This document describes the data contained in the firm level revenue-augmented Longitudinal Business Database (RE-LBD) and provides background on the construction of the data. The revenue-augmented LBD is a firm level data created by adding revenue data from the detailed tax receipts variables contained in the Standard Statistical Establishment List (SSEL) and the Business Register (BR). Key variables for the construction of the revenue variable include the FIRMID identifying the firm, revenue measures collected from income tax filings, industry classification codes detailing the activities of the employer, the legal form of organization and the year associated with that filing. The RE-LBD starts in year 1997 and ends in 2015.

Relevant Datasets: LBD, SSEL

Required Dataset Permissions: LBD 1997-2015, SSEL 1997-2015
