U.S. Population Estimates, by Age, Sex, Race, and Hispanic Origin: 1989

INTRODUCTION

This report presents estimates of the population of the United States by single years of age to 100, sex, race, and Hispanic origin. Included are revised estimates for July 1, 1986, to July 1, 1989. Estimates are shown for the total population including Armed Forces overseas, the resident population, and the civilian population. Race categories for which age-sex distributions are shown include White, Black, and Other races. Estimates of resident population by sex are also presented for the Asian or Pacific Islander, and the American Indian, Eskimo, or Aleut populations. Included are revised estimates for July 1, 1986, to July 1, 1989. Estimates are shown for the total population including Armed Forces overseas, the resident population, and the civilian population.

Also included is an analysis of the year-to-year change in the total population of the United States from 1980 through 1989 and its major components: births, deaths, and net civilian immigration.

Tables are consistent with currently published annual estimates of the population prior to 1986 by age, sex, race, and Hispanic origin, as they appear in Current Population Reports, Series P-25, Nos. 311, 519, 917, and 1045. Coverage of the population is consistent with the 1980 census.

The 1986 to 1989 data in this report supersede the figures published in Current Population Reports, Series P-25, No. 1045. Users should continue to refer to that report for data for 1980 through 1985. That report also contains a more complete description of the methodology and a detailed analysis of historical population trends through 1988.

THE GROWTH AND AGING OF THE POPULATION

The total population including Armed Forces overseas reached a level of 250,122,000 persons on January 1, 1990 (table 5), while the resident population on the same date was 249,605,000.[1] The total population figure was up 2,505,000 from January 1, 1989, the largest annual population increase of the decade. The increase in the total population since the census of April 1, 1980 was 23,060,000, or 10.2 percent. The percent increase in the total population for calendar year 1989, at 1.01 percent, was typical of the last two decades, although higher than the rate of 0.98 percent for 1988.

The persistence of a population growth rate close to one percent in the 1980's, as well as the small increase in the growth rate in the last year, have occurred in spite of an age structure that would tend to reduce the growth rate. The population of potential mothers has been aging throughout the decade, as women of the 1946-64 Baby Boom move into the later years of childbearing. In addition, the population as a whole has been aging, placing a greater proportion of Americans in ages of greater mortality risk. Compensating for this downward pressure on growth has been a continued increase in expected years of life, as well as an increase in the frequency of childbearing among women, most apparent among those in their thirties.

The male population continued its decade-long pattern of slightly more rapid growth than the female population. The last time this occurred was the 1900-1910 period. From July 1, 1980, to July 1, 1989, the male population increased 10,557,000 (9.5 percent). During that time the female population increased 10,448,000, or 8.9 percent (table A). This break with historical trends was primarily due to a lessened female advantage in deaths, although a surplus of male immigrants was also a contributing factor. The male population outgrew the female population in every age group under age 85. One consequence was that in 1989, there were more men than women in each age through 34. In 1980, men were more numerous only through age 26.

Two summary indicators of the aging of the population showed steady increases during the decade. The median age of the population, defined as the age at which half the population is older and half is younger, reached an all-time high of 32.6 years as of July 1, 1989. This is up from 30.0 in 1980, and 27.9 years in 1970, the post-World War II low. This increase was largely a result of the aging of the Baby Boomers, born from 1946 to 1964, through their thirties. The mean, or average age of the population, a broader indicator of the age distribution, reached a level of 35.2 years in 1989, compared with 34.0 years in 1980 (table B).

[1] Estimates of the total, resident, and civilian population by month for calendar years 1986 through 1989 are given in Current Population Reports, Series P-25, No. 1054, Estimates of the Population of the United States to January 1, 1990.

le A. **Change in Population, by Age Group, Sex, Race, and Hispanic Origin: July 1, 1980, to July 1, 1989**

(Numbers in thousands. Includes Armed Forces overseas)

