ABSTRACT

Census of Population and Housing, 1980: American Indian Supplementary Questionnaire Summary Tape File [machine-readable data file] / conducted by the U.S. Bureau of the Census. --Washington: Bureau of the Census [producer and distributor], 1986.

TYPE OF FILE:

Summary statistics.

UNIVERSE DESCRIPTION:

All persons living in households with one or more American Indian, Eskimo, or Aleut on reservations identified for the 1980 Census and in Historic Areas of Oklahoma (excluding urbanized areas).

SUBJECT-MATTER DESCRIPTION:

The 1980 American Indian supplementary file provides sample data on the American Indian, Eskimo, and Aleut populations beyond that obtained from the regular 1980 census questionnaire. Data were obtained for all members of households on Federal and State reservations and Historic Areas of Oklahoma (excluding urbanized areas) that received the regular short census form and had at least one American Indian, Eskimo, or Aleut member.

Population and housing items tabulated from the supplementary questionnaire include the following:

<u>Population</u>

Tribal affiliation
Tribal enrollment
School enrollment
Educational attainment
Year moved to reservation
Place of residence one year ago
Health services received
Place where health care received
Time traveled to health care facility
Method of payment for health care
Work last year (1979)
Reasons for not working a full year in 1979
Number of weeks spent looking for work
Year last worked
Industry
Occupation
Class of worker
Benefits received
Total income

<u>Housing</u>

Source of water
Public sewer connection
Source of heat
Year structure built
Complete kitchen facilities
Telephone
Electrical lighting
Material used for floors
Material used for outside walls

Basic data tabulated from the short form questionnaire include race, sex, age, household relationship, marital status, units at address, plumbing facilities, rooms, tenure, value, and contract rent.

GEOGRAPHIC COVERAGE:

278 American Indians reservations and the Historic Areas of Oklahoma (excluding urbanized areas).

TECHNICAL DESCRIPTION:

FILE SIZE:

Total record count is 1,035. Because of the large file size, each record is divided into 452 segments of 2,046 characters each.

FILE SORT SEQUENCE:

The file is sorted by level of geographic hierarchy. For further explanation, see the File Description section in the technical documentation.

REFERENCE MATERIALS:

1980 CENSUS AMERICAN INDIAN SUPPLEMENTARY QUESTIONNAIRE

Introduction

The supplementary questionnaire was used on all Federal and State reservations and in the historic areas of Oklahoma (excluding urbanized areas) to obtain information about the unique living conditions present on many reservations and in these specified areas of Oklahoma. This information will be used by tribal governments, congressional committees, and Federal agencies for planning and evaluating policy, developing legislation, and designing programs to meet the needs of the American Indian, Eskimo, and Aleut populations.

The 1980 census data on the supplementary questionnaire were collected in a direct interview by an enumerator. The questionnaire was administered in households that received the regular short form questionnaire and had one or more household members identified as American Indian, Eskimo, or Aleut in the race item (approximately an 80 percent sample). The householder was asked the questions in the supplementary questionnaire for every person in the household regardless of race.

Processing Procedures

The supplementary questionnaire was designed to be processed by a keying operation. For most items on the questionnaire, the information obtained by the enumerator was indicated by marking answers in predesignated boxes. The questionnaires were processed through manual coding operations, since some questions required the respondent to provide write-in entries that could not be keyed. Census Bureau coders assigned alphabetical or numerical codes to write-in entries for keying. This information was keyed onto computer tape.

The tape containing the information from the questionnaires was processed on the Census Bureau's computers through a number of editing and tabulation steps. The computer tape does not include information on individual names and addresses.

SUPPRESSION OF DATA FOR CONFIDENTIALITY

To maintain the confidentiality promised respondents and required by law, the Bureau of the Census takes precautions that its published data do not disclose information about specific individuals and housing units. To accomplish this the Census Bureau suppresses data for characteristics which are based on a small number of persons and/or housing units in the geographic area. Under certain conditions, both primary and complementary suppression, as defined below, may take place.

The general rules of primary suppression of sample data are as follows: estimates of total population by race are never suppressed; other characteristics, including American Indian tribes, for persons are shown only if there are 30 or more American Indians or 30 or more American Indians, Eskimos, or Aleuts in the geographic area; estimates of total housing units, vacant housing units, year-round units and occupied housing units are never suppressed; characteristics of year-round housing units which are not classified by occupancy status are shown only when there are 10 or more year-round housing units in the geographic area; characteristics of families, households, or occupied housing units are shown only if there are at least 10 occupied housing units within the geographic area; and distributions of data for owners or renters are shown only where the number of owners is at least 10 and the number of renters is also at least 10. These primary suppression criteria are applied independently of one another. The comparable figures for complete count (100-percent) data are 15 or more persons and 5 or more housing units of the specified type.

Population and occupied housing unit characteristics cross-classified by race or tribe (of the householder and householder or spouse) are subject to an additional level of examination. This level requires the 30 person or 10 housing unit criterion be applied individually to each race category.

Finally, complementary suppression is applied to prevent the derivation of primary suppressed data by subtraction.

Population and housing unit counts are shown for the following reservations and rancherias; however, all characteristics for these areas have been suppressed because they have less than 30 American Indians, Eskimos, and Aleuts and less than 10 housing units with an American Indian, Eskimo, or Aleut householder.

ACCURACY OF THE DATA

INTRODUCTION

The data available on this STF are based on the 1980 census sample that was enumerated on the 1980 Census Supplementary Questionnaire For American Indians. (Reservations and Historic Areas of Oklahoma). These data are estimates of the actual figures that would have resulted from a complete count. Estimates can be expected to vary from the complete count result, because they are subject to two basic types of error - sampling and nonsampling. The sampling error in the data arises from the selection of persons and housing units to be included in the sample. The nonsampling error, which affects both sample and complete count data, is the result of all other errors that may occur during the collection and processing phases of the census. A more detailed discussion of both sampling and nonsampling error and a description of the estimation procedure are provided below.

SAMPLE DESIGN

While every person and housing unit on American Indian reservations and in the Historic Areas of Oklahoma (excluding urbanized areas) were enumerated on a regular census questionnaire that requested certain basic demographic information (e.g., age, race, and relationship), a sample of American Indians, Eskimos, and Aleuts living on reservations and in the Historic Areas of Oklahoma (excluding urbanized areas) was enumerated on the supplementary questionnaire that requested additional relevant information on the American Indian, Eskimo, and Aleut populations. The basic sampling unit for the 1980 census supplementary questionnaire was the housing unit with one or more American Indians, Eskimos, or Aleuts. Five out of every six of these housing units were designated for sample. Approximately 75 percent of the American Indians, Eskimos, and Aleuts living on American Indian reservations and in the Historic Areas of Oklahoma (excluding urbanized areas) were included in the supplementary questionnaire sample. Table E provides the percent of persons and housing units in the supplementary questionnaire sample for American Indian reservations and counties in Historic Areas of Oklahoma (excluding urbanized areas).

ERRORS IN THE DATA

Since the data in this file are based on a sample, they may differ somewhat from complete-count figures that would have been obtained if all housing units, persons within those housing units, and persons living in group quarters had been enumerated, using the same questionnaires, instructions, enumerators, etc. The deviation of a sample estimate from the average of all possible samples is called the sampling error. The standard error of a survey estimate is a measure of the variation among the estimates from the possible samples and is thus a measure of the precision with which an estimate from a particular sample approximates the average result of all possible samples. The sample estimate and its estimated standard error permit the construction of interval estimates with prescribed confidence that the interval includes the average result of all possible samples. The method of calculating standard errors and confidence intervals for the data on this STF is given below.

In addition to the variability which arises from the sampling procedures, both sample data and complete-count data are subject to nonsampling error. Nonsampling error may be introduced during each of the many extensive and complex operations used to collect and process census data. For example, operations such as editing, reviewing, or handling questionnaires may introduce error into the data. A more detailed discussion of the sources of nonsampling error is given in the section, "Control of Nonsampling Error". Nonsampling error may affect the data in two ways. Errors that are introduced randomly will increase the variability of the data and should therefore be reflected in the standard error. Errors that tend to be consistent in one direction will make both sample and complete-count data biased in that direction. For example, if respondents consistently tend to under-report their income, then the resulting counts of households or families by income category will be below the actual figures. Such biases are not reflected in the standard error.

Calculation of Standard Errors

1. Totals and Percentages. Tables A through D contain the information necessary to calculate the standard errors of sample estimates in this file. In order to perform this calculation, it is necessary to know the unadjusted standard error for the characteristic, given in table A or B, that would result under a simple random sample design (of persons, families, or housing units) and estimation technique, and the adjustment factor for the particular characteristic estimated, given in table D. Tables C-1 and C-2 show groupings of American Indian reservations and groupings of counties in the Historic Areas of Oklahoma (excluding urbanized areas) that must be used in conjunction with tables D-1 and D-2. Tables D-1 and D-2 provide factors for groupings of American Indian reservations and groupings of counties in the Historic Areas of Oklahoma (excluding urbanized areas) by which the unadjusted standard errors obtained in table A or B must be multiplied. The adjustment factors reflect the effects of the actual sample design and complex ratio estimation procedures used to produce the estimates for this file.

