TEXT TABLES

A. Comparison of Income Summary Measures Between 1989 and 1988, by Selected Characteristics 3
B. Household Income, by Race, Hispanic Origin, and Tenure: 1988-89 4
C. Changes in Real Median Family Income Using the CPI-U and CPI-U-X1: 1967-89 8

FIGURES

1. Gini Indexes for Households and Families: 1967-89 5
2. Percent Change in Household and Family Gini Indexes: 1967-89 5
3. Share of Aggregate Household Income, by Quintile: 1969, 1979, and 1989 6
4. Percent Change in Median Family Income in Constant 1989 Dollars, by Type of Deflator: 1967-89 8

DETAILED TABLES

Households: Income in 1989

1. Median Income of Households, by Selected Characteristics, Race, and Hispanic Origin of Householder: 1989, 1988, and 1987 9
2. Selected Characteristics of Households—Households, by Total Money Income in 1989 13
3. Percent Distribution of Households, by Selected Characteristics Within Income Quintile and Top 5 Percent in 1989 15
4. Percent Distribution of Households, by Income Quintile and Top 5 Percent for

Selected Characteristics in 1989 16
5. Type of Residence—Households, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 17
6. Type of Household—Households, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 19
7. Regions and Divisions—Households, by Total Money Income in 1989 21
8. Age of Householder—Households, by Total Money Income in 1989, Type of Household, Race, and Hispanic Origin of Householder 22
9. Size of Household—Households, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 36
10. Number of Earners—Households, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 38
11. Persons in Households, by Total Household Income in 1989, Relationship to Householder, Age, Sex, Race, and Hispanic Origin 40
12. Presence of Elderly—Households, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 46

Families: Income in 1989

13. Median Income of Families, by Selected Characteristics, Race, and Hispanic Origin of Householder: 1989, 1988, and 1987 48
14. Selected Characteristics of Families—Families, by Total Money Income in 1989 52
15. Percent Distribution of Families, by Selected Characteristics Within Income Quintile and Top 5 Percent in 1989 54
16. Percent Distribution of Families, by Income Quintile and Top 5 Percent for Selected Characteristics in 1989 56
17. Age of Householder—Families, by Total Money Income in 1989, Type of Family, Race, and Hispanic Origin of Householder 58
18. Presence of Related Children Under 18 Years Old—Families, by Total Money Income in 1989, Type of Family, Race, and Hispanic Origin of Householder 76
19. Presence of Related Children Under 18 Years Old—Married-Couple Families, by Total Money Income in 1989 and Work Experience in 1989 of Husband and Wife.. 85
20. Size of Family—Families, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 92
21. Number of Earners—Families, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 94
22. Source of Income—Families, by Total Money Income in 1989, Race, and Hispanic Origin of Householder 96
23. Selected Characteristics of Unrelated Individuals—Unrelated Individuals 15 Years Old and Over, by Total Money Income in 1989 99

Persons: Income in 1989

24. Median Income of Persons, by Selected Characteristics: 1989, 1988, and 1987..... 100
25. Selected Characteristics of Persons—Persons 15 Years Old and Over, by Total Money Income in 1989, Work Experience in 1989, and Sex 104
26. Age—Persons 15 Years Old and Over, by Total Money Income in 1989, Race, Hispanic Origin, Sex, and Work Experience in 1989 108
27. Relationship—Persons 15 Years Old and Over, by Total Money Income in 1989, Race, Hispanic Origin, Sex, and Work Experience in 1989 116
28. Marital Status—Persons 18 Years Old and Over, by Total Money Income in 1989, Race, Hispanic Origin, Sex, and Work Experience in 1989 120
29. Years of School Completed—Persons 25 Years Old and Over, by Total Money Earnings in 1989, Age, Race, Hispanic Origin, Sex, and Work Experience in 1989 . 124
30. Work Experience in 1989—Persons 15 Years Old and Over, by Total Money

Earnings in 1989, Race, Hispanic Origin, and Sex 152
31. Occupation of Longest Job in 1989—Persons 15 Years Old and Over, by Total Money Earnings in 1989, Work Experience in 1989, and Sex 156
32. Occupation of Longest Job, by Industry of Longest Job in 1989— Persons 15 Years Old and Over, by Total Money Earnings in 1989, Work Experience in 1989, and Sex 162
33. Source of Income in 1989—Number With Income and Mean Income in 1989 of Persons 15 Years Old and Over, by Age 178

Households: Income in 1988

34. Selected Characteristics of Households—Households, by Total Money Income in 1988 185
35. Percent Distribution of Households, by Selected Characteristics Within Income Quintile and Top 5 Percent in 1988 187
36. Percent Distribution of Households, by Income Quintile and Top 5 Percent For Selected Characteristics in 1988 188
37. Type of Residence—Households, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 189
38. Type of Household—Households, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 191
39. Regions and Divisions—Households, by Total Money Income in 1988 193
40. Age of Householder—Households, by Total Money Income in 1988, Type of Household, Race, and Hispanic Origin of Householder 194
41. Size of Household—Households, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 208
42. Number of Earners—Households, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 210
43. Persons in Households, by Total Household Income in 1988, Relationship to Householder, Age, Sex, Race, and Hispanic Origin 212
44. Presence of Elderly—Households, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 218

Families: Income in 1988

45. Selected Characteristics of Families—Families, by Total Money Income in 1988 220
46. Percent Distribution of Families, by Selected Characteristics Within Income Quintile and Top 5 Percent in 1988 222
47. Percent Distribution of Families, by Income Quintile and Top 5 Percent For Selected Characteristics in 1988 224
48. Age of Householder—Families, by Total Money Income in 1988, Type of Family, Race, and Hispanic Origin of Householder 226
49. Presence of Related Children Under 18 Years Old—Families, by Total Money Income in 1988, Type of Family, Race, and Hispanic Origin of Householder 244
50. Presence of Related Children Under 18 Years Old—Married-Couple Families, by Total Money Income in 1988 and Work Experience in 1988 of Husband and Wife.. 253
51. Size of Family—Families, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 260
52. Number of Earners—Families, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 262
53. Source of Income—Families, by Total Money Income in 1988, Race, and Hispanic Origin of Householder 264
54. Selected Characteristics of Unrelated Individuals—Unrelated Individuals 15 Years Old and Over, by Total Money Income in 1988 267

Persons: Income in 1988

55. Selected Characteristics of Persons—Persons 15 Years Old and Over, by Total Money Income in 1988, Work Experience in 1988, and Sex 268
56. Age—Persons 15 Years Old and Over, by Total Money Income in 1988, Race, Hispanic Origin, Sex, and Work Experience in 1988 272
57. Relationship—Persons 15 Years Old and Over, by Total Money Income in 1988, Race, Hispanic Origin, Sex, and Work Experience in 1988 280
58. Marital Status—Persons 18 Years Old and Over, by Total Money Income in 1988, Race, Hispanic Origin, Sex, and Work Experience in 1988 284
59. Years of School Completed—Persons 25 Years Old and Over, by Total Money Earnings in 1988, Age, Race, Hispanic Origin, Sex, and Work Experience in 1988 . 288
60. Work Experience in 1988—Civilians 15 Years Old and Over, by Total Money Earnings in 1988, Race, Hispanic Origin and Sex 316
61. Occupation of Longest Job in 1988—Persons 15 Years Old and Over, by Total Money Earnings in 1988, Work Experience in 1988, and Sex 320
62. Occupation of Longest Job, by Industry of Longest Job in 1988— Persons 15 Years Old and Over, by Total Money Earnings in 1988, Work Experience in 1988, and Sex 326
63. Source of Income in 1988—Number With Income and Mean Income in 1988 of Persons 15 Years Old and Over, by Age 342

APPENDIXES

A. Bureau of Labor Statistics' Statement on the use of the CPI-U X1 349
B. Time Series Estimates of Income Using the CPI-U and CPI-U-X1 Price Deflaters 351
C. Definitions, Explanations, and Comparability of Data 379
Definitions and Explanations 379
Comparability of Current Population Survey Income Data With Other Data 385
Comparability of Current CPS Estimates With Those From Previous Years 386
Revisions to the March 1989 CPS Processing System 388
Quality of Income Data 390

Money Income of Households, Families, and Persons in the United States: 1988 and 1989

Note: Work experience data for 1989 contained in tables 2-4, 14-16, 19, 23, and 25-32 include members of the Armed Forces. This change reflects a modification to the March 1990 income supplement questionnaire in which current Armed Forces members were asked about work experience for the previous calendar year. Tables 1 and 24, however, restrict work experience data to civilians so that year-to-year comparisons are consistent.

Some of the standard errors for income and nonincome characteristics for 1988 and 1989 have changed since first issued in the Current Population Reports, *Money Income and Poverty Status in the United States 1989,* Series P-60, No. 168. The changes reflect a revision to the parameters used in calculating standard errors (see appendix D, "Source and Accuracy of Estimates," table D-3).

INTRODUCTION

This report presents data on the income of households, families, and persons in the United States for the calendar years 1988 and 1989. These data were compiled from information collected in the March 1989 and 1990 Current Population Surveys (CPS) conducted by the Bureau of the Census. The surveys consisted of approximately 56,000 and 60,000 households respectively, nationwide and were designed mainly to produce reliable national estimates, though some data by region and metropolitan residence were also compiled and appear in this report.

The official income estimates in this report are based solely on money income before taxes and do not include the value of noncash benefits such as food stamps, Medicare, Medicaid, public housing, and employer-provided fringe benefits. For a discussion of the effects of taxes and noncash benefits on income, see P-60, No. 169-RD.

This report differs from previous final income reports in that the tables in this report have been redesigned and data for two income years, 1988 and 1989, are included. Table contents have been revised and expanded to reflect the changing needs of users. Income data for 1989 are presented first for households, families, unrelated individuals, and persons. Comparable data for 1988 follow these tables. Time series estimates of income for households, families, persons, and per capita income are included in appendix B. Tables B-2 through B-8 show income estimates using the CPI-U as a price deflator; tables B-9 through B-15 contain comparable income estimates using the CPI-U-X1 as a price deflator.

The text of this report begins with a section on household income containing year-to-year comparisons by region, type of household, and type of residence. This is followed by a section on changes in family income by race, Hispanic origin, and family composition. Sections on earnings of year-round, full-time workers, per capita income, and income inequality follow the family section. The report text concludes with sections on the trends in money income based on two alternative measures of inflation, the CPI-U and CPI-U-X1.

HIGHLIGHTS

(The figures in parentheses denote the 90-percent confidence intervals.)

- Median household income in 1989 was $28,910 (±$262), up 1.3 (±1.0) percent in real terms from 1988.[1] This increase followed two consecutive years in which real household income was unchanged.
- Regionally, real median household incomes increased in the Northeast and West between 1988 and 1989, while incomes in the South and Midwest remained unchanged.
- Median family income increased 1.4 (±1.1) percent between 1988 and 1989, in real terms. Median family income was $34,210 (±$321) in 1989.
- Married-couple families experienced a 1.1 (±1.0) percent real increase in income to $38,550.
- Real median earnings of women working year-round, full-time increased 1.8 (±1.3) percent in 1989 to a level of $18,780 (±$207). Male earnings, on the other hand, decreased 1.8 (±0.9) percent to a level of $27,430 (±$219). The ratio of female-to-male median earnings was .68 (±.009), up from .66 in 1988 and currently at an all-time high.
- Per capita income in 1989 was $14,060 (±$125), up 2.2 (±1.1) percent from 1988, also an all-time high.

[1]Changes in real income refer to comparisons after adjusting for inflation. The percentage change in prices between 1988 and 1989 was computed by dividing the annual average Consumer Price Index for all urban consumers (CPI-U) for 1989 by the annual average for 1988. See table B-1 in appendix B for the CPI's from 1947 to 1989.

