Poverty in the United States: 1991

U.S. Department of Commerce
Economics and Statistics Administration
BUREAU OF THE CENSUS

Acknowledgments

This report was prepared by **Eleanor F. Baugher** and **Martina Shea,** under the direction of **Kathleen S. Short,** Chief, Poverty and Wealth Statistics Branch. **Susan Gajewski,** Demographic Surveys Division, programmed the detailed tables. The publication tables were produced by **Angela Feldman-Harkins, Caroline Carbaugh,** and **Diana Lewis,** Computer Programming and Applications Staff. **Anna H. Podany** provided statistical assistance and **Zana C. Colevas** and **Viola Hughes** provided word processing assistance. Technical assistance was provided by **Robert A. Kominski,** Chief of the Education and Social Stratification Branch, Population Division. Overall direction was provided by **Charles T. Nelson,** Assistant Division Chief (Economic Characteristics), Housing and Household Economic Statistics Division.

Sampling review was conducted by **Denise Lewis** and **Derrick Butler** of the Demographic Statistical Methods Division. Data collection was conducted by Bureau of the Census field representatives, under the overall direction of **Joseph S. Harris,** Chief, Field Division.

The staff of the Administrative and Publications Services Division, **Walter C. Odom,** Chief, performed publication planning, design, composition, editorial review, and printing planning and procurement. **Gail Farren** provided publication coordination and editing.

POVERTY IN THE UNITED STATES: 1991

NOTE: In January 1992, a new educational attainment question comparable to that used in the 1990 census of population was introduced in the Current Population Survey. Consequently, data on educational attainment from the 1992 CPS are not directly comparable to CPS data for prior years. A discussion of the change in the educational attainment item can be found in the descriptive text of this report.

The estimates for 1991 in this report are inflated to national population controls by age, race, sex, and Hispanic origin. The population controls are based on results of the 1980 census carried forward to 1991. The estimates in this report, therefore, may differ from estimates that would have been obtained using 1990 census results brought forward to the survey date. Population controls incorporating 1990 census results will be used for survey estimation beginning in 1993.

INTRODUCTION

This report presents social and economic characteristics of the population below the poverty level in 1991 based on the March 1992 Current Population Survey (CPS). The poverty definition used in this report is that adopted for official Government use by the Office of Management and Budget and consists of a set of money income thresholds that vary by family size and composition. Poverty status is based on responses to income questions which in the March CPS refer to pre-tax income received in the previous calendar year. Families or individuals with income below their appropriate poverty threshold are classified as below the poverty level. These poverty statistics exclude inmates of institutions, Armed Forces members in barracks, and unrelated individuals under 15 years of age. Poverty thresholds are updated every year to reflect changes in the Consumer Price Index. For example, the average poverty threshold for a family of four was $13,359 in 1990 but $13,924 in 1991. Average poverty thresholds in 1991 varied from $6,932 for a person living alone to $27,942 for a family of nine or more members. The poverty definition is based on pre-tax money income only, excluding capital gains, and does not include the value of noncash benefits such as employer-provided health insurance, food stamps, or Medicaid. For further discussion, see the section entitled "Collection and Limitations of Poverty Data."

The data in this report consist of cross-classifications of poverty status by such characteristics as age, race, Hispanic origin, family relationship, educational attainment, work experience, and type of income received. Although the primary focus of the tables is on the United States as a whole, some tables also present data by region and type of residence. In addition, appendix D presents poverty estimates and rates for States for the years 1981 through 1991 based on CPS figures.

In the text, the terms "poverty population", "poor", and "below the poverty level" are used interchangeably, as are the terms "nonpoor" and "above the poverty level". Characteristics such as age and marital status are as of the survey date (e.g., March 1992), while income, poverty status, and work experience data refer to the whole previous calendar year (e.g., 1991). In the report text, the year cited refers to the "income" year.

HIGHLIGHTS

(The figures in parentheses denote the 90-percent confidence intervals.)

- The number of persons below the official government poverty level was 35.7 (±0.9) million in 1991, a figure 2.1 million higher than the 33.6(±0.9) million poor in 1990. The poverty rate was 14.2 (±0.4) percent in 1991, significantly higher than the 13.5 (±0.3) percent poverty rate in 1990.
- The poverty rate of 14.2 (±0.4) percent in 1991 was lower than the recent peak of 15.2 (±0.4) percent reached in 1983 after the recessionary period of late 1981-82, but remained well above the 1978 level of 11.4 (±0.3) percent, a recent low-point in these figures during the economic expansion of the late 1970's.
- Children are overrepresented among the poor, while the elderly are slightly underrepresented. Children under 18 years were 40.2 (±1.1) percent of the poor and 23.9 (±0.2) percent nonpoor, while the elderly were 10.6 (±0.5) percent poor and 12.4 (±0.2) percent of the nonpoor.
- Poverty rates for children under 18 years and persons 18 to 44 years increased between 1990 and 1991. The rate for children 21.8 (±0.7) percent remains higher than that of other age groups.

- The poverty rates for Whites increased between 1990 and 1991. The poverty rate for Blacks and persons of Hispanic origin did not change significantly, nor did that for Asians and Pacific Islanders as a group. The rates in 1991 were 11.3 (±0.4) percent for Whites, 28.7 (±1.5) percent for persons of Hispanic origin, 32.7 (±1.3) percent for Blacks, and 13.8 (±0.2) percent for Asians and Pacific Islanders.
- Non-Hispanic Whites represented about half of the poor in 1991.
- The poverty rate for the South, while remaining the highest of the four regions, 16.0 (±0.4) percent, was the only regional poverty rate that did not increase between 1990 and 1991.
- The number of poor families increased by 613,000 (±168,000) between 1990 and 1991, and the poverty rate for families increased to 11.5 (±0.2) percent. The increase in the number of poor families with a female householder accounted for 64.1 (±4.6) percent of the net increase in poor families between 1990 and 1991.
- Persons living alone or with nonrelatives only (unrelated individuals) accounted for 21.8 (±0.8) percent of the poor in 1991. The increase in their numbers accounted for 15 percent of the net increase in the total number of poor between 1990 and 1991.
- In 1991, 39.8 (±1.6) percent of poor persons 15 years and over worked, and 9.0 (±1.0) percent worked year-round, full-time. The number of poor persons in these categories remained unchanged between 1990 and 1991.
- The average amount of money needed to raise the incomes of each poor family above the poverty level was $5,515 (±$67) in 1991, not statistically different from the 1990 figure of $5,410 (±$64).
- About 28.6 (±1.2) percent of the poor reported they had no medical insurance in 1991. Poor adult males 18-44 years were the least likely age-sex group to be insured. Among the poor, persons of Hispanic origin were less likely to be insured than Blacks or Whites.
- About 43.6 (±1.3) percent of the poor received cash assistance through such programs as Aid to Families with Dependent Children in 1991. About 27.1 (±1.2) percent of the poor received no assistance of any type, whether in the form of cash or noncash benefits.

POVERTY IN THE UNITED STATES: 1991

The number of persons below the official government poverty level was 35.7 million in 1991, representing 14.2 percent of the Nation's population. Both the number of poor and the poverty rate showed a statistically significant rise from the corresponding 1990 figures of 33.6 million poor and poverty rate of 13.5 percent. This represents the second consecutive annual increase in the poverty rate and the number of poor (figure 1). Between 1989 and 1990, the poverty rate rose from 12.8 percent to 13.5 percent and the number of poor rose from 31.5 to 33.6 million. Prior to 1989, the poverty rate had not increased since 1982, and the number of poor had not increased since 1983. Between 1983 and 1989, both the number of poor and the poverty rate declined, although the year-to-year changes in these figures were not statistically significant in every case.

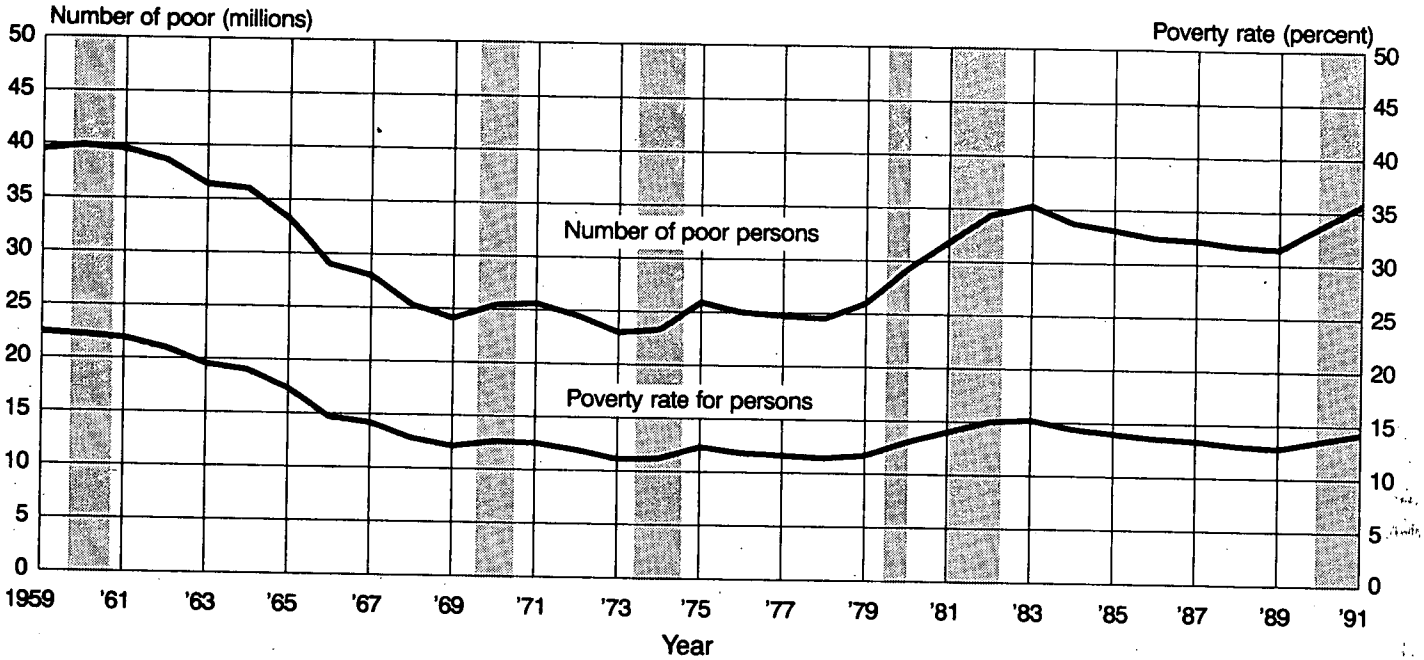
While the poverty rate in 1991 was lower than the recent peak of 15.2 percent, reached in 1983 after the recessionary period of late 1981-82, the number of poor in 1991 (35.7 million) was not significantly different from the 35.3 million poor in 1983. The 1991 poverty rate of 14.2 percent remains well above the 1978 level of 11.4 percent, a recent low point achieved during the economic expansion from March 1975 to January 1980.

Age. Half of the Nation's poor in 1991 were either children under 18 years (40.2 percent) or elderly (10.6 percent). In comparison to the age distribution of the nonpoor, children continue to be overrepresented among the poor, while the elderly are slightly underrepresented (figure 2). Children were 23.9 percent of the nonpoor, while the elderly represented 12.4 percent. The poverty rate for children continues, as it has since 1975, to be higher than that for any other age group. The poverty rate for the elderly exceeded that for children until about 1973. In 1991, the poverty rate for all children under 18 years was 21.8 percent (25.5 percent for children under age 3), 11.4 percent for persons 18 to 64 years, and 12.4 percent for the elderly. Persons 45 to 64 years of age and the elderly had no significant change in their poverty rate between 1990 and 1991, while the rate for children under 18 years and adults 18 to 44 years increased (table 5).

Though the poverty rate for the elderly was lower in 1991 than that for children and young adults 18 to 24 years, it was higher than that for all other adult age groups (ages 25-44, 45-54, 55-59, and 60-64). Furthermore, a higher proportion of elderly than nonelderly were concentrated just over their respective poverty thresholds (i.e., between 100 percent and 125 percent of their thresholds). Consequently, 19.1 percent of the Nation's 11.8 million "near poor" persons was elderly, compared with 10.6 percent of persons below the official poverty level.

Race and Hispanic origin. The poverty rate for Whites increased between 1990 and 1991, from 10.7 percent to 11.3 percent. For persons of Hispanic origin (who may be of any race) the poverty rate was 28.7 percent and for Blacks, 32.7 percent (table A). The apparent increases

Figure 1.
Number of Poor and Poverty Rate: 1959 to 1991



Note: The data points represent the midpoints of the respective years. The latest recessionary period began in July of 1990.

Figure 2.
Distribution of the Population Above and Below the Poverty Level, by Age: 1991

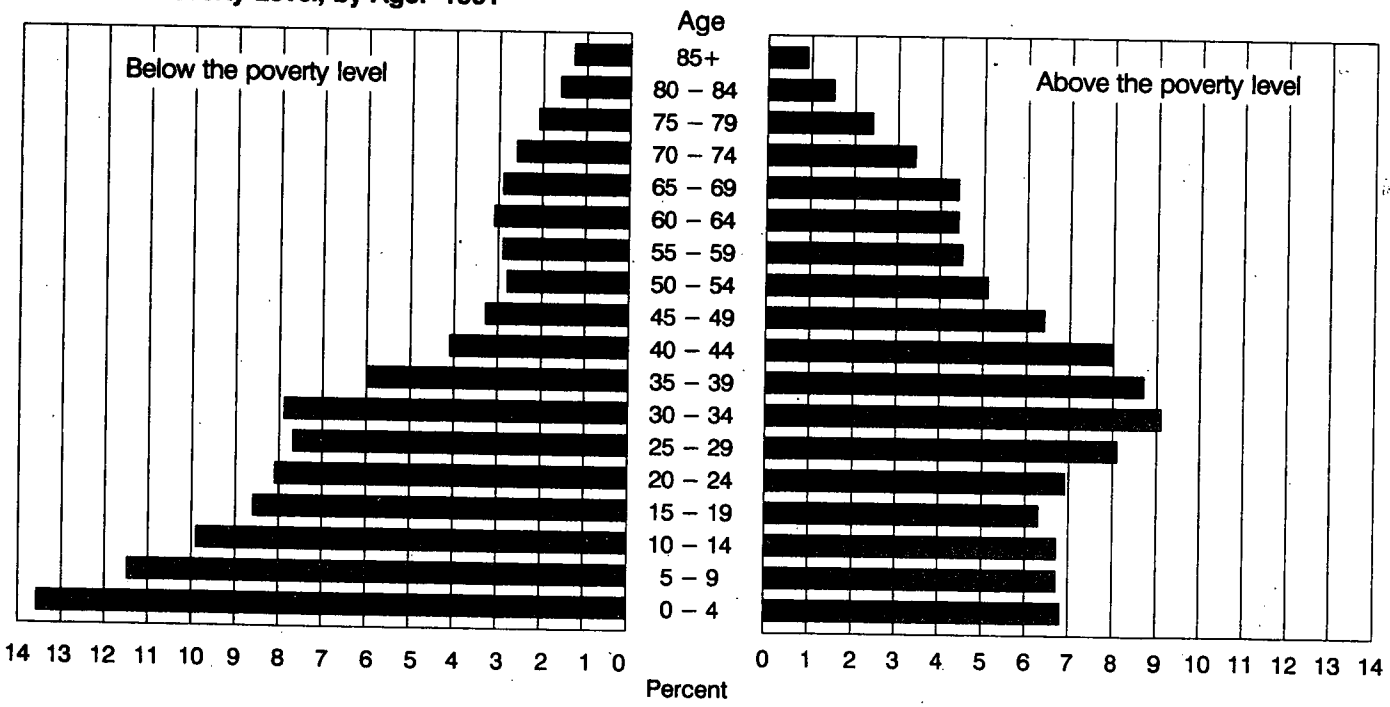


Table A. **Persons Below Poverty Level, by Detailed Race: 1990-91**

(Numbers in thousands)

Characteristic	1991			1990			1991-90 difference	
		Below poverty level			Below poverty level			
	Total	Number	Percent	Total	Number	Percent	Number of poor	Poverty rate
PERSONS								
Total	251,179	35,708	14.2	248,644	33,585	13.5	*2,123	*0.7
White	210,121	23,747	11.3	208,611	22,326	10.7	*1,421	*0.6
Not of Hispanic origin[1]	189,106	17,741	9.4	188,129	16,622	8.8	*1,119	*0.6

*Statistically significant change at the 90-percent confidence level.
[1]Persons of Hispanic origin may be of any race.

for Blacks and persons of Hispanic origin were not statistically significant from 1990 to 1991; however, the poverty rates did increase over the 2-year period from 1989 to 1991 for both groups.

For persons of other races, the poverty rate was 17.6 percent in 1991, significantly higher than the 1990 estimate of 15.4 percent. For Asians and Pacific Islanders, the largest component of the other races group, the poverty rate was 13.8 percent in 1991, lower than that for the other races group as a whole, but not significantly different from their poverty rate in 1990 (12.2 percent).

The relationship among the poverty rates for Whites, Blacks, and persons of Hispanic origin—the latter having rates intermediate between Whites and Blacks—holds generally regardless of age. For example, for children younger than 18 years, the poverty rate in 1991 was 16.8 percent for White children, 40.4 percent for children of Hispanic origin, and 45.9 percent for Black children.

Even though the poverty rate for Whites was lower than that for the other groups mentioned above, the majority of poor persons in 1991 were White (66.5 percent). Blacks constituted 28.7 percent of all persons below the poverty level (a proportion that has fluctuated little since the mid-1960's), and the remaining 4.8 percent were persons of "other" races. Most of this latter group were Asians and Pacific Islanders, who, combined, represented 2.8 percent of the Nation's poor. About 17.8 percent of the poor in 1991 were persons of Hispanic origin. This fraction is greater than their representation in the population as a whole. Persons of Hispanic origin were only 8.8 percent of all persons. Although persons of Hispanic origin may be of any race, the vast majority (over 95 percent) are included in the White racial category in the Current Population Survey. Data tabulated separately for Whites who are not of Hispanic origin indicate that only 49.7 percent of the poor fall into this category. About 79.5 percent of the nonpoor in 1991 were non-Hispanic Whites.

Regions. Among the Nation's four regions in 1991, the Northeast continued to have the lowest poverty rate (12.2 percent), as it has since 1985 (see table 8). As has historically been the case, the poverty rate was highest in the South (16.0 percent), but the South was also the only region in which there was not a statistically significant increase in the poverty rate between 1990 and 1991. The South continues to have a disproportionately large share of the Nation's poverty population; 38.6 percent of the poor lived in the South in 1991, compared with 33.5 percent of the U.S. population above the poverty level. The poverty rate in the West (14.3 percent) was higher than that in the Midwest (13.2 percent) in 1991.

States. This report contains State level poverty rates from the Current Population Survey (table B).[1] These estimates should be used with caution since relatively large standard errors are associated with these data. Somewhat lower standard errors are associated with the averages shown. State poverty rates using a 3-year average (1989 to 1991) ranged from 5.8 percent in Connecticut to 23.8 percent in Mississippi. Users should be aware that although the 1991 data presented in table B indicate that Mississippi had the highest poverty rate in that year and Connecticut the lowest, none of these rates is necessarily statistically different from the next several higher (or lower) State poverty rates.

[1]Although the Census Bureau has not published poverty data by State from the March CPS before 1990, State level poverty rates can be derived from publically available computer tape files. Researchers outside the Census Bureau have published these data for previous years. See, for example, Jon D. Haveman, Sheldon Danziger and Robert D. Plotnick, "State Poverty Rates for Whites, Blacks and Hispanics in the Late 1980s", Focus, University of Wisconsin-Madison, Volume 13, No. 1, Spring 1991.

