Section 1

Population

This section presents statistics on the growth, distribution, and characteristics of the U.S. population. The principal source of these data is the Bureau of the Census, which conducts a decennial census of the population and a monthly current population survey. It also prepares periodic population estimates. For a list of publications, see the Guide to Sources in Appendix IV of this book.

Decennial censuses.—The U.S. Constitution provides for a census of the population every 10 years, primarily to establish a basis for apportionment of Members of the House of Representatives among the States. For over a century after the first census in 1790, the census organization was a temporary one, created only for each decennial census. In 1902, the Bureau of the Census was established as a permanent Federal agency, responsible for enumerating the population and also for compiling statistics on other subjects.

In population censuses, each person is counted as an inhabitant of his usual place of residence. While this place is not necessarily a person's legal residence, voting residence, or domicile, the use of these different bases of classification should produce the same results in the vast majority of cases.

Since the 1940 census, some data have been obtained from representative samples of the population rather than from a complete count, as follows: 5 percent in 1940, 20 percent in 1950, 25 percent in 1960, and 5, 15, and 20 percent in 1970. Exact agreement is not to be expected among the various samples, nor between them and the complete census count. Sample data may be used with confidence where large numbers are involved and assumed to indicate patterns, trends, and relationships where small numbers are involved.

Estimates based on evaluation studies of the 1970 census results indicate a total net underenumeration of about 5.3 million persons, compared with 5.1 million in 1960. Among the persons who were not counted in 1970, about 3.4 million were White and about 1.9 million were Black. The overall rate of net underenumeration in 1970 was about 2.5 percent, compared with 2.7 percent in 1960 and 3.3 percent in 1950. Data from the 1950, 1960, and 1970 censuses have not been adjusted for the estimated underenumeration. For details, see *Estimates of Coverage of Population by Sex, Race, and Age: Demographic Analysis* PHC(E)–4, February 1974.

Current Population Survey.—This is a monthly nationwide survey of a scientifically selected sample representing the non-institutional civilian population and is subject to sampling error. The sample is drawn from about 600 areas comprising approximately 1,100 counties and independent cities with coverage in every State and the District of Columbia. At the present time (1977), about 65,000 housing units or other living quarters are designated for the sample at any time, of which about 55,000 are occupied by households eligible for interview; of these, in turn, about 4 to 6 percent are, for various reasons, unavailable for interview. See also Appendix III.

Population estimates and projections.—National estimates of population for the years between censuses are derived by use of decennial census data as benchmarks and of data available from various agencies as follows: Births and deaths (National Center for Health Statistics); immigrants (Immigration and Naturalization Service); the Armed Forces (Department of Defense); net movement between Puerto Rico and the U.S. mainland (Puerto Rico Planning Board); and Federal employees abroad (Civil Service Commission and Department of Defense). State estimates are based on similar data and also on a variety of data series, including school statistics from State departments of education and parochial school systems.

National population projections indicate the approximate future level and characteristics of the population under given assumptions as to future fertility, mortality, and net immigration. The method used to develop the projections involved preparation of projections of each of the components of population change—births, deaths, and net immigration—and the combination of these with July 1 estimates of the current population. Projections for States and metropolitan areas incorporate further assumptions about the redistribution of population as a consequence of migration.

Current estimates and projections are generally consistent with official decennial census figures and do not reflect the amount of estimated census underenumeration. For details on methodology, see the sources cited below the individual tables.

Standard Metropolitan Statistical Areas (SMSA) and Standard Consolidated Statistical Areas SCSA .—SMSA's and SCSA's are defined by the Office of Management and Budget (OMB). Based on OMB's definitions, the entire territory of the United States may be classified as *metropolitan* (inside SMSA's), or *nonmetropolitan* (outside SMSA'S). SCSA's are large metropolitan agglomerations consisting of groups of adjacent SMSA's. SMSA's and SCSA's are defined in terms of entire counties except in New England, where the definitions are in terms of cities and towns. To summarize data for New England that are available only by counties, New England County Metropolitan Areas (NECMA's) have been developed as a convenience for users. For descriptive details, tables showing changes in SMSA definitions, and a listing of area titles and components of each SMSA, SCSA, and NECMA, see Appendix II of this book.