HOUSEHOLD INCOME

The median income of all households was $28,910 in 1989, up 1.3 percent from 1988 in real terms. (See table A.) The 1989 increase ends a two-year period in which household income remained stagnant.

Region

For the seventh year in a row, households in the Northeast continued to show a gain in real income (2.4 percent). The 1989 median income of households in the Northeast was $32,640, highest of the four regions. The only other region to experience a real household income gain was the West, up 2.8 percent to a level of $31,090.[2] Median incomes for households in the other regions were $25,870 for the South and $28,750 for the Midwest.

Type of Household

Family households, with a 1989 median income of $34,630, showed a real increase of 1.7 percent from 1988. Married-couple households, with a median income of $38,660 (the highest of any household type), experienced a real income gain (1.2 percent). Nonfamily households, with a median income of $17,120, showed no significant change in real terms between 1988 and 1989.

Type of Residence

In general, households in the suburbs of large metropolitan areas fared better than their central city counterparts and better than households of smaller metropolitan areas.[3] Households in metropolitan areas showed a real increase of 1.2 percent between 1988 and 1989. In large metropolitan areas (those with a million or more in population), real household income increased 1.6 percent; their suburban component showed a 2.0 percent increase.[4]

Race, Hispanic Origin, and Tenure

Households with a Black householder experienced an increase in real income of 5.1 percent in 1989, to $18,080. The median incomes of White households ($30,410) and those of Hispanic origin ($21,920) did not change significantly in 1989.[5]

Beginning with the March 1990 CPS, income data for the Asian or Pacific Islander population will be shown in the P-60 series annual income reports. As shown in table B, the median income in 1989 of Asian or Pacific Islander households ($36,100) was higher than the White median ($30,410); for Asians or Pacific Islanders who own their homes, the median income ($50,010) was substantially above that of White owner-occupied households ($36,070). At least part of the difference between White and Asian or Pacific Islander income is attributable to the larger size of Asian or Pacific Islander households.[6] Based on an income per household member measure, the income of Asians or Pacific Islanders ($13,960) was not significantly different from that of Whites ($14,720).

FAMILY INCOME

In 1989, median family income was $34,210, up 1.4 percent from 1988 in real terms. Median family income has increased significantly in real terms in 6 of the last 7 years, with only 1988 showing no significant change from the previous year.

Race, Hispanic Origin, and Family Composition

In 1989, White families, with a median income of $35,980, showed a real increase of 1.2 percent. Black families with a median of $20,210, and Hispanic families with a median of $23,450 showed no statistically significant change.

In March of 1990, 79.2 percent of all families were married couples. This percentage varies by racial or ethnic subgroup: for Whites, the percentage was 83.0 percent; for Blacks, 50.2 percent; and for Hispanics, 70.1 percent. Median incomes for White, Black, and Hispanic married couples were $39,210, $30,650, and $27,380, respectively. Only White married couples, whose incomes increased by 1.5 percent, experienced a statistically significant change in real income.

Families with a female householder, no husband present had a 1989 median income of $16,440 and represented 16.5 percent of all families. White female householder, no husband present families had a median income of $18,950 and represented 12.9 percent of all White families; the Black median income for similar families was $11,630, representing 43.8 percent of all Black families; and for Hispanics, $11,750, representing 23.1 percent of all Hispanic families.[7] None of these incomes were statistically different from 1988 in real terms.

[2]The difference between the percent increase in the Northeast and West was not statistically significant.

[3]The term "suburbs" as used here refers to that portion of metropolitan areas outside central cities.

[4]The differences between increases for metro areas, large metro areas, and suburban areas of large metro areas were not significantly different from one another.

[5]Although Black households experienced an increase in real median income between 1988 and 1989, other income summary measures (such as median family income and per capita income) for the Black population showed no real change. Conversely, White households did not experience an increase in real median income between 1988 and 1989, though other income summary measures showed significant increases.

[6]In March 1990, the average size of Asian or Pacific Islander households was 3.21, compared with 2.58 for White households.

[7]The difference between Black and Hispanic incomes was not statistically significant.

EARNINGS OF YEAR-ROUND, FULL-TIME WORKERS

The real median earnings of female workers increased between 1988 and 1989 by 1.8 percent to a level of $18,780. Real median earnings of men, on the other hand, declined by 1.8 percent to $27,430. This real increase in female earnings combined with two consecutive years of decline in men's earnings resulted in a female-male earnings ratio of .68, currently at an all-time high. This ratio has increased from .62 in 1982 and .60 in 1980, as women's median earnings have generally been increasing faster than men's median earnings throughout the 1980s.

PER CAPITA INCOME

In 1989, per capita income continued to reach new highs. At a level of $14,060, per capita income increased 2.2 percent from 1988 in real terms. Per capita income has risen steadily since 1982. Per capita incomes in 1989 of Whites, Blacks, and Hispanics were $14,900, $8,750, and $8,390, respectively.[8] Only White per capita income showed a real increase over 1988, up 2.3 percent.

[8]The difference between Black and Hispanic incomes was not statistically significant.

INCOME INEQUALITY

The growing inequality of the income distribution has been a topic of increasing interest over the last few years. A commonly used statistic to measure the level of income inequality is the Gini index or index of income concentration, which varies between 0 (perfect equality) to 1 (perfect inequality).[9] In 1989 the Gini index for household income was .431, not significantly different from 1988. As shown in figure 1, the Gini index has grown slightly over the past two decades. Figure 2 places this increase in another perspective, by examining the annual percentage changes in the Gini index over this time. It shows that between 1979 and 1989 the Gini index grew by 6.7 percent. Over the 1969-79 period the Gini index grew by 3.3 percent. Thus, the 1979-89 change was about twice as large as the change between 1969 and 1979. The Gini index for families in 1989 (.401) was also higher than the 1979 and 1969 indexes (.365 and .349, respectively).

Another measure of income inequality is the share of aggregate income that is received by each quintile of the population. As shown in figure 3, in 1989 the share of aggregate income received by the highest quintile of

[9]For a description of the Gini index, see appendix C.

