BULLETIN 94

STATISTICS OF EMPLOYEES

EXECUTIVE CIVIL SERVICE OF THE UNITED STATES

1907

WASHINGTON
GOVERNMENT PRINTING OFFICE
1908

BULLETINS OF THE PERMANENT CENSUS.

1. Geographical distribution of population.
2. Quantity of cotton ginned in the United States (crops of 1899 to 1902, inclusive).
*3. Street and electric railways.
4. A discussion of increase of population.
*5. Central electric light and power stations.
6. Mineral industries of Porto Rico.
7. Estimates of population of the larger cities of the United States for 1901, 1902, and 1903.
8. Negroes in the United States.
9. Mines and quarries.
*10. Quantity of cotton ginned in the United States (crops of 1899 to 1903, inclusive).
11. Municipal electric fire alarm and police patrol systems.
12. The executive civil service of the United States.
13. A discussion of age statistics.
14. Proportion of the sexes in the United States.
15. A discussion of the vital statistics of the Twelfth Census.
16. Irrigation in the United States: 1902.
17. Telephones and telegraphs: 1902.
18. Census of manufactures: 1904. Michigan.
*19. Quantity of cotton ginned in the United States (crops of 1900 to 1904, inclusive).
20. Statistics of cities having a population of over 25,000: 1902 and 1903.
21. Commercial valuation of railway operating property in the United States: 1904.
22. Proportion of children in the United States.
23. Census statistics of teachers.
24. Insular and municipal finances in Porto Rico for the fiscal year 1902–3.
25. American cotton supply and its distribution for the year ending August 31, 1905.
26. Illiteracy in the United States.
27. Census of manufactures: 1905. Maryland and District of Columbia.
28. Census of manufactures: 1905. Kansas.
29. Census of manufactures: 1905. Nebraska.
30. Census of manufactures: 1905. Arizona, Indian Territory, New Mexico, and Oklahoma.
31. Census of manufactures: 1905. Delaware.
32. Census of manufactures: 1905. Iowa.
33. Census of manufactures: 1905. Florida.
*34. Census of manufactures: 1905. Montana, North Dakota, South Dakota, and Wyoming.
35. Census of manufactures: 1905. Missouri and Arkansas.
36. Census of manufactures: 1905. Rhode Island.
37. Census of manufactures: 1905. Colorado, Idaho, Nevada, and Utah.
38. Census of manufactures: 1905. Indiana.
39. Census of manufactures: 1905. North Carolina and South Carolina.
40. Cotton production and statistics of cottonseed products: 1905.
41. Census of manufactures: 1905. New Hampshire and Vermont.
42. Census of manufactures: 1905. Connecticut.
43. Census of manufactures: 1905. Alabama.
44. Census of manufactures: 1905. Virginia and West Virginia.
45. Statistics of cities having a population of 8,000 to 25,000: 1903.
46. Census of manufactures: 1905. Minnesota.
47. Census of manufactures: 1905. Kentucky and Tennessee.
48. Census of manufactures: 1905. Louisiana, Mississippi, and Texas.
49. Census of manufactures: 1905. California, Oregon, and Washington.
50. Statistics of cities having a population of over 30,000: 1904.
51. Census of manufactures: 1905. Maine.
52. Census of manufactures: 1905. Illinois.
53. Census of manufactures: 1905. Massachusetts.
54. Census of manufactures: 1905. New Jersey.
55. Census of manufactures: 1905. Georgia.
56. Census of manufactures: 1905. Wisconsin.
57. Census of manufactures: 1905. United States.
58. Census of manufactures: 1905. Ohio.
59. Census of manufactures: 1905. New York.
60. Census of manufactures: 1905. Pennsylvania.
61. Census of manufactures: 1905. Canning and preserving, rice cleaning and polishing, and the manufacture of beet sugar.
62. Census of manufactures: 1905. Glass and clay products.
*63. Supply and distribution of cotton for the year ending August 31, 1906.
64. Census of manufactures: 1905. Butter, cheese, and condensed milk, flour and grist mill products, and starch.
65. Census of manufactures: 1905. Coke.
66. Census of manufactures: 1905. Automobiles and bicycles and tricycles.
67. Census of manufactures: 1905. Metal working machinery.
*68. Child labor in the District of Columbia.
69. Child labor in the United States.
70. Census of manufactures: 1905. Petroleum refining.
71. Estimates of population: 1904, 1905, 1906.
72. Census of manufactures: 1905. Boots and shoes, leather and leather gloves and mittens.
73. Census of manufactures: 1905. Electrical machinery, apparatus, and supplies.
74. Census of manufactures: 1905. Textiles (combined textiles, cotton manufactures, hosiery and knit goods, wool manufactures, silk manufactures, flax, hemp, and jute products and dyeing and finishing textiles).
75. Census of manufactures: 1905. Agricultural implements.
76. Cotton production: 1906.
77. Census of manufactures: 1905. Lumber and timber products.
78. Census of manufactures: 1905. Iron and steel and tin and terne plate.
79. Census of manufactures: 1905. Printing and publishing.
80. Census of manufactures: 1905. Paper and wood pulp.
81. Census of manufactures: 1905. Shipbuilding.
82. Census of manufactures: 1905. Musical instruments, attachments, and materials.
83. Census of manufactures: 1905. Slaughtering and meat packing, manufactured ice, and salt.
84. Census of manufactures: 1905. Carriages and wagons, and the steam and street railroad car industry.
85. Census of manufactures: 1905. Pens and pencils, buttons, needles, pins, and hooks and eyes, oilcloth and linoleum, and turpentine and rosin.
86. Census of manufactures: 1905. Copper, lead, and zinc, smelting and refining.
87. Census of manufactures: 1905. Tobacco.
88. Census of manufactures: 1905. Power employed in manufactures.
89. Census of Oklahoma and Indian Territory: 1907.
90. Supply and distribution of cotton for the year ending August 31, 1907.
91. Water transportation: 1906. United States.
92. Census of manufactures: 1905. Chemicals and allied products.
93. Census of manufactures: 1905. Earnings of wage-earners.
94. Statistics of employees in the executive civil service of the United States: 1907.

NOTE.—Bulletins in this list, except those marked with an asterisk (*), may be obtained upon application to the Director of the Census.

LETTER OF TRANSMITTAL.

DEPARTMENT OF COMMERCE AND LABOR,
BUREAU OF THE CENSUS,
Washington, D. C., April 13, 1908.

SIR:

I have the honor to transmit herewith a bulletin on the employees in the executive civil service, prepared by Lewis Meriam, acting chief of the division of revision and results.

The persons referred to in this bulletin as "employees in the executive civil service" include practically all employees of the executive civil service of the United States, with the exception of the persons in the consular and diplomatic service, the postmasters, the clerks in post offices not having free delivery, the mechanics and laborers in navy yards and naval stations, and the employees of the Isthmian Canal Commission employed on the isthmus. These classes have been omitted, either because it was impracticable to secure data concerning them or because they were peculiar in some technical respect, such as the character of their appointment or the method of their compensation, so that the inclusion of statistics concerning them would have tended to impair the value of the figures for the remaining classes. The statistics for postmasters are, however, presented separately in the second section of this bulletin.

The statistics presented concerning the employees in the executive civil service and the postmasters were secured as of July 1, 1907. They were collected on the same cards on which was reported the information necessary to compile the Official Register, a duty which was performed by the Bureau of the Census for the first time in 1907. As the statistical inquiry was practically new, the schedule was to some degree experimental; and if a bulletin similar to this is again prepared, certain changes will be made in some of the questions. In most respects, however, the returns received were entirely satisfactory.

Very respectfully,

S. N. D. North
Director.

Hon. OSCAR S. STRAUS,
Secretary of Commerce and Labor.

STATISTICS OF EMPLOYEES
EXECUTIVE CIVIL SERVICE OF THE UNITED STATES: 1907.

By Lewis Meriam, A. M.

SCOPE OF THE STATISTICS.

On July 1, 1907, according to the Official Register, the executive civil service of the United States, exclusive of the consular and the diplomatic service, furnished employment to 286,902 persons. Of this number, 29,103, or 10.1 per cent, were employed at Washington and 257,799, or 89.9 per cent, elsewhere.

For the purposes of the ensuing statistical analysis the data concerning many of these employees have been omitted, in a few instances because the returns were received too late for tabulation, but more often because certain classes of employees are peculiar in some technical respect, such as the character of their appointment or the method of their compensation, and thus the inclusion of data concerning them would have tended to destroy the comparability of the figures for classes which are in technical respects alike. The most important of the classes omitted for the latter reason include 62,663 postmasters,[1] 18,376 mechanics and laborers at navy yards and naval stations, 12,850 clerks in post offices not having free delivery, and 1,031 occasional employees of the Weather Bureau. Data for 4,584 employees of the Isthmian Canal Commission at work on the isthmus were too incomplete to be included. Only 575 persons were omitted because returns concerning them were received too late for tabulation. The total number of persons omitted is shown in Table 1, by Departments and independent offices.

On account of these omissions shown in Table 1, the number of employees for whom detailed figures are given in the statistical analysis is only 185,874. This number includes all the persons who will be referred to hereafter as "employees in executive civil service."

The data collected concerning this group may be conveniently considered in four sections: The first treating all employees combined; the second, the employees in each Department, bureau, or independent office; the third, the employees appointed from each state or territory; and the fourth, the war veterans in the service. The statistics presented in each of these sections fall into two classes, general and special. The general statistics, which will be considered first, show the class of people in the Government service, as indicated by their sex, race and nativity, age, and marital condition. The special statistics, on the other hand, are concerned with the position of these people in the service—that is, the character of their appointment, the character of their work, the period of their service, and the rate of their compensation.

Table 1.—*Employees in executive civil service reported in the Official Register but not included in the statistical tables: 1907.*

[1] Statistics concerning the 62,663 postmasters included in this number are presented in the second part of this bulletin, page 156.

A distinction is made in the consideration of most of these subjects between employees in the District of Columbia and those elsewhere. It is introduced primarily because statutes in respect to the apportionment of appointments have been passed which affect only employees in the District of Columbia, and, moreover, future legislation will probably still further differentiate between the two classes. The distinction is, too, of value sociologically. Outside of Washington

[1] For the postmasters detailed statistics are given in the second part of this bulletin, page 156.

the Government employees lose their identity in the general population; in Washington, on the contrary, the character of the general population is largely determined by the Government employees. Exclusive of their families, the employees at Washington considered in this bulletin probably form about 8 per cent of the total population of the District and about 17 per cent of its breadwinners. To a large extent, therefore, the tables here presented for Washington may be used in studying social conditions at the national capital.

SEX.

The aggregate number of employees in the executive civil service in the District of Columbia and elsewhere, distributed by sex, is shown in Table 2.

The Revised Statutes of the United States, it should be noted in connection with Table 2, provide that "women may, in the discretion of the head of any Department, be appointed to any of the clerkships therein authorized by law, upon the same requisites and conditions, and with the same compensation, as are prescribed for men." The general effect of this statutory provision is to throw such positions as it is believed can be satisfactorily filled by women open to the competition of the two sexes. The proportions in Table 2, therefore, are principally determined by two factors—the proportion of positions in the civil service which can be satisfactorily filled by women, and the extent to which women have successfully competed for such positions against men.

TABLE 2.—*Distribution, by sex, of employees in executive civil service, classified by place of employment: 1907.*

SEX.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE.					
	Number.			Per cent distribution.		
	Total.	District of Columbia.	Elsewhere.	Total.	District of Columbia.	Elsewhere.
Both sexes	185,874	25,351	160,523	100.0	100.0	100.0
Male	172,053	17,993	154,060	92.6	71.0	96.0
Female	13,821	7,358	6,463	7.4	29.0	4.0

Women, as Table 2 shows, are more important among the employees in the District of Columbia than among those elsewhere. Of the employees in the District, 7,358 are women, or almost 3 in 10, while of the employees elsewhere, only 6,463 are women, or 1 in 25. Although the total number of employees in the District is less than one-sixth of the total number elsewhere, the number of women in the District exceeds the number elsewhere by 895. This difference is mainly to be attributed to the fact that in the District a far larger proportion of the positions are suitable for women than is the case elsewhere.

The executive civil service elsewhere than in the District of Columbia contains, in fact, a rather surprisingly small proportion of women. At the census of 1900 there were 38 distinct occupation classes, each containing at least 5,000 women 16 years of age and over; and in not one of these classes did the women form less than 4.2 per cent of the total.[1] Of the employees in the executive civil service elsewhere than in the District of Columbia, women form only 4 per cent.

In the District of Columbia, as has been noted, the relative importance of women is far greater. As a consequence, in only 19 of the 38 occupations containing at least 5,000 women at the census of 1900 did women form a larger percentage of the total number. Of these 19 occupations, 7 were classified as manufacturing pursuits, 5 as domestic and personal service, 4 as professional and scientific pursuits, and 3 as trade and transportation.

That the relative importance of women is much greater among the employees in the District than among those elsewhere is graphically indicated by Diagram 1, which classifies the employees by sex and place of employment.

RACE AND NATIVITY.

The distribution of the employees by race and nativity is given for each of the sexes, classified as in the District of Columbia and elsewhere, in Table 3.

The native whites are of course the most numerous class among Government employees. Table 3 shows that of the total number, 156,021, or 83.9 per cent, are native whites; 18,525, or 10 per cent, foreign born whites; and 11,328, or 6.1 per cent, colored. Of these colored, 8,352 are negroes; 1,725, Indians; 1,047, Filipinos; 142, Chinese; and 62, Japanese.

Although the relative importance of the native whites is about the same in the District as it is elsewhere, the relative importance of the other classes varies considerably between the two localities. The negroes are of far greater relative importance in the District than they are elsewhere, while the reverse is true of the other colored and of the foreign born whites. All but 9 of the Indians and Mongolians are, in fact, employed outside of the District. Of the employees in the District, 2,785, or 11 per cent, are negroes. Roughly speaking, therefore, 1 employee in the District out of every 9 is a negro.

AGE.

One of the most interesting questions concerning the employees in the executive civil service is that of their age. Table 4 accordingly presents the distribution, by age, of the employees in the District of Columbia and elsewhere, classified by sex.

TABLE 4.—DISTRIBUTION, BY AGE, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY SEX AND PLACE OF EMPLOYMENT: 1907.

[1] Less than one-tenth of 1 per cent.

The general significance of Table 4 can perhaps be more readily grasped from the following tabular statement, which presents the approximate median age of the employees of known age, classified by sex and

place of employment.[1] The median may be defined as the point at which the employees are equally divided in respect to age, one-half being older than the median, the other half younger.

SEX.	APPROXIMATE MEDIAN AGE OF EMPLOYEES OF KNOWN AGE IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	District of Columbia.	Elsewhere.
Both sexes	36.5	38.8	36.2
Male	36.6	39.7	36.3
Female	35.7	37.0	34.3

The most significant facts indicated by the tabular statement are that the median age of all employees in executive civil service is 36.5 years, that the employees in the District of Columbia are about two and a half years older than those elsewhere, and that the men are only slightly older than the women.

The oldest age periods, however, contain a considerably larger proportion of the men than of the women. This is clearly indicated in the following tabular statement, which shows for each sex the number and percentage of the employees who are at least 65 years of age. The year 65 has been selected as the dividing line, because it is the age at which, in several foreign countries, government employees are retired.

SEX.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE: 1907.					
	Number 65 years of age and over.			Per cent 65 years of age and over.		
	Total.	District of Columbia.	Elsewhere.	Total.	District of Columbia.	Elsewhere.
Both sexes	6,523	1,852	4,671	3.5	7.3	2.9
Male	6,214	1,599	4,615	3.6	8.9	3.0
Female	309	253	56	2.2	3.4	0.9

The number of Government employees at least 65 years of age is 6,523. Of this number, 1,852 are employed in the District of Columbia and 4,671 elsewhere. Although less numerous in the District than elsewhere, employees of advanced age form a much larger proportion of the force in the District than they do of the force elsewhere. In the District practically one Government employee in fourteen is at least 65 years of age, while elsewhere the corresponding figures are but about one in thirty-four.

[1] As the figures for individual years were not tabulated, these medians are calculated on the assumption of an equal distribution by years of the employees in the five-year period in which the median is known to fall. A study of the figures indicates, however, that such an assumption is probably not absolutely correct; that the earlier years in the five-year period probably contain a larger number of employees than the later years. The effect of this assumption, therefore, is to make the medians given in the tabular statement somewhat too high; but it is believed that the error is so slight that it does not detract from the practical working value of the results.

