Greenhouses and greenhouse products: 1919 and 1909	887
Greenhouse establishments classified according to value of products: 1919	888

CHAPTER XIII.—FOREST PRODUCTS OF FARMS, AND NURSERIES AND GREENHOUSES.

Introduction.—This chapter gives the data collected at the farm census of 1920 for three groups of products which, while they are produced to a considerable extent on farms and have many of the characteristics of crops, have not been classified with farm crops at the present census. These are (1) forest products of farms, (2) nursery products, and (3) greenhouse products. In addition to the data relating directly to these products, information is given with regard to the area of woodland and of timberland in farms, the acreage used for growing nursery stock, and the number of square feet under glass. Comparative figures from the census of 1910 are given for all items except woodland and timberland; and comparative figures from the census of 1900 also are given for forest products and nurseries.

FOREST PRODUCTS AND TIMBERLAND.

The data presented in this report cover only that part of the woodland and timberland included in the farm area and the forest products obtained therefrom, and do not represent the total acreage of all woodland or timberland in the United States nor the value of all forest products produced during the years covered by the different censuses.

Explanation of terms.—As the terms were defined for use in the different farm censuses, *forest products* include firewood, fence posts, crossties, pulp wood, saw logs, poles, bark, small quantities of turpentine and rosin, etc.; *woodland* includes all land covered with natural or planted forest trees which produce, or later may produce, firewood or other forest products; and *timberland*, or the area in merchantable timber, includes that part of the woodland covered by trees mostly of saw-log size.

Forest products of farms: 1899 to 1919.—At the different censuses the inquiries on the farm schedule have related to the value of all forest products cut on farms in the calendar year preceding the census date, regardless of whether the products were sold from or used on the farms in that year or were being held for sale or for use later.

The number of farms reporting forest products cut in 1919 was 1,819,685, or 28.2 per cent of all farms in the United States on January 1, 1920. The value of all forest products of farms in 1919 was $394,321,828; of this amount, $217,716,046, or 55.2 per cent, represented the value of products sold (or cut and held for sale), and $176,605,782, or 44.8 per cent, represented the value of products used on the farm (or cut and held for use later). The average value of forest products per farm reporting was $217. A part of the forest products derived from the farm woodland and intended for use on the farm represents lumber for new buildings, repairs, or other improvements on the farm property, while a much larger part doubtless consists of firewood—the latter coming especially from low-quality wood not suitable for lumber.

The proportion of all farms reporting forest products in 1919 (28.2 per cent) was considerably less than in 1909 (37.9 per cent), the decreased proportion being general throughout the divisions and states. The 101.9 per cent increase in the value of all forest products for 1919 as compared with 1909 was due largely to the high prices prevailing for forest products in 1919, the increase being much larger for the products sold from farms than for the products used on farms.

TABLE 1.—FOREST PRODUCTS OF FARMS IN THE UNITED STATES: 1919 AND 1909.

[Figures for divisions and states in Tables 2 and 3.]

ITEM.	1919	1909
Forest products of farms:		
Farms reporting	1,819,685	2,409,853
Per cent of all farms	28.2	37.9
Value[1]	$394,321,828	$195,306,283
Increase over preceding census	$199,015,545	$85,441,509
Per cent of increase	101.9	77.8
Average per farm reporting	$217	$81
Forest products sold (or cut and held for sale):		
Farms reporting	518,567	.....
Per cent of farms reporting forest products	28.5	.....
Value	$217,716,046	$92,524,205
Per cent of value of all forest products	55.2	47.4
Average per farm reporting	$420	.....
Forest products used (or cut and held for use):		
Farms reporting	1,660,233	.....
Per cent of farms reporting forest products	91.2	.....
Value	$176,605,782	$102,782,078
Per cent of value of all forest products	44.8	52.6
Average per farm reporting	$106	.....

[1] The value of forest products of farms in 1899 was $109,864,774.