Figure 1.
Gini Indexes for Households and Families: 1967–89

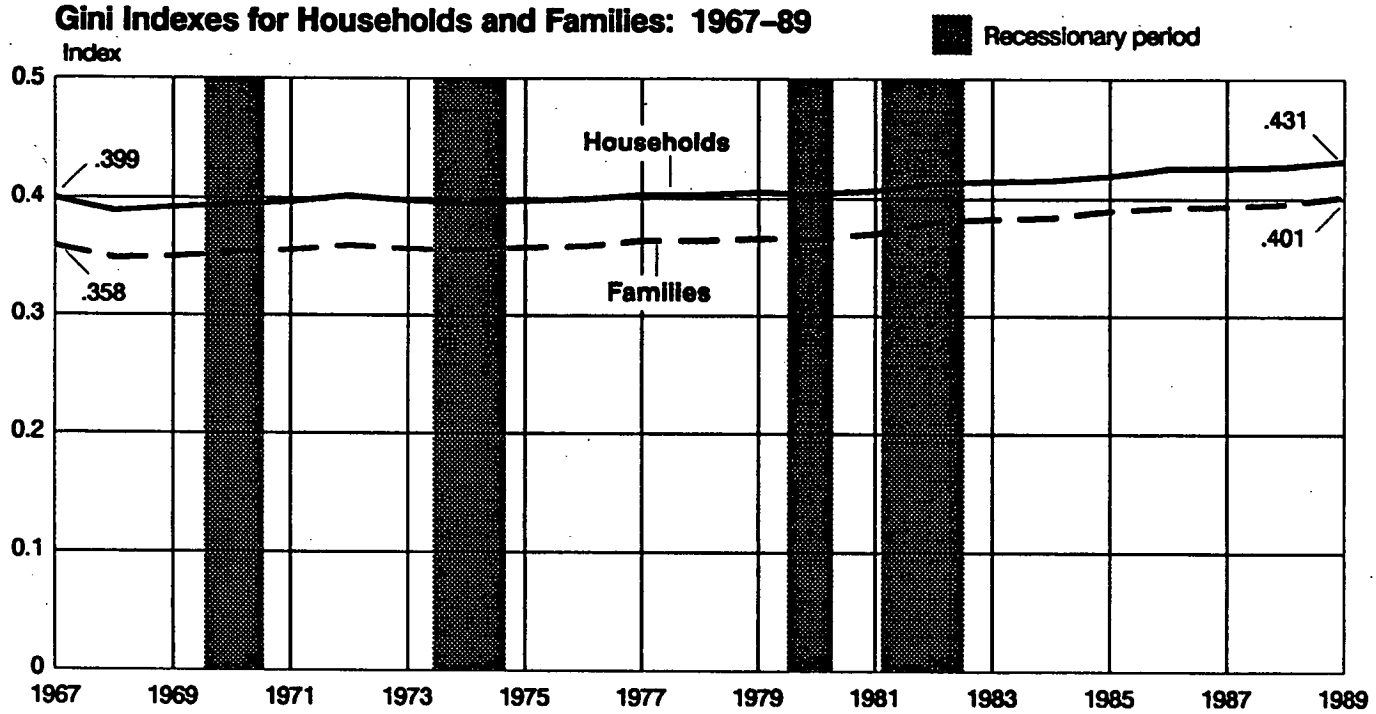

Figure 2.
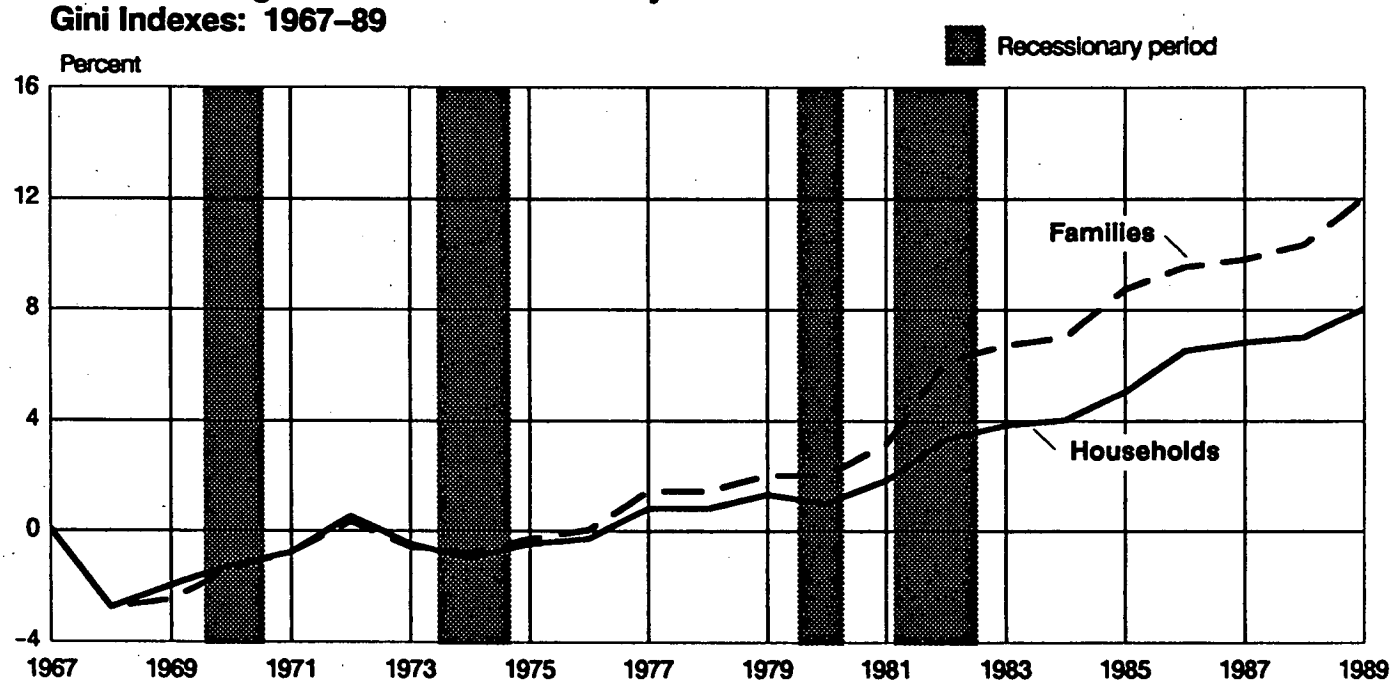
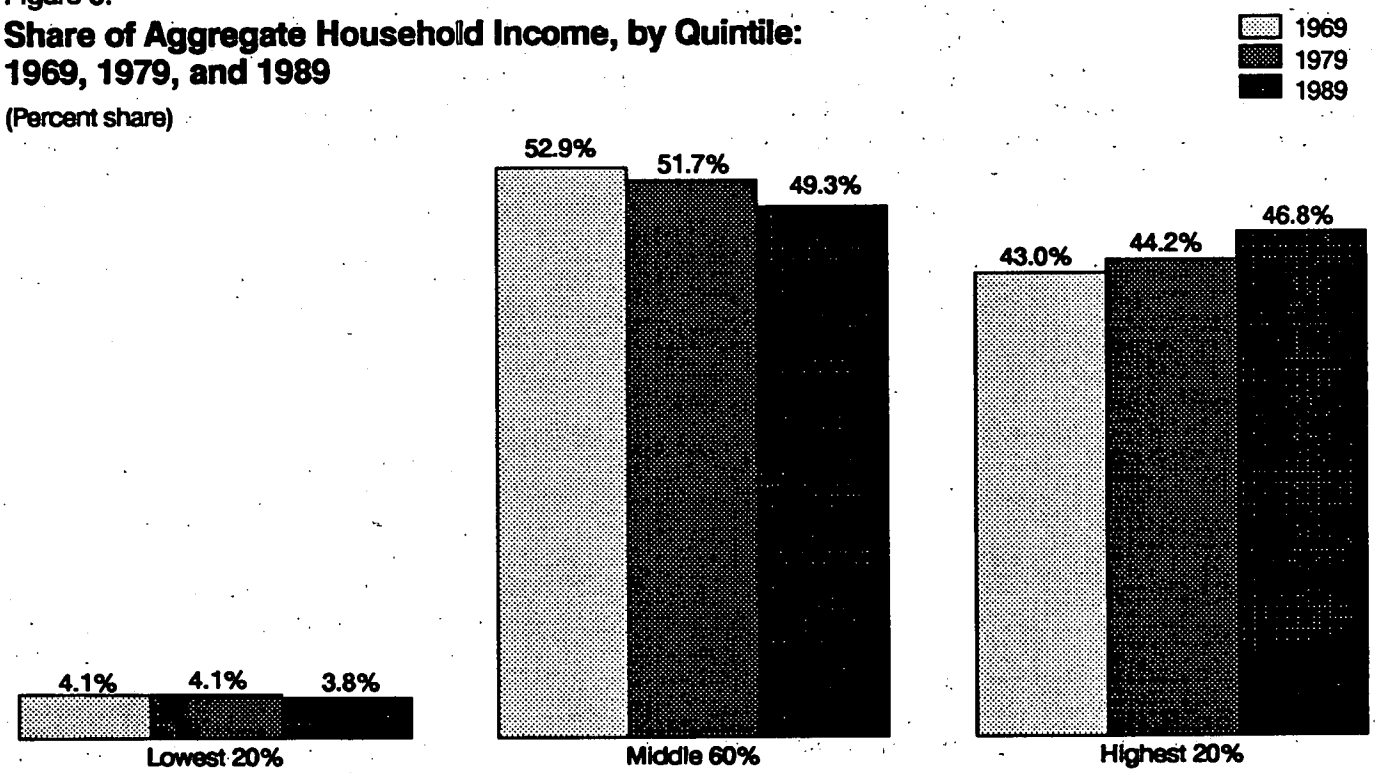
Percent Change in Household and Family Gini Indexes: 1967–89



households was 46.8 percent, no higher than in 1988, though significantly higher than the comparable figures for 1979 and 1969 (44.2 and 43.0 percent, respectively). This change was accompanied by somewhat lower shares of aggregate income going to the lowest and the middle three quintiles.

While there seems little doubt that the income distribution has become somewhat less equal over the past 20 years, the reasons for this trend are not as clear. Certainly, part of the growing inequality of the income distribution can be attributed to the changing composition of families and households. One of the

Figure 3.
Share of Aggregate Household Income, by Quintile: 1969, 1979, and 1989
(Percent share)



compositional changes is the growth in the elderly population. In March of 1990, 21.6 percent of all households had a householder 65 years old or older. The comparable figure for 1970 was 19.3 percent. Since elderly households have considerably lower incomes than nonelderly households (in 1989 the ratio of elderly to nonelderly median household income was .48), this compositional change would tend to increase income inequality.

Another compositional change is the growing number of persons living in nonfamily situations (those who live either alone or with nonrelatives). In 1970, 18.7 percent of households had a householder either living alone or with nonrelatives. By 1990, that figure grew to 29.2 percent. Since these households have a much lower median income than family households ($17,120 versus $34,630 in 1989), their increase would certainly have an effect on the inequality of the household income distribution.

A trend that is associated with the increasing inequality of the family income distribution is the growing percentage of families with a female householder, no husband present. Between 1970 and 1990, families with a female householder, no husband present grew from 10.8 percent of all families to 16.5 percent. Data from the CPS show that about one-half of all families with a female householder, no husband present were in the lowest income quintile. The increase in this type of family would cause an increase in measured income inequality.

Other factors may be associated with the growing inequality of the income distribution, including the aging of the "baby-boom" generation, the growth in the labor force participation of women, and the changing occupational structure. Understanding the reasons behind the growth in income inequality would require estimating the separate effects of each of the factors noted above (and perhaps others) on this phenomenon.[10]

TRENDS IN INCOME USING THE CPI-U VERSUS CPI-U-X1

In order to accurately assess changes over time in economic well-being, an adjustment for cost of living changes is required. Incomes from different years need to be made comparable by evaluating them in dollars with the same purchasing power. In order to adjust for cost of living changes, the Census Bureau uses the official Consumer Price Index (CPI-U), which is provided by the Bureau of Labor Statistics (BLS). This is an index of the cost of a market basket of goods and services representing the average consumption of the urban population. The Census Bureau uses the CPI-U in order to compare changes in real income over time.

[10]It should be noted that the figures in this report refer only to changes in the income distribution prior to the inclusion of taxes or the value of noncash benefits. For information on the effect of taxes and benefits on income inequality, see Current Population Reports, Series P-60, No. 169-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1989.*

According to many analysts, prior to 1983 the CPI-U measured housing costs in a way that led to excessive growth in the index during the late 1970's when interest rates increased rapidly. In particular, the housing component of the CPI-U gave inordinate weight to the costs of newly purchased homes, including both the purchase price and mortgage interest rates, as well as property taxes, insurance, and maintenance costs. As a result of the large weights assigned to homeownership costs, many analysts think that the CPI-U overstated the true rise in living costs in the late 1970's.

In 1983, the BLS began using a revised method to calculate the CPI-U. This method uses estimates of the cost of renting equivalent housing to measure homeownership costs, and as a result it is less affected by changes in housing prices and mortgage rates. The official CPI-U time series is based on the old methodology prior to 1983 and on the new methodology for the years 1983 to the present.

In order to create a consistent series over time, the BLS also created an experimental series (CPI-U-X1) based on the new methodology for the entire 1967-1982 period. The availability of the experimental series has raised important measurement issues for analysts concerned with the accuracy of time series data that have been adjusted for price changes (see appendix A, "Bureau of Labor Statistics' Statement on the Use of the CPI-U-X1"). The official CPI-U shows an increase of 271.3 percent over the 1967 to 1989 period. When the experimental CPI-U-X1 values are substituted for the official CPI-U values for the years 1967 to 1982, the resulting index shows an increase of only 241.6 percent over the 1967 to 1989 period. Using 1967 as the base year, the 1989 CPI-U-X1 (341.6) was 92.0 percent of the CPI-U (371.3), implying that the CPI-U overstated the change in cost of living over this period by 8.0 percent. (See table C.)[11]

Family Income

While family income trends since 1983 are identical using the CPI-U or CPI-U-X1 (since both indexes have been calculated using the same methodology since 1983) differences emerge in the picture of economic progress during the 1970's and early 1980's when the two indexes are used for time series comparisons. As previously stated, real family income increased 1.4 percent in 1989. Between 1983 and 1989, real family income increased by a total of 11.4 percent. Based on the official CPI-U, family income in 1989 was slightly higher than in 1973, when median family income reached an earlier peak level before a series of recessions resulted in substantial declines in family income.

The first in these series of recessions, lasting from November of 1973 through March 1975, resulted in a 6.0 percent decline in real family income. The second and third recessionary periods lasting from January 1980 to July 1980 and from July 1981 to November 1982, respectively, resulted in an overall real decline in family income of 10.0 percent.

Use of the CPI-U-X1 as a price deflator provides a different picture of economic progress. (See figure 4). Based on the CPI-U-X1, median family income increased by 8.1 percent between 1973 and 1989 in real terms compared with 1.7 percent using the CPI-U. The impact of the recessionary periods in the 1970's and early 1980's is lessened with the use of the CPI-U-X1 as an inflation index. Between 1973 and 1975 family income adjusted by CPI-U-X1 declined by 4.4 percent (compared with a 6.0 percent decline using the CPI-U) and by 7.4 percent between 1979 and 1982 (compared with 10.0 percent using the CPI-U). The 1983-89 period shows the same 11.4 percent real increase under either CPI index since both have been calculated using the same methodology since 1983.

USER COMMENTS

The Census Bureau welcomes the comments and advice of data users. We are particularly interested in receiving comments about this report and the adjustments for inflation to income based on the official and experimental CPI's. If you have any suggestions or comments, please write to:

[1]Persons of Hispanic origin may be of any race.
[2]Includes payments reported as survivor, disability, or retirement benefits.
[3]Includes estates and trusts reported as survivor benefits.

Appendix A. Bureau of Labor Statistics' Statement on the Use of the CPI-U-X1

The Bureau of Labor Statistics (BLS) developed an experimental Consumer Price Index (CPI-U-X1) for researchers who wish to make historical comparisons with the current Consumer Price Index for All Urban Consumers (CPI-U) which uses the rental equivalence approach to measuring shelter services. Prior to 1983, the measurement of homeowner costs included changes in the asset value of homes. Recognizing that this approach mixed the investment and consumption aspects of homeownership, the BLS initiated an extensive research effort in the early 1970's to develop a better methodology. Following extensive study and testing, the CPI-U was officially converted to a rental equivalence measure in 1983. This rental equivalent approach is a methodology that isolates the shelter services component and, therefore, is a superior measure.

When the new methodology was introduced, the historical series were not revised. Price indexes are used for escalation and other contractual purposes that require the parties to agree on one official series. Moreover, the BLS did not have the basic data or the resources to convert all of its historical series (including local area indexes) to the new methodology. The refinements that were ultimately developed before the methodology was officially introduced into the CPI—notably a larger sample of renters and a reweighting of the shelter component—could not be incorporated into the CPI-U-X1. Nonetheless, for many purposes the CPI-U-X1 can serve as an adequate proxy for what the national index would have been using the rental equivalence measure. Therefore, BLS recommends the use of the CPI-U-X1 to those who need to use a CPI series that treats homeowner costs consistently over time.

Appendix B. Time Series Estimates of Income Using the CPI-U and CPI-U-X1 Price Deflators

NOTE: Tables showing time series estimates of income were included among the detailed tables in past P-60 series annual income reports. Beginning with this report, times series estimates of income will be included in an appendix.

