Economics and Statistics Administration
BUREAU OF THE CENSUS

Acknowledgments

Mark S. Littman and **Eleanor F. Baugher** prepared this report, with assistance from **Cynthia J. Harpine** and **Martina Shea,** under the general direction of **Enrique J. Lamas,** Chief, Poverty and Wealth Statistics Branch.

Robert Bennefield produced the historical detailed tables. **Susan Gajewski** and **Phyllis Swanson,** Demographic Surveys Division, programmed the remaining detailed tables, which were originally designed by **John M. McNeil,** then Chief of the Poverty and Wealth Statistics Branch. The publication tables were produced by **Angela Feldman-Harkins, Stacy Masano,** and **Diana Lewis,** Computer Programming and Applications Staff. **Anna H. Podany** provided statistical assistance. Overall direction was provided by **Gordon W. Green, Jr.,** Assistant Division Chief (Socioeconomic Statistics Programs), Housing and Household Economic Statistics Division.

The staff of Publications Services Division, **Walter C. Odom,** Chief, provided publication planning, design, editorial review, and printing planning and procurement. **Gail Farren** provided publication coordination and editing.

Poverty in the United States: 1988 and 1989

INTRODUCTION

This report presents social and economic characteristics of the population below the poverty level in 1988 and 1989 based, respectively, on the March 1989 and 1990 Current Population Surveys (CPS). The poverty definition used here is that adopted for official Government use by the Office of Management and Budget and consists of a set of money income thresholds that vary by family size and composition. Poverty status is based on responses to income questions which in the March CPS refer to pre-tax income received in the previous calendar year. Families or individuals with income below their appropriate poverty threshold are classified as below the poverty level. These poverty statistics exclude inmates of institutions, Armed Forces members in barracks, and unrelated individuals under 15 years of age. Poverty thresholds are updated every year to reflect changes in the Consumer Price Index. For example, the average poverty threshold for a family of four was $12,092 in 1988 but $12,675 in 1989. Average poverty thresholds in 1989 varied from $6,311 for a person living alone to $25,480 for a family of nine or more members. The poverty definition used here is based on pre-tax money income only, excluding capital gains, and does not include the value of noncash benefits such as employer-provided health insurance, food stamps, or Medicaid. For further discussion, see the section entitled "Collection and Limitations of Poverty Data."

The data in the report consist of cross classifications of poverty status by such characteristics as age, race, hispanic origin, family relationship, educational attainment, work experience and type of income received. Although the primary focus of the tables is on the United States as a whole, some tables also present data by region and type of residence. The text of this report was drawn from the advance report, Series P-60, No. 168, Money Income and Poverty Status in the United States: 1989. Due to a minor error in the assignment of the appropriate poverty threshold to some unrelated individuals, minor differences exist between the numbers shown here and in those published in the above-mentioned report. None of these differences changed the statistical significance of comparisons made in the advance report with the exception of the poverty rate for persons 65 years and over. The poverty rate for the elderly declined from 12.0 to 11.4 percent between 1988 and 1989.[1]

The detailed tables in this report represent a new table package designed to meet the changing data needs of policymakers and the general public within the limitations of the CPS data. Tables were added to address frequently asked questions and, similarly, some tables in which there was little current interest were dropped from our standard table package. We welcome comments on these new tables, which should be addressed to Chief, Housing and Household Economic Statistics Division, U.S. Bureau of the Census, Washington D.C. 20233. Our old table package is not available for the years after 1987. Our new package is available for 1987, but will not be published for that year. Persons interested in obtaining a copy of our revised 1987 tables at cost can do so by writing to the address above.

In the text, the terms "poverty population", "poor", and "below the poverty level" are used interchangeably, as are the terms "nonpoor" and "above the poverty level". Characteristics such as age and marital status are as of the survey date (i.e. either March 1989 or March 1990), while income, poverty status, and work experience data refer to the whole previous calendar year (i.e. 1988 or 1989). In the report text, the year cited refers to the "income" year.

HIGHLIGHTS

(The figures in parentheses denote the 90-percent confidence intervals.)

- The number of persons below the official government poverty level was 31.5 (±0.9) million in 1989, not significantly different from the 31.7 (±0.9) million poor in 1988. The poverty rate was 12.8 (±0.3) percent in 1989, not significantly different from the 13.0 (±0.4) percent in 1988.

[1]Specifically, the error involved the incorrect assignment of the poverty threshold based on the age of another person in the household to several unrelated individuals on the March 1990 CPS file. Correcting this problem changed the number of poor from 31,534,000 to 31,528,000 and the number of poor unrelated individuals changed from 6,766,000 to 6,760,000. The number of families below the poverty level did not change and neither the poverty rate for persons or for unrelated individuals changed.

- While both the number of poor and poverty rate have declined since the recent peak in these figures in 1983 (when there were 35.3 million poor and the poverty rate was 15.2 percent), both remain above their 1978 levels (24.5 million poor and 11.4 percent), the recent low point in these figures.
- Of all poor families, 51.7 (±1.5) percent were maintained by women with no husband present. For poor Black families, 73.4 (±2.4) percent were maintained by women with no husband present, for White families the comparable figure was 42.1 (±1.9) percent, and for Hispanic-origin families 46.8 (±3.7) percent.
- Of poor family householders, 48.9 (±1.5) percent worked in 1989, and 16.2 (±1.1) percent worked year-round, full-time. Neither of these figures is significantly different from the comparable 1988 estimate.
- In 1989 the poverty rate for all children under 18 years was 19.6 (±0.7) percent, unchanged from the 1988 figure. About 14.2 (±0.7) percent of all White children were in families below the poverty level in 1989, compared with 36.2 (±2.4) percent of children of Hispanic origin and 43.7 (±2.1) percent of Black children.
- The poverty rate for persons 65 years and over was 11.4 (±0.6) percent in 1989, significantly lower than the 12.0 (±0.6) percent in 1988.
- Poverty rates decrease dramatically as years of school completed increases: in 1989 the poverty rate was 20.7 (±0.9) percent for householders who had not completed high school, 8.9 (±0.5) percent for those who had graduated from high school but not attended college, and 3.6 (±0.3) percent for those with one or more years of college.
- In 1989, the number of persons in poverty was 3.6 million lower using the CPI-U-X1 to adjust poverty thresholds than using the CPI-U (28.0 (±0.8) million versus 31.5 (±0.9) million) and the poverty rate was 1.4 percentage points lower (11.4 (±0.3) percent versus 12.8 (±0.3) percent).

POVERTY STATUS

The number of persons below the official government poverty level was 31.5 million in 1989, representing 12.8 percent of the Nation's population. Neither the number of poor nor the poverty rate were statistically different from the corresponding 1988 figures of 31.7 million poor and poverty rate of 13.0 percent. (The figures for 1988 have been revised since the publication of the 1988 advance report, Series P-60, Number 166, *Money Income and Poverty Status in the United States: 1988.* Several minor errors in the March 1989 CPS computer file were discovered after release of that report, resulting in the new 1988 figures. In the detailed tables, revised figures are indicated by an "r" following the year. These revisions would not have changed the results of comparisons between 1987 and 1988 made in table 17 in the above-mentioned report with the exception of the poverty rate decrease in the Northeast region, which would have been indicated as statistically significant.)[2]

Since 1983, which was a recent high point for the number of persons below poverty, both the number of poor and the poverty rate have declined, although the year-to-year changes in these figures have not been statistically significant in every case. But the number of poor and the poverty rate in 1989 remain well above their 1978 levels—which was a recent low point in these figures during the economic expansion that lasted from March 1975 to January 1980. Trends since 1959 in the number of poor and poverty rate are discussed in more depth in the historical trends section.

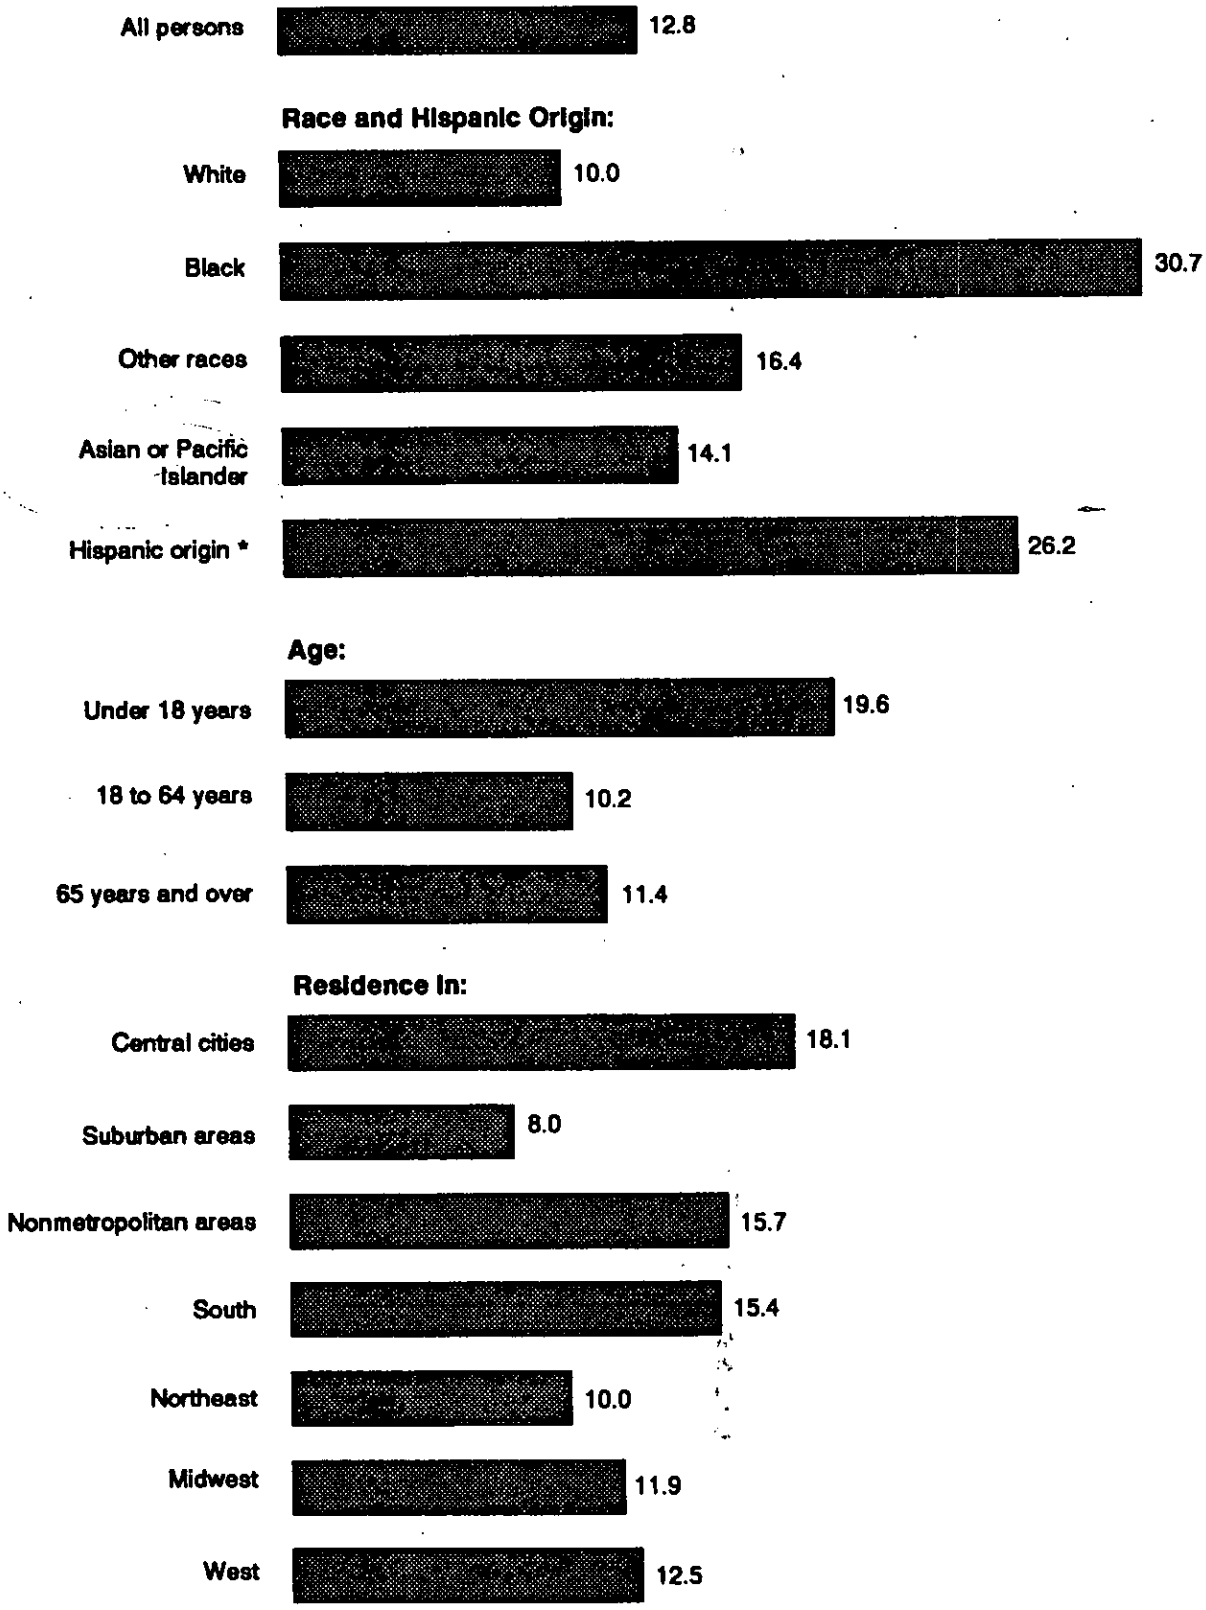
Age. Half of the Nation's poor in 1989 were either children under 18 years (39.9 percent) or elderly (10.7 percent). The poverty rate for children continues, as it has since 1975, to be higher than that for any other age group. The poverty rate for the elderly exceeded that for children until about 1973. In 1989, the poverty rate for all children under 18 years was 19.6 percent (23.5 percent for children under age 3), 10.2 percent for persons 18 to 64 years, and 11.4 percent for the elderly. (See figure 1.) The only age group to experience a significant change in poverty rate between 1988 and 1989 was the elderly. Their poverty rate decreased from 12.0 to 11.4 percent.

