Total population and distribution by classes: 1850–1920	24
Color or race, nativity, and parentage, by states: 1920 and 1910	25
Foreign-born population, by states: 1920 and 1910	26
Negro population, by states: 1920 and 1910	26
Color or race, nativity, and parentage, for cities having, in 1920, 100,000 inhabitants or more: 1920 and 1910	27

TABLES.

UNITED STATES.

1. Color or race, for the United States: 1790–1920	29
2. Increase, by color or race, for the United States: 1790–1920	29
3. Increase, by nativity of total population and by nativity and parentage of white population, for the United States: 1850–1920	29
4. Nativity and parentage of total population and of each color or race class, for the United States: 1850–1920	30

DIVISIONS AND STATES.

5. Color or race, nativity, and parentage, by divisions and states: 1920	31
6. Increase, by color or race, nativity, and parentage, by divisions and states: 1910–1920	32
7. Per cent distribution of total population by color or race, nativity, and parentage, and of white population by nativity and parentage, by divisions and states: 1920	33
8. White and Negro population, 1920, 1910, and 1900, and per cent Negro, 1850–1920, by divisions and states	34
9. Negro population, distinguished as black or mulatto, 1920, 1910, and 1890, with per cent mulatto, 1920, 1910, 1890, 1870, 1860, and 1850, by divisions and states, and for cities having, in 1920, more than 50,000 Negroes	35
10. Native and foreign-born population, 1920, 1910, and 1900, and per cent foreign born, 1850–1920, by divisions and states	36
11. Indians, Chinese, Japanese, and "all other," by divisions and states: 1920, 1910, and 1900	37
12. Color or race, nativity, and parentage, with decennial increase, by divisions and states: 1920, 1910, and 1900	38

PRINCIPAL CITIES.

13. Color or race, nativity, and parentage, for cities having 100,000 inhabitants or more: 1920	47
14. Increase, by color or race, nativity, and parentage, for cities having, in 1920, 100,000 inhabitants or more: 1910–1920	48
15. Per cent distribution of total population by color or race, nativity, and parentage, and of white population by nativity and parentage, for cities having 100,000 inhabitants or more: 1920	49
16. Color or race, nativity, and parentage, with decennial increase, for cities having, in 1920, 100,000 inhabitants or more: 1920, 1910, and 1900	50
17. Color or race, nativity, and parentage, for cities having, in 1920, from 25,000 to 100,000 inhabitants: 1920, 1910, and 1900	60
18. Indian, Chinese, and Japanese population, for cities having, in 1920, 25,000 inhabitants or more: 1920, 1910, and 1900	75
19. Per cent Negro in total population, for selected cities: 1920, 1910, and 1900	77

URBAN AND RURAL.

20. Color or race, nativity, and parentage, for urban and rural communities, by divisions and states: 1920, 1910, and 1900	79
21. Per cent of population in urban communities, by divisions and states: 1920, 1910, and 1900	88
22. Indians, Chinese, and Japanese in urban and rural communities, by divisions and states: 1920	89
23. Color or race, nativity, and parentage, for urban and rural communities and for each class of urban places, by divisions: 1920, 1910, and 1900	90
24. Color or race, nativity, and parentage, for urban and rural communities and for each class of urban places, by states: 1920	94

CHAPTER I.—COLOR OR RACE, NATIVITY, AND PARENTAGE.

INTRODUCTION.

This chapter presents statistics relative to color or race, nativity, and parentage of the population of the United States, exclusive of outlying possessions, as returned at the Fourteenth Decennial Census, with comparative figures for prior censuses. Detailed statistics regarding the population of all the outlying possessions except the Philippines and the Virgin Islands[1] are given in the reports for those possessions, which have been published in the form of separate bulletins and as sections of Volume III of the Fourteenth Census reports.

The classification by color or race generally distinguishes six groups, namely, white, Negro, Indian, Chinese, Japanese, and "all other." In classifying the population by nativity all persons born in the United States or in any of the outlying possessions are regarded as native and all other persons as foreign born. The classification by parentage includes three groups, as follows: (1) Native parentage—both parents born in the United States or in any of the outlying possessions; (2) foreign parentage—both parents born outside of the United States or outlying possessions; (3) mixed parentage—one parent native and the other foreign born.

The distinction as to parentage is generally confined to the native white population, so that in most of the tables there are six principal classes: (1) Native whites of native parentage; (2) native whites of foreign parentage; (3) native whites of mixed parentage; (4) foreign-born whites; (5) Negroes; and (6) all others. The last-named group is frequently omitted from the tables, as it comprises radically different subclasses and yet in the aggregate is unimportant in most parts of the United States. In tables where the numbers are important the Indians, Chinese, and Japanese are shown separately.

UNITED STATES AS A WHOLE.

Tables 1 to 4 (pp. 29 and 30) present statistics relating to the United States as a whole.

Correction for 1870.—The corrected figures for 1870 in Table 1 and for the decades 1860–1870 and 1870–1880 in Table 2 are based on estimates of the true population in 1870, the census taken in that year having been generally deficient in the Southern states. The number of omissions in these states in 1870 is estimated to have been 1,260,000, comprising 748,000 whites and 512,000 Negroes. (See Reports of the Eleventh Census, Population, Part I, pp. xi, xii, and xvi.)

White population.—The proportion of whites in the total population, which was approximately four-fifths in 1790, has increased at each succeeding census, except for an insignificant decrease in 1810 as compared with 1800. (See Table 1.) The increase during the first 40 years was much slower, however, than that during the remainder of the period covered by the table.

Accepting the estimate for 1870 as approximately correct, each decade since 1890, except the decade 1910–1920, has shown for the white population a numerical increase greater than that for the decade immediately preceding; and the percentage of increase for the white population has exceeded that for the Negro population in every decade since 1810.

In considering the growth of the white population it must be kept in mind that in the case of only one of the four nativity and parentage classes is the increase due in any measure to the excess of births over deaths within the class itself. The number of natives of native parentage is increased in part by the children born to natives of native parentage and in part by the children of the natives of foreign or of mixed parentage; the number of natives of mixed parentage is increased by the children of intermarriages between the native and the foreign born; the number of natives of foreign parentage, by the children born to immigrants after their arrival in this country; and the number of foreign born, by immigration. During any given period, therefore, the increase in the number of natives of native parentage is the sum of (1) the natural increase within that class, due to excess of births over deaths, and (2) the number of children born to natives of foreign or mixed parentage; the increase in the number of natives of mixed parentage is the excess of births from marriages between natives and immigrants over deaths among natives of mixed parentage, and is, in general, proportional to the number of mixed marriages; the increase in the number of natives of foreign parentage is the excess of the number of children born in the United States to foreign-born parents over the number of deaths among natives of foreign parentage;

[1] These two possessions were not enumerated in 1920, a census of the Philippines having been taken by the Philippine Government as of December 31, 1918, and a special census of the Virgin Islands having been taken by the Census Bureau as of November 1, 1917.

and the increase in the number of foreign born is the excess of net immigration over the number of deaths among the foreign born. Of the four classes of whites, therefore, the natives of native parentage constitute the only one whose increase is affected in any degree by its own reproductivity, since the children born in this country to each of the other classes belong to a class different from that to which their parents belong (except that in some cases one parent of a native of mixed parentage is also a native of mixed parentage). While the increase in the number of native whites of native parentage must, so long as there is any element of foreign birth or parentage in the population, necessarily exceed the natural increase by excess of births over deaths within this class, the numerical increase of any of the other classes may or may not exceed the natural increase which would result if the children were included in the same class with the parents. The numerical increases within the several nativity and parentage classes, therefore, bear no specific relationship to the natural increase.

It is possible to estimate the natural increase of the white population between 1910 and 1920 by subtracting from the total increase in that element the excess of white immigration over white emigration plus the estimated excess of births over deaths in the families of white immigrants arriving in this country during the decade. The excess of white immigration over white emigration between April 15, 1910, and January 1, 1920, was approximately 3,350,000. The excess of births over deaths in the families of white immigrants who arrived in this country between 1910 and 1920 may be roughly estimated at 250,000. Thus the total estimated increase in the white population due to excess of immigration over emigration between 1910 and 1920 was 3,600,000. Subtracting this number from the total increase in the white population during the decade, 13,088,958, leaves approximately 9,490,000 as the natural increase which presumably would have taken place had there been no immigration nor emigration during the decade. This represents a rate of 11.6 per cent. The corresponding increase in the Negro population, which was affected to only a slight extent by immigration and emigration, was 635,368, or 6.5 per cent.

Negro population.—The distinction between white and colored is the only racial classification which has been carried through all the 14 censuses. There is some doubt whether the small number of taxed Indians were counted with the white or with the colored population prior to 1860.

