UNITED STATES SUMMARY

UNITED STATES SUMMARY

HOUSING DATA FOR SMALL AREAS

INTRODUCTION

GENERAL

This summary presents housing characteristics for continental United States, for regions and geographic divisions, for States, for cities of 50,000 inhabitants or more, and for metropolitan districts. The subjects presented for all areas are the total number of dwelling units classified by occupancy and tenure, color of occupants, number of units having more than 1.50 persons per room, state of repair, and plumbing equipment. Additional subjects shown for urban and rural-nonfarm areas include number of residential structures, average monthly rent or rental value of dwelling units, and mortgage status of owner-occupied nonfarm units; and for rural-farm areas additional information is shown concerning electric lighting, running water, and toilet facilities.

Arrangement of tables.—Detailed statistics for continental United States, urban and rural, are presented in text tables 1 to 9. Summary statistics for regions, geographic divisions, and States are shown in tables 10 to 22; for cities of 50,000 inhabitants or more in tables 23 to 25; and for metropolitan districts in tables 26 to 28. The summary totals for States, cities, and metropolitan districts, also presented in the State sections, are brought together in this summary to facilitate comparison of the more important statistics for the several States or comparison of data for similar types of areas in the various States.

It will be noted that statistics relating to private families in 1930 are restricted in this summary to figures for the United States presented in tables 2 and 3. These, and other comparative figures available for States, counties, and urban places, are included in Volume II of the Reports on Housing.

Related reports.—Supplements to the first series of Housing bulletins present housing statistics for blocks in each city having, in 1930, 50,000 inhabitants or more. In the supplementary reports for cities, the block data are summarized for census tracts of tract cities and for wards of nontract cities that are divided into wards.

Volume II of the Reports on Housing, entitled "General Characteristics," contains more detailed statistics for States, for urban, rural-nonfarm, and rural-farm areas of States, for counties, for rural-nonfarm and rural-farm parts of counties, for urban places, and for metropolitan districts. Additional topics covered by Volume II include size of household, value or rent of farm dwelling units as well as nonfarm dwelling units, type of structure, exterior material, year built, number of rooms, number of persons per room, and housing facilities and equipment. The more significant items are shown separately for the various occupancy, tenure, and color groups.

Volume III of the Reports on Housing, entitled "Characteristics by Monthly Rent or Value," provides a cross-classification of housing data with monthly rent or value of home. The data are presented for States, principal metropolitan districts, and cities of 50,000 inhabitants or more. The statistics form a basis for determining the relationship between rent or value and such characteristics as type and age of structure, state of repair, number of rooms, size of household and race of head, persons per room, housing facilities and equipment, and mortgage status.

Volume IV of the Reports on Housing, entitled "Mortgages on Owner-Occupied Nonfarm Homes," includes statistics for first mortgages on amount of debt outstanding, type of payment, frequency and amount of payment, interest rate, and holder of mortgage; and for all mortgaged properties, value of property, estimated rental value, year built, and color of occupants. Data are presented for States, principal metropolitan districts, cities of 100,000 inhabitants or more, census tracts in tracted areas, and counties.

Volume I of the Reports on Population, entitled "Number of Inhabitants," shows the total population of States and counties, urban and rural areas of States and counties, minor civil divisions, incorporated places, wards or places of 5,000 inhabitants or more, census tracts, and metropolitan districts.

Volume II of the Population Reports, entitled "Characteristics of the Population," presents, for areas similar to those outlined above for Volume II of the Housing Reports, statistics for the population classified by sex, age, race, nativity, school attendance, and last year of school completed; for the foreign born, by citizenship and country of birth; and for the labor force, by employment status, broad occupation groups, and selected industries.

Data from previous censuses.—Several of the subjects covered in this volume have been presented in publications of earlier censuses. The number of "occupied

dwelling units" in 1940 is roughly comparable with the number of "private families" or "homes" shown in the report on families for the 1930 Census of Population. The number of families, on a slightly broader basis (including what were termed quasi-family groups in 1930) but still reasonably comparable, has been presented for each census since 1850. The term "dwelling" as used in 1930 (and earlier) is comparable with the term "residential structure," as used in the 1940 census, though the number of structures shown in 1940 includes entirely vacant structures, which were not included in the earlier censuses.

