PENNSYLVANIA.

By Edward B. White.

GENERAL STATISTICS.

General character of the state.—Pennsylvania is one of the original thirteen states. With a gross area of 45,126 square miles, of which 44,832 square miles represent land surface, it ranks thirty-second in size among the states. Its inhabitants in 1900 numbered 6,302,115, and in 1910, 7,665,111; and its estimated population in 1914 was 8,246,000. In total population Pennsylvania has ranked second only to New York at each census since and including that of 1830; in density of population it ranked sixth in 1910, with 171 inhabitants per square mile, the corresponding figure for 1900 being 140.6.

The urban population in 1910—that is, the population residing in cities and towns of 2,500 inhabitants or more—was 4,630,669, or 60.4 per cent of the total, as against 54.7 per cent in 1900. There were in the state in 1914, 71 cities and boroughs, each with an estimated population of more than 10,000. These cities and boroughs, whose aggregate population in that year was estimated to represent 49 per cent of the total population of Pennsylvania, reported 63.1 per cent of the value of the state's manufactured products. Philadelphia alone, with 1,658,000, or 20.1 per cent of the estimated total population, reported 27.7 per cent of the total value of products.

The steam-railway mileage in 1914, according to the annual report of the Interstate Commerce Commission, was 11,634, and the electric-railway mileage in 1912 (the latest year for which statistics are available) was 3,898. Water-transportation facilities are afforded by Lake Erie on the northwest and by a number of canals and navigable rivers.

The soil of Pennsylvania, except in the mountains, is fertile and adapted to agriculture and grazing. The total value of farm crops grown in the state in 1909 was $166,739,898, of which $27,330,860 was contributed by corn, $22,920,638, by wheat, and $14,421,972, by oats; and the value of domestic animals sold or slaughtered on farms amounted to $45,305,107. The state ranked thirteenth in that year in total value of farm crops and in total value of domestic animals sold or slaughtered on farms, sixteenth in production of corn, eleventh in that of wheat, and twelfth in that of oats. In value of fruits and nuts grown in 1909, Pennsylvania, with $10,794,157, was outranked by California, New York, and Michigan only.

In mineral production Pennsylvania leads all other states. Its coal beds are the most extensive in the United States, and its anthracite deposits are the largest mined anywhere in the world. The total product of its mines, quarries, and wells in 1914, according to the annual report of the United States Geological Survey, was valued at $452,374,085, of which $188,181,399 was contributed by anthracite and $159,006,296 by bituminous coal. Pennsylvania's combined production of these two kinds of coal in that year represented 46.5 per cent of the quantity and 50.9 per cent of the value of the total output of such minerals in the United States. Except for a small quantity from Colorado, the entire production of anthracite comes from this state.

The value of merchandise imported through the customs district of Philadelphia during the fiscal year 1914 was $96,483,412, and that of merchandise exported was $65,182,514.

Importance and growth of manufactures.—Pennsylvania's manufactured products in 1914 were valued at $2,832,349,437, and the average number of wage earners employed in its manufacturing industries was 924,478. The state ranked second in these two items both in 1914 and 1909. Measured by value, the manufactures of Pennsylvania in 1914 represented 11.7 per cent of the total for the United States, as compared with 12.7 per cent in 1909.

Table 1 summarizes the more important data relative to all classes of manufactures combined, in the state of Pennsylvania, for the censuses of 1914, 1909, 1904, and 1899, and gives the percentages of increase from census to census.

The figures in the table show a general increase in the manufacturing activities of the state, but relatively smaller gains in all items from 1909 to 1914 than from 1904 to 1909. The decrease in the number of establishments reported in 1914 is more than accounted for by the decline in the lumber industry. During the interval between censuses, 319 lumber mills either went out of business or were absorbed by larger concerns. The reduction in the number of proprietors and firm members is explained in the comments on Table 5.

Table 1

	MANUFACTURING INDUSTRIES.				PER CENT OF INCREASE.[1]		
	1914	1909	1904	1899	1909-1914	1904-1909	1899-1904

[1] Percentages are based on figures in Table 58; a minus sign (−) denotes decrease; percentages are omitted where the base is less than 100, or where comparable figures can not be given.

Separate statistics are presented for 100 industries, or industry groups, for each of which products valued at more than $2,000,000 were reported in 1914.

These industries include 3 with products exceeding $100,000,000 in value, 11 with products between $50,000,000 and $100,000,000, 15 with products between $25,000,000 and $50,000,000, 21 with products between $10,000,000 and $25,000,000, 20 with products between $5,000,000 and $10,000,000, and 30 with products between $2,000,000 and $5,000,000.

In addition to the industries presented separately in the above table, there were 5 other industries in the state which reported products in 1914 to the value of $2,000,000 but less than $5,000,000, 1 with products valued at $5,000,000 but less than $10,000,000, and 2 with products valued at $10,000,000 but less than $25,000,000. Among these industries are aluminum ware; bags, other than paper; electric-railroad cars, not including operations of railroad companies; locomotives, not made by railroad companies; saws; smelting and refining, zinc; sporting and athletic goods; and wire. These industries are included under the head of "all other industries," as the statistics for them can not be shown separately without the possibility of disclosing the operations of individual establishments.

The industries in this table are arranged in the order of their importance as measured by value of products, but the arrangement would vary considerably from that given if based on average number of wage earners or value added by manufacture. For the five leading industries—steel works and rolling mills; foundries and machine shops; blast furnaces; steam-railroad repair shops; and the manufacture of silk goods, including throwsters—the rank for each item is practically the same, except that blast furnaces ranks twentieth in wage earners, but thirteenth in value added by manufacture. This industry consists largely of plants connected with steel works and rolling mills, to which they transfer intermediate products at an arbitrary price.

The nine industries with products between $50,000,000 and $100,000,000 vary considerably as to rank in the three items shown. This is due largely to the character of the industries.

Of the more important industries shown in this table, steel works and rolling mills, foundries and machine shops, and blast furnaces held the same rank at both censuses. Steam-railroad repair shops; the manufacture of silk goods, including throwsters; the tanning and finishing of leather; and printing and publishing, ranking fourth, fifth, sixth, and seventh, respectively, in 1914, were sixth, eighth, fourth, and seventh, respectively, in 1909. For many of the remaining industries changes from census to census are noticeable.

Some of the most important of the industries listed in the preceding table, together with certain groups of industries, formed by combining two or more of those shown in the table, are given special consideration, as follows:

Iron and steel.—Steel works and rolling mills and blast furnaces ranked, respectively, first and third among the industries of the state. For convenience these two industries, together with the manufacture of tin plate and terneplate, may be considered as one group. The three allied industries gave employment in 1914 to an average of 145,841 wage earners, and manufactured products valued at $620,708,381, or 15.8 per cent and 21.9 per cent of the respective totals for all manufactures.

These figures represent an increase over 1909 of 2,063, or 1.4 per cent, in number of wage earners, and a decrease of $73,448,000, or 10.6 per cent, in value of products. This decrease is due in part to the depression in the steel industry in the latter part of the year 1914, when the numerical strength of wage earners was maintained by short-time work, resulting in a smaller output.

Textiles.—This classification includes the manufacture of silk goods, including throwsters; woolen,

worsted, and felt goods, and wool hats; hosiery and knit goods; cotton goods, including cotton small wares; carpets and rugs, other than rag; dyeing and finishing textiles; fur-felt hats; cordage and twine and jute and linen goods; and wool shoddy. Considered as a unit, the textile industry ranks second among the manufacturing industries of the state, when measured by value of products. The nine allied industries, representing 1,424 establishments, gave employment in 1914 to an average of 150,663 wage earners, or 16.3 per cent, of the total number engaged in the manufactures of the state; and their production was valued at $305,507,596, or 10.8 per cent of the total manufactures. The number of wage earners reported in 1914 was an increase of 4,901, or 3.4 per cent, over 1909; and the increase in the value of products was $25,608,000, or 9.1 per cent.

Foundry and machine-shop products.—This industry includes automobile repairing; the manufacture of steam, gas, and water engines; gas machines and gas and water meters; hardware; saddlery hardware; cast-iron pipe; plumbers' supplies; steam and other power pumps; steam fittings and steam and hot-water heating apparatus; and structural ironwork.

This group, which ranks second in value of products among the industries as shown in the table, is of greater importance than is indicated by the statistics reported under this specific title, for the reason that some machine shops manufacture special products, such as locomotives, electrical machinery, adding machines, cash registers, and sewing machines, which are assigned to other classifications. The production of the foundries and machine shops in 1914 was valued at $233,616,370, or 8.2 per cent of the manufactures of the state, and the industry gave employment to 91,820 wage earners, or 9.9 per cent of the total. During the five-year period 1909–1914 the average number of wage earners increased by 5.8 per cent and the value of products by 10.9 per cent.

Leather, tanned, curried, and finished.—Measured by value of products this industry ranked sixth in 1914, as compared with fourth in 1909. In average number of wage earners it held nineteenth place in 1914 and sixteenth in 1909. There was an increase of 9.4 per cent in value of products from 1909 to 1914, but a decrease of 14.4 per cent in the number of wage earners and of 9.4 per cent in the value added by manufacture.

Printing and publishing.—Under this head are included the printing and publishing of books, newspapers, periodicals, and music, job printing, bookbinding and blank-book making, steel engraving, and lithographing. This group ranked seventh as measured by value of products and in average number of wage earners in 1914. In 1909 the rank in these items was seventh and ninth, respectively. The progress of the industry during the last five years is consistent with the growth shown at former census periods. The increase from 1909 to 1914 was 20.4 per cent in value of products, 20.2 per cent in value added by manufacture, and 9 per cent in number of wage earners.

Clothing.—The manufacture of men's clothing, including shirts, and that of women's clothing are included under this designation. The combined industries manufactured products to the value of $77,429,504 and furnished employment to 38,343 wage earners in 1914.

Slaughtering and meat packing.—This classification includes establishments doing wholesale slaughtering and meat packing and those engaged in the manufacture of sausage only. It does not include the numerous slaughterhouses killing for the retail trade, which in the aggregate slaughter a large number of animals.

This industry, measured by value of products, ranked eighth in 1914, as compared with eleventh in 1909, and shows an increase of 27.3 per cent over 1909. The value added by manufacture and the number of wage earners employed in this industry are proportionately less than in most of the other industries. This may be explained by the relatively high cost of material and the fact that fewer employees are required in the operations involved.

Tobacco manufactures.—This industry includes establishments engaged in the manufacture of chewing and smoking tobacco and snuff, and cigars and cigarettes. The decrease of 238 establishments from 1909 to 1914 was confined largely to the small cigar factories. The average number of wage earners, however, increased from 33,188 in 1909 to 37,370 in 1914, or 12.6 per cent, while the value of products increased during the same time from $50,161,000 to $54,213,000, or 8.1 per cent.

Persons engaged in manufacturing industries.—Table 3 shows, for 1914 and 1909, the number of persons engaged in manufactures, distributed by sex, the average number of wage earners being distributed also by age. The sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms."

In 1914 the number of persons engaged in manufactures was 1,060,562, of whom 924,478, or nearly nine-tenths, were wage earners; 53,381 were proprietors and officials; and 82,703 were clerks and other subordinate salaried employees. While males predominated in the main classes, females constituted more than one-fifth of the total wage earners and of clerks

and other salaried employees. Wage earners under 16 years of age numbered 27,009, of whom 53.6 per cent were females. Corresponding figures for individual industries will be found in Table 32.

Table 3

CLASS.	Census year.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Total.	Male.	Female.	Per cent of total. Male.	Female.

Under 16 years of age	1914	27,009	12,536	14,473	46.4	53.6
	1909	29,107	14,063	15,044	48.3	51.7

Table 4 gives, for the several classes of persons engaged in manufactures, the percentages of increase from 1909 to 1914 and the per cent distribution at the two censuses.

This table shows an increase during the five-year period for each of the several classes of persons engaged in manufactures, except proprietors and firm members and wage earners under 16 years of age. The increases, however, were relatively less for males than for females.

The largest percentage of increase for both sexes combined, 18.3, is shown for clerks and other subordinate salaried employees, in which class females increased 24.7 per cent, while males increased 16.6 per cent. Wage earners 16 years of age and over, representing 84.6 per cent of the total number of persons engaged in manufacturing industries in the state in 1914, increased 5.8 per cent over 1909.

In order to compare the distribution of persons engaged in manufactures in 1914 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See "Explanation of terms.") Table 5 makes this comparison according to occupational status.

Table 4

CLASS.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Per cent of increase,[1] 1909–1914. Total.	Male.	Female.	Per cent distribution. Total. 1914	Total. 1909	Male. 1914	Male. 1909	Female. 1914	Female. 1909

Proprietors and firm members	28,034	29,743	26,029	2.6	3.0	3.0	−5.7	14.3
Salaried employees	108,050	94,885	66,081	10.2	9.5	7.7	13.9	43.6
Wage earners (average)	924,478	877,543	763,282	87.2	87.6	89.2	5.3	15.0

[1] A minus sign (−) denotes decrease.

During the decade ending with 1914, salaried employees formed an increasing proportion of the total number of persons in the state engaged in manufactures, and each of the other two classes a decreasing proportion. The decrease of 5.7 per cent in the number of proprietors and firm members is due in part to the reduction in the number of establishments operating in 1914. Many of the small lumber mills, flour mills, bakeries, tobacco factories, and butter and cheese factories, which reported in 1909, were owned by individuals or firms. A considerable number of these discontinued operations between censuses or became incorporated companies, and their owners, reported in 1909 as proprietors and firm members, were at the later census classed as salaried employees.

The average number of wage earners employed and their per cent distribution as males 16 years of age and over, females 16 years of age and over, and children under 16 years of age are given in Table 6, for 1914, 1909, and 1904.

The table also shows, for some of the important industries separately, a similar distribution of wage earners for 1914 and 1909.

Table 6

INDUSTRY.	Census year.	WAGE EARNERS. Average number.[1]	Per cent of total. 16 years of age and over. Male.	Female.	Under 16 years of age.

	1909	118,280	79.0	17.7	3.3

[1] For method of estimating the distribution, by sex and age periods, of the average number for all industries combined, see "Explanation of terms."
[2] Less than one-tenth of 1 per cent.

During the decade 1904–1914 there was little change in the proportion which men formed of the total wage earners employed. The proportion of females, however, increased from 17.6 per cent of the total in 1904 to 19.7 per cent in 1914. Children under 16 years formed a decreasing proportion from census to census.

In a majority of the 45 industries shown in Table 6 males 16 years of age and over predominated, but women formed the greater proportion of the total wage earners employed in the more important of the textile industries, in the manufacture of men's and women's clothing, millinery, fancy and paper boxes, confectionery, and in the tobacco factories. In the canneries women and children combined outnumbered the men.

Although fewer children were employed in 1914 than in 1909, they represent a considerable proportion of the wage earners engaged in the manufacture of cotton, silk, woolen, and worsted goods, hosiery and knit goods, fancy and paper boxes, glass, and confectionery.

Table 7 shows the average number and the per cent distribution of wage earners employed in 63 of the 71 cities having more than 10,000 inhabitants, classified according to age periods, and in the case of those 16 years of age and over, according to sex, for 1914, 1909, and 1904.

Statistics for the following boroughs are included under "all other cities" in order to avoid disclosing individual operations: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton.

Table 8 gives percentages of increase from census to census, based on the figures in Table 7, for cities where the per cent of increase can be computed.

The proportion of male wage earners 16 years of age and over exceeds that of females in all except eight of the cities. Most of the cities show decreases from census to census in the proportion of adult females and children under 16 years of age employed as wage earners.

In Philadelphia, by far the most important city of the state in the number of wage earners employed, males 16 years of age and over formed 66 per cent of the total number of wage earners reported in 1914 and 66.5 per cent in 1909. There were 76,822 adult female wage earners reported in 1914, an increase of 4 per cent over the number employed in 1909, while the children reported showed a decrease of 17.3 per cent for the census period.

The highest percentage of increase during the last five-year period in total number of wage earners, 131.6, is shown for Uniontown; the next highest, 117.2, for Nanticoke; and the third highest, 96.3, for Shenandoah.

[1] A minus sign (-) denotes decrease.
[2] Less than one-tenth of 1 per cent.
[3] Includes statistics for Allegheny, annexed in 1907.
[4] All other cities embrace: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton in 1914; Coatesville, Duquesne, Monessen, North Braddock, Old Forge, South Sharon, and Steelton in 1909; and Steelton in 1904.

Wage earners employed, by months.—Table 9 gives, for all industries combined, the total number of wage earners employed on the 15th day of each month, or the nearest representative day, for the year 1914 and 1909, and the average number employed during each month in 1904, together with the percentage which the number reported for each month forms of the greatest number reported for any month.

For 1914 the spring months show the greatest activity in the combined industries of the state, the maximum number of wage earners appearing for March, and the minimum for November. In 1909 the greatest number of wage earners were employed in December and the least in January, while in 1904, the maximum month was May and the minimum July. The greatest difference between the maximum and minimum months in any one of the three census years was 140,739 in 1909.

Table 9

Month.	Wage earners in manufacturing industries. Number.[1] 1914	Number.[1] 1909	Number.[1] 1904	Per cent of maximum. 1914	Per cent of maximum. 1909	Per cent of maximum. 1904

December	873,586	960,666	779,611	90.8	100.0	99.7

[1] The figures for 1914 and 1909 represent the number employed on the 15th of each month, or the nearest representative day; those for 1904, the average number employed during the month.

Table 10 gives the total average number of wage earners employed during 1914, together with the total number employed on the 15th of each month, or the

nearest representative day, for the combined industries of the state and for a number of selected industries; also for the separate totals for 63 of the 71 cities having more than 10,000 inhabitants, and for the combined total for the remaining eight grouped as "all other cities."

Table 10

WAGE EARNERS: 1914.
[Month of maximum employment for each industry is indicated by **boldface** figures and that of minimum by *italic* figures.]

INDUSTRY AND CITY.	Average number employed during year.	Number employed on 15th day of the month or nearest representative day.												Per cent minimum is of maximum.

[1] All other cities embrace: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton.

The majority of the industries for which separate figures are given in Table 10 show stability of employment during 1914. For 19 of them the variation between the number reported for the months of maximum and minimum employment was less than 10 per cent. Boots and shoes, including cut stock and findings, bread and other bakery products, paper and wood pulp, and tobacco manufactures furnished constant occupation to almost the entire number of wage earners employed in the months of greatest activity, the minimum forming more than 95 per cent of the maximum in each industry. Some industries, however, show wide variation in the number employed at different times during the year. The greatest degree of fluctuation is shown for canning and preserving, the number of wage earners in January being but 45.4 per cent of the number in September, when the industry is at its height.

Among the cities, the greatest stability of employment is shown for Bristol, where the proportion the minimum formed of the maximum was 97.4 per cent. In Philadelphia and Scranton also comparatively regular employment prevailed, the minimum months representing 92.7 per cent and 92.5 per cent, respectively, of the maximum. The difference between the months of greatest and least activity in Pittsburgh was due to the predominance of the iron and steel industry in that city.

Prevailing hours of labor.—In Table 11 the average number of wage earners reported for 1914 and 1909, for all industries combined and for selected industries throughout the state, have been classified according to number of hours of labor per week prevailing in the establishments in which they were employed. A similar classification is given for 1914 only, for all industries combined, in each city having more than 10 000 in-

habitants for which statistics can be shown separately, as well as for the group under the head "all other cities." The number employed in each establishment is classified as a total, even though a few employees worked a greater or smaller number of hours.

ALL OTHER CITIES [1]	1914	22,848	196	3,019	3,159	2,585	7,425	126	5,717	621

[1] All other cities embrace: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton.

The figures in this table emphasize the tendency toward a shortening of the working day of wage earners. In 1909, 659,855, or 75.2 per cent of the total average number of wage earners for all industries combined, were employed in establishments where the prevailing hours of labor were over 54 per week, while but 441,593, or 47.8 per cent, were so employed in 1914. On the other hand, the number of wage earners whose working hours were 54 per week increased from 109,826, or 12.5 per cent of the total for the state in 1909, to 296,241, or 32 per cent of the total, in 1914. During the five-year period there was a marked increase in the proportion in each of the two classes working less than 54 hours per week.

Among the industries shown separately, the most pronounced decrease in hours of labor is shown in establishments manufacturing silk goods. In 1909 2.8 per cent of the wage earners in this industry were employed in mills operating 54 hours or less per week, but in 1914 the proportion thus employed had increased to 91 per cent. Similar changes occurred in the other textile mills, in boot and shoe factories, and tobacco manufactures.

Of the 578,387 wage earners reported for 71 cities of more than 10,000 inhabitants in 1914, 483,190, or 83.5 per cent, were in establishments operating less than 60 hours per week, while 95,197, or 16.5 per cent, were in establishments in which the hours were 60 or more per week.

In Philadelphia, Pittsburgh, Reading, Scranton, and most of the smaller cities a greater number of wage earners were employed in establishments operating 54 hours per week than in any other class. In Shamokin 92.4 per cent of the total number of wage earners reported were employed 54 hours per week; while 61.6 per cent of the wage earners reported for Johnstown were employed in establishments where the prevailing hours were 72 per week.

Location of establishments.—Table 12 shows, for 1914, 1909, and 1899, the extent to which the manufactures in Pennsylvania were centralized in the cities having more than 10,000 inhabitants.

Table 12 shows a considerable increase in population and manufactures both in the urban and rural districts. During the 15 years covered by the table the value of products for the urban districts, represented by the cities of 10,000 inhabitants or more, increased 66.2 per cent, while that reported for rural districts increased 81.9 per cent. The relative importance of the manufactures as measured by average number of wage earners, value of products, and value added by manufacture, has increased for districts outside the cities, while the proportion of the cities as measured by these items has decreased. Comparisons for the city groups or for the districts outside are affected by the increase in population. The urban districts which comprised 42 cities in 1900 now includes 29 additional cities, each group being affected by the increase.

[1] Includes Allegheny city annexed to Pittsburgh in 1907.

[2] Census estimate of population for 1914.

The 71 cities which contained 49 per cent of the total population in 1914, reported 62.6 per cent of the average number of wage earners, the same proportion as was reported in 1909, while the value of products was 63.1 per cent, an increase of two-tenths of 1 per cent over the proportion at the previous census.

The relative importance in manufactures of each of 63 cities having more than 10,000 inhabitants, as measured by average number of wage earners and value of products, in 1914, 1909, and 1904, is shown in Table 13. The cities are listed in the order of their importance, as measured by value of products. The eight boroughs, Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton, each having a population of 10,000 or over in 1914, which are not shown separately, are grouped under the heading of "all other cities," to avoid disclosure of individual operations.

[1] Figures do not agree with those published in 1909, because it was necessary to revise them in order to include data only for those establishments located within the corporate limits of the city.

[2] Figures do not agree with those published in 1909, because certain establishments revised their reports for that census.

[3] All other cities embrace: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton.

Those cities for which comparative figures are not shown for 1909 and 1904, had less than 10,000 inhabitants each in those years.

In 45 of the cities for which comparative figures are shown in Table 13 there was an increase in the value of products in 1914 over 1909, but only 36 of these show an increase in the average number of wage earners during that period.

Philadelphia, the largest and most important city in the state, occupies a prominent position among the cities of the country in the variety and magnitude of its manufacturing operations. In 1914 its manufactures were valued at $784,499,633, or 27.7 per cent of the total value of the manufactured products of the state, and its industries furnished employment to 251,286 wage earners, 27.2 per cent of the total number.

Table 14 shows the principal industries of cities having a population of over 50,000 inhabitants. For these cities the industries for which figures can be shown without disclosure are arranged in the order of value of products, showing the increase from 1909 to 1914, and also the percentage which the value of products for each industry in the city represents of the corresponding total for the state.

Table 14

City and industry.	Value of products. Amount, 1914.	Per cent of the industry total for the state.	Increase[1] over 1909. Amount.	Per cent.
Allentown.				
Silk goods, including throwsters	$10,209,972	11.7	$2,754,444	36.9

[1] A minus sign (−) denotes decrease.
[2] Relative rank can not be shown without disclosing individual operations.
[3] Figures not shown, to avoid disclosing individual operations.
[4] Figures do not agree with those published in 1909 owing to a revision of the classification of one establishment.
[5] Excludes statistics for one establishment, to avoid disclosure of individual operations.

Philadelphia produced all of the sugar, 92.1 per cent of the women's clothing, and 89.1 per cent of the carpets and rugs, other than rag, manufactured in the state in 1914. There are several other industries shown in the table in which the value of products represents more than one-half of that reported for the industry in the state.

In addition to the 175 industries presented separately for Philadelphia in Table 59, there were 98 others which were included under "all other industries," to avoid disclosure of individual operations. Some of these industries were among the most important in the city, 20 reporting products exceeding $1,000,000 in value.[1] Of these, 2 reported products valued at $10,000,000 or over, 2, products between $5,000,000 and $10,000,000 and 16, products between $1,000,000 and $5,000,000.

[1] These industries are:

Agricultural implements.
Bags, other than paper.
Buttons.
Cars, electric-railroad, not including operations of railroad companies.
Chocolate and cocoa products, not including confectionery.
Files.
Gas, illuminating and heating.
Hardware.
Liquors, distilled.
Lithographing.
Locomotives.
Oilcloth and linoleum.
Petroleum, refining.
Roofing materials.
Sand and emery paper and cloth.
Saws.
Shipbuilding, including boat building.
Sporting and athletic goods.
Upholstering materials.
Waste.

The totals presented for Philadelphia and the state as a whole do not include the statistics for 4 establishments located in the city and operated by the Federal Government, namely, the Frankford Arsenal, with an average of 2,121 wage earners and products valued at $5,280,399; the United States navy yard, with 2,087 wage earners and products valued at $3,439,198; the Philadelphia depot of the Quartermaster's Department, with 395 wage earners and products valued at $2,477,196; and the depot of supplies of the United States Marine Corps, with 257 wage earners and products valued at $629,738. The 4 establishments combined reported 4,860 wage earners and products valued at $11,826,531.

Pittsburgh, the second largest city in the state, with a value of products of nearly $250,000,000, has for its leading industries those which use ore and metal as the principal materials, such as steel works and rolling mills, blast furnaces, and foundries and machine shops. The combined output of these three industries in 1914 formed 42.9 per cent of the total value of all manufactured products for the city.

Of the 10 industries presented in the table for which the value of products in 1914 exceeded $5,000,000, slaughtering and meat packing and canning and preserving formed the highest per cent of the industry totals for the state, the percentages being 27.2 for the former and 76.9 for the latter.

Reading ranked third among the manufacturing cities of the state in 1914. Hosiery and knit goods was the leading industry, the value of products, $6,500,704, representing 12.2 per cent of the value of the city's manufactures. The value of work done in steam-railroad repair shops amounted to $6,098,040; the production of wrought-iron pipe was also an important factor, but statistics for this industry can not be given without disclosing individual operations.

Johnstown, the fourth city in the state in value of manufactures, showed an increase in 1914 over 1909 of $4,199,617, or 9 per cent. The manufacturing activities were confined largely to the iron and steel industries, statistics for which can not be given without disclosing individual operations.

Allentown ranked seventh in the state in 1914 and ninth in 1909 in the value of its manufactured products, and showed an increase of $7,654,972, or 29.1 per cent, during the five years. The manufacture of silk goods, including throwsters, was the leading industry, the value of such products amounting to $10,209,972, or an increase of 36.9 per cent over 1909. Steel works and rolling mills and slaughtering and meat packing were the two important industries for which statistics can not be disclosed. Tobacco manufactures showed an increase of 86.4 per cent over the preceding census.

Erie, with a value of products of $29,447,084 for 1914, showed an increase over 1909 of $5,634,596, or 23.7 per cent. The output of foundry and machine-shop products was valued at $8,829,962, or 30 per cent of the total value of manufactures of the city. Flour mills and gristmills, slaughtering and meat packing, and breweries also contribute to the industrial importance of the city.

Scranton, the third city of the state in population, held tenth place when measured by value of manufactures. This is due primarily to the considerable portion of the population of the city employed in the coal mines of the vicinity. The silk mills, manufacturing products to the value of $5,754,859, lead all other industries. Breweries, printing and publishing plants, and foundry and machine shops were also of industrial importance.

In Altoona the operations of steam-railroad repair shops and the manufacture of silk goods were the leading industries, but statistics for neither can be shown without disclosing individual operations.

The chief industries of Harrisburg are the operation of steel works and rolling mills, steam-railroad repair shops, slaughtering and meat packing, and printing and publishing.

Wilkes-Barre manufactured products valued at $16,733,954 in 1914, an increase over 1909 of $3,207,997, or 23.7 per cent. The leading industries are the manufacture of carriages and wagons and materials, malt liquors, cotton lace, and wire.