   To calculate the approximate standard error of an estimate for a specified geographic level, follow the steps given below:

   a. Obtain the unadjusted standard error from table A or B (or from the formula given below the table) for the estimated total or percentage, respectively.

   b. Find the American Indian reservation or the county in the Historic Areas of Oklahoma (excluding urbanized areas) with which you are working in table C-1 or table C-2 and obtain its Group Number. If the Group Number is denoted "-," the standard error is zero. Skip step c.

   c. Use table D-1 for American Indian reservations or table D-2 for Historic Areas of Oklahoma (excluding urbanized areas) to obtain the factor for the type of data item (e.g., labor force, occupation) and Group Number with which you are working. Multiply the unadjusted standard error by this factor.

As is evident from the formula below tables A and B, the unadjusted standard errors of zero estimates or of very small estimated totals or percentages approach zero. This is also the case for very large percentages or estimated totals that are close to the size of the tabulation areas to which they correspond. These estimated totals and percentages are, nevertheless, still subject to sampling and nonsampling variability, and an estimated standard error of zero (or a very small standard error) is not appropriate.

For estimated percentages that are less than 2 or greater than 98, use the unadjusted standard error in table B that appears in the "2 or 98" row. For an estimated total that is less than 50 or within 50 of the total size of the tabulation area use an unadjusted standard error of 2.

An illustration of the use of the tables will be given in a later section.

2. Differences. The standard errors estimated from these tables are not directly applicable to differences between two sample estimates. In order to estimate the standard error of a difference, the tables are to be used somewhat differently in the following three situations:

   a. For the difference between a sample estimate and a complete-count value, use the standard error of the sample estimate.

   b. For the difference between (or sum of) two sample estimates, the appropriate standard error is approximately the square root of the sum of the two individual standard errors squared; that is, for standard errors Se_x and Se_y of estimates x and y:

$$Se_{(x + y)} \doteq Se_{(x-y)} \doteq \sqrt{(Se_x)^2 + (Se_y)^2}$$

This method, however, will under estimate (overestimate) the standard error if the two items in a sum are highly positively (negatively) correlated or if the two items in a difference are highly negatively (positively) correlated. This method may also be used for the difference between (or sum of) sample estimates from two censuses or between a census sample and another survey. The standard error for estimates not based on the 1980 census sample must be obtained from an appropriate source outside of this documentation.

   c. For the difference between two estimates, one of which is a subclass of the other, use the tables directly where the calculated difference is the estimate of interest.

3. Means. The standard error of a mean depends upon the variability of the distribution on which the mean is based, the size of the sample, the sample design (e.g., the use of households as sampling unit), and the estimation procedure used.

   An approximation to the standard error of the mean may be obtained as follows: compute the variance of the distribution on which the mean is based; multiply this value by 0.2 and divide the product by the total count of units in the distribution; obtain the square root of this quotient and multiply the result by the adjustment factor from table D that is appropriate for the characteristic on which the mean is based.

4. Medians. For the standard error of a median of a characteristic, it is necessary to examine the distribution from which the median is derived, as the size of the base and the distribution itself affect the standard error. An approximate method is given here. As the first step, compute one-half of the number on which the median is based (refer to this result as N/2). Treat N/2 as if it were an ordinary estimate and obtain its standard error as instructed above using tables A, B, C, D, and E. Compute the desired confidence interval about N/2. Starting with the lowest value of the characteristic, cumulate the frequencies in each category of the characteristic until the sum equals or first exceeds the lower limit of the confidence interval about N/2. By linear interpolation, obtain a value of the characteristic corresponding to this sum. This is the lower limit of the confidence interval of the median. In a similar manner, cumulate frequencies starting from the highest value of the characteristic until the sum equals or exceeds the count in excess of the upper limit of the interval about N/2. Interpolate as before to obtain the upper limit of the confidence interval for the estimated median.

Confidence Intervals

A sample estimate and its estimated standard error may be used to construct confidence intervals about the estimate. These intervals are ranges that will contain the average value of the estimated characteristic that results over all possible samples with a known probability. For example, if all possible samples that could result under the 1980 census Supplementary Questionnaire for the American Indians sample design were independently selected and surveyed under the same conditions, and if the estimate and its estimated standard error were calculated for each of these samples, then:

(1) Approximately 68 percent of the intervals from one estimated standard error below the estimate to one estimated standard error above the estimate would contain the average result from all possible samples, and

(2) Approximately 95 percent of the intervals from two estimated standard errors below the estimate to two estimated standard errors above the estimate would contain the average result from all possible samples.

The intervals are referred to as 68 percent and 95 percent confidence intervals, respectively.

The average value of the estimated characteristic that could be derived from all possible samples is or is not contained in any particular computed interval. Thus, we cannot make the statement that the average value has a certain probability of falling between the limits of the calculated confidence interval. Rather, one can say with a specified probability or confidence that the calculated confidence interval includes the average estimate from all possible samples (approximately the complete-count value).

Confidence intervals may also be constructed for the difference between two sample figures. This is done by computing the difference between these figures, obtaining the standard error of the difference (using the formula given earlier) and then forming a confidence interval for this estimated difference as above. One can then say with specified confidence that this interval includes the difference that would have been obtained by averaging the results from all possible samples.

The estimated standard errors given on this STF do not include all portions of the variability due to nonsampling error that may be present in the data. The standard errors reflect the effect of simple response variance, but not the effect of correlated errors introduced by enumerators, coders, or other field or processing personnel. Thus, the standard errors calculated represent a lower bound on the total error. As a result, confidence intervals formed using these estimated standard errors may not meet the stated levels of confidence (i.e., 68 or 95 percent). Thus, some care must be exercised in the interpretation of the data on this STF based on the estimated standard errors.

For more information on confidence intervals and nonsampling error, see any standard sampling theory text.

<u>Use of Tables to Compute Standard Errors</u>

1. The matrix shows that for Blackfeet Reservation, out of all 1,130 males 25 years and over, 517 were high school graduates. The procedure for obtaining the standard error of the estimate 517 will be demonstrated.

   The unadjusted standard error for the estimated total is obtained from Table A. In order to avoid interpolation, the use of the formula will be demonstrated here. By the formula, the unadjusted standard error, Se, is given by

$$Se = \sqrt{0.2\ (517)\quad (1 - \frac{517}{6{,}067})} = 10 \quad \text{persons.}$$

   Note: The total count of persons for Blackfeet Reservation is 6,067.

   The standard error of the estimated 517 males 25 years and over who were high school graduates is found by multiplying the unadjusted standard error, 10, by the appropriate adjustment factor. Table C-1 shows that the Blackfeet Reservation is in Group 3. Table D-1 shows that the adjustment factor for "Educational Attainment," Group Number 3, is 2.9. Thus, the estimated standard error is 10 x 2.9 or 29.

The estimated percent of males 25 years and over who were high school graduates is 45.8. From table B, (and linear interpolation), the unadjusted standard error is found to be 0.67 (with rounding). Thus, the standard error for the estimated percent of males 25 years and over who were high school graduates is 0.67 x 2.9 = 1.9.

A note of caution concerning numerical values is necessary. Standard errors of percentages derived in this manner are approximate. The use of calculators allows for expressing calculations to many decimal places, but to do so would indicate more precision in the data than is justifiable. Final results should contain no more than one decimal place when the estimated standard error is one percentage point (i.e., 1.0) or more.

2. In the previous example, the standard error of 517 persons on the Blackfeet Reservation 25 years and over who were high school graduates was found to be 29 persons. Thus, a 95 percent confidence interval for this estimated total is found to be

$$[517 - 2(29)] \text{ to } [517 + 2(29)]$$

or

459 to 575

Thus, one can say with about 95 percent probability that this interval includes the actual value that would have been obtained by averaging the results from all possible samples.

3. The calculation of standard errors and confidence intervals will be illustrated when a difference of two sample estimates is obtained. For example, the number of males 25 years and over on the Pine Ridge Reservation who were high school graduates is 919, and the total number of males 25 years and over is 2,124. Thus, the percentage of males 25 years and over who were high school graduates is 43.3 percent. The unadjusted standard error from table B is 0.48 percent. From table C-1 one finds that the Pine Ridge Reservation is in Group Number 3. Table D-1 shows that the adjustment factor for "Educational Attainment" for Group Number 3 is 2.9. Thus, the approximate standard error of the percentage (43.3 percent) is 0.48 x 2.9 or 1.4 percent.

Suppose that one wishes to obtain the standard error of the difference between Blackfeet and Pine Ridge Reservations on the percentages of males who were 25 years and over and who were high school graduates.

The difference in the estimated percentages of interest for the two reservations is

$$45.7 - 43.3 = 2.4 \text{ percent}$$

Using the results of the previous example

$$\begin{aligned} Se\ (2.4) &= \sqrt{(Se\ (45.7))^2 + (Se\ (43.3))^2} \\ &= \sqrt{(1.9)^2 + (1.4)^2} \\ &= 2.4 \text{ percent} \end{aligned}$$

The 95 percent confidence interval for the difference is formed as before.

$$[2.4 - 2\ (2.4)] \text{ to } [2.4 + 2\ (2.4)]$$

or

$$-2.4 \text{ to } 7.2$$

Thus, one can say with 95 percent probability that this interval includes the actual difference that would have been obtained by averaging the results from all possible samples.

ESTIMATION PROCEDURE

The estimates which appear in this STF were obtained from an iterative ratio estimation procedure which resulted in the assignment of a weight to each sample person or housing unit record. For any given tabulation area, a characteristic total was estimated by summing the weights assigned to the persons or housing units in the tabulation area which possessed the characteristic. Estimates of family characteristics were based only on the weights assigned to the family members designated as householders. Each sample person or housing unit record was assigned exactly one weight to be used to produce estimates of all characteristics. For example, if the weight given to a sample person or housing unit had the value two, all characteristics of that person or housing unit would be tabulated with a weight of two. The estimation procedure, however, will assign weights which vary from person to person or housing unit to housing unit.