The classification of homes by tenure is available for 1890 and succeeding census years. The number of owned homes that were encumbered was shown for each census from 1890 to 1920. Statistics of families classified by color of head have been published for each census year from 1890 to the present, except for 1910. It may be noted that the 1930 classification (as published in 1930) is not strictly comparable with the 1940 statistics because the figures for white families for 1930 excluded Mexicans. However, the 1930 figures by color which are shown in table 3 of the present summary have been revised in accordance with the 1940 definition; the revised figures for States and all other areas for which data are available will appear in later publications.

The reports of the Census of Agriculture for 1920 and 1930 indicate the number of farm operators' dwellings that were lighted by electricity and the number with water piped into the dwelling; the 1930 reports also show the number with water piped into a bathroom. These figures are only roughly comparable with the corresponding figures for rural-farm dwelling units in 1940 because the data from the Farm census represent the homes of farm operators only, whereas the 1940 figures include all dwelling units on farms, including the homes of farm laborers and persons engaged in nonfarm occupations, as well as those of farm operators. On the other hand, the statistics obtained in the Farm census include urban-farm dwelling units, while the 1940 data for Housing are limited to rural-farm dwelling units.

Urban and rural areas.—Housing characteristics for the United States and for each State are presented separately for the urban, rural-nonfarm, and rural-farm areas that have been established for the 1940 Census of Population.

The urban area is made up for the most part of cities and other incorporated places having 2,500 inhabitants or more, places of this type constituting about 96 percent of the urban places in the United States. A second type is limited to the States of New Hampshire, Massachusetts, and Rhode Island, in which States it is not the practice to incorporate as municipalities places of less than 10,000. This type is made up of towns (townships) in which there is a village or thickly settled area having 2,500 inhabitants or more and comprising, either by itself or when combined with other villages within the same town, more than 50 percent of the total population of the town. This type of urban places comprised, in 1940, 7 towns in New Hampshire, 83 towns in Massachusetts, and 12 towns in Rhode Island. A third type of urban places is made up of townships and other political subdivisions (not incorporated as municipalities, nor containing any areas so incorporated) with a total population of 10,000 or more and a population density of 1,000 or more per square mile. Under the special rule establishing this type, urban classification was given in 1940 to places distributed as follows: 4 towns in Connecticut, 1 town in New York, 12 townships in New Jersey, 11 townships in Pennsylvania, 2 election districts in Maryland, 1 county (which had no minor civil divisions) in Virginia, 1 militia district in Georgia, and 1 township in California.

Rural-nonfarm dwelling units.—Rural-nonfarm dwelling units are those located outside the boundaries of urban places but not on farms. This group comprises dwelling units in a wide variety of locations, ranging from isolated nonfarm homes in the open country to unincorporated areas suburban to a large city. Furthermore, as between one section of the country and another, the general characteristics of this area are much less uniform than are those of either the urban or the rural-farm area. In some States the rural-nonfarm area consists mainly of small manufacturing villages or of unincorporated suburban areas; in other States it may consist mainly of mining settlements; and in still other States, especially some agricultural States, it is made up largely of small trade centers.

Rural-farm dwelling units.—Rural-farm dwelling units are those located on farms outside urban places. Dwelling units on farms within the boundaries of urban places are included in the totals for the urban places. Rural-farm dwelling units, however, represent about 99 percent of all farm dwelling units, the number of farms located in urban territory being, in most States, very small. In a few States, however, especially in New Hampshire, Massachusetts, and Rhode Island, a considerable fraction of the total number of urban places consists of entire towns (townships) classified as urban (type 2, as indicated above); these urban places contain more territory not thickly settled (and therefore available for farming) than do the urban places in most other States. There are also decided differences among the States with respect to the amount of open country included within the boundaries of cities.

Metropolitan districts.—A metropolitan district has been set up for use in the 1940 Censuses of Population and Housing in connection with each city of 50,000 or more, two or more such cities sometimes being in one

district (see map on p. 11). The general plan is to include in the district, in addition to the central city or cities, all adjacent and contiguous minor civil divisions or incorporated places having a population of 150 or more per square mile. In some metropolitan districts a few less densely populated contiguous divisions are included on the basis of special qualifications. Only a portion of a minor civil division is included if the minor civil division has a large area and the principal concentration of population is in a small section near the central city with the more remote sections being sparsely settled. A metropolitan district is thus not a political unit but rather an area including all the thickly settled territory in and around a city or group of cities. It tends to be a more or less integrated area with common economic, social, and, often, administrative interests.