Though the poverty rate for the elderly was lower in 1989 than that for the nonelderly, a higher proportion of elderly than nonelderly were concentrated just over their respective poverty threshold (i.e., between 100 percent and 125 percent of their threshold). Consequently, one of five of the Nation's 11.1 million "near poor" persons was elderly, compared with about one of ten persons below the official poverty level.

Race and Hispanic origin. The poverty rates for Whites, Blacks and persons of Hispanic origin did not change between 1988 and 1989, with the 1989 rate for Whites at 10.0 percent, for Blacks at 30.7 percent, and for persons of Hispanic origin (who may be of any race)

[2]Specifically, the file errors were (a) children under 15 years of age in families with the householder in the armed forces received a weight of zero instead of a positive weight and (b) reference persons and spouses under 18 years in related subfamilies were counted as adults rather than related children (used to determine the appropriate poverty threshold for a family). The net result of these changes was that the number of persons below the poverty level decreased by 133,000 (from 31,878,000 to 31,745,000) and the poverty rate decreased by 0.1 percentage point (from 13.1 to 13.0 percent). Most of these changes were in the under 18 years age group. The number of persons under 18 years in poverty decreased by 129,000 (from 12,584,000 to 12,455,000) and their poverty rate decreased by 0.2 percentage points (from 19.7 to 19.5 percent).

Figure 1.
Poverty Rates for Persons With Selected Characteristics: 1989
(In percent)



* Persons of Hispanic origin may be of any race.

at 26.2 percent. For persons of other races the poverty rate was 16.4 percent in 1989, down from 19.8 percent in 1988. For Asians or Pacific Islanders, the largest component of the other races group, the poverty rate was 14.1 percent in 1989 (not significantly different from the other races group as a whole), a decrease of 3.3 percentage points from their poverty rate in 1988. The relationship between the poverty rates for White persons, Black persons, and persons of Hispanic origin—the latter having rates intermediate between Whites and Blacks—holds generally regardless of age. For example, for children younger than 18 years, the poverty rate in 1989 was 14.2 percent for White children, 34.9 percent for children of Hispanic origin and 43.0 for Black children.

Even though the poverty rate for Whites was lower than that for the other groups mentioned above, the majority of poor persons in 1989 were White (65.9 percent). Blacks constituted 29.5 percent of all persons below the poverty level, and the remaining 4.6 percent were persons of "other" races. Most of this latter group were Asians or Pacific Islanders, who combined represented 3.0 percent of the Nation's poor. About 17.2 percent of the poor in 1989 were persons of Hispanic origin. Although persons of Hispanic origin may be of any race, the vast majority (over 95 percent) are included in the White racial category in the Current Population Survey.

Regions. As has been the case since 1985, the Northeast had the lowest poverty rate (10.0 percent) among the Nation's four regions. The poverty rate was highest in the South (15.4 percent) followed by the West (12.5 percent) and Midwest (11.9 percent), the latter two rates were not statistically different from each other. No region had a statistically significant change in poverty rate between 1988 and 1989. The South continues to have a disproportionately large share of the Nation's poverty population: 41.0 percent of the poor lived in the South in 1989, compared with 33.2 percent of U.S. population above the poverty level.

Farm/Nonfarm Residence. There was no significant change between 1988 and 1989 in either the number of poor or poverty rates of persons living on farms or in nonfarm residences. However, for the third consecutive year, there was no significant difference between the farm and nonfarm poverty rates (12.9 percent for nonfarm and 11.1 percent for farm). Typically, the poverty rate has been higher for the farm than nonfarm population.[3]

Metropolitan/Nonmetropolitan Residence. The 1989 poverty rate in nonmetropolitan areas (15.7 percent) exceeded that for the Nation's metropolitan areas (12.0 percent). There was no change between 1988 and 1989 in the number of poor or poverty rates in these areas of residence. The poverty rate in central cities was 18.1 percent compared with 8.0 percent in suburban areas. Both rates were unchanged between 1988 and 1989.

As has historically been the case, the poor in 1989 were somewhat less concentrated in metropolitan areas (72.7 percent) than the nonpoor (78.5 percent). The majority of poor metropolitan residents were in central cities (59.3 percent), while nonpoor metropolitan residents were concentrated in suburban areas (63.4 percent).

Poor Hispanic-origin persons were more concentrated in metropolitan areas than poor Whites as a whole or poor Blacks. About 89.9 percent of poor Hispanics lived in metropolitan areas, compared with 79.0 percent of poor Blacks and 69.4 percent of poor Whites. Within metropolitan areas, 49.7 percent of poor Whites lived in central cities compared with 77.5 percent of poor Blacks and 65.5 percent of poor persons of Hispanic origin.

Poverty areas. About 39.1 percent of the Nation's poor in 1989 lived in areas of high poverty concentration (poverty areas).[4] While the majority of the 12.3 million poor poverty area residents lived in central cities (59.0 percent), 27.4 percent lived outside metropolitan areas, and 13.7 percent lived in suburban areas. Within such areas, the poverty rate was somewhat higher in large city poverty areas than elsewhere: 37.3 percent in large central cities, 31.5 percent in suburban poverty areas, and 26.7 percent in nonmetropolitan poverty areas. None of these 1989 poverty rates were statistically different from the comparable percentages in 1988. The overall number of poor persons living in poverty areas (12.3 million) was down from the 1988 estimate (13.0 million).

Blacks living in cities, regardless of poverty status, were more concentrated in poverty areas than Whites or persons of Hispanic origin. About 54.8 percent of Blacks living in central cities lived in poverty areas, and 70.9 percent of poor Blacks living in cities were concentrated in poverty areas. For Whites, the comparable percentages of city dwellers in poverty areas were only 16.7 percent for the total population and 40.0 percent of

[3]In the CPS, the farm population is defined as persons living in rural territory on places from which $1,000 or more of agricultural products were sold during the preceding 12 months. Farm residents in the CPS are not necessarily economically dependent upon farming. For example, only about half of employed farm residents reported agriculture as their main industry in 1987. For further discussion, see Current Population Reports, Series P-27, No. 61, *Farm Population of the United States: 1987.*

[4]Poverty areas are defined as census tracts in metropolitan counties and minor civil divisions in nonmetropolitan counties with a poverty rate of 20 percent or more in 1979 based on the 1980 census. In 1989, the overall poverty rate in such areas was 32.9 percent, or about 2-1/2 times the national average.

the poor; for persons of Hispanic origin the percentages were 44.5 percent of the total population and 61.8 percent of the poor.

Families, Family Composition, and Unrelated Individuals. The poverty rate for families was 10.3 percent in 1989, unchanged from 1988. The poverty rates did not change significantly between 1988 and 1989 for married-couple families or other families with a male head but decreased by 1.3 percentage points for families with a female householder, no husband present. Married-couple families continued to have the lowest rate (5.6 percent) followed by those with a male householder, no wife present (12.1 percent), and families with a female householder, no husband present (32.2 percent in 1989). (See figure 2.) White families had a lower poverty rate overall (7.8 percent in 1989), as well as by type of family, than Blacks (27.8 percent overall), or families with a householder of Hispanic origin (23.4 percent overall).

The lower overall poverty rate for Hispanic origin families compared with Black families was the result of different distributions by family type between the two groups. The poverty rates within type of family for Hispanic-origin families exceeded or were not different from those for Blacks for married couples and families with a female householder, no husband present. For example, the poverty rate for Hispanic-origin married couples was 16.2 percent in 1989, compared with 11.8 percent for Blacks; and about 47 percent of both Black and Hispanic-origin families with a female householder, no husband present were below the poverty level in 1989. However, female-householder families constituted 73.4 percent of all poor Black families compared with 46.8 percent of poor Hispanic-origin families.

Poverty rates for families in 1989 tended to decrease with increasing age of householder (from 30.4 percent for those under age 25 to 6.6 percent for those with a householder 65 and over), as well as with years of school completed by the householder and the number of workers in the family. (See table 22.) Poverty rates for families increased as family size increased.

Overall in 1989, 43.2 percent of all poor families were maintained by a married couple, while 51.7 percent were maintained by a female with no husband present. (Neither figure was statistically different from its 1988 counterpart.) The proportion of female-householder families among all poor families leveled off in the early 1980s and was actually slightly lower in 1985 than in 1978 (48.1 percent versus 50.3 percent). However, in the past four years this proportion has exceeded the 1985 figure and the 1989 percentage (51.7 percent) was not statisically different from the 1978 percentage of 50.3 percent. In 1989, only 12.5 percent of nonpoor families were maintained by a female householder, no husband present.

Persons in families represented 76.3 percent of the poor in 1989 and an additional 2.2 percent lived in unrelated subfamilies. (Unrelated subfamilies are composed of persons related to each other but not related to the person or couple maintaining the household.) The poverty rate for persons in families was 11.5 percent in 1989 (unchanged from 1988), while 54.4 percent of the 1.3 million persons in the Nation's unrelated subfamilies were poor in 1989. (The latter rate was also not significantly different from the 1988 estimate).

The 6.8 million unrelated individuals (persons living alone or with nonrelatives only) who were poor in 1989 accounted for 21.5 percent of the poverty population (compared with only 13.3 percent of the population above the poverty level).[5] Both the number of poor unrelated individuals and their poverty rate decreased between 1988 and 1989, the poverty rate falling from 20.6 percent to 19.2 percent. This change was due to a decrease in the number of poor male unrelated individuals, whose numbers had increased slightly between 1987 and 1988. Neither the number of poor female unrelated individuals, who represented 62.5 percent of all poor unrelated individuals, nor their poverty rate (22.2 percent in 1989) changed between 1988 and 1989.

Work experience of family householders. Among poor family householders, 48.9 percent worked in 1989 and 16.2 percent worked year-round, full-time. Neither of these figures is significantly different from the comparable 1988 estimate. For comparison, 79.7 percent of nonpoor family householders worked in 1989 and 62.8 percent worked year-round, full-time.