Urban and rural areas.—According to the 1970 census definition, the urban population comprises all persons in (*a*) places of 2,500 inhabitants or more incorporated as cities, villages, boroughs (except Alaska), and towns (except in New England, New York, and Wisconsin), but excluding persons living in the rural portions of "extended cities" (places with relatively low population density in one or more large parts of their area); (*b*) unincorporated places of 2,500 inhabitants or more; and (*c*) other territory, incorporated or unincorporated, included in urbanized areas. An urbanized area consists of a central city, or twin cities, with a total of 50,000 inhabitants or more, together with contiguous closely settled territory (urban fringe).

In censuses prior to 1950, the urban population comprised all persons living in incorporated places of 2,500 inhabitants or more, and certain areas (usually minor civil divisions) classified as urban under special rules relating to population size and density. The previous urban definition was replaced in 1950 by the current definition except for minor modifications and the introduction of the "extended cities" concept in 1970. In all definitions, the population not classified as urban constitutes the rural population.

Race.—For census purposes, the population is divided into three major groups on the basis of race: White, Negro or Black, and other. For the 1960 and 1970 censuses, data were obtained on race principally through self-enumeration; thus, the data represent essentially self-classification by people according to the race with which they identify themselves. Persons of Mexican or Puerto Rican birth or ancestry who did not identify themselves as of a race other than White were classified as White. In 1970, the father's race was used for persons of mixed parentage who were in doubt as to their classification. In 1960, persons who reported mixed parentage of White and any other race were classified according to the other race; mixtures of races other than White were classified according to the father's race. The terms used here to identify race (e.g. White, Black) are usually as shown in the current, original source of the data.

In Current Population Survey and other household sample surveys in which data are obtained through personal interview, race is determined by interviewer observation except for persons unrelated to the household head, in which case race is specifically asked for. Race of the father is reported for persons of mixed parentage where such mixture is given by the respondent.

Ethnic origin.—"Ethnic origin" is determined on the basis of a question in the Current Population Survey asking for self-identification of the person's origin or descent and is,

therefore, a report on what persons perceive their origin to be. The answers to this question produce results somewhat different from those based on inferences from such characteristics as place of birth, country of origin, language spoken in the home, or surname. Persons of Spanish origin may be of any race.

Nativity.—The category "Native" comprises persons born in the U.S., the Commonwealth of Puerto Rico, or an outlying area of the U.S. It also includes persons born at sea or in a foreign country who have at least one parent born in the U.S. Persons not having any of the foregoing qualifications are classified as "foreign born."

Mobility status.—The U.S. population was classified according to mobility status on the basis of a comparison between the place of residence of each individual at the time of the survey or census and the place of residence at a specified earlier date. *Nonmovers* are all persons who were living in the same house at the end of the period as at the beginning of the period. *Movers* are all persons who were living in a different house in the U.S. at the end of the period than that which they were living in at the beginning of the period. *Movers from abroad* include all persons, either citizens or aliens, whose place of residence was outside the U.S. at the beginning of the period, that is, in an outlying area under the jurisdiction of the U.S. or in a foreign country.

Household.—A "household" comprises all persons who occupy a "housing unit," that is, a house, an apartment or other group of rooms, or a room that constitutes "separate living quarters." A household includes the related family members and all the unrelated persons, if any, such as lodgers, foster children, wards, or employees who share the housing unit. A person living alone or a group of unrelated persons sharing the same housing unit as partners is also counted as a household. See text, section 28, Construction and Housing, for definition of "housing unit."

Group quarters are living arrangements for persons who do not live in housing units. Examples of group quarters are: A rooming house, an institution, a college dormitory, or a military barracks.

Family.—The term "family" refers to a group of two or more persons related by blood, marriage, or adoption and residing together in a household. A primary family consists of the head of a household and all other persons in the household related to the head. A secondary family comprises two or more persons such as guests, lodgers, or resident employees and their relatives, living in a household and related to each other but not to the household head.

Subfamily.—A "subfamily" is a married couple with or without children, or one parent with one or more unmarried children under 18 years old, living in a household and related to, but not including, the head of the household or his wife. Members of a subfamily are also members of the primary family with whom they live. The number of subfamilies, therefore, is not included in the number of families.

Married couple.—A "married couple" is defined as a husband and his wife living together in the same household, with or without children and other relatives.

Unrelated individuals.—"Unrelated individuals" refers to persons (other than inmates of institutions) who are not living with any relatives. A primary individual is a household head living alone or with nonrelatives only. A secondary individual in a household is a person such as a guest, lodger, or resident employee who is not related to any other person in the household. Persons in group quarters, except inmates of institutions, are classified as secondary individuals.

