a The figures of production from 1860 to 1871, inclusive, are taken from the New York Shipping and Commercial List; for 1872, 1873, and 1874 from the New York Commercial and Financial Chronicle; and after 1874, from reports of the National Cotton Exchange of America. The amount placed opposite each fiscal year in the column of production is the crop grown during the preceding calendar year and comprises port receipts, overland shipments to Northern mills, and Southern consumption, during the year ending August 31. *b* The net weight of bales is stated on the authority of Mr. Thomas Ellison, of Liverpool; and the gross weight for years prior to 1878 on the authority of Mr. J. R. Dodge, Statistician of the Department of Agriculture; and after 1877, as reported by the National Cotton Exchange. *c* No record during the war period.

a As a given number of gallons of refined petroleum represents the product of a larger number of gallons of crude petroleum, it is necessary to reduce the exports of petroleum to their equivalent in crude oil, in order to arrive at a knowledge of the percentage of the total product of mineral oil exported. It has been ascertained, as the result of a careful computation, that the quantity of petroleum and its distilled products exported during the year ended June 30, 1878, was equivalent to 407,482,175 gallons of crude oil: or, in other words, that the exports of petroleum constituted about 66 per cent. of the production. A larger percentage of the mineral oil product of the country is exported than of any other product, except cotton. b Barrels reduced to gallons, at the rate of 42 gallons to the barrel. c Estimated. d Figures of production for fiscal years 1882, 1883, and 1884–'85 furnished by S. H. Stowell, editor of Stowell's Petroleum Reporter.

NOTES.—(1) The production of domestic liquors and wines for 1840, 1850, and 1860 was derived from the United States Census. (2) The consumption of imported liquors and wines for 1840, 1850, and 1860 is the net imports. (3) The production of domestic wines, from 1870 to 1885, are estimates by the Department of Agriculture; by Mr. Charles McK. Leoser, president of the Wine and Spirit Traders' Society, New York, and other well-informed persons. (4) The consumption of domestic spirituous and malt liquors, from 1870 to 1885, was obtained from the reports of the Commissioner of Internal Revenue, and for prior years from the United States Census. (5) The consumption of imported liquors and wines, from 1870 to 1885, was taken from the official returns made to the Bureau of Statistics by collectors of customs. (6) In computing the quantity of sparkling and still wines and vermuth in bottles, 5 so-called quart bottles are reckoned as equivalent to the gallon.

a Of not more than 31 gallons. *b* The returns of spirits distilled from apples, grapes, and peaches were included in the account of spirits distilled from other materials until July 1, 1864. *c* Including fruit brandy.

No returns of the production of the different kinds of spirits other than fruit brandy were made prior to July 1, 1877.

There are no official data of annual production of spirits prior to 1866 except quantities on which tax was paid.

There are provisions for exportation of spirits without payment of tax in acts of July 1, 1862, and June 30, 1864; also provisions for abatement of tax on spirits lost by leakage in transportation in acts of March 3, 1863, and June 30, 1864; but there are no data in office of the Commissioner of Internal Revenue by which the total quantity of spirits so exported and lost by leakage each year can be determined prior to fiscal year 1866–'67. Hence the production above given for 1863, 1864, and 1865 is the same as the tax-paid quantities for those years, and represents the true production less unknown quantities exported and lost by leakage. To get production for 1866, the quantity returned for tax that year (14,847,943 gallons) is added to 9,214,762 gallons stock on hand at close of same year (see page ix, Rep. Com. Int. Rev., 1867), making 24,062,705 gallons as production of 1865–'66, though some of the quantity in warehouse at close of the year may have been, and doubtless was, produced in previous years.

a Prior to the year 1864 the tonnage of vessels entered from British Columbia is combined with that entered from British Possessions on the Atlantic; subsequent to that period it is shown in a separate column.

b A small portion of the tonnage fom the United Kingdom during these years entered at lake ports, and has been deducted from the total tonnage entered from that country, which will account for the apparent discrepancy between these figures and those of the regular annual statements of navigation.

c No detailed statement of the trade of each port with foreign countries was published for these years, which renders it impossible to determine what amount of the tonnage of each foreign country, if any, may have entered at lake ports. The whole amount of tonnage from the countries herein enumerated has therefore been credited to seaports.

* This statement is the result of original estimates, made by Mr. J. R. Dodge, from annual returns to the Department of Agriculture, of the comparative condition and area of the crop and price of product; and as to quantity of production, mainly from the official records of manufacture and exportation. It has been demonstrated that returns of production of tobacco, which bears a heavy tax, are uniformly underestimates, whether census returns or those of the Department of Agriculture; a fact in accord with the experience of all governments with respect to voluntary statistical returns of taxed products. The prices are the average home or farm value of leaf tobacco.