Included in this appendix are time series estimates of income for households, families, and persons; share of aggregate income and mean income received by each fifth and top 5 percent of household and families; and per capita income. Constant dollar estimates in this appendix are shown using both the CPI-U and CPI-U-X1 price deflators. (See "Trends in income and poverty using the CPI-U and CPI-U-X1" section of the descriptive text of this report for an explanation of the differences in these price deflators.) The indexes used to make the constant dollar conversions are shown in table B-1. Tables B-2 through B-8 show income estimates using the CPI-U as a price deflator. Tables B-9 through B-15 show income estimates using the CPI-U-X1 as a price deflator. Most tables presented in this appendix show data for 1967 through 1989. Two tables, tables B-4 and B-7 show the median income of families and median income of persons, respectively, for 1947 through 1989.

Table B-1. **Annual Average Consumer Price Index (CPI-U) and (CPI-U-X1): 1947 to 1989**

Appendix C. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of Armed Forces.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. The March 1980 CPS to March 1990 CPS employed a different definition of a farm than used in Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population. According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

Metropolitan-nonmetropolitan residence. The population residing in metropolitan statistical areas (MSA's) constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's). References to metropolitan-nonmetropolitan residence by size are based on the population of the CMSA.

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

Geographic regions. The four major regions and nine Census divisions of the United States for which data are presented in this report represent groups of States as follow:

Northeast:

New England: Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont.

Middle Atlantic: New Jersey, New York, and Pennsylvania.

Midwest (formerly North Central):

East North Central: Illinois, Indiana, Michigan, Ohio, and Wisconsin.

West North Central: Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, and South Dakota.

South:

South Atlantic: Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, and West Virginia.

East South Central: Alabama, Kentucky, Mississippi, and Tennessee.

West South Central: Arkansas, Louisiana, Oklahoma, and Texas.

West:

Mountain: Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, and Wyoming.

Pacific: Alaska, California, Hawaii, Oregon, and Washington.

North and West:

Northeast, Midwest, and West combined.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," or "occupied without payment of cash rent". For some tabulations, the latter of the groups are combined into a single "renter occupied" group.

Income. For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: 1) earnings from longest job (or self-employment); 2) earnings from jobs other than longest job; 3) unemployment compensation; 4) Social Security; 5) Supplemental Security income; 6) public assistance; 7) veterans' payments; 8) survivor benefits; 9) disability benefits; 10) retirement pensions; 11) interest; 12) dividends; 13) rents and royalties or estates and trusts; 14) educational assistance; 15) alimony; 16) child support; 17) financial assistance from outside of the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding calendar year, the demographic characteristics such as age, labor force status, and family or household composition are as of the survey date. The income of the family/household does not include amounts received by persons who were members during all or part of the income year if these persons no longer resided in the family/household at the time of interview. However, income data are collected for persons who are current residents but did not reside in the household during the income year.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that non-cash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

Longest job and other employment earnings can be classified into the three types:

1. *Money wage or salary income* is the total received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

2. *Net income from nonfarm self-employment* is the net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

3. *Net income from farm self-employment* is the net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, rent received from farm property if payment is made based on a percent of crops produced and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building

repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise, inventory changes were not taken into account.

Unemployment compensation includes payments received from government unemployment agencies or private companies during periods of unemployment and any strike benefits received from union funds.

Workers compensation includes payments received periodically from public or private insurance companies for injuries received at work.

Social Security includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance. Medicare reimbursements are not included.

Supplemental Security income includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) 65 years old or over, (2) blind, or (3) disabled.

Public assistance or welfare payments include public assistance payments made to low income persons, such as aid to families with dependent children and general assistance.

Veterans' payments include payments made periodically by the Department of Veterans Affairs to disabled members of the Armed Forces or to survivors of deceased veterans for education and on-the-job training, and means-tested assistance to veterans.

Survivor benefits include payments from survivor or widows' pensions, estates, trusts, annuities, or any other types of survivor benefits. Payments can be reported from 10 different sources: 1) private companies or unions; 2) Federal government (Civil Service); 3) military; 4) state or local governments; 5) railroad retirement; 6) workers' compensation; 7) Black lung payments; 8) estates and trusts; 9) annuities or paid-up insurance policies; and 10) other survivor payments.

Disability benefits include all payments received as a result of a health problem or disability. Payments can be reported from 10 sources: 1) workers' compensation; 2) companies or unions; 3) Federal government (Civil Service); 4) U.S. Military; 5) state or local governments; 6) railroad retirement; 7) accident or disability insurance; 8) Black lung payments; 9) state temporary sickness; or 10) other disability payments.

Retirement benefits include payments reported from 8 sources: 1) companies or unions; 2) Federal government (Civil Service); 3) U.S. Military; 4) state or local governments; 5) railroad retirement; 6) annuities or paid-up insurance policies; 7) IRA or KEOGH payments; or 8) other retirement income.

Interest income includes payments received or credited to: savings accounts, bonds, treasury notes, IRA's, certificates of deposit, interest-bearing checking accounts, and all open investments that pay interest.

Dividends include income received from stockholdings and mutual fund shares. Capital gains from the sale of stockholdings are not included as dividends.

Rents, royalties, and estates and trusts include the net income from the rental of a house, store, or other property, receipts from boarders or lodgers, net royalty income, and periodic payments from estate or trust funds.

Educational assistance includes Pell Grants, other government educational assistance, any scholarships or grants, or financial assistance from employers, friends, or relatives not residing in the students household.

Child support includes all periodic payments paid by parents for the support of children, even if these payments are made through a state or local government office.

Alimony includes all periodic payments to ex-spouses. One-time property settlements are not included.

Financial assistance from outside of the household includes periodic payments from nonhousehold members. Gifts or sporadic assistance are not included.

Government transfers include payments from the following sources: 1) Unemployment compensation, 2) State workers compensation, 3) Social Security, 4) Supplemental Security Income (SSI), 5) Public assistance, 6) Veterans' benefits, 7) government survivor benefits, 8) government disability benefits, 9) government pensions, and 10) government educational assistance.

Other income includes all other regularly received payments that are not included elsewhere on the questionnaire. Some examples include: state programs such as foster child payments, military family allotments, income received from foreign government pensions, etc.

Receipts not counted as income include: (1) capital gains such as money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings is the algebraic sum of money wages and salary and net income from farm and nonfarm self-employment.

Income other than earnings is the algebraic sum of all sources of money income except wages and salaries and income from self employment.

Median income. Median income is the amount which divides the income distribution into two equal groups, half having incomes above the median, half having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The medians for persons are based on persons 15 years old and over with income.

Mean income. Mean income is the amount obtained by dividing the total aggregate income of a group by the number of units in that group. The means for households, families, and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons 15 years old and over with income.

Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population in that group (excluding patients or inmates in institutional quarters).

Index of income concentration or Gini index. This is a statistical measure of income inequality. A measure of 0 indicates perfect equality, i.e., all persons having equal shares of the income. A measure of 1 indicates perfect inequality, i.e., one person has all the income and the rest have none. For a more detailed discussion see Current Population Reports, Series P-60, No. 123.

Households. Households consist of all persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. All persons who are not members of households are regarded as living in group quarters. Persons living in military barracks and inmates of institutions were excluded from the survey.

Householder. The person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households.

Head versus householder. Beginning with the 1980 CPS, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" are used. Recent social changes have resulted in greater sharing of household responsibilities among the adult members and, therefore, have made the term "head" increasingly inappropriate in the analysis of household and family data. Specifically, the Bureau has discontinued its longtime practice of always classifying the husband as the reference person (head) when he and his wife are living together.

Families. Families are groups of two persons or more (one of whom is the householder) related by birth, marriage, or adoption and residing together; all such persons (including related subfamily members) are considered as members of one family. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) were no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Family households. Family households are households maintained by a family (as defined above). Members of family households include any unrelated persons (unrelated subfamily members and/or secondary

individuals) who may be residing there. The number of family households is equal to the number of families. The count of family household members differs from the count of family members, however, in that the family household members include all persons living in the household, whereas family members include only the householder and his/her relatives. (See the definition of family.)

Unrelated subfamilies. Formerly called secondary families, unrelated subfamilies include two persons or more who are related to each other by birth, marriage, or adoption, but who are not related to the householder. An unrelated subfamily may include persons such as guests, roomers, boarders, or resident employees and their relatives living in a household. The number of unrelated subfamily members is included in the number of household members but is not included in the count of family members.

Persons living with relatives in group quarters were formerly considered as members of unrelated subfamilies. However, the number of such unrelated subfamilies became so small (37,000 in 1967) that beginning with data for 1968 (and beginning with census data for 1960) the Bureau of the Census includes persons in these unrelated subfamilies in the count of secondary individuals.

Married couples. As defined for census purposes, married couples consist of a husband and wife enumerated as members of the same family household. A married couple may or may not have children living with them.

Unrelated individuals. These are persons (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals.

Nonfamily householders. Formerly called primary individuals, nonfamily householders are persons maintaining a household while living alone or with nonrelatives only.

Secondary individuals. Secondary individuals are persons in households or group quarters such as guests, roomers, boarders, or resident employees (excluding nonfamily householders and inmates of institutions) who are not related to any other person in the household or group quarters. (See section on unrelated subfamily for slight change in coverage of secondary individuals in 1968.)

Size of household or family. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Related children under 18 years of age. In a family, related children under 18 years of age include sons and daughters, including stepchildren and adopted children, of the householder and all other children in the household who are related to the householder by blood, marriage, or adoption.

Related persons and family members. This includes all persons in the household related to the householder.

Marital status. This classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of interview.

The category "married" is further divided into "married, spouse present," "separated," and "other married, spouse absent." A householder is classified as "married, spouse present" if their spouse is reported as a member of the household, even though he or she might be temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the interview. Persons reported as "separated" includes those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The group "other married, spouse absent" includes married persons living apart because either the wife or the husband is employed and living a considerable distance from home, is residing in an institution, has moved to another area, or has a different place of residence for any other reason except separation as defined above.

Number of earners. This includes all persons in the household with $1 or more in wages and salaries or $1 or more or a loss in net income from farm or nonfarm self-employment.

Age. This classification is based on the age of the person at his last birthday.

Race. Race is based on five groups: (1) White, (2) Black, (3) Asian or Pacific Islander, (4) American Indian, Aleut, or Eskimo, and (5) other.

Hispanic origin. Persons of Hispanic origin are identified by a question that asks for self-identification of the person's origin or descent. Respondents are asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, are those who indicate that their origin is Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin. It should be noted that persons of Hispanic origin may be of any race.

Years of school completed. Data on years of school completed are derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. The questions of educational attainment apply only to progress in "regular" schools. Such schools include public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to schools in the regular school system. The median years of school completed is defined as the value which divides the distribution into two equal groups, one having completed more schooling and one having completed less schooling than the median. These medians are expressed in terms of a continuous series of numbers representing years of school completed. For example, a median of 9.0 represents the completion of the first year of high school and a median of 13.0 means completion of the first year of college.

Paid labor force. Persons are classified in the paid labor force if they were employed as wage and salary workers or self-employed workers during the survey week or were looking for work at the time and had last worked as a wage and salary or self-employed worker.

Occupation. Occupation data in this report refer to the job held longest during the income year. The occupation groupings were derived from occupation subgroups delineated on the basis of the classification system used in the 1980 census. For more detailed information, see the February 1983 issue of "Employment and Earnings," Bureau of Labor Statistics.

Work experience. Work experience is based on work for pay or profit or work without pay on a family-operated farm or business at any time during the previous year, on a part time or full time basis.

Weeks worked in the income year. This is based on the number of different weeks, during the preceding calendar year, in which a person did any work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time employment. Defined as follows: part-time indicates less than 35 hours of work per week in a majority of the weeks worked during the year. Full-time indicates 35 hours or more per week during a majority of the weeks worked.