Whether these figures represent any special tendency for Government employees to remain in service after persons in other walks of life would have retired, is of course the interesting question. Perhaps some light may be thrown upon it by comparing the age distribution of the Government employees in the District and elsewhere with a similar distribution of the total number of breadwinners at least 16 years of age reported at the census of 1900. Such a comparison is presented for each of the sexes in the following tabular statement. The figures for the totals have been omitted, because women form a much larger proportion of the total number of breadwinners than they do of the employees in the executive civil service, and thus, as the age distributions of the two sexes differ, the totals are not comparable.

AGE.	PER CENT DISTRIBUTION.			
	Employees in executive civil service: 1907.			Breadwinners at least 16 years of age: 1900.[1]
	Total.	District of Columbia.	Elsewhere.	
	MALE.

Under 25 years	15.9	13.8	18.2	44.2
25 to 34 years	31.9	30.3	33.8	24.2
35 to 44 years	26.5	25.8	27.4	14.0
45 to 54 years	15.4	16.4	14.2	9.1
55 to 64 years	7.7	10.1	5.0	5.3
65 years and over	2.2	3.4	0.9	2.9
Not reported	0.4	0.2	0.6	0.4

[1] For the actual numbers on which the percentages are based, see Special Report of the Census Bureau on "Statistics of Women at Work, 1907," page 11.

The figures in this tabular statement indicate that, in comparison with the breadwinners in general, a markedly small proportion of the employees in the civil service, whether in the District of Columbia or elsewhere, are under 25 years of age. Establishing an age limit below which persons can not enter certain positions and requiring applicants to pass a more or less rigid examination, often calling for prior training and experience, raises the age at entrance into the civil service considerably above the age at which a person first takes up a breadwinning occupation. Since the proportion in the youngest period is thus lowered, the proportions in the older periods are necessarily raised. The comparison presented in the tabular statement therefore magnifies somewhat any tendency for employees in the Government service to stay on after persons in other walks of life would have retired. For this reason the following tabular statement may be of greater interest, for it eliminates the classes under 25

years of age, where the greatest differences exist, and compares the age distribution of the employees in the civil service 25 years of age and over with that of the breadwinners 25 years of age and over reported at the census of 1900.

AGE.	PER CENT DISTRIBUTION.			
	Employees in executive civil service at least 25 years of age: 1907.			Breadwinners at least 25 years of age: 1900.[1]
	Total.	District of Columbia.	Elsewhere.	
	MALE.			
At least 25 years	100.0	100.0	100.0	100.0

25 to 34 years	38.1	35.3	41.6	43.6
35 to 44 years	31.7	30.0	33.7	25.2
45 to 54 years	18.3	19.0	17.5	16.5
55 to 64 years	9.2	11.7	6.1	9.6
65 years and over	2.7	4.0	1.1	5.2

[1] For the actual numbers on which the percentages are based, see Special Report of the Census Bureau on "Statistics of Women at Work, 1907," page 11.

In the District of Columbia, as the tabular statement indicates, 10 per cent of the male employees 25 years of age and over are at least 65. For the breadwinners in general the corresponding percentage is 6.3. In so far as one can judge from such a comparison, it would seem, therefore, that possibly the men in the service in the District tend to remain in their positions after reaching an age at which the average man would have retired. The comparison is, however, by no means precise and should be regarded only as a rough indication of such a tendency and not as absolute proof.

For the women in the District no special tendency is apparent toward remaining in the service after reaching the age of 65. It is interesting to note, however, that the proportion formed by women between 35 and 65 is considerably higher in the civil service than it is among breadwinners in general.

The employees at least 25 years of age in the civil service elsewhere than in the District are generally younger than all breadwinners at least 25. Of the male breadwinners 25 or over, 17.3 per cent are at least 55 years of age, while of the male employees 25 or over elsewhere than in the District, only 11.9 per cent are at least 55. For the females the corresponding percentages are 14.8 for the breadwinners in general and only 7.2 for the employees in the civil service. Except among the male employees in the District, therefore, the tendency to remain in the Government service after reaching advanced age does not appear to be exceptional.

In connection with the high percentage of men of advanced age among the male employees in the District, it is interesting to note that in only 7 of the 130 occupations distinguished at the census of 1900 did men of advanced age form a larger proportion of the total number of men at least 25. These 7 occupations and the percentages under consideration were as follows: Bankers and brokers, 30; boarding and lodging house keepers, 15.7; gardeners, florists, nurserymen, etc., 15.2; wheelwrights, 14.9; boot and shoe makers and repairers, 10.9; janitors and sextons, 10.6; and coopers, 10.4. For farmers, planters, and overseers the percentage was 10, the same as that for male employees in the District of Columbia. The following list shows the percentage which men at least 65 form of the total number 25 years of age and over in some of the occupations which it is most interesting to compare with the executive civil service:

OCCUPATION.	Per cent.	OCCUPATION.	Per cent.
Bankers and brokers	30.0	Machinists	3.1
Janitors and sextons	10.6	Draymen, hackmen, teamsters, etc	2.8
Clergymen	9.5	Teachers and professors in colleges, etc	2.8
Physicians and surgeons	8.6	Bookkeepers and accountants	2.6
Carpenters and joiners	8.1	Paper hangers	2.6
Lawyers	7.9	Foremen and overseers	2.3
Officials (Government)	7.4	Clerks and copyists	2.2
Masons (brick and stone)	7.1	Printers, lithographers, and pressmen	2.1
Literary and scientific persons	6.2	Steam railroad employees	1.5
Plasterers	6.0	Plumbers and gas and steam fitters	1.4
Watchmen, policemen, firemen, etc	5.8	Electricians	0.6
Laborers (not specified)	5.5	Stenographers and typewriters	0.5
Engineers (civil, etc.) and surveyors	5.4	Soldiers, sailors, and marines (U. S.)	0.4
Architects, designers, draftsmen, etc	4.1	Street railway employees	0.4
Journalists	4.0	Telegraph and telephone linemen	0.3
Officials of banks and companies	4.0	Telegraph and telephone operators	0.3
Painters, glaziers, and varnishers	3.6		
Engravers	3.4		
Roofers and slaters	3.4		

The age distribution of the employees in the executive civil service is graphically represented in Diagram 2. The upper square in this diagram represents the employees in the District, the lower square, the employees elsewhere.

MARITAL CONDITION.

In many respects closely associated with age is the subject of marital condition. Table 5 presents the distribution, by marital condition, of the employees, classified by sex and place of employment.

Between the two sexes, as Table 5 shows, the differences in marital condition are wide. Of the men, two-thirds are married, while of the women, two-thirds are single. The widowed and divorced form 20.5 per cent of the total number of women and 3.6 per cent of the total number of men. Both in the District of Columbia and elsewhere similar differences between the two sexes are apparent. In both divisions most of the men are married while most of the women are single. In the District the widowed form 4.4 per cent of the men as contrasted with no less than 21 per cent of the women. These differences, of course, are not peculiar to the employees in the civil service, but arise from general differences between the sexes. Men, under ordinary circumstances, engage in some gainful occupation, and continue in it notwithstanding any changes in their marital condition. For women, on the other hand, a breadwinning occupation is exceptional, and those who engage in one usually do so only while single, or, if they have married, after their married life has been terminated by the death of their husband or by divorce. The figures for the two sexes are thus radically different, those for men reflecting the tendency toward marriage; those for women, the tendency of women to give up gainful occupation while living in the married state.

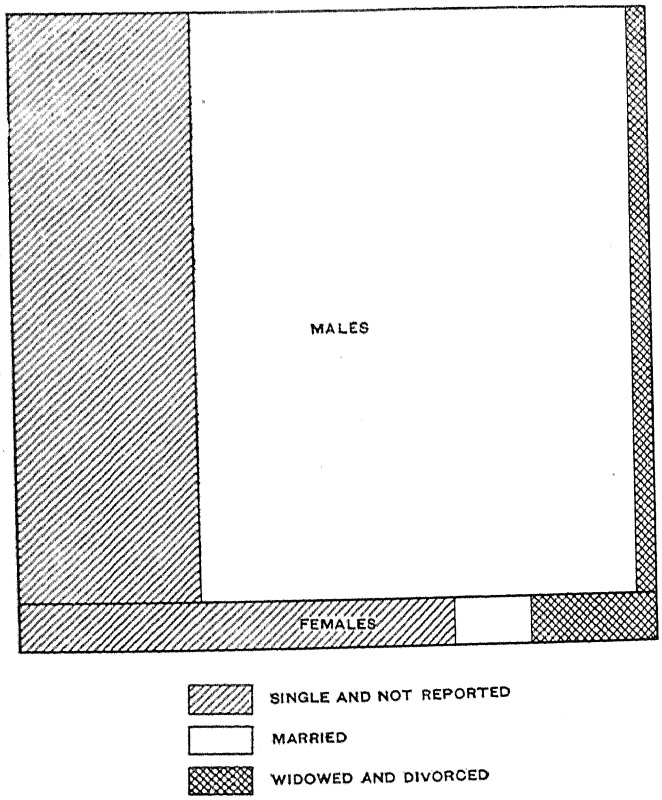
The difference between the marital condition of the two sexes may perhaps be more apparent from an inspection of Diagram 3, which classifies the employees of each sex according to their marital condition.

DIAGRAM 3.—*Employees in executive civil service, by sex and marital condition: 1907.*



MARITAL CONDITION.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE					
	Total.	Male.		Female.		
		Number.	Per cent distribution.	Number.	Per cent distribution.	Per cent of total.
All classes	185,874	172,053	100.0	13,821	100.0	7.4
Single and not reported	56,352	47,072	27.4	9,280	67.1	16.5
Married	120,497	118,790	69.0	1,707	12.4	1.4
Widowed and divorced	9,025	6,191	3.6	2,834	20.5	31.4

Because of the differences apparent from Diagram 3 it is necessary to consider the two sexes separately, and therefore in the following tabular statement the figures are presented for women alone. Comparison is made of the marital condition of the women in the executive civil service with that of the female breadwinners at least 16 years of age reported at the census of 1900.

MARITAL CONDITION.	PER CENT DISTRIBUTION.			
	Female employees in executive civil service: 1907.			Female breadwinners at least 16 years of age: 1900.[1]
	Total.	District of Columbia.	Elsewhere.	
All classes	100.0	100.0	100.0	100.0
Single and not reported	67.1	67.3	67.0	65.0
Married	12.4	10.2	14.8	15.9
Widowed	18.9	21.0	16.5	17.7
Divorced	1.6	1.5	1.6	1.3

[1] These percentages are based on the assumption that all breadwinners under 16 years of age are single. For a discussion of this assumption, and for the actual numbers on which these percentages are based, see Special Report of the Census Bureau on "Statistics of Women at Work, 1907," pages 13 and 14.

In the executive civil service relatively fewer of the women are married and relatively more are single, widowed, and divorced than is the case among female breadwinners in general; but on the whole the contrast is not very marked. The women in the service in the District of Columbia differ the most widely from the breadwinners in general, for among them the married form 10.2 per cent as compared with 15.9 per cent of the breadwinners.

The figures for men, on the other hand, show considerable variation between the employees in the civil service and the breadwinners in general, as is apparent from the tabular statement on the following page.

As this tabular statement indicates, relatively fewer of the male employees in the civil service than of the male breadwinners in general are single. This probably does not represent any particularly strong tendency for men in the civil service to marry, but merely reflects the fact that in the civil service the proportion of men below the marrying age is small. Of the male breadwinners in general, as is shown by a tabular statement on page 12, 24.7 per cent are under 25 years

of age, while for the male employees in the civil service the corresponding percentage is only 11.6. Difference in age is thus probably sufficient to account for the difference in marital condition.

MARITAL CONDITION.	PER CENT DISTRIBUTION.			
	Male employees in executive civil service: 1907.			Male bread-winners at least 16 years of age: 1900.[1]
	Total.	District of Columbia.	Elsewhere.	
All classes	100.0	100.0	100.0	100.0
Single and not reported	27.4	27.7	27.3	37.2
Married	69.0	67.5	69.2	58.5
Widowed	3.2	4.4	3.0	4.0
Divorced	0.4	0.4	0.4	0.3

[1] These percentages are based on the assumption that all breadwinners under 16 years of age are single. For a discussion of this assumption, and for the actual numbers on which these percentages are based, see Special Report of the Census Bureau on "Statistics of Women at Work, 1907," pages 13 and 14.

Age.—The effect of age on the marital condition of the employees in the civil service is shown in Table 46 (page 65), which presents a classification of the employees by sex, age, marital condition, and place of employment. Table 6, which follows, is based on this table, and shows the per cent distribution by marital condition of the employees, classified by sex and age.

The proportion which men who remain single form of the total number of male employees in the civil service decreases rapidly as the age increases. Table 6 shows that the percentage formed by single men decreases in each successive age period from "under 20 years," where it is 96.7, to "60 to 69 years," where it is but 4.7. The proportion formed by the married men, on the other hand, increases continuously as the age increases until it reaches the older periods, where its progress is checked by the growing proportion formed by the widowed.

TABLE 6.—PER CENT DISTRIBUTION,[1] BY MARITAL CONDITION, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY SEX AND AGE: 1907.

[1] For the actual numbers on which the percentages are based, see Table 46 (page 65).

[2] Per cent not shown where base is less than 100.

Among women the proportion single also decreases with advancing age, but the decrease is not so marked as in the case of men. This decrease in the proportion formed by single women is, moreover, occasioned not so much by an increase in the relative importance of the married as by a great increase in the relative importance of the widowed. Of the women 60 to 69 years of age, 57.3 per cent are widows, while only 34.5 per cent are single and 6.8 per cent married. The figures in this table therefore illustrate the statement that women do not ordinarily engage in gainful pursuits while living in the married state.

CHARACTER OF APPOINTMENT.

Thus far the figures have been concerned with showing the class of people in the civil service. The next subject is how these people entered the service—that is, the character of their appointment.

In respect to character of appointment the employees in the executive civil service are divided first into two

main groups, those in the classified service and those in the unclassified service. The classified service may be defined as all that part of the executive civil service of the United States included within the provisions of the civil service act of 1883 and the rules made by the President in accordance therewith. The unclassified service is that part to which the act and the rules do not apply.

Employees in the classified service are further subdivided according to the means whereby they secured their positions, whether by competitive examination, noncompetitive examination or preference, classification or extension, reinstatement, or temporary appointment. These terms doubtless require some explanation.

The competitive examination is the general method provided by the civil service act of 1883 for entrance into the classified service. The second paragraph of the second section of this act reads:

> And, among other things, said rules [promulgated by the President for the enforcement of the act] shall provide and declare, as nearly as the conditions of good administration will warrant, as follows:
>
> First, for open, competitive examinations for testing the fitness of applicants for the public service now classified or to be classified hereunder. Such examinations shall be practical in their character, and, so far as may be, shall relate to those matters which will fairly test the relative capacity and fitness of the persons examined to discharge the duties of the service into which they seek to be appointed.
>
> Second, that all the offices, places, and employments so arranged or to be arranged in classes shall be filled by selections according to grade from among those graded highest as the results of such competitive examinations.

Noncompetitive examinations are exceptions to the rule requiring competitive examinations, and they are given for the purpose of furthering good administration. They are very narrow in their scope, as is indicated by the following civil service rule which provides for them:

> Where, in its opinion, the conditions of good administration warrant, the Commission may give noncompetitive examinations to test fitness for (*a*) transfer, reinstatement, or promotion; (*b*) appointment of Indians in the Indian service at large as superintendents, teachers, manual training teachers, kindergartners, physicians, matrons, clerks, seamstresses, farmers, and industrial teachers, which examinations shall consist of the same tests of fitness as those applied to other persons seeking appointment through competitive examinations; (*c*) the appointment of the wife of the superintendent of an Indian school as teacher or matron therein; (*d*) employment as inspector of safety appliances by the Interstate Commerce Commission.

It should be noted that examinations under this rule are given only upon request of the head of the Department or office in which the person seeks service.

Preference, which is another exception to the rule requiring competitive examination, is based on section 1754 of the Revised Statutes. This section provides:

> Persons honorably discharged from the military or naval service by reason of disability resulting from wounds or sickness incurred in the line of duty shall be preferred for appointments to civil offices, provided they are found to possess the business capacity necessary for the proper discharge of the duties of such offices.

Technically this section applies equally to classified and unclassified positions, but as it is only through the machinery of civil service rules that the provision has been effectively enforced, preference employees are all included as within the classified service.

"Classification and extension" is the title given to the method of appointment used at the moment when the civil service act and rules are first made applicable to an existing position. The executive order or act of Congress which brings the position into the classified service, brings into the classified service the person filling that position. All subsequent occupants must enter the service through examination, but the incumbent at the moment of classification or extension is suffered to remain.