The estimation procedure used to assign the weights was performed separately for persons and housing units, and was performed independently within each county within reservation (CWR).

Within a CWR, the ratio estimation procedure for persons was performed in three stages. For persons the first stage employed 16 household type groups. The second stage used two groups: householders and nonhouseholders. The third stage could potentially use 32 age-sex-race groups.

The stages were as follows:

PERSONS

Stage 1--Type of Household

Group	
	Persons in units with a family householder with own children under 18
1	2 persons in housing unit
2	3 persons in housing unit
3	4 persons in housing unit
4	5 to 7 persons in housing unit
5	8 or more persons in housing unit
	Persons in units with a family householder without own children under 18
6-10	2 persons in housing unit through 8 or more persons in housing unit
	Other households
11	1 person in housing unit
2-16	2 persons in housing unit through 8 or more persons in housing unit

Stage II--Householder/Nonhouseholder

Group	
1	Householder
2	Nonhouseholder

Stage III--Age/Sex/Race

Group	
	American Indian, Eskimo, or Aleut Race
	Male
1	0 to 4 years of age
2	5 to 14 years of age
3	15 to 19 years of age
4	20 to 24 years of age
5	25 to 34 years of age
6	35 to 44 years of age
7	45 to 64 years of age
8	65 years of age or older
	Female
9-16	Same age categories as groups 1 to 8
17-32	Other than American Indian, Eskimo, or Aleut Race
	Same age-sex categories as group 1 to 16

Within a CWR, the first step in the estimation procedure was to assign each sample person record an initial weight. This weight was approximately equal to the inverse of the probability of selecting a person for the sample.

The next step in the estimation procedure was to combine, if necessary, the groups in each of the three stages prior to the repeated ratio estimation in order to increase the reliability of the ratio estimation procedure. For the first, second, and third stages, any group that did not meet certain criteria concerning the unweighted sample count or the ratio of the complete count to the initially weighted sample count, was combined, or collapsed, with another group in the same stage according to a specified collapsing pattern.

As a final step, the initial weights underwent three stages of ratio adjustment which used the groups listed above. At the first stage, the ratio of the complete census count to the sum of the initial weights for each sample person was computed for each stage I group. The initial weight assigned to each person in a group was then multiplied by the stage I group ratio to produce an adjusted weight. In stage II, the stage I weights were again adjusted by the ratio of the complete census count to the sum of the stage I weights for sample persons in each stage II group. Finally, the stage II weights were adjusted at stage III by the ratio of the complete census count to the sum of the stage II weights for sample persons in each stage III group. The three stages of adjustment were performed twice (two iterations) in the order given above. The weights obtained from the second iteration for stage III were assigned to the sample person records.

The ratio estimation procedure for housing units was essentially the same as that for persons. The major difference was that the occupied housing unit ratio estimation procedure was done in two stages. The first stage for occupied housing units employed 16 household type groups and the second stage could potentially use 38 tenure, race, and value/rent groups. The stages for the ratio estimation for occupied housing units were as follows:

Occupied Housing Units

Stage I--Type of Household

Group	
	Family With Own Children Under 18
1	2 persons in housing unit
2	3 persons in housing unit
3	4 persons in housing unit
4	5 to 7 persons in housing unit
5	8 or more persons in housing unit
	Family Without Own Children Under 18
6-10	2 persons in housing unit through 8 or more persons in housing unit
	Non-Family
11	1 person in housing unit
12-16	2 persons in housing unit through 8 or more persons in housing unit

Group	Stage II--Tenure/Race of Householder/Value or Rent
	Owner
	American Indian, Eskimo, or Aleut Race (Householder)
	Value of house
1	$0 to $9,999
2	$10,000 to $19,999
3	$20,000 to $34,999
4	$35,000 to $49,999
5	$50,000 to $99,999
6	$100,000 to $149,999
7	$150,000 or more
8	Other owners
9-16	Other than American Indian, Eskimo, or Aleut Race (Householder)
	Same value--American Indian, Eskimo, or Aleut Race group as groups 1 to 8.
	Renter
	American Indian, Eskimo, or Aleut Race (Householder)
	Rent categories
17	$1 to $59
18	$60 to $99
19	$100 to $149
20	$150 to $199
21	$200 to $249
22	$250 to $299
23	$300 to $399
24	$400 to $499
25	$500 or more
26	Other renter
27	No cash rent
28-38	Other than American Indian, Eskimo, or Aleut Race (Householder)
	Same rent--American Indian, Eskimo, or Aleut Race groups as groups 17 to 27

The estimates produced by this procedure realize some of the gains in sampling efficiency that would have resulted if the population had been stratified into the ratio estimation groups before sampling, and the sampling rate had been applied independently to each group. The net effect is a reduction in both the standard error and the possible bias of most estimated characteristics to levels below what would have resulted from simply using the initial (unadjusted) weight. A by-product of this estimation procedure is that the estimates from the sample will, for the most part, be consistent with the complete count figures for the population and housing unit groups used in the estimation procedure.

CONTROL OF NONSAMPLING ERROR

In any large-scale statistical operation such as a census, human and mechanical errors occur. These errors are commonly referred to as nonsampling errors. Such errors include failure to enumerate every housing unit or person in the population, not obtaining all required information from respondents, obtaining incorrect or inconsistent information, and recording information incorrectly. Errors can occur during the field review of the enumerators' work, the clerical handling of the census questionnaires, or the electronic processing of the questionnaires.

In an attempt to reduce various types of nonsampling error in the census, quality control and review procedures were used throughout the address list compilation, data collection, and processing phases to minimize undercoverage of the population and housing units and to keep other nonsampling errors at a minimum. Additional information can be found in Appendix D of PC80-1-C, General Social and Economic Characteristics.

EDITING OF UNACCEPTABLE DATA

The objective of the processing operation is to produce a set of statistics that describes the population and housing as accurately and clearly as possible.

If a characteristic for a person or housing unit was still missing when the questionnaires reached the processing office, it was supplied, in most cases, by allocation. Allocations, or assignments of acceptable entries in place of unacceptable entries, were needed most often when there was no entry for a given item or the response was inconsistent with other information for the person or housing unit. As in previous censuses, the general procedure for changing unacceptable entries was to assign an entry that was consistent with entries for other persons or housing units with similar characteristics. The following characteristics for a person were not allocated: tribal affiliation and enrollment, type of school, place of residence 1 year ago, year moved onto reservation, health services, usual source of health care, travel time to health care facility, payment for health care, and location of industry.

GLOSSARY

Area Classifications

Census Regions. Regions are large groups of States that form the first-order subdivisions of the United States for census purposes. The four regions are the Northeast, North Central, South, and West. The divisions and States where the identified reservations are located are included in the respective region in table 2.

States. The 50 States and the District of Columbia are the constituent units of the United States. However, information are shown in this report for only the 33 States with Federal or State identified reservations.

Identified American Indian Reservations. American Indian reservations are areas with boundaries established by treaty, statute, and/or executive or court order. There were 278 American Indian reservations, and their boundaries were identified for the 1980 census by the Bureau of Indian Affairs (BIA) and State governments. The Federal and State reservations are located in 33 States and may cross State, county, minor civil division/census county division, and place boundaries. Three reservation areas are composed of lands that are jointly administered and/or claimed by two reservations--San Felipe/Santa Ana Joint Area, New Mexico; San Felipe/Santo Domingo Joint Area, New Mexico; and other reservation lands in Montana.

Identified Historic Areas of Oklahoma (Excluding Urbanized Areas). The historic areas of Oklahoma (excluding urbanized areas) consist of the former reservations which had legally established boundaries during the period 1900-1907. These reservations were dissolved during the two-to-three year period preceding the statehood of Oklahoma in 1907. The former reservation boundaries are used for planning purposes by tribes and the Federal government. In the census, the entire area encompassing the former reservations was identified (excluding urbanized areas); individual former reservations were not identified separately. The parts inside urbanized areas were approximated in preparation for the 1980 Census. The historic areas of Oklahoma (excluding urbanized areas) were not identified in previous censuses.

Oklahoma Tribal Governments. The Oklahoma Tribal Governments shown in this file include Oklahoma tribes in selected counties designated by the Bureau of Indian Affairs where tribal governments have individual or tribal trust lands and perform "substantial governmental functions" as designated under the General Revenue Sharing Program. Also shown in this file are 6 federally recognized tribes ineligible under this program.

Selected Tribes. The selected tribes shown in this file are those tribes in the historic areas of Oklahoma (excluding urbanized areas) with 400 or more American Indians.

Definitions and Explanations of Population Characteristics

Transcription Items (Regular Census Questionnaires). Responses to the questions on race, household relationship, sex, age, and marital status, from the 1980 census short-form questionnaire were transcribed to the corresponding supplementary questionnaire. The items provide basic demographic information and were transcribed to the supplementary questionnaire so respondents would not be asked the same question twice.

Race. The data on the American Indian, Eskimo, Aleut, White and "Other races" populations were derived from question 4, of the regular short census questionnaire.

The concept of race as used by the Census Bureau reflects self-identification by respondents; it does not denote any clear-cut scientific definition of biological stock. Since the 1980 census obtained information on race through self-identification, the data represent self-classification by people according to the race with which they identify.