Accepting as substantially correct the estimate for 1870 (see p. 15), the proportion of Negroes in the total population has decreased at each census since 1810. Attention should be called to the pronounced fluctuations in the indicated rates of increase for the Negroes between 1880 and 1910. (See Table 2.) Again accepting the estimated figures for 1870, the decennial rate of increase for this class of the population, as shown by the returns for succeeding censuses, dropped from 22 per cent during the decade 1870–1880 to 13.5 per cent between 1880 and 1890, rose to 18 per cent during the following decade, and declined to 11.2 per cent between 1900 and 1910. Such abrupt changes in the growth of a class of the population which is not materially affected by immigration seem highly improbable and practically force the conclusion that the enumeration of Negroes in 1890 was deficient.

The number of omissions at the census of 1890 can not be accurately determined, but on the assumption that the decline in the rate of increase from the decade 1870–1880 through the next two decades was constant, the rates for the last five decades would be as follows: [1]

1870–1880	22.0 per cent.
1880–1890	17.9 per cent.
1890–1900	13.8 per cent.
1900–1910	11.2 per cent.
1910–1920	6.5 per cent.

Such data as are available indicate that the decline in the rate of increase for the Negro population is due to a considerable falling off in the birth rate, while the death rate has not changed to so great an extent. The greater part of the Negro population is in states which do not maintain adequate birth-registration systems, and a considerable proportion is also outside the death-registration area; but such birth and mortality statistics for the Negroes as are believed to be trustworthy have been carefully examined and compared with the corresponding statistics for the white population. There is no question that the birth rates for both races have been declining during recent decades, and in the case of the Negroes this decline has not been offset by a decline in the death rate to so great an extent as in the case of the white population.

Black and mulatto population.—Considerable uncertainty necessarily attaches to the classification of Negroes as black and mulatto, since the accuracy of the distinction made depends largely upon the judgment and care employed by the enumerators. Moreover, the fact that the definition of the term "mulatto" adopted at different censuses has not been entirely uniform doubtless affects the comparability of the figures in some degree. At the census of 1920 the instructions were to report as "black" all full-blooded Negroes and as "mulatto" all Negroes having some proportion of white blood. The instructions were substantially the same at the censuses of 1910 and 1870, but the term "black" as employed in 1890 denoted all persons "having three-

[1] The undercount of 1890 is discussed in more detail on pages 27 and 28 of the bureau's report, "Negro Population in the United States, 1790–1915."

fourths or more black blood," other persons with any proportion of Negro blood being classed as "mulattoes," "quadroons," or "octoroons." In 1900 and in 1880 no classification of Negroes as black or mulatto was attempted, and at the censuses of 1860 and 1850 the terms "black" and "mulatto" appear not to have been defined.

According to the census returns, the proportion of mulattoes in the Negro population increased from 12 per cent to 15.2 per cent during the 20-year period from 1870 to 1890 and continued to increase to 20.9 per cent during the following 20-year period, but decreased to 15.9 per cent during the 10-year period from 1910 to 1920. Thus on the face of the returns the proportion of mulattoes in 1920, although nearly one-fourth smaller than in 1910, was nevertheless slightly larger than that in 1890. (See Table 9.)

It is likely that the explanation of the relatively large proportion of mulattoes shown for 1910 may be found in part in the fact that a larger proportion of the Negro population was canvassed by Negro enumerators in that year than in any other census year. It is probable that the practice of returning as black those mulattoes who had but a small admixture of white blood was greater among the white than among the Negro enumerators. Moreover, the Negro enumerators may have taken somewhat greater care than did the white enumerators to ascertain whether Negroes whom they were not able to interview personally were blacks or mulattoes. The difference between the proportions mulatto in 1920 and in 1910, as shown by the returns, can not, however, be accounted for as resulting wholly or mainly from these causes.

In order to ascertain the probable effect of the employment of Negro enumerators in 1910 upon the proportion of the Negro population returned as mulattoes in that year as compared with 1920, a special tabulation was made for the 16 Southern states and the District of Columbia and for 10 Northern states—Massachusetts, New York, New Jersey, Pennsylvania, Ohio, Michigan, Indiana, Illinois, Missouri, and Kansas—in all of which a part of the Negro population was canvassed by Negro enumerators in 1910. The total Negro population of the area covered was 10,303,399 in 1920 and 9,714,770 in 1910, or between 98 and 99 per cent of the total Negro population of the United States in each year. The number of enumeration districts in this area in which Negro enumerators were employed in 1910 was 2,055. This special tabulation brought out the following facts:

Considering as one group those counties in each of which three or more Negro enumerators were employed in 1910, the percentage mulatto in the Negro population decreased from 21.8 in that year to 16.1 in 1920; considering as another group those counties in each of which one or two Negro enumerators were employed, the percentage mulatto decreased from 21 to 14.2; and considering as a third group those counties in which white enumerators only were employed, the percentage decreased from 19.6 to 15.9. Thus the decrease in the counties in which white enumerators only were employed in 1910 was nearly two-thirds as great as the decrease in those counties in each of which three or more Negro enumerators were employed in that year.

Moreover, in every one of the 26 states covered by the comparison a decrease in the percentage mulatto between 1910 and 1920 is shown for the group of counties in which white enumerators only were employed in 1910, and in a number of cases this decrease was equal to or greater than that for the groups of counties in which Negro enumerators were employed in 1910.

It appears, therefore, that the employment of Negro enumerators in certain counties in 1910 and of white enumerators only in 1920 had some effect in reducing the proportion of mulattoes in the Negro population, as shown by the returns for 1920 in comparison with those for 1910, but that this was not the sole nor principal cause of the indicated decrease.

Indian population.—The census of 1860 was the first at which Indians were distinguished from the other classes, but no enumeration was made of the Indians in Indian Territory or on Indian reservations until 1890. Prior to that time the enumeration of Indians was confined to those found living among the general population of the various states and not in Indian Territory or on reservations. The returns for Indians are subject to some degree of uncertainty because of the practice of treating as Indians all persons having any trace of Indian blood. Such persons in some cases can not be distinguished by their appearance from pure-blooded white persons, and as a result some of them have doubtless been reported as white at one census and as Indian at another, since the enumerators are not always able to interview directly the persons whom they enumerate but are obliged to secure information regarding them from other persons. Moreover, at the census of 1910 a special effort was made to secure a complete enumeration of all persons having any perceptible amount of Indian blood, for the purpose of preparing a special report showing tribal relations, purity of Indian blood, etc.; and it is probable that this resulted in the enumeration as Indians of a considerable number of persons who would ordinarily have been reported as whites. For these reasons the changes indicated by the returns of the last four censuses may not altogether correspond to the facts.

Native and foreign-born population.—The distinction between native and foreign born is of no great significance except for the white population. The proportion foreign born among the Negroes and Indians is

very slight. On the other hand, the proportion native among the other nonwhite races enumerated is small, although materially greater than the proportion foreign born among the Negroes and Indians. Moreover, in the cases of these races the distinction based on nativity has little significance.

The proportion foreign born in the total population increased during the two decades between 1850 and 1870, and alternately decreased and increased from decade to decade during the following 50 years. (See Table 4.) The decline in this proportion between 1910 and 1920 was greater than the change—either increase or decrease—which took place during any preceding decade since 1860.

The rates of increase in the total population and in the native population have declined from decade to decade since 1870. (See Tables 2 and 3.) The foreign-born population has gained in number from census to census, but the rate of increase has fluctuated greatly. The smallness of its increase during the decade 1910–1920 was due to the great reduction in the volume of immigration during the period of the World War, the net additions through immigration during the entire decade having been only a little more than 400,000 in excess of the number of deaths of foreign-born persons.

No corrections of the 1870 figures (see p. 15) have been inserted in Tables 3 and 4. It may be assumed that the omissions in the South at the census taken in that year were almost wholly of native population. Although there undoubtedly may have been a few omissions in the relatively small foreign-born population of the South, they could hardly have been numerous enough to affect the proportions for the country as a whole; but it is evident that the omission of native population would have an appreciable effect upon the proportions native and foreign born in the total population and in the white population and in the rate of increase of the natives. The true percentages native in the total population and in the white population in 1870 were, therefore, slightly larger, and the true percentages foreign were slightly smaller, than those shown (see Table 4); and the true rates of increase between 1860 and 1870 in the total natives and native whites were somewhat larger, while those for the decade 1870–1880 were somewhat smaller, than the rates given (see Table 3).

The statistics as to the nativity of the Chinese (see Table 4) are inaccurate to some extent, for the reason that a considerable number of Chinese report themselves as natives of this country when in fact they are of foreign birth.

In Table 4 both the natives and the foreign born in each color or race class are distributed according to parentage. Naturally, however, this classification has little significance for the foreign born because very nearly all such persons are of foreign parentage. A small number, however, are of mixed parentage, having one parent a native of the United States and the other foreign born.