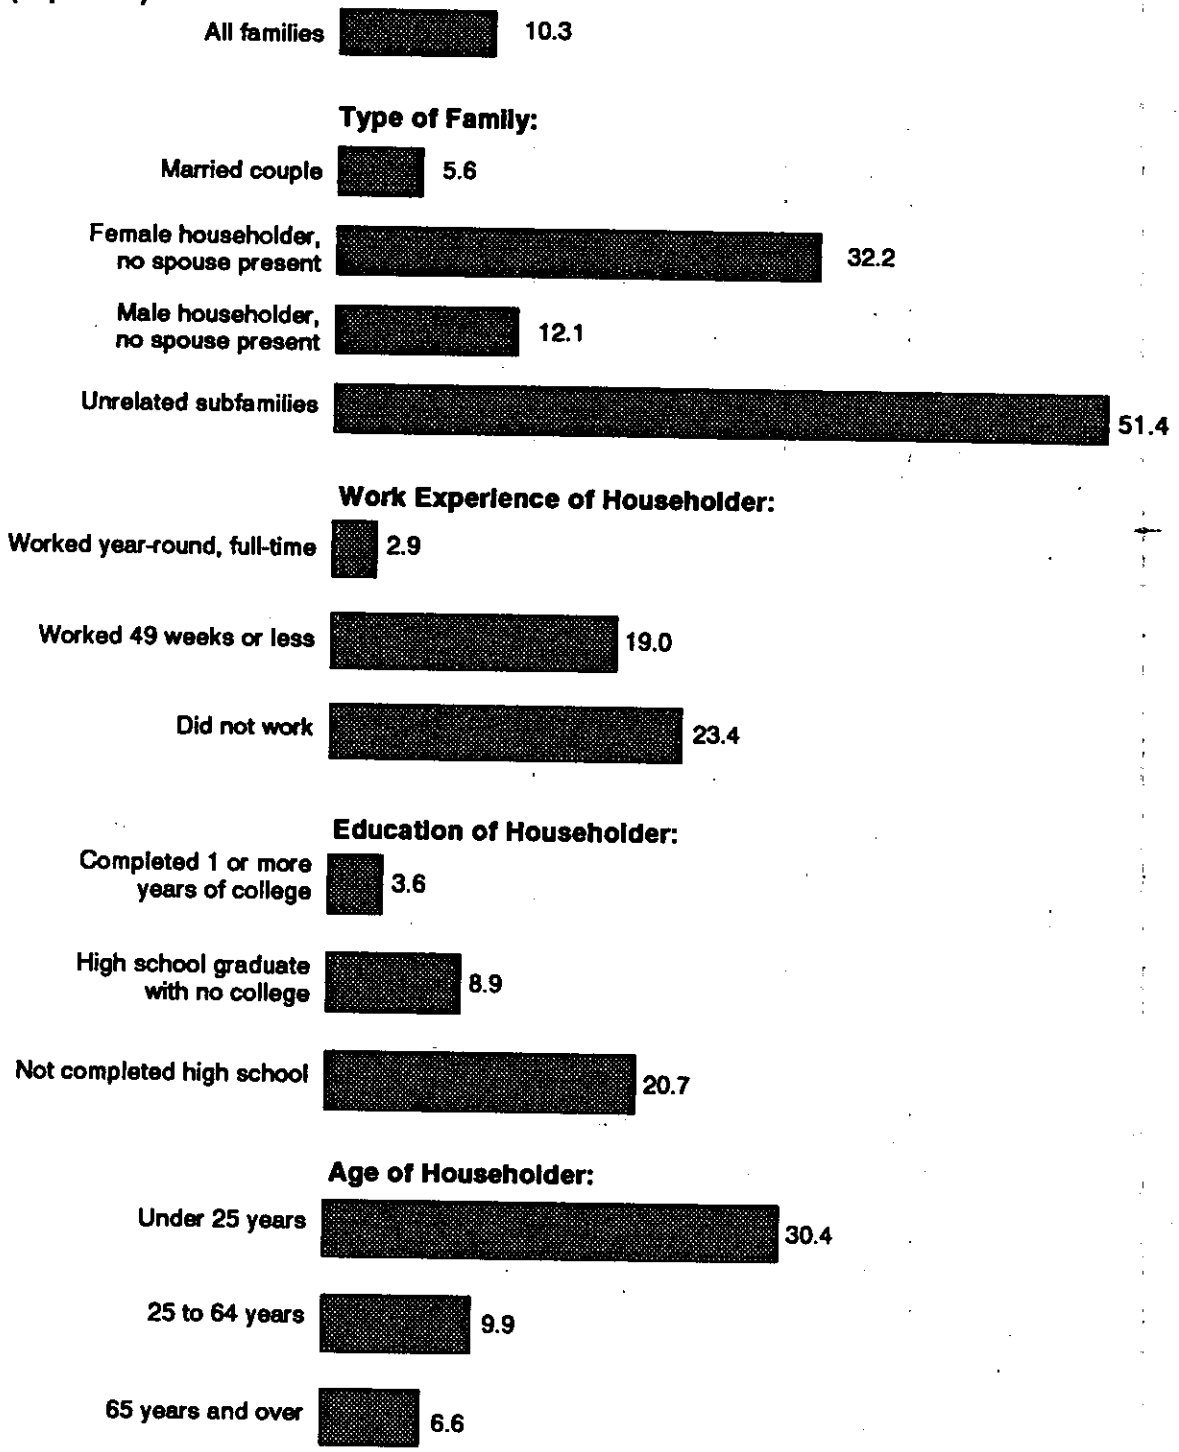
In 56.5 percent of poor married-couple families, the householder worked in 1989 with 24.4 percent working year-round, full-time. About 36.4 percent of poor married-couple householders who did not work in 1989 indicated retirement as the reason, while 36.5 percent gave illness or disability as the reason, and the remaining 27.2 percent gave a reason such as unable to find work, keeping house, or going to school.[6] For nonpoor married-couple householders, the vast majority (75.7 percent) of those who did not work were retired. Approximately twice the proportion of poor as nonpoor married-couple householders reported illness or disability as the reason for not working.

The householder worked in 41.6 percent of poor female-householder families with no husband present in 1989, with 8.8 percent working year-round, full-time. The comparable percentages for nonpoor female householders with no husband present were 76.1 percent who

[5]It should be noted that the CPS is primarily a household survey and thus persons who are homeless and not living in shelters are not included in these poverty statistics.

[6]In this sentence, 36.5 percent is not statistically different from 36.4 percent.

Figure 2.
Poverty Rates for Families With Selected Characteristics: 1989
(In percent)



worked in 1989 and 54.7 percent worked year-round, full-time. The predominant reason given by those who did not work was family responsibilities for poor female householders, with 66.0 percent giving this reason. Unlike poor families maintained by a female with no husband present, nonpoor female-householder families whose householder did not work in 1989 generally contained no related children under 18 years (74.0 percent for the nonpoor versus 10.9 percent for the poor had no children). Thus, family responsibilities was given by only 31.9 percent as the reason for not working. For these nonpoor families the most common

reason for not working was retirement, with 42.9 percent giving this response.

About 59.2 percent of all poor families in 1989 contained at least one person who worked in that year. There were 1.3 million poor families (19.3 percent of all poor families) with two or more workers in 1989. The majority of the Nation's nonpoor families had two or more workers in 1989 (62.8 percent). Poverty rates tended to decrease as number of workers in the family increased, from 29.2 percent for families with no workers to 1.9 percent for families with three or more workers.

Educational Attainment of Family Householders. About 50.6 percent of the poor family householders 25 years old and older were high school graduates in 1989, compared with 80.4 percent of nonpoor householders. Although 18.3 percent of poor householders had not completed the eighth grade, 15.6 percent had completed one or more years of college. Nevertheless, poverty rates decrease dramatically as years of school completed increases: the poverty rate was 22.2 percent for householders who had not completed high school, 8.9 percent for those who had graduated from high school but not attended college, and 3.6 percent for householders who had completed one or more years of college. This general relationship exists regardless of race or Hispanic origin although large differences exist among these groups within education category. For example, 23.4 percent of Black family householders who were high school graduates (but had not completed any college years) were below the poverty level in 1989, while 16.2 percent of Hispanic householders and only 7.0 percent of White householders with comparable education were poor.

Income Deficit. In 1989 the average amount of money needed to raise the incomes of each poor family to its respective poverty threshold was $4,875, not significantly different from the 1988 figure of $4,972 (in constant 1989 dollars). This amounts to a deficit per family member of $1,374 in 1989. The average income deficit for poor families with a female householder, no husband present ($5,380) was higher than that for married-couple families ($4,299). This difference is compounded by the fact that poor families with a female householder were smaller than poor married-couple families. Thus the deficit per family member was $1,616 in 1989 for families with a female householder, no husband present compared with $1,113 for married-couple families.

For unrelated individuals the average income deficit was $2,818 in 1989, slightly higher than the $2,695 in 1988 (in 1989 dollars). For women, the average deficit in 1989 for unrelated persons was $2,565, lower than the $3,238 for men.

Another gauge of the relative distance of the poor from the poverty level is the proportion below specified fractions of their respective poverty thresholds. For all poor persons, 38.0 percent were in families (or were unrelated individuals) whose total income in 1989 was below one-half of their respective poverty threshold. This fraction was down by 1.9 percentage points from the 1988 fraction, but remains well above the 1978 figure.[7]

In 1989 there were 10.8 million poor persons whose family or personal (in the case of unrelated individuals) income was between 75 percent and 99 percent of their poverty threshold. These persons represented 34.3 percent of all poor persons. A similar number of persons (11.1 million) had "near poor" income in 1989—that is, income more than their respective poverty threshold but below 125 percent of their threshold. Data from the Survey of Income and Program Participation imply that persons whose income is close to the poverty level—either above or below it—have a much higher probability of changing statuses than other persons. For example 17.9 percent of near poor persons in 1985 became poor in 1986 compared with only 1.8 percent of persons with income above 125 percent of their poverty threshold. Likewise 42.5 percent of poor persons in 1985 whose income was between 75 percent and 99 percent of their poverty threshold had above poverty level income in 1986, compared with only 13.4 percent of persons whose income was below 75 percent of their threshold.[8]

TRENDS IN INCOME AND POVERTY USING THE CPI-U VERSUS CPI-U-X1

In order to accurately assess changes over time in economic well-being, an adjustment for cost of living changes is required. Incomes from different years need to be made comparable by evaluating them in dollars with the same purchasing power. In order to adjust for cost of living changes, the Census Bureau uses the official Consumer Price Index (CPI-U), which is provided by the Bureau of Labor Statistics (BLS). This is an index of the cost of a market basket of goods and services representing the average consumption of the urban population. The Census Bureau uses the CPI-U in order to (1) adjust annual poverty thresholds for inflation and (2) compare changes in real income over time.

According to many analysts, prior to 1983 the CPI-U measured housing costs in a way that led to excessive growth in the index during the late 1970s when interest rates increased rapidly. In particular, the housing component of the CPI-U gave inordinate weight to the costs of newly purchased homes, including both the purchase price and mortgage interest rates, as well as property taxes, insurance, and maintenance costs. As a result of

[7]See Mark S. Littman, "Poverty in the 1980s: Are the Poor Getting Poorer?" Monthly Labor Review, June 1989, pp 13-18.

[8]See Current Population Reports, Series P-70, No. 18, *Transitions in Income and Poverty Status: 1985-86.*

the large weights assigned to homeownership costs, many analysts think that the CPI-U overstated the true rise in living costs in the late 1970s.

In 1983, the BLS began using a revised method to calculate the CPI-U. This method uses estimates of the cost of renting equivalent housing to measure homeownership costs, and as a result it is less affected by changes in housing prices and mortgage rates. The official CPI-U time series is based on the old methodology prior to 1983 and on the new methodology for the years 1983 to the present.

In order to create a consistent series over time, the BLS also created an experimental series (CPI-U-X1) based on the new methodology for the entire 1967-1982 period. The availability of the experimental series has raised important measurement issues for analysts concerned with the accuracy of time series data that have been adjusted for price changes. (See Appendix D, "Bureau of Labor Statistics' Statement on the Use of the CPI-U-X1.") The official CPI-U shows an increase of 271.3 percent over the 1967 to 1989 period. When the experimental CPI-U-X1 values are substituted for the official CPI-U values for the years 1967 to 1982, the resulting index shows an increase of only 241.6 percent over the 1967 to 1989 period. Using 1967 as the base year, the 1989 CPI-U-X1 (341.6) was 92.0 percent of the CPI-U (371.3), implying that the CPI-U overstated the change in cost of living over this period by 8.0 percent. [9]

The Number of Poor and Poverty Rate. Poverty data based on the official definition were first tabulated for 1959. As directed by the Office of Management and Budget, year-to-year adjustments for inflation are made to the poverty thresholds based on the official CPI-U.

Using this definition, the poverty rate fell dramatically in the 1960s, decreasing from 22.4 percent in 1959 to 12.1 percent in 1969, while the number of poor declined from 39.9 million to 24.1 million. Between 1970 and 1977, the size of the poverty population fluctuated between 23.0 and 25.9 million, and the poverty rate ranged from 11.1 percent to 12.6 percent. Then from 1978 to 1983, the poverty rate increased by one-third, from 11.4 percent to 15.2 percent, and the number of poor increased from 24.5 million to 35.3 million (see table A). Since 1983, however, both the number of poor and the poverty rate have declined, although the year-to-year changes in these figures have not necessarily been statistically significant. Both the number of poor and the poverty rate in 1989 were above their 1978 levels.