For persons who could not provide a single response to the race question, the race of the person's mother was used; if a single response could not be provided for the person's mother, the first race reported by the person was used. This is a modification of the 1970 census procedure when the race of the person's father was used.

The categories "American Indian," "Eskimo," and "Aleut" include persons who classified themselves as such in one of the specific race categories. In addition, persons who did not report themselves in one of the specific race categories but entered the name of an Indian tribe or reported such entries as Canadian Indian, French-American Indian, or Spanish-American Indian were classified as American Indian.

The category "White" includes persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a response such as Canadian, German, Italian, Lebanese, or Polish. In the 1980 census, persons who did not classify themselves in one of the specific race categories but marked "Other" and wrote in entries such as Cuban, Puerto Rican, Mexican, or Dominican were included in the "Other" race category. In the 1970 census, most of these persons were included in the "White" category.

The category "All other races" includes all persons <u>not</u> classified as "American Indian," "Eskimo," "Aleut," or "White."

If the race entry was missing on the questionnaire for a member of a household, an answer was assigned in the computer according to the reported entries of race of other household members using specific rules of precedence of household relationship. If race was not entered for anyone in the household (excluding paid employees), the race of a householder in a previously processed household was assigned.

The 1980 census population totals for American Indians, Eskimos, and Aleuts shown in this file differ from those published in other reports such as <u>General Population Characteristics</u>, PC80-1-B, which are based on 100-percent tabulations and <u>General Social and Economic Characteristics</u>, PC80-1-C, which are from sample tabulations based on the regular census sample. The regular census sample was approximately 19 percent of all households. The data in this file are based on a sample of approximately 80 percent of households with one or more American Indians, Eskimos, or Aleuts on identified reservations and in the historic areas of Oklahoma (excluding urbanized areas). (For details concerning the sample design for the Supplementary Questionnaire Program, see "General Enumeration and Processing Procedures," <u>American Indians, Eskimos, and Aleuts on Identified Reservations and in the Historic Areas of Oklahoma (Excluding Urbanized Areas)</u>, PC80-2-1D.) A comparison of the 100-percent, sample, and supplementary questionnaire distributions of the American Indian, Eskimo, and Aleut populations for identified reservations and historic areas of Oklahoma (excluding urbanized areas) are presented in Appendix C. The sample estimates from both the regular census long form and the supplementary questionnaire were slightly lower than the 100-percent count for identified reservations and historic areas. The supplementary questionnaire estimate was slightly lower than the regular census sample estimate.

slightly lower than the 100-percent count for identified reservations and historic areas. The supplementary questionnaire estimate was slightly lower than the regular census sample estimate.

Data in this file for a few reservations and two counties -- Canadian and Kingfisher Counties -- in the historic areas of Oklahoma (excluding urbanized areas) include corrections made after the final 1980 census tabulations were completed. These corrections are not included in the Volume 1, Characteristics of the Population and Characteristics of Housing Units. The corrections to the 100-percent tabulations were published in supplementary report, American Indian Areas and Alaska Native Villages: 1980, PC80-S1-13.

Household. Household includes all the persons who occupy a housing unit. The measure "Persons per household" is obtained by dividing the number of persons in households by the number of households (or householders).

Relationship to Householder. The data on relationship to householder were derived from answers to question 2, which was asked of all persons in housing units.

Householder--one person in each household is designated as the "Householder." In most cases, this is the person, or one of the persons, in whose name the home is owned or rented and who is listed in column 1 of the census questionnaire. If there is no such person in the household, any adult household member could be designated as the "Householder." Two types of householders are distinguished-- a family householder and a nonfamily householder. A family householder is a householder living with one or more persons related to him or her by birth, marriage, or adoption. The householder and all persons in the household related to him or her are family members. A nonfamily householder is a householder living alone or with nonrelatives only.

Spouse--a person married to and living with a householder. This category includes persons in formal marriages as well as persons in common-law marriages.

Child--a son, daughter, stepchild, or adopted child of the householder regardless of the child's age or marital status. The category excludes sons-in-law and daughters-in-law. "Own children" are sons and daughters, including stepchildren and adopted children, of the householder who are single (never married) and under 18 years of age.

The number of children "Living with two parents" includes stepchildren and adopted children as well as sons and daughters born to the couple.

"Related children" in a family include own children and all other persons under 18 years of age in the household, regardless of marital status, who are related to the householder by birth, marriage, or adoption, except the spouse of the householder.

Other Relative--any person related to the householder by birth, marriage, or adoption, who is not shown separately in the particular table (e.g., "spouse," "child," "brother or sister," or "parent").

Nonrelative--any person in the household not related to the householder by birth, marriage, or adoption. Roomers, boarders, partners, roommates, paid employees, wards, and foster children are included in this category.

Unrelated Individual. An unrelated individual is (1) a householder living alone or with nonrelatvies only, (2) a household member who is not related to the householder, or (3) a person living in group quarters who is not an inmate of an institution.

Family. A family consists of a householder and one or more other persons living in the same household who are related to the householder by birth, marriage, or adoption. All persons in a household who are related to the householder are regarded as members of his or her family. A "married-couple family" is a family in which the householder and spouse are enumerated as members of the same household. Not all households contain families, because a household may be composed of a group of unrelated persons or one person living alone. The measure "persons per family" is obtained by dividing the number of persons in families by the total number of families (or family householders).

In this file, the data for reservations are presented for households and families with an "American Indian, Eskimo, or Aleut householder or spouse" as well as for households and families with an "American Indian, Eskimo, or Aleut householder." The category "American Indian, Eskimo, or Aleut householder or spouse" includes all households where the householder or spouse is American Indian, Eskimo, or Aleut. The category "American Indian, Eskimo, or Aleut householder" includes only households where the householder is American Indian, Eskimo, or Aleut regardless of the race of the spouse.

In the tables for Oklahoma, the data are shown for the category "American Indian householder or spouse" which includes all households where the householder or spouse is American Indian and for the category "American Indian householder" which includes only households where the householder is American Indian, regardless of the race of the spouse.

Data for the selected tribes in the tables for Oklahoma are shown for the category "American Indian householder or spouse," which includes all households where the householder or spouse is American Indian and reported the name of the specific tribe. The category "American Indian householder" includes only households where the householder is American Indian and reported the name of the specific tribe.

Sex. The data on sex were derived from answers to question 3, which was asked of all persons.

Age. The data on age were derived from answers to question 5, which was asked of all persons. Only the information in items 5b and 5c (on month and year of birth) was keyed into the computer. Answers to item 5a (on age at last birthday) were used during field review to fill in any blanks in question 5c. The age classification is based on the age of the person in completed years as of April 1, 1980. The data on age represent the difference between date of birth and April 1, 1980.

Marital Status. The data on marital status were derived from answers to question 6. The marital status classification refers to the status at the time of enumeration. Persons classified as "Now married" include those who have been married only once and have never been widowed or divorced as well as those currently married persons who remarried after having been widowed or divorced. Persons reported as separated are those living apart because of marital discord, with or without a legal separation. Persons in common-law marriages are

classified as now married, persons whose only marriage had been annulled are classified as never married, and all persons under 15 years old are classified as never married. All persons classified as never married are shown as "single" in this file.

Supplementary Questionnaire Items

Tribal Affiliation. The data on tribe were derived from responses to question 10. American Indians were asked to report the tribe in which enrolled. "Enrolled" is defined as having met the membership requirements of the tribe and included on the tribe's membership rolls. American Indians who were not enrolled in a tribe were asked to report their principal tribe. The American Indian tribal classification list is shown in Appendix D. The American Indian tribal classification list was developed by persons of the Smithsonian Institution.

In preparing the list, the Smithsonian staff used a number of sources and materials and consulted with other knowledgeable persons in the American Indian community. After the list was prepared, the Census Bureau sent it to all American Indian tribal governments and to organizations in the American Indian community to be reviewed for accuracy and completeness. The Bureau finalized the list for the 1980 census, based on the comments received. Since the tribal classification list was substantially revised and expanded, data on tribes, for the most part, are not comparable with previous censuses.

Tribal Enrollment. The data on tribal enrollment were derived from responses to question 11. American Indians were classified as "enrolled" if they reported that they were enrolled in the same tribe given in question 10; those who reported that they were not enrolled were classified as such, and American Indians who did not respond to the question are shown in the "not reported" category in the tables of this file.

School Enrollment. The data on school enrollment were derived from questions 12a, 12b, and 13. Persons are classified as enrolled in school if they reported attending a regular school or college at any time between February 1, 1980, and the time of enumeration. Regular schooling is defined as nursery school, kindergarten, elementary school, and schooling which leads to a high school diploma or college degree. Schooling in trade or business schools, company training, or through a tutor was to be reported only if the course credits obtained were regarded as transferable to a regular elementary school, high school, or college. Children were to be reported as enrolled in nursery school if the school included instruction as an integral phase of its program but not if only custodial care was given. Children in Head Start programs were to be reported in nursery school or kindergarten as appropriate. Elementary school, as defined here, includes grades 1 through 8, and high school includes grades 9 through 12.

The definitions of the types of school shown in this file are as follows:

> **Tribal school, tribal college** is a school operated or controlled by the tribe or tribal government. Schools operated by the tribe under contract with the Bureau of Indian Affairs are included in this category.
>
> **Bureau of Indian Affairs day school** is a school or college operated and controlled by the Bureau of Indian Affairs where children come to school during the day while living at home.

Bureau of Indian Affairs boarding school is a school or college operated and controlled by the Bureau of Indian Affairs where children live on the premises while attending school.