The principal industries of the other incorporated places appearing in Table 13 are shown in the following statement:

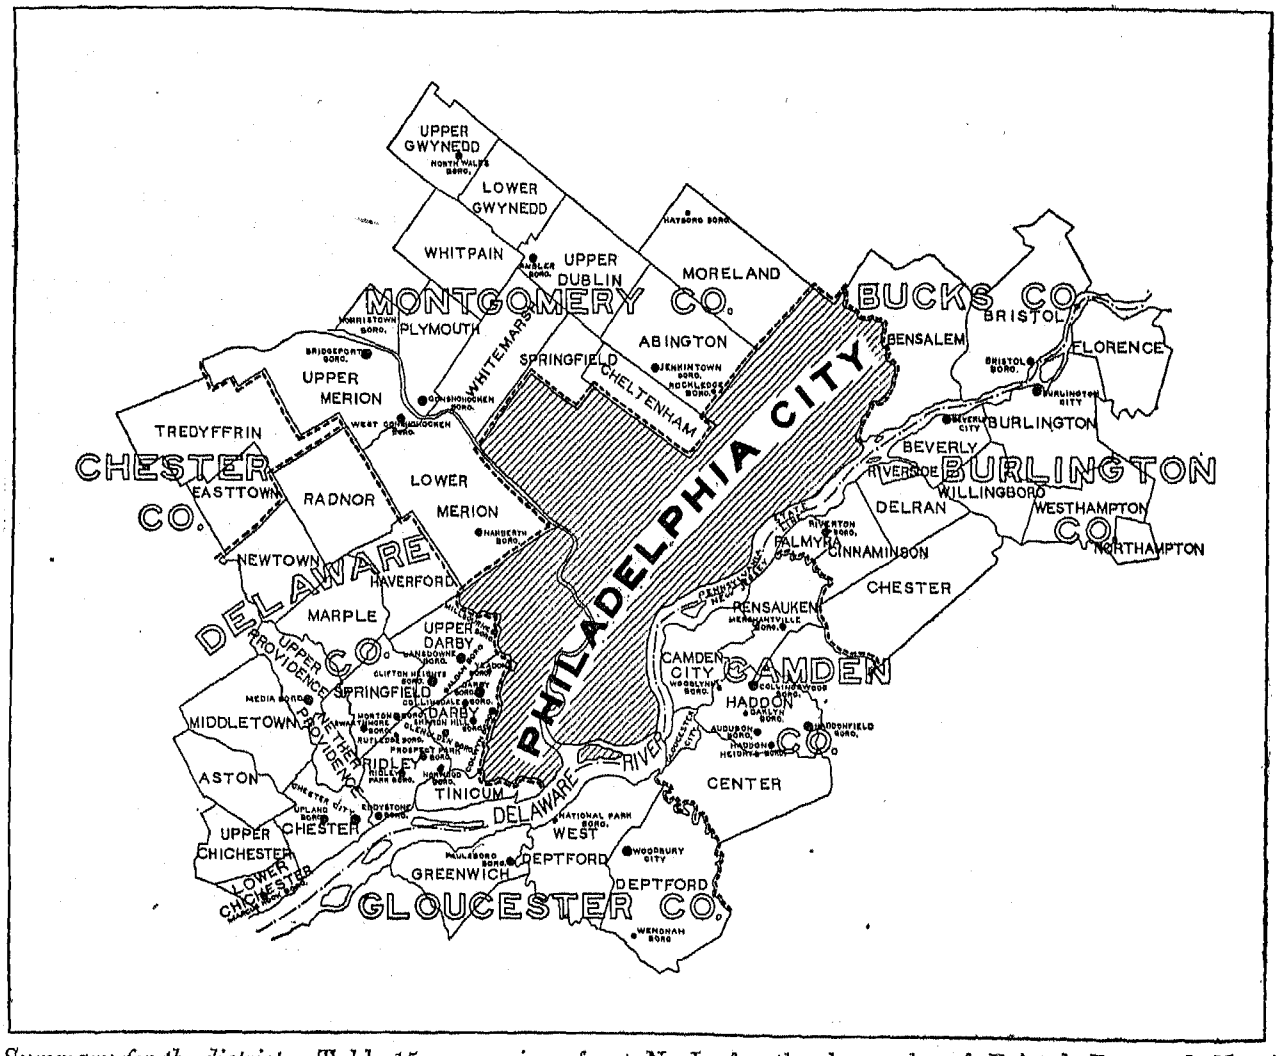
CITY.	Industries.
Beaver Falls	Foundry and machine-shop products. Lumber, planing-mill products. Signs and advertising novelties.
Bethlehem	Silk goods, including throwsters. Structural ironwork, not made in steel works or rolling mills. Flour-mill and gristmill products.
Braddock	Iron and steel, steel works and rolling mills. Iron and steel forgings. Bread and other bakery products.
Bradford	Foundry and machine-shop products. Petroleum, refining. Lumber, planing-mill products.
Bristol	Worsted goods. Carpets and rugs, other than rag. Wall paper, not made in paper mills.
Butler	Cars, steam-railroad, not including operations of rail road companies. Glass. Foundry and machine-shop products.
Carbondale	Cars and general shop construction and repairs by steam-railroad companies. Silk goods, including throwsters. Copper, tin, and sheet-iron work.
Carlisle	Boots and shoes. Foundry and machine-shop products. Silk goods, including throwsters.
Carnegie	Structural ironwork, not made in steel works or rolling mills. Liquors, malt. Slaughtering and meat packing.
Chambersburg	Foundry and machine-shop products. Cars and general shop construction and repairs by steam-railroad companies. Silk goods, including throwsters.
Charleroi	Glass. Iron and steel, steel works and rolling mills. Lumber, planing-mill products.
Chester	Cotton goods. Iron and steel, steel works and rolling mills. Worsted goods.

CITY.	Industries.
Coatesville	Iron and steel, steel works and rolling mills. Slaughtering and meat packing. Fertilizers.
Columbia	Silk goods, including throwsters. Iron and steel, steel works and rolling mills. Stoves and hot-air furnaces, except gas and oil stoves.
Connellsville	Cars and general shop construction and repairs by steam-railroad companies. Liquors, malt. Foundry and machine-shop products.
Dickson City	Silk goods, including throwsters. Fuel, manufactured. Mineral and soda waters.
Dubois	Cars and general shop construction and repairs by steam-railroad companies. Liquors, malt. Foundry and machine-shop products.
Dunmore	Liquors, malt. Cars and general shop construction and repairs by steam-railroad companies. Stoves and hot-air furnaces, except gas and oil stoves.
Duquesne	Iron and steel, steel works and rolling mills. Iron and steel, blast furnaces. Liquors, malt.
Easton	Silk goods, including throwsters. Paints. Cars and general shop construction and repairs by steam-railroad companies.
Farrell	Iron and steel, steel works and rolling mills. Tin plate and terneplate. Iron and steel, blast furnaces.
Franklin	Oil, not elsewhere specified. Foundry and machine-shop products. Iron and steel, steel works and rolling mills.
Greater Punxsutawney	Coke. Iron and steel, blast furnaces. Glass.
Greensburg	Glass. Bread and other bakery products. Lumber, planing-mill products.
Hazleton	Silk goods, including throwsters. Shirts. Pumps, steam.
Homestead	Steam fittings and steam and hot-water heating apparatus. Bread and other bakery products. Liquors, malt.
Lancaster	Oilcloth and linoleum. Umbrellas and canes. Tobacco, cigars and cigarettes.
Latrobe	Iron and steel, steel works and rolling mills. Liquors, malt. Woolen goods.
Lebanon	Iron and steel, steel works and rolling mills. Iron and steel, blast furnaces. Millinery and lace goods.
McKeesport	Iron and steel, steel works and rolling mills. Iron and steel, blast furnaces. Slaughtering and meat packing.
McKees Rocks	Iron and steel, steel works and rolling mills. Cars and general shop construction and repairs by steam-railroad companies. Foundry and machine-shop products.
Mahanoy City	Liquors, malt. Shirts. Bread and other bakery products.
Meadville	Corsets. Brass, bronze, and copper products. Liquors, distilled.
Monessen	Iron and steel, steel works and rolling mills. Tin plate and terneplate. Iron and steel, blast furnaces.
Mount Carmel	Tobacco, cigars and cigarettes. Slaughtering and meat packing. Hosiery and knit goods.
Nanticoke	Tobacco, cigars and cigarettes. Liquors, malt. Gas, illuminating and heating.
New Castle	Iron and steel, steel works and rolling mills. Tin plate and terneplate. Iron and steel, blast furnaces.
Norristown	Hosiery and knit goods. Foundry and machine-shop products. Tobacco, cigars and cigarettes.
North Braddock	Brick and tile. Bread and other bakery products.
Oil City	Foundry and machine-shop products. Engines, steam, gas, and water. Cars and general shop construction and repairs by steam-railroad companies.
Old Forge	Silk goods, including throwsters. Bread and other bakery products. Mineral and soda waters.
Phoenixville	Iron and steel, steel works and rolling mills. Hosiery and knit goods. Foundry and machine-shop products.
Pittston	Liquors, malt. Silk goods, including throwsters. Stoves and hot-air furnaces, except gas and oil stoves.
Plymouth	Hosiery and knit goods. Flour-mill and gristmill products. Foundry and machine-shop products.
Pottstown	Iron and steel, blast furnaces. Iron and steel, steel works and rolling mills. Structural ironwork, not made in steel works or rolling mills.
Pottsville	Iron and steel, steel works and rolling mills. Slaughtering and meat packing. Silk goods, including throwsters.
Shamokin	Silk goods, including throwsters. Hosiery and knit goods. Slaughtering and meat packing.
Sharon	Iron and steel, steel works and rolling mills. Iron and steel, blast furnaces. Automobiles.
Shenandoah	Liquors, malt. Slaughtering and meat packing. Bread and other bakery products.
South Bethlehem	Iron and steel, steel works and rolling mills. Iron and steel, blast furnaces. Tobacco, cigars and cigarettes.
Steelton	Iron and steel, steel works and rolling mills. Iron and steel, blast furnaces. Flour-mill and gristmill products.
Sunbury	Silk goods, including throwsters. Dyeing and finishing textiles. Flour-mill and gristmill products.
Tamaqua	Hosiery and knit goods. Cars and general shop construction and repairs by steam-railroad companies. Foundry and machine-shop products.
Taylor	Silk goods, including throwsters. Grease and tallow. Bread and other bakery products.
Uniontown	Liquors, malt. Stamped and enameled ware. Steam fittings and steam and hot-water heating apparatus.
Warren	Petroleum, refining. Foundry and machine-shop products. Furniture.
Washington	Glass. Slaughtering and meat packing. Liquors, malt.
West Chester	Dairymen's, poultrymen's, and apiarists' supplies. Carriage and wagon materials. Labels and tags.
Wilkinsburg	Lumber, planing-mill products. Marble and stone work. Ice, manufactured.
Williamsport	Silk goods, including throwsters. Leather, tanned, curried, and finished. Foundry and machine-shop products.
York	Foundry and machine-shop products. Silk goods, including throwsters. Wall paper, not made in paper mills.

Philadelphia metropolitan district.—The Philadelphia metropolitan district, which was third in the United States in importance of manufactures in 1914, embraces 437,733 acres of territory, of which 83,340 acres represents the area of Philadelphia. As defined by the census of 1914, the metropolitan district comprised in addition to the city of Philadelphia, 97 cities, boroughs, and townships, situated in Bucks, Chester,

Delaware, and Montgomery Counties in Pennsylvania; and Burlington, Camden, and Gloucester Counties in New Jersey.

The estimated population of the district on July 1, 1914, was 2,121,153, that of Philadelphia being 1,657,810; Camden, 102,465; Chester, 40,474; Norristown, 30,265; Gloucester, 10,577; Bristol, 10,172; and for the remainder of the district it was 269,390. The accompanying outline map of the district shows the city of Philadelphia and the other cities, boroughs, and townships.



Summary for the district.—Table 15 summarizes, for 1914, the statistics of manufactures for the Philadelphia metropolitan district; for the cities of Philadelphia, Pa.; Camden, N. J.; Chester, Pa.; and Gloucester, N. J.; for the boroughs of Bristol, Pa., and Norristown, Pa.; and for the remainder of the district. The percentage which the figures for Philadelphia represent of the total for the district is shown for each item.

[1] Includes two plants located outside of the district.

[2] Estimated population, July 1, 1914.

In 1914 the metropolitan district contained 9,710 establishments, which gave employment to 369,854 persons, of whom 318,308 were wage earners. These establishments expended $232,398,464 in salaries and wages, and manufactured products valued at $997,972,802, in the production of which materials costing $574,869,618 were utilized. The value added by manufacture was $423,103,184.

Comparison with earlier censuses.—Table 16 is a comparative summary for the district as a whole, for 1914 and 1909.

Value of products	997,972,802	911,014,010	9.5
Value added by manufacture (value of products less cost of materials)	423,103,184	381,021,597	11.0

[1] A minus sign (−) denotes decrease.
[2] Estimated population July 1, 1914.
[3] Population of Apr. 15, 1910.
[4] Figures not available.

An increase over 1909 is shown in all comparable items of this table except proprietors and firm members, which shows less than 2 per cent decrease. The largest per cent of increase, 30.1 per cent, is shown for primary horsepower; salaries show a gain of 23 per cent; and the capital invested increased 20.5 per cent.

Comparative summary, by industries.—Table 17 presents, for 1914 and 1909, statistics for 29 selected industries of the district shown separately, and the remainder grouped under the head of "all other industries." In this group are included, in addition to the minor industries, some large establishments for which figures can not be published without disclosing individual operations.

Flour mills and gristmills, the textile and the iron and steel industries are the only ones shown in the table in which 50 per cent or more of the value of products was reported by establishments located outside the corporate limits of Philadelphia. The entire output of electrical machinery and fur-felt hats and almost the total production of clothing factories and printing and publishing establishments were reported by Philadelphia.

[1] Excludes statistics for establishments located outside of the corporate limits of Philadelphia, to avoid disclosure of individual operations. The figures for these establishments are included under the head of "all other industries."
[2] Includes "printing and publishing, newspapers and periodicals"; "printing and publishing, book and job"; "printing and publishing, music"; "bookbinding and blank-book making"; "engraving, steel and copper plate, including plate printing"; and "lithographing."
[3] Includes "carpets and rugs, other than rag"; "cordage and twine and jute and linen goods"; "cotton goods, including cotton small wares"; "dyeing and finishing textiles"; "hosiery and knit goods"; "shoddy"; "silk and silk goods, including throwsters"; and "woolen, worsted, and felt goods, including wool hats."
[4] Includes two plants (combined in one report) located outside of metropolitan district.

Pittsburgh metropolitan district.—The Pittsburgh metropolitan district, which ranked fourth among the metropolitan districts of the United States in manufacturing in 1914, embraces 405,880 acres of territory, of which 26,511 acres constitute the land area of Pittsburgh, and 379,369 the outside territory.

The estimated population of Pittsburgh in 1914 was 564,878 and that of the outside territory 591,971, the total for the district being 1,156,849. As defined by the census of 1914, the metropolitan district comprised 119 cities, boroughs, and townships, a list of which is given below.

ALLEGHENY COUNTY.

Aleppo township.
Aspinwall borough.
Avalon borough.
Baldwin township.
Bellevue borough.
Ben Avon borough.
Bethel township.
Braddock borough.
Braddock township.
Bridgeville borough.
Carnegie borough.
Carrick borough.
Chartiers township.
Cheswick borough.

ALLEGHENY COUNTY—Continued.

Clairton borough.
Collier township.
Coraopolis borough.
Crafton borough.
Crescent township.
Dormont borough.
Dravosburg borough.
Duquesne borough.
East Deer township.
East McKeesport borough.
East Pittsburgh borough.
Edgewood borough.
Edgeworth borough.
Elizabeth borough.

ALLEGHENY COUNTY—Continued.

Elizabeth township.
Emsworth borough.
Etna borough.
Forward township.
Glassport borough.
Glenfield borough.
Greentree borough.
Harmar township.
Hays borough.
Haysville borough.
Heidelberg borough.
Homestead borough.
Ingram borough.
Jefferson borough.
Kennedy township.
Kilbuck township.
Knoxville borough.
Leet township.
Leetsdale borough.
Lincoln township.
Lower St. Clair township.
McKeesport city.
McKees Rocks borough.
Mifflin township.
Millvale borough.
Moon township.
Mount Oliver borough.
Munhall borough.
Neville township.
North Braddock borough.
North Fayette township.
North Versailles township.
Oakdale borough.
Oakmont borough.
O'Hara township.
Osburn borough.
Patton township.
Penn township.
Pitcairn borough.

ALLEGHENY COUNTY—Continued.

Pittsburgh city.
Plum township.
Port Vue borough.
Rankin borough.
Reserve township.
Robinson township.
Ross township.
St. Clair borough.
Scott township.
Sewickley borough.
Shaler township.
Sharpsburg borough.
Snowden township.
South Fayette township.
South Versailles township.
Spring Garden borough.
Springdale borough.
Springdale township.
Stowe township.
Swissvale borough.
Tarentum borough.
Thornburg borough.
Trafford borough (part of).
Turtle Creek borough.
Union township.
Upper St. Clair township.
Verona borough.
Versailles borough.
Versailles township.
Wall borough.
West Elizabeth borough.
West Homestead borough.
Westview borough.
Whitaker borough.
Wilkins township.
Wilkinsburg borough.
Wilmerding borough.
Wilson borough.

WASHINGTON COUNTY.

Finleyville borough.
Union township.

WESTMORELAND COUNTY.

Arnold borough.
Irwin borough.
Jeanette borough.
Lower Burrell township.

WESTMORELAND COUNTY—Continued.

Manor borough.
New Kensington borough.
North Huntingdon township.
North Irwin borough.
Parnassus borough.
Penn borough.
Penn township.
Trafford borough (part of).

The accompanying outline map shows the boundaries of the district and the principal cities and boroughs.

Summary for the district.—Table 18 summarizes, for 1914, the statistics of manufactures for the Pittsburgh metropolitan district, for the cities of Pittsburgh and McKeesport, Wilkinsburg, Homestead, Braddock, McKees Rocks, Carnegie, and for the remainder of the state. The percentage which the figures for Pittsburgh represent of the total for the district is shown in the case of each item.

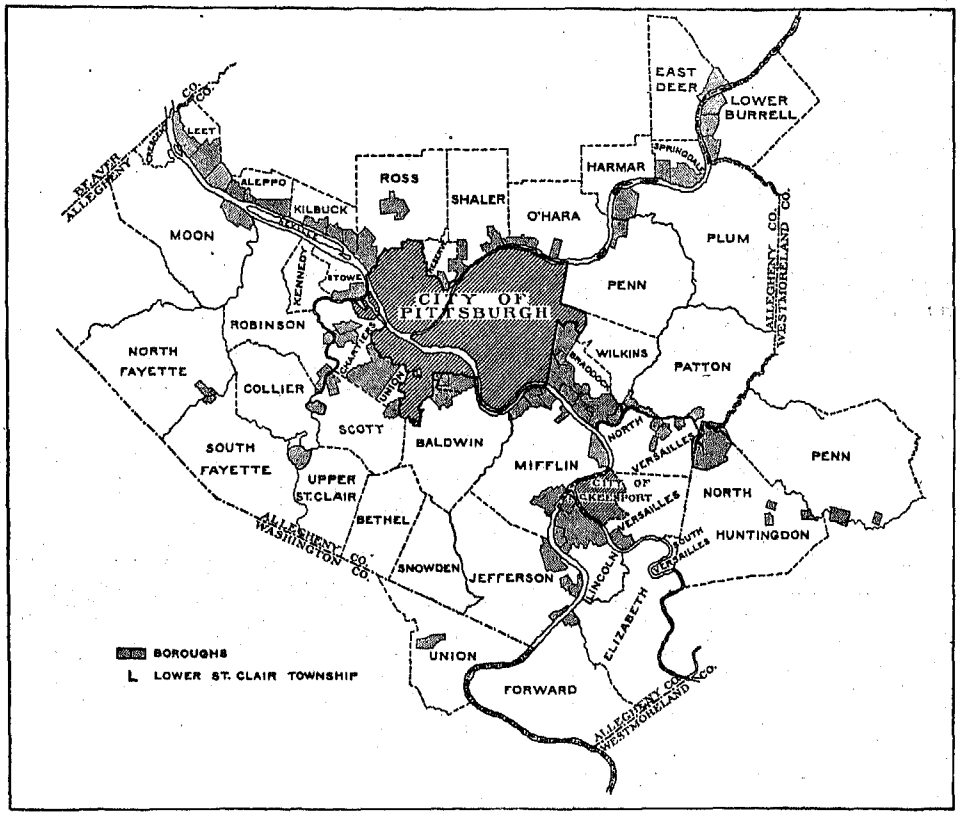

Table 18	PITTSBURGH METROPOLITAN DISTRICT.										Per cent Pittsburgh is of total for district.
	The district.	Pittsburgh.	District exclusive of Pittsburgh.

[1] Includes Duquesne and North Braddock, the statistics for which can not be shown without disclosing individual operations.
[2] Estimated population July 1, 1914.

In 1914 the metropolitan district had 2,479 manufacturing establishments, which gave employment to 177,328 persons during the year and paid out $136,352,480 in salaries and wages. These establishments manufactured products to the value of $573,380,021, the greater part of which was reported by factories outside of the central city. Pittsburgh contained nearly one-half of the population of the district, of which it is the commercial and financial center, but contributed only 43 per cent of the value of the

manufactured products of the district. This is due largely to the steel works and rolling mills and blast furnaces, which require considerable space for the operation of their plants and are consequently located outside of the corporate limits of the city. The number of manufacturing establishments in Pittsburgh constituted 70.2 per cent of the total number in the district and gave employment to 46.4 per cent of the total average number of wage earners employed.

Comparison with earlier censuses.—Table 19 is a comparative summary, for the district as a whole, for 1914 and 1909, and gives percentages of increase for the five-year period.

An increase is shown in all the comparable items of this table, except the cost of materials and value of products, the latter showing a decrease of less than 1 per cent. The greatest increases were for salaries and wages, number of salaried employees, and primary horsepower.

[1] Includes "printing and publishing, newspapers and periodicals"; "printing and publishing, book and job"; "bookbinding and blank-book making"; "engraving, steel and copper plate, including plate printing"; and "lithographing."

Measured by value of products, the most important industry in the district was iron and steel, which showed a decease in number of establishments, average number of wage earners, and total value of products. The next in importance were foundries and machine shops and steam-railroad repair shops. These three industries, which are closely allied, represented 63.6 per cent of the total product for all industries in 1914 and 70.7 per cent in 1909. Slaughtering and meat packing, with a value of products of $19,383,497 in 1914, 92.6 per cent of which was reported by Pittsburgh, shows an increase of 33.7 per cent since 1909. Other industries showing substantial increases are glass, canning and preserving, printing and publishing, and bread and other bakery products.

Under "all other industries" are included, in addition to minor industries, some important establishments located outside the corporate limits of Pittsburgh, for which statistics can not be given without disclosing individual operations.

Character of ownership.—Table 21 presents statistics concerning character of ownership, or legal organization, of manufacturing enterprises. For all industries combined, comparative figures are given for 1914, 1909, and 1904; for selected industries, statistics for 1914 and 1909 are shown; and for individual cities the figures are for all industries combined and relate to 1914 only. In order to avoid disclosing the operations of individual establishments, it is necessary to omit several important industries from this table.

[1] All other cities embrace: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton.

The figures in the preceding table indicate a pronounced tendency toward the corporate form of ownership. During the five-year period 1909–1914 there was an increase in the number of establishments throughout the state operated by corporations but a decrease in individual and all other forms of ownership. In 1914 the greatest proportion of the establishments, 56.8 per cent of the total, was owned by individuals; but measured by value of products and average number of wage earners, corporations were by far the most important. Although only 24.2 per cent of the total number of establishments in the state were under corporate control, this class reported 81.9 per cent of the total value of products and 78 per cent of the total average number of wage earners. The relative number of wage earners and value of products reported by corporations has been greater at each successive census. With few exceptions, both in 1914 and 1909, the largest proportion of the total value of products for each of the 15 industries for which separate statistics are shown was reported by corporations. Individual ownership predominated in a majority of the industries shown in the table, but the bakeries and clothing factories (both men's and women's) were the only ones of this class in which the greatest proportion of wage earners and value of products was reported by establishments owned by individuals or firms.

In the cities the same general condition prevailed as throughout the state, namely, the bulk of manufactures and a majority of the wage earners were reported by corporations.

Size of establishments.—The tendency for manufacturing to become concentrated in large establishments is indicated by the statistics in Table 22.

For 1914, 491 establishments, or 1.8 per cent of the total number in the state, each reported products valued at $1,000,000 and over, as compared with 400, or 1.5 per cent of the total, in 1909, and 284, or 1.2 per cent, in 1904. For 1914 these establishments reported 40.7 per cent of the total average number of wage earners for the state, 52.6 per cent of the total products, as measured by value, and 45.8 per cent of the total value added by manufacture. In the same year the smaller establishments—those having products valued at less than $5,000—although representing 33.7 per cent of the total number of establishments, employed only 1.2 per cent of the total wage earners, and reported less than 1 per cent of the total value of products, and 1.2 per cent of the total value added by manufacture.

Establishments having products valued at $1,000,000 and over contributed a relatively greater amount of the total value of products at each successive census, 46.1 per cent in 1904, 50.7 per cent in 1909, and 52.6 per cent in 1914.

Establishments having products valued at $100,000 and over represented 13.8 per cent of the total number of establishments, employed 80.6 per cent of the total number of wage earners, and contributed 86.8 per cent of the total value of products for the state.

Table 23 gives, for 1914 and 1909, for 15 of the important industries, a classification of establishments, wage earners, value of products, and value added by manufacture, similar to that presented in Table 22 for all industries combined.

In 1914, as in 1909, the manufacture of silk and woolen goods, and malt liquors, the tanning and finishing of leather, and slaughtering and meat packing were conducted in the comparatively large establishments. In each of these industries establishments whose products were valued at $100,000 or more employed more than 84 per cent of the wage earners engaged in the industry and reported more than 90 per cent of the value of products.

A large proportion of the bakeries, lumber mills, printing and publishing establishments, and tobacco factories were small, manufacturing products valued at less than $20,000 each.

[1] Includes the group "$1,000,000 and over."
[2] All other cities embrace: Coatesville, Dickson City, Duquesne, Farrell (formerly South Sharon), Monessen, North Braddock, Old Forge, and Steelton.

In the cities, as throughout the state, establishments having products valued at $100,000 and over reported the largest number of wage earners as well as the greatest value of products and the greatest value added by manufacture. The largest proportion of the total value of products contributed by establishments in this class, 99 per cent, was reported by South Bethlehem, and the smallest, 52.6 per cent, by Connellsville. In the two principal manufacturing cities of the state, Philadelphia and Pittsburgh, the bulk of manufacturing was done in establishments of this class, the per cent of the total products shown for this group being 84.2 and 89.2, respectively.

Table 25 shows the size of establishments in 1914 as measured by the number of wage earners employed, for all industries combined, for 45 of the more important industries and for the 71 cities having more than 10,000 inhabitants. Table 26 presents for 1914 percentages based on the figures in Table 25 and for 1909 similar percentages for all industries combined and for individual industries.

Table 25

INDUSTRY AND CITY.	TOTAL.		ESTABLISHMENTS EMPLOYING—																
			No wage earners.	1 to 5 wage earners.		6 to 20 wage earners.		21 to 50 wage earners.		51 to 100 wage earners.		101 to 250 wage earners.		251 to 500 wage earners.		501 to 1,000 wage earners.		Over 1,000 wage earners.

Table 30—Continued.	STEEL WORKS AND ROLLING MILLS.		
	1914	1909	1904
PRODUCTS—continued.			
Finished rolled products and forgings—Continued.			
Merchant bars, including bars and rods not elsewhere specified—			
Tons	1,415,417	1,749,220	
Value	$49,345,938	$56,717,882	1,166,234
Bars for reenforced concrete—			$40,425,460
Tons	55,693	36,886	
Value	$1,525,540	$1,084,652	
Wire rods—			
Tons	1,104,133	861,261	596,892
Value	$27,959,516	$23,190,920	$16,926,665
Plates and sheets, not elsewhere specified—			
Tons	1,900,427	2,057,176	
Value	$61,657,951	$78,938,359	1,563,154
Black plates (or sheets), for tinning—			$65,088,409
Tons	564,539	308,738	
Value	$23,744,024	$15,400,384	
Skelp, flue, and pipe—			
Tons	860,969	1,087,502	
Value	$24,001,966	$34,273,085	1,259,049
Hoops, bands, and cotton ties—			$39,576,046
Tons	373,658	279,172	
Value	$12,934,152	$8,305,448	
Nail and tack plates—			
Tons	31,318	37,802	41,931
Value	$1,209,420	$1,469,504	$1,156,789
Axles, rolled or forged—			
Tons	61,920	97,333	73,388
Value	$2,515,703	$3,603,095	$2,415,226
Armor plates, gun forgings, and ordnance—			
Tons	36,671	22,558	22,648
Value	$19,090,408	$8,833,335	$9,402,082
All other rolled products:—			
Tons	443,604	464,286	
Value	$24,380,743	$31,220,885	
All forged or other iron and steel products, not otherwise enumerated—			561,721
Tons	326,208	323,916	$25,943,230
Value	$15,329,125	$16,178,228	
Partly finished rolled products for sale or for transfer to other works of same company.			
Blooms, billets and slabs, steel—			
Tons	1,004,583	2,099,206	
Value	$33,510,622	$47,413,864	
Rolled blooms and billets for forging purposes—			2,582,848
Tons	30,528	37,977	$58,205,781
Value	$791,183	$1,128,594	
Sheet and tin-plate bars—			
Tons	928,249	778,260	
Value	$18,811,666	$17,430,702	
Muck and scrap bar—			
Tons	97,742	118,759	111,992
Value	$2,678,512	$3,505,236	$2,791,435
Unrolled steel.			
Ingots—			
Tons	37,053	32,144	91,059
Value	$882,882	$1,525,021	$1,850,146
Direct steel castings—			
Tons	215,398	197,405	114,411
Value	$15,327,948	$14,087,422	$8,041,419
All other products, including scrap and value added to steel or iron rolling-mill products by further manufacture	$50,487,722	$57,606,556	$13,307,012
Steel production, tons.			
Total production	[1] 11,837,503	[1] 12,189,953	7,733,640
Ingots	11,622,105	11,992,548	7,618,833
Castings	215,398	197,405	114,807
Classified according to process:			
Open-hearth	9,741,125	9,281,936	4,230,657

[1] Figures not available.

In the above table the total production, as measured by quantity and value, is given for wire rods, skelp, nail plate, and other rolled products, which are to a greater or less extent consumed in the producing establishment in the manufacture of wire, wrought-welded pipe, nails, and other fabrications; and the enhanced value which they acquired through their manufacture beyond the rolling-mill stage has been included with "all other products."

The statistics necessarily involve considerable duplication on account of the output of crude steel and partially rolled steel by certain establishments and their use as material in other works where they are made into finished rolled forms, thus appearing twice in cost of materials and twice in value of products.

In considering the comparative figures presented in this table it should be borne in mind that 1904 was at the bottom of a depression between two waves of industrial activity which had their crests in 1902 and 1907. Again in 1908 there was a depression, with the rise following reaching its crest in 1910. Hence, 1909 was a year of expansion. A slight depression occurred in 1911, but 1912 and 1913 were banner years. Then came in 1914 the depression due to the beginning of the European war.

During the five-year period 1909–1914 the decrease in certain lines is marked, notably in rails and rail fastenings, merchant bars, skelp, and structural steel; while reenforced concrete bars, wire rods, black plates for tinning, and hoops, bands, and cotton ties, show gains. The statistics for equipment show that a great number of furnaces were idle in 1914. On a basis of 300 working days the output of steel in 1914 was equal to 55.3 per cent of the capacity of the furnaces on double turn, whereas in 1909, an active

[1] Less than one-tenth of 1 per cent.

Engines and power.—Table 27 shows, for 1914, 1909, and 1904, for all industries combined, the number and total horsepower of engines or motors employed in generating power (including electric motors operated by purchased current). It also shows separately the number and horsepower of electric motors operated by current generated in the establishments reporting.

Ths table shows an increase in primary power, amounting to 628,311 horsepower, or 21.5 per cent, from 1909 to 1914. The use of rented power, now almost wholly electric, has greatly increased since 1904, when it represented only 2.6 per cent of the total primary power reported. In 1909 the amount of rented power had increased to 5.6 per cent of the total and in 1914 to 10.1 per cent.

The increase in the use of electric motors run by current generated within the same establishment, although considerable, has not kept pace with that of rented power. The power of motors operated by current generated in the same establishments represented 89.7 per cent of the total electric power in 1904, 83.2 per cent in 1909, but only 77.5 per cent in 1914.

The use of internal-combustion engines increased rapidly during the decade, but not so rapidly as that of rented electric power. The horsepower of such engines, however, represented 6.3 per cent of the total primary power in 1914.

During the last five-year period, there was a decrease in the horsepower of water wheels, turbines, and motors, which in 1914 formed 1.3 per cent of the total primary power.

[1] Figures for horsepower include for 1909 and 1904 the amounts reported under the head of "other" owned power. [2] Not reported.

Fuel.—Closely related to the subject of power employed in manufactures is that of fuel consumed in generating this power or otherwise used in manufacturing processes.