Reinstatement can best be defined by quoting Rule IX of the civil service rules:

> A person separated without delinquency or misconduct from a competitive position, or from a position which he entered by transfer or promotion from a competitive position, may be reinstated in the Department or Office in which he formerly served, upon certificate of the Commission, subject to the following limitations:
>
> (*a*) The separation must have occurred within one year next preceding the date of the requisition of the nominating or appointing officer for such certificate; but this limitation shall not apply to a person who served in the Civil War or the war with Spain and was honorably discharged, or his widow, or an army nurse of either war.
>
> (*b*) No person may be reinstated to a position requiring an examination different from that required for the position from which he was separated, without passing an appropriate examination.

Temporary appointments in the classified service can be made in three distinct cases. (1) When an emergency requires that a vacancy be filled before the Civil Service Commission would have time to certify candidates for appointment, the appointing officer, after requesting a certification, may make a temporary appointment. (2) When any register or list of eligibles certified by the Commission contains less than three names, the appointing officer may make a temporary instead of a regular appointment, but if he decides upon a temporary appointment, he must make it from the name or names on the register, unless he gives the Commission a satisfactory reason for not doing so. (3) When an employee is needed for work which is temporary in character, and, after the completion of which the services of the employee will not be needed, a temporary appointment may be made, with the prior consent of the Commission, for a period not to exceed three months.

The persons in the unclassified service are divided into three groups—presidential appointees, other unclassified appointees, and appointees the character of whose appointment was not reported.

Presidential appointees are persons nominated by the President and confirmed by the Senate.

Other unclassified appointees are mainly persons appointed to low grade positions which have never been classified. Some of them are, however, appointees to excepted positions. Excepted positions are those which, because of some peculiarity in their general character, can not properly be filled by competitive examination. Technically they are within the classified service, for the positions are exempted from examination by Rule II, paragraph 3, of the civil service rules. In character of appointment, however, they resemble more closely unclassified positions, and they have been so included.

Persons the character of whose appointment was not reported are not necessarily in the unclassified service. It is probable, however, that the majority of them were, and so they have been thus included.

Value of statistics.—The statistics showing the importance of these different means of entering the Government service are not sufficiently accurate to permit more than the most general conclusions. As was realized from the first, the subject was so technical that the ordinary Government employee could not be expected to report the character of his appointment correctly unless the different classes were explained to him more fully than was practicable. For this reason the inquiry in regard to character of appointment was headed "*To be filled in by Department or office in which employed,*" and it was fully expected that officers perfectly familiar with the various laws governing appointment would supervise the entering of returns for the employees in their offices. In many instances these expectations were not realized, for sometimes the employees themselves would answer the inquiries, and their statements would not be corrected by competent officials. In some cases the results were surprising. A charwoman raised herself to the dignity of being nominated by the President and confirmed by the Senate, while a girl stenographer of 18 reported that she had been appointed by "preference;" that is, that she had been preferred because she had been discharged from the military or naval service of the United States by reason of injuries or sickness incurred in the performance of duty. In many instances such glaring mistakes were corrected by the Bureau of the Census, but, as is apparent from the definition of the classes given above, the distinctions are often so fine that an error could not be corrected except by appointing officers fully informed of all the facts. As it was impossible to return all the cards for verification, the Bureau of the Census was obliged in most cases to tabulate the returns as they were made. The tabulations on the subject of character of appointment, therefore, should not be regarded as of unquestionable accuracy. They are presented, however, because in a majority of cases the entries were made by a proper person and are doubtless correct.

Table 7 presents the distribution by detailed character of appointment of the employees, classified by sex and place of employment.

Civil service rules have now been applied to by far the greater part of the Government positions considered in this bulletin, for, as Table 7 shows, about 9 out of 10 of the employees here considered are in the classified service. Most of the employees too—about two-thirds of the total number—have secured their present status in the Government service through open competitive examinations. This is the only important way in which ordinarily a person seeking Government employment can now enter the classified service. The two exceptions to the fundamental rule requiring a competitive examination are both unimportant, as only 2,573, or 1.4 per cent, of the total number of employees were reported as securing their present status by noncompetitive examination or by preference. Persons who secured positions in the classified service through "classification and extension," that is, survivors from a former system of original appointments, form less than a fifth of the total number of employees. Thus the figures in Table 7 indicate that the greater part of the Government employees hold office by virtue of the new system instituted by the civil service act of 1883.

Between employees in the District of Columbia and those elsewhere, however, the difference is considerable. Only slightly more than one-half of the employees in the District secured their positions through competitive examination, while for the employees outside of the District the corresponding proportion is more than two-thirds. This difference is probably to be accounted for by the fact that the Postal Service outside the District has developed rapidly, creating new positions which have been filled by competitive examinations.

The differences between the sexes shown in Table 7 are also probably accounted for largely by the development of the Postal Service outside the District. Within the District the distribution by character of appointment is much the same for the men and the women, but outside the District about 70 per cent of the men were appointed through competitive examination as contrasted with about 50 per cent of the women. This is probably due to the fact that the great number of new positions in the Rural Delivery Service of the Post Office Department have been filled by men appointed through competitive examination.

The distribution of the employees by the general character of their appointment is shown graphically in Diagram 4. The upper square in this diagram represents the employees in the District; the lower square, the employees elsewhere.

Race.—The character of appointment of the white and of the colored employees is shown for the District of Columbia and for the rest of the country in Table 8.

Table 8 shows that 48.3 per cent of the colored are in unclassified positions as contrasted with 9.4 per cent of the white.

It is exceedingly interesting to note, however, that 4,304 colored persons, 38 per cent of the total number, have secured their present status in the Government service through open competitive examination. Of this number, 4,168 are negroes; 87, Indians; 32, Filipinos; 9, Japanese; and 8, Chinese.

Age.—The ages of the classified and of the unclassified employees are shown in Table 9, which presents the distribution, by age, of the employees, classified by sex, place of employment, and general character of appointment.

[1] Includes "not reported."

The general significance of Table 9 can perhaps be more readily grasped from an inspection of the following tabular statement, which shows the approximate median age of the employees, classified by sex, place of employment, and general character of appointment. This median age, as it has already been defined,[1] is the point at which the employees are equally divided in respect to age, one-half being older than the median, the other half younger.

[1] See footnote on page 12 for a statement of the assumption made in calculating the median.

PLACE OF EMPLOYMENT.	APPROXIMATE MEDIAN AGE OF EMPLOYEES OF KNOWN AGE IN EXECUTIVE CIVIL SERVICE: 1907.					
	Total.		Male.		Female.	
	Classified.	Unclassified.[1]	Classified.	Unclassified.[1]	Classified.	Unclassified.[1]
Total	36.3	38.2	36.4	38.2	35.3	37.7
District of Columbia	38.8	39.6	39.8	39.1	36.6	40.6
Elsewhere	36.0	38.0	36.1	38.2	33.8	36.3

[1] Includes "not reported."

The unclassified employees, as this tabular statement indicates, are generally older than the classified. The difference is particularly marked among the female employees in the District, where the median age of the unclassified women exceeds that of the classified by four years. Among men in the District, on the other hand, is found the only instance in which the age of the classified employees is the greater, but the difference is only seven-tenths of a year. Elsewhere than in the District the age of the unclassified employees exceeds that of the classified, for each sex, the difference being 2.1 for the men and 2.5 for the women.

Between the two principal groups of classified employees—those appointed by competitive examination and those by classification and extension—the differences in age are marked, as is shown by the age distribution of these groups given in Table 10.

TABLE 10.—*Distribution, by age, of employees in classified executive civil service, classified by character of appointment: 1907.*

Not reported	158	45	35	0.1	0.1	0.5

[1] Includes noncompetitive examination, preference, reinstatement, and temporary appointment.

The appointees through competitive examination are shown by Table 10 to be much younger than those who secured their present status in the classified service through classification and extension. The median age of the former class is only 34.1 years, as contrasted with 47.3 years for the latter. This difference, of course, results from the fact that the group "classification and extension" consists of survivors from an earlier system and is receiving no young recruits through original appointment, while the group "competitive examination," on the other hand, contains most of the persons who have entered the classified service in late years and is constantly receiving young members.

CHARACTER OF WORK.

The next subject after character of appointment is that of character of work. In the ensuing discussion of this subject the employees are divided into the following six classes: Executive; professional, technical, and scientific; clerical; mechanical; subclerical and manual labor; and miscellaneous. The exact composition of these groups may be seen in Tables 74 to 82 (pages 117 to 131), where an occupation classification is presented which goes into rather minute detail.

In using the figures for this detailed classification it should be remembered that the terms used in the different offices for reporting the same type of work are not always identical. For example, a person engaged in stenography and typewriting may be reported by one office as a stenographer and typewriter, by another as a clerk. The distinctions between the various subgroups, therefore, are not always precise, especially in the clerical class, but it is believed that the lines separating the six main groups are sufficiently distinct to give practical accuracy to that classification.

The relative importance of these six main groups is shown in Table 11, which presents the distribution, by character of work, of the employees, classified by sex and place of employment.

TABLE 11.—DISTRIBUTION, BY CHARACTER OF WORK, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY SEX AND PLACE OF EMPLOYMENT: 1907.

Subclerical and manual labor	37,097	30,902	6,195	20.0	18.0	44.8	8,898	5,099	3,799	35.1	28.3	51.6	28,199	25,803	2,396	17.6	16.7	37.1
Miscellaneous	5,643	5,503	140	3.0	3.2	1.0	97	97	.....	0.4	0.5	.....	5,546	5,406	140	3.5	3.5	2.2

Practically two-thirds (66 per cent) of the Government employees, as Table 11 shows, are engaged in clerical work. The next largest class is formed by those whose work is subclerical and manual labor. These two classes together include 86 per cent of all the employees. None of the remaining classes are large, the percentage which they contribute to the total varying from 1.2 for the executive, the smallest class, to 5.2 for the professional, technical, and scientific.

Between employees in the District of Columbia and those elsewhere, however, Table 11 shows great differences. The executive, the professional, technical, and scientific, the mechanical, and the subclerical classes are all of much greater relative importance in the District than they are elsewhere. The clerical class, on the other hand, includes only 40.8 per cent of the employees in the District as contrasted with 70 per cent of those elsewhere.

The exact differences may perhaps be more apparent from a consideration of Table 12, which shows the per cent distribution, by place of employment, of the employees, classified by sex and character of work.

TABLE 12.—*Per cent distribution, by place of employment, of employees in executive civil service, classified by sex and character of work: 1907.*

CHARACTER OF WORK.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE.					
	Total.		Male.		Female.	
	Per cent in District of Columbia.	Per cent elsewhere.	Per cent in District of Columbia.	Per cent elsewhere.	Per cent in District of Columbia.	Per cent elsewhere.
All classes...	13.6	86.4	10.5	89.5	53.2	46.8

Miscellaneous.....	1.7	98.3	1.8	98.2	.....	100.0

[1] Per cent not shown where base is less than 100.

All six occupation classes, as Table 12 indicates, are smaller in the District than they are elsewhere, but the extent to which they are centralized in the District varies greatly. About one-third of the persons in the executive and the mechanical classes and about one-fourth of those in the professional, technical, and scientific, and the subclerical classes are in the District, as contrasted with about one-twelfth of those in the clerical class and one-fiftieth of those in the miscellaneous class.

Sex.—Both for the District and elsewhere Table 11 shows considerable difference in the character of work of the sexes. The women are more highly concentrated than the men in the subclerical and manual labor class, while relatively fewer of them are in the executive, the professional, technical, and scientific, the mechanical, and the miscellaneous classes. In the District a larger proportion of the women than of the men occupy clerical positions, but this is not the case elsewhere. On the whole, therefore, the women in the Government service are engaged in a lower class of work than the men.

The relative importance of women in each of the six occupation classes is shown in Table 13, which gives the per cent distribution, by sex, of the employees, classified by place of employment and character of work.

TABLE 13.—*Per cent distribution, by sex, of employees in executive civil service, classified by place of employment and character of work: 1907.*

CHARACTER OF WORK.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE.

Miscellaneous.....	97.5	2.5	(1)	.....	97.5	2.5

[1] Per cent not shown where base is less than 100.

In none of the six occupation classes outside of the District do women form a large proportion of the total number of employees. In the subclerical and manual labor class, where they assume greatest proportions, they constitute only 8.5 per cent of the total number. In the District of Columbia the relative importance of women is much greater than elsewhere in all classes of work except the mechanical and the miscellaneous. Over two-fifths of the subclerical and manual labor class in the District and nearly one-third of the clerical class are women.

Perhaps the difference between the employees in the District and those elsewhere in respect to the relative importance of women in the different classes of work will be more readily grasped from an examination of Diagram 5. This diagram shows for the District and elsewhere what proportion of the employees are engaged in each class of work and what proportion of those in each class are women.

Miscellaneous	5,546	5,352	194	3.5	3.5	2.3

Table 14 shows that 63.4 per cent of the colored employees are in the class subclerical and manual labor, while of the whites the corresponding percentage is 17.1. It is interesting to note, however, that 27 colored persons are engaged in executive work, and that 101 occupy positions classed as professional, technical, and scientific. Of the colored executive employees, 25 are negroes, 1 is an Indian, and 1 a Japanese. Of the colored persons engaged in professional, technical, and scientific pursuits, 59 are negroes; 12, Indians; and 30, Filipinos.

Age.—The age distribution of the employees, classified by place of employment and character of work, is shown in Table 15.

[1] Per cent not shown where base is less than 100.

This table can perhaps be most conveniently summarized by resorting once again to the device of the approximate median age. The approximate median age, therefore, is given in the following tabular statement for each of the classes of employees shown in Table 15:[1]

[1] For a definition of the approximate median age and a statement of the assumption made in calculating it, see page 12.

CHARACTER OF WORK.	APPROXIMATE MEDIAN AGE OF EMPLOYEES OF KNOWN AGE IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	District of Columbia.	Elsewhere.
All classes	36.5	38.8	36.2
Executive	49.1	48.9	49.3
Professional, technical, and scientific	36.8	34.6	37.4
Clerical	35.5	40.6	35.2
Mechanical	39.4	41.1	38.6
Subclerical and manual labor	37.7	35.7	38.2
Miscellaneous	43.7	42.5	43.7

Ranked in the ascending order according to median ages, the classes stand as follows: Clerical, 35.5; professional, technical, and scientific, 36.8; subclerical and manual labor, 37.7; mechanical, 39.4; miscellaneous, 43.7; and executive, 49.1. The youngest class is thus the clerical, the oldest the executive; and the difference between the median ages of the two is no less than 13.6 years. In the District the order is different, for the median age of the clerical class, 40.6 years, exceeds that of the professional, technical, and scientific, 34.6 years, and of the subclerical and manual labor, 35.7 years.

That the employees engaged in professional, technical, and scientific work constitute the youngest class in the District and next to the youngest class elsewhere is somewhat surprising. The explanation is that of late the tendency has been to increase the amount of work of this character performed by the Government; and, as a result, considerable numbers of comparatively young men have been brought into the service.

The clerical and the mechanical classes, it may be noted, are the only two in which the employees in the District are older than those elsewhere; but as the clerical class predominates, it makes the median age of all classes of employees combined greater in the District than it is elsewhere. The difference of 5.4 years between the clerical classes in the two localities is probably largely due to the recent development of the Postal Service, a growth which has brought many comparatively young persons into the clerical class. Outside the District the median age for mail carriers is 36.6 years; for railway mail clerks, 34.5 years; and for clerks proper, many of whom are employed in post offices, 32.1 years.

The variations in the relative importance of employees 65 years of age and over in the different occupation classes, as shown in Table 15, follow very generally the variations in the ages of the several classes as indicated by the medians. Both in the District of Columbia and elsewhere persons 65 years of age and over form a larger proportion of the executive class than of any other. In the District they form the lowest proportion of the professional, technical, and scientific class, while elsewhere they form the lowest proportion of the clerical. As was also indicated by the medians, the difference in the clerical class in the two localities is striking; only 2 per cent of the clerical class outside the District are 65 years and over, while for the District the corresponding percentage is 9.3.

Both in the District of Columbia and elsewhere, however, the clerical class contains the greatest number of employees 65 years of age and over, as is indicated by the following tabular statement, which shows the distribution, by character of work, of the employees 65 years of age and over, classified by place of employment:

CHARACTER OF WORK.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE 65 YEARS OF AGE AND OVER: 1907.					
	Number.			Per cent distribution.

Miscellaneous	472	4	468	7.2	0.2	10.0

PERIOD OF SERVICE.