[9]Table C of the Current Population Reports, Series P-60, No. 168, *Money Income and Poverty Status in the United States:1989* reflects a correction to a minor error in the calculation of the CPI-U-X1 series for the years 1983-88 that appeared in table B of Current Population Reports, Series P-60, No. 166, *Money Income and Poverty Status in the United States: 1988.*

Since the effect of adjusting poverty thresholds for inflation is cumulative, lower inflation in the past would result in lower current thresholds. If poverty thresholds had been updated between 1967 and 1982 based on the experimental CPI-U-X1 rather than the official CPI-U, they would be approximately 8 percent lower now and fewer people would have been classified as below the poverty level during this period, as well as currently.[10]

Similar trends in poverty are observed regardless of the CPI used, but the use of the CPI-U-X1 produces lower estimates of the prevalence of poverty.[11] In 1989, for example, the number of persons below poverty was 3.6 million lower using the CPI-U-X1 (28.0 versus 31.5 million) and the poverty rate was 1.4 percentage points lower (11.4 versus 12.8 percent). The use of the CPI-U-X1 index produces estimated poverty rates of 10.5 percent in 1974, 10.4 percent in 1978, 13.5 percent in 1983, and 11.4 percent in 1989 (see table E-1). The official estimates (based on the CPI-U) for these years are 11.2 percent in 1974, 11.4 percent in 1978, 15.2 percent in 1983, and 12.8 percent in 1989.[12] Both series show a sharp increase from 1978 to 1983 and a decline from 1983 to 1989. The 1989 rate in both series is significantly higher than the 1978 rate.

It should be noted that which CPI index is most appropriate is only one of many issues surrounding the accuracy of the current poverty definition. Other definitional issues include 1) the food-to-total income ratio inherent in the current definition; 2) the use of different thresholds for the elderly in 1- and 2-person households; 3) how and whether to incorporate the value of medical benefits and other noncash benefits; 4) the exclusion of the homeless in the CPS since it is a household survey; 5) the use of pretax or after-tax income; 6) regional cost of living differences; and 7) the current exclusion of assets and liabilities.[13] The resolution of some of the other poverty definition questions would have considerably more impact on the number of poor and poverty rate than changing the index for measuring inflation.

COLLECTION AND LIMITATIONS OF POVERTY DATA

This report presents findings from the Income Supplement of the Census Bureau's Current Population Surveys of March 1989 and 1990. The information was

[10]For example, the average poverty threshold for a four-person family would be $12,674 in 1989 based on the official CPI-U, but $11,662 in 1989 if the CPI-U-X1 had been used since 1967.

[11]Poverty data for 1967-73 based on the CPI-U-X1 have not yet been produced due to technical reasons but will be made available in the future.

[12]The poverty rates in 1974 and 1978 were not significantly different from each other regardless of which index is used.

[13]For a discussion of some of these issues, see Harold W. Watts, *Have Our Measures of Poverty Become Poorer?*, Focus, Volume 9, No. 2, Summer 1986, University of Wisconsin - Madison, Institute for Research on Poverty.

collected from a sample of persons representing the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United State. Because the collection of income data in the survey is restricted to persons 15 years old and over, unrelated individuals under 15 are excluded from this report. In addition, poverty numbers and rates exclude inmates of institutions, and Armed Forces members living in barracks.

The poverty definition used in this report is based on an index developed at the Social Security Administration (SSA) in 1964, and revised by Federal Interagency Committees in 1969 and 1981. A directive from the Office of Management and Budget, originally issued in 1969, established the Census Bureau's statistics on poverty as the standard data series to be used by all Federal agencies.[14]

The poverty concept is a statistical measure based on the Department of Agriculture's 1961 Economy Food Plan. It reflects the different consumption requirements of families in relation to their size and composition, and the age of the family householder. A ratio of food expenditures to income of one-third, based on the Department of Agriculture's 1955 Survey of Food Consumption, was used to derive the original poverty thresholds from the economy food plan. The poverty thresholds have been updated annually based on changes in the Consumer Price Index. For further details, see appendix A.

The data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest and rent; unemployment and worker's compensation; government and private employment pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. For additional information on this topic, see Appendix C, Underreporting of Income.

Money income does not reflect the fact that many families received part of their income in the form of nonmoney transfers. Many low-income families received benefits such as food stamps, health benefits, and subsidized housing; other families received employer-provided benefits such as health insurance coverage, contributions to retirement plans, and payment for education expenses.

Beginning with the March 1980 survey, the CPS income supplement has included a group of questions on the receipt of selected noncash benefits during the previous year. The means-tested benefit covered in the March 1989/90 surveys were food stamps, free or reduced-price school lunches, public or subsidized housing, and Medicaid. Questions were also asked about the following non-means tested benefits: Medicare, CHAMPUS or other military health care, employer-provided insurance plans, and employer-provided group health insurance plans. Data on such benefits show that about 70 percent of all poor persons were in households in which someone received at least one of the following means-tested noncash benefits in 1989: food stamps, free or reduced price school lunches, Medicaid, and publicly owned or other subsided housing.

Technical Paper 58, *Estimates of Poverty Including the Value of Noncash Benefits: 1987,* focuses on five major noncash benefits: food stamps, free or reduced-price school lunches, Medicaid, Medicare, and publicly owned or subsidized housing. The paper presents two different methods for valuing these benefits: (1) market value, (2) recipient value. It is the sixth in a series of technical papers updating the estimates to 1987. Technical Papers Nos. 50,51,52,55,56, and 57 contain estimates for the period 1979 through 1986. Since the same poverty thresholds were used as in the official definition, the resulting poverty estimates are all lower than the official estimates. The report for 1987 shows that if selected benefits had been counted as income, the official estimate of poverty would have been reduced by 8 to 37 percent, depending on the range of benefits valued and the method used.

More recently the Bureau has released a report which estimates the incremental effect of valuing these noncash benefits as well as factoring in the effect of taxes on poverty, again using the official poverty thresholds. See series P-60, No. 169-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty:1989.* It should be noted that there is no general agreement on how to value all of such benefits, which benefits should be valued or whether any noncash benefits should be valued without adjusting the poverty thresholds.[15] See *Proceedings of the Conference on the Measurement of Noncash Benefits,* Dec. 12-14, 1985, Vol. 1, and also Harold W. Watts, *Have our Measures of Poverty Become Poorer?* Focus, Volume 9, No. 2, Summer 1986, University of Wisconsin Madison, Institute for Research on Poverty.

RELATED REPORTS

Current Population Survey

A detailed explanation of the poverty concept appears in the "The Measure of Poverty, A Report to Congress as Mandated by the Education Amendments of 1974,"

[14]Statistical Policy Handbook, Directive 14, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, May 1978.

[15]The Census Bureau's income concept does not assign a value to any noncash benefit, regardless of a person's or family's income level. Benefits such as employer-provided health and life insurance, pension plans, stock options, and use of company automobiles are not valued and not included as income.

prepared by Poverty Studies Task Force under the auspices of the Department of Health, Education, and Welfare. This report also discusses limitations of the poverty definition and presents alternative methods for measuring poverty.

A detailed description of the original poverty index developed by the Social Security Administration appears in the following articles by Mollie Orshansky published in the Social Security Bulletin, "Counting the Poor: Another Look at the Poverty Profile," January 1965 (reprinted in the October 1988 issue) and "Who's Who Among the Poor: A Demographic View of Poverty," July 1965.

Data on persons in poverty based on the original poverty definition appear in Current Population Reports, Series P-60, No. 54, *The Extent of Poverty in the United States: 1959 to 1966*. Data based on the revised definition of poverty appear in later reports in the P-60 series. Poverty data are also included in some reports in the P-20 and P-23 series of the Current Population Reports. All relevant titles are listed on the inside of the back cover of this report. Data based on the Current Population Survey showing the distribution of families and persons by income levels also appear in the P-60 series; the latest report is P-60, No. 162, *Money Income of Households, Families and Persons in the United States: 1987*.

Detailed data on the receipt of noncash benefits in 1985, including the poverty status of recipients appear in Current Population Reports, Series P-60, No. 155, *Receipt of Selected Noncash Benefits: 1985*. Several approaches to the valuation of these benefits are explored in Technical Paper 58, *Estimates of Poverty Including the Value of Noncash Benefits: 1987*. The Bureau has also released a report which estimates the incremental effect on the number of poor of valuing certain noncash benefits and using an aftertax income concept (but using the same poverty thresholds as the official definition). See Current Population Reports, Series P-60, No. 169-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1989*.

Decennial Census

Poverty data collected in the 1980 Census are available for all States on computer files (referred to as summary tape files, or STF's) as well as in published reports. Summary Tape File 3 contains poverty data cross classified by race, age, type of family, and presence of children, for States, standard metropolitan statistical areas (SMSA's), counties, county subdivisions, incorporated places, and census tracts. Various subfiles of STF3 present information for neighborhoods, Congressional districts, school districts, and zip code areas. There are three report series based on STF3: Series PHC80-3, Summary Characteristics for Governmental Units and Standard Metropolitan Statistical Areas, Series PHC80-4, Congressional Districts of the 98th Congress, and Series PHC80-S2, Advance Estimates of Social, Economic, and Housing Characteristics.

Summary Type File 4 provides somewhat more detailed information on the age and family structure of the poverty population, and additional characteristics including receipt of Social Security and Public assistance income, work experience, and ratio of income to the poverty level. All items in STF4 are repeated by race and Hispanic origin. Data are shown for States, SMSA's, counties, county subdivision, places and tracts. The three report series based on STF4 are Series PC80-1-C General Social and Economic Characteristics, Series PHC80-2 Census Tracts, and Series HC80-1B, Detailed Housing Characteristics.

More detailed poverty data for fewer geographic areas (State, SMSA's counties, and cities of 50,000 or more inhabitants) are presented in STF5. This file is the basis for Series PC80-1-D, Detailed Population Characteristics. Inquiries concerning availability of printed reports, computer tapes, microfiche and 1990 Census publication plans may be addressed to Data User Services Division, Customer Services, Bureau of the Census, Washington, D.C. 20233.

[r]Figures based on new processing procedures. The 1987 and 1988 figures are also revised to reflect corrections to the files after publication of the 1988 advance report, Money Income and Poverty Status in the United States: 1988, P-60,No.166.

[1]Persons of Hispanic origin may be of any race.

Note: Prior to 1979 persons in unrelated subfamilies were included in persons in families. Beginning in 1979 persons in unrelated subfamilies are included in all persons but are excluded from persons in families.

Table 2. Poverty Status of Persons, by Age, Race, and Hispanic Origin: 1959 to 1989

(Numbers in thousands. Persons as of March of the following year. For meaning of symbols, see text)

Year and characteristic	Under 18 years						18 to 64 years			65 years and over		
	All persons			Related children in families				Below poverty			Below poverty	
		Below poverty			Below poverty

[r]Figures based on new processing procedures. The 1987 and 1988 figures are also revised to reflect corrections to the files after publication of the 1988 advance report, Money Income and Poverty Status in the United States, P-60,No.166.

[1]Persons of Hispanic origin may be of any race.

Note: Prior to 1979 unrelated subfamilies were included in all families. Beginning in 1979 unrelated subfamilies are excluded from all families.

Table 4. Age, Sex, Household Relationship, and Hispanic Origin, by Poverty Status of Persons in 1989

[Numbers in thousands. Persons, families and unrelated individuals as of March of the following year. For meaning of symbols, see text]

Table 8. Selected Characteristics of Persons Living in Poverty Areas, by Poverty Status in 1989

[Numbers in thousands. Persons, families and unrelated individuals as of March of the following year. Poverty areas or neighborhoods are defined as census tracts and minor civil divisions outside tracted areas with a poverty rate of 20 percent or more based on the 1980 census. For meaning of symbols, see text]

Characteristic	All areas			Living in poverty areas			Living outside poverty areas		
		Currently below poverty level			Currently below poverty level			Currently below poverty level

Table 8. Selected Characteristics of Persons Living in Poverty Areas, by Poverty Status in 1989—Con.

[Numbers in thousands. Persons, families and unrelated individuals as of March of the following year. Poverty areas or neighborhoods are defined as census tracts and minor civil divisions outside tracted areas with a poverty rate of 20 percent or more based on the 1980 census. For meaning of symbols, see text]

Characteristic	All areas			Living in poverty areas			Living outside poverty areas		
		Currently below poverty level			Currently below poverty level			Currently below poverty level

Table 28. Selected Characteristics of Persons Living in Poverty Areas, by Poverty Status in 1988—Con.

[Numbers in thousands. Persons, families and unrelated individuals as of March of the following year. Poverty areas or neighborhoods are defined as census tracts and minor civil divisions outside tracted areas with a poverty rate of 20 percent or more based on the 1980 census. For meaning of symbols, see text]

Table 28. Selected Characteristics of Persons Living in Poverty Areas, by Poverty Status in 1988—Con.

[Numbers in thousands. Persons, families and unrelated individuals as of March of the following year. Poverty areas or neighborhoods are defined as census tracts and minor civil divisions outside tracted areas with a poverty rate of 20 percent or more based on the 1980 census. For meaning of symbols, see text]

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. Unrelated individuals under 15 years old are also excluded.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. Beginning with the March 1980 survey, the CPS has employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population. The new definition and its impact on the size and composition of the farm population are discussed in Current Population Reports, Series P-27, No. 52, *Farm Population of the United States: 1978.*

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan areas. The population residing in metropolitan statistical areas (MSA's) as defined in June 1984 constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Nonmetropolitan areas. The territory outside metropolitan statistical areas is referred to here as nonmetropolitan.