Year-round, full-time. Indicates 50 or more weeks of full-time employment during the previous calendar year.

Nonworkers. Nonworkers are persons who did not do any work in the calendar year preceding the survey.

Workers. Persons who worked one or more days during the previous calendar year.

Symbols. A dash (-) represents zero or rounds to zero, the symbol "B" means that the base for the derived figure is less than 75,000, the symbol "X" means not applicable, the symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. Since 1979, base figures are based on civilian noninstitutional population controls for age, race, and sex established by the 1980 census. The base figures shown for 1971 to 1978 were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1970 census, whereas the base figures for the years from 1961 to 1970 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census.

Computation of aggregate income by fifths. The data shown on aggregate income and dollar cutoffs for fifths (and top 5 percent) of households and families, ranked by size of their total money income, were calculated using sorted microdata.

Computation of constant dollar distributions. For the years since 1967, adjustments for price change have been made by converting the incomes of households, families, or persons on the microdata file into

constant dollars on the basis of the Consumer Price Index (CPI-U or CPI-U-X1). The microdata were then tallied into the appropriate income interval.

The indices used to make the constant dollar conversions are shown in table B-1. The Consumer Price Index (CPI-U or CPI-U-X1) is an index designed to measure changes in family purchasing power. While the CPI is a good measure f the changes in prices paid by the average family represented in the index (urban consumers), it is not necessarily a good measure of the changes in prices faced by consumers of different characteristics and income levels. These limitations should be noted when comparing figures adjusted to constant dollars using the CPI since the same index was used for all families and all income levels.

COMPARABILITY OF CURRENT POPULATION SURVEY INCOME DATA WITH OTHER DATA

Bureau of Economic Analysis (BEA) personal income series. The income data presented in this report are not directly comparable with estimates of aggregate personal income prepared by the Bureau of Economic Analysis, Department of Commerce, nor with the distributions of families and unrelated individuals by family personal income brackets published by that Bureau between the years 1929 to 1963. The lack of correspondence stems from the following differences in definition and coverage:

1. *Income definition.* The personal income series include, among other items, the following types of nonmoney income which are not included in the census definition: wages received in kind, the value of food and fuel produced and consumed on farms, the net rental value of owner-occupied homes, the property income received by mutual life insurance companies, and the value of the services of banks and other financial intermediaries rendered to persons without the assessment of specific charges. These items of income in kind account for about 4 percent of total personal income. The Census Bureau definition of income, however, includes such items as regular contributions for support received from persons who do not reside in the same living quarters, income received from roomers and boarders residing in households, and employee contributions for social insurance, which are not included in the personal income series. These items, however, represent a much smaller income total than the nonmoney items included in personal income.

2. *Source of data.* The personal income series is estimated largely on the basis of data derived from business and governmental sources. These sources include the industrial and population censuses, employer's wage reports under the Social Security programs, and records of disbursements to individuals by governmental agencies. The income data presented in the census reports, on the other hand, are based directly on field surveys of households.

   As discussed in the section, "Source and Accuracy of Estimates," income data obtained in household interviews are subject to various types of reporting errors which tend to produce an understatement of income. It is estimated that the income surveys conducted by the Bureau of the Census during the past few years have obtained about 89 percent of the comparable total money income aggregates and about 99 percent of the comparable money wage or salary aggregates derived from the personal income series prepared by BEA.

   For a more detailed discussion of the differences between distributions using Census money income and BEA personal income, see *Size Distribution of Family Personal Income: Methodology and Estimates for 1964,* by Edward C. Budd, Daniel B. Radner, and John C. Hinrichs, Bureau of Economic Analysis, BEA-SP 73-21, June 1973.

3. *Population coverage.* The Bureau of the Census excluded from its sample inmates of institutions and military personnel overseas or living on post in the United States (except for a few families living on post). In addition, the income of persons who died or emigrated prior to the date of interview was not reported in the census inquiry. The income of these groups is included in the aggregate personal income series released by the BEA.

4. *Average income.* The average income figures (e.g., for geographical regions) represent income per capita, i.e., they were derived by dividing total income by the total population including men, women, and children. Most of the census averages, in contrast, are for households, families, unrelated individuals, or income recipients 15 years old and over.

Department of Agriculture farm income series. The farm income data are not directly comparable to that published by the U.S. Department of Agriculture (USDA) for several reasons. The USDA publishes two major series on income of farms: (1) net farm income and (2) net cash farm income.

For reasons listed below, the estimates of farm self-employment income per person or per family as published by the Bureau of the Census differ from estimates of operators' net farm income or net cash farm income per farm as published by the Department of Agriculture:

1. The unit of analysis in the USDA estimates is an establishment (farm) rather than a household as in the Bureau of the Census estimate.

2. The estimates of farm self-employment income as published by the Bureau of the Census and USDA's net cash income series exclude the nonmoney income items of crops grown for home consumption and an imputed rental value for farm dwellings. However, these are included in the estimates of operators' net farm income per farm.
3. The USDA estimate of net farm income includes the value of the change in inventories of commodities from the beginning to the end of the year. The USDA net cash farm income and the Bureau of the Census farm self-employment income do not.
4. The USDA series include the net income of farm operators from the rental of farms to other farmers but the census definition classifies these receipts as income other than earnings, not income from farm self-employment.
5. The USDA series is based on income from farms which are organized as proprietorships, partnerships, and corporations. The Bureau of the Census excludes corporate farm income. (The Bureau of Economic Analysis does estimate the proportions of the USDA estimate which are earned by corporate and noncorporate farms for inclusion in the National Income and Product Account.)

   The estimates of the USDA differ from the estimates of the Bureau of the Census methodologically as well as conceptually. The USDA estimates are based on data derived from the Census of Agriculture, farm surveys, business, and governmental sources, and are not available at a farm or household level, while the Bureau of the Census estimates are compiled from data collected in sample surveys. As noted later, the latter estimates are subject not only to sampling variation but also to errors of response and nonreporting.

   For a more detailed discussion of the concepts and methodology used in the USDA estimates, see U.S. Department of Agriculture Handbook No. 365, Major Statistical Series of the U.S. Department of Agriculture, Vol. 3, *Gross and Net Farm Income,* September 1969.

Federal income tax data. For several reasons, the income data shown in this report are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differ somewhat from the concept used by the Bureau of the Census. For example, certain types of receipts, such as veterans' payments, SSI, and AFDC, are not reported on Federal tax returns. Moreover, the coverage of income tax statistics is less inclusive because many persons with low incomes are not required to file tax returns. Furthermore, some income tax returns are filed as separate returns and others as joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Old-Age, Survivors', Disability, and Health Insurance earnings record data. Census data shown in this report and the distributions made upon the basis of Old-Age, Survivors', Disability, and Health Insurance earnings record data differ for the reasons listed below.

1. The earnings of the following groups are not covered by the earnings record data: many Federal, State, and local government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons who are not covered by the program because of insufficient earnings, including some farm and nonfarm self-employed persons, some farm workers, and domestic servants.
2. Employees' earnings in excess of $43,800 per employer are not covered by the earnings record data.
3. Income other than earnings is not covered by the earnings record data.
4. The earnings record data are based upon employers' Social Security tax reports and the Federal income tax returns of self-employed persons, while the data presented in this report are obtained by household interviews.

COMPARABILITY OF CURRENT CPS ESTIMATES WITH THOSE FROM PREVIOUS YEARS

Estimates from the CPS are in some instances not strictly comparable with those from previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; and (6) definition of the income universe. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls and Metropolitan Residence Definitions

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 20, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan area as efined on the basis of the 1970 census. Since there are important differences in the population classified as metropolitan using the 1970 and 1984 definitions, comparisons should be avoided.

The data for 1971 through 1989 are in some instances not entirely comparable to figures for earlier years because of revisions in the Current Population Survey.

The estimates for 1979 to 1989 are based on civilian noninstitutional population established by the 1980 census. Starting in January 1972, 1970 census-based population controls, metropolitan residence definitions, and other materials were introduced into the sample and estimation procedures. The major item affecting comparability at the overall national level is the introduction of population controls based on the 1970 census. The data for 1971 through 1978 are based on civilian noninstitutional population established by the 1970 census. Figures for previous years are tied in with 1960 census-based population controls. In a number of instances, data from the March 1970 and 1971 CPS's were revised to take account of 1970 census-based population controls, thus providing some measure of the impact of the changes. (See table 3, Current Population Reports, Series P-60, No. 91.) Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and low-income or poverty rates. However, the changes may have more impact on the population levels in different subgroupings, such as the total number of persons or families either overall, within some particular income interval, or below the low-income level. A detailed description of these changes appears in the Bureau of Labor Statistics report, *Employment and Earnings,* Vol. 18, No. 8, February 1972.

Comparability of metropolitan and nonmetropolitan data from the March 1980 CPS with data for previous years. Changes in the CPS design and procedures made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures should be avoided. Trends in metropolitan and nonmetropolitan population growth over the 1970-83 period should not be appreciably affected by the procedural changes. The major revisions to earlier CPS sample design and estimation methods have involved the varying of the number of sample units. Incorporation of approximately 10,000 supplemental housing units into the March CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined subsequent to the introduction of the additional sample that the new inflating (weighting) procedures used for processing both the March 1977 and March 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. For the March 1979 CPS, another revision of the weighting process was introduced to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to March 1978 CPS levels.

Collection of Income and Work Experience Data

This report presents data showing income of persons and family householders with varying amounts of work experience. In the surveys from March 1966 to March 1969, civilian work experience data collected in the February and April surveys were matched with income data collected in the March survey for all households. In the Surveys prior to March 1966 only persons included in the February and March surveys were matched.

Nonmatched persons included in the February and March interviews or the March and April interviews were almost always assigned work experience information from actual respondents with similar economic and demographic characteristics. Work experience values were estimated only when there was a nonmatched person with a given classification, but no respondent with similar economic and demographic characteristics.

No April or February 1969 survey record could be found for about 6 percent of the people included in the March 1969 survey. The major reasons for these nonmatches were migration, noninterviews, and coding errors. In order to eliminate the nonmatches and to improve the consistency between income and work experience data, both the income and work experience data were collected together beginning with the March 1970 survey.

The remaining persons, whose work experience data were assigned, resulted from inconsistencies between their work experience and income data and from persons who did not answer the work experience questions. It should be noted that the proportions of year-round, full-time workers shown in the Series P-60 reports differ slightly from those shown for the same subgroups in the Bureau of Labor Statistics, Special Labor Force Reports, *Work Experience of the Population.* The difference exists because the proportions are not based on exactly the same groups. The proportions presented in the Special Labor Force Reports relate to civilians who worked at some time during the year. In contrast, the proportions shown in the persons tables in the P-60 reports relate to civilians who received income, including not only workers but also many persons who did not work but received income from pensions, interest, dividends, or other sources aside from earnings.

Noninterviews, Nonresponses, and Allocations

In the March 1990 CPS, no interview was obtained for approximately 4.5 percent of the 60,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews

were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. Even though an interview is obtained in many cases, complete information for all of the income questions is not available, unknown or refused. In March 1990, for example, an interview was not completed for approximately 8 percent of all income supplements. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Questionnaire Wording and Procedures

Modifications in collecting income data in the March 1979 Current Population Survey. As part of the March 1979 CPS, the Bureau conducted an experiment in an effort to improve the reporting of income data. An alternative questionnaire was used on three of the eight rotation groups. The experimental questionnaire used more probing questions and inquired about more detailed sources of income. The results of the experiment and its subsequent impact on the estimates are discussed in the Current Population Reports, Series P-60, No. 123, page 12. Beginning in March of 1980, this new questionnaire was used for the full CPS sample; with few modifications, this questionnaire is still in use.