In Table 4 the population of mixed parentage is further subdivided into two classes, namely, those who had native mothers and foreign-born fathers and those who had native fathers and foreign-born mothers. It may be noted that the former class greatly outnumbers the latter, which is merely a natural result of the fact that among immigrants males outnumber females, and of the further fact that among the male immigrants the proportion unmarried on arrival in this country is abnormally large.

DIVISIONS AND STATES.

Statistics for divisions and states are given in Tables 5 to 12, inclusive.

White and Negro population.—In making use of the statistics for both the white and the Negro population, the defective enumeration in the South in 1870 must be kept in mind (see p. 15); and in considering the growth during the decades 1880–1890 and 1890–1900 the probable incompleteness of the enumeration of Negroes in 1890 should not be overlooked (see p. 16). Significant comparisons between the growth of the white and of the Negro population are, however, afforded by the increases during the past two decades. (See Table 12.) During each of those decades the white population increased more rapidly than the Negro in the three southern divisions, where Negroes are most numerous; in fact, in the East South Central division an increase among the whites between 1910 and 1920 was accompanied by a decrease among the Negroes. Furthermore, between 1910 and 1920 every Southern state except West Virginia showed a greater rate of increase for the white than for the Negro population, or an increase among the whites together with a decrease among the Negroes.

As already stated (see p. 16), the distinction between blacks and mulattoes is not always obvious nor easily drawn, and the classification therefore involves a considerable amount of uncertainty, being necessarily dependent to a large degree upon personal judgment and care exercised by the enumerators. In general, the percentage of mulattoes among Negroes is somewhat larger in the Northern and Western states than in the South, although for some reason the Middle Atlantic division constitutes an exception among the Northern divisions. The proportion of mulattoes decreased between 1910 and 1920 in every geographic division, in every Southern state, and in every Northern or Western state except Vermont, Nebraska, Wyoming, Washington, and Oregon. (See Table 9.)

The following statement shows the Negro population of each of the three geographic sections in 1920,

1910, and 1900, together with the increase during each decade:

SECTION.	NEGRO POPULATION.			INCREASE.			
				1910-1920		1900-1910	
	1920	1910	1900	Number.	Per cent.	Number.	Per cent.
Total	10,463,131	9,827,763	8,833,994	635,368	6.5	993,769	11.2
The South [1]	8,912,231	8,749,427	7,922,969	162,804	1.9	826,458	10.4
The North [2]	1,472,309	1,027,674	880,771	444,635	43.3	146,903	16.7
The West [3]	78,591	50,662	30,254	27,929	55.1	20,408	67.5

[1] South Atlantic, East South Central, and West South Central divisions.
[2] New England, Middle Atlantic, East North Central, and West North Central divisions. The boundary line between the North and the South is formed by the southern boundaries of New Jersey and Pennsylvania, the Ohio River, and the southern boundaries of Missouri and Kansas.
[3] Mountain and Pacific divisions. The West is that part of the country lying beyond the western boundaries of North and South Dakota, Nebraska, Kansas, Oklahoma, and Texas.

Native and foreign-born population.—The census of 1850 was the first at which the classification of the population by nativity was made. The native population includes practically all the Negroes and Indians, the latter having been first completely enumerated at the census of 1890, while the foreign-born population is mainly white but includes most of the Chinese, Japanese, and "all other."

It must be kept in mind in making use of the nativity statistics that unless the foreign-born population of a division or state is constantly recruited by immigration (or by the migration into that division or state of persons who have previously immigrated to the United States) it will decrease, for the reason that its numbers will be continually reduced by death, while the children born in this country to foreign-born parents are additions to the native population.

The only states in which the proportion foreign born in the total population increased between 1910 and 1920 are Delaware, Virginia, Florida, Texas, New Mexico, and Arizona. (See Table 10.) In Virginia the foreign-born element constitutes a very small proportion of the total population, and in Texas, New Mexico, and Arizona the increase was due largely to Mexican immigration. Thus Delaware is the only state in which the proportion foreign born is at all important and in which the increase was due directly or indirectly to European immigration.

Statistics relating to the nativity and parentage of the white population, by divisions and states, are given in Tables 5, 6, 7, and 12.

It may be noted that in every geographic division the native whites of foreign parentage and those of mixed parentage are together more numerous than the foreign-born whites, but the difference is less conspicuous in the New England, Middle Atlantic, and Pacific divisions than elsewhere. (See Table 5.) The relation between the number of foreign-born whites and the number of native whites of foreign or mixed parentage in any division or state depends largely upon the time at which it received its most important accessions from immigration. In the West North Central division, for example, to which immigration during the past three decades has been much less rapid than in earlier years, the native whites of foreign or mixed parentage have shown an increasing preponderance over the foreign-born whites from census to census since 1890, the former group in 1920 being nearly two and one-half times as numerous as the latter; but in the New England and Middle Atlantic divisions, which have been receiving large numbers of immigrants during the past four decades, except during the period of the World War, there is much less disparity between the two classes.

Very great differences appear among the individual states in regard to the composition of the white population; but only in Arizona were the foreign-born whites more numerous than the native whites of foreign or mixed parentage in 1920, due, as stated above, to Mexican immigration, and in no state did they equal in number the native whites of native parentage.

The size of the mixed-parentage and foreign-parentage classes in comparison with each other affords an indication of the extent to which the foreign born have intermarried with the natives. This varies greatly in different sections of the country, but in every division and in every state except North Carolina, Mississippi, and Arkansas the natives of foreign parentage outnumbered those of mixed parentage in 1920. (See Table 5.)

Increase.—In considering Table 6 it should be remembered that the increase in any given class within any one division or state by no means represents the natural growth by excess of births over deaths. Aside from the factors which have already been mentioned as contributing to the growth of the several elements, and particularly the white classes, in the country as a whole (see p. 15), the growth in individual divisions and states is largely affected by interstate migration.

PRINCIPAL CITIES.

Statistics for individual cities are presented in Tables 13 to 19, inclusive. Tables 13, 14, 15, and 16 relate to cities having 100,000 inhabitants or more and correspond to Tables 5, 6, 7, and 12, for divisions and states.

Table 17, for cities having from 25,000 to 100,000 inhabitants, is similar to Table 16 except for the omission of the decennial-increase figures.

Table 18, which gives statistics for the Indian, Chinese, and Japanese population of cities having 25,000 inhabitants or more, corresponds to Table 11, for divisions and states, except that it does not include figures for the "all other" group.

Table 19, which presents statistics for the Negro population of selected cities, corresponds in some measure to Table 8, for divisions and states, but is

narrower in scope. The cities covered by this table are those in which the total population in 1920 was 10,000 or more and in which the Negro population in that year was at least 5,000 or at least 10 per cent of the total population.

Statistics for the black and mulatto population of the eleven cities having more than 50,000 Negro inhabitants in 1920 are presented in Table 9 in connection with the corresponding statistics for divisions and states.

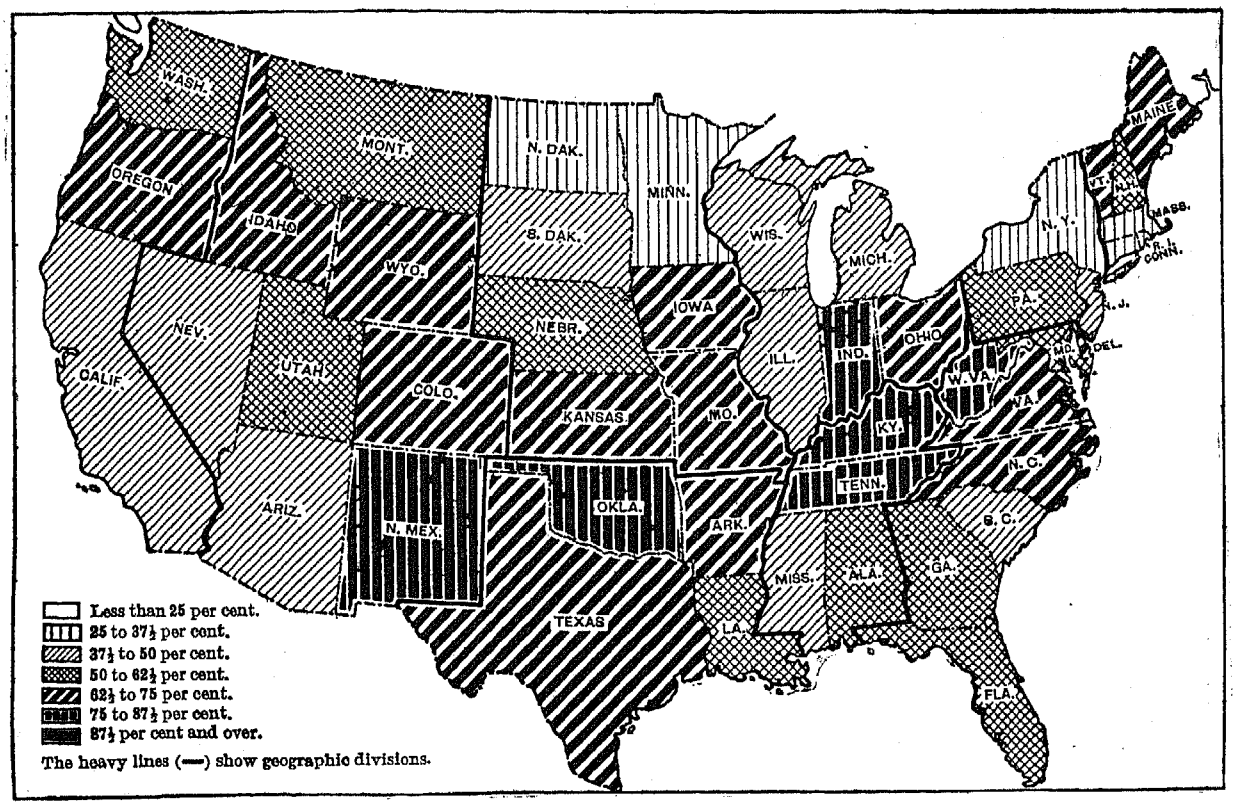
URBAN AND RURAL POPULATION.

