standard error of a ratio. Suppose that the number of persons in families with female householder, no husband present, x, was 31,152,000 and the number of persons in all other families, y, was 174,307,000. This means that the ratio of persons in families with female householder, no husband present to persons in all other families was 179 per 1,000. The standard error of this estimate, x/y, is calculated by using the following steps:

1. Compute S_x and S_y using formula (2).

$$S_x = \sqrt{(-0.000009)\,(31{,}152{,}000)^2 + (2{,}077)\,(31{,}152{,}000)} = 237{,}000.$$

$$S_y = \sqrt{(-0.000009)\,(174{,}307{,}000)^2 + (2{,}077)\,(174{,}307{,}000)} = 298{,}000\,.$$

2. Compute $(S_x/x)^2 = 0.000058$.
3. Compute $(S_y/y)^2 = 0.000003$.
4. Using formula (12) and Case 2 (r = 0), the estimate of the standard error is

$$S_{(x/y)} = 1{,}000 \sqrt{\left(\frac{31{,}152{,}000}{174{,}307{,}000}\right)^2 (0.000058 + 0.000003)} = 1.4$$

This means that the 90-percent confidence interval for the ratio of persons in families with female householder, no husband present to persons in all other families is from about 177 to 181 per 1000.

Appendix C. Underreporting of Income

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources, such as the Bureau of Economic Analysis, the Social Security Administration, and the Veterans Administration. The difference between the survey estimate and the independent estimate is termed "underreporting."

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table C-1 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, (4) general assistance, and (5) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should be noted that the independent estimates are themselves subject to errors because there is no precise method of measuring the amounts of certain types of income (e.g. interest, dividends and rent) that are received by households. In addition, the independent estimates probably understate certain types of income because they only partially take into account income received throught the underground economy.

The data in table C-1 show comparisons of CPS aggregate money income with independent estimates for 1983, the most recent year for which data are available. Comparisons of the CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 10 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 45 percent for interest income to only about 1 percent for wage and salary income. Both reported and allocated proportions of CPS aggregate incomes are shown in table C-1. The estimates of underreporting are shown for the total population. Comparable estimates are not available for the poverty population.

In 1983, $442.2 billion, or about 20 percent of the total aggregate income was allocated as a result of nonresponses to the income questions. About 13 percent of the $10.5 billion of the CPS public assistance or welfare income in 1983 was allocated, while about 33 percent of the $119.8 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 30 percent or above include interest and dividends.

The reasons for underreporting of income in the CPS and in other household surveys are many and varied. Some of the more important of these reasons include (1) respondent's overlooking income received (especially small amounts not regularly received), (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For additional information on reporting accuracy, see "Income Reported in the 1970 Census Versus Income Reported in Federal Income Tax Returns: A Case-byCase Comparison," by Douglas K. Sater, *Proceedings of the Social Statistics Section,* American Statistical Association: 1978.

Table C-1. Comparison of CPS Aggregate Money Income in 1983 With Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Allocated CPS Amounts

Source of income	Independent source		CPS					
			Total		Reported		Allocated	
	Millions of dollars	Percent distribution	Millions of dollars	Percent distribution	Millions of dollars	Percent distribution	Millions of dollars	Percent distribution