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

Outside central cities. The territory outside central cities of metropolitan statistical areas but within MSA's is referred to here as outside central cities.

Geographic region. The four major regions of the United States for which data are presented in this report represent groups of States as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

North and West: Northeast, Midwest, and West Regions combined.

Poverty areas. For this report poverty areas are defined in terms of census tracts (in metropolitan areas) or minor civil divisions (townships, districts, etc. in nonmetropolitan areas) in which 20 percent or more of the population was below the poverty level in 1979 based on the 1980 census. See 1980 Census of Population report PC80-2-8D, Poverty Areas in Large Cities.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest (on savings or other investments which pay interest); (8) dividends, income from estates or trusts, or net rental income; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. However, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Money wages or salary is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

Net income from nonfarm self-employment is net money income(gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of

inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

Net income from farm self-employment is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments, such as aid to families with dependent children and general assistance.

Dividends, interest (on savings or other investments which pay interest), income from estates or trusts, net rental income, or royalties include dividends from stockholdings or membership in associations, interest on savings or any type of investment which pays interest, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others, receipts from boarders or lodgers, and net royalties.

Unemployment compensation, veterans' payments, or worker's compensation include (1) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; (2) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; and (3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

Private and government employee pensions include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

Annuities, alimony, regular contributions from persons not living in the household, and other periodic income include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Government transfer payments include Social Security or railroad retirement, public assistance or welfare payments, Supplemental Security income, retirement and annuities, veterans' payments, and unemployment and worker's compensations.

Receipts not counted as income are receipts from the following sources that were not included as income: (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from selfemployment.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Some of

these were living on income "in-kind," savings, or gifts, or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families and unrelated individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons with income.

Income per family member. The income per family member is the average amount of income available to every man, woman, and child in a family. Income per family member is derived by dividing the total family income of a group by the number of family members in the same group.

Poverty definition. Poverty statistics presented in this report are based on a definition developed by the Social Security Administration in 1964 and revised in 1969 and 1981 by interagency committees. This definition was established as the official definition of poverty for statistical use in all Executive departments by the Bureau of the Budget (in Circular No. A-46) and later by the Office of Management and Budget (in Statistical Directive No. 14).

The original poverty index provided a range of income cutoffs adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spent approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. Annual revisions of these SSA poverty cutoffs were based on price changes of the items in the economy food budget.

As a result of deliberations of a Federal Interagency Committee in 1969, the following two modifications to the original SSA definition of poverty were recommended: (1) that the SSA thresholds for nonfarm families be retained for the base year 1963, but that annual adjustments in the levels be based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of food included in the economy food plan; and (2) that the farm thresholds be raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase of 360,000 poor families and 1.6 million poor persons in 1967.

In 1980, another interagency committee recommended three additional modifications that were implemented in the March 1982 CPS as well as the 1980 census: (1) elimination of separate thresholds for farm families, (2) averaging of thresholds for female-householder and "all other" families, and (3) extension of the poverty matrix to families with nine or more members. For further details, see the section, "Changes in the Definition of Poverty," in Current Population Reports, Series P-60, No. 133.

Table A-1. **Consumer Price Index and Average Poverty Threshold for a Family of Four: 1959 to 1989**

Year	Comsumer price index (1967=100)	Average threshold for a family of four persons[1]
1989	371.3	$12,674
1988	354.3	12,092
1987	340.4	11,611
1986	328.4	11,203
1985	322.2	10,989
1984	311.1	10,609
1983	298.4	10,178
1982	289.1	9,862
1981	272.4	9,287
1980	246.8	8,414
1979	217.4	7,412
1978	195.4	6,662
1977	181.5	6,191
1976	170.5	5,815
1975	161.2	5,500
1974	147.7	5,038
1973	133.1	4,540
1972	125.3	4,275
1971	121.3	4,137
1970	116.3	3,968
1969	109.8	3,743
1968	104.2	3,553
1967	100.0	3,410
1966	97.2	3,317
1965	94.5	3,223
1964	92.9	3,169
1963	91.7	3,128
1962	90.6	3,089
1961	89.6	3,054
1960	88.7	3,022
1959	87.3	2,973

[1]For years prior to 1981, average threshold for a nonfarm family of four is shown.

The poverty thresholds rise each year by the same percentage as the annual average Consumer Price Index. Table A-1 shows the CPI and the corresponding thresholds for a family of four for the 1959-89 period. Tables A-2 and A-3 show the full poverty threshold matrix in 1988 and 1989, respectively.

Poverty guidelines. Average poverty thresholds are similar but not identical to the "administrative poverty income guidelines" which are issued by the Department of Health and Human Services (HHS). The HHS poverty guidelines are used for administrative purposes such as determining eligibility for a particular assistance program rather than for determining poverty status in surveys. The guidelines are usually applied in combination with other eligibility criteria, such as asset limits, and may be used as multiples (e.g., children in families with income below 185 perent of their appropriate income guidelines may be eligible for the reduced-price school lunch program).

The HHS guidelines represent rounded versions of the average weighted poverty thresholds adjusted to provide equal differences between each family size (rather than using the equivalency scale inherent in the poverty thresholds). For example, the 1990 poverty guidelines issued in the Federal Register (see Federal Register, Volume 55, No. 33, Feb. 16, 1990, pp. 5,664-5,665) are based on the 1989 poverty thresholds. These guidelines use the reference year "1990" since they are applied for eligibility purposes in that year. The poverty thresholds are called "1989" because in the March 1990 CPS persons are asked income information for the previous calendar year (1989).

For further information on the poverty guidelines, contact the Office of the Assistant Secretary for Planning and Evaluation, Department of Health and Human Services, Washington, DC.

Ratio of income to poverty level. Because the poverty definition does not meet all the needs of the analysts of the data, a few of the tables in the report present variations of the poverty level expressed as a ratio of income to the family's (or unrelated individual's) appropriate poverty threshold. Ratios below 1.00 are below the official defintion while a ratio of 1.00 or greater indicates income above the poverty level. A ratio between 1.00 and 1.25 indicates for example that a family's income was above their poverty threshold but below 125 percent of their poverty threshold. If a family's poverty threshold was $9,999 a ratio of 1.00 to 1.25 thus would mean their income was between $10,000 and $12,500.

Weighted average thresholds at poverty level. As shown in table A-2 and A-3, the poverty cutoffs used by the Bureau of the Census to determine the poverty status of families and unrelated individuals consist of a set of 48 thresholds arranged in a two-dimensional matrix consisting of family size (from one person, i.e., unrelated individuals, to nine or more persons) cross-classified by presence and number of family members under 18 years old (from no children present to eight or more children present). Unrelated individuals and two-person families are further differentiated by the age of the individual or family householder (under 65 years and 65 years and over). The total family income of each family in the sample is tested against the appropriate dollar threshold to determine the poverty status of the family. If the family's total income is less than its corresponding cutoff, the family is classifed as below the poverty level. The average thresholds shown in these tables were weighted by the presence and number of children. For a given size of family, the weighted average threshold for that group is obtained by multiplying the threshold for each presence and number of children category within the given family size by the number of families in that category. These products are

Table A-2. **Poverty Thresholds in 1988, by Size of Family and Number of Related Children Under 18 Years**

Size of family unit	Weighted average thresholds	Related children under 18 years								
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual)	$ 6,022									
Under 65 years	6,155	$ 6,155								
65 years and over	5,674	5,674								
Two persons	7,704									
Householder under 65 years	7,958	7,922	$ 8,154							
Householder 65 years and over	7,157	7,151	8,123							
Three persons	9,435	9,254	9,522	$ 9,531						
Four persons	12,092	12,202	12,402	11,997	$12,039					
Five persons	14,304	14,715	14,929	14,472	14,118	$13,902				
Six persons	16,146	16,925	16,992	16,642	16,306	15,807	$15,511			
Seven persons	18,232	19,474	19,596	19,177	18,884	18,340	17,705	$17,008		
Eight persons	20,253	21,780	21,973	21,577	21,231	20,739	20,115	19,465	$19,300	
Nine persons or more	24,129	26,200	26,327	25,977	25,683	25,200	24,536	23,936	23,787	$22,871

Table A-3. **Poverty Thresholds in 1989, by Size of Family and Number of Related Children Under 18 Years**

Size of family unit	Weighted average thresholds	Related children under 18 years								
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual)	$6,310									
Under 65 years	6,451	$6,451								
65 years and over	5,947	5,947								
Two persons	8,076									
Householder under 65 years	8,343	8,303	$8,547							
Householder 65 years and over	7,501	7,495	8,515							
Three persons	9,885	9,699	9,981	$9,990						
Four persons	12,674	12,790	12,999	12,575	$12,619					
Five persons	14,990	15,424	15,648	15,169	14,798	$14,572				
Six persons	16,921	17,740	17,811	17,444	17,092	16,569	$16,259			
Seven persons	19,162	20,412	20,540	20,101	19,794	19,224	18,558	$17,828		
Eight persons	21,328	22,830	23,031	22,617	22,253	21,738	21,084	20,403	$20,230	
Nine persons or more	25,480	27,463	27,596	27,229	26,921	26,415	25,719	25,089	24,933	$23,973

then aggregated across the entire range of presence and number of children categories, and the total aggregate is divided by the total number of families in the group to yield the weighted average threshold at the poverty level for that size family. Because family composition does not remain constant from year to year, the weighted average thresholds for 1988 and 1989 will not reflect, identically, the change in the CPI between 1988 or 1989 and earlier years.

Since the basic thresholds used to determine the poverty status of families and unrelated individuals are applied to all families and unrelated individuals, the weighted poverty thresholds are derived using all families and unrelated individuals rather than just those families and unrelated individuals classified as below the poverty level. In a few instances these weighted thresholds are slightly different from those published in earlier reports due to corrections to the CPS files.

Income deficit. Income deficit is the difference between the total income of families and unrelated individuals below the poverty level, and their respective poverty thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the dificit is equal to the poverty threshold. This measure provides an estimate of the amount which would be required to raise the incomes of all poor families and unrelated individuals to their respective poverty thresholds. The income deficit is thus a measure of the degree of impoverishment of a family or unrelated individual. However, caution must be exercised in comparing the average deficit of families classified by the race or sex of the householder. Since the poverty thresholds used in this report are based on family size and composition, apparent differences in the average income deficits may, to some extent, be a function of the differences in these characteristics.

Median income deficit. The median income deficit is the amount which divides the distribution into two equal groups, one having an income deficit above the median and the other having an income deficit below the median.

Mean income deficit. The mean income deficit is the amount obtained by dividing the total income deficit of a group below the poverty level by the number of families or unrelated individuals (as appropriate) in that group.

Deficit per family member. The deficit per family member is the average amount of money necessary to raise every man, woman and child in a family out of poverty. The deficit per family member is derived by dividing the total family income deficit of a group by the number of family members in the same group.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated

to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households. Beginning with the 1980 CPS, the Bureau of the Census began using the terms "householder" and "family householder" instead of "head of household" and "head of family."

Family. The term "family" refers to a group of two or more persons related by birth, marriage, or adoption who reside together; all such persons are considered as members of one family. For example, if the son of the person who maintains the household and the son's wife are members of the household, they are treated as members of the parent's family. Every family must include a householder; two or more people living in the same household who are related to one another, but are not related to the householder, form an "unrelated subfamily" and are not included in the count of families.

Subfamily. A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old living in a household but not including among its members the person or couple maintaining the household. Because a subfamily does not include a householder, it is by definition excluded from the count of families. There are two kinds of subfamilies, related and unrelated.

Related subfamily. A related subfamily is a subfamily whose members are related to the person or couple maintaining the household. Examples of related subfamilies include a young married couple sharing the home of the husband's or wife's parents or the daughter and grandchild of the householder. Members of a related subfamily are also members of the householder's family.

Unrelated subfamily. An unrelated subfamily is a subfamily whose members are not related to the person or couple maintaining the household. Members of unrelated subfamilies may include such persons as guests, lodgers, or resident employees and their relatives living in a household. Unrelated subfamily members are not part of the householder's family. Even though unrelated subfamilies are not counted as families, they are treated as families for the purpose of determining whether their members are above or below the poverty level. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or" married-couple" before the term "household," or "family," indicates that the household, or family, is maintained by a husband and wife.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals. The poverty status of unrelated individuals is determined independently of other household members' incomes.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary individual. A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily householders and inmates of institutions) who is not related to any other person in the household or group quarters.