The next subject after character of work is that of period of service. In connection with the inquiry upon this subject, the employees were instructed that the years of service to be reported did not necessarily have to be consecutive. Each employee was to report the total number of years which he had worked for the Government, whether he had been in the service continuously or only at intervals. In all tables showing period of service, therefore, the figures represent total service, which may or may not have been continuous.

The results of this inquiry are summarized in Table 16, which gives the distribution, by period of service, of the employees, classified by sex and place of employment.[1]

[1] It may be noted that the number shown by Table 16 to have been in the service one year is peculiarly small as compared with the numbers in the other groups representing short periods of service. This probably results from the fact that the inquiry called for the number of years of service without also requesting the number of months. Employees who had served less than a year generally reported the number of months they had served, so that they were accurately classified as "under 1 year." Those who had served more than twelve months probably reported, in many instances, the nearest year, whether it was higher or lower than the actual length of their service. The result of such a practice would be to make the period "1 year" represent only the 6 months of service from 12 months to 18 months, while all the other periods would cover a full year. The number in the period "1 year" would thus be too small.

Almost one-half (48.2 per cent) of the employees in the executive civil service, as is shown in Table 16, have worked for the Government less than 5 years. In each successive five-year period of service above that of "under 5 years," the number of employees grows smaller until the period of "40 years and over" is reached, which contains but 1,052 employees, 6 out of every thousand. This constant decrease in numbers as the period of service increases is, of course, what would naturally be expected, since it is the inevitable result of resignations, removals, and deaths. The growth of Government work also tends to increase the proportions in the shorter periods, since the creation of new positions, necessary as the work of the Government expands, generally results, directly or indirectly, in the appointment of persons who have never before been in the service.

A difference in the creation of new positions may to some extent explain the fact that the length of the service of employees is greater in the District than it is elsewhere. Of the employees in the District, nearly 70 per cent have been in the service at least 5 years, while for employees elsewhere the corresponding percentage is only about 49. In the periods of greatest service, moreover, the differences between the two localities are particularly noticeable. The period 40 years and over, for example, contains 2.2 per cent of the employees in the District and three-tenths of 1 per cent of those elsewhere.

Age.—Length of service is, of course, intimately connected with age. No young man can have served a long period. An old man, however, may have served a short period, and it is this fact which makes desirable a classification of the employees by age and period of service. Such a classification is presented in Table 17, which gives the numerical distribution, by period of service, of the employees in each age group, classified by place of employment. A similar per cent distribution is shown in Table 18.

In Tables 17 and 18 the chief interest naturally centers about the employees of advanced age, since the figures show whether these employees have grown old in the service or whether they have entered the service after they were already old. If the employees over 70 years of age who have served under 10 years are grouped with those 65 to 69 who have served under 5 years, a total of 1,129 will be obtained, which means that at least that number were appointed after reaching the age of 60. In addition to these 1,129, it is practically certain that some of those employees 65 to 69 years old who have served 5 to 9 years, and some of those 60 to 64 who have served under 5 years, were also appointed after reaching the age of 60. Then, too, since the figures do not necessarily represent continuous service, some of the remaining classes of employees now over 60 may have received their latest appointment since reaching that age. The number 1,129 is, therefore, but a minimum; and without doubt the actual number is considerably larger than this minimum. The relative importance of the minimum number appointed after reaching the age of 60 is about the same in the District as it is elsewhere, though of course the actual number differs greatly. In the District the actual number is 89, or four-tenths

of 1 per cent of all employees, while elsewhere it is 1,040, or six-tenths of 1 per cent of the total.

If, however, the employees of advanced age are considered alone, without reference to the percentage which they form of the employees of all ages, it will be found that in the District a much larger proportion have grown old in the service than is the case elsewhere. Table 18 shows this most clearly. Of the employees in the District who are at least 70 years old, but 18.1 per cent have been in the service less than 15 years, while of the employees elsewhere, the corresponding percentage is 45.3. Similar differences are observable among all the older groups. The conclusion then is that, although the proportion formed by persons of advanced years is greater in the District than it is elsewhere, this does not result from a greater tendency in the District toward the appointment of elderly people.

[1] Less than one-tenth of 1 per cent.

[2] Per cent not shown where base is less than 100.

The following tabular statement may be of interest, for it shows the approximate median length of the service of the employees of known service. This median is the point at which the employees are equally divided in respect to length of service, one-half having served less than the median, the other half more.

SEX.	APPROXIMATE MEDIAN LENGTH OF SERVICE OF EMPLOYEES OF KNOWN LENGTH OF SERVICE IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	District of Columbia.	Elsewhere.
Both sexes	5.2	8.5	4.9
Male	5.1	8.8	4.9
Female	6.6	7.8	5.1

The medians presented in the tabular statement bring out strikingly the difference between men employed in the District and those employed elsewhere. In the District the median length of service for men is 8.8 years, while elsewhere it is but 4.9 years.

Character of appointment.—Another subject of particular interest in connection with period of service is character of appointment. Tables 50, 51, and 52 (pages 72 to 74) have therefore been prepared to show the employees of each sex in the District and elsewhere, classified by character of appointment and period of service. Table 19, which follows, is based on the actual numbers contained in these tables, and gives the per cent distribution, by period of service, of the employees, classified by place of employment and character of appointment.

[1] For the actual numbers on which the percentages are based, see Tables 50, 51, and 52 (pages 72 to 74).

[2] Less than one-tenth of 1 per cent.

The period of service of the classified employees is somewhat longer than that of the unclassified. From Table 19 it will be found that 28.3 per cent of the classified employees, as compared with 16.6 per cent of the unclassified, have been in the service at least 10 years. This condition, moreover, is common both to employees in the District and to those elsewhere. In the District 45.5 per cent of the classified employees and 24.1 per cent of the unclassified have served at least 10 years; elsewhere the corresponding percentages are 25.5 for the classified employees and 15.7 for the unclassified.

Marked differences are naturally apparent in the length of the service of the different classified groups. Of the temporary employees, 85.9 per cent have been in the service less than 5 years, while of those securing their present status through classification or extension, the corresponding percentage is but 12.4.

That some temporary employees are reported as having served long terms is to be attributed mainly to the fact that years of service to be reported did not have to be consecutive. Persons now temporary appointees may at some other time have been upon the permanent rolls. Some persons, moreover, hold themselves in readiness to accept a temporary appointment whenever one is available, and as a result the aggregate of their different temporary terms amounts to a considerable period.

Between employees appointed through competitive examination and those securing their present status through classification and extension the difference in respect to length of service is necessarily marked. The group "classification and extension" is composed of survivors from an earlier system of original appointment and thus practically all in that class have served a considerable period. The group "competitive examination," on the other hand, includes almost all the persons who have entered the classified service in recent years and practically none who entered prior to the passage of the civil service act in 1883. This difference between the two classes is thus the reflection of the gradual introduction of the new system of original appointment.

In this connection it is interesting to consider the difference between the District and the rest of the country in respect to the length of service of employees who obtained their present status through classification and extension. In the District 5 per cent of those securing their status in this way have served less than 5 years, while elsewhere the corresponding percentage is 15. This difference reflects the fact that in the District the process of extension practically reached its limit some time ago, while elsewhere the classified civil service has been extended considerably even within the last few years.

COMPENSATION.

A subject of particular interest is that of compensation. "Compensation," as that term is here used, means the rate of pay per annum. In most instances this is the same as the actual amount received in the course of a year, but in some instances it is not. To obtain the rate per year, when persons were employed by the month, the rate per month was multiplied by 12; when the day was the basis, the daily rate was multiplied by 313, the number of working days in a year; and when the hour was the basis, the hourly rate was multiplied by the number of hours which it was customary to work each day in the branch of the service where the person in question was employed, and the resulting product was then multiplied by 313, the number of working days in a year. In some instances persons paid monthly, daily, or hourly rates were not employed throughout the year, and these instances make important the distinction between the amount received per year and the rate of pay per year. It should be remembered that "compensation," as here used, means the latter, the rate of pay per year.

The classes into which the employees are divided according to the rate of pay per year are determined chiefly by the classification adopted on June 9, 1896, at the direction of the President, by each head of a Department and Government establishment.[1] It arranges officers and employees, other than mere laborers and persons whose appointments are confirmed by the Senate, in classes according to annual salary or compensation, as follows:

Class A.—Less than $720.
Class B.—$720 but less than $840.
Class C.—$840 but less than $900.
Class D.—$900 but less than $1,000.
Class E.—$1,000 but less than $1,200.
Class 1.—$1,200 but less than $1,400.
Class 2.—$1,400 but less than $1,600.
Class 3.—$1,600 but less than $1,800.
Class 4.—$1,800 but less than $2,000.
Class 5.—$2,000 but less than $2,500.
Class 6.—$2,500 and over.

These 11 classes have been distinguished in the following tables, but it has been necessary to add three others—"by piecework," "without pay," and "not reported," thus making the total number of classes 14.

The comparative importance of these classes is shown in Table 20, which presents the distribution, by compensation, of the employees, classified by sex and place of employment.

[1] Less than one-tenth of 1 per cent.

If the figures given in Table 20 for the total number of employees in the executive civil service are considered, it will be noted that the greatest concentration is in the class where the rate of pay is from $900 to $1,000. This class contains 43,790 persons, or 23.6 per cent of the total number. In each successive class above the one just mentioned the number of persons grows smaller until the class paid at a rate of $2,500 and over is reached, which contains only 1,874 persons, or 1 per cent of the total number. Next in numerical importance to the class "$900 but less than $1,000" is that where the annual rate of pay is less than $720. From this class to that of "$900 but less than $1,000" the decrease in numbers is continuous. The distribution by compensation, therefore, might be roughly represented by two pyramids, the apex of the smaller supporting the base of the larger. The base of the smaller would be "less than $720," its apex "$840 but less than $900." The larger would have as a base "$900 but less than $1,000" and as an apex "$2,500 and over."

Inspection of the various classes shown in Table 20 indicates that the differences in respect to compensation between the sexes and between employees in the District and those elsewhere are considerable. The general nature of these differences can perhaps be best determined by a consideration of the following tabular statement of the approximate average compensation of the employees, classified by sex and place of employment.

In calculating these averages, since the returns were tabulated by compensation classes and not by individual rates, it was necessary to make certain assumptions of more or less doubtful accuracy. It was assumed that all persons in the compensation class "less than $720" received $600, and that all persons in each of the other 10 classes prescribed by the President received the lowest rate for their class.[1] The returns for the three classes, "by piecework," "without pay," and "not reported," were omitted. The averages presented in the following tabular statement are therefore only rough approximations, yet they are probably sufficiently accurate for the purposes of general comparisons where absolute precision is not essential:

SEX.	APPROXIMATE AVERAGE COMPENSATION OF EMPLOYEES OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	District of Columbia.	Elsewhere.
Both sexes	$948	$1,079	$928
Male	960	1,178	935
Female	804	837	766

The approximate average compensation, as given in this tabular statement, is $151 higher in the District than it is elsewhere. In the case of men the difference between the two localities is even greater, $243, while in the case of women it is less, only $71. The detailed figures presented in Table 20 show that the concentration in the lower compensation classes is not nearly as great in the District as it is elsewhere. Of the men in the District, 44.2 per cent are paid at a rate of less than $1,200 per year, while for men elsewhere the corresponding percentage is 82.3. In the case of the women the percentage formed by those paid at a rate less than $1,200 per year is 73.1 in the District of Columbia and 86.7 elsewhere.

[1] The Revised Statutes of the United States (sec. 167) provide that, unless otherwise specially prescribed, the clerks in classes 1 to 4, inclusive, shall receive the lowest salary of their class. The same rule is generally followed for the remaining classes.

Both in the District of Columbia and elsewhere, as the tabular statement shows, the approximate average compensation of men is greater than that of women. In the District the difference between the figures for the two sexes is $341, while elsewhere it is only $169. By referring to the detailed figures for the total number of employees, given in Table 20, it will be seen that 47.2 per cent of the women, as contrasted with 16.7 per cent of the men, are in the class paid at a rate of less than $720 a year. The classes in which the rate of pay is $1,600 or over, on the other hand, contain 1.5 per cent of the women and 6 per cent of the men.

That the percentage of women paid at the rate of less than $720 a year is markedly high as compared with that for men does not indicate that women receive less than men for the same class of work, but reflects the fact, already noted, that a far larger percentage of the women than of the men are engaged in subclerical work or manual labor. As was shown by Table 11, (page 22), the class "subclerical and manual labor" contains 44.8 per cent of the women as contrasted with but 18 per cent of the men. If the lower paid employees—those engaged in the lower grades of work—are omitted, the comparison of the compensation of the sexes is not so unfavorable to women, as is shown by the following tabular statement, which gives the per cent distribution, by compensation, of the male and the female employees paid at a rate of at least $720 a year:

COMPENSATION.	PER CENT DISTRIBUTION, BY COMPENSATION, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE RECEIVING A COMPENSATION OF AT LEAST $720: 1907.					
	Total.		District of Columbia.		Elsewhere.	
	Male.	Female.	Male.	Female.	Male.	Female.
At least $720	100.0	100.0	100.0	100.0	100.0	100.0
$720 but less than $840	14.4	22.6	12.3	13.7	14.6	32.3
$840 but less than $900	7.3	3.7	3.5	3.0	7.7	4.4
$900 but less than $1,000	30.0	19.7	6.8	15.5	32.6	24.4
$1,000 but less than $1,200	23.1	21.7	12.3	20.0	24.3	23.4
$1,200 but less than $1,400	11.9	22.0	24.1	31.5	10.5	11.6
$1,400 but less than $1,600	6.2	7.4	14.4	11.6	5.3	2.7
$1,600 but less than $1,800	2.2	2.3	8.6	3.8	1.5	0.6
$1,800 but less than $2,000	2.1	0.5	7.9	0.7	1.4	0.3
$2,000 but less than $2,500	1.6	0.1	5.8	0.1	1.2	0.1
$2,500 and over	1.3	(1)	4.3	(1)	1.0	(1)

[1] Less than one-tenth of 1 per cent.

These differences between the sexes can be viewed in another way in Table 21, which shows the per cent distribution, by sex, of the employees in each compensation class in the District of Columbia and elsewhere.

The percentage which women form of the total number in any compensation class is highest in the case of employees paid by piecework. Of this class, as Table 21 shows, 37.4 per cent, or more than one-third, are women. The class which ranks second in this respect is that where the rate of compensation is less than $720. Of this class, 18.5 per cent are women. In the remaining classes the proportion formed by women varies from 8 per cent of those paid at a rate of $1,200 but less than $1,400 to one-tenth of 1 per cent of those paid at a rate of $2,500 and over; and it is lowest in the three classes in which the rate of compensation is highest.

TABLE 21.—*Per cent distribution, by sex, of employees in executive civil service, classified by place of employment and compensation: 1907.*

COMPENSATION.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE.

Not reported	96.8	3.2	(1)	(1)	97.0	3.0

[1] Per cent not shown where base is less than 100.

In all classes in which the amount of compensation is definite, the proportion formed by women is far greater in the District of Columbia than it is elsewhere. In the District 55 per cent of those paid at a rate of less than $720 are women, while elsewhere the corresponding percentage is only 10.2. In the District this class of "less than $720" contains the largest proportion of women, and elsewhere it is surpassed only by that of "by piecework." The classes where the rate of compensation is from $720 to $1,800 are also noticeable in the District for the comparatively high proportion which women constitute of the total, the percentages in these classes varying from 9.7 for those in the class "$1,600 but less than $1,800" to 35.3 for those in the class "$900 but less than $1,000." Elsewhere than in the District the percentages which women form of the total number in these classes from $720 to $1,800 are small, varying from 1 in the class "$1,600 but less than $1,800" to 5.2 in the class "$720 but less than $840." Both in the District and elsewhere the proportion formed by women is extremely small in the classes where the rate of pay is $1,800 a year or over.

The differences between the sexes are summarized graphically in Diagram 6, which divides the employees into six broad classes according to compensation, and shows what proportion women form of each class. The upper area in the diagram represents the employees in the District; the lower area those elsewhere.

[1] Includes "by piecework," "without pay," and "not reported."

Race.—The distribution, by compensation, of the white and of the colored employees is shown for the District of Columbia and elsewhere in Table 22.

As the character of work of the colored employees is generally lower than that of the whites, it naturally follows that the colored employees generally receive a lower rate of compensation. Table 22 indicates that 64.4 per cent of the colored, as contrasted with 16.1 per cent of the whites, received less than $720 per year. The difference in the average compensation of the two classes in the District of Columbia and elsewhere is shown in the following tabular statement:[1]

PLACE OF EMPLOYMENT.	APPROXIMATE AVERAGE COMPENSATION OF EMPLOYEES OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	White.	Colored.
Total	$948	$964	$715
District of Columbia	1,079	1,128	700
Elsewhere	928	940	720

Although the average compensation of the colored employees is but $715, some of them are found in the higher compensation classes. Twenty-two are paid at a rate of at least $2,500 a year, and of this number, 20 are negroes, 1 is an Indian, and 1 a Japanese.

