DIAGRAM.

Per cent attending school in the total population and in certain classes at each year of age from 7 to 20 years: 1920	1042

TABLES.

UNITED STATES.

1. School attendance, by sex, for principal population classes, for the United States: 1850–1920	1043
2. School attendance, by sex and age periods, for population classes, for the United States: 1920 and 1910	1044
3. School attendance of population 5 to 20 years of age, by single years, for population classes, by sex, for the United States: 1920 and 1910	1045

DIVISIONS AND STATES.

4. School attendance, by broad age groups, by divisions and states: 1920 and 1910	1047
5. School attendance of population 7 to 20 years of age, by sex, by divisions and states: 1920 and 1910	1048
6. School attendance of population 7 to 20 years of age, by age periods, by divisions and states: 1920 and 1910	1049
7. School attendance of population 7 to 20 years of age, for principal population classes, by divisions and states: 1920	1050
8. School attendance of population 7 to 20 years of age, for principal population classes, by divisions and states: 1920 and 1910	1051
9. School attendance of population 7 to 13 years of age, for principal population classes, by divisions and states: 1920 and 1910	1052
10. School attendance of Indian population, by sex and age periods, by divisions and states: 1920	1053
11. School attendance of Chinese and Japanese population, by sex and age periods, for divisions and selected states: 1920	1054
12. School attendance, by sex and age periods, for principal population classes, by divisions and states: 1920	1055
13. School attendance of population 5 to 20 years of age, by single years, for males and females and for principal population classes, by divisions and states: 1920	1070

PRINCIPAL CITIES.

14. School attendance of population 7 to 20 years of age, for principal population classes, for cities having 100,000 inhabitants or more: 1920	1082
15. School attendance of population 7 to 20 years of age, for principal population classes, for cities having, in 1920, 100,000 inhabitants or more: 1920 and 1910	1083
16. School attendance of population 7 to 13 years of age, for principal population classes, for cities having, in 1920, 100,000 inhabitants or more: 1920 and 1910	1084
17. School attendance, by age periods, for males and females and for principal population classes, for cities having 25,000 inhabitants or more: 1920	1085
18. School attendance of population 5 to 20 years of age, by single years, for males and females and for principal population classes, for cities having 250,000 inhabitants or more: 1920	1131

URBAN AND RURAL.

19. School attendance of the urban and rural population 7 to 20 years of age, and 7 to 13 years of age, by divisions and states: 1920 and 1910	1137
20. School attendance of the urban and rural population, by age periods, for males and females and for principal population classes, by geographic divisions: 1920	1138
21. School attendance of the urban and rural population, by age periods, by states: 1920	1140

CHAPTER XI.—SCHOOL ATTENDANCE.

INTRODUCTION.

The statistics of school attendance compiled from the returns of the census of 1920 are based upon the answers to a question on the population schedule as to whether the person enumerated had attended school between September 1, 1919, and the census date, January 1, 1920. If the person had attended any kind of school, college, or other educational institution for any length of time within the period in question an affirmative answer was to be made. The total number of persons returned as attending school is, therefore, larger than the number who were simultaneously in attendance at any one time between September 1, 1919, and January 1, 1920. Although this period represents considerably less than half the entire school year 1919–20, the number of persons who attended school in that year subsequently but not prior to January 1 would form an insignificant proportion of the total enrollment. The figures are, therefore, fairly comparable with those for preceding censuses, at which the enumerations were made later in the year.

The statistics on school attendance here presented are limited to continental United States and cover the United States as a whole, the states, and cities having 25,000 inhabitants or more. Less detailed statistics for states, for counties, and for incorporated places having 2,500 inhabitants or more, and complete statistics for the outlying possessions enumerated at the Fourteenth Census, are presented in Volume III of the Fourteenth Census Reports.

For the sake of simplicity, the school years 1919–20, 1909–10, etc., are designated in the tables by "1920," "1910," etc.