*Statistically significant at the 90-percent confidence level.

Accordingly, we advise strongly against using these estimates to rank the States. Different samples easily could have led to different poverty rate estimates and rank. Based on the 2-year moving average data (last two columns of table B), nine States had statistically significant changes in their poverty rates between 1989 and 1991. The poverty rate increased in California, Connecticut, Florida, Massachusetts, New York, North Carolina, Ohio, Utah, and Vermont. Poverty rates did not fall in any State between 1989 and 1991 (figure 3).

Also included in table B are poverty estimates for the Los Angeles and New York Consolidated Metropolitan Statistical Areas (CMSA's). These areas are the Nation's two largest CMSAs. Using the 3-year 1989-91 average, the poverty rate was 15.1 percent in the Los Angeles CMSA and 13.7 percent in the New York CMSA. The poverty rate in the Los Angeles CMSA and the New York CMSA increased significantly between 1989 and 1991 using the difference in the 2-year moving averages (1989-90 and 1990-91).

Appendix D presents estimates of the number of poor and poverty rates (and their respective standard errors) for States for the years 1981 through 1991 from the Current Population Survey. It is useful to note that the poverty thresholds are not adjusted for differences in the cost of living across States e.g., a poverty level income might go farther in rural Mississippi than urban Connecticut.

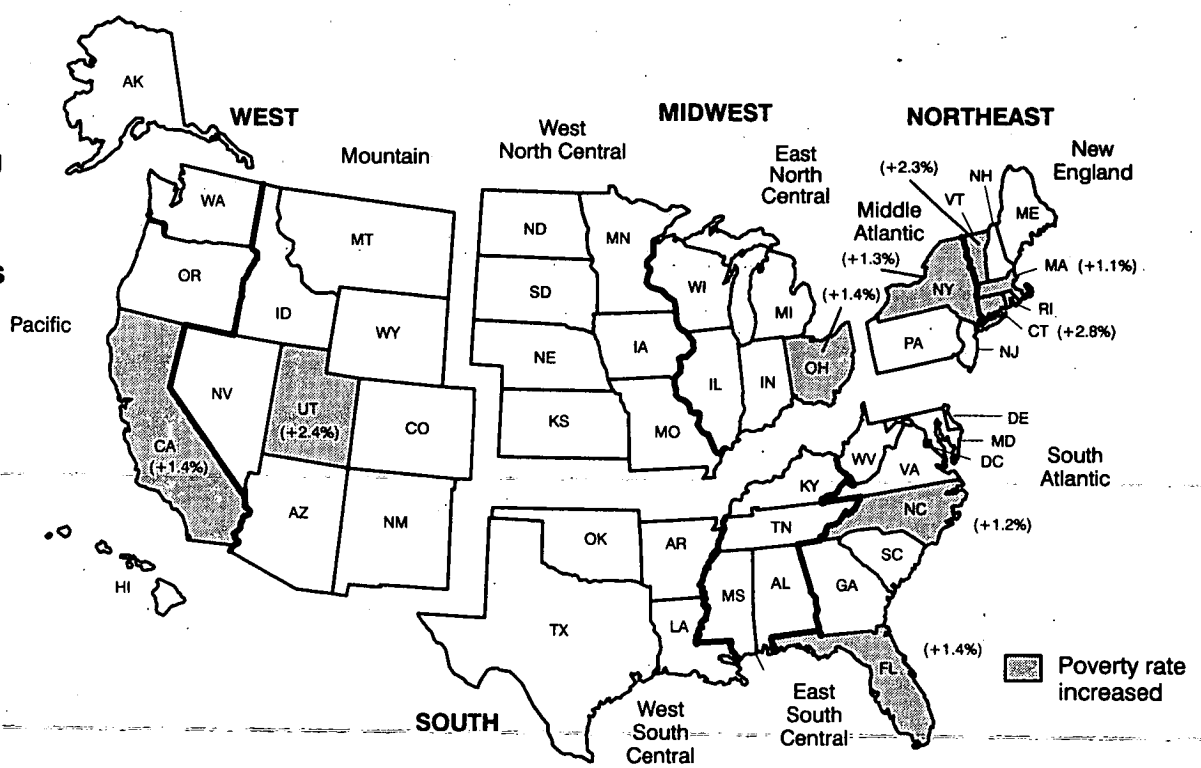
Farm/Nonfarm Residence. There was no statistically significant change between 1990 and 1991 in either the number of poor or poverty rate of persons living on farms, but both of these figures increased for the nonfarm population (table 1). However, for the fifth consecutive year, there was no significant difference between the farm and nonfarm poverty rates (14.2 percent for nonfarm and 12.5 percent for farm).[2]

Metropolitan/Nonmetropolitan Residence. The number of poor and poverty rate in the Nation's Metropolitan Statistical Areas increased between 1990 and 1991, while the comparable figures for persons living outside metropolitan areas did not change significantly (table 8). As has historically been the case, the nonmetropolitan

[2]In the CPS, the farm population is defined as persons living in rural territory on places from which $1,000 or more of agricultural products were sold during the preceding 12 months. Farm residents in the CPS are not necessarily economically dependent upon farming. For example, 46.7 percent of employed farm residents reported agriculture as their main industry in 1990. See Current Population Reports, Series P-20, No. 457, *Residents of Farms and Rural Areas:1990.*

Figure 3.
States With Increases in Poverty Rates Based on Difference in 2-year Moving Average: 1989-1991

UNITED STATES



poverty rate in 1991 (16.1 percent) was higher than that for metropolitan areas (13.7 percent). Within metropolitan areas, the poverty rate increased between 1990 and 1991 in both central cities (with a 1991 rate of 20.2 percent) and suburban areas (9.6 percent in 1991).

As in the past, the poor in 1991 were somewhat less concentrated in metropolitan areas (75.1 percent) than the nonpoor (78.5 percent). This tendency holds regardless of race or Hispanic origin. For example, a larger proportion of poor Blacks lived in nonmetropolitan areas (18.2 percent) than nonpoor Blacks (13.9 percent). The majority of poor metropolitan residents of all races were in central cities (57.1 percent), while nonpoor metropolitan residents were concentrated in suburban areas (64.2 percent).

Poor Hispanic-origin persons were more concentrated in metropolitan areas than the White poor as a whole or the Black poor. About 92.0 percent of poor Hispanics lived in metropolitan areas, compared with 81.8 percent of poor Blacks and 71.9 percent of poor Whites. Within metropolitan areas, 49.1 percent of poor Whites lived in central cities, compared with 64.8 percent of poor persons of Hispanic origin and 73.5 percent of poor Blacks.

Poverty Areas. About 34.9 percent of the Nation's poor in 1991 lived in areas of high poverty concentration (poverty areas), a somewhat smaller fraction than in 1990 (37.3 percent).[3] While the majority of the 12.5 million poor poverty area residents lived in central cities (60.0 percent), 26.1 percent lived outside metropolitan areas, and 13.9 percent lived in suburban areas.

Among poverty areas, the poverty rate was somewhat higher in large cities than elsewhere: 39.1 percent in central cities, 32.3 percent in suburban poverty areas, and 25.2 percent in nonmetropolitan poverty areas (see table 9).

Blacks living in cities, regardless of poverty status, were more concentrated in poverty areas than Whites or persons of Hispanic origin. About 52.9 percent of Blacks living in central cities lived in poverty areas, and 64.3 percent of poor Blacks living in cities were concentrated in poverty areas. For Whites, the comparable percentages of city dwellers in poverty areas were only 16.6 percent for the total population and 37.9 percent of the poor; for persons of Hispanic origin the percentages were 43.4 percent of the total population and 57.7 percent of the poor.

[3]Poverty areas are defined as census tracts in metropolitan counties and minor civil divisions in nonmetropolitan counties with a poverty rate of 20 percent or more in 1979 based on the 1980 census. In 1991, the overall poverty rate in such areas was 33.3 percent, or about 2-1/2 times the national average. For a history of Census-designated poverty areas and a discussion of trends, see Mark S. Littman, "Poverty Areas and the Underclass: Untangling the Web", Monthly Labor Review, March 1991, pp. 1932.

Families, Family Composition, and Unrelated Individuals. The poverty rate for families was 11.5 percent in 1991, higher than the 1990 rate (10.7 percent). Only the number of poor families, not the poverty rate, changed significantly for married-couple families. Neither the poverty rate nor the number of poor changed significantly for families with a male householder, no spouse present. Both the poverty rate and the number of poor families with a female householder, no spouse present, increased significantly in 1991 and the change in their numbers accounted for 64.0 percent of the net increase in poor families between 1990 and 1991. Families with a female householder represented 12.7 percent of nonpoor families but 54.0 percent of poor families in 1991. Neither of these figures was statistically different from their respective 1990 estimates. The proportion of female-householder families among all poor families leveled off in the early 1980's and was actually slightly lower in 1985 than in 1978 (see table C). However, for the past 6 years this proportion has exceeded the 1985 estimate, although there has been no statistically significant change during this period in the proportion of poor families that are maintained by women with no spouse present.

Married-couple families continued to have the lowest poverty rate (6.0 percent in 1991) followed by those with a male householder, no wife present (13.0 percent), and families with a female householder, no husband present (35.6 percent in 1991). White families had a lower poverty rate overall (8.8 percent in 1991), as well as by type of family, than Blacks (30.4 percent overall), or families with a householder of Hispanic origin (26.5 percent overall). However, the only statistically significant increase in poverty rates among families by race and family type were experienced by White, married-couple families in 1991.

The lower overall poverty rate for Hispanic-origin families compared with Black families was the result of different distributions by family type between the two groups. The poverty rates within type of family for Hispanic-origin families exceeded or were not statistically different from those for Blacks for married couples and families with a female householder, no husband present. For example, the poverty rate for Hispanic-origin married couples was 19.1 percent in 1991, compared with 11.0 percent for Blacks; and about 50 percent of both Black and Hispanic-origin families with a female householder, no husband present were below the poverty level in 1991. However, female-householder families constituted 78.3 percent of all poor Black families compared with 45.7 percent of poor Hispanic-origin families. It is this difference in demographic composition that leads to higher poverty rates for Black families and persons.

Poverty rates for families in 1991 decreased with increasing age of householder (35.5 percent for those under age 25, 13.9 percent for those 25 to 44 years of

Table C. **Number of Families Below the Poverty Level and Poverty Rate: 1959 to 1991**

[r]Revised to reflect changes in weighting and imputation procedures.

age, 7.5 percent for those 45 to 64 years and 6.5 percent for those with a householder 65 and over). Poverty rates for families also tended to decrease as years of school completed by the householder increased and as the number of workers in the family increased (See tables 11 and 19). Poverty rates for families increased as family size increased.

Persons in families represented 76.0 percent of the poor in 1991 and an additional 2.2 percent lived in unrelated subfamilies. (Unrelated subfamilies are composed of persons related to each other but not related to the person or couple maintaining the household.) The poverty rate for persons in families was 12.8 percent in 1991 (up from 12.0 percent in 1990), while 48.7 percent of the 1.6 million persons in the Nation's unrelated subfamilies were poor in 1991. (The latter rate was not significantly different from the 1990 estimate).

The 7.8 million unrelated individuals (persons living alone or with nonrelatives only) who were poor in 1991 accounted for 21.8 percent of the poverty population (compared with only 13.5 percent of the population above the poverty level).[4]

Work Experience of Persons and Family Householders. In 1991, 39.8 percent of poor persons 15 years old and over worked and 9.0 percent worked year-round, full-time. For nonpoor persons the comparable figures were 72.0 percent worked and 45.0 percent worked year-round, full-time in 1991. The proportions of poor

[4]It should be noted that the CPS is primarily a household survey and thus persons who are homeless or living in shelters are not included in these poverty statistics.

adults who worked and who worked year-round, full-time in 1991 were not statistically different from those in any year since 1978 (See table D). The number of poor persons who worked did not change significantly between 1990 and 1991.

Among poor family householders, 50.4 percent worked in 1991 and 15.8 percent worked year-round, full-time (see table 19). Neither of these figures is significantly different from the comparable 1990 estimate. The number of poor family householders who worked, however, increased by 256,000 between 1990 and 1991, as did the number who worked year-round, full-time. For comparison, 80.5 percent of nonpoor family householders worked in 1991 and 61.1 percent worked year-round, full-time.

In 69.2 percent of poor married-couple families at least one person worked in 1991, and in 24.0 percent of married-couple families both spouses worked (see table 19). About 16.3 percent of husbands in poor married-couple families who did not work in 1991 indicated retirement as the reason, while 43.5 percent gave illness or disability as the reason, and the remaining 40.2 percent gave a reason such as unable to find work or going to school. For nonpoor married-couples, 46.6 percent of husbands who did not work were retired.[5]

The householder worked in 42.4 percent of poor female-householder families with no husband present in 1991, with 9.5 percent working year-round, full-time. The comparable percentages for nonpoor female householders with no husband present were 76.1 percent who worked in 1991 and 54.5 percent worked year-round, full-time. For poor female householders, the predominant reason for not working was family responsibilities, with 65.7 percent giving this reason.

[5]These last 3 percentages are not statistically different from each other.

Unlike nonpoor families maintained by a female with no husband present, poor female-householder families whose householder did not work in 1991 generally contained related children under 18 years (48.2 percent of the nonpoor versus 92.6 percent of the poor had children). Thus, of female householders giving "family responsibilities" as the reason for not working, 83.3 percent were poor. Among female-householder families for whom the householder's reason for not working was retirement, only 17.5 percent were poor.

In 58.4 percent of all poor families in 1991 at least one person worked, and in 1.3 million poor families (16.8 percent of all poor families) there were two or more workers in 1991 (see table 19). The majority of the Nation's nonpoor families had two or more workers in 1991 (62.6 percent). Poverty rates tended to decrease as number of workers in the family increased, from 31.5 percent for families with no workers to 3.4 percent for families with two or more workers.

Educational Attainment of Family Householders. About 53.2 percent of poor family householders 25 years old and older were high school graduates in 1991, compared with 82.8 percent of nonpoor householders. While 12.5 percent of poor householders had not completed the seventh grade, 18.7 percent had completed one or more years of college. Nevertheless, poverty rates decrease dramatically as years of school completed by the householder increases: the poverty rate was 24.2 percent for householders who had not completed high school, 10.5 percent for those who had graduated from high school but not attended college, and 6.5 percent for householders who had completed some college but had no degree. This general relationship exists regardless of race or Hispanic origin, although large differences exist among these groups within education category. For example, 30.0 percent of Black family householders who were high school graduates

Table D. **Workers as a Proportion of All Poor Persons: 1978 to 1991**

(Numbers in thousands)

Year	Number of poor 15 years of age and over	Worked		Worked year-round, full-time	
		Number	Percent	Number	Percent
1991	23,194	9,227	39.8	2,076	9.0
1990	21,783	8,770	40.3	2,039	9.4
1989	20,474	8,419	41.1	1,887	9.2
1988	20,857	8,415	40.3	1,929	9.2
1987	21,316	8,440	39.6	1,871	8.8
1986	21,352	8,864	41.5	2,009	9.4
1985	21,954	9,112	41.5	1,972	9.0

1979	16,907	6,545	38.7	1,365	8.1
1978*	16,914	6,599	39.0	1,309	7.7

*14 years and over.

(but had no college) were below the poverty level in 1991, while 18.8 percent of Hispanic householders and only 7.8 percent of White householders with comparable education were poor. Only about one of three poor Hispanic householders was a high school graduate in 1991, compared with about half of both White and Black householders below the poverty level.

In general, the proportion of poor female householders with no spouse present who were high school graduates was not statistically different from that of householders in married-couple families. However, among poor Black families, 41.6 percent of householders in married-couple families were high school graduates compared with 55.9 percent of female householders with no spouse present.

Income Deficit. In 1991, the average amount of money needed to raise the incomes of each poor family to its respective poverty threshold was $5,515, not significantly different from the 1990 figure of $5,410 (in constant 1991 dollars). This amounts to a deficit per family member of $1,567 in 1991. The average income deficit for poor families with a female householder, no husband present ($5,916) was higher than that for married-couple families ($5,067). This difference is compounded by the fact that poor families with a female householder were smaller than poor married-couple families. Thus, the deficit per family member was $1,781 in 1991 for families with a female householder, no husband present, compared with $1,317 for married-couple families.

For unrelated individuals, the average income deficit was $3,016 in 1991, not significantly different from their average deficit of $3,001, in 1990 (in 1991 dollars). For women, the average deficit in 1991 for unrelated persons was $2,787, significantly lower than the $3,377 for men.

Another gauge of the relative distance of the poor from the poverty level is the proportion below specified fractions of their respective poverty thresholds. For all poor persons, 39.4 percent or 14.1 million persons, were in families (or were unrelated individuals) whose total income in 1991 was below one-half of their respective poverty threshold. This fraction was not different from the figure for 1990, but remains above the comparable proportion in 1978 (31.5 percent).

In 1991, there were 11.2 million poor persons whose family income (or personal income in the case of unrelated individuals) was between 75 percent and 99 percent of their poverty threshold. These persons represented 31.5 percent of all poor persons. A slightly larger number of persons (11.8 million) had "near poor" income in 1991 — that is, income more than their respective poverty threshold but below 125 percent of their threshold.

In absolute dollar terms, there were about 498,000 poor families and 825,000 poor unrelated individuals within $500 of having sufficient income in 1991 to lift them above the poverty level, while a similar number of families and unrelated individuals had income in 1991 above their respective poverty threshold but within $500 of the poverty level (see table 22).

Receipt of Assistance from Government Programs. About 43.6 percent of persons below the poverty level in 1991 received cash assistance in that year through such programs as Aid to Families with Dependent Children or Supplementary Security Income (see table E). Only 57.3 percent of persons in households where cash assistance was received had income below the official poverty level after the assistance is counted as income in 1991. The eligibility criteria for many programs are multiples of the poverty level (for example, 185 percent of the appropriate poverty guideline) so that a family could have earnings part of the year or some other nonwelfare income and cash government assistance another part of the year which combined produce an annual income above the poverty level.

There were an additional 7.8 million persons below the poverty level in 1991 who received some type of noncash benefit, such as food stamps, Medicaid, or housing assistance, but received no cash assistance. Combined with those who received cash assistance, 65.4 percent of the poor were in households that received cash or noncash assistance (or both since some of these programs were designed to complement each other). Another 2.7 million persons were in households which received free or reduced-price school lunches but no other assistance - only 1.4 million of whom were children under 18 years. Including all of these persons would raise the fraction of the poor who received some form of cash or noncash assistance in 1991 to 72.9 percent. There are several explanations why 27.1 percent of the poor received no benefits of any sort in 1991. Some were ineligible because of assets such as a car or savings; some did not know they were eligible; others knew they were eligible but chose not to accept assistance or felt the effort was not worth the small amount of benefits for which they qualified.[6]

About 88.0 percent of poor related children under 18 years were in households where some form of means-tested benefit was received. This included 92.5 percent of children in families with a female householder and no spouse present and 81.3 percent of those in married-couple families. About 50.2 percent of the elderly poor received some form of means-tested benefits. About 43.7 percent of unrelated individuals received such benefits, with 26.0 percent receiving cash assistance.

[6]According to a U.S. Department of Agriculture study about one-third of eligible nonparticipants in the Food Stamp program would have received $10 or less in food stamps per month. See Pat Doyle, "Food Stamp Program Participation Rates:August 1985", Mathematica Policy Research, Inc., Washington D.C., 1990. Also see the U.S. Government Accounting Office study, "Food Stamps: Reasons for Nonparticipation", GAO/PEMD-89-5BR, December 1988.

Cash assistance is included when determining the poverty status of persons using the official definition, but noncash benefits are not valued. For the past several years, the Census Bureau has had a research program which includes the experimental valuation of noncash benefits as well as the effects of taxes on the number of poor. For the latest report on this research, see Current Population Reports, Series P-60, No. 182-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1979-1991* (issued September 1992).