Definition of Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series P-60, No. 129.

REVISIONS TO MARCH 1989 CPS PROCESSING SYSTEM

Between 1988 and 1989 a new computer processing system was introduced for the March Current Population Survey. This processing system rewrite was long overdue; the system in use before this year was first introduced in March 1976 and was never fully updated to reflect the numerous questionnaire changes that have taken place since that time. In addition, the programs used to process the CPS files were written in a computer language that is being phased out of use at the Census Bureau.

Since the Census Bureau began imputing for missing income data on the CPS in 1962, there have been three major revisions to the processing system (in 1967, 1976, and 1989). Through all of these revisions, the basic strategy used to make imputations has remained the same. This approach, commonly referred to as "hot deck" imputation, assigns missing responses to sample persons with information from matched sample persons with similar demographic and economic information who answered these questions.

Under the new March processing system, there were three main modifications to the income imputation programs:

1. The edits and imputations were expanded to reflect the full detail of the March income questionnaire. The original processing system was still based on a less detailed CPS income questionnaire that has not been in use since 1980.
2. Under the revised processing procedures, entire sets of March income and noncash benefits data were imputed to supplement noninterviews from the same interviewed person. Under the original processing procedures, earnings, unearned income, and noncash benefits were imputed in separate stages during the processing system. Thus, the new processing system imputes noninterviews more efficiently and is better able to preserve the correlation between earnings, unearned income, and noncash benefits.
3. Both the old and new processing systems employ what are called "statistical matches" to link sample cases with reported data to those requiring imputation for missing responses. In the original processing system, under certain circumstances, reported data were removed and replaced with imputed data during the statistical matching process. Under the new system, reported data are never removed. This was accomplished by expanding the number of statistical matches in the income imputation system.

Table C-1. **Comparison of CPS Aggregate Money Income Concepts in 1987 With Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Imputed CPS Amounts: 1987**

Source of income	Independent source		CPS					
			Total		Reported		Imputed	
	Billions of dollars	Percent distribution	Billions of dollars	Percent distribution	Billions of dollars	Percent distribution	Billions of dollars	Percent distribution
Total income	(NA)	(X)	2988.8	(X)	2391.7	(X)	597.1	(X)
Total income, independent estimates	3297.1	100.0	2941.4	100.0	2355.0	100.0	586.5	100.0

[1]Only includes estates and trusts reported as survivor benefits. Other estates and trusts are included with rent and royalty income.

For details on the results of the revised processing procedures, see Current Population Reports, Series P-60, No. 166, *Money Income and Poverty Status in the United States: 1988.*

QUALITY OF INCOME DATA

The quality of the income data derived from the March Current Population Survey (CPS) is affected by five main sources of error. The first, sampling errors, are errors attributable to the fact that a sample rather than a census was taken. Discussion of these errors is included in appendix D of this report. The other four main sources of error, usually termed collectively as nonsampling errors, result from 1) use of a sampling frame that does not include all units for which the survey was intended to provide data, 2) failure to contact all sample units selected, i.e., noninterview and undercoverage problems, 3) poor quality of responses, and 4) missing data problems.

Over the years evaluations of the quality of the March CPS income estimates have revealed downward biases when the survey estimates are compared to independent estimates derived from sources such as the National Income and Product Accounts (NIPA), statistics based on Federal individual income tax returns, data from the Social Security Administration (SSA), etc.

Most analyses of the magnitude of nonsampling errors in the March CPS income estimates have been made at the "aggregate" level since the kind of data needed to make such comparisons are relatively easy to obtain. Some studies have also been conducted at the "micro" level by matching the data provided by individuals with data obtained from administrative records systems for those same individuals. These studies, such as the March 1973 CPS-IRS-SSA exact match, have shown that the nonsampling error problem is much more complex than that measured at the aggregate level. For example, a significant number of respondents provide responses to the amounts of income received that appear to exceed the actual amount received. These are offset by larger errors in the other direction by a somewhat higher proportion of other respondents.

Deriving independent estimates of aggregate income for purposes of evaluating the survey data is difficult. The survey and administrative sources use different definitions, cover different universes, and are based on concepts that are not exactly the same. Therefore, adjustments to the administrative sources must be made to help correct for these inconsistencies and arrive at a valid independent estimate that can be used to make fair and accurate estimates of the quality of the survey estimates. These adjustments attempt to 1) remove income that is received by the institutional population, the deceased, and persons not residing in the United States at the time of the interview, 2) remove any components of income that are received as "in-kind" payments or benefits, and 3) remove any lump-sum or one-time payments, withdrawals, etc.

A degree of uncertainty must be attached to the independent estimates for several reasons. First, not all of the information needed to make some of these adjustments mentioned above are available. Second, administrative sources are also subject to estimation problems resulting from the lack of adequate data, and in the case of the NIPA, periodically undergo significant revision to correct for some of these errors when more recent or more accurate information become available. Third, even though attempts are made to include income received by those operating in the legal "informal" economy in the NIPA these estimates are subject to some unknown degree of error. Fourth, no attempt is made to include estimates of income received through illegal means.

In spite of this uncertainty regarding development of independent estimates it is important to attempt to monitor the quality of the income estimates using these sources. Table C-1 contains comparisons of survey and independent estimates of aggregate income by type of income for 1987. The estimates shown in this table are not directly comparable to those for 1983, which was the last year for which independent estimates were made. Major revisions to the NIPA and some revisions in the methods for arriving at the CPS concepts make most comparisons for these years inconsistent. Because of the difficulties in deriving adequate independent estimates, the table does not cover all types of income identified in the March CPS.

Overall, the survey estimate of $2.941 trillion was about 89 percent of the independent estimate. This result is achieved mainly because the survey estimate of wage and salary income was 99 percent of the independent estimate and this income source accounts for 75 percent of the CPS income estimate from all sources. For the other sources of income the survey estimates range from 34 percent of the independent estimate for farm income to 99 percent for Federal government and military pensions.

The apparent extreme underreporting problem for farm income helps to illustrate the difficulty in developing meaningful independent estimates. The estimate of $46.9 billion shown in table C-1 for farm income was derived directly from the NIPA which bases its estimates on data from the United States Department of Agriculture. In contrast, farm income reported on Federal individual income tax returns for 1987 was only $10.5 billion.

The CPS continues to have serious underreporting problems for property income (interest, dividends, net rent, and net royalty income) where the survey estimates range between 53 and 72 percent of the independent estimates.

Benefits from the means-tested programs, Aid to Families With Dependent Children (AFDC) and Supplemental Security Income (SSI) also exhibit significant survey underestimates at 73 and 83 percent of the independent estimates respectively. For these incomes, however, a significant portion of this problem is associated with misclassification of the source of income. In the CPS, AFDC benefits are often reported by survey respondents as having come from other sources of welfare payments, mainly General Assistance. Benefits from the SSI program are sometimes reported as Social Security income by respondents who do not know the true source of the benefit.

Benefits from the Veterans' Administration, unemployment compensation, and workers' compensation, all of which have a past history of significant underestimation in the March CPS, continue to have such a problem. Veterans' payments have also been shown to be subject to errors of misclassification with a significant proportion of these benefits being reported incorrectly by respondents as military retirement. The low reporting rate for workers' compensation may be in part related to significant levels of one-time, lump-sum settlements that are conceptually excluded from the survey's definition of income. Since no data are available that permit a precise adjustment to the independent estimate for the existence lump-sum payments, this figure may be overestimated. While undoubtedly some persons incorrectly report lump-sum amounts in the survey, resulting in an error in the opposite direction, these errors are thought to be much smaller.

Pension income estimates from the survey show a peculiar pattern of underrporting problems. For Federal and military pensions the survey estimate is about 99 percent of that derived from independent sources while for private pensions and annuities the survey estimate is only about 46 percent of the independent source. The high level of reporting indicated for Federal and military retirement may be overstated somewhat because of the misreporting problem that exists between military retirement and Veteran's payments. The extremely low level of reporting for private pensions may be, in part, due to a significant overestimate of the independent estimate. Since information concerning the prevalence of lump-sum payments is not available, adequate adjustments to exclude these types of payments have not been made.

Table C-2 has been included in this report to illustrate the wide variation between income estimates based on Federal individual income tax returns and the NIPA. The NIPA estimates adjusted to survey concepts (column 4 of table C-2) were used as the basis for the calculations in table C-1. In some cases these income amounts differ significantly from those shown in the other columns of table C-2. The first column labeled "IRS AGI as reported" represents the amounts as computed from unaudited Federal tax returns. The second column labeled "IRS AGI after TCMP adjustment" reflects adjustments made to the amounts shown in column 1 based on results of the Taxpayer Compliance Measurement Program (TCMP). This program, which performs extensive audits of a sample of tax returns every 3 years, provides estimates of the amount of income that should have been reported but was not reported for both tax filers and nonfilers that should have filed. Finally, the third column labeled "AGI after BEA reconciliation" are estimates of adjusted gross income (AGI) for Federal individual tax returns derived by adjusting the NIPA amounts to AGI concepts. This reconciliation is performed annually by the Bureau of Economic Analysis (BEA).

Table C-2. **Comparison of Independent Sources of Income for 1987**

(Billions of dollars)

Source	IRS AGI as reported	IRS AGI after TCMP adjustment	AGI after BEA reconciliation	NIPA adjusted to survey concept
Wages and salary	2,163.9	2,239.8	2,238.9	2,215.9
Nonfarm self-employment	105.5	276.1	210.8	219.8
Farm self-employment	−1.3	10.5	39.9	46.9
Interest	[1]169.0	186.4	178.7	244.4
Dividends	66.8	75.5	100.4	73.7
Net rents and royalties	−7.2	6.5	23.5	40.3
Pensions and annuities	[2]124.8	147.1	164.6	125.8

[1]Excludes $31.0 in tax exempt interest not in AGI.
[2]Excludes $47.9 in pensions and annuities not in AGI and an unknown amount of taxable lump-sum payments.

The results of the TCMP indicate that large amounts of income are not reported on tax returns as shown by the differences in columns 1 and 2. The differences for self-employment income are especially large.

The NIPA estimates used to evaluate the quality of the survey data differ from AGI income for five main reasons. First, the NIPA estimates include the income of persons who are not required to file tax returns. Second, the NIPA estimates reflect both taxable and nontaxable income amounts. Third, the accounting methods used in the NIPA, such as the treatment of depreciation, differ from those used by the IRS. Fourth, the NIPA does not use individual income tax return data extensively in its estimation methodology because of concerns regarding high levels of misreporting. Fifth, some attempts have been made to adjust the NIPA estimates to exclude lump-sum payment, withdrawals, etc. that are sometimes included as income for tax purposes.

Appendix D. Source and Accuracy of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in March of years 1968 through 1990 in the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses only March data for its estimates. The March survey uses two sets of questions, the basic CPS and the supplement.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The present CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 States and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 60,000 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,600 of these units because the occupants are not home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and reliability of the data and to satisfy changing data needs. The most recent changes were completely implemented in July 1985.

The following table summarizes changes in the CPS designs for the years for which data appear in this report.

March Supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in March about money income received the previous calendar year.

To obtain more reliable data for the Hispanic origin population, the March CPS sample was increased by about 2,500 eligible housing units, interviewed the previous November, that contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

Description of the March Current Population Survey

Time period	Number of sample areas	Housing units eligible[1]	
		Interviewed	Not interviewed
1990	729	57,400	2,600
1989	729	53,600	2,500
1986 to 1988	729	57,000	2,500
1985	629/729[2]	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500

1967 to 1971	449	48,000	2,000

[1]Excludes about 2,500 Hispanic households added from the previous November sample. (See "March Supplement.")