Woodland and timberland in farms: 1920.—The area of woodland included in farms in 1920 was 167,730,794 acres, of which 35,270,527 acres, or practically one-fifth (21 per cent), was classed as timberland—that is, woodland with trees mostly of saw-log size. Much of the difference between the total acreage of woodland and the acreage of timberland is represented by farm wood lots, partially cut-over land, and land covered with young growth but containing few, if any, trees of saw-log size suitable for lumber.

Tables for divisions and states.—The value of forest products of farms and the acreage of woodland and timberland in farms are presented, by divisions and states, in Tables 2, 3, and 4.

TABLE 2.—FOREST PRODUCTS OF FARMS, BY DIVISIONS AND STATES: 1899 TO 1919.

[A minus sign (—) denotes decrease. Per cent not shown when more than 1,000.]

DIVISION AND STATE.	FARMS REPORTING.				VALUE.					AVERAGE VALUE PER FARM REPORTING.

NURSERIES AND NURSERY PRODUCTS.

No distinction has been made on the farm schedules for the several censuses between ordinary farms growing nursery products on a small scale and the special establishments devoted exclusively to the growing of such products. All farms and establishments propagating nursery stock (young trees, shrubs, vines, etc., for transplanting) for commercial purposes have been classed as nurseries.

TABLE 5.—NURSERIES AND NURSERY PRODUCTS IN THE UNITED STATES: 1899 TO 1919.

[Figures for divisions and states in Table 6.]

ITEM.	1919	1909	1899
Number of nurseries (farms and establishments) reporting	4,049	5,582	4,991
Acreage used for growing nursery stock	51,453	80,618	59,492
Increase over preceding census[1]	−29,165	21,126	.....
Per cent of increase[1]	−36.2	35.5	.....
Average per farm or establishment reporting	12.7	14.4	11.9
Receipts from sale of products	$20,434,389	$21,050,822	$10,123,873
Increase over preceding census[1]	−$616,433	$10,926,949	.....
Per cent of increase[1]	−2.9	107.9	.....
Average receipts per nursery	$5,047	$3,771	$2,028
Average receipts per acre	$397.15	$261.12	$170.17

[1] A minus sign (−) denotes decrease.

The number of farms and establishments reporting nursery stock grown in 1919 was 4,049, and the area used in growing such products was 51,453 acres, or an average of 12.7 acres per farm or establishment reporting. The total amount received from the sale of nursery products in 1919 was $20,434,389, or an average return of $5,047 for each of the farms or establishments reporting, and an average return of $397.15 per acre used for growing nursery products.

In the tabulation of the returns from the census of 1920 the farms and establishments reporting receipts from the sale of nursery products in excess of $250 were separated from those reporting receipts less than $250, it being believed that those of the former class would approximately represent the commercial nurseries. This classification of farms and establishments is shown, by divisions and states, in Table 7.

The acreage used in growing nursery products in 1919 was less than the corresponding acreage in 1909 or 1899. In general, the importance of nurseries and nursery products has shown a decline for 1919 as compared with 1909, but the average receipts per farm or establishment and per acre were considerably higher in 1919 than in 1909 or in 1899, due largely, no doubt, to higher prices received for nursery products in 1919.

Tables for divisions and states.—The statistics for nurseries and nursery products are shown, by divisions and states, in Tables 6 and 7.

TABLE 6.—NURSERIES AND NURSERY PRODUCTS, BY DIVISIONS AND STATES: 1899 TO 1919.

[A minus sign (—) denotes decrease. Per cent not shown when base is less than 100 or when per cent is more than 1,000.]

GREENHOUSES AND GREENHOUSE PRODUCTS.

The first inquiry under this subject on the farm schedule, both in 1920 and in 1910, related to the number of square feet under glass. This area included both the area in greenhouses or hothouses, and the area covered by hotbeds or cold frames, though the latter item is of relatively small importance.