Health Insurance Coverage. Despite the existence of such programs as Medicaid and Medicare, 28.6 percent of the poor in 1991 reported that they had no medical insurance of any kind at any time during that year (see table F).[7] About 11.7 percent of persons with income above the poverty level lacked medical insurance in 1991. Persons with income below the poverty level represented 28.9 percent of the 35.4 million persons who reported having no health insurance during 1991.

About 47.3 percent of the poor were covered by Medicaid (or Medicaid and some form of private insurance), 12.8 percent were covered by Medicare (or Medicare and some other form of insurance), 1.8 percent reported coverage under a Veterans or military plan, and 22.2 percent were covered by a private health

[7]An additional fraction of persons had coverage for only part of the year. Persons were not asked about gaps in coverage in the March 1992 CPS. Data from the Survey of Income and Program Participation (SIPP) imply that many persons covered at some time during the year have gaps in coverage. See Current Population Reports, Series P-70, No. 29, *Health Insurance Coverage: 1987-90*.

[1]Includes those also covered by other insurance.
[2]Persons of Hispanic origin may be of any race.

plan, generally through their employer or a relative's employer. Poor adult males 18 to 44 years were the least likely age-sex group to have insurance, with slightly over 50 percent uninsured in 1991. About 20.5 percent of poor children under 18 years had no insurance, compared with 2.7 percent of the elderly poor. Poor persons of Hispanic origin were more likely to be uninsured (40.5 percent) than Whites as a whole (31.2 percent) or Blacks (22.6 percent).

TRANSITIONS INTO AND OUT OF POVERTY

While year-to-year changes in the number of persons in poverty are, in general, relatively small, the poverty population is actually much more dynamic than is commonly thought. In fact, many more people change poverty status from 1 year to the next than would be indicated by simply looking at the net change in the poverty rate. This can be seen from an analysis of the Survey of Income and Program Participation (SIPP), a longitudinal income survey conducted by the Census Bureau. Unlike the income information collected in the CPS, which does not allow the analysis of change in income or poverty status over time, SIPP data make it possible to gauge movement along the income distribution and into and out of poverty for the same person in 2 consecutive years. These data enable comparisons to be made between the characteristics of persons who remained poor from 1 year to the next, those who exited poverty, and those who became poor.

The analysis in this section refers to poverty transitions between 1987 and 1988, the most recent annual longitudinal estimates available from SIPP. Based on persons interviewed over this 2-year period, 18.5 million persons who were poor in 1987 remained poor in 1988. However, there was a 1.8 million decline in the number of persons in poverty between 1987 and 1988.[8] This decline, however, may more accurately be viewed as the net result of the poverty transitions experienced by 11 million persons, as 6.4 million persons moved out of poverty and 4.6 million persons moved into poverty. About one-fourth of the persons who were poor in 1987 were not poor in 1988 (see table G). The following sections describe the characteristics associated with differing poverty entrance and exit rates. Tables containing this information were published in a report entitled *Transitions in Income and Poverty Status: 1987-88*, Series P-70, No. 24.

It should be noted that longitudinal estimates presented here are based only on responses of persons who were interviewed in all seven waves of the 1987 panel. Insofar as persons who left the sample experienced poverty differentially from those who were interviewed, these estimates will be biased. Further, it may well be true that the characteristics of those entering poverty in a period of generally rising poverty, such as 1990-91, could be different from those entering in a period of generally declining poverty, as 1987-88.

Differences in Transitions by Selected Characteristics

Income-to-poverty ratio. Persons whose income was close to the poverty level, either above or below it, had a much higher probability of changing statuses, as can be seen in table G. For example, 21.2 percent of persons with income just above the poverty level in 1987 (that is with a poverty ratio of 1.00 to 1.24) became poor in 1988, compared with only 1.3 percent of persons with an income-to-poverty level above 1.25. Looking at persons who were poor in 1987, those whose ratio of income-to-poverty level was relatively close to the poverty line (i.e., between .75 and .99) had a much higher exit rate in 1988 (42.0 percent) than poor persons with a ratio below .75 (16.1 percent).

Race and Hispanic origin. Poor persons who were White were significantly more likely than their Black and Hispanic origin counterparts to exit poverty between 1987 and 1988. Table G shows that about 30 percent of Whites who were poor in 1987 were able to exit poverty by 1988, compared with 17.0 percent of Blacks and 18.1 percent of persons of Hispanic origin (not significantly different from that for Blacks). Unlike poor Blacks, a majority of the poor Whites who exited poverty raised their income above 1.25 of the poverty level in 1988, making it less likely that they would slip back into poverty in the subsequent year.[9]

White nonpoor persons were significantly less likely to enter poverty in 1988 than Blacks or persons of Hispanic origin. Less than 2 percent of nonpoor Whites became poor, compared to 4.1 percent of persons of Hispanic origin and 5.3 percent of Blacks (not statistically different from that for persons of Hispanic origin). Moreover, Whites who became poor were less likely than their Black and Hispanic counterparts to fall below 75 percent of the poverty level. While 34.7 percent of White poverty entrants experienced such "severe" poverty, 47.0 percent of Black and 61.9 percent of Hispanic entrants did so (the rates for Black and Hispanic entrants were not significantly different).

Age. As can be seen in table H, elderly poor persons (aged 65 and older) were less likely to exit poverty than children (under 18 years) and nonelderly adults (aged

[8]The number of poor persons as measured in the CPS was 32.2 million in 1987 and 31.7 million in 1988. This decline was much smaller than the one measured by the SIPP over the same time period, and not statistically significant.

[9]As an illustration, only 1.1 percent of Whites with income above the 1.25 level in 1987 became poor by 1988, while 21.3 percent with an income-to-poverty level ratio between 1.00 and 1.24 became poor.

18 to 64). The exit rate for the poor, aged 65 and above, was 16.2 percent, compared to 30.0 percent for poor persons between 18 and 64 years of age and 22.9 percent for poor children (the exit rates for the elderly and for children were not significantly different).

Children were more likely to become poor than other age groups. Of those who were nonpoor in 1987, 3.3 percent became poor in 1988, compared to 2.0 percent of nonelderly adults and 1.3 percent of the elderly (these last two rates were not statistically different from one another).

Type of residence. There were no significant differences between exit rates by type of residence. However, there were differences in entrance rates. Nonpoor persons who lived in suburban areas were less likely than nonpoor central-city residents to enter poverty between 1987 and 1988. As shown in table H, the entrance rate for the suburban poor was 1.8 percent, compared with 2.7 percent for poor persons living in central cities. The entrance rate in metropolitan areas (2.1 percent) was not significantly different from the entrance rate in non-metropolitan areas (2.7 percent).

Migration. A change of residence was associated with both higher poverty exit and entrance rates. The exit rate for movers was 31.1 percent, significantly higher than the 23.0 percent for non-movers. The subset of movers who moved to a different State had the highest exit rate, 64.1 percent (table H).

Table H. **Percent of Persons Entering and Exiting Poverty: 1987 to 1988**

(Numbers in thousands)

Characteristic	Above poverty in 1987	Entered poverty in 1988	Below poverty in 1987	Exited poverty in 1988
AGE				
Under 18 Years	49,028	3.3	10,544	22.9
18 to 24 Years	22,184	2.7	2,524	34.9
25 to 44 Years	69,158	2.0	6,289	31.8
45 to 64 Years	41,442	1.6	3,194	22.8
65 Years and over	24,256	1.3	2,371	16.2
TYPE OF RESIDENCE				
Metropolitan Area	158,715	2.1	16,473	26.8
Central City	58,479	2.7	10,293	25.0
Not in Central City	100,236	1.8	6,180	30.0
Nonmetropolitan Area	47,353	2.7	8,448	23.5
MOBILITY STATUS

Other Family Type	22,986	5.8	9,391	18.6
Family Status Change				
From married couple to other family type	2,373	15.8	478	33.3
From other family type to married-couple	1,838	2.1	571	59.7
WORK EXPERIENCE				
Persons 18 Years and Over				
No Change Between 1987 and 1988				
Worked:				
Year-round, full-time	65,298	0.5	881	47.9
Not year-round, full-time	29,733	3.7	3,208	36.8
Did not work	35,182	2.5	7,227	15.6
Change Between 1987 and 1988				
Work effort decreased	13,515	4.6	1,043	23.5
Work effort increased	13,312	0.9	2,019	50.3
NUMBER OF WORKERS				
No Change in Number of Workers				
None	23,212	3.6	11,766	9.6
1 Worker	58,870	2.4	7,324	35.3
2 Workers or more	81,915	0.5	860	47.0
Change in Number of Workers				
More Workers in 1988	17,321	0.8	3,882	54.6
Less Workers in 1988	24,751	7.4	1,089	14.7

About 2 percent of nonpoor persons who lived at the same address throughout the 2-year period became poor in 1988, compared to 4 percent of nonpoor persons who had changed addresses, and 7.2 percent of nonpoor persons who moved to a different State (the last 2 percentages were not statistically different).

Family composition. Poor persons who went from being members of other family types to being members of married-couple families had an exit rate of 59.7 percent, significantly higher than the 18.6 percent rate of persons who remained members of other family types

for the entire 2-year period. Surprisingly, however, persons who changed from being members in married-couple families to some other family type had the same exit rate as persons who remained members of married-couple families, about 32.0 percent (table H).

Almost 16 percent of persons who experienced a family status change from married-couple to other type became poor, compared to only 1.3 percent of persons who remained in a married-couple family in both years. Conversely, persons who became members of married-couple families after being in other type families had a 2.1 percent probability of becoming poor, not different from persons who were married both years, but much lower than the 5.8 percent of persons who remained in alternative type families.

Work experience and number of workers. Almost 48 percent of poor persons who worked year-round, full-time in both years exited poverty in 1988. As shown in table H, poor adults who did not work during the 2-year period had the lowest exit rate (15.6 percent).

An increase in the work effort was associated with an exit rate exceeding 50 percent, while 1 in 4 persons who decreased their work effort were able to escape poverty.

Table H also shows that the number of workers in the family was strongly associated with the exit rate. Only 9.6 percent of the poor whose family had no workers in either year exited poverty compared to 35.3 percent of those with one worker in both years and 47.0 percent of those with two or more workers in both years (the difference in the exit rates of persons in families with one and two workers was not significant).

The exit rate of persons in families that increased the number of workers over the 2 year period was significantly higher than the exit rate for all persons, 54.6 versus 25.7 percent. On the other hand, 7.4 percent of persons in families with a decreased number of workers fell into poverty, a rate three times as high as the entrance rate for all persons (2.2 percent).

Profile of Persons Exiting and Entering Poverty

Table I shows subgroups of the population and their percentage representation in the number of poor, the number of persons "exiting" poverty and the number of persons "entering" poverty. There are significant differences between the groups in the degrees to which poverty is transient.

Even though Blacks represented 33.7 percent of the poverty population in 1987, they only made up roughly 22 percent of the "exit" and "entry" populations. This suggests that the nature of poverty is relatively permanent for Blacks.

Participation in major assistance programs was also correlated with the degree to which poverty is transient. Those who neither participated in 1987 nor in 1988 accounted for 24.9 percent of the poverty population in both years, but 49.7 percent of entries. On the other hand, those who participated in major assistance programs in both years made up almost 66 percent of the poverty population in 1987 but only 31.9 percent of the

Table I. **Persons in Poverty, by Selected Characteristics**

(Numbers in thousands)

Characteristic	Poverty Population 1987		Exits from poverty in 1988		Entrances into poverty in 1988		Poverty population 1988	
	Number	Percent	Number	Percent	Number	Percent	Number	percent
All persons	24,922	100.0	6,402	100.0	4,624	100.0	23,144	100.0
Children under 18 years	10,544	42.3	2,411	37.7	1,630	35.3	9,763	42.2
Blacks	8,402	33.7	1,429	22.3	1,036	22.4	8,009	34.6
Did not participate in major assistance programs in 1987 and 1988	6,209	24.9	2,888	45.1	2,299	49.7	5,620	24.3
Participated in major assistance programs in 1987 and 1988	16,387	65.8	2,347	36.7	1,473	31.9	15,513	67.0
In married couple families in both years	9,586	38.5	2,973	46.4	1,992	43.1	8,605	37.2
In other type families in both years	9,391	37.7	1,749	27.3	1,343	29.0	8,985	38.8
No workers in family	11,766	47.2	1,132	17.7	837	18.1	11,471	49.6
One or more workers in family	8,184	32.8	2,990	46.7	1,817	39.3	7,012	30.3
Total 18 years and over	14,378	100.0	3,991	100.0	2,994	100.0	13,381	100.0
Work year-round, full-time	881	6.1	422	10.6	294	9.8	753	5.6
Did not work year-round, full-time	3,208	22.3	1,179	29.5	1,093	36.5	3,122	23.3
Did not work	7,227	50.3	1,131	28.3	870	29.1	6,967	52.0
Did not complete high school	7,740	53.8	1,477	37.0	1,070	35.7	7,332	54.8
4 or more years of college	711	4.9	342	8.6	298	9.8	668	5.0

entry population.[10] This implies that poverty is a relatively more permanent experience for long-term participants in assistance programs than for non-participants.

Persons in married-couple families and persons in other type families are similarly represented in the poverty population, but they accounted for significantly different proportions of the exit and entry populations. Persons in married-couple families accounted for 46.4 percent of all exits in 1988. The respective rate for persons in other type families was 27.3 percent, suggesting a relatively more transient nature of poverty for persons in married-couple families.

Persons in families with no workers represented almost half of the poor yet only one-fifth of both poverty exits and entries. On the other hand, the relative representation of persons in families with at least one worker in the poverty population was significantly lower than their relative exit representations, implying again a more transient nature of poverty for persons in families with at least one worker, relative to persons in families with no workers.[11]

Looking at work experience and education, one observes that persons who did not work were less transient than other work experience groups and that more schooling is also associated with a more transient nature of poverty.

Computation of Poverty Status in SIPP and Comparison With CPS Estimates

Official poverty data in the CPS are based on questions on income received in the preceding calendar year which are asked in the March supplement. Family composition is fixed as of the survey date and assumed to be constant over the previous year (in the case of 1987 poverty status, the data were collected in March 1988). In the 1987 SIPP panel, income information was collected for each month. Family composition data was updated on a monthly basis also. A person's annual poverty status was determined by comparing the sum of the person's monthly income (family income or unrelated individual income as appropriate) against the sum of the appropriate monthly poverty thresholds. If the sum of the monthly incomes was below the sum of the monthly poverty thresholds, the person was classified as below the poverty level for the year.

Poverty estimates vary considerably between the CPS and SIPP. An earlier study showed that an approach that adjusts poverty for changes in household composition results in a poverty estimate that is about 5 percent lower than an estimate based on an approach that does not adjust for changes in household composition.[12]

Other than treatment of changes in household composition, there are several other differences between CPS and SIPP that should be noted in comparing results from the two surveys. First, the shorter recall period in SIPP results in more accurate data on the receipt of transfer income. This difference would tend to result in SIPP poverty estimates that are lower than CPS poverty estimates. A second difference concerns the way in which self-employment income is recorded. It is possible to record negative amounts in CPS, but not in SIPP. This difference would also tend to result in SIPP estimates of poverty that are lower than CPS estimates. It is also possible because of its more frequent interviews that SIPP has better reporting of intermittent income than does the CPS. If such income tends to cluster at the lower end of the earnings distribution, this would tend to lower the number of poor.

Paradoxically, wage and salary income estimates tend to be lower in SIPP than in the CPS. It is possible that persons tend to report net rather than gross wage and salary income in the SIPP. This would tend to result in SIPP estimates of poverty that are higher than the CPS estimates for those persons/families with wage and salary income.

In addition, for SIPP, the total weighted number of persons in 1987 will fall short of the independent estimates of the total population because some persons with positive weights are excluded from the analysis, namely, those who died, were institutionalized, or moved to Armed Forces barracks or out of the country. The total estimate for 1988 will fall short of independent estimates for the same reasons and because of natural increase and net immigration between 1987 and 1988.

COLLECTION AND LIMITATIONS OF POVERTY DATA

Findings presented in this report from the Income Supplement of the Census Bureau's Current Population Survey of March 1992 are based on information collected from a sample of persons representing the civilian noninstitutional population and members of the Armed Forces living off post or with their families on post in the United States. Because the collection of income data in the survey is restricted to persons 15 years old and over, unrelated individuals under 15 are

[10]There is no significant difference between the proportion of the poverty population that did not participate in assistance programs (24.9) and the proportion of the entry population that did participate (31.9).

[11]The percentage of the poor with families with no workers (47.2) is not significantly different from the relative exit representation of persons whose families have one or more workers (46.7).

[12]See John F. Coder, et.al., Preliminary Data from the SIPP 1983-84 Longitudinal Research File. SIPP Working Paper No. 8702.

excluded from this report. In addition, poverty numbers and rates exclude inmates of institutions, and Armed Forces members living in barracks. The poverty definition used in this report is based on an index developed at the Social Security Administration (SSA) in 1964, and revised by Federal Interagency Committees in 1969 and 1981. A directive from the Office of Management and Budget, originally issued in 1969, established the Census Bureau's statistics on poverty as the standard data series to be used by all Federal agencies.[13]

The poverty concept is a statistical measure based on the Department of Agriculture's 1961 Economy Food Plan. It reflects the different consumption requirements of families in relation to their size and composition, and the age of the family householder. A ratio of food expenditures to income of one-third, based on the Department of Agriculture's 1955 Survey of Food Consumption, was used to derive the original poverty thresholds from the economy food plan. For further details, see appendix A.

The poverty thresholds have been updated annually to take account of inflation based on changes in the Consumer Price Index(CPI-U). Some analysts feel that the CPI-U overstated the true rise in living costs in the late 1970's. In 1983, the Bureau of Labor Statistics (BLS) began using a revised method to calculate the CPI-U. The official CPI-U time series is based on the old methodology prior to 1983 and on the new methodology for the years 1983 to the present. In order to create a consistent series over time, the BLS devised an experimental series called the CPI-U-X1 based on the new methodology for the entire 1967-82 period. Poverty estimates using the CPI-U-X1 for 1991 are published in Current Population Reports, Series P-60, No. 182-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1979-1991*.

The data on income collected in the CPS are limited to money income received before payments for personal income taxes and deductions for Social Security, union dues, Medicare premiums, etc. Money income is the sum of the amounts received from earnings; Social Security and public assistance payments; dividends, interest and rent; unemployment and worker's compensation; government and private employment pensions; and other periodic income. (Certain money receipts such as capital gains are not included.) Readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. For additional information on this topic, see Appendix C, "Underreporting of Income."

[13]Statistical Policy Handbook, Directive 14, Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, May 1978.

Money income does not reflect the fact that many families received part of their income in the form of nonmoney transfers. Many low-income families received benefits such as food stamps, health benefits, and subsidized housing; other families received employer-provided benefits such as health insurance coverage, contributions to retirement plans, and payment for education expenses.

Beginning with the March 1980 survey, the CPS income supplement has included a group of questions on the receipt of selected noncash benefits during the previous year. The means-tested benefits covered in the March 1992 survey were food stamps, free or reduced-price school lunches, public or subsidized housing, and Medicaid. Questions were also asked about the following nonmeans-tested benefits: Medicare, CHAMPUS or other military health care, employer-provided insurance plans, and employer-provided group health insurance plans. Data on such benefits show that about 72 percent of all poor persons were in households in which someone received at least one of the following means-tested noncash benefits in 1990: food stamps, free or reduced price school lunches, Medicaid, and publicly owned or other subsidized housing.