[1] For the method pursued in computing these averages, see page 32.

Age.—The age of the employees in the different compensation classes is shown with other details in Tables 53 to 61 and 71 to 73 (pages 75 to 91, and pages 111 to 115). Table 23, which follows, is based on the absolute numbers contained in these tables, and gives the per cent distribution, by compensation, of the total number of employees, classified by age and place of employment.

The general tendency indicated by the figures presented in Table 23 is that with increasing age the rate of pay increases and the employees become more evenly distributed through the several compensation classes. The figures for the total number of employees show that in the earlier age periods there is marked concentration in the classes "less than $720" and "$900 but less than $1,000." Of the employees under 20 years of age, 71.2 per cent are paid at a rate of less than $720 and 13.6 per cent at a rate of $900 but less than $1,000, making a total in these two classes of 84.8 per cent. As the age of the employees increases the proportion in these two classes tends generally to decrease, until in the age period "70 years and over" it s only 29.1 per cent. If only definite compensation classes are considered, it will be noted that in the period "under 20 years" the difference between the percentage in the most numerous class and the percentage in the least numerous is 71.2, while in the period "70 years and over" the corresponding difference is but 13.2. This tendency toward more even distribution in the older periods results, in part at least, from the gradual advancement which comes to the more successful as their ages and the length of their service increase.

[1] For the actual numbers on which the percentages are based, see Tables 53, 56, and 59 (pages 75, 81, and 87).
[2] Less than one-tenth of 1 per cent.
[3] Per cent not shown where base is less than 100.

The same tendency for the rate of pay to increase as the age increases, and for the percentages in the several compensation classes to become more nearly uniform in the older periods, is observable both among employees in the District of Columbia and among those elsewhere. The increase in the rate of pay, however, is more marked in the District than it is elsewhere. This can perhaps be more readily grasped

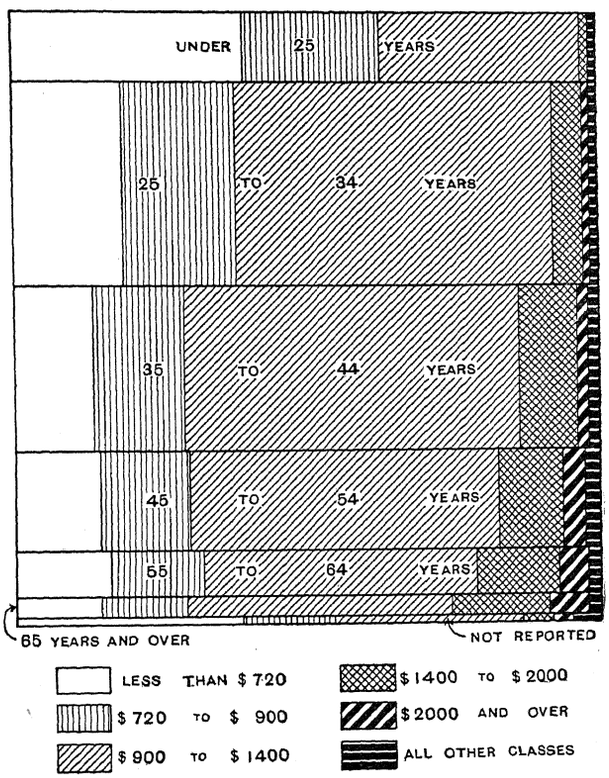
from an inspection of the following tabular statement, which shows for the District of Columbia and the rest of the country the approximate average compensation of the employees in each age period:[1]

AGE.	APPROXIMATE AVERAGE COMPENSATION OF EMPLOYEES OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	District of Columbia.	Elsewhere.
All ages	$948	$1,079	$928
Under 20 years	668	630	678
20 to 24 years	785	781	786
25 to 29 years	873	932	866
30 to 34 years	937	1,037	925
35 to 39 years	978	1,131	958
40 to 44 years	1,009	1,181	985
45 to 49 years	1,016	1,203	987
50 to 54 years	1,019	1,193	988
55 to 59 years	1,025	1,169	995
60 to 64 years	1,065	1,233	1,017
65 to 69 years	1,091	1,242	1,039
70 to 74 years	1,125	1,263	1,057
75 to 79 years	1,110	1,135	1,095
80 years and over	1,063	1,136	1,011
Not reported	859	1,057	829
70 years and over	1,118	1,224	1,063

The approximate average compensation of the two youngest classes, according to the tabular statement, is smaller in the District than it is elsewhere. In the class "25 to 29 years," however, the rate for the District exceeds that elsewhere, and the same condition exists in every older group. In the District the lowest average rate is $630 for employees under 20 years of age, and the highest $1,263 for employees 70 to 74 years of age, which makes the range of greatest variation $633. Elsewhere than in the District the lowest rate is $678 for those under 20 years of age, and the highest $1,095 for those 75 to 79 years of age, which makes the range of greatest variation only $417. The rate of pay in the District, therefore, is generally higher than it is elsewhere and shows greater increase as the age of the employees increases.[2]

Diagram 7 shows graphically the distribution of the employees by age, and also the distribution of those in each age group by compensation.

DIAGRAM 7.—*Employees in executive civil service, by age and compensation: 1907.*



[1] For the method pursued in computing these averages, see page 32.

[2] In this connection it may be noted that a new law affecting the salaries of letter carriers and postal clerks, which became operative July 1, 1907, may result ultimately in increasing the range of average rates outside the District. For the law, see 34 Stat. L., 1206.

[2] Less than one-tenth of 1 per cent.

Marital condition.—The marital condition of the employees, classified by compensation, is shown with other details in Tables 47 to 49 (pages 66 to 70). Table 24, which follows, is based on the actual numbers shown in Table 47, and presents the per cent distribution, by marital condition, of the employees, classified by sex and compensation.

TABLE 24.—PER CENT DISTRIBUTION,[1] BY MARITAL CONDITION, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY SEX AND COMPENSATION: 1907.

[1] For the actual numbers on which the percentages are based, see Table 47 (page 66).

[2] Per cent not shown where base is less than 100.

The chief interest of Table 24 centers about the figures for men, because those figures throw some light upon the question of the effect of increasing compensation on the tendency toward marriage. The proportion formed by single men, it will be noted, is highest (41.9 per cent) in the class where the rate of compensation is lowest (less than $720). As the rate of compensation increases through the next four classes, the proportion formed by single men decreases markedly, although the decrease is not uninterrupted. From the compensation class "$1,000 but less than $1,200" to that of "$2,500 and over," however, the decrease in the proportion formed by single men is continuous, the percentage falling by successive steps from 25.3 in the former class to 10 in the latter.

This tendency for the proportion formed by the single to decrease as the rate of compensation increases may result almost wholly from the fact that the employees in the higher compensation classes are, on the whole, much older than those in the lower classes. This difference in age is clearly shown in the following tabular statement, which gives the approximate median age of the employees in each compensation class:[1]

[1] For a definition of the approximate median age and a statement of the assumption made in calculating it, see page 12.

[1] Median age not shown where number of employees is less than 50.

Since the men receiving the higher rates of compensation are considerably older than those receiving the lower rates, nothing definite can be derived from a classification by marital condition and compensation unless such a classification is combined with one of age. The employees are therefore classified by age, marital condition, and compensation in Tables 47, 48, and 49 (pages 66 to 70). Table 25, which is based on the actual numbers shown in Table 47, gives the per cent distribution, by marital condition, of the male employees, classified by age and compensation.

TABLE 25.—PER CENT DISTRIBUTION,[1] BY MARITAL CONDITION, OF MALE EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY AGE AND COMPENSATION: 1907.

[1] For the actual numbers on which the percentages are based, see Table 47 (page 66).
[2] Per cent not shown where base is less than 100.
[3] Less than one-tenth of 1 per cent.

The general conclusion suggested by Table 25 is that age plays a far greater part in determining man's marital condition than do earnings. In every compensation class without exception the proportion formed by single men decreases as age increases. Although this decrease in the percentage formed by single men is most marked between the ages of 20 and 40, yet even after the age of 40 it continues uninterruptedly as age increases. Among men of the same age, on the other hand, no consistent tendency is apparent for the proportion formed by the single to decrease as compensation increases. It is true that the largest percentage formed by single men is always found in the group paid at the lowest rate, "less than $720," and that in the three lowest compensation classes this percentage of single decreases with increasing compensation, but a similar decrease in the percentage of single is not found in the higher com-

pensation classes. The proportion of single men is, in fact, generally higher among those paid at a rate of $1,000 or more than among those paid at a rate between $840 and $1,000. If those paid at a rate less than $840 are excluded, the following results will be obtained:

AGE.	Maximum percentage formed by single men.	Compensation class having maximum percentage of single men.
Under 20 years	95.8	$900 but less than $1,000.
20 to 29 years	56.4	$1,400 but less than $1,600.
30 to 39 years	24.0	$1,000 but less than $1,200. $1,600 but less than $1,800.
40 to 49 years	12.7	$1,200 but less than $1,400.
50 to 59 years	10.4	$1,200 but less than $1,400.
60 years and over	6.2	$1,400 but less than $1,600.

From these figures it is apparent that Table 25 fails to establish any close relation between marital condition and compensation. This lack of connection between marital condition and compensation does not necessarily indicate that in the case of an individual, or of a small class of individuals, earnings do not play an important part in determining marital condition. It merely tends to show that when the marital condition of a large number of men is to be considered, the question of earnings is of far less importance than the question of age.

Character of work.—Another important subject to be considered in connection with compensation is that of character of work. The distribution, by compensation, of the total number of employees engaged in each class of work is presented in Table 26.

[1] Per cent not shown where base is less than 100.

[2] Less than one-tenth of 1 per cent.

The general conditions revealed by Table 26 are those which would naturally be expected. The greatest concentration in the highest compensation classes is exhibited by employees whose work is executive, while the greatest concentration in the lowest classes is exhibited by those whose work is subclerical and manual labor. Of the employees in the executive class, 61.8 per cent are paid at a rate of at least $2,000 a year; of those in the subclerical and manual labor class, 77.6 per cent are paid at a rate of less than $840 a year.

These differences can perhaps be best summarized by resorting to the device of average compensation. The following tabular statement, therefore, gives the approximate average compensation of the employees of each sex, classified in accordance with the character

of work in which they were engaged. The actual numbers from which the averages for the men and the women are computed will be found in Tables 54 and 55 (pages 77 to 79).[1]

In using these averages the fact should be borne in mind that they are but approximations. For all classes except the executive they are presumably very nearly correct, but for the executive class they are probably too low. The assumption made in calculating them, that the employees in a given compensation class receive the lowest rate for that class, is least accurate when applied to executive employees in the groups "$2,000 but less than $2,500" and "$2,500 and over;" and as has been noted, these classes contain 61.8 per cent of the total number of executive employees. Since so large a proportion of the executive employees are in these classes, where the margin of inaccuracy is greatest, the averages for executive employees, as given in the following tabular statement and elsewhere, are undoubtedly too low:

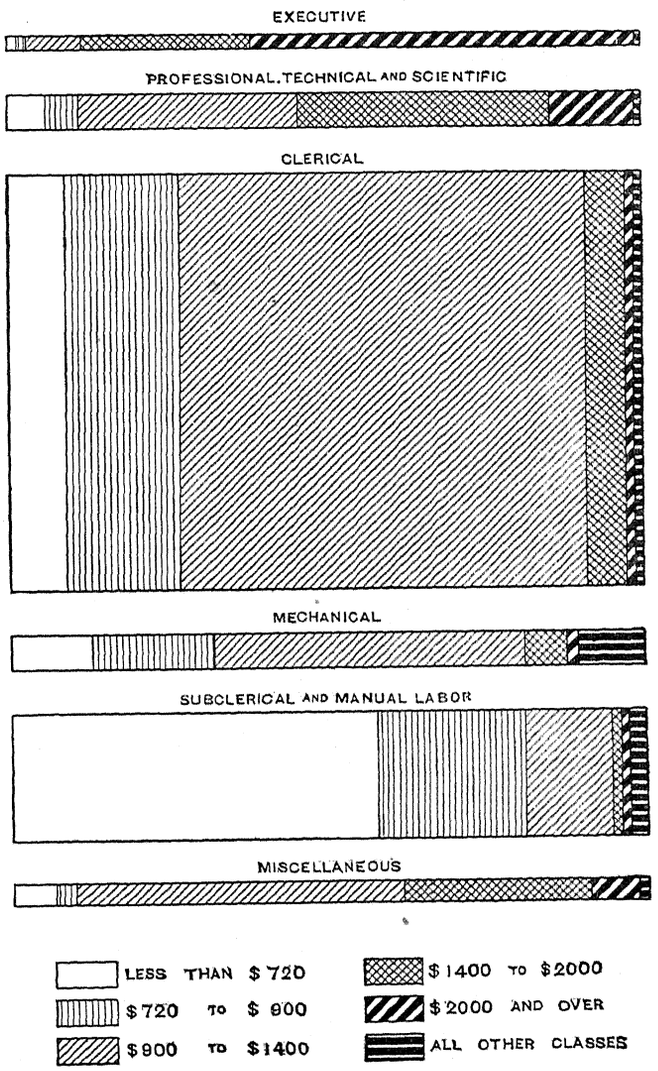
CHARACTER OF WORK.	APPROXIMATE AVERAGE COMPENSATION OF EMPLOYEES OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	Male.	Female.
All classes	$948	$960	$804
Executive	1,983	1,991	1,353
Professional, technical, and scientific	1,375	1,388	871
Clerical	953	953	950
Mechanical	959	962	814
Subclerical and manual labor	711	728	615
Miscellaneous	1,221	1,230	844

For the two sexes combined and for the men alone the rank of the classes in accordance with the average compensation shown in the tabular statement is as follows: Executive; professional, technical, and scientific; miscellaneous; mechanical; clerical; and subclerical and manual labor. The ranking of the women differs slightly, for the average compensation for the clerical class of women exceeds that for any of the other classes except the executive.

It is interesting to note that in the clerical class the average compensation of women ($950) is practically the same as that for men ($953). In all other classes the average compensation is far greater for the men than it is for the women.

The relative importance of the employees engaged in each class of work and their distribution by compensation are presented graphically in Diagram 8.

DIAGRAM 8.—*Employees in executive civil service, by character of work and compensation: 1907.*



[1] For the method pursued in computing these averages, se page 32.

[1] Includes "by piecework," "without pay," and "not reported."

Age and character of work.—Age has of course an important bearing upon character of work and compensation. In Tables 53 to 61 (pages 75 to 91) the employees are therefore classified by place of employment and sex, and by age, character of work, and compensation. The general results of this classification can perhaps be summarized by the device of average compensation. The following tabular statement therefore shows the approximate average compensation of the employees in each age group, divided in accordance with the character of their work:[1]

AGE.	APPROXIMATE AVERAGE COMPENSATION OF EMPLOYEES OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.						
	Total.	Executive.	Professional, technical, and scientific.	Clerical.	Mechanical.	Subclerical and manual labor.	Miscellaneous.

Not reported	859	(1)	(1)	930	(1)	673	(1)

[1] Average compensation not shown where number of employees is less than 50.

[1] For the method pursued in computing these averages, see page 32.

Among the employees engaged in each class of work a general tendency is apparent toward an increase in average compensation as age advances, though this increase is not always uninterrupted. Invariably, as the tabular statement shows, the lowest average rate is that paid to the youngest group for which the figures are significant. The highest average rate, in all classes except the subclerical and manual labor and the miscellaneous, is paid to those 70 years and over. In the subclerical and manual labor class the highest rate is that of $784, paid to those 65 to 69 years of age, while in the miscellaneous class the highest average is $1,275, paid to those of the comparatively young age of 45 to 49 years.

Period of service.—In using this tabular statement the fact should be recalled that old age is not necessarily synonymous with long service, since many persons are first employed by the Government after they have already reached advanced years. The averages given in the tabular statement should not be regarded, therefore, as an exact index of the opportunities for advancement presented to one who enters the service at a comparatively early age. Of more interest in this connection are Tables 62 to 70 (pages 93 to 109), which show the employees, classified by sex and place of employment and by character of work, compensation, and period of service. Table 27, which follows, is based on Table 62 and shows the per cent distribution, by compensation, of the employees, classified by character of work and period of service.