The receipts from sales as reported in 1910 included the sales of flowers and flowering plants grown in the open ground, as well as those grown under glass, and while in 1920 such receipts were not specifically called for by the schedule, they were included in many cases, especially where flowers were grown both under glass and in the open ground. In 1920 the products of greenhouse establishments were divided into two classes, namely, flowers and flowering plants, and vegetables and vegetable plants.

The number of farms and establishments reporting greenhouse products grown in 1919 was 17,199 and the area under glass in greenhouses was 162,368,593 square feet. The total amount received from the sale of greenhouse products in 1919 was $77,380,230, of which amount $61,892,352, or 80 per cent, represented the receipts from the sale of flowers and flowering plants, and $15,487,878, or 20 per cent, represented the receipts from the sale of vegetables and vegetable plants. The average return for each of the 17,199 farms and establishments reporting was $4,499. The farms or establishments reporting at least $250 received from the sale of greenhouse products in 1919 and those reporting receipts less than $250 are shown separately in Table 10.

All figures for 1919 show considerable increases as compared with the figures for 1909, as may be noted by reference to Table 8.

TABLE 8.—GREENHOUSES AND GREENHOUSE PRODUCTS IN THE UNITED STATES: 1919 AND 1909.

[Figures for divisions and states in Table 9.]

ITEM.	1919	1909
Number of farms and establishments reporting	17,199	10,614
Square feet under glass	162,368,593	114,655,276
Increase over preceding census	47,713,317	.....
Per cent of increase	41.6	.....
Receipts from sale of greenhouse products	$77,380,230	$34,872,329
Flowers and flowering plants	$61,892,352	.....
Vegetables and vegetable plants	$15,487,878	.....
Increase over preceding census	$42,507,901	.....
Per cent of increase	121.9	.....
Average receipts per farm or establishment	$4,499	$3,286

Tables for divisions and states.—The statistics for greenhouses and greenhouse products are shown, by divisions and states, in Tables 9 and 10.

TABLE 9.—GREENHOUSES AND GREENHOUSE PRODUCTS, BY DIVISIONS AND STATES: 1919 AND 1909.

[A minus sign (−) denotes decrease.]

DIVISION AND STATE.	FARMS AND ESTABLISHMENTS REPORTING.		SQUARE FEET UNDER GLASS.				RECEIPTS FROM SALE OF PRODUCTS.						AVERAGE RECEIPTS PER ESTABLISHMENT.	
					Increase.		Total.		Increase.		Flowers and flowering plants, 1919	Vegetables and vegetable plants, 1919

CHAPTER XIV.—FARM POPULATION.

Introduction.—In the reports of the Tenth Census (1880) a table was published showing what part of the population of the United States was living in cities of 8,000 inhabitants and over on the date of each census, from 1790, when the proportion in the city group was only 3.3 per cent, to 1880, when this proportion had risen to 22.7 per cent. This classification represents the first attempt to make a general distinction, in the population statistics of the United States, between city dwellers and country dwellers. The table just mentioned is reprinted, with figures for the later censuses, in the reports of the 1920 census.[1] The proportion living in cities of 8,000 inhabitants and over had increased to 43.8 per cent in 1920.

In the reports of the Thirteenth Census (1910) a new classification of the population on the basis of the size of the place of residence was introduced. The two groups or classes distinguished were designated, respectively, "urban," and "rural." Urban population was defined as that residing in cities and other incorporated places having 2,500 inhabitants and over, while the remainder of the population made up the rural group. This classification was made, not only for the current data, but also for the population reported at earlier censuses, as far back as 1880, and the figures were presented, by states, for the four censuses (1880 to 1910, inclusive). Similar figures for 1890, 1900, 1910, and 1920 are given in the reports of the 1920 census.[2] The percentage urban for the United States in 1880 was 28.6; in 1890, 35.4; in 1900, 40; in 1910, 45.8; and in 1920, 51.4.