Subject	Population on July 1		Population change, 1980-89		Average annual percent change
	1989	1980	Number	Percent	
Total, all ages	248,762	227,757	21,005	9.2	1.0
Under 5 years	18,752	16,458	2,295	13.9	1.5
5 to 13 years	31,834	31,095	739	2.4	0.3
14 to 17 years	13,496	16,142	(2,646)	−16.4	−2.0
18 to 24 years	26,564	30,350	(3,785)	−12.5	−1.5
25 to 34 years	44,048	37,625	6,423	17.1	1.8
35 to 44 years	36,584	25,868	10,716	41.4	3.9
45 to 54 years	24,905	22,754	2,151	9.5	1.0
55 to 64 years	21,593	21,762	(168)	−0.8	−0.1
65 to 74 years	18,182	15,653	2,529	16.2	1.7
75 to 84 years	9,761	7,781	1,979	25.4	2.5
85 years and over	3,042	2,269	772	34.0	3.3
65 years and over	30,984	25,704	5,280	20.5	2.1
Male	121,445	110,888	10,557	9.5	1.0
Female	127,317	116,869	10,448	8.9	1.0
White	209,326	195,571	13,755	7.0	0.8
Black	30,788	26,903	3,885	14.4	1.5
Other races	8,647	5,283	3,365	63.7	5.5
Asian or Pacific Islander[1]	6,881	3,834	3,047	79.5	6.5
American Indian, Eskimo, or Aleut[1]	1,737	1,429	308	21.6	2.2
Hispanic origin[2]	20,528	14,803	5,724	38.7	3.6

[1]Resident population
[2]Persons of Hispanic origin may be of any race.

he continued movement of the Baby Boomers out of their teens and twenties and into their thirties and early forties was evident from the population trends for these age groups. The population aged 35 to 44 years increased by 10.7 million between July 1, 1980, and July 1, 1989. This was an average annual percent increase of 3.9 percent—four times the pace of growth of the total population.[2] At the same time, the population of 25- to 34-year-olds increased by 6.4 million, or 1.8 percent per year, with the annual rate of increase on a steady decline during the period (table A).

In percentage terms, the high-school-aged population, 14 to 17 years, declined more than any other age group during this period. Its drop of 2,646,000 persons represented a 16.4 percent decline from 1980 to 1989, an annual decrease of 2.0 percent per year. The population 18 to 24 also declined, losing 3,785,000 persons, a decrease of 1.5 percent annually (table A). Thus, the population aged 25 to 44 gained substantially from the aging of the Baby Boomers, while the population aged 14 to 24 absorbed the cohorts born during the birth decline of the late 1960's and early 1970's, thereby losing population.

The population aged 45 to 64 years grew relatively slowly. This group increased by 1,983,000 persons, or 4.5 percent from 1980 to 1989, in spite of a slight decline in the 55- to 64-year-olds (table A). 1,189,000 of the growth in the 45 to 64 group occurred from 1987 to 1989—more than it grew during the previous 8 years. This spike in growth was the result of a shortlived increase in births in 1942. This age group can expect substantial growth during the 1990's, as it becomes the new recipient of the older Baby Boom cohorts.[3]

[2] Throughout this report, the average annual percent change, or increase, is defined as the natural logarithm of the ratio of the population at the end of a period to the population at the beginning of the period, divided by the duration of the period in years. Sometimes known as the "compound interest rate of return", this formula adjusts the rate to the change of population base during the period. It is also independent of the length of the period, and therefore allows the comparison of rates of change among periods of unequal duration.

Table B. **Summary Indicators of Population Distribution: 1980 and 1986-89**

(Includes Armed Forces overseas. As of July 1)

Indicator	1989	1988	1987	1986	1980
Median age	32.7	32.3	32.0	31.7	30.0
ı age	35.2	35.1	35.0	34.8	34.0
s per 100 females	95.4	95.3	95.2	95.2	94.9
Percent distribution by race:					
All races	100.0	100.0	100.0	100.0	100.0
White	84.1	84.3	84.5	84.7	85.9
Black	12.4	12.3	12.2	12.2	11.8
Other races	3.5	3.4	3.2	3.1	2.3
Percent of Hispanic origin	8.3	8.1	7.9	7.7	6.5

Source: Table 1.

[3] For further discussion of trends in age distribution projected for the coming years, see Current Population Reports, Series P-25, No. 1018, Projections of the Population of the United States, by Age, Sex, and Race: 1988 to 2080, by Gregory Spencer.

The population aged 65 and over was 12.5 percent of the population in 1989, up from 11.3 percent in 1980 and 9.8 percent in 1970. This group increased 2.1 percent annually from 1980 to 1989, twice the overall national rate of growth. The oldest categories of the elderly population increased more rapidly. For those aged 85 and over, the average annual rate for the 9 years was 3.3 percent (table A).[4]

TRENDS IN THE POPULATION BY RACE AND HISPANIC ORIGIN

The Black population reached a level of 31,047,000 on January 1, 1990, up 485,000 from the beginning of 1989 (table 5). This is consistent with the trend of the decade, the Black population having increased at an average annual rate of 1.5 percent during the period from July 1, 1980 to July 1, 1989. This compared with a rate of growth of 0.8 percent for Whites during the same period. The higher growth rate of the Black population was largely the result of higher natural increase, itself the combined result of a younger population and fertility rates somewhat higher than those of Whites. Rates of immigration for Blacks were slightly higher than for Whites, primarily a result of immigration from the Caribbean region. As a result of the higher growth, Blacks increased their percentage of the total population from 11.8 in 1980 to 12.4 in 1989.