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Age. The age classification is based on the age of the person at his or her last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes American Indians, Japanese, Chinese, Filipinos, Pacific Islanders, and any other race except White and Black.

Persons of Hispanic origin. Persons of Hispanic origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Central or South American, or some other Hispanic origin. It should be noted that persons of Hispanic origin may be of any race.

Years of school completed. Data on years of school completed were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools included public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to school in the regular school system.

Labor force and employment status. The definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in labor force. All civilians 15 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group of persons who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the survey week) are also classified as not in the labor force.

Occupation and class of worker. Persons are classified according to the civilian job held longest during the year. Persons who held two jobs or more were reported in the job at which they worked the greatest number of weeks.

The occupation groupings included in this report are based on the classification system used in the 1980 census. The data included in previous Current Population Reports in the P-60 series, starting with No. 81 and ending with No. 138, were based on the classification system used in the 1970 census. For an explanation and description of the changes from the old to the new system, see the February 1983 issue of "Employment and Earnings," published by the Bureau of Labor Statistics.

Class of worker refers to the subdivision of workers into three groups: wage and salary workers, self-employed workers, and unpaid family workers. The first group refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rate for private employer or for any government unit. The second group refers to persons working in their own business, profession, or trade, for profit or fees. The third group refers to persons working without pay in a business operated by a member of the household to whom they are related by birth or marriage.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he or she worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which work was performed during the year. A person is classified as having worked at full-time jobs if he or she worked 35 hours or more per week during a majority of the weeks in which work was performed.

Year-round, full-time worker. A year-round, full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Number of workers. The number includes all persons in the family who worked at anytime during the year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question, "What were you doing most of last year?"

Symbols. A dash (-) represents zero or rounds to zero, the symbol "B" means base less than 75,000 or not applicable. The symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1980 and later years were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1980 census. The base figures shown for 1969 to 1979 were based on statistics updated from the 1970 census, whereas the figures for the years 1961 to 1968 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey," Employment and Earnings, Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

The introduction of population controls and estimation procedures based on the 1980 census raised the number of persons from 217.8 million to 222.9 million in the March 1980 CPS and the number of families from 58.4 to 59.6 million. The number of persons and families below the poverty level rose proportionately, from 25.3 to 26.1 million, and from 5.3 to 5.5 million, respectively.

COMPARABILITY OF ESTIMATES FROM MARCH 1989 AND 1990 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1989 and 1990 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these

factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; (6) definition of the income universe and (7) revisions to the processing system. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls

Beginning with 1979, the data shown in this report are based on population controls derived from the 1980 census. The data for 1969 to 1978 reflect 1970 census-based population controls, while figures for previous years are tied in with 1960 census-based controls. Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and poverty rates. However, the changes may have more impact on the population levels in different sub-groupings such as the total number of persons or families either overall, within some particular income interval, or below the poverty level. A detailed description of these changes appears in the Bureau of Labor Statistics report, Employment and Earnings, Vol. 18, No. 8, February 1972.

Undocumented immigrants.

The 1980 census counted about two million undocumented immigrants according to Census Bureau estimates. Beginning in January 1986, the independent population controls included an allowance for growth in the undocumented population for every year since 1980. This methodological change was partially offset by another change that increased the allowance for emigration of legal residents. Data shown for Current Population Surveys with controls based on pre-1986 methods have not been revised to take into account these methodological changes. Consequently, direct comparisons of CPS figures for months before January 1986 with later months will not be consistent. Series P-25, No. 985 reviews the postcensal population estimates methodology currently in use.

Comparability of Metropolitan and Nonmetropolitan Data From March 1989 and 1990 CPS With Data for Previous Years

Estimates by type of residence categories (metropolitan, nonmetropolitan, central cities, outside central cities) were omitted from the 1984 reports because of the mixed 1970 and 1980 census sampling frame used for the 1985 CPS. Estimates by type of residence were resumed in the 1985 poverty report (Current Population Reports, Series P-60, No 158) since the March 1986 CPS was totally based on the 1980 census sampling frame as are subsequent years. The type of residence categories reflect metropolitan statistical areas (MSA's) defined as of June 1984. (For the definition of MSA's, see the definition's section under the heading "metropolitan areas".)

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. There are important differences in the population classified as metropolitan using the 1970 and 1984 definitions.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. For example, between July 1985 and August 1986 the magnitude of the monthly differences varied from 900,000 to 2.5 million persons, so that the proportion of the population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Noninterviews, Nonresponses, and Allocations

In the March 1990 CPS, no interview was obtained for approximately 4.5 percent of the 60,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for

income. In many cases, even though an interview is obtained, complete information for all of the income questions is not available, unknown or refused. In March 1988, the income data were incomplete for about 27 percent of the persons 15 years old and over. About 32 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Although nonresponse rates for families by poverty status are not available, it is known that families in the lower income intervals tend to have lower nonresponse rates than those in the middle and upper income intervals. This is due in part to the fact that lower income families have less complicated financial arragements than those in other income groups. For a more detailed discussion of this topic see "Income Nonresponses in the Current Population Survey" by Mitsuo Ono and Herman P. Miller published in Proceedings of the Social Statistics Section, American Statistical Association, 1969.

Modifications in Collecting Income Data in the March 1980 Current Population Survey

A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" in Current Population Reports, Series P-60, No. 130.

Definition of the Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series, P-60, No. 130.

REVISIONS TO EARNINGS QUESTION

The Census Bureau made a revision to the March CPS income supplement questionnaire in 1986 in an effort to adapt to continually rising levels of annual income. Beginning with the March 1986 CPS, question number 48, which covers the amount of earnings received from the employer or own business for which the respondent worked the longest during the previous calendar year, was modified to permit coding of earnings amounts to a maximum of $299,999. Prior to March 1986, procedures allowed for coding of amounts to a maximum of $99,999. In March 1977, about 127,000 weighted sample persons reported receiving earnings in the previous calendar year in excess of the $99,999 maximum. In March 1986, when the revision was made, about 627,000 weighted sample persons reported receiving earnings in excess of this maximum. About 16,000 weighted sample persons reported earnings amounts that exceeded the revised maximum of $299,999.

This change in the questionnaire causes a break in the time series for some income measures. Overall the revision added about $22.9 billion in 1985 to the total aggregate income that would have gone undetected had the $99,999 limit continued. Mean income, per capita income, shares of aggregate income by quintile and the index of income concentration (GINI Index) were all affected by the revision and caution should be used when comparing the 1985 and later data to earlier years.

REVISIONS TO THE MARCH CPS PROCESSING SYSTEM

Between 1988 and 1989 a new computer processing system was introduced for the March Current Population Survey. This processing system rewrite was long overdue; the system in use before this year was first introduced in March 1976 and was never fully updated to reflect the numerous questionnaire changes that have taken place since that time. In addition, the programs used to process the CPS file were written in a computer language that is being phased out of use at the Census Bureau. While the March 1989 file is the first to reflect this new processing system, the March 1988 file has been reprocessed based on these new procedures in order to: 1) better evaluate the new processing procedures, and 2) allow year-to-year comparisons to

be made between income years 1987 and 1988 using a consistent processing system. All 1987-88 comparisons in this report are based on the new processing procedures for both years.

While the following section deals mainly with modifications to the March imputation procedures and their subsequent effect on income and poverty estimates, it should be pointed out that all of the processing programs were rewritten this year, so that not only is the new file based on a somewhat different imputation system, it also reflects a rewritten weighting system, data acceptance program, family relationship edits, and new procedures to match income supplement records to the monthly CPS file. As a result, it is difficult to ascertain whether differences (especially those based on relatively small bases) are the result of imputation or other processing differences between the original and revised files.

Since the Census Bureau began imputing for missing income data on the CPS in 1962, there have been three major revisions to the processing system (in 1967, 1976, and 1989). Through all of these revisions, the basic strategy used to make imputations has remained the same. This approach, commonly referred to as "hot deck" imputation, assigns missing responses to sample persons with information from matched sample persons with similar demographic and economic information who answered these questions. For a detailed description of the CPS imputation procedures, see Technical Paper No. 54, *Income Nonresponse: March 1983 CPS.* Under the new March processing system, there were three main modifications to the income imputation programs:

1. The edits and imputations were expanded to reflect the full detail of the March income questionnaire. The original processing system was still based on a less detailed CPS income questionnaire that has not been in use since 1980.

2. Under the revised processing procedures, entire sets of March income and noncash benefits data were imputed to supplement noninterviews from the same interviewed person. Under the original processing procedures, earnings, unearned income, and noncash benefits were imputed in separate stages during the processing system. Thus, the new processing system imputes noninterviews more efficiently and is better able to preserve the correlation between earnings, unearned income, and noncash benefits.

3. Both the old and new processing systems employ what are called "statistical matches" to link sample cases with reported data to those requiring imputation for missing responses. In the original processing system, under certain circumstances, reported data was removed and replaced with imputed data during the statistical matching process. Under the new system, reported data are never removed. This was accomplished by expanding the number of statistical matches in the income imputation system.

Results of Revised Processing Procedures

Aggregate incomes. The most significant change brought about by the new processing system was the expansion of the imputation system to reflect the full detail of the CPS income questionnaire. The original processing system was designed to process CPS questionnaires in use prior to 1980, with eight separate dollar amounts (other than earnings) on every adult record. The introduction of a new income questionnaire in 1980 allowed the identification of 46 separate types of income other than earnings. Until this year, these 46 income types were combined into the eight original income types prior to imputation for missing responses. As a result, the imputation system has never reflected the full detail of the CPS income questionnaire now in use. Under the new system, dollar fields are never combined, so that for the first time it is possible to determine the exact amounts for each type of unearned income identified on the CPS questionnaire.

Overall, aggregate income under the new processing system totalled $2,988.8 billion, 0.9 percent higher than the original aggregate. The aggregate for income other than earnings was $598.2 billion, 2.8 percent higher than the comparable figure under the old processing system. This difference is the result of two factors: 1) the greater level of detail of the new imputations, and 2) the fact that there are more imputations under the new processing system. These additional imputations can be explained by the following example: Dividends, rents and royalties, and estates and trusts were combined into one dollar amount in the original processing system. A person receiving both rental and dividend income who reported a rental amount but no dividend amount would not have been imputed dividends under the old system, since these two amounts were combined prior to imputation and amounts were only imputed to income fields that were completely blank. Under the new system, a separate dividend amount would be imputed to this person. As a result of the greater number of imputations under the new system and the greater detail of the imputations that would have occurred under either processing system, the new imputation system results in higher aggregate incomes in each of the unearned income types (with the exception of Supplemental Security Income).

Poverty status. As would be expected, poverty rates are somewhat lower under the new processing system. Given the amount of aggregate income added by the

new processing procedures, changes in the estimated number of persons below poverty (from 32.5 to 32.3 million) and the poverty rate (from 13.5 to 13.4 percent) were quite small, indicating that the persons most affected by the new processing system were not those who were close to the poverty line. The poverty rates of White persons (10.4 percent), Black persons (32.6 percent) and those of Hispanic origin (28.1 percent) were all somewhat lower under the revised processing system. Poverty rates were also lower in each age group, with the exception of persons who were 65 years old and over. The poverty rate of elderly persons grew slightly (0.3 of a percentage point) under the revised procedures. It is likely that this increase is attributable to an ability under the new imputation procedures to differentiate between pensions with typically low dollar amounts (survivor or disability payments) and higher-paying (retirement) pensions. Persons in each of the four regions experienced declines in their poverty rates, with the exception of those living in the South. Their poverty rate(16.1 percent) remained the same.

The number of families with income below poverty declined from 7.1 to 7.0 million under the processing system, and the poverty rate of all families declined from 10.8 to 10.7 percent. Married-couple families and those with a female householder, no husband present, experienced similar declines in their poverty rates (0.2 and 0.1 of a percentage point, respectively).

Summary. The major goal of the revisions to the March processing system was to expand the imputation system to take full advantage of the CPS income questionnaire. Outside of what should be considered minor modifications, the basic concepts and the information used to impute missing data did not change between the original and revised processing systems. Thus, while the new system results in significantly higher aggregates for most types of unearned income, the effect of the new processing procedures on the summary measures that are used to measure year-to-year changes is really quite small. To put this current revision in perspective, the last processing revision (introduced in 1976) resulted in a decline in the percentage of persons in poverty of 3.4 percent. The comparable decline under this processing revision was 0.6 percent. However, any revision to the March processing system results in a disruption to the income and poverty time series. Though it appears that this revision resulted in relatively minor changes, caution should be used when comparing CPS data prior to March 1988 with March 1989 CPS figures.

Appendix B. Source and Reliability of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in March of years 1960 through 1990 from the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses only March data for its estimates. The March survey uses two sets of questions, the basic CPS and the supplement.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The March 1990 CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 60,000 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,600 of these units because the occupants are not home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and reliability of the data and to satisfy changing data needs. The most recent changes were completely implemented in July 1985.