Since marked differences exist between urban and rural communities in regard to the color or race, nativity, and parentage of the population, separate statistics for the urban and rural population are given in Tables 20 to 24, inclusive. In Tables 20, 21, and 22 the urban class is not subdivided; in Table 23, for geographic divisions, the urban communities are grouped into five subclasses according to size; and in Table 24, for states, they are grouped into four subclasses according to size. In drawing the distinction between urban and rural population, all incorporated places (and all towns in Massachusetts, Rhode Island, and New Hampshire) having 2,500 inhabitants or more are treated as urban and the remainder of the country as rural.

In Massachusetts and Rhode Island it is not the practice, as in practically all the other states, to incorporate, as separate municipalities, the relatively densely populated portions of "towns" (which are the primary divisions of the counties), and no town as a whole is incorporated as a municipality until it attains a population greatly in excess of 2,500; and in New Hampshire a similar condition exists, although the state contains two incorporated villages, each of which has fewer than 2,500 inhabitants. For this reason those towns having 2,500 or more inhabitants in the three states named are treated as urban, although portions of their areas are rural in character. The urban areas in the three states in question, as classified by the census, thus contain relatively small numbers of inhabitants who in other sections of the country would be segregated as rural. Nevertheless, in most of the Massachusetts, New Hampshire, and Rhode Island towns having 2,500 inhabitants or more by far the greater part of the population resides within the more densely settled areas, so that the proportion classed as urban is not greatly exaggerated by the practice adopted.

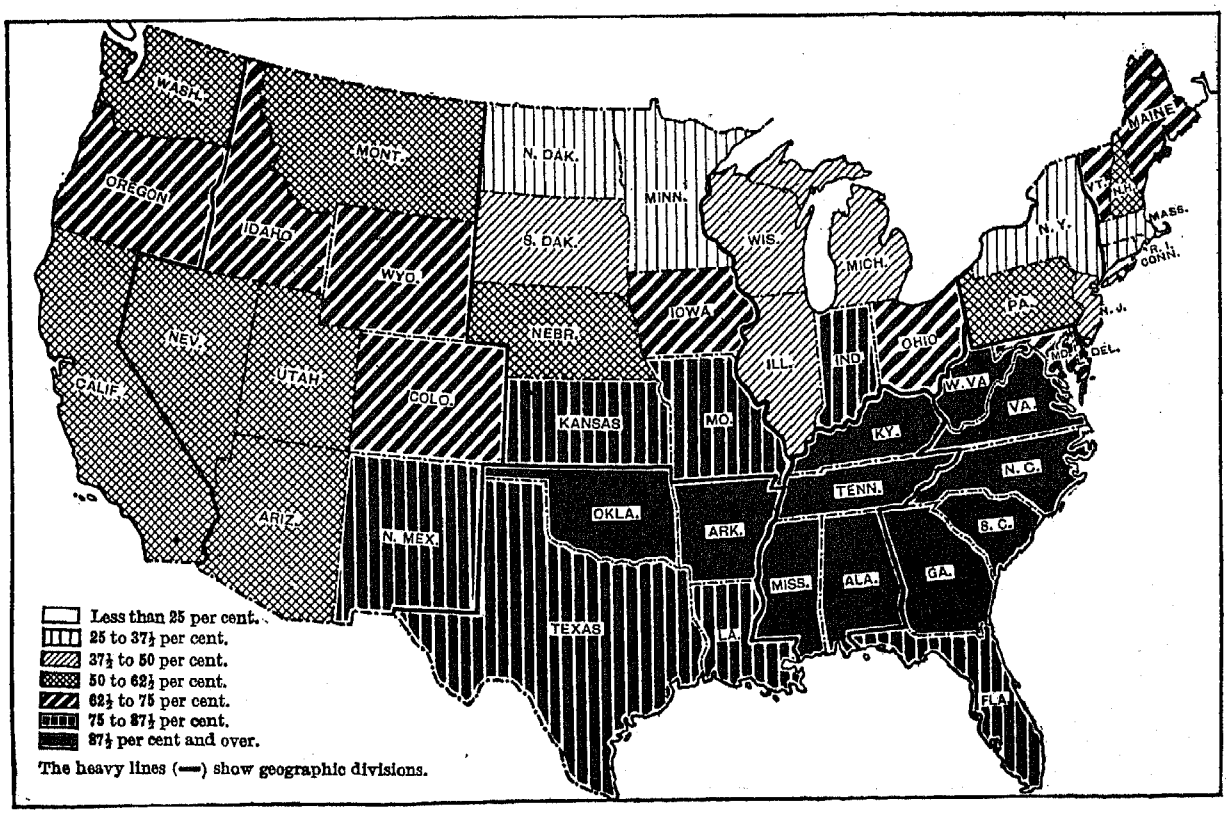
PER CENT OF NATIVE WHITE OF NATIVE PARENTAGE IN TOTAL POPULATION, BY STATES: 1920.

[District of Columbia, 54.7 per cent, not shown separately on the map.]



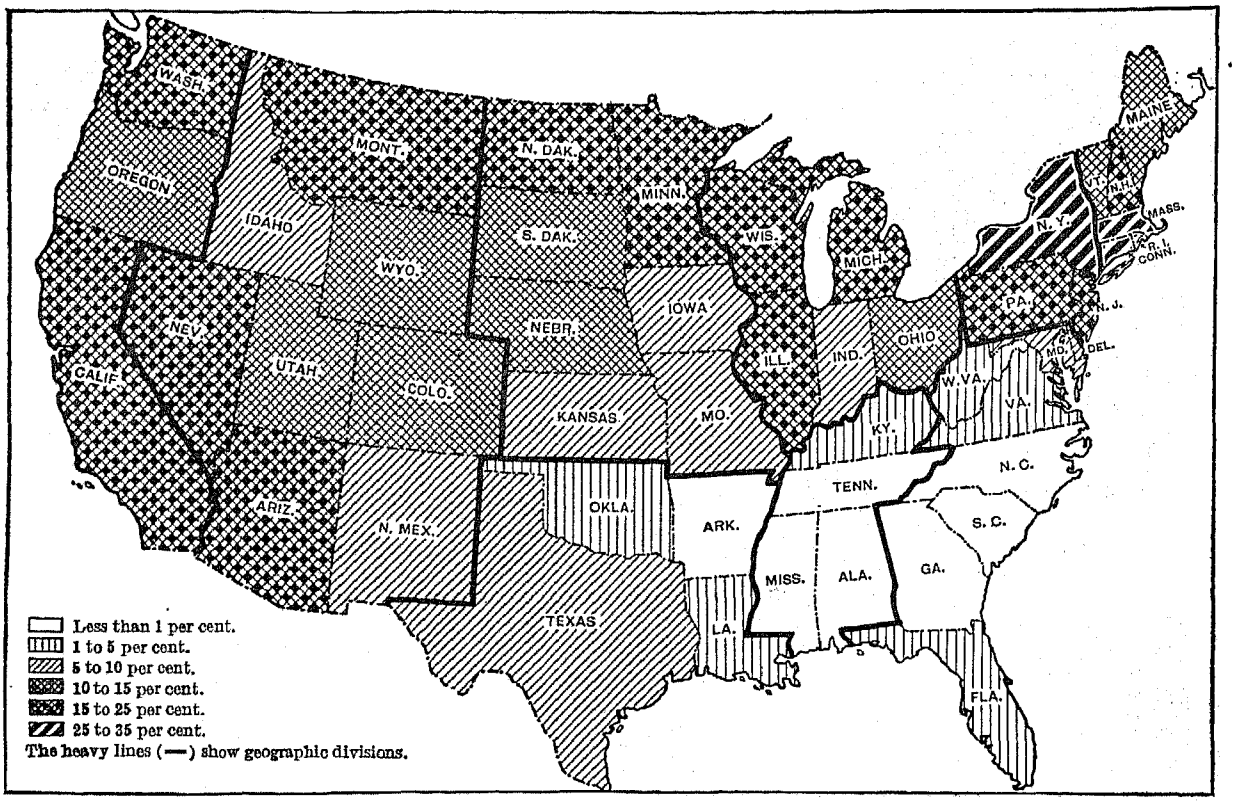
PER CENT OF NATIVE WHITE OF NATIVE PARENTAGE IN WHITE POPULATION, BY STATES: 1920.