[1] For the actual numbers on which the percentages are based, see Table 62 (page 93).
[2] Less than one tenth of 1 per cent.
[3] Per cent not shown where base is less than 100.

Inspection of the percentages given in Table 27 shows that for all classes except the executive, increase in length of service is generally accompanied by increase in compensation. The rate of pay of 65.1 per cent of the professional, technical, and scientific employees who have entered the service within a year is less than $1,200 per annum, but of the employees of this class who have been in the service 30 to 34 years, only 12.6 per cent receive less than $1,200. Persons paid at a rate of less than $1,000 a year form 93.5 per cent of the clerical employees who have entered the service within a year; 5.5 per cent of those who have served 40 years and over. Among the mechanical employees the difference is not so marked, but 62.7 per cent of the persons appointed within the year receive less than $1,000, as contrasted with 29.8 per cent of those having served 30 to 34 years. In the subclerical and manual labor class the range of increase is not nearly so wide, although some tendency toward greater compensation with increasing service is apparent. Of those in this class who have entered the service during the year, 70.4 per cent receive less than $720, while of those who have served 40 years and over, 44.7 per cent are paid at a rate of less than $720.

The movement of compensation in the intervening periods between 1 year of service and 40 years of service and over can be more conveniently studied from the following tabular statement, which shows the approximate average compensation of the employees, classified by period of service and character of work, and also the approximate average compensation of the male and female employees, classified by period of service:[1]

PERIOD OF SERVICE.	APPROXIMATE AVERAGE COMPENSATION OF EMPLOYEES OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.								
	Total.	Male.	Female.	Executive.	Professional, technical, and scientific.	Clerical.	Mechanical.	Subclerical and manual labor.	Miscellaneous.

[1] Average compensation not shown where number of employees is less than 50.

[1] For the method pursued in computing these averages, see page 32.

The approximate average compensation of the employees who have been in the service less than one year is $777, and this may be regarded practically as the approximate average compensation at time of appointment. As the length of service increases the rate of compensation increases also, until among those who have served 40 years and over it averages $1,399. The same tendency is observable among both the men and the women, but among the women the increase in compensation is not so great nor does it progress absolutely without interruption.

With the exception of those for the executive employees, the averages for the employees engaged in the different grades of work show, almost uniformly, a consistent increase in compensation as the length of service increases. The clerical class is a particularly good illustration of this tendency, since the average rate of compensation for that class, beginning at $757 for those who have been in the service less than 1 year, increases in each successive period without a single interruption, until for those who have served 40 years and over it is $1,450, an increase of $693. In the professional, technical, and scientific class the average compensation increases in each successive service period, with a single exception, moving from $1,099 for those who have served under 1 year to $1,742 for those who have served 35 to 39 years, the last class for which the average is significant. For the mechanical class the increase is very consistent until the group having served 30 to 34 years is reached, after which the average declines somewhat. Among the employees engaged in miscellaneous pursuits the increase is maintained only up to the group 20 to 24 years, after which the average is slightly lower. In the subclerical and manual labor class the increase is less consistent and less marked, but the general tendency is toward an increase up to 10 to 14 years of service, but not after that.

The striking exception to the general rule is the executive class, for in that class no tendency is apparent toward greater compensation as service increases; in fact, the average rate of compensation is higher in the earlier service periods than it is in any of the later ones. This is probably to be attributed to the fact that the executive positions are filled by two classes of persons. The first class is composed of those appointed, usually from private life, by the President with the advice and consent of the Senate. They are generally the most highly paid employees, and often do not remain in the service very many years. The second class of executive employees are those who work up to executive positions through a long apprenticeship in clerical, professional, technical, or scientific positions. Executive employees of this class are usually the less highly paid, and they continue in the service for long periods. The averages for the early service periods are thus largely influenced by the former class, the Presidential appointees, while the averages for the more advanced service periods are largely influenced by the latter class, the less highly paid employees who work up through the service.

Diagram 9 shows graphically the relative importance of the employees in each service period, and distributes them in accordance with the rate of their compensation.

DEPARTMENTS, BUREAUS, AND INDEPENDENT OFFICES.

The classification, by Department, bureau, or independent office, presented in this bulletin, is based mainly on that used by the Civil Service Commission in compiling its annual statistics. In accordance with this classification, separate offices and bureaus located in Washington and belonging to a single Department are grouped together as constituting that Department proper, except in the case of the Bureau of Engraving and Printing, which although in the Treasury Department is shown separately.[1] The branches of a Department which are located mainly outside of the District are shown separately. In addition to the Departments, the following independent offices are also located mainly in the District of Columbia: The Executive Office; the Interstate Commerce Commission; the Civil Service Commission; the Government Printing Office; the Smithsonian Institution; the Isthmian Canal Commission; and the State, War, and Navy building.

The distribution of the male and of the female employees by Departments, bureaus, or independent offices is shown in Table 28. This table also shows for each Department, bureau, and independent office the proportion of the total number of its employees formed by men and the proportion formed by women.

Of the employees considered in this bulletin, more than one-half (57.5 per cent) are in the Post Office Department. The great importance of this Department is of course due to the enormous number of persons required to handle the mail of the country. Table 28 shows that 37,389 are employed as rural delivery carriers, 28,846 as clerks in classified offices, 24,696 as letter carriers, and 13,892 as railway mail clerks. It should be recalled, moreover, that 62,663 postmasters and 12,850 clerks have been omitted from these figures for reasons given on page 9. If these are included, it will be found that the number engaged in handling the mail of the country is 180,336. In marked contrast to this army of employees is the administrative force in the Post Office Department proper, which consists of 1,988 persons.

In the number of men the Post Office Department also outranks all others, employing 104,001, or 60.4 per cent of the total number. The Treasury Department ranks second with 20,466, or 11.9 per cent of the total number; and the War Department third with 17,616, or 10.2 per cent.

Although the Post Office Department greatly exceeds all others in the total number of employees and in the number of men, it is outranked by the Treasury Department and by the Department of the Interior in the number of women employed. The Treasury Department employs 4,200 women, 30.4 per cent of the total number in the executive civil service. Of this number, 1,901 are in the Bureau of Engraving and Printing and 1,273 are in the Treasury Department proper, both of which are located mainly in the District of Columbia. The Department of the Interior employs 3,158 women, 22.8 per cent of the total number in the service. Of this number, 1,037 are in the Interior Department proper, which is mainly in the District, and 1,466 are in the Indian Service, which is mainly elsewhere. The Post Office Department employs 2,810 women, 20.3 per cent of the total number, of whom 2,294 are clerks in the classified offices which are scattered throughout the country.

In the proportion which women form of the total number of employees, the bureaus and offices differ widely. In some branches of the service none of the employees are women, while in the Bureau of Engraving and Printing women form 54.3 per cent of the total number. In the Departments proper the percentages formed by women vary from 8.2 for the Navy to 35.9 for the Treasury. In the Indian Service, which is conspicuous for the large number of women employed, 33.1 per cent of the employees are women. The 2,294 female clerks in the classified post offices form but 8 per cent of the employees of that class. The Government Printing Office employs 877 women, who form 24.4 per cent of its total force.

[1] The number of employees in each individual bureau or office in the District of Columbia is shown, classified by compensation, in the Official Register of the United States, 1907, Vol. I, pages 70 to 77.

TABLE 28.—DISTRIBUTION, BY DEPARTMENT, BUREAU, AND INDEPENDENT OFFICE, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY SEX; ALSO PER CENT DISTRIBUTION, BY SEX, OF EMPLOYEES IN EACH DEPARTMENT, BUREAU, AND INDEPENDENT OFFICE: 1907.

[1] For the actual numbers on which the percentages are based, see Table 83 (page 132).
[2] Per cent not shown where base is less than 100.
[3] Median age not shown where number of employees is less than 50.
[4] Less than one-tenth of 1 per cent.

Judged by their approximate median age, as shown in Table 29, the oldest class of employees are the 106 in the national military park commissions, who are equally divided in respect to age at 50.7 years. The youngest class—if the 68 employees of the miscellaneous branches of the Interior Department be disregarded—are the 1,035 employees of the Reclamation Service of the Interior Department, the median age of which class is 29.2 years. The greatest variation between the median ages of the employees in the different Departments, bureaus, and independent offices is thus 21.5 years.

Of the 106 employees of the national military park commissions, 1 is 80 years of age or over, 4 are 75 to 79, 8 are 70 to 74, and 16 are 65 to 69, which makes a total of 29 who are at least 65 years of age, and these 29 form 27.4 per cent of all the employees of the commissions. Inspection of the percentages in Table 29 shows that in several other branches of the service, employees at least 65 years of age form a considerable proportion of the total number of employees. Of these branches, the following rank highest in the proportion formed by these employees of advanced years: The State, War, and Navy building (15.3 per cent); the Treasury Department proper (15.2 per cent); the War Department proper (14.6 per cent); the Subtreasuries (12.1 per cent); the Interior Department proper (11.6 per cent); the Mint and Assay Service (10.6 per cent); and the Internal Revenue Service (10.5 per cent).

In this connection the following tabular statement may be of interest, since it shows the distribution of the employees 65 years of age and over by Departments and independent offices, and also the percentage which such employees form of the total number in each Department and independent office:

DEPARTMENT OR INDEPENDENT OFFICE.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE: 1907.			
	Total.	65 years of age and over.		
		Number.	Per cent of total employees.	Per cent distribution.
Total	185,874	6,523	3.5	100.0
Executive Office	43	3	(1)	(2)
Department of State	164	7	4.3	0.1
Treasury Department	24,666	1,980	8.0	30.4
War Department	18,646	790	4.2	12.1
Department of Justice	1,693	107	6.3	1.6
Post Office Department	106,811	2,030	1.9	31.1
Navy Department	2,930	133	4.5	2.0
Department of the Interior	11,378	638	5.6	9.8
Department of Agriculture	7,224	144	2.0	2.2
Department of Commerce and Labor	7,632	390	5.1	6.0
Interstate Commerce Commission	279	8	2.9	0.1
Civil Service Commission	180	3	1.7	(2)
Government Printing Office	3,599	246	6.8	3.8
Smithsonian Institution	310	14	4.5	0.2
Isthmian Canal Commission	122	.....	.....	.....
State, War, and Navy building	197	30	15.2	0.5

[1] Per cent not shown where base is less than 100.
[2] Less than one-tenth of 1 per cent.

In the actual number of employees at least 65 years of age, the Post Office Department exceeds all the other Departments and independent offices, as it employs 2,030, or 31.1 per cent of the total number, while the Treasury Department, which ranks second, employs 1,980, or 30.4 per cent. In the percentage which these employees of advanced age form of all the employees, the Post Office Department is outranked by all the other Departments and by all the independent offices except the Isthmian Canal Commission and the Civil Service Commission. Of the important Departments or offices, the Treasury, which is second in the actual number of employees of advanced age, leads in the proportion which such employees form of all employees, 2 out of every 25 in this Department being at least 65 years of age. Of the 197 employees of the State, War, and Navy building, however, 30, or almost 2 out of every 13 are at least 65.

Character of work.—The character of work of the male and of the female employees in each Department, bureau, or independent office is shown in Table 84 (page 133). Table 30 is based on Table 84, and shows the per cent distribution, by character of work, of the employees in each Department, bureau, or independent office.

[1] For the actual numbers on which the percentages are based, see Table 84 (page 133).
[2] Less than one-tenth of 1 per cent.
[3] Per cent not shown where base is less than 100.

Table 30 is chiefly valuable as a means of studying any single Department, bureau, or independent office in which one may be particularly interested. It is, however, an excellent illustration of the diversity of the work of the various branches of the service. In some branches practically all the work is subclerical or manual labor, while in others all is clerical. In the Ordnance Department at large more than one-half of the employees (51.9 per cent) are engaged in mechanical work, while in many branches of the service no mechanical work is done. Of the employees in the Steamboat Inspection Service at large, 74 per cent are professional, technical, or scientific persons, a proportion far in excess of that of any other branch; in many branches of the service, however, no employee is regarded as entitled to such a designation. In the Land Service of the Interior Department one employee in three (34.6 per cent) is engaged in executive work; in several branches of the service not one in a hundred is an executive employee. In some cases it will be noted that no executive employees are reported. In the Pay Department at large, in the Signal Service at large, and among the employees of the Naval Academy, this results from the fact that the executive employees are in the military or naval service, and so are not included in this bulletin. The absence or practical absence of executive employees in several branches of the Postal Service indicates either that the employees shown in the table are supervised by the postmasters, who are not included, for reasons given on page 9, or that the executive work is done by the central administrative force.

Length of service.—The length of service of the employees in each Department, bureau, or independent office is shown in Table 85 (page 134). Table 31 is based on the actual numbers contained in Table 85, and gives the per cent distribution by period of service, and in the last column the approximate median length of service[1] of the employees in each Department, bureau, and independent office.

Judged by the medians as shown in Table 31, the class that has been longest in the service is that formed by the employees of the Department of the Interior proper. For this class the approximate median length of service is 14.2 years. At the opposite extreme—if the 68 employees of the miscellaneous branches of the Interior Department again be disregarded—are the 1,035 employees of the Reclamation Service, for whom the median is but 1.7 years. The range of greatest variation in length of service is thus 12.5 years.

Many factors probably contribute to this wide variation, but by far the most important is the time at which the several Departments, bureaus, and independent offices were established. The Reclamation Service, which is conspicuous for the brief time its employees have been in the service, was established in pursuance of an act passed June 17, 1902, the recentness of which date accounts for the fact that 85.9 per cent of the employees have been in the service less than 5 years. In the Rural Delivery Service, which is a comparatively recent development of the Postal Service, 78 per cent of the carriers have served less than 5 years. At the other extreme stand the

[1] The approximate median length of service is that point at which the employees are equally divided in respect to length of service, one-half having served more than the median, the other half less. In calculating this median, the employees in the service period in which the median was known to fall were regarded as equally distributed through that period.

long established Departments at Washington, for example, the Treasury Department proper, where but 17 per cent of the employees have been in the service under 5 years.

These figures show that in comparing the length of service of the employees in the several branches it is absolutely necessary to consider the date of establishment.

TABLE 31.—PER CENT DISTRIBUTION,[1] BY PERIOD OF SERVICE, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY DEPARTMENT, BUREAU, AND INDEPENDENT OFFICE: 1907.

[1] For the actual numbers on which the percentages are based, see Table 85 (page 134).
[2] Per cent not shown where base is less than 100.
[3] Median length of service not shown where number of employees is less than 50.
[4] Less than one-tenth of 1 per cent.

Compensation.—The employees in each Department, bureau, and independent office are classified by sex and compensation in Tables 86, 87, and 88 (pages 135 to 137). Table 32 is based on the actual numbers contained in Table 86, and presents the per cent distribution by compensation, and in the last column the approximate average compensation,[1] of the employees in each Department, bureau, and independent office.

[1] For the method pursued in computing these averages, see page 32.

TABLE 32.—PER CENT DISTRIBUTION,[1] BY COMPENSATION, OF EMPLOYEES IN EXECUTIVE CIVIL SERVICE, CLASSIFIED BY DEPARTMENT, BUREAU, AND INDEPENDENT OFFICE: 1907.

DEPARTMENT, BUREAU, OR INDEPENDENT OFFICE.	EMPLOYEES IN EXECUTIVE CIVIL SERVICE.															
	Number.	Per cent whose compensation is—														Approximate average compensation.
		Less than $720.	$720 but less than $840.	$840 but less than $900.	$900 but less than $1,000.	$1,000 but less than $1,200.	$1,200 but less than $1,400.	$1,400 but less than $1,600.	$1,600 but less than $1,800.	$1,800 but less than $2,000.	$2,000 but less than $2,500.	$2,500 and over.	By piece-work.	Without pay.	Not reported.

[1] For the actual numbers on which the percentages are based, see Table 86 (page 135).
[2] Less than one-tenth of 1 per cent.
[3] Per cent not shown where base is less than 100.
[4] Average compensation not shown where number of employees is less than 50.

The approximate average rate of compensation is highest ($1,669) for the employees in the Steamboat Inspection Service at large. None of the employees in this branch of the service are paid at a rate less than $900 a year, while 88.9 per cent are paid at a rate of at least $1,400 a year. In this connection it is interesting to recall a fact noted in the discussion of Table 30, namely, that the Steamboat Inspection Service at large is conspicuous because 74 per cent of its employees are engaged in professional, technical, or scientific work, a proportion far in excess of that reported for any other branch of the service.

