In the tables of classification of ages for the white, free colored, and slaves, the first and most striking fact is that of the excess of the females in the free colored, and that of the males in the white and the slaves. There are other points worthy of attention embraced in the columns of ages, which will be noted in our remarks upon some of the other tables which have been framed from these. In Great Britain, exclusive of Ireland, in 1851, to every 100,000 females, the males were 96,741; in 1801, 103,353 females to 100,000 males—being, for each Census, 30 males (nearly) to 31 females.

Excess of females over males in Great Britain.—1801, 180,027; 1811, 201,598; 1821, 210,537; 1831, 297,246; 1841, 348,950; 1851, 349,871. To 100,000 males at home, in 1851, there were 105,012 females, or 20 males to 21 females.

The table annexed will exhibit the per cent. of persons at different ages living in the United Kingdom in 1821 and 1841. It is taken from Porter's Progress of the Nation. The ages for 1851 have not yet been published.

TABLE XXIV.—PER-CENTAGE OF AGES IN GREAT BRITAIN.

AGES.	ENGLAND.		WALES.		SCOTLAND.		IRELAND.	
	1821.	1841.	1821.	1841.	1821.	1841.	1821.	1841.

RELATIVE RANK OF THE STATES—INCREASE AND DECREASE.

In the table which follows, the relative rank of the several States is shown, according to their respective populations in white, free colored, and slaves, and the total of all classes, the federal population, and the area in square miles. The extent of square miles assumed as the basis of calculation is the same as that adopted in another place; though, as was remarked then, its aggregate differs from that of the table furnished by Colonel Abert. At another time the reasons of this difference will be examined into; but it is sufficient now to say that the areas of the States are given on the authority of late reports of the Land Office, and, in a few instances, on the authority of a report made under the direction of Mr. Livingston, Secretary of State in 1835. As all of the statements, except those that relate to the Western States, are, at best, approximations, and as in no two publications have they ever agreed, it will be safe to rely upon the figures of Colonel Abert.

A few pages further in the volume will be found many other interesting comparative tables of population for the States and for the United States at different periods, which were not sufficiently complete to appear in the regular order.

TABLE XXV.—RELATIVE RANK OF THE STATES AND TERRITORIES WITH REGARD TO EACH CLASS OF POPULATION, TOTAL AND FEDERAL, AND RANK IN SQUARE MILES.

DEAF AND DUMB, BLIND, INSANE, AND IDIOTIC.

The tables of Deaf and Dumb, Blind, Insane, and Idiotic, it will be seen, differ in many respects very materially from those which were previously published by the office, particularly in regard to the numbers of each color and class in the several States. The aggregates for the United States correspond more nearly with the previous publication.

As this portion of the Census of 1840 led to very great discussion, and excited a good deal of public feeling, it was deemed important to bestow upon it more than ordinary attention. The work which had been finished when the present Superintendent took charge of the office, being examined for one or two States by the Schedules, was found to differ so materially from the new results obtained, that no alternative seemed to be left than to examine the whole of the States anew, and to publish the results of the re-examination rather than of the previous one, in which errors had been detected. This was at once undertaken. Before aggregating the tables for the United States, however, it was deemed proper to institute a third and final examination of those States in which the differences were the most considerable, to wit: Virginia, North and South Carolina, Georgia, Ohio, Kentucky, Tennessee, Indiana, Illinois, Wisconsin, Massachusetts, Rhode Island, Maryland, District of Columbia, Florida, etc. For the performance of this task the most capable persons were assigned, under the most minute and particular instructions. Their report, although differing in some respects from both of the results referred to, was found to sustain very nearly those that are published in the present volume.

In examining the Schedules it is almost impossible for any two persons to arrive at the same results. This was discovered by referring the same State to two of the best qualified, consecutively, with identical instructions. Their reports, in every instance, differed. The manner of indicating the insane, idiotic, &c., among the whole mass of the population, leads to many mistakes, and involves an amount of labor in taking them off which may be conceived of in reflecting that the name of every person in the United States must be passed in review for the purpose. It is also difficult at times to decide between the letters used to indicate the insane and the idiotic. Sometimes an individual will be "blind and insane," or "deaf and dumb, and blind and insane," and so of other combinations; and different persons will classify them differently. Again, in poor-houses, hospitals, etc., it is difficult, in many cases, to say if the party be only pauper, or blind pauper, etc., etc.

If these statistics are hereafter to be taken, it will be better to have a separate schedule for the purpose. The chances of error will thus be materially diminished, and the labor of preparation for publication reduced very much. For practical purposes, it would be well to publish the ages of each of the classes of blind, insane, etc., as well as the sex; so as to show what proportion of the whole are subjects of instruction or treatment, and many other facts interesting to vital statisticians and philanthropists. It would also be well to separate the black from the mulatto, etc. Many interesting tables are in part prepared upon these and other kindred matters, but cannot be included in this volume.