The following table summarizes changes in the CPS designs for the years for which data appear in this report.

March Supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in March about money income received the previous calendar year.

To obtain more reliable data for the Hispanic origin population, the March CPS sample was increased by about 2,500 eligible housing units, interviewed the previous November, that contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

Description of the Current Population Survey

Time period	Number of sample areas	Housing units eligible[1]	
		Interviewed	Not interviewed
1990	729	57,400	2,600
1989	729	53,600	2,500
1986 to 1988	729	57,000	2,500
1985	629/729[2]	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	333	33,500	1,500

[1]Excludes about 2,500 Hispanic households added from the previous November sample. (See "March Supplement.")

[2]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

Estimation Procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces. The independent population estimates used for 1981 (1980 for income estimates) to present were based on updates to controls established by the 1980 Decennial Census. Data previous to 1981 were based on independent population estimates from the most recent decennial census. For more details on the change in independent estimates, see the section entitled "Introduction of 1980 Census Population Controls" in an earlier report (Series P-60, No. 133). The estimation procedure for the March supplement included a further adjustment so husband and wife of a household received the same weight.

The estimates in this report for 1984 and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of

the Census developed independent population controls for the Hispanic population by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

ACCURACY OF ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: nonsampling and sampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. Nonsampling errors can be attributed to many sources. These sources include the inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, respondents' inability or unwillingness to provide correct information or to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS undercoverage is about 7 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

Answers to questions about money income often depend on the memory or knowledge of one person in a household. Recall problems can cause underestimates of income in survey data, because it is easy to forget minor or irregular sources of income. Respondents may also misunderstand what the Census Bureau considers money income, or may simply be unwilling to answer these questions correctly because the questions are considered too personal. See Appendix C on underreporting of income for more discussion.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, An Error Profile: Employment as Measured by the Current Population Survey, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, The Current Population Survey: Design and Methodology, Bureau of the Census, U.S. Department of Commerce.

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described later in "Standard Errors and Their Use," are primarily measures of sampling variability, although they may include some nonsampling error.

Comparability of Data. Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

Caution should also be used when comparing estimates in this report, which reflect 1980 census-based population controls, with estimates for 1979 (from March 1980 CPS) and earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions, but did have a significant impact on levels. For example, use of 1980 based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1981 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1984, compare Hispanic estimates over time cautiously.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept, the introduction of the new farm definition, and use of more detailed income intervals in

the upper range of the income distribution. Due to these and other changes, one should use caution when comparing estimates for 1979 through 1989 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 130).

Another major change is that income estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence category such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 supplement questionnaire was revised to enable the coding of higher amounts of earnings from longest job.

Note When Using Small Estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Estimation of Median Incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto interpolation or linear interpolation. Currently, linear interpolation is used to estimate all medians. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 through 1987 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families and households, that is, where the width of the income interval containing the estimate is greater than $2,500. Estimates of median income for 1976, 1977, and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families and households, that is, where the width of the income interval containing the estimate is greater than $1,000. All other estimates of median income and associated standard errors for 1976 through 1989 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Use caution when comparing median incomes above $12,000 for persons or $18,000 for families and households for different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see Series P-60, No. 114, *Money Income in 1976 of Families and Persons in the United States.*

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. Thus, the tables show levels of magnitude of standard errors rather than the precise standard errors.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (1.0)," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the poverty rate of Black families to the poverty rate of White families.

Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in

fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference.

Standard Errors of Estimated Numbers. There are two ways to compute the approximate standard error, sx, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from table B-4, and s is the standard error of the estimate obtained by interpolation from table B-1. The second method uses formula (2), from which the standard errors in tables B-1 were calculated. This formula will provide more accurate results than formula (1)

$$s_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table B-4 associated with the particular type of characteristic. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration

As shown in table 1, there were 31,528,000 persons below the poverty level in 1989. Using formula (1) and table B-1 with f = 1.0, the approximate standard error is

$$s_x = (1.00)\ (507{,}000) = 507{,}000$$

Using the second method with a = -0.000040 and b = 9,742 from Table B-4, the approximate standard error is

$$s_x = \sqrt{(-0.000040)\ (31{,}528{,}000)^2 + (9{,}742)\ (31{,}528{,}000)} = 517{,}000$$

This means that a 90-percent confidence interval for the number of persons below the poverty level in 1989 is from 30,678,000 to 32,378,000, i.e., 31,528,000 ± 1.645 (517,000).

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table B-4 indicated by the numerator.

Table B-1. **Standard Errors of Estimated Numbers Poverty and Income: 1989**

(Numbers in Thousands)

Size of estimate	Persons			Households, families, and unrelated individuals		
	Total or White	Black	Hispanic	Total or White	Black	Hispanic
POVERTY						
75	27	27	27	13	13	13
100	31	31	31	15	15	15
250	49	49	49	24	24	24
500	70	69	69	34	34	34
1,000	98	97	96	49	49	49
3,000	170	162	158	88	88	88

X Not applicable.
Note: For a particular characteristic, see table B-4 for the appropriate factor to apply to the above standard errors.

The approximate standard error, sx,p, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from table B-4 and s is the standard error of the estimate obtained by interpolation from table B-2. Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{\frac{b}{x} p\,(100-p)} \qquad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals which is the base of the percentage, p is the percentage ($0 \leq p \leq 100$), and b is the parameter in table B-4 associated with the characteristic in the numerator of the percentage.

Illustration

As shown in table 1, of the 31,528,000 persons below the poverty level in 1989, 20,785,000 or 65.9 percent were White. Using formula (3) and table B-2 with f = 1.0, the approximate standard error is

$$s_{x,p} = (1.00)\,(0.8) = 0.8$$

Using the alternate method with b = 9,742 from table B-4, the approximate standard error on an estimate of 65.9 percent is

$$s_{x,p} = \sqrt{\frac{9{,}742}{31{,}528{,}000}\,(65.0)\,(100.0 - 65.9)} = 0.8$$

This means that a 90-percent confidence interval for the estimated percentage of persons below the poverty level in 1989 that were White is from 64.6 to 67.2 percent, i.e., 65.9 ± 1.645(0.8).

Note: For a particular characteristic, see table B-4 for the appropriate factor to apply to the above standard errors.

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^s - 2rs_xs_y} \qquad (5)$$

where sx and sy are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. The correlation coefficient, r, can be determined from table B-6 for year-to-year comparisons for poverty or income estimates of numbers and proportions; for other comparisons assume r equals zero. Making this assumption will result in accurate estimates of the same characteristic in two different areas, or for the difference between seperate and uncorrelated characateristics in the same area. However, if there is a high positive (negative) correlation betrween the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration From table 1 the number of persons below the poverty level in 1989 was 31,528,000 and in 1988 was 31,745,000. The apparent difference is 217,000. Using formula (2) and the appropriate parameters from table B-4 (a = -0.000040 and b = 9,742), the standard error on 31,528,000 is 517,000. Using the same parameters and adjusting the standard error by the factor 1.05 from table B-3 the standard error on 31,745,000 is 545,000.

Table B-3. **Factors to be Applied to Standard Errors Prior to 1989**

Characteristic	Factor
Non-Hispanic	
1988	1.05
1981-1987	0.97
1972-1980	0.90
Hispanic	
1988	1.17
1984-1987	0.97

Note: Apply the appropriate factor to the standard error calculated using the parameters in Table B-4. For Hispanic estimates prior to 1984, use the parameters in Table B-5 to calculate standard errors.

Therefore using formula (5) with r = 0.45 from table B-6, the standard error of the estimated difference of 217,000 is about

$$s_{x-y} = \sqrt{(517{,}000)^2 + (545{,}000)^2 - 2(0.45)(517{,}000)(545{,}000)} = 557{,}000$$

This means that the 90-percent confidence interval around the difference is from -699,000 to 1,333,000, i.e., 217,000 ± 1.645(557,000). Therefore a conclusion that the average estimate of the difference derived from all possible samples lies within a range computed in this way would be correct for roughly 90 percent of all possible samples. Since the interval contains zero, we cannot conclude with 90-percent confidence that the number of persons below the poverty level in 1989 is different from the figure for 1988.

Standard Error of a Mean for Grouped Data. The formula used to estimate the standard error of a mean for grouped data is

$$S_{\bar{x}} = \sqrt{(b/y)S^2} \qquad (6)$$

In this formula, y is the size of the base of the distribution and b is a parameter from table B-4. The variance, S^2, is given by the following formula:

$$S^2 = \sum_{i=1}^{c} p_i\bar{x}_i^2 - \bar{x}^2 \qquad (7)$$

where $\bar{x}$, the mean of the distribution, is estimated by

$$\bar{x} = \sum_{i=1}^{c} p_i\bar{x}_i \qquad (8)$$

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of households, families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{X}_i$ is $(Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group $\bar{x}_i$. is assumed to be the most representative value for the characteristic for households, families, and unrelated individuals or persons in group i.

Group c is open-ended, i.e., no upper interval boundary exists. For income of families below the poverty level, use -$2,500 as the midpoint for "Loss" and $20,600 as the midpoint for "$20,000 and over." For income of unrelated individuals below the poverty level, use -$9,100 as the midpoint for "Loss" and $5,200 as the midpoint for "$5,000 and over." For income tables for all families, use -$5,000 for "Loss" and $150,000 for "$100,000 and over." For the income deficit table, use $7,400 as the midpoint of "$5,000 or more" interval and $4,900 for the "$1,500 or more" interval. Otherwise, the approximate average value for an open-ended interval is

$$\bar{x}_c = \frac{3}{2}Z_{c-1} \qquad (9)$$

Standard Error of a Ratio. Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio, x/y, may be computed using

$$s_{x/y} = \frac{x}{y}\sqrt{\left[\frac{s_x}{x}\right]^2 + \left[\frac{s_y}{y}\right]^2 - 2r\frac{s_xs_y}{xy}} \qquad (10)$$

Table B-4. **Standard Error Parameters for Poverty, Income, and Nonincome Characteristics: 1989**

To estimate standard errors prior to 1989, multiply by the appropriate factor in table B-3. For regional estimates multiply the a and b parameters by 0.83, 0.93, 0.98 and 1.37 for Northeast, Midwest, South and West, respectively. The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

[1]To estimate standard errors for nonincome characteristics using formula (1) or (3), use income estimates from table B-1 or B-2 and multiply by the appropriate factor in this table.

Table B-5. **Standard Error Parameters for Poverty, Income, and Nonincome Characteristics of Hispanics: 1973 - 1983**

For regional estimates multiply the a and b parameters by 0.83, 0.93, 0.98 and 1.37 for Northeast, Midwest, South and West, respectively. The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories. Income data for Hispanics were not published before 1973 due to the reliability of the estimates.

[1]To estimate standard errors for nonincome characteristics using formula (1) or (3), use income estimates from table B-1 or B-2 and multiply by the appropriate factor in this table.

The standard error of the numerator, sx, and that of the denominator, sy, may be calculated using formula (2). Alternatively, use formula (1) and tables B-1 and B-4. In formula (10), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the mean number of children per family with children.

For all other types of ratios, r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. Examples of this type are the mean number of children per family and the poverty rate.

NOTE: For estimates expressed as the ratio of x per 100 y or x per 1,000 y, multiply formula (10) by 100 or 1,000, respectively, to obtain the standard error.

Illustration

As shown in table 3, the number of families below the poverty level, x, was 6,784,000 and the total number of families, y, was 66,090,000. This means that the ratio of families below the poverty level to the total number of families was .103 or 10.3 percent. The standard error of this estimate (x/y) is calculated by using the following steps:

1. Compute s_x and s_y using formula (2).

$$s_x = \sqrt{+0.000093(6{,}784{,}000)^2 + 2{,}300(6{,}784{,}000)} = 141{,}000$$

$$s_y = \sqrt{-0.000012(66{,}090{,}000)^2 + 1{,}703(66{,}090{,}000)} = 245{,}000$$

2. Compute $(s_x/x)^2 = 0.000432$.
3. Compute $(s_y/y)^2 = 0.000014$.
4. Using formula (10) with $r = 0$, the estimate of the standard error is

$$s_{x/y} = \frac{6{,}784{,}000}{66{,}090{,}000}\sqrt{0.000432 + 0.000014} = 0.002$$

This means that the 90-percent confidence interval for the ratio of families below the poverty level to all families is from about 0.100 to 0.106 or 10.0 to 10.6 percent, i.e., $10.3 \pm 1.645(0.2)$.

Standard Error of a Median. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the reliability of an estimated median by determining a confidence interval about it. (See the section "Standard Errors and Their Use" for a general discussion of confidence intervals.)

Estimate the 68-percent confidence limits of a median based on sample data using the following procedure.