Average annual change.—In this section, average annual percent change is computed by the exponential or continuous-compounding method; see Appendix III.

Statistical reliability.—For a discussion of statistical collection and estimation, sampling procedures, and measures of statistical reliability applicable to data presented in this and other sections, see Appendix III.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1970.* See Appendix I.

No. 3. Estimated and Projected Population, by Age and Sex, 1950 to 2000, and Illustrative Zero Growth Projections, 1980 to 2050

[**In thousands, except percent.** As of **July 1.** Includes Armed Forces abroad. The base date for the projections is 1976. These projections were prepared using the "cohort-component" method. Series I, II, and III assume a slight improvement in mortality, an annual net immigration of 400,000, and completed cohort fertility rates (i.e., average number of lifetime births per 1,000 women) that move toward the following levels: I–2,700; II–2,100; III–1,700. Series II–X differs from Series II only in that it assumes no net immigration. The Series II and Series II–X fertility assumption represents "replacement level" fertility (i.e., the level of fertility at which the population would exactly replace itself in the absence of net immigration). See p. 1 for derivation of estimates and projections. See also *Historical Statistics, Colonial Times to 1970*, series A 23–25 and A 29–41]

X Not applicable. [1] Series II–X, which would reach zero growth around the middle of the twenty-first century, is one of many possible approaches to zero growth. Immediate cessation of net immigration, combined with replacement level fertility would not lead to immediate zero growth because the U.S. has a relatively young age structure (due to the post-World War II baby boom) which provides momentum for continued growth. Immediate zero growth in 1976 (assuming no dramatic change in mortality) would require an annual total fertility rate of about 1,000 with net immigration at the current level, or about 1,200 with no net immigration. Total fertility rate in 1976 was about 1,760.

[1] See footnote 3, table 1.

[2] Puerto Rico was ceded to the United States by Spain in 1898. On July 25, 1952, pursuant to acts of Congress, it achieved the political status of the Commonwealth of Puerto Rico.

[3] Includes population of Corn Islands (1950, 1,304; 1960, 1,872) not shown separately. Lease of Corn Islands from Republic of Nicaragua was terminated in 1971. Area total excludes area of these islands (4 square miles).

[4] Enderbury Island uninhabited in 1950 and 1960; Canton and Enderbury uninhabited in 1970.

[5] Sand Island uninhabited at time of enumeration.

[6] Area is for Navassa (2 square miles), Baker, Howland, and Jarvis (3 square miles), and Palmyra (4 square miles); uninhabited at time of enumeration.

[7] Under jurisdiction of the United States in accordance with treaty of Nov. 18, 1903, with Republic of Panama.

[8] Administered by United States since July 18, 1947, under United Nations Trusteeship system.

[9] Estimated civilian population as of June 30, 1950.

[10] Census of 1958 conducted by the Office of the High Commissioner, Trust Territory of the Pacific Islands.

[11] Comprises 717 square miles of land area and 7,772 square miles of water area.

[12] Excludes U.S. citizens temporarily abroad on private business, travel, etc. Such persons were enumerated at their usual place of residence in the United States as absent members of their own households.

[13] Based on 20-percent sample of reports received.

[14] Based partially on tabulations provided by Dept. of Defense.

[15] Represents U.S. citizens abroad for extended periods. Since this population was enumerated on a voluntary basis, its coverage is probably less complete than that of other categories of Americans abroad.

X Not applicable. Z Less than .05 percent. [1] Except as indicated. [2] For 1940–1976, includes admissions into, less discharges from, Armed Forces abroad. Through 1970, includes "error of closure" (the amount necessary to make the components of change add to the net change between censuses), for which figures are not shown separately. [3] Percent of population at beginning of period. [4] Adjusted for underregistration prior to April 1, 1970. [5] Prior to April 1, 1960, adjusted for underregistration of infant deaths.

X Not applicable. Z Less than .05 percent. [1] For U.S., population of U.S. has been divided by total land area. For each State and Puerto Rico, population at given census has been divided by land area as then constituted. [2] 1930 as of Oct. 1, 1929; 1940 as of Oct. 1, 1939.