Technical Paper 58, *Estimates of Poverty Including the Value of Noncash Benefits: 1987*, focuses on five major noncash benefits: food stamps, free or reduced price school lunches, Medicaid, Medicare, and publicly owned or subsidized housing. The paper presents two different methods for valuing these benefits: (1) market value, (2) recipient value. It is the sixth in a series of technical papers updating the estimates to 1987. Technical Papers No. 50, 51, 52, 55, 56, and 57 contain estimates for the period 1979 through 1986. Since the same poverty thresholds were used as in the official definition, the resulting poverty estimates are all lower than the official estimates. The report for 1987 shows that if selected benefits had been counted as income, the official estimate of poverty would have been reduced by 8 to 37 percent, depending on the range of benefits valued and the method used.

More recently the Bureau has released reports which estimate the incremental effect of valuing these noncash benefits as well as factoring in the effect of taxes on poverty, again using the official poverty thresholds. See Current Population Reports, Series P-60, No. 182-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1979-1991*. It should be noted that there is no general agreement on how to value all of

such benefits, which benefits should be valued or whether any noncash benefits should be valued without adjusting the poverty thresholds.[14]

CHANGES IN THE EDUCATIONAL ATTAINMENT ITEM

Beginning in January 1992, the Current Population Survey (CPS) began using an educational attainment question similar to that used in the 1990 Decennial Census of Population and Housing. This section briefly discusses the form of the new question, some of the motivating factors behind the change, and addresses some of the concerns data users may have regarding the change.

The educational attainment item used in the CPS prior to 1992 has been virtually unchanged since the 1940's. This item was a two-part question which allowed the respondent to report the highest grade that was attended and whether the grade was completed.

The new educational attainment question introduced in January 1992 differs from the old question in the following manner:

- a single question is now asked
- response categories for lower levels of schooling have been collapsed into several summary categories
- a new category, "12th grade, No Diploma," has been added
- beginning with the response, "High School Graduate - high school diploma or the equivalent (for example GED)," the categories identify specific degree completion levels, rather than years of school completed.

The focus of the question remains "regular" schooling, that is, schooling which is a part of the collegiate system. No attempt has been made to incorporate postsecondary educational attainment from institutions other than the regular college system.

The change in the educational attainment item was motivated by a combination of factors. The main factors were:

1. the misclassification of years of schooling completed into degrees
2. the inability to identify specific degrees
3. uncertainty in the classification of high school graduates
4. programmatic and legislative data needs

The change in the collection of data on educational attainment raises some concern. One concern is the loss in continuity with a time series that dates back as much as 50 years. The meaning of the old question itself, however, has not remained constant over the past 50 years—that is in fact a primary reason why it needed to be changed. Reports of "years of schooling completed" do not mean the same thing now as they did in 1940. In 1940 for example, we could say with a high degree of certainty that a person completing 4 years of college received a Bachelor's degree, we do not have the same level of certainty for data collected in 1990. To use the old item today and benchmark it against 1940 is misleading, with the problem becoming more serious with each passing year.

The new item, on the other hand, does allow comparable construction of many of the educational attainment concepts and benchmarks that are frequently used in research, analysis and legislation. Persons with less than a high school diploma, for example, can be easily identified, including the 12th grade "completers" who are not graduates. Persons with less than (more than) a Bachelor's degree can also be determined, as can those who have attained a Bachelor's as their highest degree. In this respect the new item will provide better year-to-year comparability, since it relies on known degree attainment, not a translation of years to degrees.

Another concern is the elimination of summary measures such as median or average years of schooling completed. While these measures will no longer be derivable in the same metric, this may not be such a major loss. During the entire decade of the 1980's median years of schooling for persons ages 25 and above changed by two-tenths of a year, going from 12.5 to 12.7 years, emphasizing the fact that the median is not a very good summary measure to detect changes in educational attainment. The table below shows four different summary measures, including the median. Note that the three proportionate measures all tell a much stronger story than the median on how the population educational profile changed during the 16-year period from 1975 to 1991.

Measure	1975	1991
Median years of schooling	12.3	12.7
Percent high school graduates	62.5	78.4
Percent with 1 or more years college	26.3	39.8
Percent with 4 or more years college	13.9	21.4

The change in the attainment question will end a time series for median years of schooling, however, the utility of the old measure is questionable since it almost totally

[14]The Census Bureau's income concept does not assign a value to any noncash benefit, regardless of a person's or family's income level. Benefits such as employer-provided health and life insurance, pension plans, stock options, and use of company automobiles are not valued and not included as income in the official estimates. For further discussion on valuing noncash benefits, see Proceedings of the Conference on the Measurement of Noncash Benefits, Dec. 12-14, 1985, Vol. 1, and also Harold W. Watts, "Have our Measures of Poverty Become Poorer?" Focus, Volume 9, No. 2, Summer 1986, University of Wisconsin-Madison, Institute for Research on Poverty.

misses the dynamic changes that occurred in the educational profile of the United States.

In summary, changing patterns of enrollment and perceptions of education as human capital required a serious reexamination of the usefulness of the attainment question. The growing importance of postsecondary education and the increasing credentialing of individuals dictates that more direct measures be used. The new educational attainment item is a departure from the past, but it provides more relevant and useful data for today and the future.

RELATED REPORTS

Current Population Survey

A detailed explanation of the poverty concept appears in the *The Measure of Poverty, A Report to Congress as Mandated by the Education Amendments of 1974,* prepared by Poverty Studies Task Force under the auspices of the Department of Health, Education, and Welfare. This report also discusses limitations of the poverty definition and presents alternative methods for measuring poverty.

A detailed description of the original poverty index developed by the Social Security Administration appears in the following articles by Mollie Orshansky published in the Social Security Bulletin, "Counting the Poor: Another Look at the Poverty Profile," January 1965 (reprinted in the October 1988 issue) and "Who's Who Among the Poor: A Demographic View of Poverty," July 1965.

Data on persons in poverty based on the original poverty definition appear in Current Population Reports, Series P-60, No. 54, *The Extent of Poverty in the United States: 1959 to 1966.* Data based on the revised definition of poverty appear in later reports in the P-60 series. Poverty data are also included in some reports in the P-20 and P-23 series of the Current Population Reports. All relevant titles are listed on the inside of the back cover of this report. Data based on the Current Population Survey showing the distribution of families and persons by income levels also appear in the P-60 series; the latest report is P-60, No. 180, *Money Income of Households, Families and Persons in the United States: 1991.*

Detailed data on the receipt of noncash benefits in 1985, including the poverty status of recipients appear in Current Population Reports, Series P-60, No. 155, *Receipt of Selected Noncash Benefits: 1985.* Several approaches to the valuation of these benefits are explored in *Technical Paper 58, Estimates of Poverty Including the Value of Noncash Benefits: 1987.* The Bureau has also released a report which estimates the incremental effect on the number of poor of valuing certain noncash benefits and using an after-tax income concept (but using the same poverty thresholds as the official definition). See Current Population Reports, Series P-60, No. 182-RD, *Measuring the Effect of Benefits and Taxes on Income and Poverty: 1979-1991.*

In 1992, the Census Bureau initiated a research study on poverty measurement at the Committee on National Statistics, National Academy of Sciences, sponsored by the U.S. Bureau of Labor Statistics and The Administration for Children and Families, U.S. Department of Health and Human Services. A report is expected in 1994.

Survey of Income and Program Participation

Data on movement into and out of poverty in a 2-year period are contained in Current Population Reports, Series P-70, No. 15-RD-1, *Transitions in Income and Poverty Status: 1984 and 1985*, P-70, No. 18, *Transitions in Income and Poverty Status: 1985-86*, and P-70, No.24, *Transitions in Income and Poverty Status: 1987-1988.*

Decennial Census

Poverty data derived in the 1990 Census are available for all States on computer files (referred to as summary tape files, or STF's) as well as in published reports. Summary Tape File 3 contains poverty data cross classified by race, age, type of family, and presence of children, for States, standard metropolitan statistical areas (SMSA's), counties, county subdivisions, incorporated places, census tracts, block numbering areas, and block groups. Various subfiles of STF3 present information for neighborhoods, Congressional districts, and zip code areas. There will be two report series based on STF3: Series CPH-4, Congressional Districts of the 98th Congress, and Series CPH-5, Summary Social, Economic, and Housing Characteristics.

Summary Tape File 4 will provide somewhat more detailed information on the age and family structure of the poverty population, and additional characteristics including receipt of Social Security and public assistance income, work experience,and ratio of income to the poverty level. All items in STF4 will be repeated by detailed race and Hispanic origin. Data will be shown for States, SMSA's, counties, county subdivision, places and tracts. The three report series based on STF4 are Series CP-2, General Social and Economic Characteristics, Series CPH-3, Census Tracts, and Series CH-2, Detailed Housing Characteristics.

Inquiries concerning availability of printed reports, computer tapes, microfiche and 1990 Census publication plans may be addressed to Data User Services Division, Customer Services, Bureau of the Census, Washington, D.C. 20233.

USER COMMENTS

The Census Bureau welcomes the comments and advice of data users. If you have any suggestions or comments, please write to:

rFigures based on new processing procedures. The 1987 and 1988 figures are also revised to reflect corrections to the files after publication of the 1988 advance report, Money Income and Poverty Status in the United States: 1988, P-60,No.166.

[1]Persons of Hispanic origin may be of any race.

Note: Prior to 1979 persons in unrelated subfamilies were included in persons in families. Beginning in 1979 persons in unrelated subfamilies are included in all persons but are excluded from persons in families.

rFigures based on new processing procedures. The 1987 and 1988 figures are also revised to reflect corrections to the files after publication of the 1988 advance report, Money Income and Poverty Status in the United States, P-60,No.166.

[1]Persons of Hispanic origin may be of any race.

Note: Prior to 1979 unrelated subfamilies were included in all families. Beginning in 1979 unrelated subfamilies are excluded from all families.

Table 5. Age, Sex, Household Relationship, and Hispanic Origin, by Poverty Status of Persons in 1991

Appendix A. Definitions, Explanations, and Comparability of Data

DEFINITIONS AND EXPLANATIONS

Population coverage. This report includes the civilian noninstitutional population of the United States and members of the Armed Forces in the United States living off post or with their families on post, but excludes all other members of the Armed Forces. Unrelated individuals under 15 years old are also excluded.

Farm-nonfarm residence. The farm population refers to rural residents living on farms. Beginning with the March 1980 survey, the CPS has employed a different definition of a farm than used in past Current Population Surveys or decennial censuses before 1980. Under the new definition, as used in the 1974 Census of Agriculture, a farm is any place in rural territory from which $1,000 or more of agricultural products were sold in the reporting year. All other households were classified as nonfarm, which comprises persons living in urban areas and persons not on farms living in rural areas. Rural persons in institutions, motels, and tourist camps, and those living on rented places where no land is used for farming are classified as nonfarm population. The new definition and its impact on the size and composition of the farm population are discussed in Current Population Reports, Series P-27, No. 52, *Farm Population of the United States: 1978.*

According to the old definition, farm residence was determined by responses to two questions: (1) "Does this place you (own/rent) have 10 acres or more?" and (2) "During the past 12 months, how much did sales of crops, livestock and other farm products from this place amount to (under $50, $50 to $249, $250 to $999, or $1,000 or more)?" The household was classified as being in the farm population if either (a) the acreage response was "yes" and sales amounted to $50 or more or (b) the acreage response was "no" and sales amounted to $250 or more.

The method of determining farm residence in Current Population Surveys prior to 1960 was to ask the question, "Is this house on a farm (or ranch)?" All persons living on farms as determined by the answer to the question constituted the farm population. However, persons on "farms" who paid cash rent for a house and yard only were classified as nonfarm, and, as in the present definition, all rural persons in institutions, motels, and tourist camps were classified as nonfarm.

Metropolitan areas. The population residing in metropolitan statistical areas (MSA's) as defined in June 1984 constitutes the metropolitan population. MSA's are defined by the Office of Management and Budget for use in the presentation of statistics by agencies of the Federal Government. An MSA is a geographic area consisting of a large population nucleus, together with adjacent communities which have a high degree of economic and social integration with that nucleus. The definitions specify a boundary around each large city so as to include most or all its suburbs. Entire counties form the MSA building blocks, except in New England where cities and towns are used. The former term SMSA was changed to MSA in 1983.

An area qualifies for recognition as an MSA if (1) it includes a city of at least 50,000 population, or (2) it includes a Census Bureau-defined urbanized area of at least 50,000 with a total metropolitan population of at least 100,000 (75,000 in New England). In addition to the county containing the main city or urbanized area, an MSA may include other counties having strong commuting ties to the central county. If specified conditions are met, certain large MSA's are designated as consolidated MSA's (CMSA's) and divided into component primary MSA's (PMSA's).

Nonmetropolitan areas. The territory outside metropolitan statistical areas is referred to here as nonmetropolitan.

Central cities. The largest city in each MSA is always designated a central city. There may be additional central cities if specified requirements, designed to identify places of central character within the MSA, are met. Although the largest central cities are generally included in the title of the MSA, there may be central cities that are not part of the title. The balance of the MSA outside the central city or cities often is regarded as equivalent to "suburbs."

Outside central cities. The territory outside central cities of metropolitan statistical areas but within MSA's is referred to here as outside central cities.

Geographic regions. The four major regions of the United States for which data are presented in this report represent groups of States as follows:

Northeast: Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest: Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South: Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West: Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

North and West: Northeast, Midwest, and West Regions combined.

Poverty areas. For this report poverty areas are defined in terms of census tracts (in metropolitan areas) or minor civil divisions (townships, districts, etc. in nonmetropolitan areas) in which 20 percent or more of the population was below the poverty level in 1979 based on the 1980 census. See 1980 Census of Population report PC80-2-8D, Poverty Areas in Large Cities.

Tenure. A housing unit is "owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. A cooperative or condominium unit is "owner occupied" only if the owner or co-owner lives in it. All other occupied units are classified as "renter occupied," including units rented for cash rent and those occupied without payment of cash rent. For renter-occupied units, information was also obtained as to whether the unit was publicly owned or subsidized by the Federal, State, or local government.

Income (CPS). For each person in the sample 15 years old and over, questions were asked on the amount of money income received in the preceding calendar year from each of the following sources: (1) money wages or salary; (2) net income from nonfarm self-employment; (3) net income from farm self-employment; (4) Social Security or railroad retirement; (5) Supplemental Security income; (6) public assistance or welfare payments; (7) interest; (8) dividends, income from estates or trusts, net rental income or royalties; (9) veterans' payments or unemployment and worker's compensation; (10) private pensions or government employee pensions; (11) annuities, alimony or child support, regular contributions from persons not living in the household, and other periodic income.

It should be noted that although the income statistics refer to receipts during the preceding year the characteristics of the person, such as age, and labor force status, and the composition of families refer to the time of the survey. The income of the family does not include amounts received by persons who were members of the family during all or part of the income year if these persons no longer resided with the family at the time of enumeration. However, family income includes amounts reported by related persons who did not reside with the family during the income year but who were members of the family at the time of enumeration.

Data on consumer income collected in the CPS by the Bureau of the Census cover money income received (exclusive of certain money receipts such as capital gains) before payments for personal income taxes, Social Security, union dues, Medicare deductions, etc. Therefore, money income does not reflect the fact that some families receive part of their income in the form of noncash benefits such as food stamps, health benefits, and subsidized housing; that some farm families receive noncash benefits in the form of rent-free housing and goods produced and consumed on the farm; or that noncash benefits are also received by some nonfarm residents which often take the form of the use of business transportation and facilities, full or partial payments by business for retirement programs, medical and educational expenses, etc. These elements should be considered when comparing income levels. Moreover, readers should be aware that for many different reasons there is a tendency in household surveys for respondents to underreport their income. From an analysis of independently derived income estimates, it has been determined that income earned from wages or salaries is much better reported than other sources of income, and is nearly equal to independent estimates of aggregate income.

The various sources for which income is reported are defined as follows:

1. *Money wages or salary* is total money earnings received for work performed as an employee during the income year. It includes wages, salary, Armed Forces pay, commissions, tips, piece-rate payments, and cash bonuses earned, before deductions were made for taxes, bonds, pensions, union dues, etc.

2. *Net income from nonfarm self-employment* is net money income (gross receipts minus expenses) from one's own business, professional enterprise, or partnership. Gross receipts include the value of all goods sold and services rendered. Expenses include costs of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc. In general, inventory changes were considered in determining net income; replies based on income tax returns or other official records do reflect inventory changes. However, when values of inventory changes were not reported, net income figures

exclusive of inventory changes were accepted. The value of saleable merchandise consumed by the proprietors of retail stores is not included as part of net income.

3. *Net income from farm self-employment* is net money income (gross receipts minus operating expenses) from the operation of a farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, government farm programs, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include cost of feed, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not State and Federal personal income taxes), etc. The value of fuel, food, or other farm products used for family living is not included as part of net income. In general, inventory changes were considered in determining net income only when they were accounted for in replies based on income tax returns or other official records which reflect inventory changes; otherwise inventory changes were not taken into account.

4. *Social Security or railroad retirement* includes Social Security pensions and survivors' benefits, and permanent disability insurance payments made by the Social Security Administration prior to deductions for medical insurance and railroad retirement insurance checks from the U.S. Government. Medicare reimbursements are not included.

5. *Supplemental Security income* includes payments made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old or over), (2) blind, or (3) disabled.

6. *Public assistance or welfare payments* include public assistance payments, such as aid to families with dependent children and general assistance.

7. *Interest* consists of returns on savings or other interest bearing investments.

8. *Dividends, income from estates or trusts, net rental income, or royalties* include dividends from stock holdings or membership in associations, periodic receipts from estates or trust funds, net income from rental of a house, store, or other property to others receipts from boarders or lodgers, and net royalties.

9. *Veterans' payments or unemployment and worker's compensation* include 1) money paid periodically by the Veterans Administration to disabled members of the Armed Forces or to survivors of deceased veterans, subsistence allowances paid to veterans for education and on-the-job training, as well as so-called "refunds" paid to ex-servicemen as GI insurance premiums; 2) unemployment compensation received from government unemployment insurance agencies or private companies during periods of unemployment and any strike benefits received from union funds; and 3) worker's compensation received periodically from public or private insurance companies for injuries incurred at work. The cost of this insurance must have been paid by the employer and not by the person.

10. *Private Pensions or government employee pensions* include (1) private pensions or retirement benefits paid to a retired person or his survivors by a former employer or by a union, either directly or through an insurance company and (2) government employee pensions received from retirement pensions paid by Federal, State, county, or other governmental agencies to former employees (including members of the Armed Forces) or their survivors.

11. *Annuities, alimony, or child support, regular contributions from persons not living in the household, and other periodic income* include (1) periodic receipts from annuities or insurance; (2) alimony and child support; (3) contributions received periodically from persons not living in the household; (4) other periodic income such as military family allotments, net gambling winnings, and other kinds of periodic income other than earnings.

Receipts not counted as income are receipts from the following sources (1) money received from the sale of property, such as stocks, bonds, a house, or a car (unless the person was engaged in the business of selling such property, in which case the net proceeds would be counted as income from self-employment); (2) withdrawals of bank deposits; (3) money borrowed; (4) tax refunds; (5) gifts; and (6) lump-sum inheritances or insurance payments.

All sources of income may be combined into two major types:

Total money earnings. The algebraic sum of money wages or salary and net income from farm and nonfarm self-employment.

Income other than earnings. The algebraic sum of all sources of money income except wages and salaries and income from self-employment.

Income (SIPP). The cash income concept used in the SIPP section of this report includes the sum of all income received from any of the sources listed in table A-1. Rebates, refunds, loans and capital gain or loss amounts from the sale of assets, and interhousehold transfers of cash such as allowances are not included.