The following tables will show the whole number of deaf and dumb, etc., in each of the States, and in the United States, as ascertained by the Census of 1830 and 1840. It was deemed proper to include them with the tables of 1850, but not to make any comparisons for the three periods until a further and particular examination could be had of the schedules of 1840, about which so many difficulties occurred, together with the reports which were made upon them at the time in Congress and at the State Department. When this is done, the whole subject of 1850 will again come under examination and revision.

It would, perhaps, be desirable to have copied into a volume, preserved in the department, to be consulted by institutions for the deaf and dumb, blind, insane, etc., the names and address, age, etc., of every person in the United States embraced within either of these classes. Several institutions have expressed an anxious wish that such a catalogue should be prepared. It would be imparting a new and enhanced value to the results of this portion of the Census.

In the thirty-fourth report of the institution for the deaf and dumb, in New York, Dr. Peet, after criticising the statistics of the Census previously published, relating to this class of persons, makes some remarks in regard to the "deaf" only, which, in connexion with the tables published, are worthy of notice. He says:

"But another difficulty is the variety of phrases employed by the assistant marshals to designate the deaf and dumb, and the gratuitous return, as 'deaf,' of a large number of middle-aged and elderly persons, who were, perhaps, only hard of hearing. In the list of names from our own State, (New York) which, as we have already observed, appears to embrace only about four-fifths of those to be found in the original schedules, seven hundred and twenty-eight are returned as 'deaf and dumb,' seventy-eight as 'dumb,' twenty-two (for the sake of euphemism, we suppose) as 'mute,' one as 'deaf mute,' two as 'speechless,' and one hundred and seventy-six as 'deaf.' Of this last number, seventy were under the age of twenty, thirty-nine between twenty and thirty, and sixty-seven above thirty. The number over thirty would have been much larger if the clerk who compiled the list had not been desired to omit 'deaf' persons over that age, a distinction which he generally remembered, but sometimes forgot. Of the persons thus returned as 'deaf' under twenty, the greater number were doubtless proper subjects for an institution like our own; while the elderly people returned as 'deaf,' had nothing to do with our calculations.

"This distinction was not understood at Washington. Some of the clerks who compiled the tables of the deaf and dumb, included not only the 'dumb,' (whether they included the 'mute' we cannot say,) but all the 'deaf' of whatever age; thus making it appear, as many of the 'deaf' were very old people, that there was an incredible portion of deaf mutes over seventy years of age in certain States. When this error was pointed out, a re-examination of the returns for those States was made, and *all* the deaf, of whatever age, excluded—an error in the other extreme. The proper mode would have been to classify the 'deaf and dumb,' and the 'deaf,' in separate columns.

"It must be admitted, however, that the instructions to the assistant marshals do not require the 'deaf' who are not dumb to be returned at all. Most of the officers, therefore, neglected them entirely. Here and there, an assistant marshal, with rather more zeal than knowledge, returned all the persons commonly called 'deaf' (perhaps some of them merely hard of hearing) to the number sometimes of a dozen in a single town. It might be of some interest to know in what part of our country this infirmity of deafness, occurring late in life, is most prevalent; but from the desultory nature of the returns of this kind that we have, no conclusions can be drawn from them.

"It is not generally understood that a degree of deafness, which is little more than a serious social inconvenience when it occurs in middle life, or comes with other infirmities in old age, occurring in infancy, would induce dumbness, or at least disqualify the child for instruction in ordinary schools. The child under ten who is now deaf will hereafter become mute, at least so far that he needs and is entitled to the privileges of a special institution for the education of deaf mutes. The man or woman who becomes deaf in mature life does not, therefore, become mute. Such cases might, as a part of 'vital statistics,' be noted, as well as the cases of those who become blind late in life; but to judge of the probable number of deaf mutes who require the means of education, the deaf who become so late in life should be carefully distinguished from those who are so from birth or infancy. This can be done in another census, by merely noting, in each case, at what age the hearing was lost; and we would suggest this as a very desirable improvement whenever a census of the deaf and dumb is taken.

"As we have already stated, though some of the 'deaf' were doubtless inadvertently included in the official tables, the plan finally adopted was to exclude all the 'deaf,' and to include the 'deaf and dumb' and 'dumb' only. Thus it is, that while so many deaf and dumb children were overlooked, and so many deaf children withheld from the original returns by misapprehension or false pride, those of the latter who were returned were excluded from the tables prepared in the Census office."