The lowest approximate average rate of compensation is $640 a year, reported for the 702 employees of the Government Hospital for the Insane. Of these employees, 91 per cent are paid at a rate of less than $720 a year. Inspection of Table 30 indicates that this is largely due to the fact that in the hospital most of the employees (76.8 per cent of the total number) are engaged in subclerical work and manual labor.

The Departments, bureaus, and independent offices located mainly in Washington are ranked according to the approximate average compensation of their employees in the following tabular statement:

DEPARTMENT, BUREAU, OR INDEPENDENT OFFICE LOCATED MAINLY IN THE DISTRICT OF COLUMBIA.	Approximate average compensation of employees of known compensation in executive civil service: 1907.[1]
Department of Justice proper	$1,588
Department of State	1,310
Isthmian Canal Commission	1,306
Interstate Commerce Commission	1,286
Department of the Interior proper	1,257
Department of Commerce and Labor proper	1,254
Civil Service Commission	1,242
Post Office Department proper	1,228
War Department proper	1,219
Department of Agriculture	1,106
Navy Department proper	1,125
Smithsonian Institution	968
Bureau of Engraving and Printing	719
State, War, and Navy building	695

[1] For the method pursued in computing these averages, see page 32.

The figures in this tabular statement, as well as those in Table 32, should be considered in connection with those for character of work presented in Table 30. They do not necessarily indicate that one Department, bureau, or independent office pays a larger salary than another for the same work. To obtain conclusive statistics upon such a point would probably be impracticable, since slight variations in the character of the work would destroy the comparability of the figures.

STATE OR TERRITORY FROM WHICH APPOINTED.

The distribution of the employees according to the state or territory from which they were appointed is shown in Table 33, which also classifies the employees by place of employment.

TABLE 33.—*Distribution, by state or territory from which appointed, of employees in executive civil service, classified by place of employment: 1907.*

[1] Less than one-tenth of 1 per cent.

New York ranks first in the number of its citizens employed in the executive civil service, reporting 22,467, or 12.1 per cent of the total number; Pennsylvania ranks second with 14,627, or 7.9 per cent; Illinois, third with 13,406, or 7.2 per cent; and Massachusetts, fourth with 9,585, or 5.2 per cent.

If the figures for the employees in the District of Columbia be considered, it will be found that the largest

number appointed from any single state or territory is 7,606, reported for the District itself. These 7,606 appointed from the District form 30 per cent of all the employees located there. New York ranks second in the number of appointees employed in the District with 2,152, or 8.5 per cent; Maryland, third with 1,806, or 7.1 per cent; Pennsylvania, fourth with 1,696, or 6.7 per cent; and Virginia, fifth with 1,418, or 5.6 per cent. The Atlantic seaboard states from New York to Virginia, inclusive, contribute 59.9 per cent of all the employees in the District of Columbia.

The distribution of the employees elsewhere than in the District according to the state or territory from which they were appointed probably indicates in a rough way the magnitude of the governmental work conducted in the several states and territories. New York ranks first with 20,315, or 12.7 per cent of the total number; Pennsylvania, second with 12,931, or 8.1 per cent; Illinois, third with 12,537, or 7.8 per cent; and Massachusetts, fourth with 8,922, or 5.6 per cent.

Ratio to population.—It will be observed that with the exception of Massachusetts these states were also the leading states in population at the census of 1900 In this connection Table 34 may be of interest, for it shows for each state and territory of continental United States the population in 1900, and the number of employees in the executive civil service per 100,000 of this population, distinguishing between employees in the District and those elsewhere.

The number, per 100,000 inhabitants, of appointments to positions elsewhere than in the District of Columbia varies from 442 in Arizona to 68 in Mississippi, and it is, generally speaking, highest for the states in the Western division and lowest for those in the South Central. The rank of the divisions in this respect is Western (335), North Atlantic (244), North Central (222), South Atlantic (154), and South Central (125).

In respect to appointments to positions in the District of Columbia, per 100,000 inhabitants, the rank of the divisions is far different. The South Atlantic division is first with 118; the North Atlantic, second with 27; the North Central, third with 18; the Western, fourth with 17; and the South Central, again last with 12. The ratio for the District of Columbia (2,729) exceeds that for Maryland, the state which ranks second, by 2,577. Maryland has 152 citizens per 100,000 in the service in the District, Virginia 76, and Delaware 46. All these states are in the South Atlantic division. Of the 3 states which come next, Nevada with 43 and Wyoming with 40 are in the Western division, and Vermont with 40 is in the North Atlantic. The states with the lowest ratios are Alabama and Indian Territory of the South Central division, for each of which 10 appointees were reported per 100,000 inhabitants. Four other states of this division have a ratio of 11, which is lower than that for any of the states and territories constituting the other divisions.

Apportionment.—In respect to positions in the classified service in the District of Columbia, the civil service act of 1883 provides that they "shall be apportioned among the several states and territories and the District of Columbia upon the basis of population as ascertained at the last preceding census. Every application for an examination shall contain, among other things, a statement, under oath, setting forth his or her actual bona fide residence at the time of making the application, as well as how long he or she has been a resident of such place."

In pursuance of this requirement of the law, section 2 of Rule VII of the civil service rules provides:

Certification for appointment in the Departments or independent offices at Washington shall be so made as to maintain, as nearly as the conditions of good administration will warrant, the apportionment of such appointments among the several states and territories and the District of Columbia upon the basis of population: *Provided*, That appointments to the following named positions shall not be so apportioned, viz: Plate printer, printer's assistant, skilled helper, and operative in the Bureau of Engraving and Printing; positions in the field service of the military staff departments and at Army Headquarters [and all positions in] mail bag repair shop and mail lock repair shop, Government Printing Office, Pension Agency, and local offices in the District of Columbia; apprentice, student, gardener, engraver, carpenter, cabinetmaker, painter, plumber, plumber's helper, electric wireman, electric lineman, and electrician's helper.

Since the law thus provides for the apportionment of appointments to classified positions among the several states and territories according to their population at the last preceding census, Table 35 may be of interest, for it shows the number of classified and unclassified employees, per 100,000 population, for each state and territory in continental United States, distinguishing between the employees in the District of Columbia and those elsewhere.

[1] Includes "not reported."

[2] Less than 1 in 100,000.

The figures in Table 35, it should be noted, do not furnish any indication of the effectiveness with which the Civil Service Commission is now able to execute the provisions of the law governing apportionment. The figures here dealt with include all employees now in the classified service, whether they were appointed through methods over which the Civil Service Commission exercises control or whether they obtained their status in the service through "classification and extension," a method over which the Civil Service Commission has no control and to which the law respecting apportionment does not apply. Statistics showing the effectiveness of the Civil Service Commission in this respect are published in the annual reports of that Commission and are usually accompanied by interesting statements concerning the execution of the law respecting apportionment. The figures here presented merely indicate how nearly the classified service in the District now conforms to that ideal of fairness to the several states and territories which was laid down in the civil service act of 1883.

In the number of appointees to the classified service in the District of Columbia, per 100,000 inhabitants, the District itself is far ahead of any state or territory, having 2,296 appointees in each 100,000 inhabitants as contrasted with 140 for Maryland, which ranks second. Virginia ranks third with 69, and Delaware, fourth with 44. The following extract from the Twenty-first (1904) Report of the Civil Service Commission may be of interest in this connection:

> But with every effort to enforce the letter and the spirit of the law, it has been impossible to prevent the District of Columbia from securing more than the small share of appointments to which it is entitled on the basis of population. This is due to the following causes:
>
> There is naturally a keener interest in Government positions among persons residing at the seat of Government, and greater effort on their part to ascertain the needs of the service and to acquire those qualifications which are most in demand.
>
> For technical positions, including stenographers and typewriters, patent examiners, engineers, draftsmen, computers, etc., the Commission is constantly obliged to certify eligibles from states already in excess because of the failure of other states to provide eligibles properly qualified. The Commission is seldom called upon to certify eligibles having only ordinary clerical qualifications.

The number of legal residents appointed to the classified service at Washington, per 100,000 inhabitants, is lowest for Alabama, Mississippi, and Indian Territory, for each of which the ratio is 10. It is interesting to note that the Civil Service Commission has had great difficulty in securing eligibles from the South Central states. For some reason the inhabitants of these states do not enter the competitive examinations as generally as do the people in other sections of the country. In order to maintain the apportionment required by law, the Civil Service Commission has upon at least two occasions made vigorous efforts to secure applicants for examination from these states, and has met with some success.[1] The fact that vigorous effort is necessary to persuade people from the South Central division to enter the competitive examinations explains to some extent why the ratios for these states are low.

The employees in the District of Columbia and elsewhere appointed from each state and territory are classified by sex, race, age, character of work, period of service, and compensation, in Tables 89 to 100 (pages 138 to 149).

WAR VETERANS.

In answer to the inquiry concerning war service, 15,207 employees, 8.2 per cent of the total number, reported that they were war veterans. The distribution of these veterans according to the war in which they served is shown in the following tabular statement for the District of Columbia and for the rest of the country:

WAR.	WAR VETERANS EMPLOYED IN EXECUTIVE CIVIL SERVICE: 1907.					
	Number.			Per cent distribution.		
	Total.	District of Columbia.	Elsewhere.	Total.	District of Columbia.	Elsewhere.
Total	15,207	2,605	12,602	100.0	100.0	100.0
Civil War	8,464	1,879	6,585	55.7	72.1	52.3
Spanish War	6,743	726	6,017	44.3	27.9	47.7

Both in the District and elsewhere the veterans of the Civil War outnumber those of the Spanish. In the District the difference is very marked, as 72.1 per cent of all the veterans served in the Civil War. Elsewhere the difference is but slight, as 52.3 per cent served in the Civil War and 47.7 per cent in the Spanish.

The number of veterans of each war is much smaller in the District than it is elsewhere, but this is mainly a reflection of the fact that the number of employees of all classes is much smaller in the District than it is elsewhere. That such is the principal explanation is shown in the following tabular statement, which gives the percentage that the veterans of each war form of the total number of employees in the District and elsewhere:

PLACE OF EMPLOYMENT	EMPLOYEES IN EXECUTIVE CIVIL SERVICE: 1907.						
	Aggregate.	War veterans.					
		Total.		Civil War.		Spanish War.	
		Number.	Per cent of aggregate.	Number.	Per cent of aggregate.	Number.	Per cent of aggregate.
Total	185,874	15,207	8.2	8,464	4.6	6,743	3.6
District of Columbia	25,351	2,605	10.3	1,879	7.4	726	2.9
Elsewhere	160,523	12,602	7.9	6,585	4.1	6,017	3.7

In the District of Columbia approximately 1 employee in 10 is a war veteran, while elsewhere the cor-

[1] Twenty-second Annual Report of the Civil Service Commission, page 16, and the Seventh Report, page 12.

responding figures are about 2 in 25. The relative importance of war veterans is accordingly greater in the District than it is elsewhere. The veterans of the Civil War alone cause this condition, since the Spanish War veterans are relatively more important elsewhere than they are in the District.

Age.—The age of the war veterans is shown in Table 36, which gives the distribution, by age, of the veterans of each war, classified in accordance with the place of their employment.

[1] Less than one-tenth of 1 per cent.

The Spanish War veterans are, of course, comparatively young, more than four-fifths of the total number being under 40 years of age; that is to say, more than four-fifths of the Spanish War veterans now in the service were less than 31 years of age at the time of the war with Spain. A considerable proportion, 26.5 per cent, were under 21 years of age, but the majority, 57.2 per cent, were between 21 and 31.

Of the veterans of the Civil War now employed by the Government, 78.3 per cent are from 60 to 69 years of age; that is to say, more than three-fourths of them were between 18 and 28 years of age at the close of the war. Unless some tendency now exists toward an understatement of age, 723, or 8.5 per cent of the total number, were under 18 years of age at the close of the war. No less than 1,052 of the Civil War veterans are now between 70 and 80 years of age, and 60 are 80 years of age and over.

To what extent the policy of employing veterans where possible has led to the problem frequently referred to as "superannuation in the Government service," is indicated by Table 37, which shows the number and percentage of war veterans among the total number of employees in the executive civil service who are at least 25 years of age.

[1] Per cent not shown where base is less than 100.

The total number of employees at least 60 years of age is 13,363, and of this number, 7,768, or 58.1 per cent, are war veterans. Roughly speaking, therefore, among every 10 employees at least 60 years of age, 6 are war veterans. In the District the relative importance of war veterans among the employees of at

least 60 years of age is not so great as it is elsewhere, since of the employees of that age in the District, but 52.5 per cent are war veterans, while elsewhere the corresponding percentage is 60. Both in the District and elsewhere, however, as more than half of the employees at least 60 years of age are war veterans, it would seem that possibly a considerable part of the problem of superannuation arises from the policy of preferring war veterans for original appointment and for retention when forces are reduced.

Character of appointment.—The way in which the war veterans obtained their present status in the executive civil service is indicated by Table 38. This table gives the distribution, by character of appointment, of the veterans, classified in accordance with the place of their employment and the war in which they served. In using this table it should be remembered that the answers to the inquiry upon the subject of character of appointment were far from satisfactory, as has been explained on page 18, and so the figures should not be regarded as precisely accurate.

Most of the war veterans occupy positions in the classified service. As Table 38 shows, the proportion in the classified service is lowest among the Spanish War veterans elsewhere than in the District, of whom 80 per cent are in the classified service; the proportion is highest among the Civil War veterans in the District, of whom 96.1 per cent are in the classified service. The differences in respect to character of appointment between the classified veterans of the Civil War and the classified veterans of the Spanish War are rather interesting illustrations of the development of the civil service system instituted by the law of 1883. The percentage formed by those who obtained their present status through "classification and extension"—that is, the percentage formed by survivors from an earlier system of original appointment—is markedly higher for veterans of the Civil War than for veterans of the Spanish War. The percentage formed by those who secured their present status through "competitive examination," the modern way of entering the civil service, is, on the other hand, far greater for veterans of the Spanish War than for veterans of the Civil War.

How the character of appointment of the war veterans compares with the character of appointment of all employees may be determined from Table 39, which shows the number and percentage of war veterans among each class of appointees in the District and elsewhere.

In the District of Columbia the percentage formed by Civil War veterans is highest (30.1 per cent) among employees appointed through noncompetitive examination and preference. This comparatively high proportion is due, of course, to the fact that practically all preference appointees are war veterans, although the statute gives preference to any person honorably discharged from the military or naval service by reason of disability resulting from wounds or sickness incurred in performance of duty, whether or not the person was in the service during time of war. In the District the appointees through reinstatement are second in rank in respect to the proportion formed by Civil War veterans, with 22.6 per cent. This high percentage probably results from the fact that honorably discharged veterans do not forfeit their right to reinstatement at the end of one year after their separation from the service, as do all other classes except widows of war veterans and army nurses of either war.

Elsewhere than in the District of Columbia two-fifths of the employees who have entered through reinstatement are Civil War veterans. Of those who secured their positions through noncompetitive examination and preference, 15.8 per cent are Civil War veterans. These two are the classes in which the proportion formed by Civil War veterans is highest.

The figures for the Spanish War veterans are somewhat conspicuous for the comparatively high percentage which the veterans of this war form of all employees appointed through noncompetitive examination and preference. Spanish War veterans are not markedly numerous among the persons securing positions through reinstatement.

Character of work.—The character of work in which the war veterans are engaged is shown in Table 40, which gives the number and percentage of war veterans among the total number of employees, classified by character of work and place of employment.

A majority of the war veterans, 8,664, or 57 per cent of the total number, are engaged in clerical work, and 3,937, or 25.9 per cent, are engaged in work classified as subclerical and manual labor. These two classes thus contain more than four-fifths of all the war veterans. Relatively, however, war veterans are more numerous among the executive employees than among any other class of workers, for 18.7 per cent of all the executive employees in the civil service are war veterans as contrasted with 14.8 per cent of the employees engaged in miscellaneous work, the class which ranks second in this respect. In the District of Columbia 1 executive employee in 5 and 1

clerical employee in 10 are war veterans. Elsewhere than in the District war veterans are least important among the employees engaged in clerical work, while approximately 1 executive employee out of 6, 1 employee engaged in miscellaneous work out of every 7, and 1 of every 10 belonging to the subclerical and manual labor class are war veterans.

Not reported	60	3	57	17	1	16	43	2	41	0.4	0.1	0.5	0.2	0.1	0.2	0.6	0.3	0.7

It may be assumed that the youngest Civil War veteran considered in Table 41 was, at the close of the war in 1865, at least 16 years of age, and at the date of the enumeration for this bulletin, July 1, 1907, at least 58 years of age. Upon this hypothesis the 1,614 Civil War veterans who have been in the civil service less than 5 years were at the time of their appointment at least 53 years of age. These 1,614 Civil War veterans appointed after reaching the age of 53 form 19.1 per cent of all the Civil War veterans in the service. Elsewhere than in the District 1,535 Civil War veterans have been in the service less than 5 years, and they form 23.3 per cent of all Civil War veterans employed outside the District.