Other public school is any school or college which is controlled and supported primarily by a local, State, or Federal government (other than a Bureau of Indian affairs school).

Other private school is any school or college which is controlled and supported primarily by a religious organization or by private persons or groups (excluding those previously identified as a tribal school).

Years of School Completed. The data on years of school completed were derived from answers to questions 13 and 14. These questions on educational attainment applied only to progress in "regular" schools as defined under the definition of school enrollment. The first question asked for the highest grade (or year) attended, regardless of "skipped" or "reported" grades. Persons whose education was received in a foreign school system or an ungraded school were instructed to report the approximate equivalent grade in the regular American school system. Persons who finished high school by an equivalency test (GED) and did not attend college were instructed to mark grade 12 (high school, 4 years).

The second question on educational attainment asked if the highest grade (or year) attended has been finished. The number in each category of highest grade of school completed represents a combination of (a) persons who reported the indicated grade as highest grade attended and that they had finished it, (b) those who had attended the next highest grade, but had not finished it, and (c) those still attending the next highest grade. Persons who have not completed the first year of elementary school are classified as having no years of school completed.

"Percent high school graduates" includes persons who completed four years of high school and those who completed one or more years of college.

Place of Residence 1 Year Ago. The data on residence 1 year ago were derived from answers to questions 15a and 15b. Residence on April 1, 1979, is the usual place of residence 1 year before enumeration. Residence 1 year ago is used in conjunction with current residence to determine the extent of residential mobility of the population. The category "Yes, this house" includes all persons 1 year old and over who did not move during the last year. For those persons classified as "No, different house," information is presented as to where they lived 1 year ago. "On this reservation" includes persons living in a different house, but on the same reservation 1 year ago. "On another reservation" refers to persons living on a different reservation 1 year ago. "Off reservation" includes persons who did not live on a reservation 1 year ago.

Year Moved Onto Reservation. The data on year moved onto reservation were derived from answers to question 16. Data presented for this question refer to the year of the most recent move to this reservation. If the person moved off the reservation and then moved back again, the year of the most recent move was recorded. "Always lived on this reservation" includes persons who never lived on any other reservation or anywhere else. "Now living in Oklahoma outside the Osage Reservation" refers to persons living within the historic areas of Oklahoma.

Health Services. The data on health services were derived from answers to questions 17a-17i. Persons were asked if they received medical and/or dental services since March 1, 1980. Persons were classified as receiving health services if:

(a) There was a visit by the person to the health care provider (doctor, nurse, and so forth), for treatment or examination. This includes visits to the provider's office, a clinic, a medical center or a hospital (either as an inpatient or an outpatient).

(b) There was a visit by the health care provider (nurse, medic, and so forth), to the person. If the health care provider visits the household to see one patient and while there examines or visits professionally another member of the household, this visit was counted for each individual receiving the provider's attention.

(c) There was a telephone call to or from a health care provider, including calls to obtain or renew a prescription. Requests for appointments or inquiries about a bill were not included.

(d) The person in question is a health care provider and treated him/herself.

(e) The person talked informally with a family member or friend who is a health care provider to obtain advice.

The definitions of the categories included in this file are as follows:

(a) **Doctor**--a medical practitioner with an M.D. or D.O. (Doctor of Osteopathy) degree, including ophthalmologists. Chiropractors, chiropodists, podiatrists, and optometrists were not included.

General practitioners and specialists were included. A general practitioner is a medical doctor who does not limit his/her practice to a specialty.

A specialist is a medical doctor who limits his/her practice to certain groups of people (children, women, and so forth), certain conditions (diabetes, arthritis, and so forth), certain parts of the body (eyes, ears, nose and throat, and so forth) or special procedures (anesthesia, radiology, and so forth).

(b) **Dentist**--a person who has been trained in the prevention, diagnosis, and treatment of diseases of the teeth and adjacent tissues. For example, oral surgeon, orthodontist, periodontist, and dental hygienist were included.

(c) **Nurse**--a person trained to care for and wait upon the sick or infirm and assist doctors, and so forth. Registered nurses (RN) and licensed practical nurses (LPN) were included.

(d) **Pharmacist**--a person trained in the practice of preparing and preserving drugs, and of compounding and dispensing medicine.

(e) **Community Health Representative (CHR)**--a person employed by the tribe and trained by the Indian Health Service to provide outreach assistance to persons in the community.

(f) **Midwife**--a person who assists during childbirth.

(g) **Physician Assistant or Medic**--a person trained to administer primary health care to individuals living in isolated areas.

(h) **Community Health Aide**--a person trained as an outreach worker to provide health care education and other services to Alaska Natives.

(i) **Other**--any response not classified in the categories listed above.

Usual Source Of Health Care. The data on usual source of health care were derived from answers to question 18a. "Usual source" refers to the place where persons received the most health care in the last twelve months. The definitions of the categories shown in this file are as follows:

Indian Health Service (IHS) clinic, health center or hospital--any facility operated under the jurisdiction of IHS.

Tribal clinic or hospital--health facilities operated under the jurisdiction of a tribal government.

Private physician or dentist--an office of a doctor, or dentist, or group of doctors in private practice.

Government (Federal, State, county, or city) clinic or hospital--health facilities operated under the listed government bodies (other than Indian Health Service facilities).

Other--any response that cannot be classified in the categories listed above.

Did not seek health care--the person received no health care during the last 12 months.

Travel Time To Health Care Facility. The data on travel time to health care facility were derived from answers to question 18b. Data on travel time includes persons who reported seeking health care in the last 12 months. Travel time to health care facility refers to how long it usually took to get from the person's home to the health facility (length of time for a one-way trip).

Payment For Health Care. The data on payment for health care were derived from answers to question 19. Data on payment for health care includes persons who reported seeking health care in the last 12 months.

Definitions of the categories are as follows:

Received from Indian Health Service or tribe at no cost--the health care was received at any Indian Health Service (IHS) clinic, health center or hospital, by IHS contract services, or at tribally operated clinics or hospitals.

Medicare--the Medicare program is a Federal health insurance plan designed to provide medical care for the aged and disabled. The plan also covers many persons under 65 years old who received Social Security or Railroad Retirement benefits based on long-term disability.

Medicaid--the Medicaid program furnishes medical assistance for needy families with dependent children, and to aged, blind, or permanently and totally disabled individuals with resources insufficient to meet the cost of necessary medical services. The program is administered by State agencies and is paid by a combination of Federal, State, and local funds. Eligibility rules for this program vary from state to state.

Received from other governmental source at no cost--the health care was covered by a government program other than Medicare or Medicaid or Indian Health Service such as the Veterans Administration and the National Health Service Corps (Department of Health and Human Services).

Received from private source at no cost--the health care was paid for with money from private contributions, programs through foundations, and so forth.

Private health insurance (For example: Aetna, Blue Cross, Health Maintenance Organization, Kaiser or other health plan)--a health insurance plan is specifically designed to pay all or part of the hospital, doctor, surgeon, or medical expense of the insured individual. The plan, to be considered as insurance, must be a formal one with defined membership and benefits.

Paid for by person or other member of family--health care was paid for by the individual receiving the care or by another family member.

Other--any response that cannot be classified in the categories listed above.

Labor Force Status In 1979. The data on labor force status in 1979 were derived from answers to question 21. Persons 16 years old and over at the time of the census are classified as "In labor force in 1979" if they worked in 1979 or had any weeks of unemployment in 1979; all other persons 16 years old and over are classified as "Not in labor force in 1979." Persons in the labor force in 1979 are classified into the following two categories:

(1) **Paid job or a business or farm**--work at a paid job or in a business or farm includes any work for pay or profit (including weeks on paid vacation or on paid sick leave) or work without pay in a business or farm run by a relative or by the tribe or active duty in the Armed Forces.

(2) **Traditional work**--this includes any time spent raising crops and/or livestock or making things to sell or trade such as rugs, pottery, jewelry, and so forth. Information on receipt of cash income is also shown for persons classified as doing traditional work. The data on cash income were derived from question 21c and includes wages or salary and self-employment income. In addition to what is ordinarily considered wage or salary income such things as piece-rate payments, commissions, tips, bonuses, and Armed Forces pay are also included as well as income received from own business, professional practice, or farm.

Weeks Worked In 1979--these data were derived from question 21b. The data refer to the number of weeks during 1979 in which a person did any work for pay or

profit (including paid vacation and sick leave), or worked without pay on a family or tribal farm or in a family or tribal business, or weeks of active service in the Armed Forces.

Main Reason For Not Working A Full Year In 1979. The data on main reason for working fewer than 50 weeks in 1979 were derived from question 22. These data are shown for persons 16 years and over at the time of the census who worked 1-49 weeks in 1979. The reasons for working fewer than 50 weeks in 1979 shown in this file are:

Personal reasons--includes reasons such as illness in the family, own illness or disability, pregnancy, child care, school, retirement, moving, marriage, and so forth.

Seasonal job completed--the job ended because the season was over. This occurs regularly in such industries as farming, logging, fishing, construction, the garment industry, and retail selling.

Slack work or business conditions--the job ended, either permanently or temporarily, because work was no longer available for reasons other than that the season was over. Examples are job eliminated, no need for services, laid off, reductions in force, and so forth.

Temporary nonseasonal job completed--includes persons who took a job with the knowledge that it was temporary. Examples include just working temporarily, helping out for a while, substitute teaching, and so forth.

Unsatisfactory work arrangements--persons who left their jobs voluntarily because they were dissatisfied with their working conditions. Examples of reasons include hours too long, pay too low, and so forth.