[2]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

Estimation Procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces. The independent population estimates used for 1981 (1980 for income estimates) to present were based on updates to controls established by the 1980 Decennial Census. Data previous to 1981 were based on independent population estimates from the most recent decennial census. For more details on the change in independent estimates, see the section entitled "Introduction of 1980 Census Population Controls" in an earlier report (Series P-60, No. 133). The estimation procedure for the March supplement included a further adjustment so husband and wife of a household received the same weight.

The estimates in this report for 1983 (from March 1984 CPS) and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population

by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

ACCURACY OF ESTIMATES

Since the CPS estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: nonsampling and sampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. Nonsampling errors can be attributed to many sources. These sources include the inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, respondents' inability or unwillingness to provide correct information or to recall information, errors made in data collection such as in recording or coding the data, errors made in processing the data, errors made in estimating values for missing data, and failure to represent all units with the sample (undercoverage).

CPS undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS undercoverage is about 7 percent. CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race-Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

Answers to questions about money income often depend on the memory or knowledge of one person in a household. Recall problems can cause underestimates of income in survey data, because it is easy to forget minor or irregular sources of income. Respondents may also misunderstand what the Census Bureau considers money income, or may simply be unwilling to answer these questions correctly because the questions are considered too personal. See Appendix C, "Underreporting of Income," for more discussion.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey*, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology*, Bureau of the Census, U.S. Department of Commerce.

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described later in "Standard Errors and Their Use," are primarily measures of sampling variability, although they may include some nonsampling error.

Comparability of Data. Data obtained from the CPS and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

Caution should also be used when comparing estimates in this report, which reflect 1980 census-based population controls, with estimates for 1979 (from March 1980 CPS) and earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions, but did have a significant impact on levels. For example, use of 1980 based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1981 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1983, compare Hispanic estimates over time cautiously.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept, the introduction of the new farm definition, and use of more detailed income intervals in

the upper range of the income distribution. Due to these and other changes, one should use caution when comparing estimates for 1979 through 1989 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 129).

Another major change is that income estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence category such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 supplement questionnaire was revised to enable the coding of higher amounts of earnings from longest job.

Note When Using Small Estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Estimation of Median Incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto interpolation or linear interpolation. Currently, linear interpolation is used to estimate all medians. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 through 1987 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families and households. This is because the width of the income interval containing the estimate is greater than $2,500. Estimates of median income for 1976, 1977, and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families and households. This is because the width of the income interval containing the estimate is greater than $1,000. All other estimates of median income and associated standard errors for 1976 through 1989 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Thus, use caution when comparing median incomes above $12,000 for persons or $18,000 for families and households for different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see Series P-60, No. 114, *Money Income in 1976 of Families and Persons in the United States.*

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics.

Tables D-1 and D-2 provide standard errors of estimated numbers and estimated percentages, respectively. The standard errors in both tables are of persons, households, families, and unrelated individuals for Total or White, Black, and Hispanic. Table D-3 has standard error parameters for various types of characteristics. Table D-4 provides factors to approximate standard errors for estimates prior to 1989. Table D-5 provides Hispanic parameters for estimates prior to 1984. Table D-6 has the year-to-year correlation coefficients for income characteristics.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent ($\pm$1.0)," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the median annual income of Black families to the median annual income of White families.

Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference.

Table D-1. **Standard Errors of Estimated Numbers**

(Numbers in thousands)

Size of estimate	Persons			Households, families, and unrelated individuals		
	Total or White	Black	Hispanic	Total or White	Black	Hispanic
75	13	14	14	12	13	13
100	15	16	16	14	15	15
250	24	25	25	23	24	23
500	34	35	35	32	33	33
1,000	47	50	49	45	46	45
3,000	82	81	78	78	76	72
5,000	105	99	91	100	92	83
10,000	146	116	87	139	107	70
25,000	221	(X)	(X)	210	(X)	(X)
50,000	288	(X)	(X)	270	(X)	(X)
100,000	325	(X)	(X)	293	(X)	(X)
150,000	261	(X)	(X)	197	(X)	(X)

X Not applicable

Note: See table D-3 for the appropriate factor to apply to the above standard errors.

Standard Errors of Estimated Numbers. There are two ways to compute the approximate standard error, s_x, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from table D-3, and s is the standard error of the estimate obtained by interpolation from table D-1. The second method uses formula (2), from which the standard errors in table D-1 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table D-3 associated with the particular type of characteristic. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration

Table 1 shows that there were 66,090,000 family households in 1989. Using formula (1) with f = 0.9 from table D-3 and s = 277,000 interpolating from table D-1, the approximate standard error of 66,090,000 is

$$s_x = (0.9)(277{,}000) = 249{,}000$$

Alternatively, using formula (2) with a = -0.000012 and b = 1,661 from table D-3, the approximate standard error of 66,090,000 is

$$s_x = \sqrt{(-0.000012)(66{,}090{,}000)^2 + (1{,}661)(66{,}090{,}000)} = 240{,}000$$

The 90-percent confidence interval for the estimated number of family households in 1989 is from 65,695,000 to 66,485,000, i.e., 66,090,000 ± 1.645(240,000).

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table D-3 indicated by the numerator.

The approximate standard error, $s_{x,p}$ of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from table D-3 and s is the standard error of the estimate obtained by interpolation from table D-2.

Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{\frac{b}{x}\, p(100 - p)} \qquad (4)$$

Here x is the total number of persons, families, households, or unrelated individuals which is the base of the percentage, p is the percentage ($0 \leq p \leq 100$), and b is the parameter in table D-3 associated with the characteristic in the numerator of the percentage.

Table D-2. **Standard Errors of Estimated Percentages**

Base of percentage (thousands)	Estimated percentage									
	Persons					Families				
	2 or 98	5 or 95	10 or 90	25 or 75	50	2 or 98	5 or 95	10 or 90	25 or 75	50
Total or White										
75	2.4	3.8	5.2	7.5	8.7	2.3	3.6	5.0	7.2	8.3

1,000	0.7	1.1	1.5	2.2	2.6	0.7	1.0	1.0	2.1	2.4
3,000	0.4	0.6	0.9	1.3	1.5	0.4	0.6	0.8	1.2	1.4
5,000	0.3	0.5	0.7	1.0	1.1	0.3	0.5	0.6	0.9	1.1
10,000	0.2	0.3	0.5	0.7	0.8	0.2	0.3	0.4	0.6	0.7

Note: See table D-3 for the appropriate factor to apply to the above standard errors.

Illustration

Table 1 shows that 10,890,000 or 16.5 percent of the 66,090,000 family households were maintained by female householders with no husband present. Using formula (3) with f = 0.9 from table D-3 and s = 0.2 interpolating from table D-2, the approximate standard error of 16.5 percent is

$$s_{x,p} = (0.9)(0.2) = 0.2$$

Alternatively, using formula (4) with b = 1,661 from table D-3, the approximate standard error of 16.5 percent is

$$s_{x,p} = \sqrt{\frac{1{,}661}{66{,}090{,}000}\,(16.5)\,(100.0 - 16.5)} = 0.2$$

The 90-percent confidence interval for the estimated percentage of family households that were maintained by female householders with no husband present is from 16.2 percent to 16.8 percent, i.e., 16.5 ± 1.645(0.2).

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2 - 2rs_xs_y} \qquad (5)$$

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. The correlation coefficient, r, can be determined from table D-6 for year-to-year comparisons for income estimates of numbers and proportions; for other comparisons assume that r equals zero. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration

Table 24 shows that the median income of all males in 1989 was $19,893 and the median income of all females in 1989 was $9,624. The apparent difference between the median income of males and females in 1989 is $10,269. Table 24 also shows the approximate standard errors, s_x and s_y, are $122 and $69, respectively. Using formula (5) with r = 0 (assuming the estimates are uncorrelated), the approximate standard error of $10,269 is

$$s_{x-y} = \sqrt{(122)^2 + (69)^2} = 140$$

The 90-percent confidence interval for the estimated difference between the median income of males and females in 1989 is from $10,039 to $10,499, i.e., $10,269 ± 1.645($140). Because this interval does not contain zero, we can conclude with 90-percent confidence that the median income of males in 1989 was larger than the median income of females in 1989.

Notes: To estimate standard errors prior to 1989, multiply by the appropriate factor in table D-4. For regional estimates multiply the a and b parameters by 0.74, 0.98, 1.04 and 1.06 for Northeast, Midwest, South and West, respectively.

The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories. The 1989 standard error parameters were revised since the advance report (Series P-60,No.168).

Standard Error of a Median. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the reliability of an estimated median by determining a confidence interval about it. (See the section "Standard Errors and Their Use" for a general discussion of confidence intervals.)

Estimate the 68-percent confidence limits of a median based on sample data using the following procedure.

1. Determine, using formula (4), the standard error of the estimate of 50 percent from the distribution.

2. Add to and subtract from 50 percent the standard error determined in step 1.

3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2.

   Use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise. The formulas for interpolation are:

$$\text{Pareto:} \quad X_{pN} = \exp\left[\frac{\mathrm{Ln}(pN/N_1)}{\mathrm{Ln}(N_2/N_1)}\,\mathrm{Ln}(A_2/A_1)\right]A_1 \qquad (6)$$

$$\text{Linear:} \quad X_{pN} = \frac{pN - N_1}{N_2 - N_1}\,(A_2 - A_1) + A_1 \qquad (7)$$

where

X_{pN} = estimated upper and lower bounds for the confidence interval ($0 \leq p \leq 1$). For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_{pN} estimates the median when $p = 0.50$.

N = *for distribution of numbers*: the total number of units (persons, households, etc.) for the characteristic in the distribution.

= *for distribution of percentages*: the value 1.0.

p = the values obtained in step 2.

A_1, A_2 = the lower and upper bounds, respectively, of the interval containing X_{pN}.

N_1, N_2 = *for distribution of numbers*: the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A_1 and A_2, respectively.

= *for distribution of percentages*: the estimated percentage of units (persons, households, etc.) having values of the characteristic greater than or equal to A_1 and A_2, respectively.

exp is the exponential function.

Ln is the natural logarithm function.

A mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

4. Divide the difference between the two points determined in step 3 by two to obtain the standard error of the median.

Use of the above procedure could result in standard errors which differ from those given in the detailed tables. The reasons for this discrepancy are the use of a more detailed distribution than that given in the tables in determining the published standard errors, and the rounding of the numbers to thousands in the published tables. Linear interpolation was almost always used to compute the published medians and standard errors. Occasionally, a median may lie in an open-ended interval. To calculate its standard error the user must call Housing and Household Economic Statistics Division of the Census Bureau to obtain the methodology.

Illustration

Table 30 shows that the median earnings for male workers was $21,376 in 1989. Table 30 also shows that the size, or base, of the distribution from which this median was determined was 72,045,000 male workers.

1. Using formula (4) with b = 2,254 from table D-3, the standard error of 50 percent on a base of 72,045,000 is about 0.3 percent.
2. To obtain a 68-percent confidence interval on the estimated median, add to and subtract from 50 percent the standard error found in step 1. This yields percentage limits of 49.7 and 50.3.
3. The lower and upper limits for the interval in which the median falls are $20,000 and $22,500, respectively (from table 30). The estimated numbers of male workers with an income greater than or equal to $20,000 and $22,500 are 38,695,000 and 33,838,000, respectively. Using formula (7), the lower limit for the confidence interval of the median is

$$\frac{(.503)\,(72{,}045{,}000) - 38{,}695{,}000}{33{,}838{,}000 - 38{,}695{,}000}(22{,}500 - 20{,}000) + 20{,}000 = 21{,}264$$

Similarly, the upper limit is approximately

$$\frac{(.497)\,(72{,}045{,}000) - 38{,}695{,}000}{33{,}838{,}000 - 38{,}695{,}000}(22{,}500 - 20{,}000) + 20{,}000 = 21{,}487$$

Thus, a 68-percent confidence interval for the median income for male workers is from $21,264 to $21,487.