DENSITY—STATES AND PUERTO RICO: 1920 TO 1970

of present area of State; for area figures of States, see table 327. Minus sign (—) denotes decrease. For composition series A 172, for population by regions and A 195–196 for population and density by States]

[1] 1960 to 1970 based on 1960 population; 1970 to 1976 based on 1970 population.
[2] Comprises both net immigration from abroad and net interdivisional or interstate migration according to the area shown. Includes movements of persons in the Armed Forces.

No. 13. Population Projections—States: 1980 and 1985

[**In thousands.** As of **July 1.** Preliminary. These projections are consistent with the 1970 census, but do not reflect actual population trends since 1970. Thus, for many States, these projections no longer appear reasonable. See 1976 estimates of State populations in table 10. Roman numerals indicate interstate migration assumptions. Series I assumes 1960–1970 migration patterns will continue. Series III assumes no net interstate migration. Letter E represents national population projection series (since superseded by Series II, see table 3) in which the ultimate average fertility level is 2.1 births per woman]

[1] Resident population consistent with Series E in *Current Population Reports*, series P–25, No. 470, which has been superseded by Series II. See headnote, table 3.
[2] Figure is consistent with a projected population for 1976 that is lower than the 1976 estimated population (as shown in table 10) by more than 3.0 percent.
[3] Figure is consistent with a projected population for 1976 that is higher than the 1976 estimated population (as shown in table 10) by 3.0 percent or more.
[4] Includes District of Columbia, not shown separately because methodology is not applicable.

No. 15. Population, by Residence and Race: 1950 to 1976

[**In millions, except percent.** Covers 243 standard metropolitan statistical areas (SMSA's) as defined in 1970 census publications. Data for **1950–1970** as of **April**. Data for **1976** are **five-quarter annual averages centered on April** from the Current Population Survey, which excludes inmates of institutions and members of the Armed Forces living in barracks and similar types of quarters; see text, p. 1. Minus sign (—) denotes decrease. See also *Historical Statistics, Colonial Times to 1970*, series A 276–287]

No. 16. Land Area, Population, and Density of Urban and Rural Territory, by Metropolitan and Nonmetropolitan Status: 1960 and 1970

[Areas as defined for the 1960 and 1970 censuses, respectively. Changes in land area between the censuses reflect (a) changes in the extent of urban territory and of standard metropolitan statistical areas (SMSA's) and (b) alterations resulting from remeasurement of land areas, including changes in the extent of inland water area. See also *Historical Statistics, Colonial Times to 1970*, series A 73, for total, urban, and rural population]

No. 21. Large Metropolitan Areas—Population, 1960 to 1975

[**In thousands, except as indicated.** Covers 159 large SMSA's with estimated population of 200,000 or more as of July 1, 1975, and 13 standard consolidated statistical areas (SCSA's) as defined in *Standard Metropolitan Statistical Areas, 1975, Revised Edition* (Dec. 1975), issued by the Executive Office of the President, Office of Management and Budget. Figures for 1970 include corrections through May 1977. Change measured from April 1, 1960, to April 1, 1970, and from April 1, 1970, to July 1, 1975; minus sign (−) denotes decrease. Rank based on unrounded figures. For definitions and components of SMSA's, SCSA's, and New England County Metropolitan Areas (NECMA's), see Appendix II]

X Not applicable. Z Less than 500 or .05 percent. [1] Land area information supplied by the individual cities. [2] Anchorage city merged with Greater Anchorage Area Borough in 1975. [3] For 1975, the estimate is for Baton Rouge which includes all of East Baton Rouge Parish (except Baker City and Zachary Town) not shown in earlier years. [4] Columbus and Muscogee County consolidated on Jan. 1, 1971. [5] Not incorporated in 1950. [6] Hampton and Elizabeth City County consolidated between 1950 and 1960. [7] Indianapolis and Marion County consolidated between 1960 and 1970. [8] Jacksonville and Duval County consolidated between 1960 and 1970. [9] Lexington and Fayette County consolidated between 1970 and 1975. [10] Nashville and Davidson County consolidated between 1960 and 1970. [11] Newport News and Warwick consolidated between 1950 and 1960. [12] Virginia Beach and Princess Anne County consolidated between 1960 and 1970.