[District of Columbia, 73.3 per cent, not shown separately on the map.]



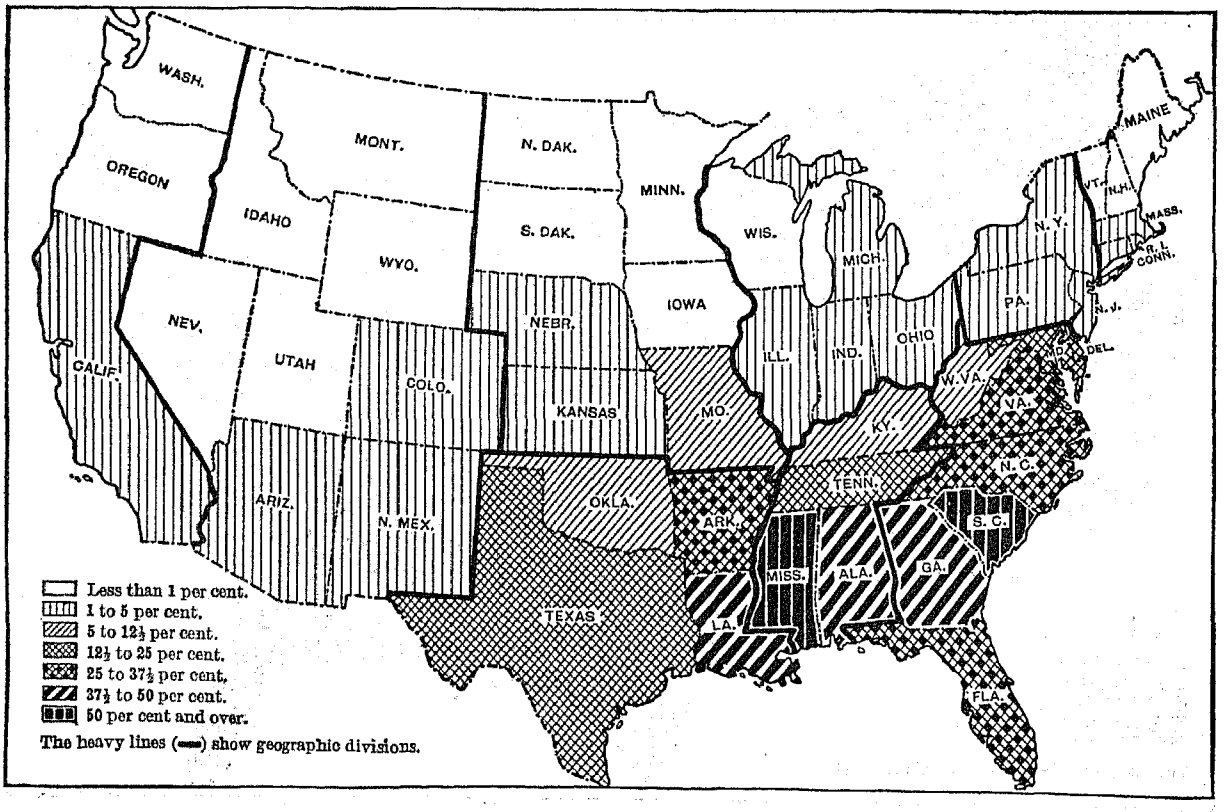
PER CENT OF FOREIGN-BORN WHITE IN TOTAL POPULATION, BY STATES: 1920.

[District of Columbia, 6.5 per cent, not shown separately on the map.]



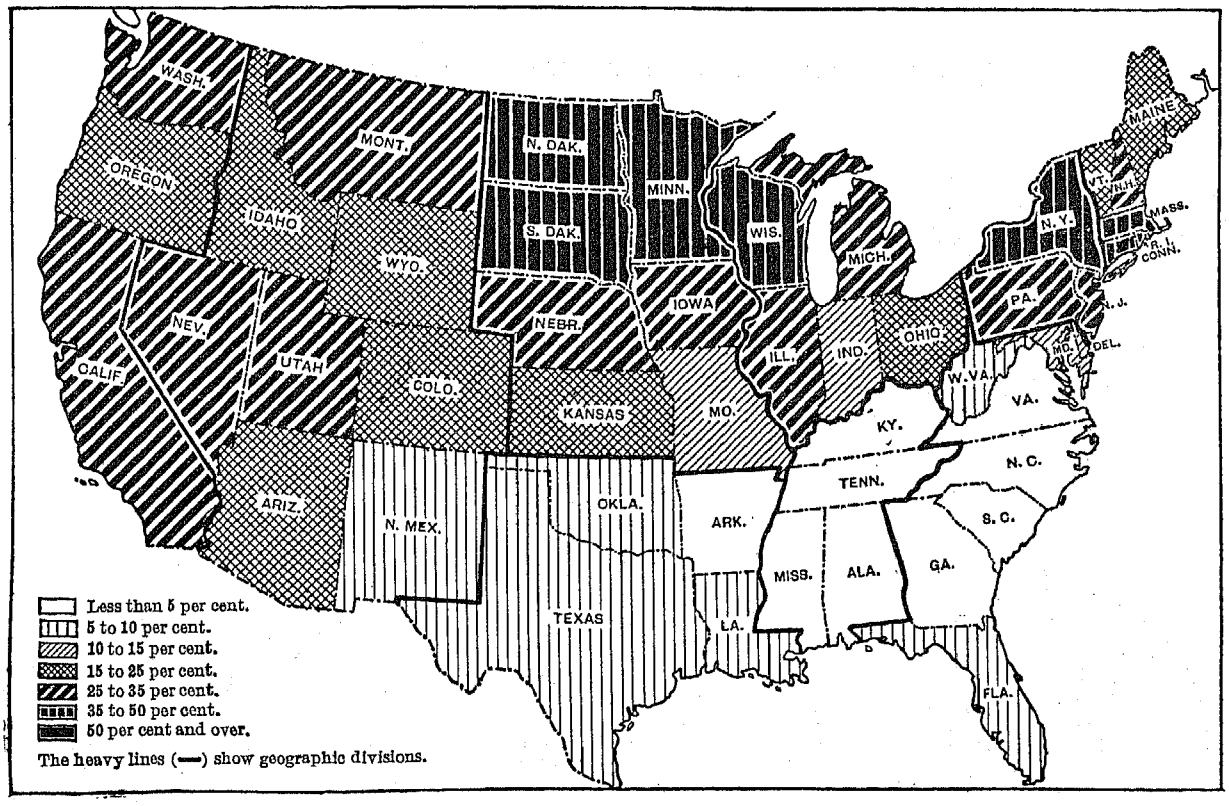
PER CENT OF NEGROES IN TOTAL POPULATION, BY STATES: 1920.

[District of Columbia, 25.1 per cent, not shown separately on the map.]