Table 28 shows, for 1914, the quantity of each kind of fuel used, for which data were obtained, for all industries combined, for certain selected industries in the state as a whole, and for all industries combined for the cities which can be shown separately.

SPECIAL STATISTICS.

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials, the quantity and value of products, and other information for securing which no provision is made on the general schedule. Certain data for some of the important industries in Pennsylvania are here presented. Statistics for power laundries are also given.

Iron and steel, blast furnaces, and steel works and rolling mills.—The establishments included in the blast-furnace industry are those engaged in the smelting of iron ore, and the steel works and rolling mills which manufacture steel or which roll iron and steel. Steel works and rolling mills is the leading industry of the state, whether measured by value of products, number of wage earners employed, value added by manufacture, or capital invested. Nearly seven-eighths (86.2 per cent) of the pig-iron product of the state is used in the steel works and rolling mills and 86.6 per cent of the pig iron consumed by the steel works and rolling mills in 1914 was produced by the consumer. The state produced, in 1914, 41.9 per cent of the pig-iron of the country and 48.1 per cent of the rolled, forged, and other classified products of the steel works and rolling mills.

The first successful ore-smelting works were established in Berks County in 1716, although in 1692 a small amount of iron had been made in the Pennsylvania colony. In 1728–29 the colony exported 274 tons of pig iron to England. In 1791 there were 16 blast furnaces in the state and by 1849 the number had grown to 298, of which 230 were charcoal furnaces. Since 1849 the manufacture of charcoal iron has declined; in 1914 but 4 small charcoal furnaces were operated.

The manufacture of steel was attempted about 1750, but development was slow, and in 1805 there were only two steel plants in the state with a combined yearly capacity of about 150 tons. In 1809 there were five steel furnaces with an output of 531 tons, the total steel product of the country being 917 tons. In 1812 the first steel plant was erected in Pittsburgh. Bessemer steel was first made in Pennsylvania, at Steelton, in 1867 (though this was the third converter in the United States), and the first steel rails made in this country were rolled at Johnstown, Pa., in the same year. The first rolling mill for the production of bar iron was built at Plumsock, Pa., in 1817, and the first puddling was done at that mill.

Blast furnaces.—The following table shows, for 1914, 1909, and 1904, the quantity and cost of the principal materials used in pig-iron manufacture, the quantity and value of the products, and statistics relating to equipment. The ton of 2,240 pounds is used in showing quantities, except when otherwise stated.

Table 29

	BLAST FURNACES. 1914	1909	1904

White, mottled, and miscellaneous	9,949	51,916	12,121
Direct castings	4,613	4,563	2,941
Spiegeleisen, ferromanganese, and ferrosilicon, including Bessemer ferrosilicon (7 per cent and over in silicon)	164,565	178,936	167,181
Pig iron classified by method of delivery or casting, tons:			
Delivered in molten condition	5,712,786	5,887,507	3,579,501
Machine cast	2,696,520	2,837,576	2,376,870
Sand cast	1,112,180	1,907,514	1,490,312
Chill cast	217,756	274,516	279,654
Direct castings	4,613	4,563	2,941
EQUIPMENT.			
Furnaces in active establishments:			
Completed stacks at end of year—			
Number	137	145	131
Daily capacity, tons	46,934	41,707	34,200
Active during the year—			
Number	108	143	120
Daily capacity, tons	38,194	41,557	(1)
In course of construction at end of year—			
Number	1	5	11
Daily capacity, tons	500	2,200	1,950
Pig-casting machines, number	.....	56	(1)
Granulated slag pits:			
Number	40	39	15
Number of blast furnaces served	43	(1)	(1)
Gas engines operated with blast-furnace gas:			
Number	40	13	(1)
Horsepower	93,400	32,100	(1)

[1] Figures not available.

The figures for pig iron, classified according to fuel, show that coke pig iron constituted 98.7 per cent of the total in 1914 and 94 per cent in 1909. The remaining 1.3 per cent in 1914 includes pig iron made with anthracite, mixed bituminous coal and coke, and charcoal. Basic pig iron constituted 51.9 per cent of the total production in 1914 and 44.1 per cent in 1909; Bessemer, 31.6 per cent in 1914 and 34.6 per cent in 1909; foundry, 8 per cent in 1914 and 14.1 per cent in 1909; and all other kinds, 8.5 and 7.1 per cent, respectively, for the two years. In 1914, 58.6 per cent, and in 1909, 54 per cent were delivered in a molten condition; 27.7 per cent was machine cast in 1914 and 26 per cent in 1909; 11.4 per cent, sand cast in 1914, and 17.5 per cent in 1909; the remaining 2.3 per cent in 1914 and 2.6 per cent in 1909 were chill cast or cast direct. The decrease in production in 1914 as compared with 1909, a decrease of 10.7 per cent in pig-iron tonnage, was in keeping with the general depression affecting the iron industry, the decrease for the country as a whole being 9.3 per cent. The recovery, setting in at the close of 1914, was rapid and the pig-iron product for the state in 1915, according to the statistical report of the American Iron and Steel Institute, was 12,790,668 tons. The depression for 1914 is further shown in the relatively small number of furnaces active during the year, 108 in 1914, as compared with 143 in 1909 and 120 in 1904. An interesting feature with respect to equipment is the growth of gas engines operated with the waste blast-furnace gases. These engines are large units, averaging over 2,000 horsepower.

Steel works and rolling mills.—The next table gives, for 1914, 1909, and 1904, statistics in regard to materials, products, and equipment for the steel works and rolling mills of the state. The ton of 2,240 pounds is used in showing quantity, except when otherwise stated.

Table 30	STEEL WORKS AND ROLLING MILLS.		
	1914	1909	1904
MATERIALS.			
Total cost	$285,382,084	$329,013,421	$237,875,025

[1] Figures not available.

In the above table the total production, as measured by quantity and value, is given for wire rods, skelp, nail plate, and other rolled products, which are to a greater or less extent consumed in the producing establishment in the manufacture of wire, wrought-welded pipe, nails, and other fabrications; and the enhanced value which they acquired through their manufacture beyond the rolling-mill stage has been included with "all other products."

The statistics necessarily involve considerable duplication on account of the output of crude steel and partially rolled steel by certain establishments and their use as material in other works where they are made into finished rolled forms, thus appearing twice in cost of materials and twice in value of products.

In considering the comparative figures presented in this table it should be borne in mind that 1904 was at the bottom of a depression between two waves of industrial activity which had their crests in 1902 and 1907. Again in 1908 there was a depression, with the rise following reaching its crest in 1910. Hence, 1909 was a year of expansion. A slight depression occurred in 1911, but 1912 and 1913 were banner years. Then came in 1914 the depression due to the beginning of the European war.

During the five-year period 1909–1914 the decrease in certain lines is marked, notably in rails and rail fastenings, merchant bars, skelp, and structural steel; while reenforced concrete bars, wire rods, black plates for tinning, and hoops, bands, and cotton ties, show gains. The statistics for equipment show that a great number of furnaces were idle in 1914. On a basis of 300 working days the output of steel in 1914 was equal to 55.3 per cent of the capacity of the furnaces on double turn, whereas in 1909, an active

year, the corresponding ratio was 73.5 per cent, and in 1904, 63.4 per cent.

Tin plate and terneplate.—Pennsylvania manufactures more than half of the tin plate and terneplate product of the United States, 56.1 per cent in 1914, 52.9 per cent in 1909, and 56.9 per cent in 1904. Practically all of the concerns engaged in the industry roll their black plates, and the plate rolling and dipping is all done in one plant, although the two departments fall under different industry classifications.

In the following table are given, for 1914, 1909, and 1904, the quantity and cost of the materials used and the quantity and value of the products:

All other products, value	$1,228,167	$1,483,316	$413,564

The mills of the state consumed in 1914 a little over 22,000,000 pounds of coating metal, consisting approximately of 21,550,000 pounds of tin and 450,000 pounds of lead. In the way of equipment the plants reported 314 tin and terne sets, with a daily capacity on single turn of 1,882,408 pounds.

Of the 13 establishments in the state 9 were operated on triple turn, 2 on double, and 2 on single turn, and the daily capacity of the plants as operated was nearly 5,500,000 pounds.

Textiles.—The relative importance of the different textile industries in Pennsylvania, as measured by value of products, is shown in Table 32, which presents the total value of these products at the last three censuses.

The progress of the textile industries in the state is reflected to a large extent by the increases or decreases in the number of spindles, looms, knitting machines, and other equipment. Table 33 shows the number of the principal kinds of machines used in the combined textile industries and also in each of the five main branches of textile manufacture for 1914, 1909, and 1904.

Table 32	1914	1909	1904

[1] Figures include woolen, worsted, and cotton looms, as follows: In 1914, 447; 1909, 328; 1904, 904.

The total number of producing spindles increased from 1,707,116 in 1904 to 2,218,569 in 1914, or 30 per cent. This increase was due entirely to the silk mills, which show a gain of 564,966, or 72 per cent, while all of the other classes of textile mills show an actual decrease during the decade. In addition to the spindles shown in the table, there were 16,964 in active use during 1914 in establishments manufacturing cordage and twine and jute goods. In this connection, attention is called to the fact that the spindle capacity of the cotton and knitting mills in Pennsylvania is small in comparison with the production of such mills, because in this state many establishments are engaged principally in the final processes of manufacture. To such an extent is this the fact that the state furnishes the largest market in this country for the sale of cotton yarn. The converse is true of silk mills, Pennsylvania reporting 32.1 per cent of the total quantity of tram and organzine produced for sale in the United States.

The increase in the total number of looms during the decade was 9,975, or 20 per cent. The increase in the number of silk looms alone, however, was much larger, being 14,358, or 74.3 per cent. The number of looms in woolen, worsted, and felt mills increased 1,094. This increase was confined to looms on worsted and felt goods, as the number on woolen goods decreased. The number of looms employed in the manufacture of

carpets and rugs and of cotton goods shows a decrease during the decade. The increase in the number of knitting machines, from 33,816 in 1904 to 51,422 in 1914, or 52.1 per cent, corresponds with the increase in the production of hosiery and knit goods. The number of woolen cards decreased from 971 in 1904 to 855 in 1914, or 11.9 per cent, while the number of combing machines decreased from 377 in 1904 to 320 in 1914, or 15.1 per cent.

Wool manufactures.—The woolen industry in Pennsylvania was established by the English settlers in Philadelphia soon after the founding of the colony. It was characterized for many years by the number of small independent factories, and the prevalence of hand-loom weaving. The state, and especially that part embraced by the present limits of the city of Philadelphia, has always ranked high in this industry. In the manufacture of carpets and rugs, Pennsylvania has likewise held an important position among the states. As early as 1791, there was a factory in Philadelphia engaged in the manufacture of Turkey and Axminster carpets. At the census of 1849 Massachusetts led in the industry, but at each census from 1859 to 1904, inclusive, Pennsylvania ranked first in value of products. New York led in 1909 and still holds first place, but its production in 1914 was only slightly greater in value than that reported for Pennsylvania.

The carpet and rug industry in Pennsylvania is confined almost entirely to the city of Philadelphia, which leads all other cities in the United States in the manufacture of ingrains. Pennsylvania ranks first among the states in the manufacture of wool-felt hats; second in the production of woolen goods; third in the output of worsted goods; and tenth in the manufacture of felt goods.

Table 34 shows in detail, for 1914, 1909, and 1904, the quantity and cost of materials used in wool manufactures and the quantity and value of the principal products.

All other products, value	$6,811,659	$4,426,459	$3,556,075

The number of establishments engaged in the manufacture of woolen, worsted, and felt goods, wool hats, and carpets and rugs in 1914 was 44 less than in 1909. The table shows a corresponding decrease in the cost of materials used and in the value of the products manufactured, 14.9 per cent and 14.5 per cent, respectively. The amount expended for wool in 1914 was $20,071,113, as compared with $28,309,853 in 1909, a decrease of 29.1 per cent; yarns, which formed a large proportion of the materials used, also decreased, while all the other classes increased in cost and all, except animal hair and fur, increased in quantity. All the completed products show decreases in value for 1914 as compared with 1909, except cotton-mixed goods, which increased 60.4 per cent in value, though constituting less than 4 per cent of the total value reported for 1914. The carpet and rug industry shows a considerable decrease not only for the period 1909–1914 but for the preceding five-year period. Pennsylvania manufactured 36.3 per cent of the total production (as measured in square yards) of the carpet and rug industry in the United States in 1914, as compared with 44.6 per cent in 1909 and 55.4 per cent in 1904. More than one-third of the total value of products in 1914 consisted of partly manufactured products for sale. This class decreased 23.2 per cent in quantity and 20.3 per cent in value during the period 1909–1914.

Silk manufactures.—The silk industry was established in Pennsylvania in 1793. The products manufactured were fringes, coach laces, and tassels. For many years the output was limited to these goods and to ribbons and various trimmings. In recent years, however, the manufacture of broad silks has developed rapidly and the throwing of silk on contract for establishments engaged in weaving has expanded into an important phase of the industry. Where throwing is done on commission, the value of products represents only the amount received for work done. In 1904 and 1909 Pennsylvania ranked second in the value of silk manufactures, but in 1914 advanced to first place.

The following table shows the quantity and cost of materials used and the quantity and value of products manufactured in 1914, 1909, and 1904:

Table 35	1914	1909	1904
MATERIALS.

Pounds	1,306,686	1,642,004	1,396,424
Value	$5,163,732	$7,475,327	$6,124,717
Machine twist, sewing, embroidery, and wash silks, and fringe and floss:			
Pounds	190,497	174,468	183,776
Value	$801,538	$824,643	$837,466
Ribbons, value	$13,667,159	$10,008,146	$5,573,799
Laces, embroideries, fringes, and braids, value	$610,439	$780,047	$773,847
Trimmings, value	$396,479	$1,498,148	$1,326,307
All other products, value	$3,639,751	$1,285,821	$1,880,535
Amount received for contract work	$5,208,322	$4,416,978	$1,994,319
Silk thrown on commission, total pounds	9,754,295	7,733,016	4,116,299
Into organzine, pounds	5,201,159	4,150,688	2,288,174
Into tram, pounds	4,553,136	3,582,328	1,828,125

The cost of raw silk purchased greatly exceeded that of any other material used during each census year, and shows a gain of $16,154,288, or 104.8 per cent, during the decade. Among the materials, other than silk, cotton yarn shows a steady increase, while mercerized yarns increased in quantity but decreased in cost for the five-year period 1909–1914. Wool yarn shows a very rapid increase, the quantity used in 1914 being nearly ten times the amount reported in 1904.

The total value of products more than doubled during the ten-year period. Broad silks, of which yarn-dyed silks formed the larger part, increased in quantity from 65,569,386 yards in 1909 to 90,727,907 yards in 1914, or 38.4 per cent. Of the piece-dyed and printed goods those designated as all-silk show an increase of nearly 500 per cent since 1909, the increase of broad silks being made up almost wholly of this item. The value of ribbons manufactured more than doubled during the decade. In 1914, 9,754,295 pounds of silk were thrown on commission, representing 70.3 per cent of the total quantity of silk thrown on contract in the United States, as compared with 60.6 per cent in 1909. Of this amount, 5,201,159 pounds were thrown into organzine and 4,553,136 pounds into tram. The throwing establishments are located largely in the mining districts where women are available for factory work. Of the 44,755 wage earners employed in the silk mills of the state, 57.9 per cent were females.

Hosiery and knit goods.—The manufacture of hosiery was introduced into the United States about 1698 at Germantown, now a part of the city of Philadelphia, which continues to be the center of this branch of the textile industry in America.

The following table shows for the industry the quantity and cost of materials used and the quantity and value of products manufactured, for 1914, 1909, and 1904:

Table 36	1914	1909	1904
MATERIALS.			
Total cost	$37,756,301	$27,217,951	$16,037,098
Cotton:

Value	$912,766	$135,702	
All other products, value	$3,527,301	$2,859,871	$2,445,727

[1] Includes 4,066,978 dozen pairs silk-mixed hose and half hose, not reported separately at previous censuses.
[2] Included in "all other products."
[3] Not reported separately.

The amount expended for materials used in the manufacture of hosiery and knit goods in 1914 was more than double the cost a decade earlier. The increase was in large part due to the expansion of the silk hosiery branch of the industry during the last five-year period. The quantity of silk yarns (including artificial silk) used in 1914 was 1,456,022 pounds in excess of the quantity used in 1909, or 581.3 per cent, and the cost, $3,881,550, or 396.9 per cent, greater. Decreases are shown in the cost of all other materials, except cotton and worsted yarns, the former increasing 10.8 per cent in cost and the latter 4.6 per cent.

The total value of products shows an increase of $33,341,238, or 108.2 per cent, during the decade 1904–1914. Nearly two-thirds of the total in 1914 represents the value of hosiery, 57.4 per cent of which was for cotton hose, 40.9 per cent for silk hose, and 1.8 per cent for woolen or worsted and merino hose. The output of hosiery in which silk was the chief

material increased from 145,497 dozen pairs in 1909 to 6,057,900 dozen pairs in 1914, while a decrease of 133,292 dozen pairs was shown in the quantity of woolen, worsted, and merino hose. In the production of underwear, that made of cotton forms by far the greater proportion. The output of shirts and drawers decreased slightly from 1909 to 1914, but there was a large increase in the production of cotton combination suits. The quantity of Jersey cloth and stockinette manufactured in 1914 was almost seven times as great as in 1909. Gloves and mittens and cardigan jackets, sweaters, etc., show substantial gains in both quantity and value, while hoods, scarfs, etc., show a pronounced decrease.

Cotton goods, including cotton small wares.—The following table shows the quantity and cost of the principal materials used and the quantity and value of the leading products for 1914, 1909, and 1904:

Table 37	1914	1909	1904

Value	$2,759,147	$1,749,813	$1,100,601
All other woven goods:			
Square yards	43,313,228	71,510,247	63,486,373
Value	$6,237,869	$10,690,252	$8,400,029
Yarns, for sale:			
Pounds	9,476,091	11,448,343	14,303,093
Value	$2,075,228	$2,591,458	$2,812,445
Cotton waste, for sale:			
Pounds	2,613,542	3,038,771	2,277,242
Value	$97,915	$96,340	$79,970
All other products, value	$13,992,011	$13,110,082	$8,653,189

The total cost of material used in cotton manufactures increased 22.6 per cent during the decade 1904–1914, but decreased 6.4 per cent from 1909 to 1914.

The decline in recent years in the spinning of cotton has been accompanied by an increased dependence upon yarns manufactured elsewhere. A smaller quantity of cotton yarn was purchased in 1914 than in 1909, but the amount expended for it represented 61.6 per cent of the cost of all materials used in 1914 as against 57.9 per cent in 1909.

There was a decrease of 4.5 per cent in the value of cotton manufactures during the period 1909–1914. This decrease is due chiefly to a decline in the manufacture of plain and fancy goods made for wearing apparel, included under "all other woven goods." The value of every other product shown separately in the table, except yarn for sale, increased during both five-year periods.

Fur-felt hats.—Table 38 shows the quantity and cost of materials used and the quantity and value of fur-felt hats manufactured in 1914, 1909, and 1904.

Table 38	1914	1909	1904
MATERIALS.			
Total cost	$3,888,530	$5,012,770	$2,728,895
Hatter's fur:			
Pounds	1,459,412	1,976,118	1,227,951
Cost	$2,519,557	$2,420,635	$1,307,816
Fur-felt hat bodies and hats in the rough:			
Dozens	11,987	26,984	23,512
Cost	$75,071	$175,642	$156,420
Chemicals and dyestuffs, cost	$73,676	$164,843	$72,931
All other materials, cost	$1,220,226	$2,251,650	$1,191,728
PRODUCTS.			
Total value	$11,040,820	$13,022,617	$7,350,311
Fur-felt hats:			
Dozens	472,498	668,696	413,506
Value	$11,013,629	$12,943,334	$7,270,067
All other products, value	$27,191	$79,283	$80,244

Pennsylvania held first place in 1914 among the states in the value of fur-felt hats, but Connecticut reported the greatest number of hats manufactured. The city of Philadelphia reported 89.8 per cent of the total value of products for the state, as compared with 79.9 per cent in 1909.

Leather, tanned, curried, and finished.—Table 39 gives the quantity and cost of the principal materials used and the quantity and value of the various products of the industry in 1914, 1909, and 1904.

While the table shows a decrease of 3.7 per cent from 1904 to 1909 in the total number of hides and skins treated and 8.3 per cent from 1909 to 1914, a marked increase is shown in their cost, 7.6 per cent and 18.2 per cent, respectively. The total value of products increased 9.4 per cent during the period 1909–1914, but the gain was chiefly in sole leather, the value of which increased from $39,904,180 in 1909 to $50,485,259 in 1914, a gain of 29 per cent. Sheep and lamb skins and all other products show a slight increase, while calf and kip and goat and kid skins and the amount received for work done on materials for others show considerable decreases between 1909–1914.

Table 39	1914	1909	1904
MATERIALS.			
Total cost	$68,308,720	$59,113,124	$55,411,027
Cattle hides:			
Number	4,657,229	5,449,826	5,447,947
Cost	$38,573,094	$30,118,025	$26,416,581
Skins:			
Calf and kip—			
Number	129,931	142,464	292,500
Cost	$170,810	$212,316	$501,930
Goat and kid—			
Number	20,019,153	23,117,712	24,220,530
Cost	$11,906,728	$12,909,125	$13,646,179
Sheep and lamb—			
Number	3,756,551	2,445,024	2,402,264
Cost	$1,846,752	$1,160,130	$715,166
All other raw stock, cost	$1,819,427	$208,685	$1,849,392
Fuel and rent of power, cost	$872,025	$726,432	$523,885
All other materials, cost	$13,118,084	$13,778,411	$11,758,794

All other products, value	$1,693,154	$1,412,742	$1,166,686
Work on materials for others, value	$1,844,143	$3,258,161	$1,969,092

Printing and publishing.—The following table shows the number and aggregate circulation per issue of the different classes of newspapers and periodicals for 1914, 1909, and 1904:

Table 40 PERIOD OF ISSUE.	NUMBER OF PUBLICATIONS.			AGGREGATE CIRCULATION PER ISSUE.		
	1914	1909	1904	1914	1909	1904
Total	1,498	1,520	1,474	21,530,742	19,674,336	17,867,795
Daily	224	223	220	2,952,135	2,924,306	2,520,587
Sunday	39	27	27	1,760,504	1,481,282	1,299,160
Semiweekly and triweekly	46	52	52	337,806	243,089	467,339
Weekly	788	847	887	6,146,332	5,319,021	5,282,691
Monthly	264	253	212	6,046,975	6,107,571	4,385,686
Quarterly	113	97	60	3,838,053	3,516,933	3,758,107
All other classes	24	21	16	448,317	82,134	154,225

The total number of publications decreased from 1,520 in 1909 to 1,498 in 1914, but increased by 24 during the decade. The aggregate circulation per issue increased 1,856,406, or 9.4 per cent, from 1909 to 1914. Weeklies show a larger increase in circulation than any other class of publications. The only decrease in circulation among the various classes was in monthlies.

Table 41 shows, for 1914 and 1909, the number and circulation of foreign publications, by periods of issue, compared with those printed in English. Publications partly in English and partly in a foreign language are included in the foreign.

Table 41 PERIOD OF ISSUE.	Census year.	TOTAL.		IN ENGLISH.		IN FOREIGN LANGUAGES.[1]	
		Number.	Aggregate circulation per issue.	Number.	Aggregate circulation per issue.	Number.	Aggregate circulation per issue.
Total	1914	1,498	21,530,742	1,372	20,500,041	126	1,030,701
	1909	1,520	19,674,336	1,424	19,265,581	96	408,755

	1909	847	5,319,021	778	5,132,782	69	186,239
Monthly	1914	264	6,046,975	248	5,970,263	16	76,712
	1909	253	6,107,571	244	6,050,536	9	57,035
All other classes [2]	1914	183	4,624,796	170	4,280,944	13	343,852
	1909	170	3,842,156	165	3,809,256	5	32,900

[1] Includes those printed in English and a foreign language.
[2] Include in 1914, 109 quarterlies in English and 4 in foreign languages; in 1909, 94 quarterlies in English and 3 in foreign languages.

There was an increase of 30 during the five years 1909–1914 in the number of publications printed in foreign languages, as compared with a decrease of 52 in those published in English. The increase in circulation of foreign publications was even more pronounced, 152.2 per cent for foreign, as compared with 6.4 per cent for English publications. German was the predominating language in all classes of foreign publications. Of the 11 dailies printed in foreign languages, 5 were published in German, 2 each in Italian and Slovak, and 1 each in Ruthenian and Yiddish. The 79 weeklies were made up of 22 published in German, 32 in Letto-Slavic languages, 12 in Italian, 5 in Hungarian, 2 each in Swedish, and English and German, and 1 each in French, Yiddish, English and Dutch, and English and Italian. Of the 16 foreign monthlies, 6 were published in German, 2 in Letto-Slavic languages, 2 in English and German, and 1 each in French, Hungarian, Italian, Spanish, English and Italian, and English and Spanish. Of the quarterlies, 109 were printed in English and 4 in the German language. There were published also 1 semimonthly in German, 1 semiweekly in Italian, 1 semiweekly and 1 semimonthly in Lithuanian, 2 semiweeklies in Russian, 1 semiweekly and 1 semiannual in English and German and 1 bimonthly in Spanish and Portuguese.

Petroleum, refining.—Measured by value of products, Pennsylvania ranked fourth among the states in the petroleum-refining industry in 1914 as compared with second in 1909. The following table shows the cost of materials, the quantity and value of the principal products, and details as to the main equipment reported in 1914, 1909, and 1904.

From 1909 to 1914 the total cost of materials decreased $3,055,822, or 6.4 per cent, and the value of products, $213,098, or four-tenths of 1 per cent. The quantity of crude petroleum used as material decreased from 21,893,871 barrels of 42 gallons to 17,523,078

barrels, or 20 per cent. Of the crude petroleum used in 1914, more than one-half, or 62.7 per cent, was from the Appalachian field (Pennsylvania grade); 17.7 per cent was Mid-Continent; 13.8 per cent, Gulf and Mexican; and 5.9 per cent, Illinois. In 1909 a little more than one-half was from the Appalachian field, with Illinois ranking second.

Table 42	1914	1909	1904
MATERIALS.			
Total cost	$44,384,494	$47,440,316	$38,921,919
Crude petroleum: [1]			
Barrels (42 gallons)	17,523,078	21,893,871	17,977,686

Capacity	88,030,237		

[1] Marketed production of crude petroleum produced in the state of Pennsylvania: 1914, 8,170,335 barrels; 1909, 9,299,403; 1904, 11,125,762.
[2] Figures not available.
[3] In addition, there was produced at the wells in 1914, 922,348 barrels (50 gallons) of casing-head gasoline, valued at $359,402.

The total production of refined oils in 1914 was 13,526,498 barrels, of which illuminating oils constituted 38.5 per cent; lubricating oils, 23.6 per cent; fuel oils, 20.7 per cent; and gasoline and naphthas, 17.2 per cent. In 1909 the production of refined oils was 16,547,600 barrels, of which illuminating oils formed 52.3 per cent; lubricating oils, 18.9 per cent; fuel oils, 16.4 per cent; and gasoline and naphthas, 12.4 per cent. There was a decrease in the production of refined oils from 1909 to 1914 of 3,021,102 barrels, or 18.3 per cent.

The condition of the industry is also reflected in the figures for the equipment, such as stills, storage tanks, and agitators.

Slaughtering and meat packing.—The following table gives the quantity and cost of the principal materials used and the quantity and value of some of the leading products reported for the slaughtering and meat-packing industry for 1914, 1909, and 1904:

Table 43	1914	1909	1904
MATERIALS.			
Total cost	$57,604,689	$44,247,404	$27,784,202
Animals slaughtered:			
Beeves—			
Number	236,949	252,897	197,581
Cost	$19,340,197	$14,997,080	$10,068,306
Calves—			
Number	115,446	152,851	112,867
Cost	$1,665,435	$1,764,473	$1,025,377
Sheep and lambs—			
Number	436,881	445,471	363,494
Cost	$2,356,186	$2,332,533	$1,570,071
Hogs—			
Number	1,573,974	1,222,880	1,085,634
Cost	$25,321,253	$16,934,874	$10,156,069
Dressed meat purchased for curing, cost [1]	$5,375,280	$4,898,467	$3,363,793
All other materials, cost	$3,546,329	$3,320,067	$1,600,586
PRODUCTS.			
Total value	$65,191,272	$51,106,708	$32,321,089
Fresh meat:

Pounds	18,793,774	(2)	(2)
Value	$2,018,687		
Lard:			
Pounds	47,191,604	36,121,032	34,129,473
Value	$5,156,619	$4,522,249	$2,534,618
Oleo and other oils:			
Gallons	504,708	679,938	1,000,259
Value	$358,258	$536,841	$469,013
Tallow, oleo stock, and stearin:			
Pounds	7,911,300	8,965,706	(2)
Value	$572,439	$682,426	
Sausage casings:			
Pounds	717,482	(2)	(2)
Value	$165,051		
Fertilizers and fertilizer materials:			
Tons	11,298	9,973	8,415
Value	$350,718	$190,762	$140,642
Hides and pelts:			
Cattle—			
Number	236,949	3097,448	296,259
Pounds	15,573,867	19,17,659	14,619,934
Value	$2,544,896	$2,426,372	$1,469,705
Calf—			
Number	115,005		
Pounds	1,348,226		
Value	$243,049		
Sheep—			
Number	436,880	444,480	363,494
Value	$433,704	$455,030	$336,037
All other products, value	$767,280	$2,889,375	$1,478,984

[1] Includes the cost of poultry. [2] Not reported separately.

From 1909 to 1914 the total cost of materials increased $13,357,195, or 30.2 per cent, while the total value of products increased $14,084,564, or 27.5 per cent, for the same period. There was a decrease in the number of each class of animals slaughtered, except hogs, but an increase in the cost of each kind of animals slaughtered, except calves. The cost of dressed meat purchased for curing increased 9.7 per cent. The output of fresh meat, sold as such, shows a gain of 18.1 per cent in quantity and 46.8 per cent in value, while the quantity of meats cured increased 5.6 per cent and the value 11.2 per cent. These gains are due largely to the increase in the production of pork. Sausage decreased 4.5 per cent in quantity, but increased 22.3 per cent in value, while lard increased 30.6 per cent in quantity and 14 per cent in value.

Coke.—The manufacture of coke in the United States was begun in 1841 near Connellsville, Pa. For many years the industry was confined almost entirely to the western part of Pennsylvania, where coal suited to its manufacture was abundant and the proximity of the iron mills of the Pittsburgh district an advantage. While coke is now manufactured in a number of other states, Pennsylvania still leads in its production and supplies nearly two-thirds of the total for the country.

The following table presents, for 1914, 1909, and 1904, statistics for the materials used and the quantity and value of coke produced, together with the number and kinds of ovens in use. The figures for 1914 were compiled by the United States Geological Survey.