4. Therefore, the standard error of the median is

$$\frac{(21{,}487 - 21{,}264)}{2} = 112$$

Table D-4. **Factors to be Applied to Standard Errors Prior to 1989**

Characteristic	Factor
Non-Hispanic	
1988	1.05
1981-1987	0.97
1972-1980	0.90
Hispanic	
1988	1.14
1984-1987	0.97

Note: Apply the appropriate factor to the standard error calculated using the parameters in table D-3. For Hispanic estimates prior to 1984, use the parameters in table D-5 to calculate standard errors.

Standard Error of a Mean for Grouped Data. The formula used to estimate the standard error of a mean for grouped data is

$$s_{\bar{x}} = \sqrt{(b/y)S^2} \qquad (8)$$

In this formula, y is the size of the base of the distribution and b is a parameter from table D-3. The variance, S^2, is given by the following formula:

$$S^2 = \sum_{i=1}^{c} p_i \bar{x}_i^2 - \bar{x}^2 \qquad (9)$$

where $\bar{x}$, the mean of the distribution, is estimated by

$$\bar{x} = \sum_{i=1}^{c} p_i \bar{x}_i \qquad (10)$$

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of households, families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i$ is $(z_{i-1} + z_i)/2$ where z_{i-1} and z_i are the lower and upper interval boundaries, respectively, for group i. $\bar{x}_i$ is assumed to be the most representative value for the characteristic for households, families, and unrelated individuals or persons in group i.

Group c is open-ended, i.e., no upper interval boundary exists. For income tables for all families, use -$5,000

Table D-5. **Standard Error Parameters for Income and Nonincome Characteristics of Hispanics: 1973 - 1983**

Characteristics	1973 - 1980			1981 - 1983

Households, Families, and Unrelated Individuals						
Total	-0.000020	1,422	0.8	-0.000022	1,632	0.8
Farm	(X)	(X)	(X)	(X)	(X)	(X)

X Not applicable.

Notes: The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories.
Income data for Hispanics was not published before 1973 due to the reliability of the estimates.

for "Loss" and $150,000 for "$100,000 and over." For the income deficit table, use $7,400 as the midpoint of "$5,000 or more" interval and $4,900 for the "$1,500 or more" interval. Otherwise, the approximate average value for an open-ended interval is

$$\bar{x}_c = \frac{3}{2} z_{c\ 1} \qquad (11)$$

Standard Error of a Ratio. Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio, x/y, may be computed using

$$s_{x\ y} = \frac{x}{y}\sqrt{\left[\frac{s_x}{x}\right]^2 + \left[\frac{s_y}{y}\right]^2 - 2r\frac{s_x s_y}{xy}} \qquad (12)$$

In formula (12), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the mean number of children per family with children.

For all other types of ratios, r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. Examples of this type are the mean number of children per family and the poverty rate.

NOTE: For estimates expressed as the ratio of x per 100 y or x per 1,000 y, multiply formula (10) by 100 or 1,000, respectively, to obtain the standard error.

Illustration

Table 24 shows the median earnings for year-round, full-time female workers in 1989, x, was $18,778 and the median earnings for year-round, full-time male workers in 1989, y, was $27,430. The ratio of the median earnings was 0.68. Table 24 also shows the approximate standard errors, s_x and s_y, are $126 and $133,

respectively. Using formula (12) with r = 0, the approximate standard error of 0.68 is

$$S_{x/y} = \frac{18{,}778}{27{,}430}\sqrt{\left[\frac{126}{18{,}778}\right]^2 + \left[\frac{133}{27{,}430}\right]^2} = 0.01$$

The 90-percent confidence interval for the ratio of the median earnings for year-round, full-time female workers to the median earnings for year-round, full-time male workers is from 0.66 to 0.70, i.e., 0.68 ± 1.645(0.01).

Table D-6. **Year-To-Year Correlation Coefficients Income: 1960 - 1989**

Characteristic	Families, households, and unrelated individuals	Persons
Total, White, Black and/or other races	0.35	0.30
Hispanic	0.55	0.45

Note: These correlations are for comparisons of consecutive years. For comparisons of nonconsecutive years, assume the correlations are zero.

3. CONTROL NUMBER

6. PSU NO. **7. SEGMENT NO.** **8. SERIAL NO.** **9. HOUSEHOLD NO.**

INTRODUCTION
(Optional)

We have just completed the questions about employment and unemployment. Each March, the Census Bureau also collects information about the economic situation of Americans and their families for the previous year. I am going to ask these questions now. We don't expect all answers to be perfect, but please think about each question and answer it the best you can.

77. CHECK ITEM
TENURE (from Control Card item 10)

Owned or being bought 1
Rented 2
No cash rent 3

78. How many housing units are in this structure?

1 ○ 5–9 ○
2 ○ 10+ ○
3–4 ○

79. CHECK ITEM

Some household members under age 15 ○ (Ask 80)
No household members under age 15 ○ (Skip to 82)

80. During 1989, how many of the children under age 15 in this household were covered by Medicare or Medicaid?

○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

81. During 1989, how many of the children under age 15 in this household were covered by a health insurance plan *(Excluding Medicaid and Medicare)?*

○ All ..... (Ask 81A)
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None (Skip to 82)

81A. How many of these children were covered by the health insurance plan of someone not residing in this household?

○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

82. CHECK ITEM

Some household members 5–18 years old ○ (Ask 83)
No household members 5–18 years old ○ (Skip to 84)

83. During 1989, how many of the children in this household usually ate a complete hot lunch offered at school?

○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

84. CHECK ITEM
Entry in Control Card item 29 is:

Under $30,000, NA or Ref. ○ (Fill 85)
$30,000 or more ..... ○ End questions

85. CHECK ITEM

All or some marked in 83 ○ (Ask 86)
None marked in 83 or 83 blank ○ (Skip to 87)

86. During 1989, how many of the children in this household received free or reduced price lunches because they qualified for the Federal School Lunch Program?

○ All
○ Some, but not all – Mark number
1 2 3 4 5 6 7 8 9 +
○ None

87. CHECK ITEM

Owned marked in 77 ○ (Skip to 90)
Rented or no cash rent marked in 77 ○ (Ask 88)

88. Is this house in a public housing project, that is, is it owned by a local housing authority or other public agency?

Yes ○ (Skip to 90)
No ○ (Ask 89)

89. Are you paying lower rent because the Federal, State, or local government is paying part of the cost?

Yes ○
No ○

90. Did anyone in this household get food stamps at any time during 1989?

Yes ○ (Ask 91)
No ○ (Skip to 94)

91. How many of the people now living here were covered by food stamps during 1989?

All ○
1 2 3 4 5 6 7 8 9 +

92. In how many months of 1989 were food stamps received?

All ○
0 1 2 3 4 5 6 7 8 9

93. What was the value of all the food stamps received during 1989?
(Add monthly amounts to obtain annual figure)

$ (Nearest dollar)
0 1 2 3 4 5 6 7 8 9 (Ask 94)

94. The government has an energy assistance program which helps pay heating costs. This assistance can be received directly by the household or it can be paid directly to the electric company, gas company or fuel dealer.

Since October 1, 1989, has this household received assistance of this type from the federal, state, or local government?

Yes ○ (Ask 95)
No ○ (End questions)

95. Altogether, how much energy assistance has been received since October 1, 1989?

$ (Nearest dollar)
0 1 2 3 4 5 6 7 8 9

FOLLOW-UP INFORMATION – TRANSCRIBE THIS INFORMATION FROM THE CPS-1 AND CONTROL CARD BEFORE SENDING THEM TO THE RO.

ALL CPS-1s AND CONTROL CARDS MUST BE SENT TO THE R.O. BY SATURDAY, MARCH 24

ALL 665s MUST BE MAILED TO R.O. BY SATURDAY, MARCH 31

(1) Complete items 3, 6–9, 77, 79, 82 and 84 on page 1.

(2) Complete items 18A, 18B, 18D, and 18G1 for each 15+ person, (p. 3, 4, 5, 6).

(3) Record below the industry and occupation description from CPS-1 Items 23A–23E as applicable. You will need to refer to it when filling item 45 in your followup interview.

(4) Complete items 56D and 58, (p. 7 and 8, respectively).

(5) Note below Names and Line No.'s of persons (and item numbers, if necessary) needing followup. Also, as necessary note address, telephone, and 'best time to call' information from control card.

NOTES:

CIVILIAN 15+ AND CURRENT ARMED FORCES MEMBER, BEGIN WITH ITEM 29A

29A. Did . . . work at a job or business at any time during 1989?
Yes ○ *(Skip to 33)* No ○

29B. Did . . . do any temporary, part-time, or seasonal work even for a few days during 1989?
Yes ○ *(Skip to 33)* No ○

30. Even though . . . did not work in 1989, did he/she spend any time trying to find a job or on layoff?
Yes ○ No ○ *(Skip to 32)*

31. How many different weeks was . . . looking for work or on layoff from a job?
(Mark weeks)

32. What was the main reason . . . did not work in 1989?
- Ill or disabled and unable to work ○
- Retired . . . . . ○
- Taking care of home or family . . . ○
- Going to school . . . . . ○
- Could not find work . . . . . ○
- Doing something else . . . . . ○

(Skip to 52A)

33. During 1989 in how many weeks did . . . work even for a few hours? Include paid vacation and sick leave as work.
(Mark weeks and Go to 34)

34. CHECK ITEM
Number of weeks in item 33 is:
1–49 ○ *(Skip to 36)*
50–51 ○ *(Ask 35)*
52 ○ *(Skip to 39)*

35. Did . . . lose any full weeks of work in 1989 because he/she was on layoff from a job or lost a job?
Yes ○ No ○ *(Skip to 39)*

36. You said . . . worked about *(entry in item 33)* weeks in 1989. How many of the remaining *(52 minus entry in item 33)* weeks was . . . looking for work or on layoff from a job?
(Mark weeks and ask 37)
None ○ *(Skip to 38)*

37. Were the *(entry in item 36)* weeks . . . was looking for work *(or on layoff)* all in one stretch?
Yes – 1 stretch ○
No – 2 stretches ○
No – 3+ stretches ○
(Go to 38)

(If the entries in items 33 and 36 add to 52 weeks, skip to item 39. If not, ask 38)

38. What was the main reason . . . was not working or looking for work in the remaining weeks of 1989?
- Ill or disabled and unable to work ○
- Taking care of home or family . . . . ○
- Going to school . . . . ○
- Retired . . . . . ○
- No work available . . . ○
- Other *(Specify)* . . . . ○

39. For how many employers did . . . work in 1989? If more than one at same time, only count it as one employer.
1 ○
2 ○
3+ ○
(Ask 40)

40. In the weeks that . . . worked, how many hours did . . . usually work per week?
(Mark hours)
(Go to 41)

41. CHECK ITEM
Number of hours in item 40 is:
1–34 ○ *(Skip to 43)*
35+ ○ *(Ask 42)*

42. During 1989, were there one or more weeks in which . . . worked less than 35 hours? Exclude time off with pay because of holidays, vacation, days off, or sickness.
Yes ○ *(Ask 43)*
No ○ *(Skip to 45)*

43. How many weeks did . . . work less than 35 hours in 1989?
(Mark weeks)

44. What was the main reason . . . worked less than 35 hours per week?
- Could not find a full time job . . ○
- Wanted to work part time or only able to work part time . . ○
- Slack work or material shortage ○
- Other . . . . . ○

(Ask 45)

45. What was . . . 's longest job during 1989?
(Compare with entry in CPS-1 item 23)
Same as item 23 . . . . . ○ *(Skip to 47)*
Different from item 23 or item 23 blank . . . . ○
Current Armed Forces . . . . . ○
(Specify in 46A-46E)

46A. For whom did . . . work?

46B. What kind of business or industry is this?