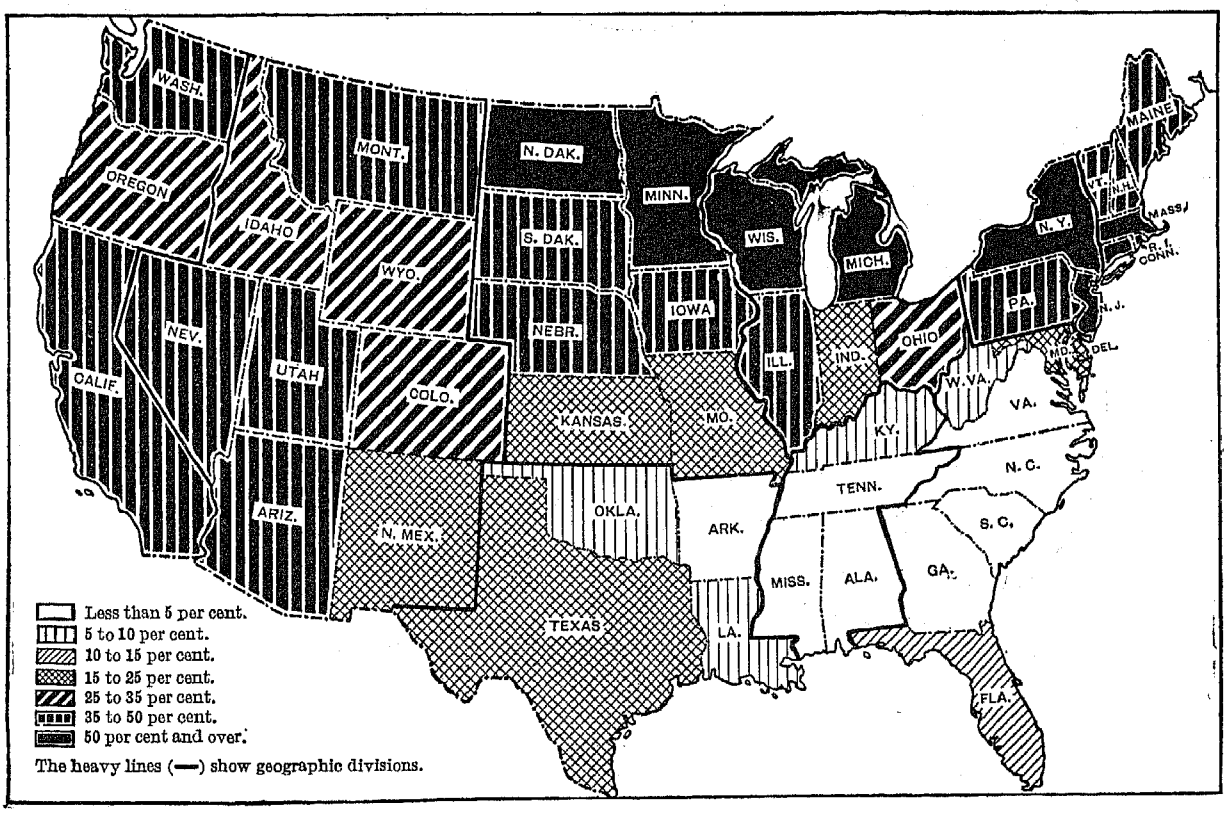
PER CENT OF NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE IN TOTAL POPULATION, BY STATES: 1920.

[District of Columbia, 13.4 per cent, not shown separately on the map.]

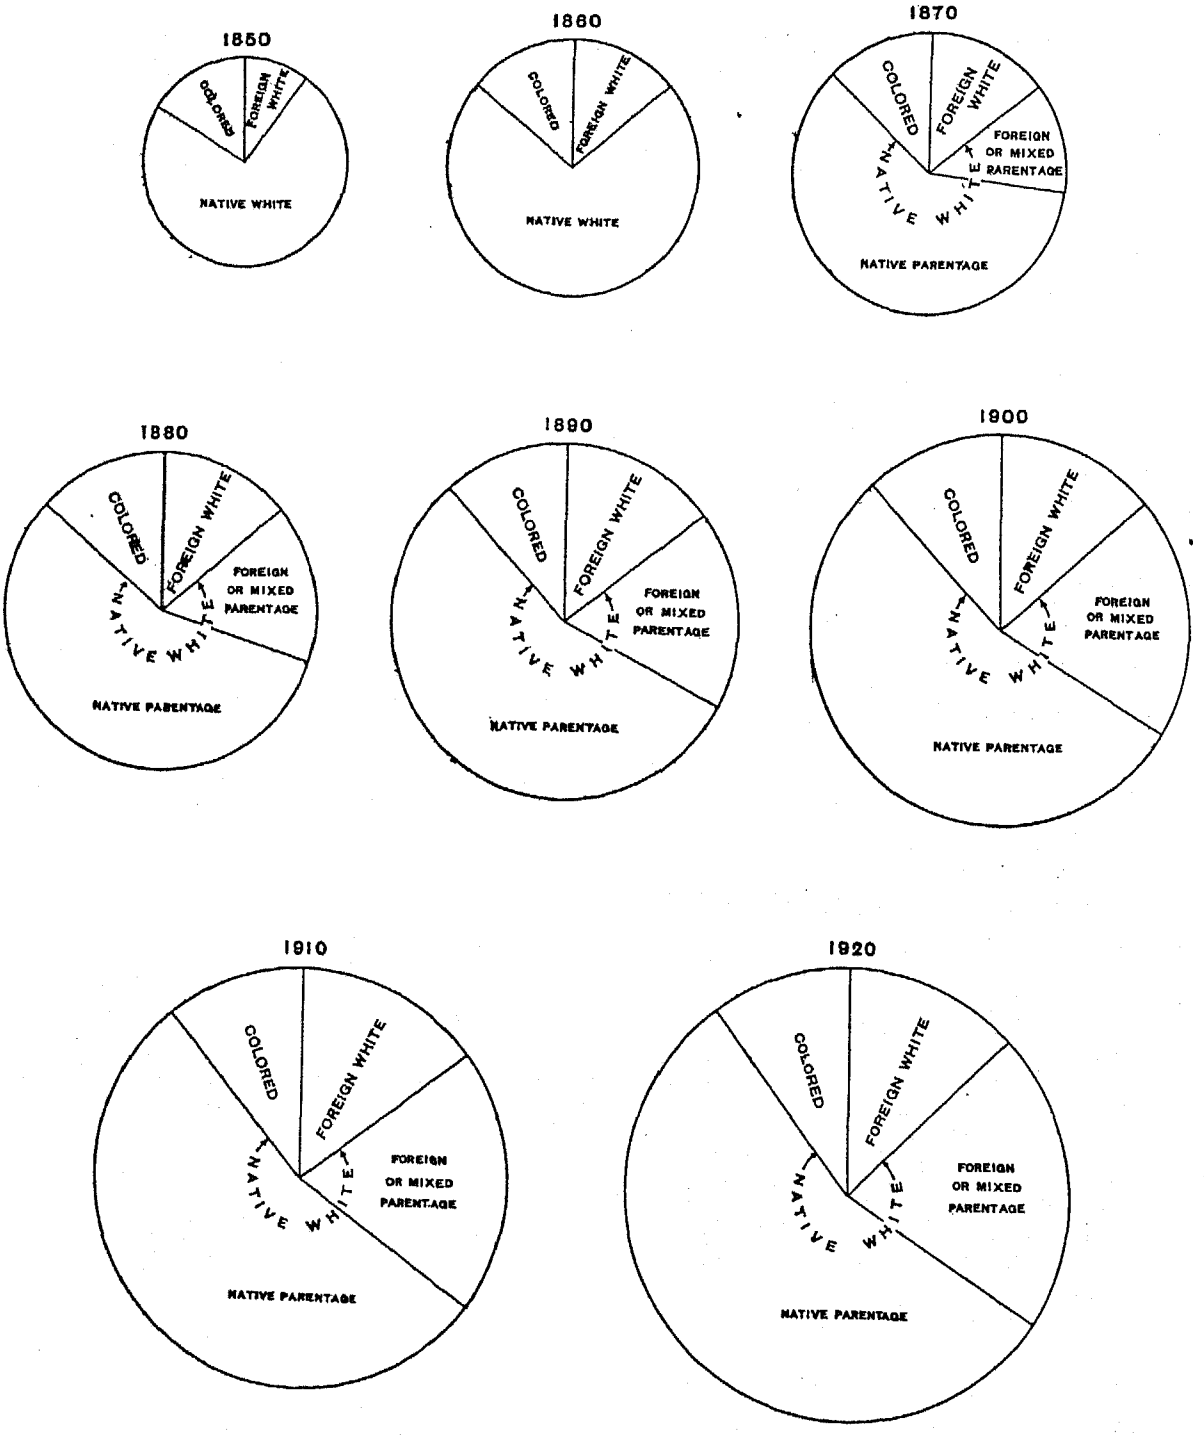


PER CENT OF FOREIGN-BORN WHITE AND NATIVE WHITE OF FOREIGN OR MIXED PARENTAGE COMBINED IN TOTAL POPULATION, BY STATES: 1920.