Although many Civil War veterans are thus recent appointees, the larger number have been in the service for a comparatively long period. In the District of Columbia a majority (59.9 per cent) have been in the service at least 20 years. Elsewhere the length of service of the Civil War veterans is generally shorter, but even so 27.3 per cent of the Civil War veterans outside the District have served at least 20 years.

The Spanish War veterans, being a much younger class than the veterans of the Civil War, have of course served a much shorter period. Of the 6,743 Spanish War veterans in the civil service, 3,650, or 54.1 per cent, have served less than 5 years and 2,468, or 36.6 per cent, have served from 5 to 9 years. Thus

90.7 per cent of all the Spanish War veterans have served less than 10 years. It is interesting to note that 582 veterans of the Spanish War reported that they had been in the civil service at least 10 years. The fact that so many have served long periods shows that a considerable number occupied civil positions under the Government before the outbreak of the war.

Compensation.—The distribution, by compensation, of the veterans of each war, classified by the place of their employment, is presented in Table 42.

[1] Less than one-tenth of 1 per cent.

Table 42 shows that relatively more of the Civil War veterans than of the veterans of the Spanish War are in the higher compensation classes. Of the Civil War veterans, 35.7 per cent are paid at a rate of at least $1,200 a year, while of the Spanish War veterans, the corresponding percentage is but 21.6. The general differences between the two classes can perhaps be more readily grasped from an inspection of the following tabular statement, which shows the approximate average compensation of the veterans of each war, classified by the place of their employment:[1]

PLACE OF EMPLOYMENT.	APPROXIMATE AVERAGE COMPENSATION OF WAR VETERANS OF KNOWN COMPENSATION IN EXECUTIVE CIVIL SERVICE: 1907.		
	Total.	Civil War.	Spanish War.
Total	$1,017	$1,082	$937
District of Columbia	1,209	1,275	1,033
Elsewhere	978	1,026	925

This tabular statement shows that the average compensation of the Civil War veterans exceeds that of the Spanish War veterans by $145. This difference is what would naturally be expected in view of the fact that the Civil War veterans are older than the veterans of the war with Spain, and so have been in the service longer and have had opportunity to rise to the higher positions.

The approximate average compensation of both classes of veterans is higher in the District than it is elsewhere, but this condition is common to all employees and is not peculiar to war veterans. In order to determine the relative importance of war veterans in the different compensation classes, Table 43 has been prepared, which gives the number and percentage of veterans of each war among all employees, classified by compensation and place of employment.

In the District of Columbia 841 employees are paid at a rate of $2,000 but less than $2,500, and of this number, 142, or 16.9 per cent, are veterans of the Civil War. In no other compensation class in the District do Civil War veterans form so large a proportion of the total number of employees, although they constitute a large percentage of those paid at rates between $1,400 and $2,000, and also in the classes paid at rates between $720 and $900.

Elsewhere than in the District the percentage formed by Civil War veterans is highest (12.4) in the class paid at a rate of $2,500 and over. It is also comparatively high in all classes where the rate is between $1,200 and $2,500. The figures thus indicate that both in the District and elsewhere the Civil War veterans are more highly paid than the employees as a whole.

[1] For the method pursued in computing these averages, see page 32.

[1] Per cent not shown where base is less than 100.

This difference can perhaps be more conveniently measured by the following tabular statement, which compares the approximate average compensation of the veterans of each war with a similar average for the employees as a whole. The figures for male employees are also shown, as of course all the war veterans are males.[1]

This tabular statement shows that the approximate average compensation of the Civil War veterans in the civil service is somewhat higher than that of all male employees. In the District of Columbia the difference is $97, while elsewhere it is $91. The approximate average compensation of the Spanish War veterans, on the other hand, is lower than that of all males both in the District of Columbia and elsewhere, the difference being $145 in the District and $10 elsewhere. That the Spanish War veterans are thus paid at lower rates results, of course, from the fact that in most instances the Spanish War veterans are young and new to the service, and have not yet had time to advance to the higher positions.

[1] The totals here presented include such persons as are actually employed in the District of Columbia. The totals in the Official Register for 1907 include as in the District of Columbia all persons employed by any independent office or branch of department which is officially regarded as located in the District of Columbia. The Official Register moreover, includes some persons who have been omitted entirely from these statistical tables. See page 9.

STATISTICS FOR POSTMASTERS.

The number of postmasters, as reported by the Post Office Department on July 1, 1907, was 62,663. In the returns for the Official Register, satisfactory statistical data were secured concerning 62,214 postmasters, 99.3 per cent of the total number.

Of the postmasters for whom the returns were satisfactory, 53,157, or 85.4 per cent, are males, and 9,057, or 14.6 per cent, are females. The distribution, by race and nativity, of these male and female postmasters is presented in Table 107.[1]

TABLE **107.**—*Distribution, by race and nativity, of postmasters, classified by sex: 1907.*

RACE AND NATIVITY.	POSTMASTERS.					
	Number.			Per cent distribution.		
	Total.	Male.	Female.	Total.	Male.	Female.
All classes	62,214	53,157	9,057	100.0	100.0	100.0
White	61,871	52,861	9,010	99.4	99.4	99.5
Native	57,100	48,559	8,541	91.8	91.4	94.3
Foreign born	4,771	4,302	469	7.7	8.1	5.2
Colored	343	296	47	0.6	0.6	0.5
Negro	280	244	36	0.5	0.5	0.4
Indian	45	37	8	0.1	0.1	0.1
Mongolian	18	15	3	(1)	(1)	(1)

[1] Less than one-tenth of 1 per cent.

The vast majority of postmasters, 99.4 per cent of the total number, are white persons; and 91.8 per cent are native white. Only 280 postmasters are negroes, and they form one-half of 1 per cent of the total number. That is to say, but 1 postmaster in 200 is a negro.

The age distribution of the male and the female postmasters is presented in Table 108.

The largest number of postmasters in any single age group is, as Table 108 shows, 8,391 in the period 35 to 39 years. Each of the five-year periods covering the ages 30 to 55 years contains at least 6,500 postmasters, and when combined these periods include 37,883, or 61 per cent of the total number. The approximate median age of the postmasters—that is, the approximate point at which they are equally divided in respect to age, one-half being younger than the median and the other half older—is 45.1 years.[2] The males are slightly older than the females, for the approximate median age of the men is 45.7 years as contrasted with 41.8 for the women.

[1] Less than one-tenth of 1 per cent.

No less than 4,973 postmasters, 7.9 per cent of the total number, are at least 65 years of age and 182, or three-tenths of 1 per cent, are at least 80 years of age. In this connection it is interesting to note that of the employees in the executive civil service, considered in the first section of this bulletin, but 3.5 per cent are at least 65 years of age. Among the male employees in the executive civil service in the District of Columbia, the percentage formed by persons at least 65 years of age is 8.9, but among all the other classes the percentage formed by persons of advanced age is considerably lower than it is among the postmasters.

An attempt was made to determine the marital condition of the postmasters, but the number of cases in which no returns at all were made, or in which the returns were made without a proper understanding of the question, was so large that it was deemed best to omit the results. The entire absence of an answer to the inquiry is explained in most cases by the fact that when no returns could be obtained from the postmaster himself, the schedule had to be filled in from the records of the Post Office Department at Washington, and these records do not embrace the subject of marital condition. In a considerable number of cases the meaning of the question was misunderstood, although the instructions read "answer 'single,' 'married,' 'widowed,' or 'divorced.'" One postmaster reported that

[1] The term "postmistress" is not recognized in the United States statutes, nor is it in use by the Post Office Department. For these reasons the word has been avoided in this bulletin.

[2] As the figures for individual years were not tabulated, these medians are calculated on the assumption of an equal distribution, by years, of the postmasters in the five-year period in which the median is known to fall.

his marital condition was "unsatisfactory," and many others made answers, which although significant, were not valuable for statistical purposes. The proportion formed by cases in which the question was thus either incorrectly answered or entirely unanswered was so great that it destroyed the value of the figures.

The inquiry concerning period of service was satisfactory, as it was answered, probably correctly, by 60,628 postmasters, 97.5 per cent of the total number here considered. The results of this inquiry are shown in Table 109, which presents the distribution, by period of service, of the postmasters of each sex.

TABLE 109.—*Distribution, by period of service, of postmasters, classified by sex: 1907.*

PERIOD OF SERVICE.	POSTMASTERS.					
	Number.			Per cent distribution.		
	Total.	Male.	Female.	Total.	Male.	Female.

40 years and over	136	129	7	0.2	0.2	0.1
Not reported	1,586	1,359	227	2.5	2.6	2.5

Almost one-half of the postmasters (47 per cent) have served less than 5 years and practically one-eighth (12.3 per cent) have served less than 1 year. The men, as Table 109 indicates, have served somewhat longer than the women, but the difference is slight. Neither among the men nor among the women do the postmasters who have served at least 20 years form a very large percentage of the total—5 per cent in the case of the men, and 3.3 per cent in the case of the women.

The following tabular statement may be of interest in connection with a discussion of the length of service of the postmasters, as it compares the per cent distribution, by period of service, of the postmasters with a similar distribution of the employees in the executive civil service, classified as employed in the District of Columbia and employed elsewhere:

PERIOD OF SERVICE.	PER CENT DISTRIBUTION.			
	Postmasters: 1907.	Employees in executive civil service: 1907.		
		Total.	District of Columbia.	Elsewhere.
All periods	100.0	100.0	100.0	100.0
Under 5 years	47.0	48.2	30.8	51.0
5 to 9 years	26.5	24.3	25.2	24.1
10 to 14 years	14.3	10.3	13.2	9.8
15 to 19 years	4.8	8.2	10.8	7.8
20 to 24 years	2.5	4.0	7.2	3.5
25 to 29 years	1.2	2.1	5.4	1.5
30 to 34 years	0.6	1.1	3.0	0.8
35 to 39 years	0.3	0.7	2.0	0.5
40 years and over	0.2	0.6	2.2	0.3
Not reported	2.5	0.6	0.3	0.7

Inspection of the tabular statement indicates that the period of service of the postmasters is much shorter than that of the employees in the executive civil service in the District of Columbia. Of the employees in the District, 30.6 per cent have served at least 15 years, while for the postmasters, the corresponding percentage is 9.6. Each of the periods representing service of less than 15 years contain a larger proportion of the postmasters than of the employees in the District. The length of service of the postmasters is thus the shorter.

The comparison of the postmasters with the employees elsewhere than in the District is rather more interesting, for all but one of the postmasters are employed outside the District. This comparison indicates that the periods representing long terms of service contain relatively fewer of the postmasters than of the employees elsewhere than in the District. Of the postmasters, as has been noted, 9.6 per cent have served at least 15 years, while of the employees elsewhere than in the District, 14.4 per cent have been in the service that long. The period representing less than 5 years of service, however, contains fewer of the postmasters than of the employees elsewhere than in the District, but this condition probably reflects the recent rapid growth of the executive civil service elsewhere than in the District of Columbia. On the whole, therefore, the figures would seem to indicate also a shorter period of service for the postmasters than for the employees in the executive civil service elsewhere than in the District.

The rate of compensation of the postmasters of the three highest classes is based on the gross receipts of the office over which they have charge, in accordance

with a law approved March 3, 1883,[1] and still in force in practically its entirety. This law provides as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the respective compensation of postmasters of the first, second, and third classes shall be annual salaries, assigned in even hundreds of dollars, and payable in quarterly payments, to be ascertained and fixed by the Postmaster-General from their respective quarterly returns to the Auditor of the Treasury for the Post Office Department, or copies or duplicates thereof, to be forwarded to the First Assistant Postmaster-General, for four quarters immediately preceding the adjustment, at the following rates, namely: [The rates are here reduced to tabular form, as it makes them more concise and more convenient for study.]

CLASS OF OFFICE.	GROSS RECEIPTS.		Salary.
	Minimum.	Maximum.	
First class[1]	$40,000	$45,000	$3,000
	45,000	60,000	3,100
	60,000	80,000	3,200
	80,000	110,000	3,300
	110,000	150,000	3,400
	150,000	200,000	3,500
	200,000	260,000	3,600
	260,000	330,000	3,700
	330,000	400,000	3,800
	400,000	450,000	3,900
	450,000	500,000	4,000
	500,000	600,000	5,000
	600,000	.....	6,000
Second class	8,000	9,000	2,000
	9,000	10,000	2,100
	10,000	11,000	2,200
	11,000	13,000	2,300
	13,000	16,000	2,400
	16,000	20,000	2,500
	20,000	24,000	2,600
	24,000	30,000	2,700
	30,000	35,000	2,800
	35,000	40,000	2,900
Third class	1,900	2,100	1,000
	2,100	2,400	1,100
	2,400	2,700	1,200
	2,700	3,000	1,300
	3,000	3,500	1,400
	3,500	4,200	1,500
	4,200	5,000	1,600
	5,000	6,000	1,700
	6,000	7,000	1,800
	7,000	8,000	1,900

[1] The salary of the postmaster at New York, N. Y., is fixed by law at $8,000.

The provisions of this law in regard to the payment of fourth-class postmasters is as follows:

That the compensation of postmasters of the fourth class shall be fixed upon the basis of the whole of the box-rents collected at their offices and commissions upon the amount of canceled postage-due stamps (provided for in section two hundred and seventy of the Revised Laws and regulations, edition of eighteen hundred and seventy-nine), and on postage stamps, official stamps, stamped envelopes, postal cards, and newspaper and periodical stamps canceled on matter actually mailed at their offices, and on amounts received from waste paper, dead newspapers, printed matter, and twine sold, at the following rates, namely: On the first fifty dollars or less per quarter, one hundred per centum; on the next one hundred dollars or less per quarter, sixty per centum; on the next two hundred dollars or less per quarter, fifty per centum; and on all the balance, forty per centum, the same to be ascertained and allowed by the Auditor of the Treasury for the Post Office Department in the settlement of the accounts of such postmasters upon their sworn quarterly returns: *Provided,* That when the compensation of any postmaster of this class shall reach two hundred and fifty dollars for four consecutive quarters each, exclusive of commissions on money order business, and when the returns to the auditor for four consecutive quarters shall show him to be entitled to a compensation in excess of two hundred and fifty dollars per quarter, the auditor shall report such fact to the Postmaster-General, who shall assign the office to its proper class, and fix the salary of the postmaster as provided by section one of this act: *Provided further,* That in no case shall there be allowed to any postmaster of this class a compensation greater than two hundred and fifty dollars in any one of the first three quarters of any fiscal year, exclusive of money order commissions, and in the last quarter of each fiscal year there shall be allowed such further sum as he may be entitled to under the provisions of this act, not exceeding for the whole fiscal year the sum of one thousand dollars exclusive of money-order commissions.

[1] 22 Stat. L., 600, An act to adjust the salaries of postmasters.

In the ensuing statistical tables the fourth-class postmasters are divided according to compensation into ten groups; the third-class postmasters, into five groups; and the second-class postmasters, into two groups. The first-class postmasters are shown all together in the class "$3,000 and over." The compensation of 210 postmasters was not reported, but all of them were presumably in the fourth class. The relative importance of the different groups is shown in Table 110, which distributes the male and the female postmasters by compensation.

Not reported	210	176	34	0.3	0.3	0.4

[1] Less than one-tenth of 1 per cent.

Almost nine-tenths of the postmasters (88.8 per cent of the total number) are, as Table 110 shows, in the fourth class, and so receive less than $1,000 a year. More than one-third of the total number (33.6 per cent) receive less than $100 a year, and more than one-half (53.2 per cent) receive less than $200. A rough approximation indicates that the average annual compensation of a postmaster is about $375.

Relatively more of the women than of the men are postmasters in the smaller offices. Of the women, 95.1

per cent are in the fourth class, as contrasted with 87.7 per cent of the men. The first and second classes, moreover, contain 3.5 per cent of the men and but five-tenths of 1 per cent of the women. The average annual compensation of the men is about $400; that of the women, about $250.

The male and the female postmasters in each compensation group are classified by race and nativity, age, period of service, and war record, and by the state or territory in which they are employed, in Tables 111 to 116, which follow:

TABLE 111.—POSTMASTERS, CLASSIFIED BY COMPENSATION, SEX, RACE AND NATIVITY, AGE, PERIOD OF SERVICE, AND WAR RECORD: 1907.

CLASSIFICATION.	POSTMASTERS.																			
	Total.	Compensation.