Could not find work--persons who tried to find work, or tried to start a business or profession during 1979, but could not.

Bad weather conditions--persons prevented from working part of the year (1979) because of "bad weather."

Did not want work--persons who did not want work.

Other--includes persons who could not be classified in any of the above categories. Examples include "started job during the year," "labor dispute," and so forth.

Weeks Of Unemployment In 1979. The data on weeks of unemployment were derived from answers to question 23. Weeks of unemployment in 1979 pertain to the number of weeks during 1979 in which a person 16 years old and over did not work but spent any time looking for work (that is, trying to get a job or start a business or professional practice) or on layoff from a job. Excluded from weeks of unemployment are any weeks in which the person worked, even for one hour; or any weeks for which the person received any wages or salary; or in which the person was on active duty in the Armed Forces, on paid vacation, or on paid leave.

Date Last Worked. Data on date last worked were derived from answers to question 24. The date last worked is the most recent year in which the person

did any work at all, even for a few days, and not the year last worked at a full-time job.

"Now working" includes persons who were working at the time of the census. "Never worked" includes persons who never worked at any kind of job or in a business or farm, either full time or part time, have never done upaid work in a family business or on a family farm, never raised crops and/or livestock, or made things to sell or trade, and have never served in the Armed Forces.

Occupation And Industry. The information on the industry and occupation were obtained from questions 24, 25, and 26.

Occupation Classification System. The system developed for the 1980 census consists of 503 specific occupation categories arranged into 6 summary and 13 major occupation groups. This classification was developed to be consistent with the 1980 Standard Occupational Classification Manual (SOC), published by the U.S. Department of Commerce, Office of Federal Statistical Policy and Standards. This is the first time there was a United States standard to use in developing the census occupational classification.

The SOC Manual presents a list of 12 principles used in occupational classification. The primary principles used were as follows: 1) the classification should realistically reflect the current occupational structure of the United States, and 2) an occupation should be classified on the basis of work performed. The conversion of the census classification to the SOC has caused the 1980 census classification to be less comparable with the classifications used in earlier censuses.

In addition to the standard occupations, 24 "traditional" American Indian occupations were added to the list for the supplementary questionnaire program.

The 1980 Census of Population: Classified Index of Industries and Occupations (PHC80-R4), 1982, U.S. Government Printing Office, Washington, D.C., provides information on the composition of the detailed occupation categories.

Industry Classification System. The industry classification system developed for the 1980 Census of Population consists of 231 categories classified into 13 major industry groups. Since 1940 the industrial classification has been based on the Standard Industrial Classification Manual (SIC). The 1980 census classification was developed from the 1972 SIC published by the Executive Office of the President, Office of management and Budget, and the 1977 supplement to that manual.

The 1980 Census of Population: Classified Index of Industries and Occupations (PHC80-R4), 1982, U.S. Government Printing Office, Washington, D.C., provides additional information on the industry classification system.

Location Of Industry. The data on location of industry were derived from responses to question 25c. "On reservation" refers to businesses or organizations located on the reservation, and "Off reservation" refers to businesses or industries located off the reservation.

Class Of Worker. The data on class of worker were derived from answers to question 27. The information on class of worker refers to the same job as a respondent's industry and occupation and categorizes persons according to the type of ownership of the employing organization. The definitions of the class of worker categories shown in this file are as follows:

Private Wage and Salary Workers--private wage and salary workers are persons who worked for a private employer for wages, salary, commission, tips, pay-in-kind, or at piece rates. Self-employed persons whose business is incorporated are included here because they are paid employees of their own companies. The categories "Tribal or Indian-owned business" and "Private company, business or individual" are included as private wage and salary workers. The definitions of these categories are:

Tribal or Indian-Owned Business--tribal or Indian-owned business employees are persons employed in a business owned by a tribe or an American Indian, other than the respondent or the respondent's family.

Private Company, Business or Individual--private company, business, or individual workers are persons employed by a private company, business, or individual, for wages, salary, or commissions.

Tribal Government Workers--tribal government workers are persons employed by a tribal government, such as a tribal administrator or a teacher in a tribal school.

Federal Government Workers--Federal government workers are employees of any Federal governmental unit, regardless of the activity of the particular agency. This includes persons who work for the Bureau of Indian Affairs (BIA) and Indian Health Service (IHS).

State or Local Government Workers--State or local government workers are employees in public schools, government-owned bus lines, government-owned electric power utilities, and so forth. Persons elected to paid offices at the State or local level are also included.

Self-Employed Workers--self-employed workers are those who work for profit or fees in their own unincorporated business, profession, or trade or who operate a farm.

Unpaid Family Workers--unpaid family workers are those who work without pay on a farm or in a business operated by a relative. Room and board and a cash allowance are not counted as pay for these family workers.

Types Of Benefits Received In 1979. The data on benefits received in 1979 were derived from answers to question 28. The definitions of the categories shown in this file are as follows:

Medicare or Medicaid--the Medicare program is a Federal health insurance plan designed to provide adequate medical care for the aged and disabled. The plan also covers many persons under 65 years old who receive Social Security or Railroad Retirement benefits based on long-term disability.

The Medicaid program furnishes medical assistance for needy families with dependent children, and to aged, blind, or permanently and totally disabled individuals with resources insufficient to meet the cost of necessary medical services. The program is administered by State agencies and is funded through a combination of Federal, State, and local funds. Eligibility rules for this program vary from state to state.

Food Stamps--this Federally funded program increases food purchasing power by providing eligible households with coupons which can be used to purchase

food. The U.S. Department of Agriculture administers the Food Stamp Program through State, local, and tribal governments. Free food commodities given by State, local, or tribal governments are not counted as food stamps.

Federal Housing Assistance--several programs are administered by the Department of Housing and Urban Development which provide housing assistance to low income families and individuals living in publicly or privately owned dwellings. Participation in public housing is determined by program eligibility and the availability of housing. Income standards for occupancy vary by local housing authority. Other programs involve the use of Federal, State, and local funds to subsidize low income tenants in privately owned housing through rent supplements paid to the property owner by a government agency or mortgage interest reduction savings to the owner.

Women, Infants, and Children (WIC)--benefits are received in the form of vouchers that are redeemed at retail stores for specific supplemental nutrition foods. Eligible low income recipients are infants and children up to age five, and pregnant, postpartum, and breastfeeding women.

Social Security (green colored check)--the program includes Social Security pensions and survivors benefits, and permanent disability payments made by the Social Security Administration. Medicare reimbursements are not included.

Supplemental Security-U.S. Government (gold colored check)--the program includes payment made by Federal, State, and local welfare agencies to low income persons who are (1) aged (65 years old and over), (2) blind, or (3) disabled.

Aid to Families with Dependent Children (AFDC)--money is provided from the State or local welfare offices under the Aid to Families with Dependent Children Program.

Bureau of Indian Affairs General Assistance--payments are provided for assistance from the Bureau of Indian Affairs.

Other Assistance or Welfare Payments--money received from other assistance programs such as general assistance, emergency assistance, tribal assistance or other Amerian Indian assistance, as well as free food commodities given by State, local, or tribal governments.

Total Income In 1979. The data on income in 1979 were derived from answers to question 29. Information on income received in the calendar year 1979 was requested from persons 15 years old and over. Persons were asked to report any income from the following (before deductions for taxes, bonds, dues, or other items): wages and salaries; own farm or nonfarm business, partnership or professional practice (net after expenses); interest, dividends, or net rental income; Social Security or Railroad Retirement; public assistance or welfare; Unemployment Compensation; veterans' payments; pensions; alimony or child support; or any other money income received regularly. Instructions were to exclude lump-sum amounts such as gains from sale of property.

Although the income statistics cover the calendar year 1979, the characteristics of persons and the composition of families and households refer to the time of enumeration (April 1980). For example, the income of the family does not include amounts received by persons who were members of the family during all or

part of the calendar year in 1979 if these persons no longer resided with the family at the time of enumeration. On the other hand, family income amounts reported by related persons who did not reside with the family during 1979 but who were members of the family at the time of enumeration are included. However, the composition of most families and households was the same during 1979 as in April 1980.

The income information in this file may differ from similar data shown in regular 1980 census reports because the data are derived from a single question on income rather than the addition of component types of income entries asked on the regular census questionnaires.

Poverty Status In 1979. Families and unrelated individuals are classified as being below or above the poverty level based on income in 1979 using a poverty index which provides a range of income cutoffs or "poverty thresholds" varying by size of family, number of children, and age of the family householder or unrelated individual. The poverty thresholds used in the 1980 census differ slightly from those used in the 1970 census, which took into account the same three factors as well as sex of the family householder or unrelated individual and farm-nonfarm residence. In addition, for the 1980 census the thresholds by size of family were extended from 7 or more persons to 9 or more persons. The income cutoffs are updated each year to reflect the change in the Consumer Price Index. The poverty threshold for a family of four was $7,412 in 1979; thresholds by size of family are shown below.

Weighted Average Poverty Thresholds: 1979

Size of family	Threshold
1 person:	
Under 65 years	$3,774
65 years and over	3,479
2 persons:	
Householder under 65 years	4,876
Householder 65 years and over	4,389
3 persons	5,787
4 persons	7,412
5 persons	8,776
6 persons	9,915
7 persons	11,237
8 persons	12,484
9 or more persons	14,812

Households are classified below the poverty level when the total 1979 income of the family or of the nonfamily householder is below the appropriate poverty threshold. The income of persons living in the household who are unrelated to the householder is not considered when determining the poverty status of a household.