No. 26. Components of Population Change, by Race, Between 1960 and 1977

[**In thousands, except as indicated.** Resident population, excluding Armed Forces abroad; growth, birth, and death rates per 1,000 population estimated as of July 1]

Item	Total [1]	White	Black
Apr. 1, 1960, to Apr. 1, 1970			
Pop. at beg. of the period	179,323	158,832	18,872
Net change during period [2]	23,912	19,266	3,709
Births [3]	39,073	32,543	5,948
Deaths	18,209	15,986	2,107
Net civilian immig.	3,887	3,362	234
Pop. at end of period	203,235	178,098	22,581
Apr. 1, 1970, to Jan. 1, 1977			
Pop. at beg. of period	203,235	178,098	22,581
Net change during period [2]	12,312	8,746	2,368
Births	22,260	18,174	3,579
Deaths	13,017	11,416	1,506
Net civilian immig.	2,451	1,404	261
Pop. at end of period	215,547	186,844	24,949

Item	Total [1]	White	Black
1960 (calendar year):			
Net growth rate	16.1	15.1	22.1
Birth rate	23.9	22.7	32.9
Death rate	9.5	9.4	10.3
General fertility rate [4]	118.0	113.2	152.7
1970 (calendar year):			
Net growth rate	12.0	10.6	18.0
Birth rate	18.3	17.3	25.4
Death rate	9.4	9.4	10.0
General fertility rate [4]	87.5	83.5	114.7
1976 (calendar year): [5]			
Net growth rate	7.4	5.8	13.3
Birth rate	14.7	13.8	20.8
Death rate	8.9	9.0	8.8
General fertility rate [4]	65.7	62.2	87.2

[1] Includes other races not shown separately. [2] Includes changes due to movement of Armed Forces to posts overseas and the "error of closure" (the amount necessary to make the components of change add to the net change between censuses.) [3] Adjusted for underregistration.
[4] Registered births per 1,000 resident females aged 15 to 44 as of July 1. [5] Preliminary.

[1] Average change from 1920. [2] Average annual change since 1970.
[3] Computed using the formula for continuous compounding.
[4] Obtained by dividing total population by number of households; hence, not strictly average size of household because total population includes members of group quarters.
[5] Occupied housing units from U.S. Census of Housing reports.

No. 58. Households, Families, and Individuals—Projections: 1977 to 1990

[In thousands. As of July 1. Includes members of the Armed Forces living off post or with their families on post, but excludes all other members of the Armed Forces. See text, p. 3, for definitions of households and families. Series B assumes that the trends in marital status and household proportions observed over the period 1960 to 1974 will continue to 1990. Series A and Series C are based on weighted averages of the Series B proportions and the 1974 observed proportions. Series K assumes that the levels of proportions observed in 1974 will continue to 1990. For additional explanation, see source]

No. 70. Religious Bodies—Selected Data

[Represents latest information available from religious bodies with memberships of 50,000 or more; excludes a few groups giving no data. Not all groups follow same calendar year nor count membership in same way; some groups give only approximate figures. Roman Catholics count all baptized persons, including infants; Jews regard as members all Jews in communities having congregations; Eastern Orthodox Churches include all persons in their nationality or cultural groups; most Protestant bodies count only persons who have attained full membership, and previous estimates have indicated that all but a small minority of these are over 13 years of age; however, many Lutheran bodies and The Episcopal Church now report all baptized persons, and not only those confirmed. Data which appear in italics are "noncurrent," i.e., they are reported for **1974 or earlier.** All other data are "current" and were reported in **1975 or 1976**]

Section 2

Vital Statistics

This section presents vital statistics—data on births; deaths; abortions; fetal deaths, including still-births; fertility; life expectancy; marriages; and divorces. Vital statistics are compiled for the country as a whole by the National Center for Health Statistics (NCHS) and published in its annual report, *Vital Statistics of the United States*, in certain reports of the *Vital and Health Statistics* series, and in the *Monthly Vital Statistics Report.* Reports in this field are also issued by the various State bureaus of vital statistics. Current data on fertility of the population and on the age of persons at first marriage are compiled by the Bureau of the Census from its Current Population Survey (see text, p. 1) and published in *Current Population Reports*, series P–20.

Registration of vital events.—The registration of births, deaths, fetal deaths, and other vital events in the United States is primarily a State and local function. The civil laws of every State provide for a continuous and permanent birth and death registration system. In many States, marriage and divorce registration systems have also been established.

Births and deaths.—The live-birth, death, and fetal-death statistics prepared by NCHS are based on copies of vital records received from registration offices of all States, of certain cities, and of the District of Columbia. The annual collection of death statistics on a national basis began in 1900 with a national death-registration area of 10 States and the District of Columbia; a similar annual collection of birth statistics for a national birth-registration area began in 1915, also with 10 reporting States and the District of Columbia. Since 1933, the birth- and death-registration areas have comprised the entire U.S., including Alaska (beginning 1959) and Hawaii (beginning 1960). For further information on the history and character of registration areas, see Appendix III of this *Statistical Abstract.* National statistics on fetal deaths were first compiled for 1918 and annually since 1922.