Table A-1. **Income Sources Included in Monthly Cash Income (SIPP)**

Earnings from Employment
Wages and salary
Nonfarm self-employment income
Farm self-employment income

Income from Assets (Property Income)
Regular/passbook savings accounts in a bank, savings and loan or credit union
Money market deposit accounts
Certificate of deposit
NOW, Super NOW, or other interest-earning checking accounts
Money market funds
U.S. Government securities
Municipal or corporate bonds
Other interest-earning assets
Stocks or mutual fund shares
Rental property
Mortgages
Royalties
Other financial investments

Other Income Sources
Social Security
U.S. Government Railroad Retirement
Federal Supplemental Security Income
State Administered Supplemental Security Income
State unemployment compensation
Supplemental Unemployment Benefits
Black Lung payments
Worker's compensation
State temporary sickness or disability benefits

Other Income Sources—Continued
Employer or union temporary sickness policy
Payments from a sickness, accident, or disability insurance policy purchased on your own
Aid to Families with Dependent Children (AFDC), (ADC)
General assistance or General relief
Indian, Cuban, or Refugee assistance
Foster child care payments
Other welfare
Child support payments
Alimony payments
Pensions from a company or union
Federal Civil Service or other Federal civilian employee pensions
U.S. Military retirement
National Guard or Reserve Forces retirement
State government pensions
Local government pensions
Income from paid-up life insurance policies or annuities
Estates and trusts
Other payments for retirement, disability or survivors, G.I. Bill/VEAP education benefits
Income assistance from a charitable group
Other unemployment compensation (Trade Adjustment Act benefits, strike pay, other)
Veterans' compensation or pensions
Money from relatives or friends
Lump sum payments
Income from roomers or boarders
National Guard or Reserve pay
Incidental or casual earnings
Other cash income not included elsewhere

Accrued interest on Individual Retirement Accounts, KEOGH retirement plans, and U.S. Savings bonds are also excluded. This definition differs somewhat from that used in the annual reports based on the March CPS income supplement questionnaire. The data from the CPS are based only on income received in a regular or periodic manner and, therefore, exclude lump-sum or one-time payments, such as inheritances, or insurance settlements which are included as income in SIPP. Educational assistance, which is included in the March CPS income concept, is not included in the SIPP income concept.

The income amounts represent amounts actually received during the month, before deductions for income and payroll taxes, union dues, Part B Medicare premiums, etc.

The SIPP income definition includes three types of earnings: wages and salary, nonfarm self-employment, and farm self-employment. The definition of nonfarm self-employment and farm self-employment earnings is not based on the net difference between gross receipts or sales and operating expenses, depreciation, etc. The monthly amounts for these income types are based on the salary or other income received from the business by the owner of the business or farm during the 4-month period.

While the income amounts from most sources are recorded monthly for the 4-month reference period, property income amounts such as interest, dividends, and rental income, were recorded as totals for the 4-month period. These totals were distributed equally between months of the reference period for purposes of calculating poverty status in the SIPP portion of this report.

Means-tested Assistance. There are two categories of means-tested assistance:

Means-tested cash assistance. Includes cash benefits received from Aid to Families with Dependent Children (AFDC), General Assistance, Supplemental Security Income (SSI), and means-tested veterans compensation or pensions.

Means-tested noncash assistance. Includes medicaid benefits, food stamps, subsidies from free or reduced-price school lunches, and rent subsidies.

AFDC. Title VII of the Social Security Act permits States to give cash assistance to needy children who lack financial support of one parent because a parent is continuously absent from home, incapacitated, dead, or unemployed.[1] The Federal and State government share in the cost of benefit payments and administrative outlays. Some States require local governments to share these costs. Able-bodied AFDC recipients are required by federal law to register for training and employment services. Mothers receiving AFDC payments are required to assign their child support rights to the State and to cooperate in establishing paternity of a child born out of wedlock.

General Assistance. General Assistance consists of a host of State and local programs to provide cash assistance to needy persons not qualifying for AFDC or SSI. Eligibility rules vary from State to State, and often from county to county within a State, ranging from aid to mostly unemployable single adults (District of Columbia), to workfare programs, where recipients work in exchange for the assistance (New York).

Public and subsidized housing. There are several programs designed to "remedy the unsafe and unsanitary housing conditions and the acute shortage of decent, safe, and sanitary dwellings for families of low income."[2] Among these, the most important are Low Rent Public Housing and Sections 8, 236, and 101 of the U.S. Housing Act, all of which are funded in full by the Federal Government. Under sections 8 and 101, Federal funds are used to subsidize private sector housing. The difference between the "fair market" rent and the rent charged to the tenant is paid to the owner by the government. Under an interest reduction program (e.g. section 236), the amount of interest paid on the mortgage by the owner is reduced and the subsequent savings are passed on to low-income tenants in the form of lower rent charges.

Participation in public housing is determined by two factors: program eligibility and the availability of housing. Income standards for initial and continuing occupancy vary by local housing authority, although the limits are constrained by Federal guidelines. Rental charges, which, in turn, define net benefits, are set by a Federal statute not to exceed 25 percent of net monthly money income. A recipient unit can either be a family of two or more related persons or an individual who is handicapped, elderly, or displaced by urban renewal or natural disaster.

Federal law mandates that, as a total among all assisted housing programs, at most, 25 percent of units being re-rented and 5 percent of units that become available can be rented to households with incomes between 50 and 80 percent of the area median.[3] All other units are to be reserved for families at or below 50 percent of the area median.

Food stamps. The Food Stamp Act of 1977 defines this Federally funded program as one intended to "permit low-income households to obtain a more nutritious diet."[4] Food purchasing power is increased by providing eligible households with coupons which can be used to purchase food.

The Food and Nutrition Service of the U.S. Department of Agriculture (USDA) administers the Food Stamp Program through State and local welfare offices. The Food Stamp Program is the major national income support program which provides benefits to all low-income and low-resource households regardless of household characteristics (e.g., sex, age, and disability). The questions on participation in the Food Stamp Program in SIPP were designed to identify households in which one or more of the current members received food stamps. Once a food stamp household was identified, a question was asked to determine the number of current household members covered by food stamps. Questions also were asked about the number of months food stamps were received and the total face value of all food stamps received during the period.

Medicaid. The Medicaid Program is designed "to furnish medical assistance on behalf of needy families with dependent children, and of aged, blind, or permanently and totally disabled individuals whose incomes and resources are insufficient to meet the costs of necessary medical services."[5] The program is administered by State agencies through grants from the Health Care Financing Administration of the Department of Health and Human Services. Funding for medical assistance payments consists of a combination of Federal, State, and in some cases, local resources.

Medicaid is for the most part a categorical program with complex eligibility rules which vary from State to State. There are two basic groups of eligible individuals: the categorically eligible and the medically needy. The major categorically eligible groups are all Aid to Families with Dependent Children (AFDC) recipients and most

[1]The Family Support Act of 1988 requires all jurisdictions with AFDC programs to extend benefits to children in two-parent families in which the principal earner is unemployed (AFDC-UP). The law took effect October 1, 1990, for the States and the District and 2 years later for the outlying areas.

Table A-2. **The Consumer Price Index and Average Poverty Threshold for a Family of Four: 1959 to 1991**

Year	Comsumer price index (1982-84=100)	Average threshold for a family of four persons[1]
1991	136.2	$13,924
1990	130.7	13,359
1989	124.0	12,674
1988	118.3	12,092
1987	113.6	11,611
1986	109.6	11,203
1985	107.6	10,989
1984	103.9	10,609
1983	99.6	10,178
1982	96.5	9,862
1981	90.9	9,287
1980	82.4	8,414
1979	72.6	7,412
1978	65.2	6,662
1977	60.6	6,191
1976	56.9	5,815
1975	53.8	5,500
1974	49.3	5,038
1973	44.4	4,540
1972	41.8	4,275
1971	40.5	4,137
1970	38.8	3,968
1969	36.7	3,743
1968	34.8	3,553
1967	33.4	3,410
1966	32.4	3,317
1965	31.5	3,223
1964	31.0	3,169
1963	30.6	3,128
1962	30.2	3,089
1961	29.9	3,054
1960	29.6	3,022
1959	29.1	2,973

[1]For years prior to 1981, average threshold for a nonfarm family of four is shown.

Supplemental Security Income (SSI) recipients. Other categorically eligible groups are those who meet basic State cash assistance eligibility rules (the aged, blind, or disabled; needy single parents with children; and, in some States, needy unemployed parents with children who are not currently receiving money payments), and needy persons who meet categorical eligibility standards but are institutionalized for medical reasons (e.g., low-income elderly persons in nursing homes). However, such institutionalized persons are not included in the CPS universe and, therefore, are not reflected in these statistics.

In roughly one-half of the States, coverage is extended to the medically needy: persons meeting categorical age, sex, or disability criteria whose money incomes and assets exceed eligibility levels for cash assistance but are not sufficient to meet the cost of medical care. In such States, qualifying income and asset levels are usually above those set for cash assistance. Families with large medical expenses relative to their incomes and assets may also meet medically needy eligibility standards in these States.

Social Security. In the context of this report, Social Security refers to the Old-Age, Survivors, and Disability Insurance (OASDI) program.[6] The Old Age program provides benefits for the workers who retire in old age, the Survivors program provides benefits to families of workers who died, and the Disability program grants assistance to persons whose disabilities do not permit a continuation of the work effort. Persons are participants in Social Security if they worked in covered employment and are now disabled or retired. In addition, participants include spouses or dependent children of retired or disabled workers and widowed spouses and surviving children.

Supplemental Security Income. Authorized as Title XVI of the Social Security Act by the Social Security Amendments of 1972 and implemented in 1974, the SSI program provides monthly cash benefits to aged, blind, and disabled persons who are financially needy according to criteria governing both income and assets. The program is allied with optional State Supplementation Programs (SSPs), which raise the levels of payments to amounts desired by individual States. SSI/SSP, which covers people of all ages, replaced Federal grants to the States for old-age assistance and aid to blind and permanently and totally disabled adults.

Total money income. This is defined as the algebraic sum of money wages and salaries, net income from self-employment, and income other than earnings. The total income of a family is the algebraic sum of the amounts received by all income recipients in the family.

The income tables for families and unrelated individuals include in the lowest income group those who were classified as having no income in the income year and those reporting a loss in net income from farm and nonfarm self-employment or in rental income. Some of these were living on income "in-kind," savings, or gifts, or were newly constituted families, unrelated individuals who had recently left families, or families in which the sole earner had recently died or had left the household. However, other families or unrelated individuals who reported no income probably had some money income which was not recorded in the survey.

Median income. The median income is the amount which divides the distribution into two equal groups, one having incomes above the median, and the other having incomes below the median. The medians for households, families, and unrelated individuals are based on all households, families and unrelated individuals. The medians for persons are based on persons with income.

Mean income. The mean income is the amount obtained by dividing the total income of a group by the number of units in that group. The means for households, families,

[6]The term Social Security is often used in a broader context referring to all types of social insurance programs.

and unrelated individuals are based on all households, families, and unrelated individuals. The means for persons are based on persons with income.

Income per family member. The income per family member is the average amount of income available to every man, woman, and child in a family. Income per family member is derived by dividing the total family income of a group by the number of family members in the same group.

Poverty definition. Poverty statistics presented in this report are based on a definition developed by the Social Security Administration in 1964 and revised in 1969 and 1981 by interagency committees. This definition was established as the official definition of poverty for statistical use in all Executive departments by the Bureau of the Budget (in Circular No. A-46) and later by the Office of Management and Budget (in Statistical Directive No. 14).

The original poverty index provided a range of income cutoffs adjusted by such factors as family size, sex of the family head, number of children under 18 years old, and farm-nonfarm residence. At the core of this definition of poverty was the economy food plan, the least costly of four nutritionally adequate food plans designed by the Department of Agriculture. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spent approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households. Annual revisions of these SSA poverty cutoffs were based on price changes of the items in the economy food budget.

As a result of deliberations of a Federal Interagency Committee in 1969, the following two modifications to the original SSA definition of poverty were recommended: (1) that the SSA thresholds for nonfarm families be retained for the base year 1963, but that annual adjustments in the levels be based on changes in the Consumer Price Index (CPI) rather than on changes in the cost of food included in the economy food plan; and (2) that the farm thresholds be raised from 70 to 85 percent of the corresponding nonfarm levels. The combined impact of these two modifications resulted in an increase of 360,000 poor families and 1.6 million poor persons in 1967.

In 1980, another interagency committee recommended three additional modifications that were implemented in the March 1982 CPS as well as the 1980 census: (1) elimination of separate thresholds for farm families, (2) averaging of thresholds for female-householder and "all other" families, and (3) extension of the poverty matrix to families with nine or more members. For further details, see the section, "Changes in the Definition of Poverty," in Current Population Reports, Series P-60, No. 133.

The poverty thresholds rise each year by the same percentage as the annual average Consumer Price Index. Table A-2 shows the CPI and the corresponding thresholds for a family of four for the 1959-91 period. The poverty thresholds are currently adjusted using the annual average CPI-U (1982-84 =100). This base year has been used since 1988. From 1980 through 1988 the thresholds were adjusted using the CPI (1967 = 100). The CPI (1963 = 100) was used to adjust thresholds prior to 1980. Table A-3 shows the full poverty threshold matrix in 1991.

Poverty guidelines. Average poverty thresholds are similar but not identical to the "administrative poverty income guidelines" which are issued by the Department of Health and Human Services (HHS). The HHS poverty guidelines are used for administrative purposes such as determining eligibility for a particular assistance program rather than for determining poverty status in surveys. The guidelines are usually applied in combination with other eligibility criteria, such as asset limits, and may be used as multiples (e.g., children in families with income below 185 percent of their appropriate income guidelines may be eligible for the reduced-price school lunch program).

The HHS guidelines represent rounded versions of the average weighted poverty thresholds adjusted to provide equal differences between each family size (rather than using the equivalency scale inherent in the poverty thresholds). For example, the 1992 poverty guidelines issued in the Federal Register (see Federal Register, Volume 57, No. 31, Feb. 14, 1992, pp. 5,455-5,457) are based on the 1991 poverty thresholds. These guidelines use the reference year "1992" since they are applied for eligibility purposes in that year. The poverty thresholds are called "1991" because in the March 1992 CPS persons are asked income information for the previous calendar year (1991).

For further information on the poverty guidelines, contact the Office of the Assistant Secretary for Planning and Evaluation, Department of Health and Human Services, Washington, DC 20201.

Ratio of income to poverty level. Because the poverty definition does not meet all the needs of the analysts of the data, a few of the tables in the report present variations of the poverty level expressed as a ratio of income to the family's (or unrelated individual's) appropriate poverty threshold. Ratios below 1.00 are below the official definition while a ratio of 1.00 or greater indicates income above the poverty level. A ratio between 1.00 and 1.25 indicates for example that a family's income was above their poverty threshold but

Table A-3. **Poverty Thresholds in 1991, by Size of Family and Number of Related Children Under 18 Years**

Size of family unit	Weighted average thresholds	Related children under 18 years								
		None	One	Two	Three	Four	Five	Six	Seven	Eight or more
One person (unrelated individual)	$6,932									
Under 65 years	7,086	7,086								
65 years and over	6,532	6,532								
Two persons	8,865									
Householder under 65 years	9,165	9,120	9,388							
Householder 65 years and over	8,241	8,233	9,352							
Three persons	10,860	10,654	10,963	10,973						
Four persons	13,924	14,048	14,278	13,812	13,860					
Five persons	16,456	16,941	17,188	16,662	16,254	16,006				
Six persons	18,587	19,486	19,563	19,160	18,773	18,199	17,859			
Seven persons	21,058	22,421	22,561	22,078	21,742	21,115	20,384	19,582		
Eight persons	23,605	25,076	25,297	24,842	24,443	23,877	23,158	22,410	22,220	
Nine persons or more	27,942	30,165	30,311	29,908	29,569	29,014	28,249	27,558	27,386	26,331

below 125 percent of their poverty threshold. If a family's poverty threshold was $10,000 a ratio of 1.00 to 1.25 thus would mean their income was between $10,000 and $12,500.

Weighted average thresholds at poverty level. As shown in table A-3, the poverty cutoffs used by the Bureau of the Census to determine the poverty status of families and unrelated individuals consist of a set of 48 thresholds arranged in a two-dimensional matrix consisting of family size (from one person, i.e., unrelated individuals, to nine or more persons) cross-classified by presence and number of family members under 18 years old (from no children present to eight or more children present). Unrelated individuals and two-person families are further differentiated by the age of the individual or family householder (under 65 years and 65 years and over). The total family income of each family in the sample is tested against the appropriate dollar threshold to determine the poverty status of the family. If the family's total income is less than its corresponding cutoff, the family is classified as below the poverty level. The average thresholds shown in these tables were weighted by the presence and number of children. For a given size of family, the weighted average threshold for that group is obtained by multiplying the threshold for each presence and number of children category within the given family size by the number of families in that category. These products are then aggregated across the entire range of presence and number of children categories, and the total aggregate is divided by the total number of families in the group to yield the weighted average threshold at the poverty level for that size family. Because family composition does not remain constant from year to year, the weighted average thresholds for 1991 will not reflect, identically, the change in the CPI between 1991 and earlier years.

Since the basic thresholds used to determine the poverty status of families and unrelated individuals are applied to all families and unrelated individuals, the weighted poverty thresholds are derived using all families and unrelated individuals rather than just those families and unrelated individuals classified as below the poverty level. In a few instances these weighted thresholds are slightly different from those published in earlier reports due to corrections to the CPS files.

Income deficit. Income deficit is the difference between the total income of families and unrelated individuals below the poverty level, and their respective poverty thresholds. In computing the income deficit, families reporting a net income loss are assigned zero dollars and for such cases the deficit is equal to the poverty threshold. This measure provides an estimate of the amount which would be required to raise the incomes of all poor families and unrelated individuals to their respective poverty thresholds. The income deficit is thus a measure of the degree of impoverishment of a family or unrelated individual. However, caution must be exercised in comparing the average deficit of families classified by the race or sex of the householder. Since the poverty thresholds used in this report are based on family size and composition, apparent differences in the average income deficits may, to some extent, be a function of the differences in these characteristics.

Median income deficit. The median income deficit is the amount which divides the distribution into two equal groups, one having an income deficit above the median and the other having an income deficit below the median.

Mean income deficit. The mean income deficit is the amount obtained by dividing the total income deficit of a group below the poverty level by the number of families or unrelated individuals (as appropriate) in that group.

Deficit per family member. The deficit per family member is the average amount of money necessary to raise every man, woman and child in a family out of

poverty. The deficit per family member is derived by dividing the total family income deficit of a group by the number of family members in the same group.

Household. A household consists of all the persons who occupy a housing unit. A house, an apartment or other group of rooms, or a single room is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live and eat with any other persons in the structure and there is direct access from the outside or through a common hall.

A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone in a housing unit, or a group of unrelated persons sharing a housing unit as partners, is also counted as a household. The count of households excludes group quarters.

Group quarters. All persons who are not members of households are regarded as living in group quarters. Group quarters contain five or more persons unrelated to the person in charge, such as residents of lodging and boarding houses. Persons living in military barracks and inmates of institutions were excluded from the survey.

Householder. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented. If the house is owned jointly by a married couple, either the husband or the wife may be listed first, thereby becoming the reference person, or householder, to whom the relationship of the other household members is recorded. One person in each household is designated as the "householder." The number of householders, therefore, is equal to the number of households. Beginning with the 1980 CPS, the Bureau of the Census began using the terms "householder" and "family householder" instead of "head of household" and "head of family."

Family. The term "family" refers to a group of two or more persons related by birth, marriage, or adoption who reside together; all such persons are considered as members of one family. For example, if the son of the person who maintains the household and the son's wife are members of the household, they are treated as members of the parent's family. Every family must include a householder; two or more people living in the same household who are related to one another, but are not related to the householder, form an "unrelated subfamily" and are not included in the count of families.

Subfamily. A subfamily is a married couple with or without children, or one parent with one or more own single children under 18 years old living in a household but not including among its members the person or couple maintaining the household. Because a subfamily does not include a householder, it is by definition excluded from the count of families. There are two kinds of subfamilies, related and unrelated.