Ages of school attendance.—Ages of compulsory school attendance vary in the different states, beginning at 7 years in 21 states and at 8 years in 27 states and the District of Columbia. Table 3 (p. 1045) presents, for the United States, the number and per cent of persons attending school by single years of age from 5 to 20, inclusive, so that from this table it is possible to compile the number of children attending school for any desired age group. Tables 13 and 18 give similar statistics for states and for large cities, respectively. In the remaining tables school-attendance figures are presented for persons 7 to 20 years of age, sometimes grouped into the age periods 7 to 13, 14 and 15, 16 and 17, and 18 to 20, and several of the tables also show the number attending school under 7 and 21 years of age and over.

Population classes.—The differences among the proportions attending school for the several classes of the population are due in part to differences in distribution as between urban and rural communities. The native whites of foreign or mixed parentage and the foreign-born whites are found mainly in urban communities, in which school attendance begins and, in general, ends at somewhat earlier ages than in rural communities. (See Table 20.) It is probable, however, that the decidedly higher proportions for the native stock, 14 years of age and over, are due in part to the better economic and social position of this class of population. Attendance at school, college, or any other educational institution at the older school ages is more clearly indicative of a higher economic level than school attendance at the younger ages, when local school facilities and legal requirements are dominant factors. (See Table 2.)

The smaller proportions attending school at the ages of 14 and over among the foreign-born whites than among the natives are not due wholly to the fact that those in school leave before reaching this age, but result in part from the influx of immigrants at and above the age of 14, most of whom never attend school in the United States. The difference between the proportions attending school for the two sexes in the foreign-born white population at and above the age of 14 is probably due to the feeling, common in many foreign countries, that education is much more important for men than for women.

UNITED STATES AS A WHOLE.

Comparison with preceding censuses.—Because of a difference in the form of the census inquiry regarding school attendance, the statistics for 1890 and 1900 are probably not exactly comparable with those for the other census years covered by Table 1. At the censuses prior to 1890 and subsequent to 1900 the inquiry was merely as to whether the person enumerated had attended school at any time during the period between the beginning of the school year and the census date; but in 1890 and 1900 the enumerators were required to ascertain also the number of months of school attendance. It is undoubtedly true that in some cases, when the person interviewed by the enumerator was not the one to whom the information applied, the fact of school attendance was known, while the number of months of attendance was unknown. In such cases enumerators might sometimes have been disposed to make no reply whatever to the inquiry, rather than to give only a partial one. The returns for 1910 and 1920 are, therefore, doubtless more nearly complete than those for 1890 and 1900.

DIVISIONS AND STATES.

In making comparisons among the geographic divisions and states, it must be borne in mind that the census inquiry as to school attendance ascertains only the fact that a certain number of persons in a given state or division attended school during the census year, throwing no light on the duration of attendance. In other words, the census figures indicate merely the fact that education was being obtained but not the relative amount of education obtained. There are very considerable differences among the geographic divisions and states in regard to the average length of time schools are in session during the year, and consequently in regard to the average annual duration of school attendance.

URBAN AND RURAL COMMUNITIES.

Because of the marked differences between urban and rural communities in regard to school facilities, and also in regard to the composition and characteristics of their population, separate statistics for school attendance are given for the two classes of communities in Tables 19 to 21. In drawing the distinction between urban and rural population, all incorporated places (and all towns in Massachusetts, Rhode Island, and New Hampshire) having 2,500 inhabitants or more are treated as urban and the remainder of the country as rural.

In Massachusetts and Rhode Island it is not the practice, as in practically all the other states, to incorporate, as separate muncipalities, the relatively densely populated portions of "towns" (which are the primary divisions of the counties), and no town as a whole is incorporated as a muncipality until it attains a population greatly in excess of 2,500; and in New Hampshire a similar condition exists, although the state contains two incorporated villages, each of which has fewer than 2,500 inhabitants. For this reason those towns having 2,500 or more inhabitants in the three states named are treated as urban, although portions of their areas are rural in character. The urban areas in the three states in question, as classified by the census, thus contain relatively small numbers of inhabitants who in other sections of the country would be segregated as rural. Nevertheless, in most of the towns having 2,500 inhabitants or more in Massachusetts, Rhode Island, and New Hampshire by far the greater part of the population resides within the more densely settled areas, so that the proportion classed as urban, considering each state as a whole, is not greatly exaggerated by the practice adopted.