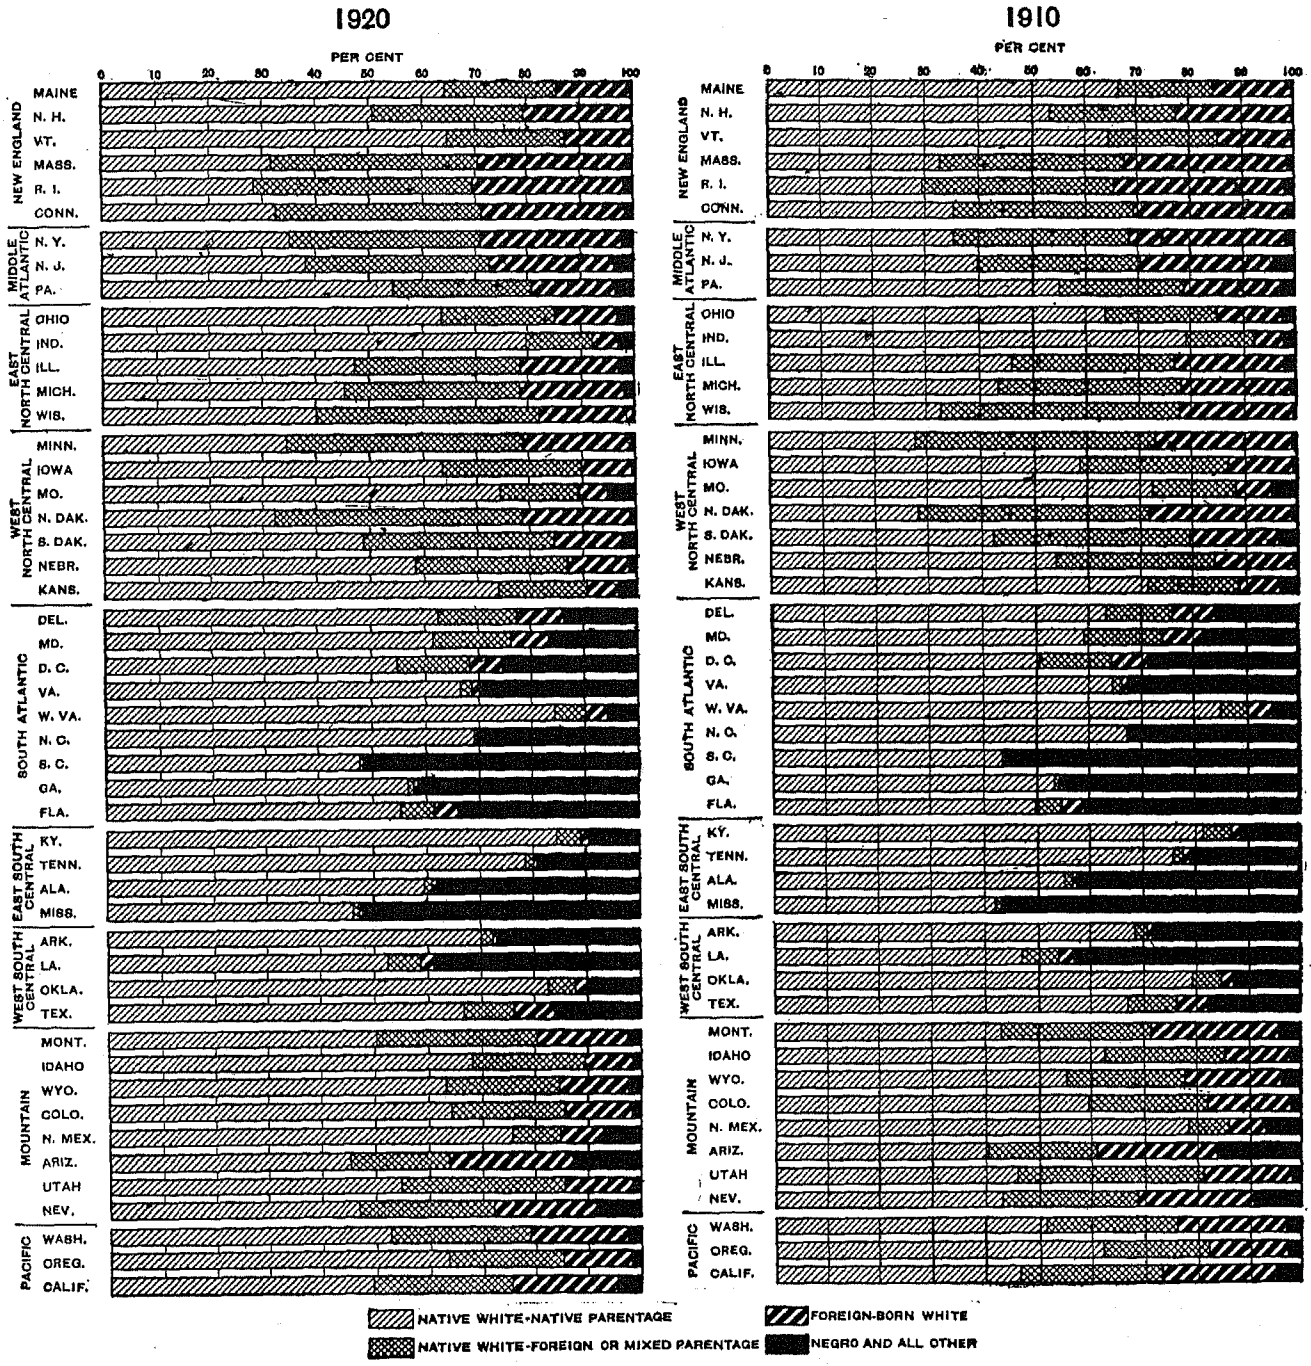
[District of Columbia, 19.9 per cent, not shown separately on the map.]



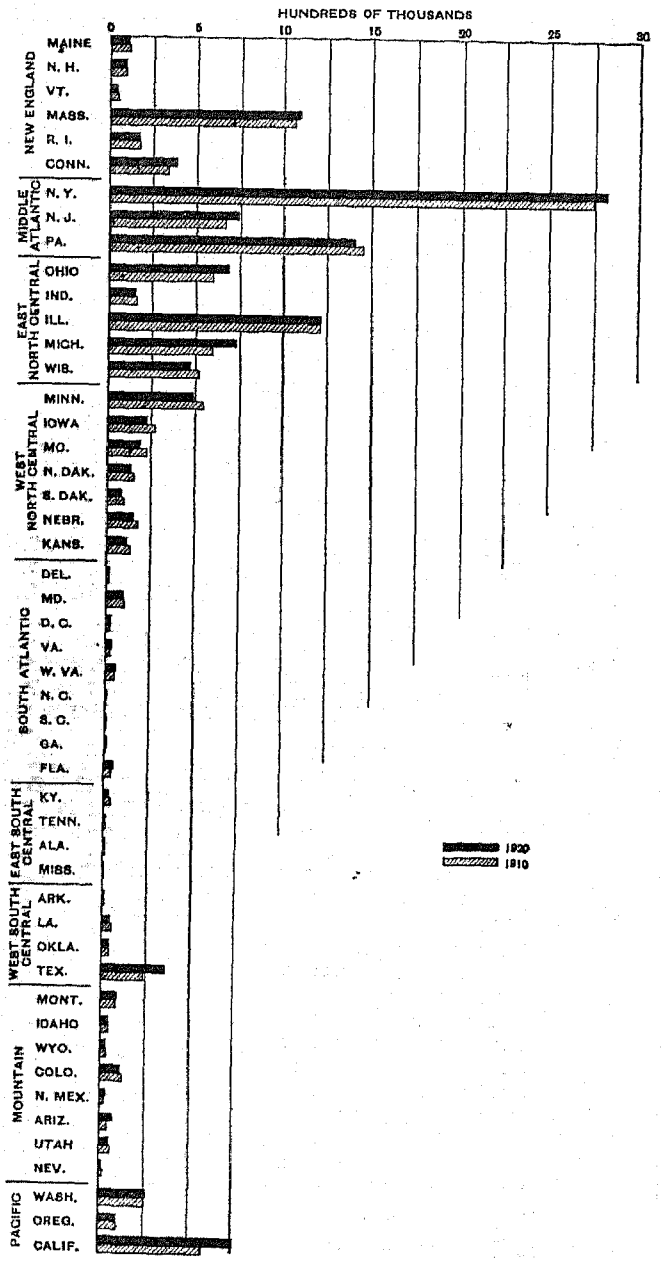
TOTAL POPULATION AND DISTRIBUTION BY CLASSES: 1850–1920.



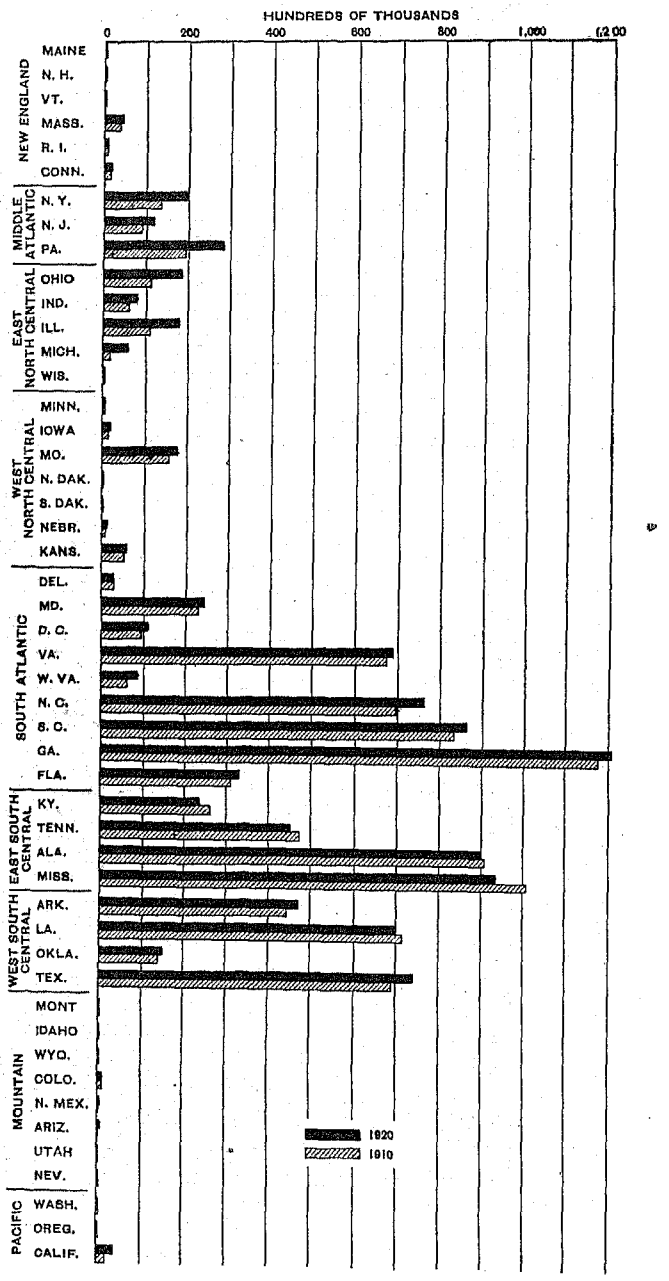
COLOR OR RACE, NATIVITY, AND PARENTAGE, BY STATES: 1920 AND 1910.