Table 44	1914	1909	1904
MATERIALS.			
Coal charged into ovens, tons (2,000 pounds)	30,286,961	36,083,568	23,083,044
Run of mine—			
Unwashed	25,568,902	31,712,482	20,505,557
Washed	2,135,754	2,278,927	505,527
Slack—			
Unwashed	465,927	1,016,576	1,079,682
Washed	2,116,318	1,975,583	992,278
PRODUCTS.			
Coke:			
Tons	20,258,393	24,905,525	16,273,040
Value	$42,447,886	$50,377,035	$28,593,130
Made in beehive ovens—			
Tons	18,074,057	22,960,105	15,767,652
Value	$35,877,910	$45,315,189	$27,542,495
Made in retort or by-product ovens—			
Tons	2,184,336	1,939,420	505,394
Value	$6,569,976	$5,061,846	$1,050,641
EQUIPMENT.			
Ovens, number at end of year	54,075	54,506	37,205
Beehive ovens	52,553	53,210	36,675
Retort or by-product ovens	1,522	1,296	530

There was a decrease from 1909 to 1914 in the total quantity of coke produced, but an increase in the number of by-product ovens and of coke produced by them. This growth in the use of by-product ovens is significant as showing the value of utilizing that which was formerly waste. For the general statistics for the classified industry, which include all the subsidiary products of the establishments engaged in the production of coke, see Table 59.

Flour-mill and gristmill products.—The following table shows the quantity and value of the several products of the flour mills and gristmills of the state for 1914, 1909, and 1904:

Table 45	1914	1909	1904
Products, total value	$43,626,356	$44,782,558	$38,518,702
Wheat flour:			
Barrels	3,975,031	3,749,842	3,969,229
Value	$19,795,116	$20,150,978	$19,814,069
Rye flour:			
Barrels	151,877	154,679	128,506
Value	$666,000	$628,999	$536,516
Buckwheat flour:			
Pounds	36,830,070	50,760,000	45,117,852
Value	$1,077,717	$1,289,949	$1,075,989
Barley meal:			
Pounds	270,364	196,800	331,660
Value	$5,762	$2,776	$4,106
Corn meal and corn flour:			
Barrels	760,299	767,462	1,097,993
Value	$2,509,596	$2,369,701	$2,691,670
Hominy and grits:			
Pounds	51,981,949	52,105,637	33,938,974
Value	$930,878	$796,433	$411,579
Oatmeal:			
Pounds	4,627,400	.....	.....
Value	$86,613	.....	.....
Bran and middlings:			
Tons	182,626		
Value	$4,642,020	649,636	598,888
Feed and offal:			
Tons	404,928	$18,071,309	$13,764,753
Value	$12,760,946		
Breakfast foods:			
Pounds	267,137	.....	.....
Value	$16,262	.....	.....
All other cereal products, value	$618,385	$422	.....
All other products, value	$514,061	$1,471,991	$189,966

The total value of products of the industry decreased from $44,782,558 in 1909 to $43,626,356 in 1914. Wheat flour, and feed and offal, including bran and middlings, were the principal products at each of the last three census years, constituting 85.3 per cent of the total value of products in 1914, 85.4 per cent in 1909, and 87.3 per cent in 1904. During the five-year period 1909–1914 the quantity of wheat flour increased 225,189 barrels, or 6 per cent, while its value decreased $355,862, or 1.8 per cent. Feed and offal, including bran and middlings, shows a decrease of 62,082 tons, or 9.6 per cent, in quantity and $668,343, or 3.7 per cent, in value during the same period. With the exception of barley meal, the remaining products presented separately show slight decreases in quantity since 1909.

Of the 824 establishments grinding wheat in 1914, 4 reported over 100,000 barrels of wheat flour, 24 from 20,000 to 100,000 barrels, 114 from 5,000 to 20,000 barrels, 392 from 1,000 to 5,000 barrels, and 290 establishments less than 1,000 barrels each. The equipment reported in 1914 consisted mainly of 3,638 stands of rolls, 1,380 runs of stone, and 635 attrition mills. Barrels were manufactured by 10 and sacks by 10 of the establishments reported in 1914.

Glass.—In 1914 Pennsylvania reported 32.3 per cent of the total value of glass manufactured in the United States as against 35.6 per cent in 1909 and 34.8 per cent in 1904. The state ranked first in the production of building glass and pressed and blown glass and second in the production of bottles and jars. The following table gives the quantity and value of products in the industry for 1914, 1909, and 1904:

Table 46	1914	1909	1904
Products, total value	$39,797,822	$32,817,936	$27,671,693
Building glass, value	$18,968,873	$14,958,649	$12,169,013
Window glass—			
Square feet	193,392,492	181,772,450	120,520,000
Value	$8,613,703	$5,786,591	$5,963,874
Obscured glass—			
Square feet	23,114,813	[1] 10,792,914	[1] 7,745,349
Value	$1,254,911	$543,019	$357,587
Plate glass—			
Square feet	33,615,943	31,992,783	17,695,346
Value	$8,192,576	$8,245,821	$5,140,554
Wire glass—			
Square feet	7,219,018	(2)	(2)
Value	$586,120		
All other, value	$321,563	$383,218	$706,998
Pressed and blown glass, value	$11,241,495	$9,847,228	$9,406,183
Bottles and jars, value	$8,930,255	$7,778,787	$5,951,144
All other products, value	$657,199	$233,272	$145,353

[1] Reported as skylights. [2] Not reported separately.

The total value of products for 1914 represents an increase of 21.3 per cent over 1909. Window glass, the product of chief value among those for use in building, increased 6.4 per cent in quantity and 48.9 per cent in value. Obscured glass, which was reported prior to the census of 1914 as skylight glass, shows an increase in both quantity and value of over 100 per cent. Plate glass also increased in quantity but shows a slight decrease in value. The total value of pressed and blown glass increased 14.2 per cent, and that of bottles and jars, 14.8 per cent. In 1914 the factories in Pennsylvania produced 61,167,900 pieces of table ware; 3,999,513 dozen blown tumblers, stem ware, and bar goods; 1,183,341 gross prescription bottles, vials, and druggists' ware; and 285,041 gross milk jars. The state also produced 85.7 per cent of the opal ware and 94.8 per cent of the battery jars made in the United States in 1914. Of the 103 establishments engaged in the manufacture of glass in 1914, 39 produced building glass, 33 pressed and blown glass, and 34 bottles, jars, etc.

Boots and shoes.—The following table shows the number of pairs of the various kinds of footwear manufactured in 1914, 1909, and 1904:

Table 47	Number of pairs.		
Kind.	1914	1909	1904
Boots and shoes	17,717,591	11,631,329	9,998,589
Men's	1,697,909	942,959	1,116,021
Boys' and youths'	1,230,664	1,105,348	1,035,721
Women's	3,672,662	3,285,815	3,417,319
Misses' and children's	11,116,356	6,297,207	4,429,528
Slippers, all kinds	312,334	1,165,117	328,741
All other footwear	4,154,577	4,792,028	3,009,090

Table 47 shows a great increase in the manufacture of footwear in Pennsylvania during the decade 1904–1914. There were 22,184,502 pairs produced in the state in 1914, a gain of 26.1 per cent over 1909, and of 66.3 per cent over 1904. Of the 17,717,591 pairs of boots and shoes manufactured in 1914, those made for misses and children constituted 62.7 per cent, an increase of 76.5 per cent over 1909. Women's boots and shoes increased 11.8 per cent during the period and boys' and youths' 11.3 per cent, while the largest relative increase, 86 per cent, was for men's boots and shoes. The number of pairs of slippers manufactured decreased by 73.2 per cent during the period from 1909 to 1914. "All other footwear," which consists principally of infants' shoes and slippers, decreased 13.3 per cent during the same period.

The following table classifies the various kinds of footwear produced in 1914, according to the methods employed in their manufacture:

Table 48		Number of pairs, by method of manufacture.				
Kind.	Census year.	Total.	Welted.	Turned.	McKay.	Wood or metal fastened.
Boots and shoes	1914	17,717,591	4,823,414	6,981,379	5,404,466	508,332
	1909	11,631,329	2,764,754	4,170,122	4,187,893	508,560
Men's	1914	1,697,909	1,236,963	(1)	51,732	409,214
	1909	942,959	534,350	.....	37,418	371,191
Boys' and youths'	1914	1,230,664	327,077	.....	804,469	99,118
	1909	1,105,348	138,675	.....	852,559	114,114
Women's	1914	3,672,662	1,979,191	416,222	1,277,249	(2)
	1909	3,285,815	1,748,784	418,545	1,106,136	12,350
Misses' and children's	1914	11,116,356	1,280,183	6,565,157	3,271,016	(1)
	1909	6,297,207	342,945	3,751,577	2,191,780	10,905
Slippers, all kinds	1914	312,334	(1)	174,025	138,309	.....
	1909	1,165,117	91,739	583,741	489,637	.....
All other footwear	1914	4,154,577	(1)	3,927,980	226,597	.....
	1909	4,792,028	579,602	3,861,268	222,783	128,375

[1] Included with "McKay." [2] Included with "turned."

More than two-thirds of the boots and shoes manufactured in Pennsylvania in 1914 were turned and McKay sewed; 6,981,379 pairs of the former class and 5,404,466 of the latter class being reported, while 4,823,414 pairs were made by the welted process. Of men's shoes made in 1914, 72.9 per cent were welted as compared with 56.7 per cent in 1909. The McKay type predominated in the manufacture of boys' and youths' boots and shoes, and the welted style in women's wear, while more than half of the misses' and children's shoes, were turned. Slippers were divided about equally between the turned and McKay types.

Paper and wood pulp.—Table 49 shows the quantity and cost of the principal materials used in the industry, the quantity and value of the principal products, and the number and capacity of the paper machines and pulp equipment for the census years 1914, 1909, and 1904.

The total cost of the materials used in 1914, including fuel and rent of power, was an increase of 40.8 per cent over 1909 and of 88.6 per cent during the decade. The total quantity of wood used in the manufacture of pulp was 375,730 cords. Of this amount, spruce represented 103,114 cords; poplar, 49,317 cords; pine, 29,859 cords; southern pine, 26,276 cords; hemlock, 25,722 cords; other woods, including gum, birch, beach, maple, etc., 88,102 cords; and slabs and other mill waste, 53,340 cords. Of the different kinds of

wood pulp used at each census, sulphite fiber was the most important. The use of old and waste paper as a material has almost doubled in both quantity and value since 1904, while the value of "all other materials," which amounted to $5,021,212 in 1914, increased 66 per cent during the decade.

Table 49	1914	1909	1904
MATERIALS.			
Total cost	$16,046,557	$11,398,311	$8,509,546

Ground, tons	4,150	10,908	4,400
Soda, tons	117,144	87,903	73,873
Sulphite, tons	84,678	65,150	52,274

The total value of paper and wood pulp products increased by $5,566,629, or 28 per cent, for the period 1909–1914, and 65.1 per cent for the decade 1904–1914. Book paper, plain, coated, and cover, was the leading product of the paper mills of the state in 1914 as well as at the two preceding censuses, representing 38.1 per cent of the total value of products in 1914, 32.4 per cent in 1909, and 31.8 per cent in 1904. The product ranking next in value was wrapping paper, while writing and other fine paper, although of almost equal value, can not be shown separately on account of disclosing the operations of individual establishments. Board and building papers were also important products of the industry in the state.

The total amount of wood pulp produced increased from 83,114 tons in 1904 to 136,850 tons in 1909 and 178,127 tons in 1914, an increase of 114.3 per cent during the decade.

Chemicals.—The following table shows the value of certain chemicals manufactured in Pennsylvania during 1914 and 1909:

Table 50	1914	1909
Products, total value	$24,909,294	$18,813,785
The chemical industry	22,387,835	15,978,162
Sulphuric, nitric, and mixed acid industry	1,158,479	621,473
Subsidiary chemical products from other industries	1,362,980	2,211,150
Acids	4,456,542	3,158,940
Alums	1,362,357	1,390,589
Coal-tar products	1,442,481	783,382
Compressed and liquefied gases	1,545,857	931,388
Soda and sodium compounds	1,129,863	1,076,592
Fine chemicals, alkaloids, gold, silver, and platinum salts, ether, vanadium, etc.	4,343,809	4,427,865
Other chemicals	8,234,511	6,800,240
All other products	2,393,874	244,789

The total value of products of the classified chemical industry increased $6,409,673, or 40.1 per cent, from 1909 to 1914. From the standpoint of value, the most important group of products made in 1914 was acids, which shows an increase over 1909 of 41.1 per cent. Coal tar shows the largest relative increase of any of the groups, 84.1 per cent. Chemicals valued at $1,362,980 were produced incidentally during 1914 by establishments primarily engaged in the manufacture of products classified under other industry designations.

In the production of chemicals Pennsylvania ranked third among the states at both the census of 1914 and that of 1909.

Paint and varnish.—The following table shows the quantity and value of the paints and varnishes reported at the censuses of 1914, 1909, and 1904.

Table 51	1914	1909	1904
Products, total value	[1] $16,004,616	$14,019,744	$11,637,038
Pigments	$5,248,837	$3,055,741	$2,489,535
Paints	$6,915,720	$6,312,862	$5,144,112
In paste form, ground in oil—			
White lead—			
Pounds	41,526,000	32,401,207	35,780,225
Value	$2,470,052	$1,995,179	$1,898,758

Value	$185,624		
Water paints and kalsomine:			
Dry or in paste, pounds	265,499		
Value	$12,870		
Mixed for use, value	$6,966		
All other products, value	$3,075,154	$2,332,073	$1,775,012

[1] In addition, paints and varnishes to the value of $9,835 were made in establishments not engaged primarily in the manufacture of paint or varnish.
[2] Include damar and similar turpentine and benzine varnishes.
[3] Included in oleoresinous varnish.
[4] Not reported.

All major items in the table show an increase in value since 1909. The increase in the total value of products was $1,984,872. Paints, already mixed for use, is the most important product, showing a value in 1914 of $2,862,000. White lead in oil ranked second among the products, with a value of $2,470,052.

Butter, cheese, and condensed milk.—In 1914 Pennsylvania ranked twelfth among the states in the factory production of butter, third in cheese, and sixth in condensed and evaporated milk. Table 52 gives in detail the quantity and value of the products of the industry for 1914, 1909, and 1904.

The combined value of butter, cheese, and condensed milk shows an increase of $2,143,234, or 15.8 per cent, during the five years 1909 to 1914. Butter contributed 49.3 per cent of the total value of products in 1914 as against 71 per cent in 1909. The quantity produced decreased between 1904 and 1909 and again between 1909 and 1914, but the value increased during the former and decreased during the latter five-year period. Cheese, which contributed 9.7 per cent of the total value of products of the industry in 1914, showed no very marked change in value, but increased in quantity 3,574,536 pounds, or 31.8 per cent. Condensed and evaporated milk, contributing 28.3 per cent of the total value of products, shows large increases in both quantity and value, the increase in quantity being 43,247,533 pounds, or 163.4 per cent, and in value, $2,954,868, or 199.5 per cent. The increase is due to the manufacture of unsweetened and evaporated milk, which increased from 15,683,771 pounds in 1909 to 53,296,814 pounds in 1914, or 239.8 per cent, while the value increased from $743,014 in 1909 to $3,239,753 in 1914, or 336 per cent. Cream sold as such shows a very large increase during the decade.

Table 52	1914	1909	1904
Products, total value	$15,687,299	$13,544,065	$11,581,115

Value	$75,247	$90,619	$150,461
All other products, including parts and repair work, value	$8,186,596	$7,789,343	$6,031,159

[1] Not reported.

The total value of products of this industry shows a decrease of 3.8 per cent for the five-year period 1909–1914 and an increase of 6.7 per cent for the decade 1904–1914. With the exception of business wagons, there was a considerable decrease in the value of every kind of vehicle for which statistics are shown, but this loss was to a great extent counterbalanced by the gain in value of "all other products" and repair work. In number and value, business vehicles constituted the most important of the different classes of products made in 1914. Carriages for pleasure shows a decrease of 7,844, or 33.5 per cent, in number, and $636,818, or 36.6 per cent, in value.

Laundries.—Statistics for power laundries are not included in the general tables or in the totals for all manufacturing industries. They were not collected previous to 1909. Table 54, however, summarizes the power-laundry statistics for Pennsylvania for 1914 and 1909.

Table 54	POWER LAUNDRIES.		
	Number or amount.		Per cent of increase, 1909–1914.
	1914	1909	
Number of establishments	396	385	2.9
Persons engaged	11,831	10,915	8.4
Proprietors and firm members	447	436	2.5
Salaried employees	974	840	16.0
Wage earners (average number)	10,410	9,639	8.0
Primary horsepower	12,602	10,730	17.4
Capital	$8,160,248	$6,685,132	22.1
Salaries and wages	5,120,647	4,167,836	22.9
Salaries	884,289	680,843	29.9
Wages	4,236,358	3,486,993	21.5
Cost of materials	1,848,109	1,449,517	27.5
Amount received for work done	10,225,004	8,331,834	22.7

In 1914 Pennsylvania ranked fourth among the states in amount received for work done and in average number of persons engaged in the industry, while in 1909 the rank was fourth and third, respectively. The foregoing summary shows increases during the five-year period in all of the items. Establishments owned by individuals reported 30 per cent of the receipts for work done; those owned by corporations, 48.5 per cent; and those under other forms of ownership, 21.5 per cent. Of the 396 laundries reported for the state in 1914, 200 were located in 19 cities each having a population of 10,000 or more. Of these, 91 were in Philadelphia and 25 in Pittsburgh. Measured by the amount received for work done, these cities represent 38.9 and 19.9 per cent, respectively, of the total for the state.

Table 55 shows for 1914 and 1909 the number of wage earners employed in the laundries on the 15th day of each month, or the nearest representative day, and the percentage which this number forms of the greatest number employed in any month during the year. In the monthly employment of wage earners there was a greater variation in 1909 than in 1914.

Table 55	WAGE EARNERS.			
MONTH.	Number.		Per cent of maximum.	
	1914	1909	1914	1909
January	10,404	9,331	98.4	94.7
February	10,402	9,357	98.4	95.0
March	10,477	9,380	99.1	95.2
April	10,471	9,474	99.0	96.2
May	10,576	9,630	100.0	97.8
June	10,521	9,771	99.5	99.2
July	10,407	9,756	98.4	99.1
August	10,355	9,716	97.9	98.6
September	10,310	9,820	97.5	99.7
October	10,410	9,849	98.4	100.0
November	10,320	9,802	97.6	99.5
December	10,259	9,782	97.0	99.3

Table 56 gives statistics as to kinds and amount of power used in the laundries of the state in 1914 and 1909, together with the percentages of increase for the five-year period.

Table 56	NUMBER OF ENGINES OR MOTORS.		HORSEPOWER.		
			Amount.		Per cent of increase,[1] 1909–1914.

Gas (excluding blast-furnace gas)	1,000 cubic feet	194,879	433,028	—55.6

[1] A minus sign (—) denotes decrease.

GENERAL TABLES.

Table 58 gives, for 1914, 1909, and 1904, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products, for selected industries in the state and in cities having 50,000 population or more; and for the cities having more than 10,000 inhabitants, similar data for all industries combined.

Table 59 presents, for 1914, for the state as a whole and for cities with 50,000 inhabitants or more, statistics in detail for each industry for which figures can be shown without the disclosure of individual operations; and for each of the cities in the state having from 10,000 to 50,000 inhabitants, for all industries combined.

TABLE 58.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.

[1] Excludes statistics for one establishment, to avoid disclosure of individual operations.
[2] Includes "cardboard, not made in paper mills" and "envelopes."
[3] Includes "perfumery and cosmetics."
[4] Includes "bookbinding and blank-book making"; "engraving, steel and copper plate, including plate printing;" and "lithographing."
[5] Includes "sausage."

TABLE 58.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904—Continued.

CITIES OF 50,000 INHABITANTS OR MORE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.
					Expressed in thousands.		
ALLENTOWN—All industries.	1914	297	13,685	22,219	$6,501	$20,705	$33,918
	1909	274	11,481	19,101	5,061	15,581	26,263
	1904	257	8,984	.....	3,312	9,873	16,841
Boots and shoes	1914	12	820	504	335	1,007	1,578
	1909	9	724	365	297	762	1,302
	1904	10	716	.....	251	691	1,126
Bread and other bakery products.	1914	33	180	139	103	366	550
	1909	32	146	82	77	276	475
	1904	28	130	.....	62	192	348
Brick	1914	4	131	265	60	56	179
	1909	6	141	335	56	37	175
	1904	5	102	.....	37	21	101
Carriages and wagons and materials.	1914	6	32	33	18	9	43
	1909	4	30	33	18	26	61

All other industries	1914	135	4,524	11,258	2,569	7,373	12,290
	1909	163	3,237	9,751	1,469	4,933	8,701
	1904	92	2,526	.....	1,156	3,047	5,338

[1] Excludes statistics for one establishment, to avoid disclosure of individual operations.
[2] Includes "automobile repairing;" "engines, steam, gas, and water;" "hardware;" "plumber's supplies, not elsewhere specified;" "pumps, steam and other power;" "steam fittings and steam and hot-water heating apparatus;" "structural ironwork, not made in steel works or rolling mills."
[3] Includes "boxes, wooden packing, except cigar boxes;" "lumber planing-mill products, not including planing mills connected with sawmills;" and "window and door screens."
[4] Includes "bookbinding and blank-book making."
[5] Excludes statistics for two establishments, to avoid disclosure of individual operations.
[6] Figures do not agree with those published because it was necessary to revise them in order to include data only for those establishments located within the corporate limits of the city.
[7] Includes "stamped ware."
[8] Includes "automobile repairing;" "engines, steam, gas, and water;" "hardware;" "plumbers' supplies, not elsewhere specified;" "steam fittings and steam and hot-water heating apparatus;" and "structural ironwork, not made in steel works or rolling mills."
[9] Includes "engraving, steel and copper plate, including plate printing," and "lithographing."

TABLE 58.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904—Continued.

CITIES OF 50,000 INHABITANTS OR MORE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES—Continued.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages. (Expressed in thousands.)	Cost of materials. (Expressed in thousands.)	Value of products. (Expressed in thousands.)
HARRISBURG—All industries.	1914	219	7,966	24,216	$4,457	$10,605	$18,872

[1] Figures do not agree with those published in 1909 because certain establishments revised their reports for that census.
[2] Includes "automobile repairing," and "engines, steam, gas, and water."
[3] Less than $500.
[4] Figures do not agree with those published because it was necessary to revise them in order to include data only for those establishments located within the corporate limits of the city.
[5] Includes "enameled ware."
[6] Includes "lumber, planing-mill products, not including planing mills connected with sawmills."
[7] Excludes statistics for one establishment, to avoid disclosure of individual operations.
[8] Figures do not agree with those published, because it was necessary to revise them to exclude data for some establishments not located within the corporate limits of the city.
[9] Excludes statistics for three establishments, to avoid disclosure of individual operations.
[10] Includes "stamped ware" and "tinware."
[11] Includes "cotton lace."

[1] Excludes statistics for one establishment, to avoid disclosure of individual operations.
[2] Includes "automobile repairing;" "hardware;" "iron and steel, cast-iron pipe;" "plumbers' supplies, not elsewhere specified;" "steam fittings and steam and hot-water heating apparatus;" and "structural ironwork, not made in steel works or rolling mills."
[3] Includes "bookbinding and blank-book making."
[4] Figures do not agree with those published in 1909 because certain establishments revised their reports for that census.
[5] Includes "steam fittings and steam and hot-water heating apparatus" and "structural ironwork, not made in steel works or rolling mills."
[6] Includes "bookbinding and blank-book making" and "lithographing."
[7] Excludes statistics for two establishments, to avoid disclosure of individual operations.

TABLE 58.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904—Continued.

CITIES OF 50,000 INHABITANTS OR MORE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES—Continued.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.
					Expressed in thousands.		
WILKES-BARRE—Continued.							
Lumber, planing-mill products, not including planing mills connected with sawmills.	1914	7	90	271	$64	$101	$183
	1909	6	90	205	41	98	193
Printing and publishing.	1914	33	420	346	289	264	925
	1909	31	327	320	206	206	766
	1904	22	278	.....	158	137	570
WILKES-BARRE—Continued.							
Silk goods, including throwsters.	1914	5	1,594	1,891	$389	$748	$1,625
	1909	6	1,083	1,866	247	407	1,066
	1904	3	918	.....	195	649	1,055
All other industries	1914	118	5,750	9,032	2,965	6,271	13,041
	1909	101	5,839	9,322	2,710	5,011	10,509
	1904	87	4,571	.....	2,061	3,919	8,614

CITIES OF 10,000 TO 50,000 INHABITANTS—ALL INDUSTRIES COMBINED.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.

[1] Figures do not agree with those published, because it was necessary to revise them in order to include data only for those establishments located within the corporate limits of the city.
[2] Figures do not agree with those published in 1909, because certain establishments revised their reports for that census.

TABLE 59.—DETAIL STATEMENT FOR THE STATE AND FOR CITIES OF 50,000 INHABITANTS

	INDUSTRY AND CITY.	Number of establishments.	PERSONS ENGAGED IN THE INDUSTRY. Total.	Proprietors and firm members.	Salaried officers, superintendents, and managers.	Clerks, etc. Male.	Clerks, etc. Female.	Wage earners. Average number.	Wage earners. Number, 15th day of— Maximum month.	Wage earners. Number, 15th day of— Minimum month.	WAGE EARNERS DEC. 15, OR NEAREST REPRESENTATIVE DAY. Total.	16 and over. Male.	16 and over. Female.	Under 16. Male.	Under 16. Female.	Capital.
	THE STATE—ALL INDUSTRIES COMBINED AND SPECIFIED INDUSTRIES.

* All other industries embrace—
Automobiles 1
Automobile repairing 1
Baskets, and rattan and willow ware 1
Blacking, stains, and dressings 2
Bookbinding and blank-book making 3
Boot and shoe cut stock 1
Boxes, cigar 2
Boxes and cartons, paper 1
Boxes, wooden packing, except cigar boxes 1
Brass and bronze products 2
Brooms 1
Brushes 1
Cars and general shop construction and repairs by electric-railroad companies 1
Cars and general shop construction and repairs by steam-railroad companies 1
Chemicals 1
Clothing, women's 3
Cooperage 1
Druggists' preparations 1
Dyeing and finishing textiles, exclusive of that done in textile mills 4
Engines, steam, gas, and water 1
Flour-mill and gristmill products 1
Food preparations, not elsewhere specified 1
Fur goods 1
Furnishing goods, men's 2
Gas and electric fixtures 3
Gas, illuminating and heating 1
Glass, cutting, staining, and ornamenting 2
Hardware 1
Hats and caps, other than felt, straw, and wool 1

[4] Owned power only.

[3] Includes rented power, other than electric.

OR MORE, BY INDUSTRIES, AND FOR CITIES OF 10,000 TO 50,000 INHABITANTS: 1914—Continued.

EXPENSES.										POWER.						
Salaries and wages.			For contract work.	Rent and taxes.		For materials.		Value of products.	Value added by manufacture.	Primary horsepower.					Electric horsepower generated in establishments reporting.	
Officials.	Clerks, etc.	Wage earners.		Rent of factory.	Taxes, including internal revenue and corporation income.	Principal materials.	Fuel and rent of power.			Total.	Steam engines.[1]	Internal-combustion engines.[2]	Water wheels and motors.[1]	Electric (rented).

Agricultural implements 1
Aluminum ware 2
Automobiles 1
Awnings, tents, and sails 2
Babbitt metal and solder 2
Boxes and cartons, paper 2
Boxes, wooden packing, except cigar boxes 1
Brooms 2
Brushes 2
Buttons 1
Canning and preserving, fish 1
Carriages and sleds, children's 1
Cars and general shop construction and repairs by electric-railroad companies 1
Cars and general shop construction and repairs by steam-railroad companies 2
Cars, steam-railroad, not including operations of railroad companies 1
Cleansing preparations 1
Coffee, roasting and grinding 2
Coffins, burial cases, and undertakers' goods 1
Confectionery and ice cream 6
Cooperage 3
Cork, cutting 1
Corsets 1
Dairymen's, poultrymen's, and apiarists' supplies 1
Druggists' preparations 1
Dyeing and finishing textiles, exclusive of that done in textile mills 2
Electroplating 1
Engraving, steel and copper plate, including plate printing 1
Flavoring extracts 1
Food preparations, not elsewhere specified 1
Fur goods 2
Furniture 1
Gas and electric fixtures 1
Gas, illuminating and heating 1
Glass, cutting, staining, and ornamenting 1
Grease and tallow, not including lubricating greases 1
Hardware 3

[1] Owned power only.

[2] Includes rented power, other than electric.

*All other industries embrace—

Agricultural implements	2
Aluminum ware	1
Ammunition	1
Artificial flowers	16
Artists' materials	5
Bags, other than paper	8
Baking powders	4
Belting and hose, woven	2
Billiard tables and materials	3
Bluing	5
Bone, carbon, and lamp black	2
Boot and shoe cut stock	2
Butter	1
Buttons	19
Canning and preserving, fish	1
Card cutting and designing	18
Carriages and sleds, children's	4
Cars, electric-railroad, not including operations of railroad companies	1
Cash registers and calculating machines	1
China decorating, not including that done in potteries	3
Chocolate and cocoa products, not including confectionery	3
Clocks	2
Cloth, sponging and refinishing	5
Collars and cuffs, men's	1
Condensed milk	1
Cordials and flavoring sirups	4
Crucibles	3
Drug grinding	3
Emery and other abrasive wheels	4
Enameling	4
Engravers' materials	1
Engraving, wood	4
Files	6
Firearms	3
Fire extinguishers, chemical	2
Flags and banners	3
Foundry supplies	2
Gas, illuminating and heating	3
Gloves and mittens, leather	2
Glue, not elsewhere specified	4
Gold and silver, leaf and foil	4
Gold and silver, reducing and refining, not from the ore	4
Grindstones	1
Hammocks	3
Hardware, saddlery	4
Hat and cap materials	5
Ink, writing	3
Iron and steel, nails and spikes, cut and wrought, including wire nails, not made in steel works or rolling mills	3
Iron and steel, wrought pipe	2
Japanning	2
Jewelry and instrument cases	8

* All other industries embrace—

Artificial flowers	1
Artificial stone products	2
Automobiles	1
Babbitt metal and solder	2
Baking powders	2
Baskets, and rattan and willow ware	3
Belting, leather	1
Billiard tables and materials	2
Blacking, stains, and dressings	2
Bluing	1
Boot and shoe cut stock	1
Boxes, wooden packing, except cigar boxes	2
Butter	2
Carriage and wagon materials	1
Cars and general shop construction and repairs by electric-railroad companies	1
Cars, steam-railroad, not including operations of railroad companies	1
China decorating, not including that done in potteries	1
Chocolate and cocoa products, not including confectionery	1
Cloth, sponging and refinishing	1
Coffins, burial cases, and undertakers' goods	3
Coke, not including gas-house coke	2
Cordials and flavoring sirups	1
Cork, cutting	2
Corsets	1
Crucibles	1
Dental goods	1
Engraving and diesinking	3
Engraving, steel and copper plate, including plate printing	7
Fireworks	1
Flavoring extracts	4
Foundry supplies	1
Galvanizing	3
Gas, illuminating and heating	2
Gloves and mittens, leather	2
Gold and silver, reducing and refining, not from the ore	1
Grease and tallow, not including lubricating greases	2
Hair work	2

RHODE ISLAND.