Both of these classifications were made, however, primarily to throw light upon the number and status of city dwellers, while the rural population, or noncity dwellers, appeared as a sort of by-product—a group composed partly of farmers and their families; partly of the populations of mill villages, engaged almost exclusively in manufacturing; partly of the inhabitants of mining settlements; and partly of the incidental population found, even in a farming section, living in the open country but not engaged in any agricultural pursuit nor in any way directly connected with agriculture.

To meet the need for a classification which should represent more definitely that part of the population directly dependent on agriculture, or connected with it, provision was made in 1920 for a separate tabulation of the farm population.

[1] Reports of the Fourteenth Census, Vol. I, p. 43.

[2] Reports of the Fourteenth Census, Vol. I, p. 46.

Farm population—definition.—The farm population, as the term is here used, includes all persons actually living on farms, without regard to occupation, and also those farm laborers (and their families) who, while not living on a farm, nevertheless live in strictly rural territory, outside the limits of any village or other incorporated place.

The instructions given to the enumerators with regard to placing the designation for farm population on the population schedule were as follows:

> Write "*Fm*" opposite the name of the first person enumerated in the house, if the family is living on a farm (as defined in the agricultural instructions), including the families of both farm operators and farm laborers.
>
> "*Fm*" is also to be entered for the house of a farm laborer and his family living on a small parcel of land *not* within the limits of an incorporated place.

All persons engaged in agricultural pursuits, together with their families, are therefore included in the farm population, except those farm operators who do not live on the farm, and those farm laborers who live in a city or village, away from the farm where they work. The numbers of these two classes are too small to be of any great significance, and further, they represent mainly persons who are living under urban (or village) conditions, rather than in a farm environment.

The farm population also includes, by virtue of their residence on a farm, a considerable number of persons engaged in occupations not agricultural and not directly connected with agriculture. A large part of this group is made up of the grown sons and daughters of the farmers, still living at home, and of other relatives living with the farm family.

The line of demarkation between the farm population and the urban population is not absolute, because a few farms are located within the limits of cities and other incorporated places having 2,500 inhabitants or over, and the families residing on them are therefore included in the urban population, as well as in the farm population. Most of these farms are situated in the edge of the incorporated area, however, where living conditions are more like those in the open country than they are like those in the main part of the city or village. For comparison, therefore, the farm population may be contrasted in most cases with the urban population of the same area, since these two groups will show the widest difference in the conditions under which they live.

Between the farm population and the rural population, in which the farm population is practically all

included, there is naturally a general similarity. This similarity is greater where the nonfarm part of the rural population is engaged principally in the trades (carpentering, blacksmithing, etc.) and in those professional and commercial activities required to supply the needs of the farmers and their families, and less where the nonfarm part of the rural population is engaged in factory work or in lumbering or mining.

The farm population data are correlated, in the accompanying tables, with similar data for the total population and for the urban and rural population, in order to afford a convenient basis for comparisons. The urban population, as already stated, comprises that residing in cities and other incorporated places having 2,500 inhabitants or more—including towns of that size in New Hampshire, Massachusetts, and Rhode Island. The rural population is that residing in smaller incorporated places and in unincorporated territory.

Total farm population.—The farm population of the United States in 1920 was 31,614,269, representing 29.9 per cent of the total population. The total population, amounting to 105,710,620, comprised an urban population of 54,304,603 and a rural population of 51,406,017—51.4 per cent being urban and 48.6 per cent rural.

TABLE 1.—FARM POPULATION OF THE UNITED STATES, AND TOTAL POPULATION, URBAN AND RURAL: 1920.