The poverty data in this file may differ from similar data shown in regular 1980 census reports because the income data are derived from a single question on total income rather than from the addition of types of income components.

Poverty status in this file is determined for all persons except unrelated individuals under 15 years old. For a detailed explanation of the poverty definition, see appendix B in General Social and Economic Characteristics reports, PC80-1-C.

Because the poverty definition currently in use by the Federal Government does not meet all the needs of the analysts of the data, some of the data are presented for alternate definitions ranging from 75 percent to 200 percent of the current poverty level. These specified poverty levels are obtained by multiplying the income cutoffs at the poverty level by the appropriate factor. For example, the income cutoff at 125 percent of the poverty level was $9,265 in 1979 for a family of 4 persons.

Definitions and Explanations of Housing Characteristics

Living Quarters. Living quarters are classified in the census as either housing units or group quarters. (Group quarters were not enumerated in the Supplementary Questionnaire Program.) Usually, living quarters are in structures intended for residential use (e.g., a one-family home, apartment house, hotel or motel, boarding house, mobile home or trailer). However, living quarters may also be in structures intended for nonresidential use (e.g., the rooms in a warehouse where a night guard lives) as well as in boats, tents, vans, etc.

Housing Units. A housing unit is a house, an apartment, a group of rooms, or a single room, occupied as a separate living quarters or, if vacant, intended for occupancy as a separate living quarters. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from the outside of the building or through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except those in Group Quarters as described in the next paragraph).

Group Quarters. Group quarters are any living quarters which are not classified as housing units. There are two types of group quarters: (1) institutional group quarters, and (2) noninstitutional group quarters. Institutional group quarters are living quarters occupied by one or more persons under care or custody, such as children in an orphanage, persons in a nursing home, prisoners in a penitentiary. Noninstitutional group quarters include living quarters such as college-owned and/or operated dormitories, fraternity and sorority houses, nurses' dormitories, and boarding houses. In addition, noninstitutional group quarters include any living quarters (other than those classified as instituional group quarters) which are occupied by 9 or more persons unrelated to the householder, or by 10 or more unrelated persons. Information on the housing characteristics of group quarters was not collected in the census.

Transcription Items (Regular Census Questionnaires). Responses to the questions on units at address, plumbing facilities, rooms, tenure, value, and contract rent, from the 1980 census short-form questionnaire were transcribed to the corresponding supplementary questionnaire. The items provide basic housing informaiton and were transcribed to the supplementary questionnaire so these questions would not be asked twice.

Units at Address. Data on the number of housing units at an address are derived from answers to question H4. The statistics are presented for 1 unit, 2 to 9 units, and 10 or more units at an address. Data are also presented for mobile homes or trailers. In several census reports, data are provided on the number of housing units in structures of specified size. Care should be taken in using "Units at address" as a proxy for "Units in structure" because some multi-unit buildings have more than one street address.

Plumbing Facilities. Data on the plumbing facilities were derived from answers to question H6. The category "Complete plumbing for exclusive use" consists of units which have hot and cold piped water, a flush toilet, and a bathtub or shower inside the housing unit for the exclusive use of the occupants of the unit. "Lacking complete plumbing for exclusive use" includes those conditions when (1) all three specified plumbing facilities are present inside the unit, but are also used by another household; (2) some but not all the facilities are present; or (3) none of the three specified plumbing facilities is present.

Rooms. Data on rooms were derived from answers to question H7. The statistics on "Rooms" are in the terms of the number of housing units with a specified number of rooms. The intent of this question is to count the number of whole rooms used for living purposes. For each unit they include living rooms, dining rooms, kitchens, bedrooms, finished recreation rooms, enclosed porches suitable for year-round use, and lodger's rooms. Excluded are strip or pullman kitchens, bathrooms, open porches, balconies, halls, half-rooms, utility rooms, unfinished attics or basements, or other unfinished space used for storage. A partially divided room is a separate room only if there is a partition from floor to ceiling.

Tenure. Data on tenure were derived from answers to question H8. A housing unit is "Owner occupied" if the owner or co-owner lives in the unit, even if it is mortgaged or not fully paid for. All other occupied units are classified as "Renter occupied," including units rented for cash rent and those occupied without payment of cash rent.

Value. Data on value were derived from answers to question H11. Value is the respondent's estimate of how much the property (house and lot) or condominium unit would sell for, if it were for sale. Value and price asked are tabulated separately for certain kinds of housing units. Value statistics are presented for "Specified owner-occupied" housing units. These "specified" housing units include only one-family houses on less than 10 acres without a commercial establishment or medical office on the property. Mobile homes, trailers, boats, tents, or vans occupied as a usual residence, and owner-occupied noncondominium units in multi-family buildings are excluded from the value tabulations.

Contract Rent. Data on contract rent were derived from answers to question H12. Contract rent is the monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. For vacant units, it is the rent asked for the unit at the time of enumeration. The statistics on rent are tabulated for "Specified renter-occupied" housing units which include renter units except one-family houses on 10 or more acres. Respondents were asked to report rent only for the housing unit enumerated and to exclude any rent paid for additional units for business premises. Renter units occupied without payment of cash rent are shown separately as "No cash rent" in the rent tabulations.

Supplementary Questionnaire Items

Occupied Housing Units. A housing unit is classified as occupied if it is the usual place of residence of the person or group of persons living in it at the time of enumeration, or if the occupants are only temporarily absent; e.g., away on vacation. If all the persons staying in the unit at the time of the census have their usual place of residence elsewhere, the unit is classified as vacant. A household includes all the persons who occupy a housing unit as their ususal place of resident. By definition, therefore, the number of occupied housing units is the same as the number of households. In tabulations presenting data from a sample of the housing units, there may be small differences in the counts resulting from processing procedures used to inflate the population and housing sample data.

Persons In Unit. All persons occupying the housing unit are included. These persons include not only occupants related to the householder but also any lodgers, roomers, boarders, partners, roommates, wards, foster children, and resident employees who share the living quarters of the householder. The data on "Persons in unit" show the number of housing units occupied by the specified number of persons.

Persons Per Room. "Persons per room" is a derived measure obtained by dividing the number of persons in each occupied housing unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of occupied housing units having the specified ratio of persons per room.

Piped Water. Data on piped water were derived from answers to questions 1a and 1b. A unit is classified as having piped water if water is piped to the unit from a pressure or gravity system. The supply of water may be available at a sink, wash basin, bathtub, or shower. Piped water must be located in the same building as the living quarters being enumerated to be counted as available for the units. Piped water may be located within the unit itself, or it may be in the hallway, or in a room used by several units in the building. It may be necessary to go outdoors to reach that part of the building in which the piped water is located.

Source Of Water. Data on source of water were derived from answers to question 1c. Housing units may receive their water supply from a number of sources. The definitions of the types of source of water shown in this file are as follows:

> **Public system, private company, tribal or community system**--a common source that supplies water to six or more housing units. The water may be supplied by a city, county, water district, water company, tribal system, community system, etc., or it may be obtained from a well which supplies piped water to six or more housing units.
>
> **Individual drilled well or individual dug well**--the water is supplied from a well on the property or on a neighboring property serving five or fewer housing units.
>
> **Private cistern**--refers to vessels in which rainwater is collected usually as it drains from the roof or, if the property slopes, from a paved area. This source usually serves only one structure.
>
> **Creek, spring, river, lake, or pond**--water is obtained privately from a creek, spring, river, lake, or pond.
>
> **Other source**--water sources other than the ones listed above.

Sewage Disposal. Data on sewage disposal were derived from answers to question 2. The definitions of the types of sewage disposal shown in this file are as follows:

> **Public sewer**--this applies to housing units connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. A public sewer may be operated by a government body, including a tribe, or by a private organization. Small sewage treatment plants, which in some localities are called neighborhood septic tanks, are also classified as public sewers.

Septic tank or cesspool--a housing unit is considered to be connected to a septic tank or cesspool when the unit is provided with an underground pit or tank for sewage disposal.

Chemical toilet or an outhouse or privy--a housing unit using a chemical toilet or other type of nonflush toilet in an outdoor structure.

Other means--this includes all other means of sewage disposal other than the ones listed above.

Year Structure Built. Data on year structure built were derived from answers to question 4. Year structure built refers to when the building was first constructed, not when it was remodeled, added to, or converted. For a houseboat or mobile home or trailer, the manufacturer's model year is assumed to be the year built. The figures shown in this file relate to the number of units in structures built during the specified periods and in existence at the time of enumeration.

Floor Materials. Data on floor materials were derived from answers to question 8. This item refers to the flooring materials, not to rugs, carpets or other floor covering. The classification identifies the main type of material used for the major portion of the floor area of the living quarters. The categories for types of material used are: (1) "Wood," including woodboards, plywoods, etc.; (2) "Asphalt, linoleum, or vinyl tiles;" (3) "Stone, concrete, brick, clay, or ceramic tile;" (4) "Metal," including zinc, steel, tin, etc.; (5) "Earth, gravel, sand;" and (6) "Other," for all types of materials which cannot be described by any of the other specific categories.

Exterior Wall Materials. Data on exterior wall materials were derived from answers to question 9. Units were classified according to the main type of material used in the construction for the major portion of the outside walls of the structure. The categories for types of material used are: (1) "Siding or shingles (wood or aluminum)," including asphalt shingles or vinyl siding and shingles; (2) "Brick, concrete block, stone, or stucco;" (3) "Logs;" (4) "Asphalt siding or tar paper;" (5) "Cloth or tent;" (6) "Mud, adobe, or sod;" (7) "Metal," including zinc, steel, tin, etc.; and (8) "Other," for materials not specified in the listed categories.