The population of Other races reached a level of 8,854,000 on January 1, 1990, up 4.76 percent, or 402,000 persons, since the beginning of 1989 (table 5). This group, consisting of Asians, Pacific Islanders, American Indians, Eskimos, and Aleuts, grew nearly seven times as rapidly (5.5 percent per year) as Whites from mid-1980 to mid-1989.

The resident Asian or Pacific Islander population increased at a rate of 6.5 percent annually from 1980 to 1989, largely because of a heavy flow of immigration from East Asia and Southeast Asia. During the same period, the annual rate of increase was 2.2 percent for resident American Indians, Eskimos, or Aleuts (table A). Relatively high natural increase accounted for the higher than average growth of this population.[5] Estimates of the Asian or Pacific Islander and the American Indian, Eskimo, or Aleut populations are shown in table C.

The population of Hispanic origin (including Armed Forces overseas) at the beginning of 1990 was 20,859,000, up by 661,000, or 3.27 percent during 1989. The Hispanic population has grown rapidly throughout the decade, having increased at a rate of 3.6 percent annually during the mid-1980 to mid-1989 period. This was nearly four times the rate for the total population. For the 9-year period, the numerical increase was 5,724,000, or 38.7 percent (table A). This population growth was evenly divided between natural increase and immigration. A high proportion of young adults, as well as higher-than-average fertility rates have combined to produce both a high crude birth rate and a low crude death rate, hence the high level of natural increase. At the same time, substantial net immigration from Latin America, primarily Mexico, has reinforced the growth of this population.

THE COMPONENTS OF POPULATION CHANGE

While the distribution of the population by age, sex, race, and Hispanic origin is an outgrowth of the historical trend in the components of population change

[4] For further discussion of the relationship between the age distribution and historical trends in births, deaths, and immigration, see Current Population Reports, Series P-25, No. 1045, *United States Population Estimates, by Age, Sex, Race, and Hispanic Origin: 1980 to 1988,* by Frederick W. Hollmann.

[5] The current estimates assume, in fact, that all immigration to the Other-races population occurs to Asians or Pacific Islanders. There is known to be a small exchange of American Indian immigrants between the United States and both Canada and Latin America, but it has not been measured.

Table C. **Resident Population of Other Races: 1980 and 1986-89**

(Numbers in thousands. Excludes Armed Forces overseas)

Other race	Population on July 1					Percent of all residents	
	1989	1988	1987	1986	1980	1989	1980
Other races	8,618	8,227	7,848	7,478	5,263	3.5	2.3
Male	4,213	4,024	3,841	3,663	2,575	3.5	2.3
Female	4,404	4,203	4,007	3,816	2,687	3.5	2.3
American Indian, Eskimo, or Aleut	1,737	1,701	1,665	1,629	1,429	0.7	0.6
Male	857	839	822	804	707	0.7	0.6
Female	880	861	843	825	722	0.7	0.6
Asian or Pacific Islander	6,881	6,526	6,184	5,849	3,834	2.8	1.7
Male	3,356	3,185	3,020	2,859	1,869	2.8	1.7
Female	3,525	3,341	3,164	2,991	1,965	2.8	1.7

Note: For a discussion of how these estimates were computed, see Current Population Reports, Series P-25, No. 1045.

.ths, deaths, and migration), the age-sex-race structure of the population acts as a major determinant of the current trend in these components. The decomposition of the rate of change in the population into these components is shown annually since April 1, 1980 in tables 5 and 6 by race and Hispanic origin. These data are summarized in table D.

The crude birth rate in 1989 stood at 16.0 live births per 1,000 population at mid-year. This corresponded to 3,977,000 births during that year, the highest level since 1964 (table 5). The 1989 crude birth rate was as high as it had been this decade, in spite of the slowing growth and aging of the childbearing-age population. This was accompanied by an increase in the total fertility rate, an age-independent indicator of childbearing (table E).[6] While in no way comparable to the Baby Boom of the 1950's, this fertility increase was substantial among women above age 30.