Related subfamily. A related subfamily is a subfamily whose members are related to the person or couple maintaining the household. Examples of related subfamilies include a young married couple sharing the home of the husband's or wife's parents or the daughter and grandchild of the householder. Members of a related subfamily are also members of the householder's family.

Unrelated subfamily. An unrelated subfamily is a subfamily whose members are not related to the person or couple maintaining the household. Members of unrelated subfamilies may include such persons as guests, lodgers, or resident employees and their relatives living in a household. Unrelated subfamily members are not part of the householder's family. Even though unrelated subfamilies are not counted as families, they are treated as families for the purpose of determining whether their members are above or below the poverty level. Beginning with the 1980 CPS, unrelated subfamilies (referred to in the past as secondary families) are no longer included in the count of families, nor are the members of unrelated subfamilies included in the count of family members.

Married couple. A married couple, as defined for census purposes, is a husband and wife enumerated as members of the same household. The married couple may or may not have children living with them. The expression "husband-wife" or" married-couple" before the term "household," or "family," indicates that the household, or family, is maintained by a husband and wife.

Unrelated individuals. The term "unrelated individuals" refers to persons 15 years and over (other than inmates of institutions) who are not living with any relatives. An unrelated individual may (1) constitute a one-person household, (2) be part of a household including one or more other families or unrelated individuals, or (3) reside in group quarters such as a rooming house. Thus, a widow living by herself or with one or more other persons not related to her, a lodger not related to the householder or to anyone else in the household, and a servant living in an employer's household with no relatives are examples of unrelated individuals. The poverty status of unrelated individuals is determined independently of other household members' incomes.

Nonfamily householder. A nonfamily householder (formerly called a primary individual) is a person maintaining a household while living alone or with nonrelatives only.

Secondary individual. A secondary individual is a person in a household or group quarters such as a guest, roomer, boarder, or resident employee (excluding nonfamily householders and inmates of institutions) who is not related to any other person in the household or group quarters.

Family Status (SIPP). As in the Current Population Survey, the term "family" refers to a group of two or more persons related by birth, marriage, or adoption who reside together; all such persons are considered as members of one family. Two or more people living in the same household who are related to one another, but are not related to the householder, form an "unrelated subfamily". Persons in unrelated subfamilies are not included in the count of family members in the Current Population Survey, but they are included as family members for the SIPP section of this report and are classified by family type as if they were families.

Persons were classified as members of a married-couple family, other family type, or as an unrelated individual based on their most common status during the calendar year. For example, a person who in 1987 was in a married-couple family in January through March but was an unrelated individual in April through December would be characterized here as an unrelated individual in 1987. Ties were broken by using the family status that occurred first. Family size was also based on the most common size during the calendar year.

Size of household, family, or subfamily. The term "size of household" includes all persons occupying a housing unit. "Size of family" includes the family householder and all other persons in the living quarters who are related to the householder by birth, marriage, or adoption.

Own children and related children under 18 years of age. "Own" children in a family are sons and daughters, including stepchildren and adopted children of the householder. "Related" children in a family include own children and all other children in the household who are related to the householder by blood, marriage, or adoption.

Marital status. The marital status classification identifies four major categories: single, married, widowed, and divorced. These terms refer to the marital status at the time of the enumeration.

The category "married" is further divided into "married, wife present," "separated," and "other married, wife absent" for male householders and "married, husband absent" by reason for absence of husband for female householders. A male householder was classified as "married, wife present" if his wife was reported as a member of the household, even though she may have been temporarily absent on business or on vacation, visiting, in a hospital, etc., at the time of the enumeration. Persons reported as separated included those with legal separations, those living apart with intentions of obtaining a divorce, and other persons permanently or temporarily separated because of marital discord. The groups "other married, wife absent" and "other married, husband absent" included married persons living apart because either the wife or the husband was employed and living at a considerable distance from home, was residing in an institution, had moved to another area, or had a different place of residence for any other reason except separation as defined above.

Age. The age classification is based on the age of the person at his or her last birthday.

Race. The population is divided into three groups on the basis of race: White, Black, and "other races." The last category includes American Indians, Japanese, Chinese, Filipinos, Pacific Islanders, and any other race except White and Black.

Persons of Hispanic origin. Persons of Hispanic origin were identified by a question that asked for self-identification of the person's origin or descent. Respondents were asked to select their origin (and the origin of other household members) from a "flash card" listing ethnic origins. Persons of Hispanic origin, in particular, were those who indicated that their origin was Mexican, Puerto Rican, Central or South American, or some other Hispanic origin. It should be noted that persons of Hispanic origin may be of any race.

Educational Attainment. This classification refers to the highest level of school completed or the highest degree received. The category, "Associate degree" includes persons whose highest degree is an associate degree either in (1) an occupational program that prepares them for a specific occupation, and the course work may or may not be creditable toward a bachelor's degree or (2) an academic program primarily in the arts and sciences, and the course work is transferrable to a bachelor's degree. Some examples of professional degrees include medicine, dentistry, chiropractic, optometry, osteopathic medicine, pharmacy, podiatry, veterinary medicine, law, and theology, but specifically exclude barber school, cosmetology, or other training for a specific trade.

Data on educational attainment are derived from a question that asks, "What is the highest level of school ... has completed or the highest degree ... has received?" The question on educational attainment applies only to progress in "regular" schools. Such schools include public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, and

professional schools (whether day schools or night schools). Thus, regular schooling is that which may advance a person toward an elementary school certificate, a high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable to schools in the regular school system.

Beginning in January 1992, the CPS began using an educational attainment question similar to that used in the 1990 Decennial Census of Population and Housing. Consequently, data on educational attainment from the 1992 CPS are not directly comparable to CPS data for prior years. Prior to 1992, the CPS educational attainment data were derived from the combination of answers to questions concerning the highest grade of school attended by the person and whether or not that grade was finished. For a discussion of the change in the form of the question, and some of the motivating factors behind the change, see the introductory text of this report.

Work Disability. Persons were classified as having a work disability if they met any of the following criteria:

1. With a health problem or disability which prevents them from working or which limits the kind or amount of work they can do. (See 62A and 62B on the facsimile of Form CPS-665-Income Supplement.)
2. Ever retired or left a job for health reasons. (See items 63A and 63B on the facsimile of Form CPS-665-Income Supplement.)
3. Did not work in survey week because of long-term physical or mental illness or disability which prevents the performance of any kind of work.
4. Did not work at all in previous year because ill or disabled.
5. Under 65 years of age and covered by Medicare.
6. Under 65 years of age and a recipient of SSI (Supplemental Security Income).
7. Received veteran's disability compensation.

Severe work disability. A person who meets any of the criteria in 3 through 6 above, is considered to have a severe work disability.

Labor force and employment status. Unless otherwise specified, the definitions of labor force and employment status relate to the population 15 years old and over.

Employed. Employed persons comprise (1) all civilians who, during the survey week did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a farm or in a business operated by a member of the family and (2) all those who were not working but who had jobs or businesses from which they were temporarily absent because of illness, bad weather, vacation, or labor-management dispute, or because they were taking time off for personal reasons, whether or not they were paid by their employers for time off, and whether or not they were seeking other jobs. Excluded from the employed group are persons whose only activity consisted of work around the house (such as own home housework, and painting or repairing own home) or volunteer work for religious, charitable, and similar organizations.

Unemployed. Unemployed persons are those civilians who, during the survey week had no employment but were available for work and (1) had engaged in any specific jobseeking activity within the past 4 weeks, such as registering at a public or private employment office, meeting with prospective employers, checking with friends or relatives, placing or answering advertisements, writing letters of application, or being on a union or professional register; (2) were waiting to be called back to a job from which they had been laid off, or (3) were waiting to report to a new wage or salary job within 30 days.

Labor force. Persons are classified as in the labor force if they were employed as civilians, unemployed, or in the Armed Forces during the survey week. The "civilian labor force" is comprised of all civilians classified as employed or unemployed.

Not in labor force. All civilians 15 years old and over who are not classified as employed or unemployed are defined as "not in the labor force." This group of persons who are neither employed nor seeking work includes persons engaged only in own home housework, attending school, or unable to work because of long-term physical or mental illness; persons who are retired or too old to work, seasonal workers for whom the survey week fell in an off season, and the voluntarily idle. Persons doing only unpaid family work (less than 15 hours during the survey week) are also classified as not in the labor force.

Occupation and class of worker. Occupation describes the kind of work the person does on the job. If the person changed jobs, the data refer to the occupation of the job held longest during the income year. The occupational groupings were derived from the classification system used in the 1990 Census of Population. Note that data on occupations for 1991 are not fully comparable with data for prior years because of the change from the 1980 classification to that used in 1990.

Class of worker refers to the subdivision of workers into three groups: wage and salary workers, self-employed workers, and unpaid family workers. The first group refers to persons working for wages, salaries, commissions, tips, pay "in kind," or at piece rate for private employer or for any government unit. The second group refers to persons working in their own business, profession, or trade, for profit or fees. The third group refers to persons working without pay in a business operated by a member of the household to whom they are related by birth or marriage.

Work experience. A person with work experience is one who, during the preceding calendar year, did any civilian work for pay or profit or worked without pay on a family-operated farm or business at any time during the year, on a part-time or full-time basis.

Weeks worked in income year. Persons are classified according to the number of different weeks, during the preceding calendar year, in which they did any civilian work for pay or profit (including paid vacations and sick leave) or worked without pay on a family-operated farm or business.

Part-time or full-time jobs. A person is classified as having worked at part-time jobs during the preceding calendar year if he or she worked at civilian jobs which provided less than 35 hours of work per week in a majority of the weeks in which work was performed during the year. A person is classified as having worked at full-time jobs if he or she worked 35 hours or more per week during a majority of the weeks in which work was performed.

Year-round, full-time worker. A year-round, full-time worker is one who worked primarily at full-time civilian jobs for 50 weeks or more during the preceding calendar year.

Number of workers. The number includes all persons in the family who worked at anytime during the year.

Nonworker. A nonworker is one who did not do any civilian work in the calendar year preceding the survey.

Main reason for working part year. For persons who worked 1 to 49 weeks during the year, the main reason for working part year is based on the response to the question "What were you doing most of the remaining weeks?"

Main reason for not working. For persons who reported they did not work at a civilian job for pay or profit or on a family-operated farm or business during the year, the main reason for not working is derived from the response to the question, "What were you doing most of last year?"

Symbols. A dash (-) represents zero or rounds to zero, the symbol "B" means base less than 75,000 or not applicable. The symbol "NA" means not available, and the symbol "r" means revised.

Rounding. Percentages are rounded to the nearest tenth of a percent; therefore, the percentages in a distribution do not always add to exactly 100.0 percent. The totals, however, are always shown as 100.0. Moreover, individual figures are rounded to the nearest thousand without being adjusted to group totals, which are independently rounded; percentages are based on the unrounded numbers.

Base figures. The base figures shown for 1980 and later years were prepared by inflating weighted sample results to agree with independent estimates of the population based on statistics updated from the 1980 census. The base figures shown for 1969 to 1979 were based on statistics updated from the 1970 census, whereas the figures for the years 1961 to 1968 were inflated to estimates derived from the 1960 census. The data for the years prior to 1961 were based on the 1950 census. A more detailed description of this change can be found in an article entitled "Revisions in Current Population Survey," Employment and Earnings, Vol. 18, No. 8, February 1972, published by the Bureau of Labor Statistics.

The introduction of population controls and estimation procedures based on the 1980 census raised the number of persons from 217.8 million to 222.9 million in the March 1980 CPS and the number of families from 58.4 to 59.6 million. The number of persons and families below the poverty level rose proportionately, from 25.3 to 26.1 million, and from 5.3 to 5.5 million, respectively.

COMPARABILITY OF ESTIMATES FROM MARCH 1992 CPS WITH ESTIMATES FOR PREVIOUS YEARS

Estimates from the March 1992 CPS are in some instances not strictly comparable with estimates for previous years due to several factors. Among these factors are changes in (1) population controls and metropolitan residence definitions; (2) collection of income and work experience data; (3) noninterviews, nonresponses, and allocations; (4) questionnaire wording and procedures; (5) sample size and interpolation procedures; (6) definition of the income universe and (7) revisions to the processing system. Each of these factors is discussed in the following sections, and readers should consider these differences when comparing current with previous years' estimates.

Population Controls

Beginning with 1979, the data shown in this report are based on population controls derived from the 1980

census. The data for 1969 to 1978 reflect 1970 census-based population controls, while figures for previous years are tied in with 1960 census-based controls. Basically, these changes should have no substantial impact on summary measures, such as medians and means, and on proportional measures, such as percent distributions and poverty rates. However, the changes may have more impact on the population levels in different sub-groupings such as the total number of persons or families either overall, within some particular income interval, or below the poverty level. A detailed description of these changes appears in the Bureau of Labor Statistics report, Employment and Earnings, Vol. 18, No. 8, February 1972.

Undocumented immigrants

The 1980 census counted about two million undocumented immigrants according to Census Bureau estimates. Beginning in January 1986, the independent population controls included an allowance for growth in the undocumented population for every year since 1980. This methodological change was partially offset by another change that increased the allowance for emigration of legal residents. Data shown for Current Population Surveys with controls based on pre-1986 methods have not been revised to take into account these methodological changes. Consequently, direct comparisons of CPS figures for months before January 1986 with later months will not be consistent. Series P-25, No. 985 reviews the postcensal population estimates methodology currently in use.

Comparability of Metropolitan and Nonmetropolitan Data From March 1992 CPS With Data for Previous Years

Estimates by type of residence categories (metropolitan, nonmetropolitan, central cities, outside central cities) were omitted from the 1984 reports because of the mixed 1970 and 1980 census sampling frame used for the 1985 CPS. Estimates by type of residence were resumed in the 1985 poverty report (Current Population Reports, Series P-60, No 158) since the March 1986 CPS was totally based on the 1980 census sampling frame as are subsequent years. The type of residence categories reflect metropolitan statistical areas (MSA's) defined as of June 1984. (For the definition of MSA's, see the definition's section under the heading "metropolitan areas".)

In July 1985, the CPS began carrying the metropolitan statistical area definitions announced by the Office of Management and Budget on June 30, 1984. Figures published from the CPS in the early 1980's and throughout most of the 1970's referred to metropolitan areas as defined on the basis of the 1970 census. There are important differences in the population classified as metropolitan using the 1970 and 1984 definitions.

The new CPS metropolitan estimates have consistently been higher than independent estimates of the metropolitan population prepared by the Census Bureau; the new CPS nonmetropolitan estimates have been lower than the independent estimates. For example, between July 1985 and August 1986 the magnitude of the monthly differences varied from 900,000 to 2.5 million persons, so that the proportion of the population living in metropolitan areas according to the CPS has ranged from 0.4 to 1.0 percentage points higher than the independent estimate. The difference in level between the two sets of estimates is partially attributable to the basic CPS sample design, which, because of sampling variability, includes an oversample of metropolitan households and an undersample of nonmetropolitan households. The monthly variations result from the exit and entrance of rotation groups, each with slightly different metropolitan-nonmetropolitan proportions, into the sample. The apparent overestimation of metropolitan and underestimation of nonmetropolitan population in the CPS relative to the Bureau's independent estimates should be taken into account when using the data.

Noninterviews, Nonresponses, and Allocations

In the March 1992 CPS, no interview was obtained for approximately 4.5 percent of the 60,000 households in the sample. No interview was obtained at these households during the enumeration week for reasons such as "no one home," "temporarily absent," or "refusals." In order to account for these households, the weights assigned to households in which interviews were obtained have been increased slightly. This "noninterview" adjustment procedure adjusts the weights of sample households by race of householder and within a specified set of geographical restrictions.

The nonresponse problem, which is sometimes referred to as "item nonresponse," is a serious problem in most household surveys and is especially troublesome for income. In many cases, even though an interview is obtained, complete information for all of the income questions is not available, unknown or refused. In March 1992, the income data were incomplete for about 27 percent of the persons 15 years old and over. About 32 percent of the families had one or more members with incomplete income information. In order that the maximum amount of information can be utilized, missing income items are imputed or allocated by values which are obtained from active respondents with similar economic and demographic characteristics.

Although nonresponse rates for families by poverty status are not available, it is known that families in the lower income intervals tend to have lower nonresponse

rates than those in the middle and upper income intervals. This is due in part to the fact that lower income families have less complicated financial arrangements than those in other income groups. For a more detailed discussion of this topic see "Income Nonresponses in the Current Population Survey" by Mitsuo Ono and Herman P. Miller published in Proceedings of the Social Statistics Section, American Statistical Association, 1969.

Modifications in Collecting Income Data in the March 1980 Current Population Survey

A modified version of the experimental questionnaire which was tested on three-eighths of the March 1979 sample was used for the full sample in March 1980. The experimental questionnaire contained a number of modifications designed to improve income reporting. For further discussion, see the section, "Modifications to the March 1980 CPS" in Current Population Reports, Series P-60, No. 130.

Definition of the Income Universe

Starting in the March 1980 CPS, a decision was made to restrict the universe for presenting income data to persons 15 years old and over instead of 14 years old and over. This change was made to establish consistency between the results from the March 1980 CPS and the 1980 Census of Population. Although income data were collected for persons 14 years old and over, the income of the 14-year-olds was not used for processing and tabulation purposes.

The March 1980 CPS also incorporated the use of the "householder" concept rather than the traditional "head" concept. Under the new procedure, the householder is the first adult household member listed on the questionnaire. The instructions call for listing first the person (or one of the persons) in whose name the home is owned or rented.

Another change made in the March 1980 CPS was the exclusion of secondary families (now called unrelated subfamilies) from the count of all families. This modification was required because of the introduction of the householder concept, since unrelated subfamilies do not have a householder. For more discussion on all of these changes, see the section, "Modifications to the March 1980 CPS," Current Population Reports, Series, P-60, No. 130.

REVISIONS TO EARNINGS QUESTION

The Census Bureau made a revision to the March CPS income supplement questionnaire in 1986 in an effort to adapt to continually rising levels of annual income. Beginning with the March 1986 CPS, question number 48, which covers the amount of earnings received from the employer or own business for which the respondent worked the longest during the previous calendar year, was modified to permit coding of earnings amounts to a maximum of $299,999. Prior to March 1986, procedures allowed for coding of amounts to a maximum of $99,999. In March 1977, about 127,000 weighted sample persons reported receiving earnings in the previous calendar year in excess of the $99,999 maximum. In March 1986, when the revision was made, about 627,000 weighted sample persons reported receiving earnings in excess of this maximum. About 16,000 weighted sample persons reported earnings amounts that exceeded the revised maximum of $299,999.

This change in the questionnaire causes a break in the time series for some income measures. Overall the revision added about $22.9 billion in 1985 to the total aggregate income that would have gone undetected had the $99,999 limit continued. Mean income, per capita income, shares of aggregate income by quintile and the index of income concentration (GINI Index) were all affected by the revision and caution should be used when comparing the 1985 and later data to earlier years.

REVISIONS TO MARCH CPS PROCESSING SYSTEM

Between 1988 and 1989 a new computer processing system was introduced for the March Current Population Survey. This processing system rewrite was long overdue; the system in use before this year was first introduced in March 1976 and was never fully updated to reflect the numerous questionnaire changes that have taken place since that time. In addition, the programs used to process the CPS file were written in a computer language that is being phased out of use at the Census Bureau. While the March 1989 file is the first to reflect this new processing system, the March 1988 file has been reprocessed based on these new procedures in order to: 1) better evaluate the new processing procedures, and 2) allow year-to-year comparisons to be made between income years 1987 and 1988 using a consistent processing system. All 1987-88 comparisons in this report are based on the new processing procedures for both years.