Prior to 1951, birth statistics came from a complete count of records received in the Public Health Service (now received in NCHS). From 1951 through 1971, they were based on a 50-percent sample of all registered births (except for a complete count in 1955 and a 20- to 50-percent sample in 1967). Beginning in 1972, they have been based on a complete count for States in the Cooperative Health Statistics System (for details, see the technical appendix in *Vital Statistics of the United States*) and on a 50-percent sample of all other areas. Mortality data have been based on a complete count of records for each area (except for a 50-percent sample in 1972). Beginning in 1970, births to, and deaths of, U.S. nonresidents have been excluded from the data. Fetal deaths and deaths among Armed Forces abroad are excluded. Data based on samples are subject to sampling error; for details, see annual issues of *Vital Statistics of the United States* and Appendix III in this *Statistical Abstract.*

Mortality statistics by cause of death are compiled in accordance with World Health Organization (WHO) regulations, which specify that member nations classify causes of death according to the *International Statistical Classification of Diseases, Injuries, and Causes of Death.* The current classification, "Eighth Revision International Classification of Diseases, Adapted for Use in the United States," has been used since 1968.

Fertility and life expectancy.—Fertility rates, narrowly defined as the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring in the specified year, are compiled and published by NCHS. Other data relating to social and medical factors which affect fertility rates, such as contraceptive use and birth expectations, are collected and made available by both NCHS

and the Bureau of the Census. NCHS figures are based on information in birth and fetal death certificates and on the 1973 National Survey of Family Growth; Bureau of the Census data are based on decennial censuses and periodic surveys.

Life expectancy rates are computed and published by NCHS. Age-at-time-of-death data are obtained by examination of death certificates sent to NCHS. The population data on which the rates are based are supplied by the Bureau of the Census and consist of decennial census figures and annual population estimates. For details, see the technical appendix in *Vital Statistics of the United States.*

Marriage and divorce.—The compilation of nationwide statistics on marriages and divorces in the U.S. began in 1887–1888 when the National Office of Vital Statistics prepared estimates for the years 1867–1886. Although periodic updates took place after 1888, marriage and divorce statistics were not collected and published annually until 1944 by that Office.

In 1957 and 1958, respectively, the same Office established marriage- and divorce-registration areas. At the beginning of 1957, the marriage-registration area comprised 32 States, the Virgin Islands, and Puerto Rico; by 1977, it also included nine additional States and the District of Columbia. The divorce-registration area, starting with 16 States and the Virgin Islands in 1958, included a total of 29 States and the Virgin Islands by early 1977. Procedures for estimating the number of marriages and divorces in the registration States are discussed in *Vital Statistics of the United States,* vol. III—*Marriage and Divorce,* and in Appendix III of this *Statistical Abstract.* Because of the incomplete geographic coverage provided by the marriage- and divorce-registration areas, additional data are gathered by other means, mainly by collecting already summarized data on marriages and divorces reported by nonregistration State offices of vital statistics and by county offices of registration.

Another important source of data on marriage and divorce trends in the United States is the Current Population Survey carried out monthly by the Bureau of the Census. It comprises a scientifically selected sample representing the noninstitutional civilian population and is subject to sampling error. For further details, see text, section 1, Population; section 13, Labor Force, Employment, and Earnings; and Current Population Reports, series P–20, No. 306.

Vital statistics rates.—Vital statistics rates computed by NCHS are based on decennial census population figures as of April 15, 1910; January 1, 1920; and April 1 for 1930, 1940, 1950, 1960, and 1970; and on midyear population figures for other years, as estimated by the Bureau of the Census (see text, p. 1).

Race.—Data by race for births, deaths, marriages, and divorces from NCHS are based on information contained in the certificates of registration. In the National Survey of Family Growth, race is determined by interviewer observation.

Statistical reliability.—For discussion of statistical collection, estimation, and sampling procedures and measures of statistical reliability applicable to data presented in this and other sections, see Appendix III.

Historical statistics.—Tabular headnotes provide cross references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1970.* See Appendix I.