Kitchen Facilities. Data on kitchen facilities were derived from answers to question 5a. A unit has complete kitchen facilities when it has all of the following: (1) an installed sink with piped water, (2) a range or cookstove, and (3) a mechanical refrigerator. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or cookstove. An icebox is not considered to be a mechnical refrigerator.

Refrigerator. Data on the presence of a refrigerator were derived from answers to question 5b. A unit is classified as having a refrigerator if there is a mechanical refrigerator available for the living quarters. Mechanical refrigerators may be operated by electricity, gas, kerosene, or other source of power. An icebox is not considered to be a mechanical refrigerator.

Heating Equipment. Data on heating equipment were derived from answers to question 3. Housing units use specific types of heating equipment as their primary source of heat. The categories for types used are: (1) a steam or hot water system; (2) a central warm-air furnace with ducts to the individual rooms;

(3) an electric heat pump; (4) other built-in electric units which are permanently installed in the floors, walls, ceilings, or baseboards, and are a part of the electrical installation of the building; (5) a floor, wall, or pipeless furnace; (6) room heaters with flue or vent that burn gas, oil, or kerosene; (7) nonportable room heaters without flue or vent that burn gas, oil, or kerosene; and (8) fireplaces, stoves, or portable room heaters of any kind that can be picked up and moved.

Electric Lighting. Data on electric lighting were derived from answers to questions 7a and 7b. Housing units are classified as having electric lighting if the unit has electric lighting fixtures or electric lamps in the unit or if the unit is equipped for electric lighting even though the current may be shut off or the service temporarily discontinued. If the electricity is supplied by a government body or a private organization, the units are classified as receiving electricity from a "Public or private utility company." Electricity may also be supplied by the following sources: (1) rural electric cooperative; (2) Bureau of Indian Affairs electric system; (3) tribal system; and (4) a generator, which may be operated by means of diesel oil, solar or other sources of energy. Sources of electric lighting other than the ones listed were included in the category "Other."

Telephone in Housing Unit. Data on telephone in the housing unit were derived from answers to questions 6a and 6b. A unit is classified as having a telephone if there is a telephone in the living quarters. Units where the respondent uses a telephone located inside the building but not in the respondent's living quarters are classified as having no telephone.

FILE DESCRIPTION

File Structure

Records on the STF are divided into 452 physical segments of 2,046 characters each. The initial segment of each record begins with 252 characters of geographic identification and suppression flags while subsequent segments begin with 102 characters of geographic identification. Each segment may be padded at the end (See Figure 1).

Figure 1 also provides information needed to calculate character location for each cell, including matrix number, segment number where the matrix is located, and cell size (either 9 or 15 characters) for the matrix. When calculating, note that the first matrix of segment 1 begins in position 253; the first matrix or continuing matrix of each subsequent segment begins in position 103. (Matrices may cross segment boundaries.)

FOOTNOTES

1/ Each sample person and housing unit was assigned a weight as the result of a complex ratio estimation procedure. These weights vary from person to person and from housing unit to housing unit, but on the average they are approximately equal to the inverse of each records sample selection probability. The tabulations in this file are based on a summing the weights of the appropriate persons or housing units relating to the tabulation. For specified aggregates, indicated below, the characteristics data are multiplied by the weight; for example, in aggregate income for persons the amount of income is multiplied by the weight. In medians, the weights are brought to bear indirectly through the distribution used to calculate the measure. For family and household tabulations (population type), only the weights of the householder are used. The following is a listing of the weights used in producing each tabulation:

Persons weights -- Tabulations 1-4; 11; 13; 14; 16; 17; 22-25; 27-36; 47; 53-56; 58-60; 64; 67-71; 73-81; 87-91; 93-99; 116-118; 120; 123; 125; 130; 163-166; 169-173; 175; 230-249; 289; 290; 293; 317-325; 358; 421; 422; 443

Householder (persons) weights -- Tabulations 5-8; 20; 21; 38; 39; 41; 42; 44; 45; 48-51; 61-63; 65; 66; 82-86; 92; 101; 102; 104; 105; 107; 108; 110; 111; 114; 115; 119; 121; 122; 124; 126-129; 133; 136; 138; 139; 141; 142; 144; 145; 147; 148; 150; 151; 153; 154; 158-162; 167; 168; 250; 251; 283; 284; 286; 287; 292; 310; 311; 313; 314; 326-357; 359-379; 397-402; 404-420, 424-442

Housing weights -- Tabulations 9; 10; 174; 176-192; 194; 195; 197; 198; 200; 201; 203; 204; 206; 207; 209; 210; 212; 213; 215; 216; 218; 219; 221; 222; 224; 225; 227; 229; 252-267; 294-309; 380-396; 403

2/ The count of households in sample tabulations may differ from the number of occupied housing units. This is a result of the weighting process. An indication of the type of weight (population or housing) for each matrix is listed in footnote 1.

3/ Includes Black, Asian and Pacific Islander (e.g., Chinese and Filipino), and all other races not shown separately.

4/ Not used.

5/ A "Child of householder" includes any son, daughter, stepchild, or adopted child of the householder. An "Own child of householder" is a never-married child under 18 years of age who is a son, daughter, stepchild, or adopted child of the householder. "Related children" include not only own children but also all other family members, regardless of marital status, who are under 18 years old, except the householder or spouse. Foster children are included in the "Nonrelative" category.

6/ Relatives include householder, spouse, and the questionnaire categories: "Son/daughter," "Brother/sister," "Father/mother," and "Other relative." Tabulations of "Other relatives" include all categories not shown separately in the matrix.

7/ "Nonrelatives" include the questionnaire categories: "Roomer, boarder," "Partner, roommate," "Paid employee," and "Other nonrelative." Tabulations of "Nonrelatives" include all categories not shown separately in the matrix.

8/ This aggregate, along with the relevant count, will permit the computation of a mean. For example, the aggregate value for specified owner-occupied housing units will yield the mean value when divided by the number of specified owner-occupied housing units, and the aggregate rooms for occupied housing units divided by the number of occupied housing units yields mean rooms.

9/ Distribution does not add to total; total includes households and families where both householder and spouse did not report tribal enrollment status and have no principal or enrolled tribe and households and families where the householder (spouse) did not report enrollment status or has no principal or enrolled tribe and the spouse (householder) reported "not enrolled" in tribe.

10/ "Living with two parents" is defined as an own child in a married-couple family.

11/ Totals for "Different house in the United States" include persons who did not report whether they lived "on" or "off" reservation; totals for "off reservation" includes persons who did not report where they lived 1 year ago off the reservation; and "Same State" includes persons who did not report "same" or "different" county. The category "Not reported," if shown separately, includes persons who did not report their residence 1 year ago; if "Not reported" is not shown separately, it is included in "Total."

12/ Tabualtions of poverty status exclude unrelated individuals under 15 years. (See also Footnote 19.)

13/ In Oklahoma, data are shown only for the Osage Reservation; it excludes the Historic Areas of Oklahoma (excluding urbanized areas).

14/ Persons under 16 years old are classified as not in the labor force in 1979.

15/ The initial income interval for distributions of persons income includes the following:

a. persons with appropriate net positive amounts (e.g., $1 to $999)

b. persons with positive and negative amounts netting to "0"

c. persons with negative total income.

16/ Not used.

17/ The initial interval for distributions of household and family income include the following:

- units with appropriate net positive amounts (e.g., $1 to $2,499)
- units with no income
- units with positive and negative dollar amounts netting to "0"
- units with negative total income

18/ Per capita income is calculated by dividing the aggregate income for persons 15 years and over by the total number of persons in the group.

19/ Poverty status is determined for families and unrelated individuals. The poverty status assigned to a family is also assigned to each family member. Unrelated individuals are each assigned poverty status according to their individual incomes. Households and occupied housing units are classified below the poverty level when the total 1979 income of the family or the nonfamily householder is below the appropriate poverty threshold. The income of persons living in a household or housing unit who are not related to the householder is not considered when determining the poverty status of a household or occupied housing unit. Tabulations of poverty status exclude unrelated individuals under 15 years. (See Footnote 12.)

20/ Not used.

21/ The value distribution is restricted to certain kinds of owner-occupied units. The following are excluded from the tabulations on value:

a. Units at an address with two or more units

b. Units on 10 or more acres

c. Units with a commercial establishment or medical office on the property

d. Mobile homes or trailers.

22/ Includes renter-occupied units except one-family houses on 10 acres or more.

23/ Households, families, or housing units may be counted more than once in this tabulation.

24/ See Attachment 1 for definition of tribal codes.

25/ "Traditional work" is tabulated when the respondent answered "Yes" to the questionnaire item: "In 1979, did this person raise crops and/or livestock, or spend any time making things to sell or trade such as rugs, pottery, or jewelry?"

26/ See Appendix B for occupation codes.

27/ See Appendix A for industry codes.

28/ Persons, households, families, householders, or unrelated individuals may be counted more than once in this tabulation.

29/ Includes persons who responded "Yes" for a least one health service.

30/ Includes persons who responded "No" for at least one health service and did not respond "Yes" to any health service.

31/ Includes persons who did not respond to any of the health services listed.

32/ Lacking complete plumbing (facilities) for exclusive use includes: complete plumbing (facilities) but also used by another household, some but not all plumbing facilities, or no plumbing facilities.