Housing data for each urban place and for the minor civil divisions included in the metropolitan districts are shown in the sections for each State. Where a metropolitan district includes territory in more than one State, the statistics for the entire district appear in the section for the State that contains the central city (or the largest central city) of the district. Maps of the metropolitan districts have been published in Volumes I and II of the Reports on Population.

STATISTICS FOR THE UNITED STATES

Number of dwelling units.—Table 1 shows the number of occupied and vacant dwelling units in urban and rural areas of continental United States in 1940.

TABLE 1.—DWELLING UNITS BY OCCUPANCY STATUS, FOR THE UNITED STATES, URBAN AND RURAL: 1940

OCCUPANCY STATUS	United States	Urban	Rural-nonfarm	Rural-farm

Vacant, not for sale or rent	1.6	0.5	5.0	1.3

A dwelling unit is defined as the living quarters occupied by, or intended for occupancy by, one household. A dwelling unit may be a detached house; a tenement, flat, or apartment in a larger building (an apartment house, an apartment hotel, or a section of a hotel devoted entirely to apartment rather than transient use); or a room in a structure primarily devoted to business or other nonresidential purposes. It may be a superintendent's living quarters in a public building, such as a courthouse or library; a watchman's living quarters in a factory, store, or warehouse; a chauffeur's living quarters in a garage; or a tourist cabin, trailer, railroad car, boat, tent, etc., if occupied by persons having no other place of residence.

All occupied dwelling units, and vacant dwelling units in habitable structures, seasonal as well as ordinary, were included in the canvass for housing data, except the following special types of dwelling places: Hotels for transient guests, and similar places maintained by the Y. M. C. A. or kindred organizations; missions, cheap one-night lodginghouses; dormitories for students; nurses' homes; educational or religious institutions; military institutions; penal institutions; soldiers' homes; homes for orphans and for the aged, blind, deaf, infirm, or incurable; Civilian Conservation Corps camps; Coast Guard stations; and lumber camps, or railroad or other construction camps, in which the workers live in a common barracks. These special types of dwelling places were not considered as part of the housing market, and in general their exclusion is consistent with the exclusion of quasi-family groups from the statistics of private families, as in the 1930 report on Families. Dwelling units occupied by the families of officials or employees of such places (except on military reservations) are included in the Housing census if they constitute separate living quarters in a detached house or in a multifamily structure containing no persons enumerated as part of the institutional population. In the case of Government-owned dwelling units in United States military reservations, neither private living quarters for families of officers or employees nor barracks for enlisted men are included in the data presented for housing.

Occupancy status.—Dwelling units are classified as occupied if they were occupied at the time of enumeration by households enumerated in the Population census at their usual place of residence. The group "vacant, for sale or rent" includes all vacant dwelling units available for occupancy, even though they were not actually offered in the housing market at the time of enumeration. Vacant dwelling units in buildings under construction are excluded; those in "boarded-up" structures are excluded if they were beyond repair. The percentage of all dwelling units that were vacant and for sale or rent on April 1, 1940, as shown in table 1, represents what is commonly referred to as the vacancy ratio. The relatively small group classified as "vacant, not for sale or rent" represents chiefly dwelling units that were neither occupied nor available for sale or rent at the time of enumeration because they were being held for absent households. While many of these are for seasonal use only, others are the usual place of residence of households for which population data were enumerated elsewhere and reallocated to the home district. The dwelling units occupied temporarily by nonresident households also are included in this category.

Occupied units or households.—Since a dwelling unit, as the term is used in the census, is the living quarters occupied by one household, the number of occupied dwelling units corresponds closely to the number of families and may be compared with the number of private families returned in the 1930 census. Such a comparison shows that between 1930 and 1940 the number of families in the Nation increased by 16.6 percent, the increase being considerably greater in the urban and rural-nonfarm areas than in the rural-farm (table 2).

Tenure.—The proportion of home ownership is shown for the total, urban, and rural areas of the United States in table 2, together with comparative data for 1930. A dwelling unit is classified as owner-occupied if it was owned either wholly or in part by the head of the household or by some related member of his family living in the dwelling unit. All other occupied units are classified as tenant-occupied whether or not cash rent was actually paid for the living quarters. Rent-free quarters and living accommodations received in payment for services performed are thus included with the tenant-occupied units.