By William A. Countryman.

GENERAL STATISTICS.

General character of the state.—Rhode Island was one of the original thirteen states. With a gross area of 1,248 square miles, of which 1,067 represent land surface, it is the smallest state in the Union. Its inhabitants in 1900 numbered 428,556, and in 1910, 542,610, and its estimated population in 1914 was 591,000. In total population Rhode Island ranked thirty-eighth among the states in 1910, but in density of population it ranked first, with 508.5 inhabitants per square mile, the corresponding figure for 1900 being 401.6.

The urban population in 1910—that is, the population residing in cities and towns of 2,500 inhabitants or more—was 524,654, or 96.7 per cent of the total, as against 95.1 per cent in 1900. There were in the state in 1914, 10 cities and towns each with an estimated population of more than 10,000: Central Falls, Cranston, Cumberland, East Providence, Lincoln, Newport, Pawtucket, Providence, Warwick, and Woonsocket. These cities, whose aggregate population in that year represented 82.8 per cent of the estimated total population of Rhode Island, reported 83.5 per cent of the value of the state's manufactured products.

The transportation facilities of Rhode Island are excellent. The state is traversed by the main line of the leading railway system of New England, and Providence, the largest city, is an important seaport. The total steam-railway mileage in 1914 was 206, and the electric-railway mileage (street and interurban combined) in 1912 was 309.

Importance and growth of manufactures.—At the census of 1914 Rhode Island ranked nineteenth among the states in value of products of its manufacturing industries and fourteenth in average number of wage earners employed. Its proportion of the total value of products of manufactures for the United States was 1.2 per cent, the corresponding proportion for both 1909 and 1904 being 1.4 per cent. The total value of products for the state represented a per capita of $473 in 1914, as against $517 in 1909, in which year it ranked first in this respect. The corresponding per capita figures for continental United States were $245 in 1914 and $225 in 1909.

Table 1 summarizes the principal data for all manufacturing industries combined for the state as returned at the censuses of 1914, 1909, 1904, and 1899, and gives the percentages of increase from census to census.

Table 1	Manufacturing industries.				Per cent of increase.[1]		
	1914	1909	1904	1899	1909–1914	1904–1909	1899–1904

Value added by manufacture (value of products less cost of materials)	117,120,654	122,152,223	89,237,322	77,598,602	−4.1	36.9	15.0

[1] A minus sign (−) denotes decrease. [2] Figures not available. [3] Exclusive of internal revenue.

The table brings out the fact that the growth which took place in the industries of Rhode Island during the decade 1899–1909 did not continue during the five-year period 1909–1914. In fact, as measured by value of products, value added by manufacture, and number of wage earners employed, the state's industries showed an actual decline during this latter period. It is noteworthy, however, that the number of salaried employees, amount of primary horsepower, and amounts paid for salaries and for rent and taxes showed considerable increases. The percentages of increase in number of establishments, average number of wage earners, value of products, and value added by manufacture during the decade 1904–1914 were 35.4, 16.6, 38.3, and 31.2, respectively.

Table 2 shows the relative importance of the leading manufacturing industries in 1914, and gives percentages of increase for the three five-year periods from 1899 to 1914.

Table 2

[1] Percentages are based on figures in Table 35; a minus sign (−) denotes decrease; percentages are omitted where base is less than 100, or where comparable figures can not be given.

The designation "all other industries" covers 19 industries, each of which reported products exceeding in value some for which figures are shown in the table, but statistics for these can not be given without disclosing the operations of individual establishments. These industries are: Automobiles; baking powders; boots and shoes, rubber; cars and general shop construction and repairs by electric-railroad companies; chemicals; files; food preparations, not elsewhere specified; iron and steel, steel works and rolling mills; oil, cottonseed, and cake; oleomargarine; paints; paper and wood pulp; screws, wood; shipbuilding, iron and steel; silversmithing and silverware; upholstering materials; washing machines and clothes wringers; waste; and wire.

Although a few industries greatly predominate in importance, it will be seen from Table 2 that there is, on the whole, considerable diversity in the manufactures of the state. The most important of the industries listed in this table, in which they are arranged according to value of products, may be considered briefly.

Textiles.—The textile industries—comprising woolen and worsted goods; cotton goods, including cotton small wares and cotton lace; silk goods, including throwsters; hosiery and knit goods; and dyeing and finishing textiles—constitute by far the most important group of industries in the state. This group, designated as "combined textiles," gave employment during the year to an average of 64,511 wage earners, and reported products valued at $138,764,688, these figures representing 56.9 per cent and 49.6 per cent, respectively, of the totals for all industries in the state; the corresponding percentages for 1909 were 57.2 and 52.5, respectively. Rhode Island ranks fifth among the states in value of products of cotton goods, third in that of woolen and worsted goods, fourth in that of dyeing and finishing textiles, sixth in that of silk goods, and fifteenth in that of hosiery and knit goods.

Although textiles are dyed and finished in some of the factories in which they are produced, a great part of the textile output is treated in independent establishments. This industry is centered in great textile-manufacturing communities and is therefore extensive in Rhode Island, in which it ranks fifth among the separate industries.

Manufactures from precious metals.—The manufacture of jewelry is closely allied with the silversmithing and silverware industry and with the reduction and refining of gold and silver from sweepings, clip-

pings, and scraps. The combined figures, however, can not be given without disclosing the operations of individual establishments in the silversmithing and silverware industry. The manufacture of jewelry and the reduction and refining of gold and silver together gave employment to an average of 8,851 wage earners and turned out products valued at $24,812,108.

Foundry and machine-shop products.—Rhode Island ranked twelfth in this important industry, a large part of which is devoted to the manufacture of machinery of various kinds, including that used in textile factories. It also includes automobile repairing, the manufacture of engines (steam, gas, and water), gas machines and gas and water meters, hardware, plumbers' supplies, steam fittings and steam and hot-water heating apparatus, and structural ironwork. The value of products shown, $19,373,113, represents 6.9 per cent of the total for all manufacturing industries in the state.

Electrical machinery, apparatus, and supplies.—Insulated wires and cables, incandescent lamps, and electric lighting fixtures are the chief products of this industry. Rhode Island ranked tenth among the states in value of such products in 1914.

The leading industries differ somewhat in their ranking in value of products and in value added by manufacture. In 1914, as in 1909, woolen and worsted goods ranked first in value of products, but second in value added by manufacture; cotton goods, second in value of products, but first in value added by manufacture; jewelry, third in value of products, but fourth in value added by manufacture; and foundry and machine-shop products, fourth in value of products but third in value added by manufacture.

The greatest rate of increase in value of products from 1909 to 1914, 96.7 per cent, is shown for confectionery; and the smallest, 2 per cent, for bread and other bakery products. A number of decreases are shown, the greatest, 30.3 per cent, appearing for brass, bronze, and copper products; and the least, 1.2 per cent, for cotton goods.

In value added by manufacture the greatest rate of increase, 96.9 per cent, is for soap; and the smallest, 11.7 per cent, for flour-mill and gristmill products. The greatest rate of decrease, 21.3 per cent, is shown for furnishing goods, men's; and the smallest, nine-tenths of 1 per cent, for paper boxes and cartons.

Persons engaged in manufacturing industries.—Table 3 shows, for 1914 and 1909, the number of persons engaged in manufactures, distributed by sex, the average number of wage earners being distributed also by age. The sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms."

There was an increase of 1,696 in the number of males and a decrease of 228 in the number of females engaged in the manufactures of the state. The change was sufficient to cause a slight increase in the proportion of males and a decrease in that of females.

Table 3

CLASS.	Census year.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES.				
		Total.	Male.	Female.	Per cent of total.	
					Male.	Female.
All classes	1914	124,109	83,539	40,570	67.3	32.7
	1909	122,641	81,843	40,798	66.7	33.3
Proprietors and officials	1914	4,403	4,267	136	96.9	3.2
	1909	4,109	3,957	152	96.3	3.7
Proprietors and firm members	1914	1,883	1,780	103	94.5	5.5
	1909	1,721	1,606	115	93.3	6.7
Salaried officers of corporations	1914	947	925	22	97.7	2.3
	1909	907	885	22	97.6	2.4
Superintendents and managers	1914	1,573	1,562	11	99.3	0.7
	1909	1,481	1,466	15	99.0	1.0
Clerks and other subordinate salaried employees.	1914	6,281	4,143	2,138	66.0	34.0
	1909	4,994	3,337	1,657	66.8	33.2
Wage earners (average number)	1914	113,425	75,129	38,296	66.2	33.8
	1909	113,538	74,549	38,989	65.7	34.3
16 years of age and over	1914	109,242	73,217	36,025	67.0	33.0
	1909	108,913	72,239	36,674	66.3	33.7
Under 16 years of age	1914	4,183	1,912	2,271	45.7	54.3
	1909	4,625	2,310	2,315	49.9	50.1

Slight decreases appear in the percentages of females in all classes combined and in each subclass separately, with the exceptions of clerks and other subordinate salaried employees and wage earners under 16 years of age. It is worthy of note that, although the number of female wage earners under 16 years of age decreased from 2,315 in 1909 to 2,271, in 1914, their proportion in this subgroup increased from 50.1 per cent in the earlier year to 54.3 per cent in the later.

Table 4 gives, for the several classes of persons engaged in manufactures, the percentages of increase or decrease from 1909 to 1914 and the per cent distribution at the two censuses.

The average number of wage earners employed in the manufactures of the state during 1914 was slightly less (0.1 per cent) than the average number reported for 1909. The increase in the number of proprietors and officials, clerks, and other subordinate salaried employees was sufficient to overcome this slight decrease and resulted in a net gain of 1,468, or 1.2 per cent, in the number of persons engaged in manufacturing industries. The decrease in the number of wage earners is due entirely to the decrease in the number of females and of persons under 16 years of age. There was an actual increase of 976, or 1.4 per cent, in the number of male wage earners 16 years of age and over. The number of clerks and other subordinate salaried employees increased by 1,287, or 25.8 per cent. This large increase in salaried employees was due in part to the fact that some of the establishments did not operate to their full capacity during the entire year, but found it impracticable to make a corresponding reduction in the office and clerical force. This condition resulted in a slight increase in the proportion that the clerks

and other salaried employees and proprietors and officials are of the total number engaged in manufactures and a corresponding decrease in the proportion of wage earners.

Table 4

CLASS.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Per cent of increase,[1] 1909-1914. Total.	Male.	Female.	Per cent distribution. Total. 1914	Total. 1909	Male. 1914	Male. 1909	Female. 1914	Female. 1909
All classes	1.2	2.1	−0.6	100.0	100.0	100.0	100.0	100.0	100.0
Proprietors and officials	7.2	7.8	−10.5	3.5	3.4	5.1	4.8	0.3	0.4
Proprietors and firm members	9.4	10.8	−10.4	1.5	1.4	2.1	2.0	0.3	0.3
Salaried officers of corporations	4.4	4.5	.....	0.8	0.7	1.1	1.1	0.1	0.1
Superintendents and managers	6.2	6.5	.....	1.3	1.2	1.9	1.8	(2)	(2)
Clerks and other subordinate salaried employees	25.8	24.2	20.0	5.1	4.1	5.0	4.1	5.3	4.1
Wage earners (average number)	−0.1	0.8	−1.8	91.4	92.6	89.9	91.1	94.4	95.6
16 years of age and over	0.3	1.4	−1.8	88.0	88.8	87.6	88.3	88.8	89.9
Under 16 years of age	−9.6	−17.2	−1.9	3.4	3.8	2.3	2.8	5.6	5.7

[1] A minus sign (−) denotes decrease; percentages are omitted where base is less than 100.

[2] Less than one-tenth of 1 per cent.

In order to compare the distribution of persons engaged in manufactures in 1914 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See "Explanation of terms.") Table 5 makes this comparison according to occupational status.

Table 5

CLASS.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Number. 1914	Number. 1909	Number. 1904	Per cent distribution. 1914	Per cent distribution. 1909	Per cent distribution. 1904	Per cent of increase.[1] 1909-1914	Per cent of increase.[1] 1904-1909
Total	124,109	122,641	104,299	100.0	100.0	100.0	1.2	17.6
Proprietors and firm members	1,883	1,721	1,561	1.5	1.4	1.5	9.4	10.2
Salaried employees	8,801	7,382	5,420	7.1	6.0	5.2	19.2	36.2
Wage earners (average number)	113,425	113,538	97,318	91.4	92.6	93.3	−0.1	16.7

[1] A minus sign (−) denotes decrease.

The table shows a constant increase in the proportion that salaried employees formed of the total number of persons engaged. The percentage of increase for each class during the later five-year period is much smaller than that for the earlier one, and for the average number of wage earners a slight decrease is is shown.

The average number of wage earners employed and their per cent distribution as males 16 years of age and over, females 16 years of age and over, and children under 16 years of age are given in Table 6, for 1914, 1909, and 1904. The table also shows, for some of the important industries separately, a similar distribution of wage earners for 1914 and 1909.

For all industries combined, the percentage which the number of male wage earners over 16 years of age represented of the total, increased slightly from census to census; for females the corresponding percentage increased somewhat from 1904 to 1909 but decreased during the following five-year period; and for wage earners under 16 decreases in this respect are shown from census to census.

Table 6

INDUSTRY.	Census year.	WAGE EARNERS. Average number.[1]	Per cent of total. 16 years of age and over. Male.	Per cent of total. 16 years of age and over. Female.	Per cent of total. Under 16 years of age.

	1909	24,924	52.1	41.7	6.2
All other industries	1914	22,880	76.4	22.1	1.5
	1909	22,497	77.6	20.2	2.1

[1] For method of estimating the distribution, by sex and age periods, of the average number in all industries combined, see "Explanation of terms."

In 1914, as in 1909, the larger part of the female wage earners were employed in the textile industries. The proportion of females among wage earners over 16 years of age employed in 1914 in the manufacture of hosiery and knit goods was more than three-fourths; in the silk industry, more than five-ninths; and in the cotton and the woolen and worsted industries, each

more than two-fifths. In the independent establishments dyeing and finishing textiles the percentage of females was comparatively small—less than one-fifth—and showed a decrease from 1909 to 1914. The manufacture of electrical machinery, apparatus, and supplies, and of jewelry, each employed a substantial proportion of women in 1914, but a smaller one than in 1909. A decrease is shown in the proportion of wage earners under 16 employed in each of the industries covered by the table except the manufacture of silk goods, woolen and worsted goods, and lumber and timber products.

Table 7 shows the average number and the per cent distribution of wage earners employed in each of the 10 cities having more than 10,000 inhabitants, classified according to age periods, and in the case of those 16 years of age and over, according to sex, for 1914, 1909, and 1904.

	1904	9.1	0.3	6.4	0.1	.....	0.7	6.4	4.4	8.5	6.9

[1] Figures do not agree with those published, because it was necessary to revise them in order to include data only for those establishments located within the corporate limits of the city.

This table shows the extent to which men, women, and children, respectively, are employed in the manufactures of the principal cities of the state. The smallest proportions of children in 1914 of the total average number of wage earners employed are shown for Cranston and Newport. The largest city in the state, Providence, had a smaller proportion in 1914 than in 1909 or 1904, and a decrease from census to census is also shown for Pawtucket. In the cities where the largest numbers are employed, Providence and Pawtucket, the per cent that women form of the number of wage earners has decreased slightly since 1904. This is true also of four of the smaller cities.

Table 8 gives percentages of increase from census to census, based on the figures in Table 7, for cities where per cent of increase can be computed.

Table 8

City.	Per cent of increase in average number of wage earners.[1]					City.	Per cent in increase of average number of wage earners[1]—continued.

	1909–1914	23.0	16.4	.....	.....						
	1904–1909	−14.5	−16.5	.....	.....						

[1] A minus sign (−) denotes decrease; percentages are omitted where base is less than 100.

[2] A decrease of less than one-tenth of 1 per cent.

An increase in total average number of wage earners for the 10 years was reported for each of the cities, but slight decreases appear for four during the semidecade 1909–1914. There has been a decrease in number of women employed, in two cities, and of children, in five cities, since 1904.

Wage earners employed, by months.—The following table gives, for all industries combined, the total number of wage earners employed on the 15th of each month, or the nearest representative day, for 1914 and 1909, and the average number employed during each month in 1904, together with the percentage which the number reported for each month forms of the greatest number reported for any month.

For 1914 the maximum number, 116,685, was reported for March; but for 1909 and 1904 it was reported for December—119,191 and 100,453, respectively. December was the month of least employment in 1914, with 92.8 per cent of the maximum; January in 1909, with 91.3 per cent; and July in 1904, with 94.7 per cent.

Table 9

MONTH.	WAGE EARNERS IN MANUFACTURING INDUSTRIES.					
	Number.[1]			Per cent of maximum.		
	1914	1909	1904	1914	1909	1904
January	116,501	108,773	98,184	99.8	91.3	97.7
February	116,597	109,615	97,573	99.9	92.0	97.1
March	116,685	111,924	97,376	100.0	93.9	96.9
April	116,349	111,320	96,263	99.7	93.4	95.8
May	115,661	111,952	95,516	99.1	93.9	95.1
June	114,119	112,055	95,678	97.8	94.0	95.2
July	111,600	111,571	95,138	95.6	93.6	94.7
August	110,936	112,835	95,212	95.1	94.7	94.8
September	112,035	110,116	96,672	96.0	97.4	96.2
October	112,300	118,007	99,414	96.2	99.0	99.0
November	110,056	119,104	100,337	94.3	99.9	99.9
December	108,261	119,191	100,453	92.8	100.0	100.0

[1] The figures for 1914 and 1909 represent the number employed on the 15th of each month, or the nearest representative day; those for 1904, the average number employed during the month.

Table 10 gives the total average number of wage earners employed during 1914, together with the total number employed on the 15th of each month, or the nearest representative day, for the combined industries of the state, for a number of selected industries, and for the total industries of each of the 10 cities having more than 10,000 inhabitants.

Table 10

WAGE EARNERS: 1914.
[Month of maximum employment for each industry is indicated by **boldface** figures and that of minimum by *italic* figures.]

The smallest degree of fluctuation in number of wage earners employed in the various industries in 1914 was shown by bread and other bakery products, and the greatest by rubber goods, not elsewhere specified. It is worthy of note that although in 1914 March was the month of greatest employment, taking all the industries as a group, the maximum figures for 6 of the 15 industries are shown for January.

Providence, Central Falls, and Lincoln reported their maximum numbers for January; and the maximum for all the cities taken as a group also appears for this month. The maximum numbers for Pawtucket,

Cumberland, and East Providence, and for the state as a whole, are shown for March; and for Woonsocket the greatest number appears for February. The minimum numbers of wage earners for all the cities combined and for four of the cities separately—Providence, Pawtucket, East Providence, and Newport—were reported for December.

Prevailing hours of labor.—In Table 11 the average number of wage earners reported, for 1914 and 1909, for all industries combined, and for selected industries have been classified according to number of hours of labor per week prevailing in the establishments in which they were employed. A similar classification is given, for 1914 only, for all industries combined in each city having more than 10,000 inhabitants. The number employed in each establishment is classified as a total, even though a few employees worked a greater or a smaller number of hours.

Woonsocket	1914	10,952	446	35	8,269	2,110	92	.....	.....	.....

It appears from this table that the greatest number of wage earners in 1914—72,681, or more than half the total—were employed in establishments in which the prevailing hours were 54 per week, and that the next greatest number—26,013, or about one-fourth of the total—were reported by establishments whose prevailing hours were between 54 and 60. In 1909, however, the great majority—92,597, or more than 80 per cent of the total—were employed in establishments in which the prevailing hours were between 54 and 60, while only 7,001, or but little more than 6 per cent of the total, were reported by establishments in

the 54-hour group. In 1914, 8.3 per cent of the total number of wage earners were employed in establishments with prevailing hours fewer than 54, and only 0.3 per cent in establishments in which the prevailing hours were more than 60; the corresponding proportions were 3.7 per cent and three-tenths of 1 per cent, respectively, in 1909. In the foundry and machine-shop industry the great majority of the wage earners were employed between 54 and 60 hours weekly in both 1914 and 1909. In the cotton, hosiery, silk, and woolen and worsted industries, the greatest numbers in 1914 were reported by establishments in which the prevailing hours were 54 weekly, but in these industries the greatest numbers in 1909 were employed in the factories with prevailing hours between 54 and 60. For the cities taken as a group, the proportions of wage earners reported for the different groups do not differ greatly from those for the state as a whole. Six cities show no wage earners in establishments working more than 60 hours a week. For the 10 cities taken together, 8.5 per cent of the wage earners were reported by establishments whose prevailing hours were fewer than 54 a week, and for Providence the corresponding percentage is 11.2.

Location of establishments.—Table 12 shows, for 1914, 1909, and 1899, the extent to which the manufactures in Rhode Island were centralized in the cities having more than 10,000 inhabitants.

[1] Census estimate of population for 1914.

For 1914, 83.5 per cent of the total value of products and 82.6 per cent of the average number of wage earners for the state were reported by cities having more than 10,000 inhabitants. These figures are slightly higher than the corresponding ones for the earlier census years shown, as might be expected in view of the fact that in 1914 the state had 10 cities of more than 10,000, as against 9 in 1910 and 8 in 1900.

The group of cities and towns having between 10,000 and 25,000 inhabitants consisted in 1914 of Central Falls, Cranston, Cumberland, East Providence, and Lincoln. Cumberland was first included in this group for 1909 and Lincoln for 1914. The cities having between 25,000 and 100,000 inhabitants in 1914 are Newport, Pawtucket, Warwick, and Woonsocket. Providence is the only city having a population of more than 100,000.

For all the cities combined and for the two groups of places having fewer than 100,000 inhabitants, there are shown increases between 1909 and 1914, not only in total value of products but also in the proportions which the values reported by these groups are of the total for the state; but for Providence, the only city of more than 100,000 inhabitants, there appear slight decreases in both respects.

The relative importance in manufactures of each of the 10 cities having more than 10,000 inhabitants, as measured by average number of wage earners and by value of products, in 1914, 1909, and 1904, is shown in Table 13. The cities are listed in the order of their importance as shown by value of products. Lincoln, for which comparable figures are not shown for 1909 and 1904, had less than 10,000 inhabitants in those years.

Table 13

City.	Average number of wage earners.			Value of products.		
	1914	1909	1904	1914	1909	1904
Providence	44,176	46,381	39,804	$115,335,131	$120,240,584	$91,980,963
Pawtucket	16,713	15,275	12,054	42,028,728	37,696,186	25,846,899
Woonsocket	10,952	10,703	8,672	28,115,187	28,218,515	19,260,537
Warwick	6,439	6,471	6,153	11,655,597	10,588,943	7,051,971
Cumberland	4,666	5,359	4,574	7,972,387	9,826,720	5,965,027
East Providence	1,906	2,041	1,381	7,000,109	7,145,977	5,544,376
Central Falls	3,077	2,476	2,443	6,748,296	5,470,939	5,090,984
Cranston	2,218	1,711	587	6,706,138	5,624,714	1,638,881
Lincoln	2,602	.....	.....	5,485,354	.....	.....
Newport	893	726	849	2,298,576	1,378,927	1,347,104

For every city for which comparative figures for earlier censuses are given an increase in value of products appears for the ten-year period; but for the last five-year period four cities—Providence, Woonsocket, Cumberland, and East Providence—show decreases in value of products. The greatest absolute gain from 1909 to 1914, $4,332,542, was made by Pawtucket and was due partly to the increased production of its silk mills. The greatest relative gain, however, 66.7 per cent, appears for Newport and was in part the result of increased activity in shipbuilding and in the manufacture of confectionery. The greatest absolute decrease, $4,905,453, was reported for Providence, and may be accounted for in large measure by a lessened production of woolen and worsted goods and of foundry and machine-shop products. The greatest relative decrease, 18.9 per cent, is shown for Cumberland, and was caused by a decreased production of cotton goods. The totals presented for Newport do not include figures for the naval torpedo station in that city, operated by the Federal Government. In 1914 this plant employed an average of 588 wage earners and turned out products valued at $2,137,924, the corresponding figures for 1909 being 270 and $471,712, respectively.

Providence ranked twenty-second among the cities of the United States in value of all manufactured products in 1914, nineteenth in 1909, and seventeenth in 1904. More than one-fifth of the total value of the textile products of the state was reported from this city. All the establishments in the state which manufactured silverware and plated ware were located here as well as practically all those engaged in the manufacture of jewelry. Of the total value of foundry and machine-shop products manufactured in Rhode Island in 1914, Providence reported 57.8 per cent, and of those made in 1909, a considerably greater proportion, 70.3 per cent.

Pawtucket, Woonsocket, and Warwick still maintain their importance in the textile industries, which contributed 52.3, 74.7, and 76.7 per cent, respectively, of the total value of products reported by these places for 1914. Woolen mills lead in importance in Woonsocket, and cotton mills in Pawtucket and Warwick.

Character of ownership.—Table 14 presents statistics concerning character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given for 1914, 1909, and 1904; for selected industries, statistics for 1914 and 1909 are shown; and for individual cities, the figures are for all industries combined and relate only to 1914. In order to avoid disclosing the operations of individual establishments, it is necessary to omit several important industries from this table.

[1] Includes the group "all others."

The distribution in this table is that among corporate, individual, and all other forms of organization. With "all others" are included "firms," the corporations being kept wholly separate. For all industries combined, 32.6 per cent of the total number of establishments in 1914 were under corporate ownership, as against 33.8 per cent in 1909 and 31.7 per cent in 1904. The proportions of the total value of products reported by the corporations, however, were much greater—84.9 per cent in 1914, 86.8 in 1909, and 78.3 in 1904.

Of the industries covered separately by the table, the only one in which the individual form of organization reported the greatest value of output was bread and other bakery products. In this industry, as well as in cotton goods, marble and stone work, and woolen and worsted goods, the proportion reported by the individual form of organization was greater in 1914 than in 1909, the most marked increase in this respect being shown by the woolen and worsted industry.

In the 10 cities and towns, taken as a group, 85.3 per cent of the total value of products of manufacturing establishments in 1914 was reported by corporations. The largest percentage for any one city, 98.7, is shown for Cumberland, and the smallest, 53.6, for Lincoln. In Providence, the largest city, 83.5 per cent of the total was reported by corporations.

Size of establishments.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is indicated by the statistics given in Table 15.

Although the percentage which the output of the corporations formed of the total, diminished somewhat between the last two census years, as shown by Table 14, the proportion reported by establishments with products valued at $1,000,000 and over, increased slightly during the same period. For 1904 the establishments with products valued at $100,000 to $1,000,000 reported a greater percentage, 48.1, of the total value of products than those in any of the other groups; but for both 1909 and 1914 those reporting $1,000,000 and over were far in the lead, with 48.3 per cent in the earlier year and 48.8 per cent in the later. The establishments with products valued at less than $100,000, taken as a group, reported 12.3 per cent of the total value for 1904, 10.1 per cent for 1909, and 10.8 per cent for 1914. In average number of wage earners these smaller establishments show a continued, though slight, proportional decrease, from 13.4 per cent of the total in 1904 to 13 per cent in 1909 and to 12.6 per cent in 1914.

Table 16 gives, for 1914 and 1909, for six of the more important industries, a classification of establishments, wage earners, value of products, and value added by manufacture similar to that presented in Table 15 for all industries combined.

For two of the leading industries—woolen and worsted goods and foundry and machine-shop products—the establishments with products valued at $1,000,000 and over, show decreases between 1909 and 1914 in number, average number of wage earners, value of products, and value added by manufacture. In the cotton industry, on the other hand, the establishments in this class show increases in all respects, except value added by manufacture.

Of the establishments reporting products valued at less than $5,000, those in the bread and other bakery and foundry and machine-shop industries show increases in number, average number of wage earners, value of products, and value added by manufacture, while the printing and publishing industry shows increases in all these particulars, except wage earners. Although the number of establishments in this group manufacturing cotton goods remained the same, their value of products and value added by manufacture decreased considerably. There were four of these small establishments in the woolen and worsted industry in 1909, but none was reported for 1914.

It should be borne in mind that a material increase or decrease in the value of products reported by any industry might affect the per cent distribution shown

in the table, even though the proportional increase or decrease in the output of each establishment was substantially the same as that in the output of the industry as a whole. For example, the output of an entire industry and of each establishment within that industry might increase by substantially 10 per cent during the five-year period. This being the case, an establishment which in 1909 turned out products valued at a trifle less than $1,000,000 would, for 1914, report products valued at more than $1,000,000, and therefore the proportion reported for the group comprising the largest establishments would be greater in the later year than in the earlier. Conversely, a uniform decrease in the output of all establishments in an industry would tend to reduce the proportion for the group comprising the largest establishments.

Table 17 presents, for 1914, for all industries combined in each of the 10 cities having more than 10,000 inhabitants, statistics similar to those given in Table 15 for the state as a whole.

It is impossible to show for every city the group of establishments reporting products valued at $1,000,000 and over without disclosing the operations of individual establishments; but among the four cities for which this group is given the largest percentages of total value of products reported for it are shown by Pawtucket and Woonsocket—52.4 per cent for each city. Providence, of course, leads in absolute numbers and values. The greatest proportion of value of products—3.2 per cent—for the group of smallest establishments was reported by Newport.

Table 18 shows the size of establishments in 1914 as measured by the number of wage earners employed. The figures given are for all industries combined, for 15 of the more important industries, and for each of the 10 cities having more than 10,000 inhabitants. Table 19 presents, for 1914, percentages based on the figures in Table 18, and for 1909 similar percentages for all industries combined and for individual industries in the state as a whole.

Tables 18 and 19 show the extent to which establishments of various sizes, as measured by the average number of wage earners, are engaged in the different industries of the state. Considering the total for all industries, there were 198 establishments in operation during 1914 in which no wage earners were employed. These are small establishments in which the work is done by the proprietors or firm members. In some cases they employ a few wage earners for short periods, but the number is so small and the period so short that in computing the average number, as described in the "Explanation of terms," no wage earners could be shown for the establishment. Bakeries and printing and publishing establishments are the industries in which the largest number of these small establishments were reported.

The comparatively small establishments still predominate in the majority of the industries of the state. Of the 2,190 establishments reported for all industries, 1,410, or 64.4 per cent, employed on the average less than 20 wage earners during the year. On the other hand, while these small establishments predominate in number, they gave employment to only 7,392 wage earners, or 6.5 per cent of the total for all establishments. There were only 228 establishments in the state that reported the employment of more than 100 wage earners each, but these establishments gave employment to 88,978, or 78.4 per cent of the total average number of wage earners reported for all establishments. These large establishments are shown especially for the manufacture of textiles, foundry and machine-shop products, and rubber goods, not elsewhere specified.

Among the cities the highest percentages of the total number of wage earners reported by establishments employing more than 100 wage earners each are shown for Cumberland, 96.2, and Lincoln, 95.3.