While the following section deals mainly with modifications to the March imputation procedures and their subsequent effect on income and poverty estimates, it should be pointed out that all of the processing programs were rewritten this year, so that not only is the new file based on a somewhat different imputation system, it also reflects a rewritten weighting system, data acceptance program, family relationship edits, and new procedures to match income supplement records to the monthly CPS file. As a result, it is difficult to

ascertain whether differences (especially those based on relatively small bases) are the result of imputation or other processing differences between the original and revised files.

Since the Census Bureau began imputing for missing income data on the CPS in 1962, there have been three major revisions to the processing system (in 1967, 1976, and 1989). Through all of these revisions, the basic strategy used to make imputations has remained the same. This approach, commonly referred to as "hot deck" imputation, assigns missing responses to sample persons with information from matched sample persons with similar demographic and economic information who answered these questions. For a detailed description of the CPS imputation procedures, see Technical Paper No. 54, *Income Nonresponse: March 1983 CPS.* Under the new March processing system, there were three main modifications to the income imputation programs:

1. The edits and imputations were expanded to reflect the full detail of the March income questionnaire. The original processing system was still based on a less detailed CPS income questionnaire that has not been in use since 1980.

2. Under the revised processing procedures, entire sets of March income and noncash benefits data were imputed to supplement noninterviews from the same interviewed person. Under the original processing procedures, earnings, unearned income, and noncash benefits were imputed in separate stages during the processing system. Thus, the new processing system imputes noninterviews more efficiently and is better able to preserve the correlation between earnings, unearned income, and noncash benefits.

3. Both the old and new processing systems employ what are called "statistical matches" to link sample cases with reported data to those requiring imputation for missing responses. In the original processing system, under certain circumstances, reported data was removed and replaced with imputed data during the statistical matching process. Under the new system, reported data are never removed. This was accomplished by expanding the number of statistical matches in the income imputation system.

Appendix B. Source and Accuracy of Estimates

SOURCE OF DATA

Most estimates in this report come from data obtained in March of years 1960 through 1992 in the Current Population Survey (CPS). The Bureau of the Census conducts the survey every month, although this report uses only March data for its estimates. The March survey uses two sets of questions, the basic CPS and the supplement.

Some estimates in this report come from data obtained from the 1987 Panel of the Survey of Income and Program Participation (SIPP). The Bureau of the Census conducts the SIPP every four months, and collects data on a monthly basis.

Basic CPS. The basic CPS collects primarily labor force data about the civilian noninstitutional population as well as basic demographic characteristics of population such as age, sex, race, marital status and household relationship. Interviewers ask questions concerning labor force participation about each member 15 years old and over in every sample household.

The present CPS sample was selected from the 1980 Decennial Census files with coverage in all 50 states and the District of Columbia. The sample is continually updated to account for new residential construction. It is located in 729 areas comprising 1,973 counties, independent cities, and minor civil divisions. About 60,000 occupied households are eligible for interview every month. Interviewers are unable to obtain interviews at about 2,600 of these units because the occupants are not home after repeated calls or are unavailable for some other reason.

Since the introduction of the CPS, the Bureau of the Census has redesigned the CPS sample several times to improve the quality and reliability of the data and to satisfy changing data needs. The most recent changes were completely implemented in July 1985.

The following table summarizes changes in the CPS designs for the years for which data appear in this report.

Description of March Current Population Survey

Time Period	Number of sample areas	Housing units eligible[1]	
		Interviewed	Not interviewed
1990 to 1992	729	57,400	2,600
1989	729	53,600	2,500
1986 to 1988	729	57,000	2,500
1985	629/729[2]	57,000	2,500
1982 to 1984	629	59,000	2,500
1980 to 1981	629	65,500	3,000
1977 to 1979	614	55,000	3,000
1973 to 1976	461	46,500	2,500
1972	449	45,000	2,000
1967 to 1971	449	48,000	2,000
1963 to 1966	357	33,500	1,500
1960 to 1962	333	33,500	1,500

[1]Excludes about 2,500 Hispanic households added from the previous November sample. (See "CPS March Supplement.")

[2]The CPS was redesigned following the 1980 Decennial Census of Population and Housing. During phase-in of the new design, housing units from the new and old designs were in the sample.

CPS March Supplement. In addition to the basic CPS questions, interviewers asked supplementary questions in March about money income received the previous calendar year.

To obtain more reliable data for the Hispanic origin population, the March CPS sample was increased by about 2,500 eligible housing units, interviewed the previous November, that contained at least one sample person of Hispanic origin. In addition, the sample included persons in the Armed Forces living off post or with their families on post.

CPS Estimation Procedure. This survey's estimation procedure inflates weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, sex, race and Hispanic/non-Hispanic categories. The independent estimates were based on statistics from decennial censuses of population; statistics on births, deaths, immigration and emigration; and statistics on the size of the Armed Forces.

The independent population estimates used for 1981 (1980 for income estimates) to present were based on updates to controls established by the 1980 Decennial Census. Data previous to 1981 were based on independent population estimates from the most recent decennial census. For more details on the change in independent estimates, see the section entitled "Introduction of 1980 Census Population Controls", in an earlier report (Series P-60, No. 133). The estimation procedure for the March supplement included a further adjustment so husband and wife of a household received the same weight.

The estimates in this report for 1983 (from the March 1984 CPS) and later also employ a revised survey weighting procedure for persons of Hispanic origin. In previous years, weighted sample results were inflated to independent estimates of the noninstitutional population by age, sex, and race. There was no specific control of the survey estimates for the Hispanic population. Since then, the Bureau of the Census developed independent population controls for the Hispanic population by sex and detailed age groups. Revised weighting procedures incorporate these new controls. The independent population estimates include some, but not all, undocumented immigrants.

Basic SIPP. The 1987 panel SIPP sample is located in 230 Primary Sampling Units (PSU's) each consisting of a county or a group of contiguous counties. Within these PSU's, expected clusters of two housing units (HU's) were systematically selected from lists of addresses prepared for the 1980 decennial census to form the bulk of the sample. Similar to CPS, the SIPP sample is continually updated to account for HU's built after the 1980 census.

The period covered by the 1987 longitudinal panel consists of 28 interview months (seven interviews) conducted from February 1987 to May 1989. The first interview was conducted during February, March, April, and May of 1987. Each sample person was visited every 4 months thereafter. At each interview the reference period was the 4 months preceding the interview month. In general, one cycle of four interviews covering the entire sample using the same questionnaire is called a wave. For subsequent interviews, only original sample persons (those in Wave 1 sample households and interviewed in Wave 1) and persons living with them were eligible to be interviewed. Original sample persons were followed if they moved to a new address, unless the new address was more than 100 miles from a SIPP sample area. Then, telephone interviews were attempted. All first wave noninterviewed households were automatically designated as noninterviews for all subsequent interviews. When original sample persons moved to remote parts of the country and couldn't be reached by telephoning, moved without leaving a forwarding address; or refused to be interviewed, additional noninterviews resulted.

Approximately 33,100 persons were initially eligible to be interviewed; however, 24,400 were classified as interviewed for the life of the panel. The person nonresponse rate was 26 percent.

SIPP Estimation Procedure. Several stages of weight adjustments were involved in the estimation procedure used to derive the SIPP longitudinal person weights. Each person received a base weight equal to the inverse of the probability of selection. Two noninterview adjustment factors were applied. One adjusted the weights of interviewed persons in interviewed households to account for households which were eligible for the sample but could not be interviewed at the first interview. The second was applied to compensate for person noninterviews occurring in subsequent interviews. The Bureau has used complex techniques to adjust the weights for nonresponse, but the success of these techniques in avoiding bias is unknown.

Another factor was applied to each interviewed person's weight to account for the SIPP sample areas not having the same population distribution as the strata from which they were selected.

An additional stage of adjustment to longitudinal person weights was performed to reduce the mean square error of the survey estimates. This was accomplished by ratio adjusting the sample estimates to agree with Current Population Survey (CPS) type estimates of the civilian (and some military) noninstitutional population of the United States by demographic characteristics including age, sex, and race, as of the specified control date. For the Panel, the control date is March 1, 1987. The CPS estimates by age, race, and sex were themselves brought into agreement with estimates from the 1980 decennial census which have been adjusted to reflect births, deaths, immigration, emigration, and changes in the Armed Forces since 1980. Also, SIPP estimates were controlled to independent Hispanic controls.

ACCURACY OF ESTIMATES

Since the CPS and SIPP estimates come from a sample, they may differ from figures from a complete census using the same questionnaires, instructions, and enumerators. A sample survey estimate has two possible types of error: nonsampling and sampling. The accuracy of an estimate depends on both types of error, but the full extent of the nonsampling error is unknown. Consequently, one should be particularly careful when interpreting results based on a relatively small number of cases or on small differences between estimates. The standard errors for CPS and SIPP estimates primarily indicate the magnitude of sampling error. They also partially measure the effect of some nonsampling errors in responses and enumeration, but do not measure systematic biases in the data. (Bias is the average over all possible samples of the differences between the sample estimates and the desired value.)

Nonsampling Variability. Nonsampling errors can be attributed to several sources including the following:

- Inability to obtain information about all cases in the sample.
- Definitional difficulties.
- Differences in the interpretation of questions.
- Respondents' inability or unwillingness to provide correct information.
- Respondents' inability to recall information.
- Errors made in data collection such as in recording or coding the data.
- Errors made in processing the data.
- Errors made in estimating values for missing data.
- Failure to represent all units with the sample (undercoverage).

CPS and SIPP undercoverage results from missed housing units and missed persons within sample households. Compared to the level of the 1980 Decennial Census, overall CPS and SIPP undercoverage is about 7 percent. Undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. As described previously, ratio estimation to independent age-sex-race-Hispanic population controls partially corrects for the bias due to undercoverage. However, biases exist in the estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics from those of interviewed persons in the same age-sex-race Hispanic group. Furthermore, the independent population controls have not been adjusted for undercoverage in the 1980 census.

Answers to questions about money income often depend on the memory or knowledge of one person in a household. Recall problems can cause underestimates of income in survey data, because it is easy to forget minor or irregular sources of income. Respondents may also misunderstand what the Census Bureau considers money income, or may simply be unwilling to answer these questions correctly because the questions are considered too personal. See Appendix C, "Underreporting of Income," for more discussion.

For additional information on nonsampling error including the possible impact on CPS data when known, refer to Statistical Policy Working Paper 3, *An Error Profile: Employment as Measured by the Current Population Survey,* Office of Federal Statistical Policy and Standards, U.S. Department of Commerce, 1978 and Technical Paper 40, *The Current Population Survey: Design and Methodology,* Bureau of the Census, U.S. Department of Commerce.

For additional information on nonsampling error found in the SIPP data, refer to the *Quality Profile for the Survey of Income and Program Participation*, SIPP Working Paper #8708, Bureau of the Census, July 1987.

Comparability of Data. Data obtained from the CPS, SIPP, and other sources are not entirely comparable. This results from differences in interviewer training and experience and in differing survey processes. This is an example of nonsampling variability not reflected in the standard errors. Use caution when comparing results from different sources.

Caution should also be used when comparing CPS estimates in this report, which reflect 1980 census-based population controls, with estimates for 1979 (from March 1980 CPS) and earlier years, which reflect 1970 census-based population controls. This change in population controls had relatively little impact on summary measures such as means, medians, and percentage distributions, but did have a significant impact on levels. For example, use of 1980 based population controls results in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for data collected in 1981 and later years will differ from those for earlier years by more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Since no independent population control totals for persons of Hispanic origin were used before 1983, compare Hispanic estimates over time cautiously.

A number of changes were made in data collection and estimation procedures beginning with the March 1980 CPS. The major changes were the use of a more detailed income questionnaire, the use of the "householder" concept, the introduction of the new farm definition, and use of more detailed income intervals in the upper range of the income distribution. Due to these and other changes, one should use caution when comparing estimates for 1979 through 1991 with estimates for earlier years. A description of these changes and the effect they had on the data is given in the section "Modifications to the March 1980 CPS" of an earlier report (Series P-60, No. 130).

Another major change is that CPS income estimates for 1985 are the first based entirely on households selected from the 1980 census-based sample design. Estimates by type of residence category such as metropolitan, nonmetropolitan, farm and nonfarm, which were omitted from the 1984 report because of the mixed 1970 and 1980 census sampling frame used for the March 1985 CPS, have been resumed. The residence categories reflect metropolitan areas defined as of June 1984. In addition, the March 1986 CPS supplement

questionnaire was revised to enable the coding of higher amounts of earnings from longest job.

Note When Using Small Estimates. Summary measures (such as medians and percentage distributions) are shown only when the base is 75,000 or greater for CPS; 200,000 or greater for SIPP. Because of the large standard errors involved, summary measures would probably not reveal useful information when computed on a smaller base. However, estimated numbers are shown even though the relative standard errors of these numbers are larger than those for corresponding percentages. These smaller estimates permit combinations of the categories to suit data users' needs. Take care in the interpretation of small differences. For instance, even a small amount of nonsampling error can cause a borderline difference to appear significant or not, thus distorting a seemingly valid hypothesis test.

Estimation of Median Incomes. The methodology for computing median income has been changed over the past few years. The computations have been done using either Pareto interpolation or linear interpolation. Currently, linear interpolation is used to estimate all medians. Pareto interpolation assumes a decreasing density of population within an income interval, whereas linear interpolation assumes a constant density of population within an income interval. Estimates of median income for 1979 through 1987 and associated standard errors have been calculated using Pareto interpolation if the estimate is larger than $20,000 for persons or $40,000 for families and households. This is because the width of the income interval containing the estimate is greater than $2,500. Estimates of median income for 1976, 1977, and 1978 and associated standard errors were calculated using Pareto interpolation if the estimate was larger than $12,000 for persons or $18,000 for families and households. This is because the width of the income interval containing the estimate is greater than $1,000. All other estimates of median income and associated standard errors for 1976 through 1991 and almost all of the estimates of median income and associated standard errors for 1975 and earlier were calculated using linear interpolation. Thus, use caution when comparing median incomes above $12,000 for persons or $18,000 for families and households for

different years. Median incomes below those levels are more comparable from year to year since they have always been calculated using linear interpolation. For an indication of the comparability of medians calculated using Pareto interpolation with medians calculated using linear interpolation, see Series P-60, No. 114, *Money Income in 1976 of Families and Persons in the United States.*

Sampling Variability. Sampling variability is variation that occurred by chance because a sample was surveyed rather than the entire population. Standard errors, as calculated by methods described next in "Standard Errors and Their Use," are primarily measures of sampling variability, although they may include some nonsampling error.

Standard Errors and Their Use. A number of approximations are required to derive, at a moderate cost, standard errors applicable to all the estimates in this report. Instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics.

Tables B-1 and B-2 provide CPS standard errors of estimated numbers and estimated percentages, respectively. The standard errors in both tables are of persons, households, families, and unrelated individuals for Total or White, Black, and Hispanic. For Asian and Pacific Islanders, use the standard errors for Total or White from these two tables. Table B-3 has CPS standard error parameters for various characteristics. Table B-4 provides factors to apply to the CPS standard error parameters for estimates prior to 1991. Table B-5 provides CPS Hispanic parameters for estimates prior to 1984. Table B-6 provides CPS Asian and Pacific Islander parameters for poverty, income, and nonincome characteristics. Table B-7 has the year-to-year CPS correlation coefficients for poverty and income characteristics.

Note: See table B-3 or B-6 for the appropriate factor to apply to the above standard errors. For Asian and Pacific Islanders, use the standard errors for Total or White.

Table B-8 and B-9 provide SIPP standard errors of estimated numbers and percentages, respectively. Table B-10 has SIPP standard error parameters by race and sex.

The sample estimate and its standard error enable one to construct a confidence interval, a range that would include the average result of all possible samples with a known probability. For example, if all possible samples were surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then approximately 90 percent of the intervals from 1.645 standard errors below the estimate to 1.645 standard errors above the estimate would include the average result of all possible samples.

A particular confidence interval may or may not contain the average estimate derived from all possible samples. However, one can say with specified confidence that the interval includes the average estimate calculated from all possible samples.

Some statements in the report may contain estimates followed by a number in parentheses. This number can be added to and subtracted from the estimate to calculate upper and lower bounds of the 90-percent confidence interval. For example, if a statement contains the phrase "grew by 1.7 percent (±1.0)," the 90-percent confidence interval for the estimate, 1.7 percent, is 0.7 percent to 2.7 percent.

Standard errors may also be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common type of hypothesis appearing in this report is that the population parameters are different. An example of this would be comparing the poverty rate of Black families to the poverty rate of White families.

Tests may be performed at various levels of significance, where a significance level is the probability of concluding that the characteristics are different when, in fact, they are the same. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better. This means that the absolute value of the estimated difference between characteristics is greater than or equal to 1.645 times the standard error of the difference.

Standard Errors of Estimated Numbers. There are two ways to compute the approximate standard error, s_x, of an estimated number shown in this report. The first uses the formula

$$s_x = fs \qquad (1)$$

where f is a factor from table B-3, B-6, or B-10 and s is the standard error of the estimate obtained by interpolation from table B-1 or B-8. The second method uses formula (2), from which the standard errors in table B-1 and B-8 were calculated. This formula will provide more accurate results than formula (1).

$$s_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and a and b are the parameters in table B-3, B-6, or B-10 associated with the particular type of characteristic. When calculating standard errors for numbers from cross-tabulations involving different characteristics, use the factor or set of parameters for the characteristic which will give the largest standard error.

Illustration

Table 1 shows that there were 35,708,000 persons below the poverty level in 1991. Using formula (1) with f = 1.0 from table B-3 and s = 526,000 interpolating from table B-1, the approximate standard error of 35,708,000 is

$$s_x = 1.0 \times 526{,}000 = 526{,}000$$

Alternatively, using formula (2) with a = -0.000040 and b = 9,502 from table B-3, the approximate standard error of 35,708,000 is

$$s_x = \sqrt{-0.000040 \times 35{,}708{,}000^2 + 9{,}502 \times 35{,}708{,}000} = 537{,}000$$

The 90-percent confidence interval for the estimated number of persons below the poverty level in 1991 is from 34,825,000 to 36,591,000, i.e., 35,708,000 ±1.645 (537,000).

Standard Errors of Estimated Percentages. The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends on the size of the percentage and its base. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. When the numerator and denominator of the percentage are in different categories, use the factor or parameter from table B-3, B-6, or B-10 indicated by the numerator.

The approximate standard error, $s_{x,p}$, of an estimated percentage can be obtained by use of the formula

$$s_{x,p} = fs \qquad (3)$$

In this formula, f is the appropriate factor from table B-3, B-6, or B-10 and s is the standard error of the estimate obtained by interpolation from table B-2 or B-9.

Alternatively, formula (4) will provide more accurate results:

$$s_{x,p} = \sqrt{\frac{b}{x} p(100 - p)} \qquad (4)$$

Notes: To obtain parameters prior to 1991, multiply by the appropriate factor in table B-4. For regional estimates multiply the a and b parameters by 0.74, 0.98, 1.04, and 1.06 for Northeast, Midwest, South, and West, respectively. The a and b parameters should be multiplied by 1.5 for nonmetropolitan residence categories.

Here x is the total number of persons, families, households, or unrelated individuals which is the base of the percentage, p is the percentage ($0 \leq p \leq 100$), and b is the parameter in table B-3, B-6, or B-10 associated with the characteristic in the numerator of the percentage.

Illustration

Table 1 shows that of the 35,708,000 persons below the poverty level in 1991, 23,747,000, or 66.5 percent were White. Using formula (3) with f = 1.0 from table B-3 and s = 0.8 interpolating from table B-2, the approximate standard error of 66.5 percent is

$$s_{x,p} = 1.0 \times 0.8 = 0.8$$

Alternatively, using formula (4) with b = 9,502 from table B-3, the approximate standard error of 66.5 percent is

$$s_{x,p} = \sqrt{\frac{9{,}502}{35{,}708{,}000}(66.5)(100.0 - 66.5)} = 0.8$$

The 90-percent confidence interval for the estimated percentage of persons below the poverty level in 1991 that were White is from 65.2 percent to 67.8 percent, i.e., 66.5 ±1.645(0.8).