ITEM.	Number or amount.
Total population	**105,710,620**
Farm population	31,614,269
Per cent of total population	29.9
Farm population in urban territory	255,629
In cities and other incorporated places of 25,000 and over	52,955
In cities and other incorporated places of 10,000 to 25,000	36,131
In cities and other incorporated places of 2,500 to 10,000	166,543
Farm population in rural territory	31,358,640
Per cent of rural population	61.0
Urban population (living in cities and other incorporated places of 2,500 inhabitants and over) [1]	54,304,603
Rural population	51,406,017
In incorporated places of less than 2,500 inhabitants	8,969,241
In unincorporated territory	42,436,776
Per cent of total population urban	51.4
Per cent of total population rural	48.6

[1] In three New England states (New Hampshire, Massachusetts, and Rhode Island) towns having 2,500 inhabitants or over were included with incorporated places and classified as urban.

More than 99 per cent of the farm population were residing in rural territory (outside of incorporated places having 2,500 inhabitants or over), the number reported as living on farms inside the limits of cities and other incorporated places of 2,500 inhabitants and over being only 255,629, or 0.8 per cent of the whole number.

The farm population living in rural territory formed 61 per cent of the whole rural population, as above defined, and was equal to 73.9 per cent of the rural population living in unincorporated territory—that is, outside the small incorporated places (under 2,500 inhabitants).

There were four states (see Table 5) in which the farm population living in rural territory formed more than three-fourths of the rural population, namely, Mississippi, 81.8 per cent; Arkansas, 78.3 per cent; Georgia, 77.5 per cent; and South Carolina, 77.2 per cent. In a number of states, also, the farm population was nearly equal to the population living outside incorporated places of any kind.

Farm population, by sex.—The total farm population of the United States in 1920 (31,614,269) comprised 16,496,338 males and 15,117,931 females, or 109.1 males per 100 females. In the urban population the ratio of males to females was much lower—100.4 to 100.

The larger number of males in the farm population, in proportion to the number of females, results in part from the fact that most of the farm work is done by men—in particular, that most persons coming to the farm to secure work are men. For while the census reports on occupations show considerable numbers of women employed as farm laborers, most of these are members of the farmer's immediate family. Many of the urban occupations, on the other hand, are followed chiefly or largely by women.

For some reason, at any rate, the opportunities for employment in the city seem to appeal more strongly to women than to men. Hence the farmer's daughter is more likely to leave the farm and go to the city than is the farmer's son, who may find profitable employment on another farm when his services are no longer needed at home.

TABLE 2.—FARM POPULATION OF THE UNITED STATES, AND TOTAL POPULATION, URBAN AND RURAL, BY SEX: 1920.

CLASS OF POPULATION.	NUMBER.			Males per 100 females.
	Total.	Male.	Female.	
Total population	**105,710,620**	**53,900,431**	**51,810,189**	**104.0**
Farm population	31,614,269	16,496,338	15,117,931	109.1
Per cent of total population	29.9	30.6	29.2	.....
Urban population	54,304,603	27,203,312	27,101,291	100.4
Rural population	51,406,017	26,607,119	24,708,898	108.0

Farm population, by race, nativity, and parentage.—Of the total farm population in 1920, 66.6 per cent were native whites of native parentage, 12.1 per cent were native whites of foreign or mixed parentage, 4.7 per cent were foreign-born whites, and 16.8 per cent were colored. The urban population on the same date was 45.2 per cent native white of native parentage, 28.9 per cent native white of foreign or mixed parentage, 19.1 per cent foreign-born white, and 6.8 per cent colored.

TABLE 3.—FARM POPULATION OF THE UNITED STATES, AND TOTAL POPULATION, URBAN AND RURAL, BY RACE, NATIVITY, AND PARENTAGE: 1920.

RACE, NATIVITY, AND PARENTAGE.	Total population.	FARM POPULATION.		Urban population.	Rural population.	PER CENT DISTRIBUTION.			
		Number.	Per cent of total population.			Total population.	Farm population.	Urban population.	Rural population.