Engines and Power.—Table 20 shows, for 1914, 1909, and 1904, for all industries combined, the number and horsepower of engines or motors, employed in generating power (including electric motors operated by purchased current). It also shows separately the number and horsepower of electric motors operated by current generated in the establishments reporting.

[1] Figures for horsepower include for 1909 and 1904 the amounts reported under the head of "other" owned power.

[2] Not reported.

Although the horsepower of steam engines and turbines increased during the five-year period 1909–1914 by 13.6 per cent, and during the ten-year period 1904–1914 by 39.9 per cent, the proportion which this class of power formed of the total decreasedfrom 78 per cent in 1904 to 77.3 per cent in 1909 and to 73.8 per cent in 1914. The number of these engines remained nearly the same from census to census. The horsepower of internal-combustion engines increased greatly between 1904 and 1909, but decreased during the following five years. Their number, however, increased from census to census. The power of water wheels, turbines, and motors increased during each five-year period, but their number and the proportion which they represented of the total power decreased.

The decreases in the relative importance of the three classes of owned power are accounted for largely by the rapid increase in rented electric power, which contributed 3.4 per cent of the total in 1904, 6 per cent in 1909, and 11.7 per cent in 1914. The increase in the power of motors run by current generated in the same establishments has also been very great. The total horsepower of electric motors in use was nearly six times as great in 1914 as in 1904.

Fuel.—Closely related to the subject of power employed in manufactures is that of the fuel consumed in generating this power or otherwise used in the manufacturing processes. Table 21 shows, for 1914, the quantity of each kind of fuel used, for which data were obtained, for all industries combined, and for selected industries in the state as a whole, and for all industries combined in each city.

SPECIAL STATISTICS.

By means of special schedules the Census Bureau collects detailed data regarding the quantities and cost of materials, the quantities and values of products, and the numbers and classes of machines used in manufacturing. Statistics of this character are here presented for five important industries. Data are also given for power laundries.

Textiles.—The number and kind of the principal machines used in the textile industries, considered separately and as a group, are given in Table 22.

Table 22

MACHINE.	Census year.	Total.	Cotton goods, including cotton small wares.	Woolen and worsted goods.	Hosiery and knit goods.	Silk goods, including throwsters.
Producing spindles	1914	2,927,949	2,400,916	504,213	4,040	18,780
	1909	2,831,816	2,363,689	459,127	1,280	7,720
	1904	2,489,016	2,085,802	379,374	4,364	19,476
Looms	1914	66,972	53,676	10,251	.....	3,045

Knitting machines	1914	1,864	.....	.....	1,864	.....
	1909	1,669	.....	.....	1,669	.....
	1904	1,170	.....	.....	1,170	.....
Woolen cards (sets)	1914	218	.....	205	13	.....
	1909	309	.....	305	4	.....
	1904	367	.....	360	7	.....
Combing machines	1914	522	.....	522	.....	.....
	1909	461	.....	461	.....	.....
	1904	294	.....	291	3	.....

The total number of producing spindles shows an increase of 96,133, or 3.4 per cent, from 1909 to 1914; the number of knitting machines, an increase of 195, or 11.7 per cent; and the number of combing machines, an increase of 61, or 13.2 per cent. On the other hand, the number of looms decreased, by 14,121, or 17.4 per cent; and the sets of cards, by 91, or 29.4 per cent.

Although the cotton mills reported nearly five times as many spindles in 1914 as the woolen and worsted mills, the increase during the period 1909–1914 in the latter—45,086, or 9.8 per cent—was much greater than in the former, in which it was 37,227, or 1.6 per cent. The knitting mills and the silk mills also showed marked increases, which nearly offset their losses during the preceding five-year period.

In addition to the number of cotton spindles reported in connection with the census of manufactures, statistics of the number employed in all branches of the textile industry are reported monthly to the Census Bureau. The total number of cotton spindles in the state of Rhode Island in 1914, as compiled from these monthly reports, was 2,574,942, and of these, 2,512,702 were active sometime during the year ending August 31.

The number of looms used in the cotton mills decreased by 15,654, or 22.6 per cent, between 1909 and 1914; but the number used in the woolen and worsted mills showed an increase of 999, or 10.8 per cent, and in the silk mills an increase of 534, or 21.3 per cent.

Woolen and worsted goods.—Establishments engaged primarily in the manufacture of worsted goods reported products to the value of $56,914,988 in 1914, as compared with $44,477,596 in 1904, while the products of those making woolen goods amounted to $3,973,767 in 1914 and $8,163,167 in 1904. Because of the similarity of materials and products these two industries are combined in the report. The worsted goods industry ranks first in 1914 among the manufacturing industries of the state in cost of materials and in value of products.

The quantity and cost of the materials reported for this industry, for 1914, 1909, and 1904, by kinds, are given in Table 23.

Both foreign and domestic wool show decreases in quantity and cost between 1909 and 1914, but for the former there were marked increases in both respects during the ten-year period 1904–1914, taken as a whole. For foreign wool the decreases in quantity and cost during the later five-year period amounted to 8.1 per cent and 28.4 per cent, respectively; and for domestic wool, to 25.4 per cent and 34.2 per cent, respectively.

Of the total wool consumption in 1914, that of domestic origin represented 69.2 per cent of the quantity and 66.1 per cent of the cost, the corresponding percentages for 1909 being 73.5 and 67.9, respectively.

The consumption of raw cotton between 1909 and 1914 increased 66.6 per cent in quantity and 46.2 per cent in cost, but that of purchased cotton yarns decreased during the same period 56.8 per cent in quantity and 48.7 per cent in cost. The consumption of the latter, however, is still much greater than that of the former.

Table 23	1914	1909	1904

Pounds	38,025	18,376	57,119
Cost	$173,149	$71,649	$231,227
Chemicals and dyestuffs, cost	$1,178,516	$1,536,824	$1,108,222
Fuel and rent of power, cost	$1,010,906	$906,926	$740,476
All other materials, cost	$3,917,632	$2,846,531	$2,171,394

Table 24 gives statistics as to quantity and value of the several classes of products for the last three census years.

The quantity of all-wool woven goods reported, both woolen and worsted, amounted to 46,713,932 square yards in 1914, as against 53,661,591 in 1909 and 43,831,236 in 1904. The production in 1914, therefore, represented a decrease of 6,947,659 square yards during the later five-year period, although it exceeded the production of 1904 by 2,882,696 square yards. The decrease during the later five-year period was due entirely to the falling off in the production of worsted coatings, overcoatings, and dress goods; the production of woolen coatings, overcoatings, and dress goods increased in quantity by 268,089 square yards, although it shows a slight decrease in value.

The production of goods woven on cotton warps decreased in both quantity and value between 1909 and 1914; for worsted-filling coatings, dress goods, etc., the decline in quantity was from 15,641,716 square yards in the earlier year to 9,545,888 square yards in the later, or nearly 40 per cent, and the decline in value was from $7,305,686 to $3,251,084, or considerably more than one-half. Figures for wool-filling coatings, dress goods, etc., can not be given without disclosing individual operations and are, therefore, included in "all other" cotton-warp woven goods.

Table 24	1914	1909	1904
Products, total value	$60,888,755	$74,600,240	$52,649,763
All-wool woven goods, whether woolen or worsted:

Merino yarn—			
Pounds	1,604,059	534,654	2,341,087
Value	$1,055,346	$225,317	$1,150,011
Worsted yarn and tops—			
Pounds	20,771,249	24,285,265	13,222,913
Value	$18,652,542	$23,410,014	$10,551,023
Noils—			
Pounds	3,283,790	5,199,661	3,319,117
Value	$940,435	$1,819,094	$1,240,806
Waste—			
Pounds	5,177,162	7,166,426	5,837,000
Value	$902,003	$1,316,779	$831,452
Amount received for contract work	$678,674	$366,622	$138,822
All other products, value	$671,577	$384,150	$1,622,880

The output of two of the five classes of partly manufactured goods for sale—namely, all-wool woolen yarn and merino yarn—showed great decreases in quantity and value between 1904 and 1909, followed by increases between 1909 and 1914. In both classes, however, the 1914 figures show decreases, as compared with those for 1904. On the other hand, for the remaining three classes of this group—worsted yarn and tops, noils, and waste—marked increases between 1904 and 1909 were followed by decreases during the next five-year period.

Cotton goods, including cotton small wares.—Although the total cost of materials consumed in these industries (including cotton lace) increased from 1909 to 1914, the output decreased considerably in quantity and slightly in value. The quantity and cost of materials used in 1914, 1909, and 1904 are given in Table 25.

The consumption of cotton, both domestic and foreign, in these industries in 1914—122,403,247 pounds,

costing $17,813,655—represented increases of 8.6 per cent in quantity and 17.4 per cent in cost, as compared with the figures for 1909, and 28.1 per cent in quantity and 47.9 per cent in cost, as compared with 1904. In 1914 domestic cotton represented 90.2 per cent of the total quantity and 86.2 per cent of the total cost of cotton consumed; for 1909 the corresponding percentages were 90.4 and 86.6, respectively; and for 1904, 93.6 and 91.5, respectively. The quantity of purchased cotton yarn consumed shows very little change from census to census, but its cost increased 22.7 per cent from 1904 to 1909 and 4 per cent from 1909 to 1914.

Table 25	1914	1909	1904
Materials, total cost	$28,756,309	$25,401,239	$19,665,504
Cotton:

Value	$2,140,780	$1,135,767	$940,030
Yarns, for sale:			
Pounds	15,744,098	19,752,920	16,402,391
Value	$5,679,149	$6,666,271	$4,954,570
Thread:			
Pounds	2,675,562	3,715,469	2,934,660
Value	$3,247,298	$3,516,713	$2,717,267
Cotton waste, for sale:			
Pounds	23,079,944	42,158,042	49,352,389
Value	$1,325,590	$1,984,192	$2,177,008
All other products, value	$12,113,175	$7,549,389	$5,738,915

[1] These fabrics, the combined quantities and values of which are here brought into comparison for the three census years, were designated at prior censuses as "plain cloths for printing or converting" and "brown or bleached sheetings and shirtings."

The total value of products shown for 1914 was less by 1.2 per cent than that given for 1909, but exceeded by 43.8 per cent the total reported for 1904. Unbleached and bleached sheetings, shirtings, and muslins decreased during the later five-year period by 17 per cent in quantity and 23.5 per cent in value; but for the entire ten-year period these products show increases of 11.7 per cent and 40.3 per cent, respectively.

For fancy weaves an increase of 18.3 per cent in quantity is shown for the later five-year period, but the accompanying increase in value amounted to only four-tenths of 1 per cent.

The gain shown by this group of products is accounted for entirely by the increase in the output of twills, sateens, etc., which amounted to 38.1 per cent in quantity and 29 per cent in value between 1909 and 1914; other fancy weaves show decreases of 3.4 per cent and 16.3 per cent, respectively, during the same period. For velvets, corduroys, plushes, etc., notable increases—75.7 per cent in quantity and 88.5 per cent in value—are shown. The value of "all other products" also increased rapidly, the 1914 figure exceeding that for 1909 by 60.5 per cent.

Silk goods, including throwsters.—Table 27 gives the kind, quantity, and cost of the materials used in this industry in 1914, 1909, and 1904.

Table 27	1914	1909	1904
Materials, total cost	$5,326,594	$3,187,085	$1,695,950
Silk:			
Raw—			
Pounds	535,013	483,330	262,112
Cost	$1,850,707	$2,173,458	$1,179,447
Spun—			
Pounds	130,342	73,816	52,145
Cost	$363,934	$175,113	$139,909
Yarns, not made in mill:			
Woolen or worsted—			
Pounds	153,006	59,811	7,800
Cost	$164,789	$93,493	$6,040
Cotton—			
Pounds	1,830,922	1,421 229	969,426
Cost	$500,348	$404,141	$290,214
Fuel and rent of power, cost	$55,438	$36,091	$20,341
All other materials, cost	$2,391,378	$305,389	$59,999

The quantity of raw silk used increased 10.8 per cent between 1909 and 1914, but the cost of this material, as reported, shows a decrease of 14.8 per cent. The quantity and cost of spun silk used, however, increased greatly—76.6 per cent in quantity and 107.8 per cent in value. For both cotton yarn and woolen and worsted yarns considerable increases are shown, and the proportion which the combined quantities of these yarns formed of the total quantity of materials for which separate figures are given was slightly greater in 1914 than in 1909—74.9 per cent in the later year, as against 72.7 per cent in the earlier.

A detailed statement of products can not be given without disclosing operations of individual establishments. The total value of all products was $7,664,472 in 1914, as against $4,584,431 in 1909, the increase being $3,080,041, or 67.2 per cent. The principal products were silk-mixed broad silks and spun silk.

Hosiery and knit goods.—Table 28, on the following page, compares the kind, quantity, and cost of materials used in this industry in 1914, 1909, and 1904.

Table 28	1914	1909	1904
Materials, total cost	$2,404,602	$2,444,457	[1] $2,271,099
Yarns, not made in mill:			
Cotton—			
Pounds	[2] 3,472,110	4,609,892	4,778,112
Cost	[2] $1,008,333	$1,220,424	$1,154,834
Worsted—			
Pounds	665,977	597,037	622,209
Cost	$667,144	$686,017	$606,595

Cost	$57,816	$146,544	$56,779
Silk and spun-silk [3]—			
Pounds	104,046	22,900	5,425
Cost	$402,979	$84,955	$17,352
Chemicals and dyestuffs, cost	$18,794	$32,160	$61,935
Fuel and rent of power, cost	$43,623	$29,795	$42,082
All other materials, cost	$205,013	$244,562	$331,622

[1] Excludes figures for one establishment engaged in the manufacture of hand-knit goods.
[2] Includes mercerized cotton.
[3] Includes artificial silk yarn.

The total cost of materials used in this industry decreased 2.3 per cent between 1909 and 1914. The total quantity of yarns used decreased during the same period from 5,544,477 pounds to 4,328,999 pounds, or 21.9 per cent, but increases are shown for worsted and silk yarns, that for the latter amounting to 82,046 pounds, or 358.3 per cent.

The kind, quantity, and value of products in 1914, 1909, and 1904 are given in Table 29.

Table 29	1914	1909	1904
Products, total value	$4,191,841	$3,865,792	[1] $3,344,655

All other—			
Dozens	26,047	28,469	(3)
Value	$326,994	$243,938	(3)
Boot and shoe linings:			
Square yards	5,331,268	6,686,112	9,021,062
Value	$607,296	$862,096	$826,362
Jersey cloth and stockinette:			
Square yards	455,911	505,889	(3)
Value	$277,221	$206,609	(3)
All other products, value	$297,918	$166,833	$1,001,790

[1] Excludes figures for one establishment engaged in the manufacture of hand-knit goods, to avoid disclosure of individual operations.
[2] Includes silk hose and half hose.
[3] Figures not available.

Although the total value of products increased during the five-year period 1909–1914 by $326,049, or 8.4 per cent, a decline in quantity appears for each class of products, with the exceptions of half hose and cotton shirts and drawers. The increase in half hose amounted to 108.2 per cent in quantity and 105.9 per cent in value; and that in cotton shirts and drawers, to 21.2 and 30.4 per cent, respectively. For hose, combination suits, and Jersey cloth and stockinette, decreases in quantity together with increases in value are shown. For "all other" shirts and drawers a very great decrease appears, the quantity and value of the output being only about one-eighth and one-fourth, respectively, as great in 1914 as in 1909. Decreases, though far less pronounced, appear also for boot and shoe linings. The value of "all other products" increased by 78.6 per cent during the five-year period.

Printing and publishing.—Table 30 gives statistics as to the number and aggregate circulation of newspapers and periodicals per issue in 1914, 1909, and 1904.

Table 30 — Period of issue	Number of publications			Aggregate circulation per issue		
	1914	1909	1904	1914	1909	1904
Total	53	47	60	333,606	254,493	247,613
Daily and Sunday [1]	14	14	16	194,316	191,670	180,464
Semiweekly	3	3	4	4,447	5,810	6,719
Weekly	22	21	29	48,928	34,013	39,542
All other	[2] 14	[3] 9	[4] 11	86,005	23,000	20,888

[1] Includes 2 Sunday papers in 1914 and 1909 and 3 in 1904.
[2] Includes 11 monthly publications, 1 quarterly, 1 semimonthly, and 1 bimonthly.
[3] Includes 8 monthly publications and 1 semimonthly.
[4] Includes 10 monthly publications and 1 quarterly.

Of the 12 dailies in 1914, 10, with an aggregate circulation of 125,466, were issued in the evening. The greatest gains shown are for "all other," which increased from 9, with an aggregate circulation of 23,000, in 1909 to 14, with an aggregate circulation of 86,005, in 1914. This group included 11 monthly publications in 1914, 8 in 1909, and 10 in 1904. The publications printed in foreign languages comprised 4 in French—1 daily, 1 semiweekly, 1 weekly, and 1 monthly—2 weeklies in Italian, and 1 weekly in German. The aggregate circulation of those foreign-language publications in 1914 was 53,500.

Laundries.—Statistics for power laundries in 1914 and 1909 are summarized in Table 31. These statistics are not included in the general tables or in the totals for all manufacturing industries.

Table 31 — Power laundries	Number or amount, 1914	Number or amount, 1909	Per cent of increase,[1] 1909–1914
Number of establishments	66	53	.....
Persons engaged	1,402	1,211	15.8
Proprietors and firm members	70	70	.....
Salaried employees	140	65	.....
Wage earners (average number)	1,192	1,076	10.8
Primary horsepower	1,829	1,368	33.7
Capital	$684,194	$612,524	11.7
Salaries and wages	$679,735	$523,045	30.0
Salaries	$135,280	$61,761	119.0
Wages	$544,455	$461,284	18.0
Paid for contract work	$1,974	$916	115.5
Rent and taxes (including internal revenue)	$34,436	$21,818	57.8
Cost of materials	$230,604	$158,443	45.5
Amount received for work done	$1,260,942	$1,019,404	23.7

[1] Percentages are omitted where base is less than 100.

The rank of Rhode Island among the states in this industry in 1914 was thirtieth, as against twenty-fourth in 1909. Forty-one of the establishments in 1914 were owned by individuals, 7 by corporations, and the remaining 18 were under other forms of owner-

ship; the corresponding figures for 1909 were 28, 5, and 20, respectively. At both censuses the corporation-owned laundries reported the largest amount of business, the receipts for work done in 1914 being $535,686, or 42.5 per cent of the total, and $401,499, or 39.4 per cent, in 1909. Establishments owned by individuals in 1914 reported $441,046, or 35 per cent of the total, and $388,068, or 38.1 per cent, in 1909. The receipts for establishments under all other forms of ownership amounted to $284,210, or 22.5 per cent of the total, in 1914, and to $229,837, or 22.5 per cent, in 1909.

Table 32 gives the number of wage earners employed in laundries on the 15th (or nearest representative day) of each month in 1914 and in 1909, together with the percentage which the number shown for each month forms of the maximum.

Table 32

MONTH.	WAGE EARNERS.			
	Number.		Percent of maximum.	
	1914	1909	1914	1909
January	1,170	1,041	94.8	94.2
February	1,162	1,040	94.2	94.1
March	1,162	1,041	94.2	94.2
April	1,177	1,047	95.4	94.8
May	1,192	1,070	96.6	96.8
June	1,214	1,083	98.4	98.0
July	1,234	1,105	100.0	100.0
August	1,223	1,101	99.1	99.6
September	1,211	1,104	98.1	100.0
October	1,194	1,091	96.8	98.7
November	1,184	1,095	95.9	99.1
December	1,184	1,095	95.9	99.1

The largest number of wage earners was reported for July at each census. The maximum in 1914 was 1,234, as against 1,105 in 1909. The minimum for the later year—1,162, or 94.2 per cent of the maximum—was reported for both February and March; and the minimum for 1909—1,040, or 94.1 per cent of the maximum—is shown for February. The fluctuation of employment, therefore, was comparatively slight and was substantially the same at both censuses.

Table 33 shows, for 1914 and 1909, the kind, number, and horsepower of engines and motors used in the laundries of the state, together with the percentages of increase in horsepower during the five-year period.

Table 33

POWER.	NUMBER OF ENGINES OR MOTORS.		HORSEPOWER.		
			Amount.		Per cent of increase,[1] 1909–1914.
	1914	1909	1914	1909	
Primary power, total	77	57	1,829	1,368	33.7
Owned	62	54	1,716	1,275	34.6
Steam engines and turbines	61	52	1,711	1,252	36.7

Coke	Tons, 2,000 lbs	.....	50	.....
Oil	Barrels	.....	25	.....
Gas	1,000 cubic feet	4,109	2,927	40.4

GENERAL TABLES.

Table 35 gives, for 1914, 1909, and 1904, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products, for selected industries in the state and in the cities having 50,000 inhabitants or more, and for the cities having from 10,000 to 50,000 inhabitants, similar data for all industries combined.

Table 36 presents, for 1914, in the state as a whole and in cities with 50,000 inhabitants or more, statistics in detail for each industry that can be shown without the disclosure of the operations of individual establishments, and for each of the cities in the state having from 10,000 to 50,000 inhabitants, for all industries combined.

TABLE 35.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.
					Expressed in thousands.		
THE STATE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES.							
All industries	1914	2,190	113,425	260,854	$59,366	$162,425	$279,546
	1909	1,951	113,538	226,740	55,234	158,192	280,344
	1904	1,617	97,318	182,608	43,113	112,872	202,110
Boxes and cartons, paper.	1914	12	490	144	172	298	626
	1909	9	496	128	158	169	499

* All other industries embrace—

Aeroplanes and parts	1
Aluminum ware	1
Ammunition	1
Artists' materials	2
Automobiles	1
Baking powders	1
Baskets, and rattan and willow ware	1
Blacking, stains, and dressings	2
Bookbinding and blank-book making	9
Boot and shoe findings	3
Boots and shoes, not including rubber boots and shoes	2
Boots and shoes, rubber	4
Boxes, wooden packing	7
Brick	1
Butter	2
Buttons	2
Card cutting and designing	2
Cars and general shop construction and repairs by electric-railroad companies	2
Cars and general shop construction and repairs by steam-railroad companies	2
Cash registers and calculating machines	2
Chemicals	3
Clocks	2
Clothing, men's	2
Clothing, women's	5
Coffee, roasting and grinding	2
Coffins, burial cases, and undertakers' goods	1
Combs and hairpins, not made from metal or rubber	1
Cutlery and edge tools	1
Dental goods	1
Druggists' preparations	2
Emery and other abrasive wheels	1
Engines, steam, gas, and water	2
Engraving, steel and copper plate, including plate printing	6
Engraving, wood	2
Fertilizers	2
Files	4
Flags and banners	1
Food preparations, not elsewhere specified	11
Fur goods	4
Gas machines and gas and water meters	1
Glass	1
Gold leaf and foil	3
Haircloth	1
Hardware	4
Hat and cap materials	1
Hats, fur-felt	1
Hats, wool-felt	1
Horseshoes	1
House-furnishing goods, not elsewhere specified	2
Ice, manufactured	2
Instruments, professional and scientific	2
Iron and steel, steel works and rolling mills	3

CITIES OF 50,000 INHABITANTS OR MORE—ALL INDUSTRIES COMBINED AND SPECIFIED INDUSTRIES.

* All other industries embrace:

Aeroplanes and parts	1
Artists' materials	1
Automobile bodies and parts	3
Automobiles	1
Awnings, tents, and sails	2
Baking powders	1
Belting, leather	1
Blacking, stains, and dressings	2
Bookbinding and blank-book making	7
Boot and shoe findings	3
Boots and shoes, not including rubber boots and shoes	1
Boots and shoes, rubber	1
Buttons	2
Card cutting and designing	2
Carpets, rag	2
Cars and general shop construction and repairs by steam-railroad companies	1
Cash registers and calculating machines	2
Cheese	2
Chemicals	1
Cleansing and polishing preparations	1
Clocks	1
Clothing, men's	2
Coffee, roasting and grinding	1
Coffins, burial cases, and undertakers' goods	1
Cooperage, hogsheads and barrels	1
Dental goods	1
Druggists' preparations	2
Dyestuffs and extracts	1
Emery and other abrasive wheels	1
Enameling	17
Engines, steam, gas, and water	2
Engraving and diesinking	49
Engraving, steel and copper plate, including plate printing	4
Engraving, wood	2
Fancy articles, not elsewhere specified	8
Files	4
Flags and banners	1
Flavoring extracts	4
Food preparations, not elsewhere specified	5
Fur goods	4
Furnishing goods, men's	1
Gas, illuminating and heating	2
Gas machines and gas and water meters	1
Gold, leaf and foil	3
Hair work	1
Hardware	2
Hats and caps, other than felt, straw, and wool	3
Hats, fur-felt	1
House-furnishing goods	1
Instruments, professional and scientific	2
Iron and steel, bolts, nuts, washers, and rivets	1
Iron and steel forgings	2
Iron and steel, nails and spikes	1
Ivory, shell, and bone work, not including combs and hairpins	5

SOUTH CAROLINA.

By F. M. Woodward.

GENERAL STATISTICS.

General character of the state.—South Carolina is one of the original thirteen states. With a gross area of 30,989 square miles, of which 30,495 represent land surface, it ranks thirty-ninth in size among the states. Its inhabitants in 1900 numbered 1,340,316, and in 1910, 1,515,400; and its estimated population in 1914 was 1,590,000. In total population South Carolina ranked twenty-sixth among the states in 1910; and in density of population it ranked sixteenth, with 49.7 inhabitants per square mile, the corresponding figure for 1900 being 44.

The urban population in 1910—that is, the population residing in incorporated places of 2,500 or more—was 224,832, or 14.8 per cent of the total, as against 12.8 per cent in 1900. There were in the state in 1914 five cities, each with an estimated population of more than 10,000—Anderson, Charleston, Columbia, Greenville, and Spartanburg. These cities, whose aggregate population in that year formed 9 per cent of the estimated total population of South Carolina, reported 15.7 per cent of the value of the state's manufactured products.

The steam-railway mileage in 1914 was 3,687, and the electric-railway mileage in 1912 was 184.

Agriculture is the leading industry. The total value of farm crops grown in 1909 was $141,983,354, of which $96,381,067, or more than two-thirds, was contributed by cotton and cotton seed. The state's production of cotton from the crop of 1914 was 1,533,810 bales of 500 pounds each, or 9.5 per cent of the total yield in the United States.

The value of merchandise exported through the South Carolina customs district in the fiscal year 1914 was $20,829,302, and that of merchandise imported was $5,548,191.

Importance and growth of manufactures.—The manufactured products of South Carolina in 1914 were valued at $138,891,202 and its factories gave employment on the average during the year to 71,914 wage earners. At times larger numbers were employed, the maximum number—77,256—being reported for March. The state ranked thirty-first in the value of products and twenty-fifth in the number of wage earners employed in manufactures.

Table 1 summarizes the more important data relative to all classes of manufactures combined, in the state, for the censuses of 1914, 1909, 1904, and 1899, and gives the percentages of increase.

Table 1	MANUFACTURING INDUSTRIES.				PER CENT OF INCREASE.[1]

Value added by manufacture (value of products less cost of materials)	47,882,206	46,885,071	29,407,636	22,849,950	2.1	59.4	28.7

[1] A minus sign (−) denotes decrease. [2] Figures not available. [3] Exclusive of internal revenue.

There was a material increase in the manufactures of the state during the 15 years covered by Table 1. The increase, however, was more pronounced during the five-year periods ending with 1904 and 1909 than during the period ending with 1914. There was a decrease of 1,132, or 1.5 per cent, in the average number of wage earners employed in 1914 as compared with the number reported for 1909. This decrease was due primarily to the decrease in the number employed in the lumber mills of the state and was accompanied by a decrease in the value of products and other features shown for the industry in Table 30. The decrease of 54.3 per cent, shown for the amount paid for contract work, is no indication of a depression in any industry of the state, because the expenditure for such work depends upon the methods followed in carrying on the various industries and not on the magnitude of the operations.

Table 2 shows the relative importance of the leading manufacturing industries in 1914 and gives percentages of increase for the three five-year periods from 1899 to 1914.

Table 2

[1] Percentages are based on figures in Table 30; a minus sign (−) denotes decrease; percentages are omitted where base is less than 100, or when comparable figures can not be given.
[2] Same number reported for both years.
[3] Less than one-tenth of 1 per cent.

Separate statistics are presented for 23 industries, or industry groups, for each of which products valued at more than $100,000 were reported for 1914. These industries include 4 with products exceeding $10,000,000 in value, 3 with products between $1,000,000 and $3,000,000, 5 with products between $500,000 and $1,000,000, and 11 with products between $100,000 and $500,000. Among those included under the head of "all other industries," are the following, which have products exceeding in value some for which figures are shown in the table, but for which statistics can not be shown separately without the possibility of disclosing individual operations: Cordage and twine; dyeing and finishing textiles; electrical machinery; men's furnishing goods; jute goods; rice, cleaning; steam packing; and surgical appliances.

The industries in this table are arranged in the order of their importance as shown by value of products, but the arrangement would vary from that given if based on average number of wage earners or value added by manufacture. The leading industry, cotton goods, and the third, fertilizers, are the only ones ranking the same in all three respects. Oil, cottonseed, and cake, second in value of products, was fourth in number of wage earners and value added by manufacture. Lumber, ranking fourth in value of products, ranked second in average number of wage earners and value added by manufacture.

Based on the value of products, the manufacture of cotton goods, cottonseed products, fertilizers, and lumber, in the order named, were the four leading industries of the state at the census of 1914, but at the census of 1909 these industries ranked first, third, fourth, and second, respectively. But slight changes are shown in the relative rank of the other industries.

Cotton goods.—The manufacture of cotton goods is the most important industry of the state. During 1914 it gave employment to 64.6 per cent of the wage earners, and its products formed 56.5 per cent of the total for all industries. There were only two states—Massachusetts and North Carolina—that exceeded the state in value of cotton manufactures for 1914. During the five-year period 1909–1914 the total value of products increased from $65,930,000 to $78,446,000, or 19 per cent, and the average number of wage earners from 45,454 to 46,448, or 2.2 per cent. The industry is naturally fostered by the cotton crop of the state. There were 1,418,704 bales, or about 688,910,000 pounds, of lint cotton obtained from the crop of 1913–14, and, as shown by Table 22, the mills consumed, during 1914, 372,464,143 pounds of domestic cotton. While it may be that a small amount was obtained from adjoining states, practically all of this was grown in South Carolina.

Oil, cottonseed, and cake.—Second in importance in the state, this industry, which includes establishments

engaged principally in extracting oil from cotton seed or in refining the crude oil, shows a marked increase from census to census in both value of products and wage earners. The percentages of increase during the three five-year periods 1909–1914, 1904–1909, and 1899–1904 for value of products were 50.2, 99.6, and 76.1 per cent, respectively, and for wage earners, 15.4, 37.7, and 74.7, respectively.

Fertilizers.—The growth of the cottonseed-oil industry and the utilization of phosphate rock have resulted in an increase in the manufacture of fertilizers.

