NOTE.—Of the sums contained in the four columns in order, respectively, fourth, fifth, sixth, and seventh, in this table, that in the seventh is invariably the smallest, and that in the fourth invariably the largest. The sum given in column five may be larger or smaller than that in column six, according to circumstances It *happens* to be larger in the case of every State, and of each of the Territories except Arizona and Utah, (in the latter case for obvious reasons.) The mathematical proof of column four is by adding columns five and six, and subtracting column seven. The difference between column five and column seven yields the number having foreign fathers but native mothers. The difference between column six and column seven yields the number having foreign mothers but native fathers.

* At 1860 and 1850 the nativity of the slaves was not ascertained. In this table they are assumed to have been native.