Standard Error of a Difference. The standard error of the difference between two sample estimates is approximately equal to

$$s_{x-y} = \sqrt{s_x^2 + s_y^2 - 2rs_xs_y} \qquad (5)$$

Table B-4. **CPS Factors to Apply to a and b Parameters For Estimates Prior to 1991**

Characteristic	Factor
Non-Hispanic	
1989-1991	1.00
1988	1.11
1981-1987	0.94
1960-1980	0.82
Hispanic	
1989	1.00
1988	1.30
1984-1987	0.94

Note: Apply the appropriate factor to the parameters in tables B-3 and B-6. For Hispanic estimates prior to 1984, use the parameters in table B-5.

where s_x and s_y are the standard errors of the estimates, x and y. The estimates can be numbers, percentages, ratios, etc. The correlation coefficient, r, can be determined from table B-7 for year-to-year comparisons for CPS poverty or income estimates of numbers and proportions; for other CPS comparisons and for SIPP assume that r equals zero. This will represent the actual standard error quite accurately for the difference between estimates of the same characteristic in two different areas, or for the difference between separate and uncorrelated characteristics in the same area. However, if there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration

Table 1 shows that the number of persons below the poverty level in 1991 was 35,708,000 and in 1990 was 33,585,000. The apparent difference is 2,123,000. Using formula (2) and a = -0.000040 and b = 9,502 from table B-3, the standard error on 35,708,000 is 537,000. Similarly, the standard error on 33,585,000 is 523,000.

Using formula (5) with r = 0.45 from table B-7, the approximate standard error of the estimated difference 2,123,000 is

$$s_{x-y} = \sqrt{523{,}000^2 + 537{,}000^2 - 2 \times 0.45 \times 523{,}000 \times 537{,}000} = 556{,}000$$

The 90-percent confidence interval for the estimated difference is from 1,208,000 to 3,038,000, i.e., 2,123,000 ±1.645(556,000). Because this interval does not contain zero, we can conclude with 90-percent confidence that the number of persons below the poverty level in 1991 is different from the figure for 1990.

Standard Error of a Median. The sampling variability of an estimated median depends on the form of the distribution and the size of the base. One can approximate the reliability of an estimated median by determining a confidence interval about it. (See the section "Standard Errors and Their Use" for a general discussion of confidence intervals.)

Estimate the 68-percent confidence limits of a median based on sample data using the following procedure.

1. Determine, using formula (4), the standard error of the estimate of 50 percent from the distribution.
2. Add to and subtract from 50 percent the standard error determined in step 1.
3. Using the distribution of the characteristic, determine upper and lower limits of the 68-percent confidence interval by calculating values corresponding to the two points established in step 2.

Use Pareto interpolation for any point in an income interval greater than $2,500 in width, and linear interpolation otherwise. The formulas for interpolation are:

$$\text{Pareto: } X_{pN} = \exp\left[\frac{\mathrm{Ln}(pN/N_1)}{\mathrm{Ln}(N_2/N_1)}\mathrm{Ln}(A_2/A_1)\right]A_1 \qquad (6)$$

$$\text{Linear: } X_{pN} = \frac{pN - N_1}{N_2 - N_1}(A_2 - A_1) + A_1 \qquad (7)$$

where

X_{pN} = estimated upper and lower bounds for the confidence interval ($0 \leq p \leq 1$). For purposes of calculating the confidence interval, p takes on the values determined in step 2. Note that X_{pN} estimates the median when p = 0.50.

N = *for distribution of numbers:* the total number of units (persons, households, etc.) for the characteristic in the distribution.

= *for distribution of percentages:* the value 1.0.

p = the values obtained in step 2.

A_1, A_2 = the lower and upper bounds, respectively, of the interval containing X_{pN}.

N_1, N_2 = *for distribution of numbers:* the estimated number of units (persons, households, etc.) with values of the characteristic greater than or equal to A_1 and A_2, respectively.

= for distribution of percentages: the estimated percentage of units (persons, households, etc.) having values of the characteristic greater than or equal to A_1 and A_2, respectively.

exp is the exponential function.

Ln is the natural logarithm function.

A mathematically equivalent result is obtained by using common logarithms (base 10) and antilogarithms.

4. Divide the difference between the two points determined in step 3 by two to obtain the standard error of the median.

Table B-7. **CPS Year-To-Year Correlation Coefficients For Poverty and Income Estimates**

Characteristics	Below poverty level								All income levels	
	1972 - 1983 or 1984 - 1991		1983 - 1984		1971 - 1972		1970 - 1971		1959 - 1991	
	Persons	Families	Persons	Families	Persons	Families	Persons	Families	Persons	Families
Total	0.45	0.35	0.39	0.30	0.15	0.14	0.31	0.28	0.30	0.35
White	0.35	0.30	0.30	0.26	0.14	0.13	0.28	0.25	0.30	0.35
Black	0.45	0.35	0.39	0.30	0.17	0.16	0.35	0.32	0.30	0.35
Other Races	0.45	0.35	0.30	0.30	0.17	0.16	0.35	0.32	0.30	0.35
Hispanic	0.65	0.55	0.56	0.47	0.17	0.16	0.35	0.32	0.45	0.55

Notes: These correlations are for comparisons of consecutive years. For comparisons of nonconsecutive years, assume the correlations are zero. Correlation coefficients for 1983-84 are lower than those for 1982-83 or 1984-85 because of the phase-in of the new sample design.

Use of the above procedure could result in standard errors which differ from those given in the detailed tables. The reasons for this discrepancy are the use of a more detailed distribution than that given in the tables in determining the published standard errors, and the rounding of the numbers to thousands in the published tables. Linear interpolation was almost always used to compute the published medians and standard errors. Occasionally, a median may lie in an open-ended interval. To calculate its standard error the user must call Housing and Household Economic Statistics Division of the Census Bureau to obtain the methodology.

Illustration

Table 20 shows that the median income deficit for families below the poverty level was $4,910 in 1991. Table 20 also shows that the size, or base, of the distribution from which this median was determined was 7,712,000 families.

1. Using formula (4) with b = 2,243 from table B-3, the standard error of 50 percent on a base of 7,712,000 is about 0.9 percent.
2. To obtain a 68-percent confidence interval on the estimated median, add to and subtract from 50 percent the standard error found in step 1. This yields percentage limits of 49.1 and 50.9.
3. The lower and upper limits for the interval in which the median falls are $4,000 and $5,000, respectively (from table 20). Then, by addition, the estimated numbers of families below the poverty level with an income deficit greater than or equal to $4,000 and $5,000 are 4,495,000 and 3,793,000, respectively. Using formula (7), the lower limit for the confidence interval of the median is

$$\frac{0.509 \times 7{,}712{,}000 - 4{,}495{,}000}{3{,}793{,}000 - 4{,}495{,}000}(5{,}000 - 4{,}000) + 4{,}000 = 4{,}811$$

Similarly, the upper limit is approximately

$$\frac{0.491 \times 7{,}712{,}000 - 4{,}495{,}000}{3{,}793{,}000 - 4{,}495{,}000}(5{,}000 - 4{,}000) + 4{,}000 = 5{,}009$$

Thus, a 68-percent confidence interval for the median income deficit for families below the poverty level is from $4,811 to $5,009.

4. Therefore, the standard error of the median is

$$\frac{(5{,}009 - 4{,}811)}{2} = 99$$

Standard Error of a Mean for Grouped Data. The formula used to estimate the standard error of a mean for grouped data is

$$s_{\bar{x}} = \sqrt{(b/y)S^2} \qquad (8)$$

In this formula, y is the size of the base of the distribution and b is a parameter from table B-3, B-6, or B-10. The variance, S^2, is given by the following formula:

$$S^2 = \sum_{i=1}^{c} p_i\bar{x}_i^2 - \bar{x}^2 \qquad (9)$$

where $\bar{x}$, the mean of the distribution, is estimated by

$$\bar{x} = \sum_{i=1}^{c} p_i\bar{x}_i \qquad (10)$$

c is the number of groups; i indicates a specific group, thus taking on values 1 through c.

p_i is the estimated proportion of households, families or persons whose values, for the characteristic (x-values) being considered, fall in group i.

$\bar{x}_i$ is $(Z_{i-1} + Z_i)/2$ where Z_{i-1} and Z_i are the lower and upper interval boundaries, respectively, for group i. $\bar{x}_i$ is assumed to be the most representative value for the characteristic for households, families, and unrelated individuals or persons in group i.

Group c is open-ended, i.e., no upper interval boundary exists. For income of families below the poverty level, use -$2,500 as the midpoint for "Loss" and $20,600 as the midpoint for "$20,000 and over." For income of unrelated individuals below the poverty level, use -$9,100 as the midpoint for "Loss" and $5,200 as the midpoint for "$5,000 and over." For income tables for all families, use -$5,000 for "Loss" and $150,000 for $100,000 and over." For the income deficit table, use $7,400 as the midpoint of "$5,000 or more" interval and $4,900 for the "$1,500 or more" interval. Otherwise, the approximate average value for an open-ended interval is

$$\bar{x}_c = \frac{3}{2}Z_{c-1} \qquad (11)$$

Standard Error of a Ratio. Certain estimates may be calculated as the ratio of two numbers. The standard error of a ratio, x/y, may be computed using

$$s_{x/y} = \frac{x}{y}\sqrt{\left[\frac{s_x}{x}\right]^2 + \left[\frac{s_y}{y}\right]^2 - 2r\frac{s_x s_y}{xy}} \qquad (12)$$

In formula (12), r represents the correlation between the numerator and the denominator of the estimate.

For one type of ratio, the denominator is a count of families or households and the numerator is a count of persons in those families or households with a certain characteristic. If there is at least one person with the characteristic in every family or household, use 0.7 as an estimate of r. An example of this type is the mean number of children per family with children.

For all other types of ratios, r is assumed to be zero. If r is actually positive (negative), then this procedure will provide an overestimate (underestimate) of the standard error of the ratio. Examples of this type are the mean number of children per family and the poverty rate.

NOTE: For estimates expressed as the ratio of x per 100 y or x per 1,000 y, multiply formula (12) by 100 or 1,000, respectively, to obtain the standard error.

Illustration

Table 1 shows the number of families below the poverty level, x, was 7,712,000 and the total number of families, y, was 67,173,000. The ratio of families below the poverty level to the total number of families was .115 or 11.5 percent. The standard error of this estimate (x/y) is calculated by using the following steps:

1. Compute s_x and s_y using formula (1).

$$s_x = \sqrt{+0.000093 \times 7{,}712{,}000^2 + 2{,}243 \times 7{,}712{,}000} = 151{,}000$$

$$s_y = \sqrt{-0.000012 \times 67{,}173{,}000^2 + 1{,}899 \times 67{,}173{,}000} = 271{,}000$$

2. Compute $(s_x/x)^2 = 0.000383$.
3. Compute $(s_y/y)^2 = 0.000016$.
4. Using formula (12) with r = 0, the estimate of the standard error is

$$s_{x/y} = \frac{7{,}712{,}000}{67{,}173{,}000}\sqrt{0.000383 + 0.000016} = 0.002$$

The 90-percent confidence interval for the ratio of the families below the poverty level to all families is from 0.112 to 0.118, or 11.2 percent to 11.8 percent, i.e., 11.5 ±1.645(0.2).

APPENDIX C. Underreporting of Income

The quality of the income data derived from the March Current Population Survey (CPS) is affected by five main sources of error. The first, sampling errors, are errors attributable to the fact that a sample rather than a census was taken. The other four main sources of error, usually termed collectively as nonsampling errors, result from 1) use of a sampling frame that does not include all units for which the survey was intended to provide data, 2) failure to contact all sample units selected, i.e., noninterview and undercoverage problems, 3) poor quality of responses, and 4) missing data problems.

Over the years, evaluations of the quality of the March CPS income estimates have revealed downward biases when the survey estimates are compared to independent estimates derived from sources such as the National Income and Product Accounts (NIPA), statistics based on Federal individual income tax returns, data from the Social Security Administration (SSA), etc.

Most analyses of the magnitude of nonsampling errors in the March CPS income estimates have been made at the "aggregate" level since the kind of data needed to make such comparisons are relatively easy to obtain. Some studies have also been conducted at the "micro" level by matching the data provided by individuals with data obtained from administrative records systems for those same individuals. These studies, such as the March 1973 CPS-IRSSSA exact match, have shown that the nonsampling error problem is much more complex than that measured at the aggregate level. For example, a significant number of respondents provide responses to the amounts of income received that appear to exceed the actual amount received. These are offset by larger errors in the other direction by a somewhat higher proportion of other respondents.

Deriving independent estimates of aggregate income for purposes of evaluating the survey data is difficult. The survey and administrative sources use different definitions, cover different universes, and are based on concepts that are not exactly the same. Therefore, adjustments to the administrative sources must be made to help correct for these inconsistencies and arrive at a valid independent estimate that can be used to make fair and accurate estimates of the quality of the survey estimates. These adjustments attempt to 1) remove income that is received by the institutional population, the deceased, and persons not residing in the United States at the time of the interview, 2) remove any components of income that are received as "in-kind" payments or benefits, and 3) remove any lump-sum or one-time payments, withdrawals, etc.

A degree of uncertainty must be attached to the independent estimates for several reasons. First, not all of the information needed to make some of these adjustments mentioned above are available. Second, administrative sources are also subject to estimation problems resulting from the lack of adequate data, and in the case of the NIPA, periodically undergo significant revision to correct for some of these errors when more recent or more accurate information become available. Third, even though attempts are made to include income received by those operating in the legal "informal" economy in the NIPA these estimates are subject to some unknown degree of error. Fourth, no attempt is made to include estimates of income received through illegal means.

In spite of this uncertainty regarding development of independent estimates it is important to attempt to monitor the quality of the income estimates using these sources. Table C-1 contains comparisons of survey and independent estimates of aggregate income by type of income for 1987. The estimates shown in this table are not directly comparable to those for 1983, which was the last year for which independent estimates were made. Major revisions to the NIPA and some revisions in the methods for arriving at the CPS concepts make most comparisons for these years inconsistent. Because of the difficulties in deriving adequate independent estimates, the table does not cover all types of income identified in the March CPS.

Overall, the survey estimate of $2.941 trillion was about 89 percent of the independent estimate. This result is achieved mainly because the survey estimate of wage and salary income was 99 percent of the independent estimate and this income source accounts for 75 percent of the CPS income estimate from all sources. For the other sources of income the survey estimates range from 34 percent of the independent estimate for farm income to 99 percent for Federal government and military pensions.

The apparent extreme underreporting problem for farm income helps to illustrate the difficulty in developing meaningful independent estimates. The estimate of $46.9 billion shown in table C-1 for farm income was derived directly from the NIPA which bases its estimates

Table C-1. **Comparison of CPS Aggregate Money Income Concepts in 1987 With Independent Estimates of Aggregate Money Income Adjusted to CPS Money Income Concepts, by Type of Income and Reported and Imputed CPS Amounts: 1987**

[1]Only includes estates and trusts reported as survivor benefits. Other estates and trust are included with rent and royalty income.

on data from the United States Department of Agriculture. In contrast, farm income reported on Federal individual income tax returns for 1987 was only $10.5 billion.

The CPS continues to have serious underreporting problems for property income (interest, dividends, net rent, and net royalty income) where the survey estimates range between 53 and 72 percent of the independent estimates.

Benefits from the means-tested programs, Aid to Families With Dependent Children (AFDC) and Supplemental Security Income (SSI) also exhibit significant survey underestimates at 73 and 83 percent of the independent estimates respectively. For these incomes, however, a significant portion of this problem is associated with misclassification of the source of income. In the CPS, AFDC benefits are often reported by survey respondents as having come from other sources of welfare payments, mainly General Assistance. Benefits from the SSI program are sometimes reported as Social Security income by respondents who do not know the true source of the benefit.

Benefits from the Veterans' Administration, unemployment compensation, and workers' compensation, all of which have a past history of significant underestimation in the March CPS, continue to have such a problem. Veterans' payments have also been shown to be subject to errors of misclassification with a significant proportion of these benefits being reported incorrectly by respondents as military retirement. The low reporting rate for workers' compensation may be in part related to significant levels of one-time, lump-sum settlements that are conceptually excluded from the survey's definition of income. Since no data are available that permit a precise adjustment to the independent estimate for the existence lump-sum payments, this figure may be overestimated. While undoubtedly some persons incorrectly report lump-sum amounts in the survey, resulting in an error in the opposite direction, these errors are thought to be much smaller.

Pension income estimates from the survey show a peculiar pattern of underreporting problems. For Federal and military pensions the survey estimate is about 99 percent of that derived from independent sources while for private pensions and annuities the survey estimate is only about 46 percent of the independent source. The high level of reporting indicated for Federal and military retirement may be overstated somewhat because of the misreporting problem that exists between military retirement and Veteran's payments. The extremely low level of reporting for private pensions may be, in part, due to a significant overestimate of the independent estimate. Since information concerning the prevalence of lump-sum payments is not available, adequate adjustments to exclude these types of payments have not been made.

Table C-2 has been included in this report to illustrate the wide variation between income estimates based on Federal individual income tax returns and the NIPA. The NIPA estimates adjusted to survey concepts (fourth column of table C-2) were used as the basis for the calculations in table C-1. In some cases these income amounts differ significantly from those shown in the other columns of table C-2. The first column labeled "IRS AGI AS REPORTED" represents the amounts as computed from unaudited Federal tax returns. The second column labeled "IRS AGI AFTER TCMP ADJUSTEMENT" reflects adjustments made to the amounts shown in the first column based on results of the Taxpayer Compliance Measurement Program (TCMP). This program, which performs extensive audits of a sample of tax returns every 3 years, provides estimates of the amount of income that should have been reported but was not reported for both tax filers and nonfilers that should have filed. Finally, in the third column, labeled "AGI AFTER BEA RECONCILIATION", are estimates of adjusted gross income (AGI) for Federal individual tax returns derived by adjusting the NIPA amounts to AGI concepts. This reconciliation is performed annually by the Bureau of Economic Analysis (BEA).

The results of the TCMP indicate that large amounts of income are not reported on tax returns as shown by the differences in the first and second columns. The differences for selfemployment income are especially large.

The NIPA estimates used to evaluate the quality of the survey data differ from AGI income for five main reasons. First, the NIPA estimates include the income of persons who are not required to file tax returns. Second, the NIPA estimates reflect both taxable and nontaxable income amounts. Third, the accounting methods used in the NIPA, such as the treatment of depreciation, differ from those used by the IRS. Fourth, the NIPA does not use individual income tax return data extensively in its estimation methodology because of concerns regarding high levels of misreporting. Fifth, some attempts have been made to adjust the NIPA estimates to exclude lump-sum payment, withdrawals, etc. that are sometimes included as income for tax purposes.

Table C-2. **Comparison of Independent Sources of Income for 1987**

(Figures in billions of dollars)

Source of income	IRS AGI as reported	IRS AGI after TCMP adjustment	AGI after BEA reconsiliation	NIPA adjusted to survey concept
Wages and salary	2,163.9	2,239.8	2,238.9	2,215.9
Nonfarm self-employment	105.5	276.1	210.8	219.8
Farm self-employment	−1.3	10.5	39.9	46.9
Interest	[1] 169.0	186.4	178.7	244.4
Dividends	66.8	75.5	100.4	73.7
Net rents and royalties	−7.2	6.5	23.5	40.3
Pensions and annuities	[2] 124.8	147.1	164.6	125.8

[1]Excludes $31.0 in tax exempt interest not in AGI.
[2]Excludes $47.9 in pensions and annuities not in AGI and an unknown amount of taxable lump-sum payments.