1. Determine, using formula (4), the standard error of the estimate of 50 percent from the distribution.
2. Add to and subtract from 50 percent the standard error determined in step 1.
3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2.

Use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise. The formulas for interpolation are:

$$\text{Pareto: } X_{pN} = \exp\left[\frac{\mathrm{Ln}(pN/N_1)}{\mathrm{Ln}(N_2/N_1)}\mathrm{Ln}(A_2/A_1)\right]A_1 \qquad (11)$$

$$\text{Linear: } X_{pN} = \frac{pN - N_1}{N_2 - N_1}(A_2 - A_1) + A_1 \qquad (12)$$

Where

X_{pN} = estimated upper and lower bounds for the confidence interval ($0 \leq p \leq 1$). For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_{pN} estimates the median when $p = 0.50$.

N = *for distribution of numbers:* the total number of units (persons, households, etc.) for the characteristic in the distribution.

= *for distribution of percentages:* the value 1.0.

p = the values obtained in step 2.

A_1, A_2 = the lower and upper bounds, respectively, of the interval containing XpN.

N_1, N_2 = *for distribution of numbers*: the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A11 and A2, respectively.

= *for distribution of percentages*: the estimated percentage of units (persons, households, etc.) having values of the characteristic greater than or equal to A1 and A2, respectively.

exp is the exponential function.

Ln is the natural logarithm function.

A mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

4. Divide the difference between the two points determined in step 3 by two to obtain the standard error of the median.

Use of the above procedure could result in standard errors which differ from those given in the detailed tables. The reasons for this discrepancy are the use of a more detailed distribution than that given in the tables in determining the published standard errors, and the rounding of the numbers to thousands in the published tables. Linear interpolation was almost always used to compute the published medians and standard errors. Occasionally, a median may lie in an open-ended interval. To calculate its standard error the user must call Housing and Household Economic Statistics Division of the Census Bureau to obtain the methodology.

Illustration

Table 21 shows that the median income deficit for poor White families with a female householder (no husband present) was $4,507 in 1989. Table 21 also shows that the base of the distribution from which this median was determined was 1,858,000 families.

1. Using formula (4) and b = 2,300 from table B-4, the standard error of 50 percent on a base of 1,858,000 is about 1.8 percentage points.
2. Adding to and subtracting from 50 percent the standard error found in step 1 to obtain a 68-percent confidence interval on the estimated median yields limits of 48.2 percent and 51.8 percent.
3. The lower and upper limits for the interval in which the median falls are $4,000 and $5,000, respectively (from table 21). Then, by addition, the estimated numbers of poor White families with a female householder with an income deficit greater than or equal to $4,000 and $5,000 are 1,047,000 and 816,000 respectively. Using formula (12), the lower limit for the confidence interval of the median is found to be about

$$\frac{(.518)\,(1{,}858{,}000) - 1{,}047{,}000}{816{,}000 - 1{,}047{,}000}\,(5{,}000 - 4{,}000) + 4{,}000 = \$4{,}366$$

Similarly, the upper limit is approximately

$$\frac{(.482)\,(1{,}858{,}000) - 1{,}047{,}000}{816{,}000 - 1{,}047{,}000}\,(5{,}000 - 4{,}000) + 4{,}000 = \$4{,}656$$

Thus, a 68-percent confidence interval for the median income deficit for poor White families with a female householder is from $4,366 to $4,656.

4. Finally, the standard error of the median is

$$(4{,}656 - 4{,}366)\,/\,2 = \$145$$

Table B-6. **Year-To-Year Correlation Coefficients For Poverty and Income Estimates**

Characteristics	Below poverty level								All income levels	
	1972-1983 or 1984-1989		1983-1984		1971-1972		1970-1971		1959-1989	
	Persons	Families	Persons	Families	Persons	Families	Persons	Families	Persons	Families
Total	0.45	0.35	0.39	0.30	0.15	0.14	0.31	0.28	0.30	0.35
White	0.35	0.30	0.30	0.26	0.14	0.13	0.28	0.25	0.30	0.35
Black	0.45	0.35	0.39	0.30	0.17	0.16	0.35	0.32	0.30	0.35
Other Races	0.45	0.35	0.30	0.30	0.17	0.16	0.35	0.32	0.30	0.35
Hispanic	0.65	0.55	0.56	0.47	0.17	0.16	0.35	0.32	0.45	0.55

Notes: These correlations are for comparisons of consecutive years. For comparisons of nonconsecutive years, assume the correlations are zero. Correlation coefficients for 1983-84 are lower than those for 1982-83 or 1984-85 because of the phase-in of the new sample design.

Appendix C. Underreporting of Income

As in most household surveys, the estimated total amount of income received by persons derived from the March CPS is somewhat less than estimated amounts derived from independent sources, such as the Bureau of Economic Analysis, the Social Security Administration, and the Veterans Administration. The difference between the survey estimate and the independent estimate is termed "underreporting."

In order to estimate the magnitude of underreporting on the CPS, estimates of aggregate money income are made from independent sources (for each income source) by adjusting aggregate income figures from these sources to CPS money income concepts. One of the more important adjustments is the exclusion of "nonmoney" income amounts such as pay to employees in the form of food or lodging or imputed rent of owner-occupied housing from aggregate personal income figures obtained from BEA.

Because of the difficulty in obtaining reliable independent estimates of aggregate income for some individual sources of income collected in the CPS, the independent estimates shown in table C-1 do not include figures for (1) estates or trusts, (2) alimony and child support, (3) contributions from persons not living in the household, (4) general assistance, and (5) the "anything else" category. Independent estimates of aggregate nonfarm and farm self-employment income are based on the BEA personal income series even though they pose some troublesome conceptual problems. It should be noted that the independent estimates are themselves subject to errors because there is no precise method of measuring the amounts of certain types of income (e.g. interest, dividends and rent) that are received by households. In addition, the independent estimates probably understate certain types of income because they only partially take into account income received throught the underground economy.

The data in table C-1 show comparisons of CPS aggregate money income with independent estimates for 1983, the most recent year for which data are available. Comparisons of the CPS estimates with the independent totals reveal that overall income in the survey after allocation is underreported by about 10 percent. However, wide variations are found in the amount of underreporting by source of income. Underreporting varied from about 45 percent for interest income to only about 1 percent for wage and salary income. Both reported and allocated proportions of CPS aggregate incomes are shown in table C-1. The estimates of underreporting are shown for the total population. Comparable estimates are not available for the poverty population.

In 1983, $442.2 billion, or about 20 percent of the total aggregate income was allocated as a result of nonresponses to the income questions. About 13 percent of the $10.5 billion of the CPS public assistance or welfare income in 1983 was allocated, while about 33 percent of the $119.8 billion of nonfarm self-employment income was allocated. Other sources of income with allocated proportions of 30 percent or above include interest and dividends.

The reasons for underreporting of income in the CPS and in other household surveys are many and varied. Some of the more important of these reasons include (1) respondent's overlooking income received (especially small amounts not regularly received), (2) reluctance to reveal the receipt of certain income types, (3) reporting rounded amounts, (4) misunderstanding the questions, (5) lack of information especially covering family members not present during the interview, (6) interviewer's errors in recording information on the questionnaire, (7) biases in the allocation of nonresponses, and (8) errors resulting from the aggregation of the information collected from individual questionnaires.

For additional information on reporting accuracy, see "Income Reported in the 1970 Census Versus Income Reported in Federal Income Tax Returns: A Case-by-Case Comparison," by Douglas K. Sater, *Proceedings of the Social Statistics Section,* American Statistical Association: 1978.

Appendix D. Statement on the Use of the CPI-U-X1 Series

The Bureau of Labor Statistics (BLS) developed an experimental Consumer Price Index (CPI-U-X1) for researchers who wish to make historical comparisons with the current Consumer Price Index for All Urban Consumers (CPI-U) which uses the rental equivalence approach to measuring shelter services. Prior to 1983, the measurement of homeowner costs included changes in the asset value of homes. Recognizing that this approach mixed the investment and consumption aspects of homeownership, the BLS initiated an extensive research effort in the early 1970s to develop a better methodology. Following extensive study and testing, the CPI-U was officially converted to a rental equivalence measure in 1983. This rental equivalent approach is a methodology that isolates the shelter services component and, therefore, is a superior measure.

When the new methodology was introduced, the historical series were not revised. Price indexes are used for escalation and other contractual purposes that require the parties to agree on one official series. Moreover, the BLS did not have the basic data or the resources to convert all of its historical series (including local area indexes) to the new methodology. The refinements that were ultimately developed before the methodology was officially introduced into the CPI—notably a larger sample of renters and a reweighting of the shelter component—could not be incorporated into the CPI-U-X1. Nonetheless, for many purposes the CPI-U-X1 can serve as an adequate proxy for what the national index would have been using the rental equivalence measure. Therefore, BLS recommends the use of the CPI-U-X1 to those who need to use a CPI series that treats homeowner costs consistently over time.

Bureau of Labor Statistics
U.S. Department of Labor
July 1989

Appendix E. Estimates of Income and Poverty Using the CPI-U-X1

The poverty statistics in the report are based on a poverty definition developed by the Social Security Administration (SSA) in 1964 and revised in 1969 and 1981. Poverty thresholds are adjusted annually for changes in the Consumer Price Index (CPI). The Federal Government's official poverty statistics are based on annual adjustments made using the official CPI for all urban consumers (CPI-U). The availability of the experimental CPI-U-X1 series has led many analysts to consider the effect of a consistent treatment of the housing component in the CPI. (See Appendix D for a statement from the Bureau of Labor Statistics on the use of the CPI-U-X1.) The experimental poverty statistics presented in this appendix are based on the poverty definition developed by the SSA in 1964, but the annual adjustment for cost-of-living changes are based on the CPI-U-X1. (See the section "Trends in Income and Poverty Based on the CPI-U versus CPI-U-X1" in the text of this report for an analysis of the results.) The poverty estimates in this appendix were derived using microlevel data from CPS files and poverty thresholds adjusted by the CPI-U-X1. Average poverty thresholds for 1989 based on the CPI-U-X1 are shown below.

It should be noted that to be consistent with official poverty estimates through time, poverty thresholds were recalculated based on the poverty definition which applied in that year. For example, current poverty thresholds vary by the size of the family and the number of children under 18. Prior to 1982, in addition to family size and number of children, the poverty thresholds also varied by farm/nonfarm residence and sex of householder. For 1974 through 1982, the official thresholds in each year were calculated using 1967 as the base year (when the CPI-U and the CPI-U-X1 were equal) and then adjusted accordingly based on changes in the CPI-U-X1. Beginning with 1983, the thresholds were calculated using 1982-1984 as the base year.

Weighted Average Poverty Thresholds in 1989 Based on the CPI-U-X1, by Size of Family

Size of family unit	Weighted average thresholds
One person (unrelated individual)	$5,807
15 to 64 years	5,937
65 years and over	5,472
Two persons	7,431
Householder 15 to 64 years	7,676
Householder 65 years and over	6,902
Three persons	9,095
Four persons	11,662
Five persons	13,792
Six persons	15,569
Seven persons	17,631
Eight persons	19,624
Nine persons or more	23,444

The historical tables presented in this appendix show data for 1974 through 1989. Due to technical difficulties in computer processing the CPS files prior to 1974, estimates for 1967 through 1973 were not available for this report. Estimates for these years will be presented in future reports.

Table E-1. Poverty Status of Persons, by Family Relationship, Race, and Hispanic Origin: 1974 to 1989 (Poverty Thresholds Based on CPI-U-X1)

(Numbers in thousands. Persons as of March of the following year. For meaning of symbols, see text)

[r]Figures based on new processing procedures. The 1987 and 1988 figures are also revised to reflect corrections to the files after publication of the 1988 advance report, Money Income and Poverty Status in the United States: 1988, P-60, No. 166.

[1]Persons of Hispanic origin may be of any race.

Note: Prior to 1979 persons in unrelated subfamilies were included in persons in families. Beginning in 1979 persons in unrelated subfamilies are included in all persons but are excluded from persons in families.

Table E-2. Poverty Status of Persons, by Age, Race, and Hispanic Origin: 1974 to 1989 (Poverty Thresholds Based on CPI-U-X1)

(Numbers in thousands. Persons as of March of the following year. For meaning of symbols, see text)

Year and characteristic	Under 18 years						18 to 64 years			65 years and over		
	All persons			Related children in families				Below poverty			Below poverty	
		Below poverty			Below poverty

[r]Figures based on new processing procedures. The 1987 and 1988 figures are also revised to reflect corrections to files after publication of the 1988 advance report, Money Income and Poverty Status in the United States: 1988, P-60,No.166.

[1]Persons of Hispanic origin may be of any race.

Note: Prior to 1979 unrelated subfamilies were included in all families. Beginning in 1979 unrelated subfamilies are excluded from all families.