No. 74. Live Births, Deaths, Marriages, and Divorces: 1910 to 1976

[Prior to 1960, excludes Alaska and Hawaii. Figures for deaths and death rates for 1910–1930 are for death-registration States only. Beginning 1970, excludes births to, and deaths of, nonresidents of the U.S. See also *Historical Statistics, Colonial Times to 1970*, series B 1–5, B 142, B 167, B 214, and B 216]

No. 76. Total Fertility Rate and Intrinsic Rate of Natural Increase, by Race: 1940 to 1975

[Excludes Alaska prior to 1959 and Hawaii prior to 1960. Prior to 1960, based on births adjusted for underregistration, thereafter, registered births only. The *total fertility rate* is the number of births that 1,000 women would have in their lifetime if, at each year of age, they experienced the birth rates occurring in the specified year. A total fertility rate of 2,110 represents "replacement level" fertility for the total population under current mortality conditions. The *intrinsic rate of natural increase* is the rate that would eventually prevail if a population were to experience, at each year of age, the birth rates and death rates occurring in the specified year and if these rates remained unchanged over a long period of time. Minus sign (—) denotes decrease. See also *Historical Statistics, Colonial Times to 1970*, series B 11]

Period or year	Total fertility rate			Intrinsic rate of natural increase		
	Total	White	Negro and other	Total	White	Negro and other
Annual average:						
1940–1944	2,523	2,460	3,010	4.6	3.9	9.8
1945–1949	2,985	2,916	3,485	11.7	10.9	17.2
1950–1954	3,337	3,221	4,185	16.8	15.4	25.7
1955–1959	3,690	3,549	4,716	21.1	19.5	30.7
1960–1964	3,459	3,331	4,375	18.6	17.1	27.7
1965–1969	2,636	2,516	3,447	8.2	6.4	18.6

1975	[3] 66.7	63.0	89.3	1.3	56.3	114.7	110.3	53.1	19.4	4.6	.3

[1] Rates computed by relating total births, regardless of age of mother, to women aged 15–44 years.
[2] Through 1960, rates computed by relating births to mothers aged 45 years and over to women aged 45–49 years.
[3] Live birth rate for 1976 was 65.6; detailed data not available.

No. 78. Birth Rates, All Women by Live-Birth Order, by Race: 1950 to 1975

[**Births per 1,000 women 15–44 years old.** Prior to 1960, excludes Alaska and Hawaii. Live-birth order refers to number of children born alive. Figures for births of order not stated are distributed. See also headnote, table 77, and *Historical Statistics, Colonial Times to 1970*, series B 20–27]

Live-birth order	1950		1960		1967		1970		1974		1975	
	White	Negro and other	White	Negro and other	White	Negro and other	White	Negro and other	White	Negro and other	White	Negro and other
Total	**102.3**	**137.3**	**113.2**	**153.6**	**91.4**	**133.9**	**84.1**	**113.0**	**64.7**	**91.0**	**63.0**	**89.3**

No. 93. Legal Abortions—Number, Rate per 1,000 Women 15–44 Years Old, and Ratio per 1,000 Live Births, by State of Occurrence: 1973 to 1975

[Numbers of legal abortions are from two surveys of hospitals, clinics, and physicians identified as providers of abortion services, conducted by the Alan Guttmacher Institute. Abortion rates are computed per 1,000 women 15-44 years of age on July 1 of specified year; abortion ratios are computed as the number of abortions per 1,000 live births from July 1, 1973, to June 30, 1974, from July 1, 1974, to June 30, 1975, and from July 1, 1975, to June 30, 1976, respectively, by State of occurrence]

No. 98. Deaths and Death Rates, by Sex, Race, and Age: 1940 to 1975

[**Rates are per 1,000 population for specified groups.** Prior to 1960, excludes Alaska and Hawaii. Beginning 1970, excludes deaths of nonresidents of the U.S. Excludes fetal deaths. 1972 figures based on 50-percent sample of deaths. Rates based on enumerated population as of Apr. 1 for 1940 to 1960 and 1970, and July 1 estimates for other years. See text, p. 53. See also *Historical Statistics, Colonial Times to 1970*, series B 167–173 and B 181–192]

Section 3

IMMIGRATION and NATURALIZATION

This section presents statistics related to immigration, naturalization, and alien registration. The principal source of these data is the *Annual Report of the Immigration and Naturalization Service.* Immigration statistics are prepared from entry visas and change of immigration status forms. Statistics for naturalization are compiled from periodic reports by Federal courts and specially designated State courts conducting such proceedings. Alien registration data are compiled from alien address report cards.