Negro	10,463,131	5,112,253	48.9	3,559,473	6,903,658	9.9	16.2	6.6	13.4
Indian	244,437	142,714	58.4	15,219	229,218	0.2	0.5	(1)	0.4
Chinese	61,639	4,287	7.0	50,008	11,631	0.1	(1)	0.1	(1)
Japanese	111,010	39,504	35.6	53,830	57,180	0.1	0.1	0.1	0.1
All other	9,488	1,857	19.6	5,989	3,499	(1)	(1)	(1)	(1)

[1] Less than one-tenth of 1 per cent.

The two outstanding differences between the farm population and the urban population with respect to race and nativity are the large proportion of colored in the farm population (16.8 per cent, as compared with 6.8 per cent in the urban population), and the small proportion of foreign-born whites (4.7 per cent in the farm population, as compared with 19.1 per cent in the urban population). Thus while the farm population included only 10.7 per cent of the total foreign-born white population of the country, it included 48.7 per cent of the total colored population.

These differences in the composition of the farm population are brought out, in detail, in Table 7, which presents figures for the farm population, by race, nativity, and parentage, by divisions and states, with data for the total population, and for the urban and rural population, by color and nativity, for comparison.

Farm population, by age.—In Tables 4 and 8 the farm population is classified by age into three groups, comprising, respectively, those under 10 years of age, those from 10 to 20 years, inclusive, and those 21 years of age and over. As in the case of the other classifications, figures are also presented for the total population, and the urban and rural population, with the same age grouping, for comparison. The most significant comparison is doubtless that with the urban population, which is practically exclusive of the farm population and which is made up for the most part of persons living under conditions radically different from those which prevail on the farms.

TABLE 4.—FARM POPULATION OF THE UNITED STATES, AND TOTAL POPULATION, URBAN AND RURAL, BY AGE: 1920.

AGE GROUP.	Total population.	FARM POPULATION.		Urban population.	Rural population.	PER CENT DISTRIBUTION.			
		Number.	Per cent of total population.			Total population.	Farm population.	Urban population.	Rural population.
All ages	**105,710,620**	**31,614,269**	**29.9**	**54,304,603**	**51,406,017**	**100.0**	**100.0**	**100.0**	**100.0**
Under 10 years	22,971,305	8,138,070	35.4	10,326,027	12,645,278	21.7	25.7	19.0	24.6
10 to 20 years	21,852,795	7,824,106	35.8	10,039,484	11,813,311	20.7	24.7	18.5	23.0
21 years and over	60,886,520	15,652,093	25.7	33,939,092	26,947,428	57.6	49.5	62.5	52.4

In the United States as a whole, on January 1, 1920, 25.7 per cent of the farm population were under 10 years of age, as compared with 19 per cent of the urban population; 24.7 per cent of the farm population were in the group from 10 to 20 years old, inclusive, as compared with 18.5 per cent of the urban population; and 49.5 per cent of the farm population were 21 years of age and over, as compared with 62.5 per cent of the urban population. These figures show, in general, the effects of migration from the farm to the city on the part of adults, such migration operating both to increase the proportion 21 years of age and over in the urban population and to reduce the proportion of this age in the farm population.

There are considerable differences among the states, however, with regard to this relation between the two classes of population with respect to the age classification. The excess of children in the farm population as compared with the urban population was most marked in those parts of the country where farming is the dominant industry; and there are a few states, where the major part of the population is urban, in which the percentage under 10 years of age was greater in the urban population than in the farm population, and several where the proportion from 10 to 20 was only slightly higher in the farm population than in the urban. It is possible that the large element of foreign stock in the cities of these states may account for the relatively large proportion of children in the urban population.

TABLE 5.—FARM POPULATION, AND TOTAL POPULATION, URBAN AND RURAL, BY DIVISIONS AND STATES: 1920.

DIVISION AND STATE.	Total population.	FARM POPULATION. Total. Number.	Total. Per cent of total population.	In cities and other incorporated places of 2,500 and over.	In rural territory. Number.