[6] More specifically, the total fertility rate is the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring to women of that age in the specified calendar year. It should be stressed that the total fertility rate is an annual (or period) measure of fertility, even though it is expressed hypothetical lifetime (or cohort) measure. The total fertility rate is cted by the timing as well as the level of childbearing. The .llowing example illustrates this point. The total fertility rate peaked in 1957 at 3,760. However, it now appears that the highest cohort fertility rate among women who were then in the childbearing ages will be about 3,200 for women born in the early 1930's.

Table D. **Components of the Average Rate of Population Change for Selected Periods, by Race: 1980 to 1989**

(Total population including Armed Forces overseas. Rates are per 1,000 mid-period population)

Race and Hispanic origin	Net change	Natural increase	Births	Deaths	Net civilian immigration
All races:					
1985-89	9.8	7.0	15.8	8.7	2.7
1980-84[1]	10.1	7.1	15.7	8.6	2.9
White:					
1985-89	7.5	5.7	14.7	9.0	1.8
1980-84[1]	7.8	5.9	14.7	8.8	1.9
Black:					
1985-89	15.0	13.0	21.4	8.5	2.1
1980-84[1]	15.1	12.9	21.2	8.3	2.2
Other races:					
1985-89	48.6	18.9	22.1	3.2	29.7
1980-84[1]	61.0	20.1	23.3	3.2	40.9
`panic origin:[2]					
85-89	34.2	18.7	23.1	4.4	15.5
980-84[1]	38.4	18.7	22.9	4.2	19.6

[1]1980-84 refers to the period from April 1, 1980, through December 31, 1984. 1985-89 refers to January 1, 1985, through December 31, 1989.

[2]Persons of Hispanic origin may be of any race.

Source: Table 5.

Table E. **Summary Indicators of Fertility and Mortality: 1980 and 1986-89**

(Resident population. Rates are per 1,000 mid-year population)

Indicator	1989	1988	1987	1986	1980
Fertility:					
Crude birth rate[1]	16.0	15.9	15.7	15.6	15.9
General fertility rate	68.0	67.3	65.7	65.4	68.4
Total fertility rate[2]	1,977	1,933	1,871	1,836	1,840
Mortality:					
Crude death rate[1]	8.6	8.8	8.7	8.7	8.8
Age-adjusted crude death rate	5.2	5.4	5.4	5.4	5.9
Life expectancy at birth (years)	(NA)	74.9	75.0	74.8	73.7

[1]Data are for the resident population, and differ from table 5, which shows crude birth and death rates for the total population including Armed Forces overseas.

[2]Estimated total fertility rates for 1988 and 1989 are based on indirect standardization and 1987 final age-specific birth rates.

Source: National Center for Health Statistics, *Vital Statistics of the United States, 1987*, Vol. 1, Natality, DHHS Pub. No. (PHS) 87-1123, Public Health Service, Washington, 1989, tables 1-1 and 16; National Center for Health Statistics: *Vital Statistics of the United States, 1986*, Vol. II, Mortality, Part A, DHHS Pub. No. (PHS)88-1122, Public Health Service, Washington, D.C., 1988, tables 11, 1-2, and 6-5; National Center for Health Statistics, Advance report of final mortality statistics, 1987, *Monthly Vital Statistics Report*, Vol. 38, No. 5 Supp., Hyattsville, Maryland, Public Health Service, 1988, tables 1 and 4; National Center for Health Statistics, Annual summary of births, marriages, divorces and deaths for 1988. *Monthly Vital Statistics Report*, Vol. 37, No. 13, DHHS Pub. No. (PHS) 89-1120, Public Health Service, Hyattsville, MD, p. 2, and unpublished data.

The number of deaths in 1989, 2,155,000, was down from the historical peak of 2,171,000 in 1988. The crude death rate (deaths per 1,000 population at mid-year) stood at 8.7, down slightly from a decade high of 8.8 in 1988. The increase in deaths through 1988 was partly a result of the increase in population. However, the increase in the crude death rate is primarily the result of the aging of the population. If the effect of age and population growth are removed, mortality declined slightly during the 1980's, indicated by a decreasing age-adjusted crude death rate[7] and an increasing life expectancy at birth. The latter indicator rose from 73.7 years in 1980 to 74.9 years in 1988 (table E). This represented a slowing of the post-war mortality improvement, but nevertheless served to prevent the crude death rate from rising substantially.