FOREIGN-BORN POPULATION, BY STATES: 1920 AND 1910.



NEGRO POPULATION, BY STATES: 1920 AND 1910.



COLOR OR RACE, NATIVITY, AND PARENTAGE, FOR CITIES HAVING, IN 1920, 100,000 INHABITANTS OR MORE: 1920 AND 1910.

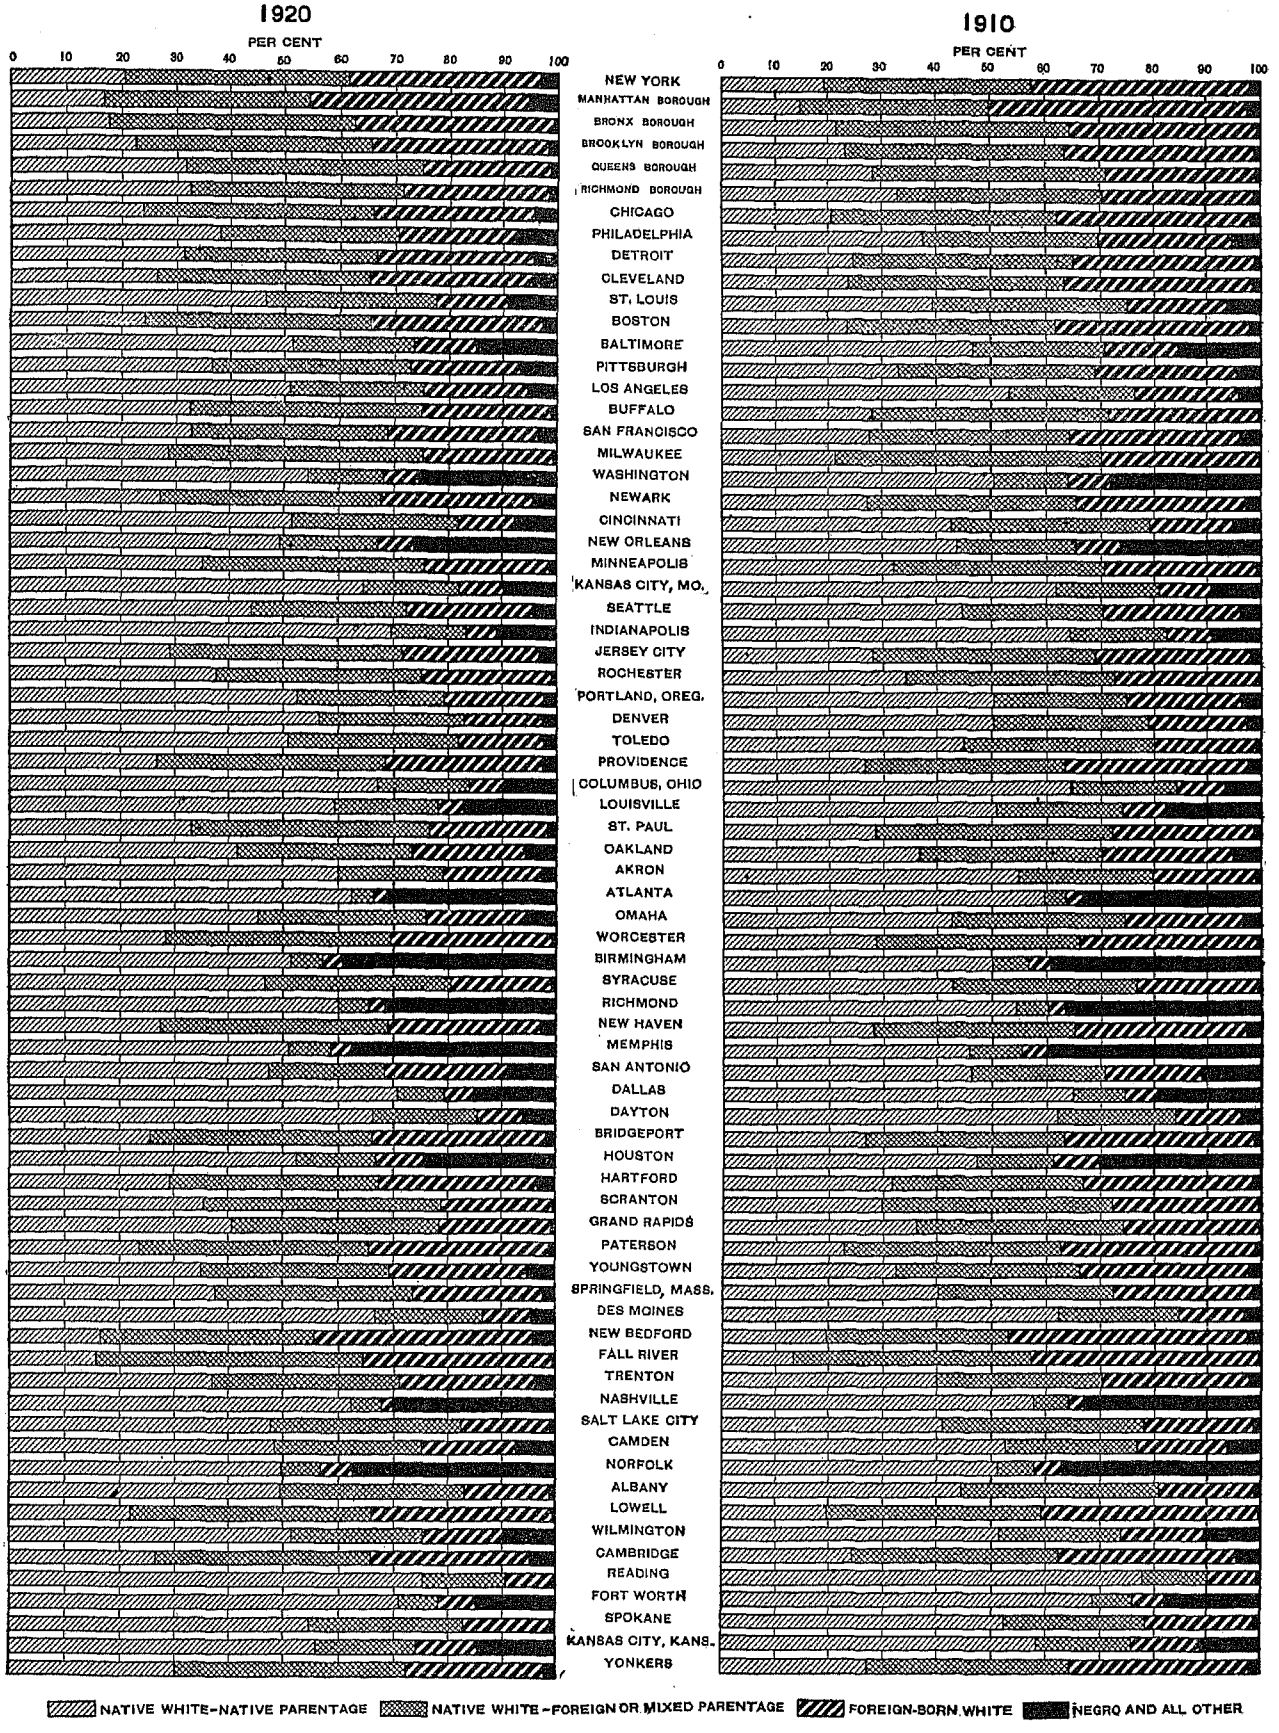


TABLE 1.—COLOR OR RACE, FOR THE UNITED STATES: 1790–1920.

[Figures are given under each class for all census years for which data are available.]