Color of occupants.—Occupied dwelling units are classified by color of head of household, according to the definition used in the 1940 Census of Population. The two major classifications, "white" and "nonwhite," are presented in table 3. The classification "white" includes persons of Mexican birth or ancestry who were not definitely Indian or of other nonwhite race. "Nonwhite" comprises Negro, Indian, Chinese, Japanese, Filipino, Hindu, Korean, or other nonwhite race, and persons of mixed white and nonwhite parentage.

Dwelling units reporting.—All dwelling units are classified by occupancy and tenure, and all occupied dwelling units are classified by color of occupants. The corresponding percentage distributions shown for these items are based on all dwelling units and all occupied units, respectively. For other subjects, the percentages shown are based on the dwelling units for which the specific characteristics are reported, that is, the total shown as "number reporting."

State of repair and plumbing equipment.—Table 4 shows the number of dwelling units with and without a private bath for dwelling units in structures needing major repairs and for those in structures not needing major repairs.

Instructions to enumerators specified that structures were to be reported as "needing major repairs" when parts of the structure, such as floors, roof, plaster, walls, or foundations required repairs or replacements, the continued neglect of which would impair the soundness of the structure and create a hazard to its safety as a place of residence. The category "with private bath" comprises only those dwelling units which were specifically reported as having running water in the dwelling unit, and a bathtub or shower and flush toilet in the structure for the exclusive use of the household occupying the dwelling unit.

Persons per room.—The number of persons per room, used as an index of crowding, was computed for each occupied dwelling unit by dividing the number of persons in the household by the number of rooms in the dwelling unit. The number of occupied units having more than one and one-half persons per room is shown in table 5.

TABLE 5.—OCCUPIED DWELLING UNITS BY PERSONS PER ROOM, FOR THE UNITED STATES, URBAN AND RURAL: 1940

PERSONS PER ROOM	United States	Urban	Rural-nonfarm	Rural-farm
Occupied dwelling units	**34, 854, 532**	**20, 596, 500**	**7, 151, 473**	**7, 106, 559**

1.50 or less	91.0	94.3	88.9	83.9
1.51 or more	9.0	5.7	11.1	16.1

All persons enumerated in the Population census as members of the household (including lodgers, servants, and other unrelated persons having no other usual place of residence) are counted in determining the number of persons who occupy each dwelling unit. The number of rooms in the dwelling unit includes all rooms available for use as living quarters throughout the year. Bathrooms, closets, pantries, halls, screened porches, and unfinished rooms in the basement or attic are not counted as rooms.

Residential structures.—A residential structure is a building which contains one or more dwelling units. Each single-family or two-family house, apartment house, or other residential building constitutes a separate structure. Each house in a block of three or more "row" houses is counted as a separate structure, although a building which contains only two attached dwelling units constitutes one two-family structure. A building designed for business or other nonresidential uses was not enumerated unless it contained one or more dwelling units.

Table 6 shows the number of residential structures and the number of dwelling units per structure in urban and rural-nonfarm areas. The count of residential structures in the rural-farm area was not tabulated for this volume but is shown in Volume II of the Reports on Housing.

TABLE 6.—URBAN AND RURAL-NONFARM DWELLING UNITS AND RESIDENTIAL STRUCTURES, FOR THE UNITED STATES: 1940

AREA	Dwelling units	Residential structures	Dwelling units per structure
Urban and rural-nonfarm	**29, 683, 189**	**21, 781, 550**	**1.36**

Rural-nonfarm	8, 066, 837	7, 514, 172	1.07

Contract or estimated rent.—The average monthly rent or rental value of all dwelling units in urban and rural-nonfarm areas is shown in table 7. This average was obtained by dividing the total amount of rent or estimated rental value reported by the number of dwelling units for which the items were reported. The enumerator was instructed to report for each tenant-occupied nonfarm dwelling unit the monthly contract rent, or, if no cash rent was paid, the estimated monthly rental value based on rents for similar dwelling units in the neighborhood; for each owner-occupied nonfarm dwelling unit, the owner's estimate of its monthly rental value; and for each vacant unit, the rent asked or the estimated rental value. The rental reported for a vacant seasonal dwelling unit represents the actual or estimated monthly amount charged for the unit during the portion of the year it is generally occupied.

Mortgage status.—The mortgage data presented in table 8 relate to owner-occupied nonfarm dwelling units in structures without business and containing not more than four dwelling units. Such a dwelling unit is classified as mortgaged if there is an indebtedness in the form of a mortgage, a deed of trust, or a land contract that is secured by it or by the property of which it is a part. Statistics relating to mortgaged farm properties are presented in reports of the Census of Agriculture.