The Geological Survey reported 106,919 long tons of phosphate rock marketed in South Carolina in 1914, valued at $415,039. South Carolina was the first state in the union to mine and to use this product as the basis of commercial fertilizer, and for many years produced the larger part of the world's supply. There were engaged in the manufacture of fertilizer 55 establishments in 1914, giving employment to an average of 2,050 wage earners, and reporting a product valued at $13,824,659, the percentage of increase over 1909 figures being 10.8 per cent for wage earners and 53.2 for value of products.

Lumber and timber products.—This industry embraces the operations of logging camps, sawmills, planing mills, and wooden-box factories. It ranked fourth in importance in 1914, although a considerable decrease is shown in the industry since 1909. Mills engaged exclusively in custom sawing for consumption in the immediate neighborhood should not be included in the census of manufactures, but it is not always possible to conduct the canvass on uniform lines in all sections of the country at different censuses in regard to the omission of these establishments, and it may be that some of this class were included at the census of 1909 that were excluded from the canvass of 1914.

Cars and general shop construction and repairs by steam-railroad companies.—The work in these establishments is practically confined to repairs to the rolling stock and equipment of steam-railroad companies. The industry ranked fifth in the state in 1914 in the average number of wage earners and value of products.

Persons engaged in manufacturing industries.—Table 3 shows, for 1909 and 1914, the number of persons engaged in manufactures, distributed by sex, the average number of wage earners being distributed also by age. The sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms."

Table 3

CLASS.	Census year.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Total.	Male.	Female.	Per cent of total. Male.	Female.
All classes	1914	77,693	59,717	17,976	76.9	23.1
	1909	78,040	60,944	17,096	78.1	21.9

	1909	3,333	3,287	46	98.6	1.4
Proprietors and firm members	1914	1,815	1,768	47	97.4	2.6
	1909	1,737	1,697	40	97.7	2.3
Salaried officers of corporations	1914	847	834	13	98.5	1.5
	1909	606	603	3	99.5	0.5
Superintendents and managers	1914	1,032	1,028	4	99.6	0.4
	1909	990	987	3	99.7	0.3
Clerks and other subordinate salaried employees	1914	2,085	1,757	328	84.3	15.7
	1909	1,661	1,393	268	83.9	16.1
Wage earners (average number)	1914	71,914	54,330	17,584	75.5	24.5
	1909	73,046	56,264	16,782	77.0	23.0
16 years of age and over	1914	64,075	49,949	14,126	77.9	22.0
	1909	63,641	50,848	12,793	79.9	20.1
Under 16 years of age	1914	7,839	4,381	3,458	55.9	44.1
	1909	9,405	5,416	3,989	57.6	42.4

In 1914 the number of persons engaged in manufactures was 77,693, of whom 71,914, or about nine-tenths, were wage earners, 3,694 were proprietors and officials, and 2,085 were clerks and other subordinate salaried employees. Of the wage earners 16 years of age and over, 49,949, or a little over three-fourths, were males, and 14,126, or about one-fourth, were females. Corresponding figures for individual industries will be found in Table 31.

Table 4 gives, for the several classes of persons engaged in manufactures, the percentage of increase from 1909 to 1914 and the per cent distribution at the two censuses.

Table 4

CLASS.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Per cent of increase,[1] 1909–1914. Total.	Male.	Female.	Per cent distribution. Total. 1914	Total. 1909	Male. 1914	Male. 1909	Female. 1914	Female. 1909
All classes	−0.4	−2.0	5.1	100.0	100.0	100.0	100.0	100.0	100.0

16 years of age and over	0.7	−1.8	10.4	82.5	81.5	83.6	83.4	78.6	74.8
Under 16 years of age	−16.7	−19.1	−13.3	10.1	12.1	7.3	8.9	19.2	23.3

[1] A minus sign (−) denotes decrease; percentages are omitted where base is less than 100.

[2] Less than one-tenth of 1 per cent.

This table shows an increase during the five-year period for each of the several classes of employees with the exception of wage earners under 16 years of age, in which group there was a decrease of 16.7 per cent. The largest percentage of increase for both sexes combined, 39.8, is shown for salaried officers. Wage earners 16 years of age and over represented 82.5 per cent of the total number of persons engaged in manufacturing industries in the state in 1914 and 81.5 in 1909.

In order to compare the distribution of persons engaged in manufactures in 1914 with that shown at the census of 1904, it is necessary to use the classification employed at the earlier census. (See "Explanation of terms.") Table 5 makes this comparison according to occupational status.

Table 5

CLASS.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES.							
	Number.			Per cent distribution.			Per cent of increase.[1]	
	1914	1909	1904	1914	1909	1904	1909–1914	1904–1909
Total	77,693	78,040	63,071	100.0	100.0	100.0	−0.4	23.7
Proprietors and firm members	1,815	1,737	1,241	2.3	2.2	2.0	4.5	40.0
Salaried employees	3,964	3,257	2,389	5.1	4.2	3.8	21.7	36.3
Wage earners (average)	71,914	73,046	59,441	92.6	93.6	94.2	−1.5	22.9

[1] A minus sign (−) denotes decrease.

Each of the three classes shown in this table as well as the total for all classes combined show an increase for the five-year period 1904–1909; but the increase for the five-year period 1909–1914 is confined to proprietors and firm members and salaried employees.

The average number of wage earners employed and their per cent distribution as males 16 years of age and over, females 16 years of age and over, and children under 16 years of age is given in Table 6 for 1914, 1909, and 1904. The table also shows for some of the important industries separately a similar distribution of wage earners for 1914 and 1909.

For all industries combined, the proportion of male wage earners 16 years of age and over is practically the same for the last two censuses, but shows an increase since 1904. A decrease is shown in the proportion of adult female wage earners and also of children employed in the decade 1904–1914.

Of the 12 industries for which separate figures are given in this table, 7 show an increase from 1909 to 1914 in proportion of adult males, and 4 an increase in proportion of adult females, while 3 show an increase in the proportion of children under 16 years of age. Canning and preserving and hosiery and knit goods are the 2 industries which show a larger proportion of women wage earners than men, the percentages being 48.5 and 44.9 for the women as against 42.4 and 34.2 for the men. The cotton-goods industry also shows a large proportion of women employed, over one-fourth of the total number of wage earners being women. The wage earners under 16 years of age in South Carolina are employed principally in the cotton-goods industry, but the proportion of children employed in these cotton mills shows a decrease of 3.4 per cent since 1909.

Table 6

INDUSTRY.	Census year.	WAGE EARNERS.			
		Average number.[1]	Per cent of total.		
			16 years of age and over.		Under 16 years of age.

	1904	.....	5.2	13.9	14.0	19.5

[1] Figures do not agree with those published, because it was necessary to revise them in order to include data only for those establishments located within the corporate limits of the city.

Table 8 gives percentages of increase from census to census, based on the figures in Table 7, for cities where per cent of increase can be computed.

Table 8

CITY.	PER CENT OF INCREASE IN AVERAGE NUMBER OF WAGE EARNERS.[1] Period.	Total.	16 years of age and over. Male.	Female.	Under 16 years of age.
Charleston	1904–1914	−20.7	−14.6	−38.7	−17.1
	1909–1914	−4.8	−0.9	−12.7	−22.7
	1904–1909	−16.7	−13.9	−29.9	7.2
Columbia	1904–1914	−6.9	11.5	−25.7	−78.7
	1909–1914	−5.2	0.1	15.2	−69.4
	1904–1909	−1.8	11.4	−35.4	−30.3
Greenville	1904–1914	18.6	28.9	16.1	−15.5
	1909–1914	20.8	25.8	31.8	−19.3
	1904–1909	−1.8	2.4	−11.9	4.8
Spartanburg	1904–1914	13.9	23.2	16.2	−15.5
	1909–1914	6.0	6.9	−3.0	20.9
	1904–1909	7.4	15.2	19.7	−30.1

[1] A minus sign (−) denotes decrease.

The proportion of male wage earners 16 years of age and over is greatly in excess of that for females in every city. The only city in South Carolina in which this proportion fell below 60 per cent in 1914 was Greenville, where it increased from 54.1 in 1904 to 58.8 per cent in 1914. The proportion in all cities combined in 1914 was 70.9 per cent for men, 20.8 per cent for women, and 8.3 per cent for children. Columbia shows a decrease of 78.7 per cent in the number of wage earners under 16 years of age for the decade 1904–1914. A decrease of about 15 per cent in children wage earners is also shown for Charleston, Greenville, and Spartanburg for the same period.

Wage earners employed, by months.—The following table gives, for all industries combined, the total number of wage earners employed on the 15th of each month, or the nearest representative day, for 1914 and 1909, and the average number employed during each month in 1904, together with the percentage which the number reported for each month forms of the greatest number reported for any month.

Table 9

MONTH.	WAGE EARNERS IN MANUFACTURING INDUSTRIES. Number.[1] 1914	1909	1904	Per cent of maximum. 1914	1909	1904
January	75,723	73,774	59,774	98.0	96.6	97.0
February	76,808	75,696	61,535	99.5	99.1	99.8
March	77,256	76,373	61,634	100.0	100.0	100.0
April	73,826	72,682	60,748	95.6	95.2	98.6
May	71,200	70,310	58,346	92.2	92.1	94.7
June	69,830	70,283	57,415	90.4	92.0	93.2
July	69,334	70,708	56,501	89.7	92.6	91.7
August	68,285	70,441	56,832	88.4	92.2	92.2
September	69,215	71,951	58,368	89.6	94.2	94.7
October	69,557	73,996	59,976	90.0	96.9	97.3
November	70,540	74,756	61,158	91.3	97.9	99.2
December	71,299	75,585	61,005	92.3	99.0	99.0

[1] The figures for 1914 and 1909 represent the number employed on the 15th of each month, or the nearest representative day; those for 1904, the average number employed during the month.

The greatest activity in the manufacturing industries of the state is shown for the winter and early spring months, the maximum number of wage earners appearing for March at each successive census, while the minimum was reported for August, in 1914, June for 1909, and July for 1904. The greatest difference between the maximum and minimum months in any of the three census years was 8,971, or 11.6 per cent of the maximum in 1914.

Table 10 gives the total average number of wage earners employed during 1914, together with the total number employed on the 15th of each month, or the nearest representative day, for the combined industries of the state, for a number of selected industries, and for the total industries of each of the five cities having more than 10,000 inhabitants.

Of the selected industries, oil, cottonseed, and cake, an industry ranking second in the state in value of products, shows a high degree of fluctuation in employment, the number of wage earners in July being but 16.1 per cent of the number in November. This is a seasonal industry and naturally there is considerable variation in the number of wage earners employed during different months. For the same reason there is a great fluctuation in the numbers reported for canning and preserving, fertilizers, and manufactured ice. The greatest stability of employment is shown for printing and publishing and cotton goods, for which industries the proportions which the minimum formed of the maximum were 97.2 per cent and 94.3 per cent, respectively.

Of the five cities, Columbia shows the greatest fluctuation in the number of wage earners employed, the percentage that the minimum formed of the maximum for this city being 62.3 per cent. The greatest stability of employment is shown for Charleston, where the minimum number formed 94.8 per cent of the maximum.

Table 10

WAGE EARNERS: 1914.

Prevailing hours of labor.—In Table 11 the average number of wage earners reported for 1914 and 1909, for all industries combined and for selected industries throughout the state, have been classified according to number of hours of labor per week prevailing in the establishments in which they were employed. A similar classification is given, for 1914 only, for all industries combined, in each city having 10,000 inhabitants or more. The number employed in each establishment is classified as a total, even though a few employees worked a greater or a smaller number of hours.

From Table 11 it appears that there has been a general tendency to shorten the number of hours of labor for wage earners in the manufactures of the state. In 1909 there were 5,508 wage earners employed in establishments where the hours of labor were more than 60 per week; by 1914 the number employed in such establishments had decreased to 4,121. During the same period, the number employed in establishments where the prevailing hours of work were less than 60 per week increased from 5,891 to 7,747. In both 1909 and 1914, for all industries combined and for almost all of them separately, the majority of wage earners were employed in establishments where the prevailing hours of labor were 60 per week.

Statistics of hours of employment are not available for the cities for 1909, but for 1914, with the exception of Charleston, the majority of the wage earners in the five cities were employed in establishments where the prevailing hours of labor were 60 per week. For both Charleston and Columbia a considerable proportion of the wage earners, 22.6 and 29.5 per cent, respectively, were employed by establishments operated 54 hours per week. In these cities the wage earners whose hours of employment were 54 per week were in establishments engaged principally in the following industries: Bread and other bakery products; carriages and wagons; cars and general shop construction and repairs; foundry and machine-shop products; and tobacco, cigars and cigarettes.

Location of establishments.—Table 12 presents, for 1914, 1909, and 1899, the extent to which the manufactures in South Carolina were centralized in the cities having more than 10,000 inhabitants.

[1] Census estimate of population for 1914.

In 1909 and 1899 the population of Anderson was less than 10,000, and the statistics for its manufactures were included with those for the outside districts. The table shows that for 1914 the cities, which represented 9 per cent of the population of the state, reported 16.1 per cent of the total number of establishments, 15.7 per cent of the total value of products, 17.4 per cent of the total value added by manufacture, and 13.1 per cent of the total average number of wage earners.

The major portion of the manufactures of the state are located outside the cities that had a population of 10,000 and over. During the 15 years covered by Table 12 the industries in these outside districts increased more rapidly than they did in the five principal cities of the state. The development in the cities, however, during the five years from 1909 to 1914 was at a more rapid rate than in the outside districts.

The relative importance in manufactures of each of the five cities having more than 10,000 inhabitants, as measured by average number of wage earners and by value of products in 1914, 1909, and 1904, is shown in Table 13. The cities are listed in the order of their importance as shown by value of products.

Table 13 City.	Average number of wage earners.			Value of products.		
	1914	1909	1904	1914	1909	1904
Columbia	2,228	[1] 2,350	2,393	$6,764,082	[1] $5,295,198	$4,676,944

Anderson	1,146	.....	.....	1,903,562	.....	.....

[1] Figures do not agree with those published because it was necessary to revise them in order to include data only for establishments located within the corporate limits of the city.

Anderson had less than 10,000 inhabitants in 1909 and 1904; therefore comparative figures can not be given. The manufacture of cotton goods and planing-mill and cottonseed-oil products are the principal industries of the city.

The principal industries in Columbia are the railroad repair shops, cotton goods, cottonseed-oil mills, and printing and publishing. These industries are also important ones in Charleston, which has in addition extensive planing mills and tobacco manufacturing establishments. Greenville and Spartanburg, which rank third and fourth, respectively, among the cities, have important cotton factories. Columbia and Spartanburg are the only cities reporting a product for any one industry of over $1,000,000.

Character of ownership.—Table 14 presents statistics concerning character of ownership, or legal organization, of manufacturing enterprises. For all industries combined comparative figures are given for 1914, 1909, and 1904; for selected industries statistics for 1914 and 1909 are shown; and for individual cities the figures are for all industries combined and relate only to 1914. In order to avoid disclosing the operations of individual establishments it is necessary to omit several important industries from this table.

[1] Includes the group "corporations."

[2] Includes the group "all others."

For all industries combined there was an increase during the decade in the number of establishments under each form of ownership. The greatest proportion of the establishments is shown for those under individual ownership, but in value of products and average number of wage earners those owned by corporations greatly predominate. For 1914, with but 34.1 per cent of the total number of establishments in the state, the corporations reported 93.2 per cent of the total value of products and 90 per cent of the average number of wage earners. In 1909 and 1904 the corresponding proportions are only slightly less. Bread and other bakery products was the only industry in 1914, among those mentioned in this table, where the establishments under individual ownership exceeded the corporations in value of products and average number of wage earners. In the cities taken as a group, more than one-half of the number of establishments were reported as under corporate ownership, and over nine-tenths of the total value of products for the cities was reported by the same class of establishments.

Size of establishments.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is indicated by the statistics given in Table 15.

The number of establishments with products valued at $100,000 or more in 1914 was 286, or 15.2 per cent of the total number in the state, as compared with 235, or 12.7 per cent, in 1909 and 164, or 11.7 per cent, in 1904. These establishments in 1914 reported 82.8 per cent of the total number of wage earners for the state, 85.8 per cent of the total value of products, and 79.5 per cent of the total value added by manufacture. In

the same year the small establishments—those having products less than $5,000 in value—although representing 44.8 per cent of the total number of establishments, reported only 1.3 per cent of the total value of products and 2.6 per cent of the total average number of wage earners and value added by manufacture.

Table 16 gives, for 1914 and 1909, for four of the more important industries, a classification of establishments, wage earners, value of products, and value added by manufacture, similar to that presented in Table 15 for all industries combined.

This table shows for each industry presented an increase for 1914, as compared with 1909, in the number of establishments having products valued at $100,000 and over, and all industries in this class, with the exception of lumber and timber products, show an increase in wage earners and value of products. The manufacture of lumber and timber products shows a larger proportion of wage earners, value of products, and value added by manufacture in this class of establishments in 1914 than in 1909, although showing a decrease in actual numbers in these items.

Table 17 presents, for 1914, for all industries combined, in each of the five cities having more than 10,000 inhabitants, statistics similar to those given in Table 15 for the state as a whole.

In the cities the same general condition prevails as that found throughout the state, namely, a preponderance as to number of wage earners, value of products, and value added by manufacture for establishments having products valued at $100,000 and over. The largest proportions of total value of products for establishments in this class, 83.2 per cent and 82.4 per cent, are reported for Columbia and Spartanburg, respectively, and the lowest, 66.9 per cent, for Charleston.

Table 19 presents, for 1914, percentages based on the figures in Table 18, and, for 1909, similar percentages for all industries combined and for individual industries in the state as a whole.

Table 19

INDUSTRY AND CITY.	Census year.	PER CENT OF TOTAL AVERAGE NUMBER OF WAGE EARNERS IN ESTABLISHMENTS EMPLOYING SPECIFIED NUMBER.							
		1 to 5	6 to 20	21 to 50	51 to 100	101 to 250	251 to 500	501 to 1,000	Over 1,000

[1] Less than one-tenth of 1 per cent.

Of the total number of establishments for all industries combined, 172, or 9.1 per cent, employed no wage earners in 1914. These are small establishments in which the work is done by the proprietors or firm members. In some cases they employ a few wage earners for short periods, but the number is so small and the period so short that in computing the average number, as described in the "Explanation of terms," no wage earners could be shown for the establishments. The largest number of these small establishments was reported for lumber mills. The comparatively small establishments still predominate in the majority of the industries of the state. Of the 1,885 establishments reported for all industries, 1,311, or 69.5 per cent, employed on the average less than 21 wage earners during the year. On the other hand, while the small establishments predominate in number, they gave employment to only 6,670 wage earners, or 9.3 per cent of the total for all establishments. There were only 172 establishments in the state that reported the employment of more than 100 wage earners each, but these establishments gave employment to 54,821, or 76.2 per cent of the total average number of wage earners reported for all establishments. These large establishments are shown especially in the manufacture of textiles, fertilizers, and lumber, and in railroad repair shops.

Among the cities the highest percentage of the total number of wage earners reported by establishments employing more than 100 wage earners each is shown for Spartanburg, 82.6 per cent. All of the cities show over 50 per cent of wage earners in similar establishments.

Engines and power.—Table 20 presents, for 1914, 1909, and 1904, for all industries combined, the number and horsepower of engines or motors employed in generating power (including electric motors operated by purchased current). It also shows separately the number and horsepower and per cent distribution of electric motors operated by current generated in the establishments reporting.

Table 20

[1] Figures for horsepower include for 1909 and 1904 the amounts reported under the head of "other" owned power.
[2] Less than one-tenth of 1 per cent.
[3] Not reported

This table shows an increase in primary horsepower of 63,846, or 23.1 per cent, from 1909 to 1914, about three-fourths of which was due to the increase in rented power. The use of rented power, almost wholly electric, has greatly increased since 1904, when it represented only 4.3 per cent of the total primary power reported. This proportion had increased to 25.9 per cent in 1914. This increase in the proportion of rented power used was accompanied by a decrease in the proportion of owned power from 95.7 per cent in 1904 to 74.1 in 1914.

The use of internal-combustion engines has increased rapidly during the decade, although the horsepower of such engines is insignificant, representing less than 1 per cent of the total at all three censuses.

During the five-year period 1909–1914 there was an increase of 10.2 per cent in the horsepower of water wheels, turbines, and motors, though this horsepower shows a decreased proportion of the total at each successive census.

Fuel.—Closely related to the subject of power employed in manufactures is that of the fuel consumed in generating this power or otherwise used in the manufacturing processes.

Table 21 shows, for 1914, the quantity of each kind of fuel used, for which data were obtained, for all industries combined and for selected industries in the state as a whole, and for all industries combined in each city.

Table 21.

INDUSTRY AND CITY.	COAL. Anthracite (tons, 2,240 lbs.).	COAL. Bituminous (tons, 2,000 lbs.).	Coke (tons, 2,000 lbs.).	Oil, including gasoline (barrels).	Gas (1,000 cubic feet).

SPECIAL STATISTICS.

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantity and cost of materials, the quantity and value of products, and other information for which no provision is made on the general schedule. Certain data of this character for five important industries in South Carolina are here presented, followed by statistics for power laundries.

Cotton goods.—In the following table the materials and products of the cotton-goods industry are shown by kind, quantity, cost, and value, for the census years 1914, 1909, and 1904.

Table 22

	1914	1909	1904
MATERIALS.			
Total cost	$53,889,154	$41,303,438	$34,308,311
Cotton:

Value	$6,610,701	$5,002,204	$5,344,146
Twills, sateens, etc.—			
Square yards	13,598,202	12,910,370	45,220,488
Value	$844,701	$797,624	$2,175,651
Other fancy weaves—[2]			
Square yards	99,246,161	59,475,787	24,315,732
Value	$6,331,876	$3,789,713	$1,420,975
Bags and bagging:			
Square yards	10,147,120	19,792,444	14,250,913
Value	$825,064	$1,120,825	$683,877
Yarns, for sale:			
Pounds	27,861,944	32,709,732	31,645,397
Value	$6,078,250	$6,759,913	$6,217,795
Cotton waste, for sale:			
Pounds	40,417,952	29,621,480	24,199,029
Value	$1,349,787	$850,246	$867,273
All other products, value	$3,477,531	$3,261,239	$1,889,442

[1] These fabrics were designated at prior censuses as "plain cloths for printing or converting" and "brown or bleached sheetings and shirtings."
[2] Does not include fancy woven ginghams.

The increase in the quantity of raw cotton consumed during the ten-year period covered by the table—from 270,957,461 pounds to 372,894,331 pounds, or 37.6 per cent—is a fair measure of the growth of the industry. The amount of cotton imported shows, for the five-year period 1909–1914, a decrease of 70.1 per cent. The total value of products shows a substantial gain from census to census, sheetings, shirtings, and muslins being the most important products reported. These products increased in value

$20,796,532, or 67.8 per cent, during the decade 1904–1914, and among the remaining products fancy weaves show the greatest increase for the same period—$6,059,748, or 78.4 per cent.

Oil, cottonseed, and cake.—South Carolina ranked fifth among the states in value of cottonseed products manufactured in 1914. The increase in the output of these products from census to census shows a rapid growth of the industry in the state. The following table gives the quantity of cotton seed used for oil extraction and the quantities of the several products obtained for the census years 1914, 1909, and 1904:

Table 23	QUANTITY.		
	1914	1909	1904
Cotton seed crushed.....tons (2,000 lbs.)..	418,486	346,550	213,103
Crude products manufactured:			
Oil.....gallons..	18,979,394	15,745,552	9,178,661
Meal and cake.....tons (2,000 lbs.)..	190,498	156,729	90,815
Hulls.....tons (2,000 lbs.)..	116,403	103,795	71,942
Linters.....pounds..	23,781,620	14,356,169	6,641,495

The statistics in this table for 1914 relate to the crushing season of 1913–14; that is, to the handling of seed from the crop of 1913. They cover the operations of all establishments which crushed cotton seed during the season, regardless of the extent to which they were engaged in other branches of industry. Furthermore, the crude products reported represent the total production derived from crushing cotton seed, whether sold as such or used as intermediate products in further processes of manufacture, such as the refining of oil and the mixing of fertilizer and feed.

The total quantity of cotton seed crushed increased from 213,103 tons in 1904 to 418,486 tons in 1914, or 96.4 per cent. Of the 98 mills reported in 1914 as crushing cotton seed, 9 crushed less than 1,000 tons each during the census year; 27 crushed 1,000, but less than 2,000 tons; 35 crushed 2,000, but less than 5,000 tons; 19 crushed 5,000, but less than 10,000 tons; 6 crushed 10,000, but less than 20,000 tons; and 2 crushed 20,000 tons and over.

The quantities of the various products obtained in 1914 per ton of seed, as received at the mill, were as follows: Crude oil, 45.4 gallons; cake and meal, 910 pounds; hulls, 556 pounds; and linters, 57 pounds. The ratios which the several products bore to the total weight of the seed when received at the mill were: Crude oil, 17 per cent; cake and meal, 45.5 per cent; hulls, 27.8 per cent; and linters, 2.8 per cent. It will be observed that the hulls have represented a decreasing proportion of the total quantity of products from census to census. This change is due in part to the installation of cold-process machinery, which expresses the oil without hulling the seed, the resulting cake thus containing the hulls.

Fertilizers.—The principal products manufactured, by kind, quantity, and value, are shown in the following table for 1914, 1909, and 1904:

Table 24	1914	1909	1904
Total value.....	$13,824,659	$9,024,900	$3,637,576
Fertilizers:			
Tons (2,000 lbs.).....	[1] 678,080	512,714	254,408
Value.....	$12,734,043	$8,728,312	$3,498,127
Complete and ammoniated fertilizers—			
Tons.....	435,403	278,894	147,554
Value.....	$9,927,343	$5,815,498	$2,395,725
Superphosphates—			
Tons.....	175,414	176,005	49,763
Value.....	$1,467,972	$2,036,220	$453,663
Other fertilizers—			
Tons.....	67,263	57,815	57,091
Value.....	$1,338,728	$876,594	$648,739
All other products, value.....	$1,090,616	$296,588	$139,449

[1] In addition, there were produced 55,715 tons of fertilizers, valued at $1,273,063, by cottonseed-oil mills and by establishments engaged primarily in other lines of manufacture.

The principal materials used in 1914 by fertilizer establishments consisted of 175,402 tons of phosphate rock, 75,002 tons of ammoniates, 19,473 tons of fish, 20,990 tons of ammonium sulphate and cyanamid or lime nitrogen, 86,956 tons of purchased superphosphates, 55,409 tons of kainit, 80,370 tons of pyrites, and 30,388 tons of purchased sulphuric acid.

The total quantity of fertilizers reported in 1914 by establishments engaged primarily in the manufacture of fertilizers was an increase of 32.3 per cent over the production of 1909. Complete and ammoniated fertilizers constituted the largest class manufactured during each of the three census years, representing 64.2 per cent in 1914, 54.4 per cent in 1909, and 58 per cent in 1904.

In addition, 55,673 tons of fertilizers were produced in 1914, by the cottonseed-oil mills, and 42 tons as subsidiary products in other industries, valued in the aggregate at $1,273,063. This makes a total production from all sources in 1914 of 733,795 tons, valued at $14,007,106.

Besides the products shown in the table, 236,221 tons of acid phosphate and 160,327 tons of sulphuric acid were manufactured in 1914 by the 55 establishments reporting, and consumed by them in further processes.

The state ranked third among the states in this industry in 1914 and in 1909.

Printing and publishing.—The following table shows the number of different newspapers and periodicals published and the aggregate circulation per issue of each for the census years 1914, 1909, and 1904.

There was an increase both in number and in circulation of the total newspapers and periodicals from 1909 to 1914, the circulation increasing 57,653, or 20.7 per cent. The dailies, Sunday papers, and weeklies showed increases during the same period, the largest relatively, 31,336, or 96.6 per cent, occurring in the Sunday editions. The dailies also had a large increase.

32,261, or 62.5 per cent, while the weeklies increased 15,357, or 11.5 per cent. In 1914, 8 of the 16 daily papers were morning editions, with an aggregate circulation per issue of 52,570. All of the publications reported were published in the English language, except one weekly, which was in German.

Table 25 — Period of issue	Number of publications			Aggregate circulation per issue		
	1914	1909	1904	1914	1909	1904
Total	140	138	148	336,165	278,512	239,968
Daily	16	13	14	83,885	51,624	32,103
Sunday	7	4	6	63,783	32,447	24,617
Semiweekly	[1] 18	[1] 21	16	29,250	44,622	28,401
Weekly	91	90	103	148,597	133,240	137,439
Monthly	8	[2] 10	[3] 9	10,650	16,579	17,318

[1] Includes one triweekly publication.
[2] Includes one semimonthly and one quarterly.
[3] Includes one biweekly, one quarterly, and one semimonthly.

Turpentine and rosin.—As early as 1849 there were 40 establishments in the state reported as engaged in this industry, having products valued at $235,836. The industry increased until 1879, when 192 establishments were reported, with a product valued at $1,893,206. Since that census there has been a steady decline of the industry, because of the gradual depletion of the longleaf pine forests of the state.

The quantity and value of products, by classes, for 1914, 1909, and 1904 are given in the table below.

Table 26	1914	1909	1904
Total value	$151,801	$406,286	$574,150
Spirits of turpentine:			
Gallons	201,221	460,186	764,412
Value	$78,233	$205,517	$370,046
Rosin:			
Barrels (280 pounds)	16,169	51,401	87,836
Value	$72,377	$199,273	$203,749
All other products, value	$1,191	$1,496	$355

The working unit in turpentine operations is called a "crop," which consists of 10,500 boxes or cups. In 1914 there were 125 crops produced in the state, of which 5 were from virgin trees, 40 from yearling or second-year trees, 42 from third-year workings, and 38 from older trees. Of the 125 crops worked, 16 were worked by the cup system, while in former censuses no such system was reported.

Laundries.—Statistics for power laundries are not included in the general tables or in the totals for all manufacturing industries. Table 27, however, summarizes these statistics for South Carolina for 1914 and 1909.

In 1914 South Carolina ranked forty-fourth among the states in amount received for work done and fortieth in number of persons engaged in the industry. Establishments owned by individuals reported 23.1 per cent of the amount received for work done; those owned by corporations, 54.4 per cent; and those under other forms of ownership, 22.5 per cent.

Table 27 — Power laundries	Number or amount		Per cent of increase,[1] 1909–1914
	1914	1909	
Number of establishments	23	24	.....
Persons engaged	588	440	33.6
Proprietors and firm members	24	26	.....
Salaried employees	47	41	.....
Wage earners (average number)	517	373	38.6
Primary horsepower	604	501	20.6
Capital	$265,692	$183,975	44.4
Salaries and wages	183,769	117,772	56.0
Salaries	37,213	30,344	22.6
Wages	146,556	87,428	67.6
Paid for contract work	.....	2,645	.....
Rent and taxes	14,899	10,625	40.2
Cost of materials	95,898	51,705	85.3
Amount received for work done	422,212	269,112	56.9

[1] Percentages are omitted where base is less than 100.