The proportions attending school at the earlier ages are somewhat smaller, and at the later school ages somewhat larger, in rural than in urban communities. The explanation is probably to be found in the facts that in rural districts, where schools are less accessible, children begin their schooling at somewhat older ages than in cities and towns, and that larger proportions of rural youth at and above the age of 14 remain in school because employment on the farm does not preclude school attendance, at least during a part of the school year, while employment in the city frequently does.

The slightly larger proportion of persons attending school in rural than in urban communities in 1920, considering the combined 7 to 20 age group as a whole, does not indicate, of course, that the rural population of the United States was receiving more schooling than the urban. This condition is due merely to the fact that in many parts of the country the schools in rural districts are in session for shorter periods during each year than those in urban communities, and consequently the amount of schooling received by rural inhabitants, while not larger in the aggregate, is often prolonged through a greater number of years. (See Table 19.)

PER CENT ATTENDING SCHOOL IN THE TOTAL POPULATION AND IN CERTAIN CLASSES AT EACH YEAR OF AGE FROM 7 TO 20, INCLUSIVE: 1920.

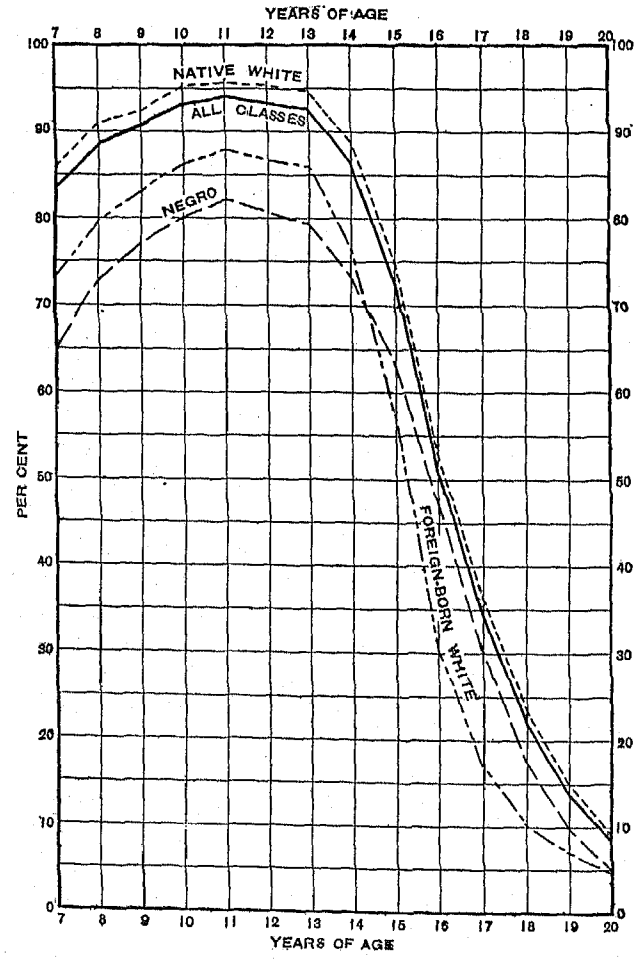

TABLE 1.—SCHOOL ATTENDANCE, BY SEX, FOR PRINCIPAL POPULATION CLASSES, FOR THE UNITED STATES: 1850–1920.

[Because of variations from census to census in the manner of presenting statistics of school attendance, it is impossible to give comparative figures for any specified age group. The school-attendance percentages are, however, based on the population 5 to 20 years of age, inclusive, for the reason that the numbers of persons attending school at ages above and below these limits are insignificant. For all classes and for the white and Negro population in 1860 and 1850 the number 5 to 20 years of age has been calculated by adding estimates for age 20 to the numbers returned as in the 5 to 19 group; and for the Negro population in 1890 and 1880 the number in the 5 to 20 group was estimated on the assumption that the proportion which this group formed of the total at all ages was the same for the Negro population as for the total colored population (Negroes, Indians, Chinese, Japanese, and other nonwhites).]

CLASS OF POPULATION AND CENSUS YEAR.	POPULATION 5 TO 20 YEARS OF AGE, INCLUSIVE.			TOTAL PERSONS ATTENDING SCHOOL.