Net civilian immigration increased the population by 682,000 in 1989, a rate of 2.7 immigrants per 1,000

[7] The age-adjusted death rate is computed as a weighted average of age-specific death rates for 11 age categories, where each category is weighted by the proportion of the total resident population enumerated in the census of 1940 in that category. Thus, the age-adjusted crude death rate for the total resident population in 1988 can be roughly interpreted as the crude death rate that would be observed in 1988 as a result of 1988 age-specific mortality rates if the age structure had remained unchanged since 1940. This indicator is affected by changes or differences in age distribution within the 11 age categories, most of which are 10-year groups. For further information, see National Center for Health Statistics: Vital Statistics of the United States, 1986, Vol. II, Mortality, Part A. DHHS Pub. No. (PHS) 88-1122. Public Health Service, Washington, 1988, Section 7, p. 19.

population. Immigration has remained close to this rate since 1982; in the few years prior to 1982 it was higher because of a major influx of refugees from Cuba and Southeast Asia. Beginning in 1988, a reduction in the net flow of migrants from Puerto Rico was partially compensated by an increased influx of refugees from the Soviet Union.

Two major factors affecting immigration over the last two decades have been 1) the emergence of undocumented immigration as a major factor in immigration to the United States, and 2) a shift from Europe to Asia as the predominant source of legal immigration to the United States. Latin America, primarily Mexico, has always been a substantial contributor of immigrants, both legal and undocumented. Immigration has thus come to be a major factor in the growth of both the Hispanic and the Asian or Pacific Islander population (tables C and D).[8]

DEFINITIONS, SOURCES, AND METHODOLOGY

Estimates of the U.S. population shown in this report cover three population definitions: total population including Armed Forces overseas, resident population, and civilian population. Estimates of resident population (table 2) are consistent with the decennial census of April 1, 1980, and conform to the definition of United States residence applied in that census. The estimates of total population shown in tables 1, 5, and 6 are also consistent with the 1980 census, with the addition of the Armed Forces stationed outside the 50 States and the District of Columbia, as reported by the five branches of the Armed Forces in the U.S. Departments of Defense and Transportation. The civilian population, shown in table 3, is defined as the census-consistent resident population minus Armed Forces stationed within the United States, as reported by the branches of the Armed Forces. The resident population used in these estimates includes residents of the 50 States and the District of Columbia, but excludes residents of the Commonwealth of Puerto Rico, residents of the outlying areas under United States sovereignty or jurisdiction (principally American Samoa, Guam, Virgin Islands of the United States, and Commonwealth of the Northern Mariana Islands), and other American citizens living overseas. None of the population estimates shown in these tables make any allowance for undercount of United States residents in the census.

The details of the method by which these estimates were produced are presented in Current Population Reports, Series P-25, No. 1045. Basically, it consisted of updating a base population as of April 1, 1980, distributed by age, sex, race, and Hispanic origin to the reference date of the estimates, using data on the components of population change: births, deaths, and net immigration. The base population was an adaptation of the 1980 census distribution. We based estimates of births and deaths on data from the National Center for Health Statistics as well as data on deaths from the Health Care Finance Administration. The Immigration and Naturalization Service provided data on legal immigration of non-U.S. citizens. Statistics on refugees from Southeast Asia, Cuba, Haiti, and the U.S.S.R. were provided by the Office of Refugee Resettlement. The Puerto Rico Planning Board provided data used to estimate the net migration of persons from Puerto Rico to the 50 States plus the District of Columbia. Data from the Office of Personnel Management and the Department of Defense were used to estimate the migration of other civilian U.S. citizens across the national boundaries. Research conducted at the Bureau of the Census and the Immigration and Naturalization Service provided the basis for estimates of undocumented immigration and the emigration of legal residents from the United States.

Symbols. In this report, a dash (-) means zero or round to zero, and "NA" means not available.

Rounding. The estimates shown in this report have been independently rounded to the nearest thousand from figures computed to the last digit; hence, the sums of parts shown may differ from the totals shown. Percents, rates, and averages are based on unrounded numbers.

RELATED REPORTS

The table shown below lists other Current Population Reports containing estimates related to those shown in this report and specifies the years for which consistent data are provided.

Type of population estimate	Years covered	P-25 number
United States:		
By age, sex, and race	1980-85	1045
By age, sex, and race	1970-79	917
By age, sex, and race	1960-69	519
By age, sex, and race	1900-59	311
Total, monthly, by type of population	1986-89	1054
Total, monthly, by type of population	1950-85	1045
Total and components of change by race	1940-80	1045
States:		
Components of change and age	1980-89	1058
Components of change and age	1970-79	998

[8] For a more detailed discussion of the trend in immigration by source, see Current Population Reports, Series P-25, No. 1045, *op. cit.*, pp. 24-29.