Table 28 shows, for 1914 and 1909, the number of wage earners employed in the laundries on the 15th of each month, or the nearest representative day, and the percentage which this number represents of the greatest number employed in any month of the same year.

Table 28 — Wage earners	Number		Per cent of maximum	
Month	1914	1909	1914	1909
January	510	362	95.7	92.3
February	514	365	96.4	93.1
March	513	373	96.2	95.2

[1] Percentages are omitted where base is less than 100.

GENERAL TABLES.

Table 30 gives, for 1914, 1909, and 1904, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products for selected industries in the state and in the city having 50,000 inhabitants or more, and for the cities having from 10,000 to 50,000 inhabitants similar data for all industries combined.

Table 31 presents, for 1914, in the state as a whole and in the city with 50,000 inhabitants or more, statistics in detail for each industry that can be shown without the disclosure of the operations of individual establishments, and the statistics for all industries combined for each of the cities having from 10,000 to 50,000 inhabitants.

TABLE 30.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.
					Expressed in thousands.		
THE STATE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES.							
All industries	1914	1,885	71,914	340,224	$24,173	$91,009	$138,891

SOUTH DAKOTA.

By Walter H. Booth.

GENERAL STATISTICS.

General character of the state.—The gross area of South Dakota is 77,615 square miles, of which 76,868 represent land surface. Its population in 1900 was 401,570, in 1910, 583,888, and the estimated population in 1914 was 661,583. South Dakota ranked fourteenth in area and thirty-seventh in population in 1914. In 1914 the density of population was 8.6 inhabitants per square mile, as compared with 5.2 in 1900.

The urban population of the state in 1910—that is, the population residing in cities or other incorporated places of 2,500 inhabitants or more—was 76,673, or 13.1 per cent of the total, as against 10.2 per cent in 1900. In 1914 there were two cities estimated to have more than 10,000 inhabitants; namely, Aberdeen and Sioux Falls. The aggregate population of these two cities—29,525—formed 4.5 per cent of the estimated total population of the state, and reported 47.9 per cent of its manufactured products.

South Dakota is essentially an agricultural state. Lying in the Great Plains region, its surface, with the exception of the Black Hills district, varies from level plain to rolling upland. Agriculture is by far the most important industry. The total value of all farm crops grown in 1909 was $125,507,249, and of cereals alone $98,953,050; and the value of domestic animals sold or slaughtered on farms during that year was $38,359,140. South Dakota ranked fifth among the states in 1909 in the production of wheat.

The United States Geological Survey reports for 1914 the mineral output of the state as valued at $7,861,601, of which gold and silver represented $7,431,191.

The eastern part of the state and the mining regions of the southwestern part are well provided with transportation facilities. The Interstate Commerce Commission reported 4,238 miles of steam railway in 1914.

Importance and growth of manufactures.—In 1914, measured by the value of products of its manufacturing industries—$24,138,566—South Dakota ranked forty-fifth among the 48 states comprising continental United States, holding the same rank in respect to wage earners, with an average of 3,788 engaged in such industries. In 1909 the state ranked forty-sixth, both in value of products and average number of wage earners. Of the total value of products manufactured in the United States in 1914, South Dakota's proportion was small, but one-tenth of 1 per cent, the same as in 1909 and 1904.

Table 1 summarizes the more important data relative to all classes of manufactures combined in South Dakota, for the censuses of 1914, 1909, 1904, and 1899, and gives percentages of increase from census to census.

Table 1

	Manufacturing industries.				Per cent of increase.[1]		
	1914	1909	1904	1899	1909–1914	1904–1909	1899–1904
Number of establishments	898	1,020	686	624	−12.0	48.7	9.9
Persons engaged	5,346	5,226	3,582	(2)	2.3	45.9	.....

Cost of materials	17,079,357	11,476,350	8,696,831	6,483,677	48.8	32.0	34.1
Value of products	24,138,566	17,870,135	13,085,333	9,520,946	35.1	36.6	37.3
Value added by manufacture (value of products less cost of materials)	7,059,209	6,393,785	4,388,502	3,046,269	10.4	45.7	44.1

[1] A minus sign (−) denotes decrease; percentages are omitted where comparable figures can not be given. [2] Figures not available. [3] Exclusive of internal revenue.

All of the items except cost of materials show smaller increases from 1909 to 1914 than for the preceding five-year period, while three show an actual decrease. The decrease in the number of establishments and proprietors and firm members is due chiefly to decreases in the artificial stone, the butter, and the flour-mill and gristmill industries.

Mills engaged exclusively in custom grinding for consumption in the immediate neighborhood should not be included in the census of manufactures, but it is not always possible to conduct the canvass in regard to the omission of these establishments on uniform lines in all sections of the country at different censuses.

The value of products and value added by manufacture show an increase, although a smaller percentage from 1909 to 1914 than for the two preceding five-year periods.

Table 2 shows the relative importance of the leading manufacturing industries in 1914, and gives percentages of increase for the three five-year periods from 1899 to 1914.

Table 2	CENSUS OF 1914.							PER CENT OF INCREASE.[1]

[1] Percentages are based on figures in Table 23; a minus sign (−) denotes decrease; percentages are omitted where base is less than 100 or when comparable figures can not be given.

Separate statistics are presented for 14 industries, or industry groups, each with products valued at more than $150,000 in 1914. These industries include 1 with products exceeding $5,000,000 in value, 4 with products between $1,000,000 and $5,000,000, and 9 with products valued at less than $1,000,000. Included under the head of "all other industries," are several having products in excess of $100,000, the statistics for which can not be shown separately without the possibility of disclosing the operations of individual establishments. Among these industries are the following: Automobile bodies and parts, patent medicines and compounds and druggists' preparations, and slaughtering and meat packing, the latter being one of the most important industries in the state.

The industries in this table are arranged in the order of their importance by value of products, but the arrangement would vary considerably from that given, if based on the average number of wage earners or value added by manufacture. Flour-mill and gristmill products, which ranked first in value, was fourth in number of wage earners, and second in value added by manufacture. Printing and publishing, third in value, was first in wage earners and value added by manufacture. Cars and general shop construction and repairs by steam-railroad companies, fifth in value, was second in wage earners and fourth in value added by manufacture.

In rank according to value of products, there were a few changes in 1914 as compared with 1909. Of the more important industries shown in the table, flour-mill and gristmill products, butter, printing and publishing, and bread and other bakery products held the same rank at both censuses.

Flour-mill and gristmill products.—This industry, which excludes custom mills grinding for toll or local consumption, continues to lead in value of products among the industries shown. In 1914 the value of products represented less than one-fourth of the total for all industries in the state as against more than one-third in 1909, there being a decrease of $651,220, or 10.5 per cent, during the five-year period.

Butter.—During the five-year period 1909–1914 there was an increase in the value of products of $234,831, or 8.7 per cent, but a decrease of $34,495, or 9.3 per cent, in value added by manufacture. The average number of wage earners decreased from 139 in 1909 to 134 in 1914.

Printing and publishing.—This industry embraced over two-fifths of the total number of establishments in the state, and gave employment to 801 wage earners, the largest number shown among the industries reported. Of the 379 establishments, 363 were engaged in the publication of newspapers and periodicals, and 16 operated job printing offices only. There was an increase of $159,604, or 8.1 per cent, in value of products, from 1909 to 1914, and of $154,434, or 10.1 per cent, in value added by manufacture, while the average number of wage earners decreased 2.9 per cent.

Bread and other bakery products.—This industry shows an increase, from 1909 to 1914, in value of products and in value added by manufacture, but the number of establishments and the average number of wage earners show slight decreases. Included in this

industry is one establishment engaged almost exclusively in the production of biscuits and crackers.

Cars and general shop construction and repairs by steam-railroad companies.—This industry represents the work done in the repair shops operated by steam-railroad companies, and consists almost exclusively of repairs to the rolling stock and equipment. It does not include minor repairs made in roundhouses. The value of products represents practically the expenditures in salaries, wages, and materials. The industry employed 579 wage earners in 1914 and was exceeded in this respect by only one industry—printing and publishing.

Lumber and timber products.—This industry embraces 34 establishments operating sawmills, and the logging connected therewith, and 17 operating planing mills not connected with sawmills. The depletion of the forests naturally reduces the output in the lumber industry, and the decline of the industry in South Dakota is no doubt due to this cause. From 1909 to 1914 there was a decrease in value of products, average number of wage earners, and value added by manufacture. In 1909 this industry employed an average of 451 wage earners as compared with 281 in 1914.

Persons engaged in manufacturing industries.—Table 3 shows, for 1914 and 1909, the number of persons engaged in manufactures, distributed by sex, the average number of wage earners being distributed also by age. The sex and age classification of the average number of wage earners in this and other tables is an estimate obtained by the method described in the "Explanation of terms."

Table 3

CLASS.	Census year.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Total.	Male.	Female.	Per cent of total. Male.	Female.
All classes	1914	5,346	4,712	634	88.1	11.9
	1909	5,226	4,588	638	87.8	12.2
Proprietors and officials	1914	1,061	1,025	36	96.6	3.4
	1909	1,227	1,188	39	96.8	3.2
Proprietors and firm members	1914	762	730	32	95.8	4.2
	1909	942	906	36	96.2	3.8

	1909	96	95	1	99.0	1.0
Superintendents and managers	1914	228	225	3	98.7	1.3
	1909	189	187	2	98.9	1.1
Clerks and other subordinate salaried employees.	1914	497	352	145	70.8	29.2
	1909	397	255	142	64.2	35.8
Wage earners (average number)	1914	3,788	3,335	453	88.0	12.0
	1909	3,602	3,145	457	87.3	12.7
16 years of age and over	1914	3,731	3,283	448	88.0	12.0
	1909	3,556	3,099	457	87.1	12.9
Under 16 years of age	1914	57	52	5	91.2	8.8
	1909	46	46	.....	100.0	.....

In 1914 the number of persons engaged in manufactures was 5,346, of whom 3,788 were wage earners, 1,061 were proprietors and officials, and 497 were clerks. Of the wage earners, 3,335 were males and 453 females, or 88 per cent and 12 per cent, respectively. Figures for individual industries will be found in Table 24.

Table 4 shows, for the several classes of persons engaged in manufactures, the percentage of increase from 1909 to 1914, and the per cent distribution at the two censuses.

Table 4

CLASS.	PERSONS ENGAGED IN MANUFACTURING INDUSTRIES. Per cent of increase,[1] 1909–1914. Total.	Male.	Female.	Per cent distribution. Total. 1914	Total. 1909	Male. 1914	Male. 1909	Female. 1914	Female. 1909

Under 16 years of age	.....	.....	.....	1.1	0.9	1.1	1.0	0.8	.....

[1] A minus sign (−) denotes decrease; percentages are omitted where base is less than 100.

This table shows a decrease during the five-year period in the total number of proprietors and firm members of 19.1 per cent. The total number of superintendents and managers increased 20.6 per cent; clerks, 25.2 per cent; and wage earners, 5.2 per cent. Of all persons engaged in manufacturing industries in 1914, 70.9 per cent were wage earners, as compared with 68.9 per cent in 1909. Only 1.1 per cent were children under 16 years of age in 1914, and nine-tenths of 1 per cent in 1909.

The average number of wage earners employed, for all industries combined, with per cent distribution of males and females 16 years of age and over and of children under 16 years of age, is given in Table 5 for 1914, 1909, and 1904. The table also shows, for some of the important industries separately, a similar distribution of wage earners for 1914 and 1909.

For all industries combined, the table shows an actual increase from census to census in the total average number of wage earners. Of the 7 industries

shown in the table, however, for 1909 and 1914, each shows a decrease in this respect for that five-year period except cars and general shop construction and repairs by steam-railroad companies.

	1909	203	80.3	15.3	4.4
All other industries	1914	1,280	88.6	10.7	0.8
	1909	1,086	90.3	8.7	0.9

[1] For method of estimating the distribution, by sex and age periods of the average number of all industries combined, see "Explanation of terms."

For all industries combined, the proportion of male wage earners and children under 16 years of age was slightly more in 1914 than in 1909, while the proportion of females was slightly less.

Of the seven industries for which separate figures are presented, four show an increase from 1909 to 1914 in proportion of males, and three an increase in proportion of females, while only one—printing and publishing—shows an increase in proportion of children under 16 years of age. Three of the industries that gave employment to children under 16 years of age in 1909 reported no employees of this class for 1914.

Wage earners employed, by months.—The following table gives, for all industries combined, the total number of wage earners employed on the 15th of each month or the nearest representative day, for 1914 and 1909, and the average number employed during each month in 1904, together with the percentage which the number reported for each month forms of the greatest number reported for any month.

In 1914 the maximum number of wage earners was employed in October, and the minimum number in February; in 1909 the maximum month was September, and in 1904, July. It will be noticed that for all three periods the least activity in manufactures is during the months from January to April, inclusive, while the period of greatest activity is more variable, running from July to October. The greatest difference in employment between maximum and minimum months in any one of the three census years was 817 in 1909. Based upon the number of wage earners reported for each of the 12 months, the average number per month would be 3,788 in 1914, and 3,602 in 1909.

Table 6

MONTH.	WAGE EARNERS IN MANUFACTURING INDUSTRIES. Number.[1] 1914	Number.[1] 1909	Number.[1] 1904	Per cent of maximum. 1914	Per cent of maximum. 1909	Per cent of maximum. 1904

[1] The figures for 1914 and 1909 represent the number employed on the 15th of each month, or the nearest representative day; those for 1904, the average number employed during the month.

Table 7 gives the total average number of wage earners employed during 1914, together with the total number employed on the 15th of each month, or the nearest representative day, for the combined industries of the state, for a number of selected industries, and for the total industries in each of the two cities having more than 10,000 inhabitants.

The lumber industry shows the greatest fluctuation in monthly employment, the percentage which the minimum formed of the maximum being 47.6. The great fluctuation in wage earners in this industry was due to the fact that a large establishment was in operation only during the last three months of the year.

Butter manufactures also show a considerable fluctuation in monthly employment, the percentage which the minimum formed of the maximum being 64.2.

Printing and publishing and bread and other bakery products are the industries which show the most stable employment, the percentage which the minimum is of the maximum in 1914 being 95.9 and 89.6, respectively.

The monthly employment of wage earners in the two cities shows less fluctuation than for the state as a whole, in 1914 the per cent that the minimum month of employment formed of the maximum being 89.1 for Aberdeen and 87.9 for Sioux Falls.

Table 7

WAGE EARNERS: 1914.
[Month of maximum employment for each industry is indicated by **boldface** figures and that of minimum by *italic* figures.]

Prevailing hours of labor.—In Table 8 the average number of wage earners employed for 1914 and 1909, for all industries combined and for selected industries throughout the state have been classified according to number of hours of labor per week prevailing in the establishments in which they were employed. A similar classification is given for 1914 only, for all industries combined, in each city having more than 10,000 inhabitants. The number employed in each establishment is classified as a total, even though a few employees worked a greater or smaller number of hours.

This table shows the tendency toward a shortening of the working day of wage earners, the prevailing hours per week being generally less in 1914 than in 1909. In 1914, 2,058, or more than one-half of the total average number of wage earners for all industries combined, were employed in establishments where the prevailing hours of labor were less than 60 hours per week, whereas 1,384, or only a little over one-third,

were so employed in 1909. On the other hand, the number of wage earners whose prevailing hours of labor were 60 or more per week decreased from 2,218, or 61.6 per cent of the total for the state in 1909, to 1,730, or 45.7 per cent of the total in 1914.

Of the industries shown in this table, car repairs by steam-railroad companies shows the most pronounced decrease in hours of labor. In 1914 about two-thirds of the wage earners were employed in establishments reporting their prevailing hours of labor as 54 per week, while one-third were employed in establishments reporting 48 hours and under. In 1909 almost the entire number were employed in establishments operated 60 hours per week. In 1914 and 1909, bread and other bakery products and lumber and timber products were conducted mainly on the basis of 60 hours per week. In the printing and publishing industry, more than nine-tenths of the wage earners were employed in establishments reporting their prevailing hours of labor as 54 or less per week.

In Aberdeen more than one-third of the wage earners were in establishments where the prevailing hours were 54 per week and in Sioux Falls about two-thirds were in establishments where the prevailing hours were 60 per week.

Location of establishments.—Table 9 shows, for 1914, 1909, and 1899, the extent to which manufactures in South Dakota were centralized in the two cities having more than 10,000 inhabitants.

Aberdeen in 1900 had less than 10,000 inhabitants and the statistics for the city in that year were included with those for the outside districts. For the five-year period 1909–1914 there was a decided increase in the amounts shown for the two cities, which in 1914 contained 4.5 per cent of the estimated population of the state, reported 39.2 per cent of the total average number of wage earners and 47.9 per cent of the total value of products. The corresponding proportions for 1909 were 4.3, 27, and 25 per cent, respectively.

[1] Census estimate of population for 1914.

Character of ownership.—Table 10 presents statistics concerning character of ownership, or legal organization, of manufacturing enterprises. For all industries combined, comparative figures are given, for 1914, 1909, and 1904; for selected industries, statistics for 1914 and 1909 are shown; and for individual cities, the figures are for all industries combined and relate only to 1914.

In order to avoid disclosing the operations of individual establishments, it is necessary to omit several important industries from table.

For all industries combined, the table shows that since 1904 there has been a decreased percentage in value of products for individual ownership, an increase in that for corporation, and a fluctuation in that for all other. The proportion of establishments in the state operated by corporations was 23.2 per cent in 1914 and 21.2 per cent in 1909. The proportion under individual ownership was 59.1 per cent in 1914 and 57.2 per cent in 1909. The establishments operated by corporations reported 56.5 per cent of the average number of wage earners in 1914, 57.6 per cent in 1909, and 45.9 per cent in 1904. Of the total value of products, establishments operated by corporations reported 55.1 per cent in 1914, 55.2 per cent in 1909, and 45.9 per cent in 1904. Of the value of products reported in 1914 by the flour-mill and gristmill and the lumber industries, 78.6 per cent and 71.1 per cent, respectively, were returned by establishments under corporate form of ownership; in 1909 the proportions were 63.5 per cent and 66.8 per cent, respectively. In the butter industry the proportion of value of products reported under corporate form of ownership increased from 38.6 per cent in 1909 to 64.1 per cent in 1914.

In Aberdeen the value of products reported by corporate ownership comprised 89.3 per cent of the total for the city. In Sioux Falls the largest proportion, however, 56.1 per cent, was for all other. Individual ownership reported but a small part of the total value of products; for the two cities combined it was only 4.5 per cent.

Size of establishments.—The tendency for manufacturing to become concentrated in large establishments, or the reverse, is indicated by the statistics given in Table 11.

Table 11 — VALUE OF PRODUCT.	NUMBER OF ESTABLISHMENTS.			AVERAGE NUMBER OF WAGE EARNERS.			VALUE OF PRODUCTS.			VALUE ADDED BY MANUFACTURE.

[1] Includes the group "$1,000,000 and over."

For 1914 only 37 establishments, or 4.1 per cent of the total number in the state, reported products exceeding $100,000 in value, as compared with 36, or 3.5 per cent of the total, in 1909 and 21, or 3.1 per cent, in 1904. In 1914 these establishments had 1,529 wage earners, or 40.4 per cent of the total for the state, 61.5 per cent of the total value of products, and 39.8 per cent of the total value added by manufacture. The small establishments—those having products valued at less than $5,000—in 1914 represented 51.6 per cent of the total number of establishments, but reported only 12.5 per cent of the total average number of wage earners and 4.7 per cent of the total value of products for the state.

Table 12 gives, for 1914 and 1909, for five of the more important industries, a classification of establishments, wage earners, value of products, and value added by manufacture, similar to that presented in Table 11, for all industries combined.

In order to avoid the possibility of disclosing the operations of individual establishments, the separation of industries into groups can not be made as complete as is given for the state, consequently, the specified industries are not fully comparable for 1914 and 1909.

In 1914, in the flour-mill and gristmill industry, 66.1 per cent of the total value of products was reported by establishments having products of $100,000 and over, as compared with 60.4 per cent in 1909; and in the butter industry, 55.9 per cent in 1914, as compared with 31.2 per cent in 1909. In the lumber, the bakery, and the printing industries in 1914, the proportions of the total value of products in establishments having products of $20,000 and over was 76.7, 55.4, and 44.4 per cent, respectively.

Table 13 shows the size of establishments in 1914 as measured by the average number of wage earners employed. The figures given are for all industries combined, for 11 of the more important industries, and for the two cities having more than 10,000 inhabitants.

Table 14 presents, for 1914, percentages based on the figures in Table 13, and for 1909, similar percentages for all industries combined and for individual industries in the state as a whole.

Table 12

INDUSTRY AND VALUE OF PRODUCT.	NUMBER OF ESTABLISHMENTS.				AVERAGE NUMBER OF WAGE EARNERS.				VALUE OF PRODUCTS.				VALUE ADDED BY MANUFACTURE.

There were 131 establishments for which no wage earners are shown. In these establishments all the work is done by the proprietors, firm members, or their families, or persons classed as salaried employees. For some of them the number of wage earners employed was so small or the term of employment so short that in computing the average, as described in the "Explanation of terms," the number was less than one person and the establishment was classed as one having "no wage earners." The small establishments—those employing from 1 to 20 wage earners—formed 82.5 per cent of the total for the state, but gave employment to only 56.8 per cent of the total wage earners reported. The group of establishments having more than 100 wage earners, although representing but six-tenths of 1 per cent of the total number of establishments in the state, gave employment to 22.2 per cent of the total number of wage earners.

For all of the industries shown in Table 14, except steam-railroad repair shops, confectionery, and malt liquors, the majority of the establishments were in the group employing from one to five wage earners.

Table 14

Engines and power.—Table 15 shows, for 1914, 1909, and 1904, for all industries combined, the number and horsepower of engines or motors, classified according to their character, employed in generating power.

During the five-year period 1909–1914, the total primary power decreased 1,342 horsepower, or 7.6 per cent. This decrease may be accounted for by the fact that an establishment, which reported power in 1909 in excess of the decrease shown, was idle in 1914. This falling off was wholly in owned power, which decreased 4,070 horsepower, or 25.5 per cent, since rented electric power, which forms part of the total primary power, increased 2,731 horsepower, or 162.3 per cent.

Table 15

POWER.	NUMBER OF ENGINES OR MOTORS.			HORSEPOWER.					
				Amount.			Per cent distribution.		
	1914	1909	1904	1914	1909	1904	1914	1909	1904

Other	.....	.....	.....	.....	3	10	.....	(3)	0.1
Electric	723	346	23	4,632	2,084	339	100.0	100.0	100.0
Rented	699	324	(2)	4,414	1,683	181	95.3	80.8	53.4
Generated by establishments reporting	24	22	23	218	401	158	4.7	19.2	46.6

[1] Figures for horsepower include for 1909 and 1904 the amount reported under the head of "other" owned power. [2] Not reported. [3] Less than one-tenth of 1 per cent.

The increased use of rented electric power is emphasized by the fact that in 1909 it formed 9.5 per cent of the total primary power and 27 per cent of the total in 1914. The horsepower developed by electric motors run by current generated within the same establishment has decreased since 1909.

Fuel.—Closely related to the subject of power employed in manufactures is that of the fuel consumed in generating this power or otherwise used in the manufacturing processes.

Table 16 gives, for 1914, the quantity of each kind of fuel used, for which data were obtained, for all industries combined, and for certain selected industries in the state as a whole, and for all industries combined in each of the two cities.

SPECIAL STATISTICS.

For certain industries the Census Bureau collects, by means of special schedules, details regarding the quantities and cost of materials, the quantities and values of products, and other information for securing which no provision is made on the general schedule. Certain data of this character for three important industries in South Dakota are here presented. Statistics for power laundries are also given.

Flour-mill and gristmill products.—Table 17 gives the quantities and values of flour-mill and gristmill products for the last three census years.

Table 17	1914	1909	1904
Total value	$5,556,996	$6,208,216	$6,519,364
Wheat flour:			
Barrels	920,070	968,280	1,148,024

Value	.....	$7,500	$700
Corn meal and corn flour:			
Barrels	5,244	6,845	23,308
Value	$18,555	$23,413	$49,571
Bran and middlings:			
Tons	42,684		
Value	$817,037	54,121	72,558
Feed and offal:		$1,084,808	$1,072,809
Tons	7,895		
Value	$196,329		
Breakfast foods:			
Pounds	161,498		
Value	$8,500	$1,043	.....
All other cereal products, value	$7,498		
All other products, value	$43,546	$4,434	$490

Wheat flour is the chief product of this industry in South Dakota, forming 80.2 per cent of the total value of products in 1914, 81.6 per cent in 1909, and 82.6 per cent in 1904. Since 1904, at each succeeding census, there has been a decline in the number of barrels of wheat flour produced. Bran and middlings is shown separately for 1914 only, when it formed 14.7 per cent of the total value of products.

The equipment for 1914 consisted of 405 stands of rolls 12, runs of stone, and 24 attrition mills.

Butter.—The quantity and value of products, for 1914, 1909, and 1904, are given in Table 18.

Table 18	1914	1909	1904
Total value	$2,020,342	$2,085,511	$2,182,653
Butter:			
Pounds	10,538,747	9,495,608	11,058,460
Value	$2,760,251	$2,598,413	$2,101,323
Packed solid—			
Pounds	8,335,726	8,880,010	10,835,596
Value	$2,164,290	$2,424,897	$2,110,000
Prints or rolls—			
Pounds	2,203,021	615,598	222,864
Value	$595,961	$173,516	$44,423
Cream sold:			
Pounds	152,759	390,108	2,140
Value	$10,475	$43,147	$215
All other products, value	$140,616	$43,951	$21,115

There was an increase in total value of products from 1909 to 1914 of $234,831, or 8.7 per cent, and between 1904 and 1909 of $502,858, or 23 per cent. During the former five-year period the quantity of butter manufactured shows an increase of 1,043,139 pounds, but from 1904 to 1909 there was a decrease of 1,562,852 pounds. The value of products, however, increased at each successive five-year period.

The value of butter put up in prints or rolls, although forming the smaller part of such manufactures, shows a decided increase at each succeeding census, representing 21.6 per cent of the total value of butter manufactured in 1914, 6.7 per cent in 1909, and 2.1 per cent in 1904.

Printing and publishing.—Table 19 gives the number of publications and the aggregate circulation per issue for all newspapers and periodicals published in South Dakota during 1914, 1909, and 1904.

Table 19 — Period of issue.	Number of publications.			Aggregate circulation per issue.		
	1914	1909	1904	1914	1909	1904
Total	381	402	302	416,671	485,101	330,705
Daily	[1] 20	[2] 23	[3] 21	55,834	69,679	33,200
Semiweekly	[4] 4	3	5	6,210	4,400	6,850
Weekly	347	360	263	268,243	277,127	198,604
All other classes	10	16	13	86,384	133,895	91,991

[1] Includes two Sunday newspapers.
[2] Includes four Sunday newspapers.
[3] Includes five Sunday newspapers.
[4] Includes one triweekly publication.

There was a loss of 21 in the total number of publications during the five-year period from 1909 to 1914, due to the discontinuance since 1909 of 1 daily, 2 Sunday, and 13 weekly papers, and 6 in "all other classes"; there was an increase, however, of 1 semiweekly during this period. The aggregate circulation decreased 68,430 per issue, the greatest decrease, 47,511, being in "all other classes." The decrease shown in the daily circulation was due wholly to the disappearance of the two Sunday papers. Of the 18 dailies reported in 1914, 13 were evening papers, having a circulation of 30,850. "All other classes" in 1914 comprise 8 monthly publications, 1 quarterly, and 1 semimonthly. Seven weeklies, with a circulation of 31,208, were printed in foreign languages, including 4 in German, with a circulation of 26,500, 2 in Norwegian, and 1 in English and German.

Laundries.—Statistics for power laundries are not included in the general tables or in the totals for manufacturing industries, but Table 20 summarizes these statistics for South Dakota for 1914 and 1909.

Table 20	Power laundries.		
	Number or amount.		Per cent of increase,[1] 1909–1914.
	1914	1909	
Number of establishments	26	28	.....
Persons engaged	454	447	1.6
Proprietors and firm members	29	33	.....
Salaried employees	25	28	.....
Wage earners (average number)	400	386	3.6
Primary horsepower	520	519	0.2
Capital	$352,747	$336,276	4.9
Salaries and wages	215,051	190,830	12.7
Salaries	24,559	22,864	7.4
Wages	190,492	167,966	13.4
Paid for contract work	2,469	.....	.....
Rent and taxes	12,465	10,416	19.7
Cost of materials	112,555	81,770	37.6
Amount received for work done	477,474	423,092	12.9

Percentages are omitted where base is less than 100.

South Dakota ranked forty-third among the states in 1914 and forty-first in 1909 in the number of persons engaged in the industry and forty-second in 1914 and forty-first in 1909 in amount received for work done.

Table 21 shows, for 1914 and 1909, the wage earners employed in the laundries on the 15th day of each month, or the nearest representative day, and the percentage which this number represents of the greatest number employed in any month of the same year.

Table 21

MONTH.	WAGE EARNERS.			
	Number.		Per cent of maximum.	
	1914	1909	1914	1909
January	381	352	88.8	85.0
February	378	352	88.1	85.0
March	384	356	89.5	86.0
April	388	369	90.4	89.1
May	398	384	92.8	92.8
June	429	394	100.0	95.2
July	429	410	100.0	99.0
August	429	414	100.0	100.0
September	410	406	95.6	98.1
October	397	398	92.5	96.1
November	388	395	90.4	95.4
December	387	397	90.2	95.0

Table 22 gives statistics as to kinds and amounts of power used in the laundries of the state in 1914 and 1909, together with the percentages of increase for the five-year period.

Table 22

POWER.	NUMBER OF ENGINES OR MOTORS.		HORSEPOWER.		
			Amount.		Per cent of increase, 1909-1914.[1]
	1914	1909	1914	1909	
Primary power, total	52	49	520	519	0.2
Owned	17	26	305	396	—23.0
Steam engines and turbines	14	19	288	360	—20.0
Internal-combustion engines	3	7	17	36	.....
Rented—Electric	35	23	215	123	74.8
Electric—Generated in establishments reporting	.....	.....	11	.....	.....

[1] A minus sign (—) denotes decrease; percentages are omitted where base is less than 100.

GENERAL TABLES.

Table 23 gives, for 1914, 1909, and 1904, the number of establishments, average number of wage earners, primary horsepower, wages, cost of materials, and value of products, for selected industries in the state; and for the cities having more than 10,000 inhabitants, similar data for all industries combined.

Table 24 presents, for 1914, statistics in detail for each industry in the state that can be shown without the disclosure of the operations of individual establishments, and the statistics for all industries combined for each of the cities in the state having more than 10,000 inhabitants.

TABLE 23.—COMPARATIVE SUMMARY FOR 1914, 1909, AND 1904.

INDUSTRY AND CITY.	Census year.	Number of establishments.	Wage earners (average number).	Primary horsepower.	Wages.	Cost of materials.	Value of products.
					Expressed in thousands.		
THE STATE—ALL INDUSTRIES COMBINED AND SELECTED INDUSTRIES.							
All industries	1914	898	3,788	16,324	$2,628	$17,079	$24,139