The continuous recording of U.S. immigration statistics began in 1819, under the Act of 1819, which required the captain or master of a vessel arriving from abroad to deliver to the local officials of the U.S. collector of customs a list or manifest of all passengers taken on board. Copies of these manifests were to be transmitted to the U.S. Secretary of State, who reported the information periodically to Congress. Subsequently, the Act of 1855 prescribed quarterly reports to the Secretary of State and annual reports to Congress. Later acts have continued to require the collection of such information.

Immigration statistics were compiled by the Department of State for 1820–1870; by the Treasury Department for 1867–1895; and since 1892, by a separate Office or Bureau of Immigration, presently a part of the Immigration and Naturalization Service, a unit of the Department of Justice. For 1892–1932, the data appeared in annual reports of the Bureau of Immigration; for 1933–1940, in the *Annual Report of the Secretary of Labor;* for 1941, in the *Annual Report of the Attorney General;* and, since then, in the *Annual Report of the Immigration and Naturalization Service.*

Immigrants.—Immigrants are nonresident aliens admitted to the United States for permanent residence (one year or longer).

Nonimmigrants.—Nonimmigrants are nonresident aliens admitted to the United States for a temporary period. Included in this group are visitors for business and pleasure, students and their spouses and children, foreign and government officials, exchange visitors and their spouses and children, international representatives, treaty traders and investors, representatives of foreign information media, fiances(ees) of U.S. citizens and their children, officials of the North Atlantic Treaty Organization (NATO), aliens in transit, and, for statistical purposes, permanent resident aliens returning after short trips abroad. Excluded are border crossers, crewmen, and insular travelers. Certain temporary admissions such as of persons in possession of border-crossing identification cards are not included in the nonimmigrant totals.

Quota and nonquota immigrants.—Between May 1921, and July 1968, immigrants were required by Federal law to be classified as quota and nonquota immigrants. Quota immigrants were those subject to congressionally-mandated quotas for Eastern Hemisphere countries and their dependencies. Nonquota immigrants included natives of the Western Hemisphere and their spouses and children, immediate relatives of U.S. citizens, and certain groups of special immigrants.

Prior to 1921, Federal law prohibited from entry into the United States only particular categories of persons (convicts, the mentally defective and insane, children under age 16 unaccompanied by parents, persons likely to become public welfare dependents, etc.), usually without respect to country of origin.[1] In 1921, Congress enacted the first numerical ceiling on immigration (357,000 per year) into the United States, although it applied only to Eastern Hemisphere countries and their dependencies. The 1921 Act also estab-

[1] The Chinese exclusion law of 1882 (repealed in 1943) and the automatic exclusion sections of the 1917 Act which barred entry to certain peoples from the geographic regions of Asia and Pacific Islands are important exceptions.

lished a quota system whereby the total number of immigrants from any individual country was not to exceed 3 percent of that country's United States residents in 1910.

For 1925–1929, the congressionally-mandated annual quota of 164,667 was based on 2 percent of foreign-born U.S. residents as determined by the 1890 census. The "national origins" formula which determined quotas from 1929 until 1965, provided that the annual quota equal one-sixth of one percent of the number of White inhabitants in the continental United States in 1920, less Western Hemisphere immigrants and their descendants. The annual quota for each nationality was then determined by the same ratio to 150,000 as the number of inhabitants of each nationality living in the continental United States in 1920 to the total inhabitants, although a minimum quota for any nationality was 100.

The Act of Oct. 1965 abolished the quota system and in its place set up an annual numerical limitation of 170,000 immigrants from the Eastern Hemisphere, with no more than 20,000 immigrants to come from any one country. In July 1968, the new law and the system of numerical limitations went fully into effect. At that time a numerical limitation of 120,000 per year was imposed on Western Hemisphere immigration, which had previously been unrestricted. The 1965 Act thereby abolished the "national origins" system and gave persons from every country within each hemisphere an equal chance to immigrate to the United States. Since 1968, immigrants have been classified as those subject to numerical limitations of the Eastern Hemisphere and to numerical limitations of the Western Hemisphere, and those exempt from numerical limitations (see table 116). Those exempt include immediate relatives (parents, spouses, and children) of U.S. citizens and various classes of special immigrants.

Displaced persons and refugees.—The Displaced Persons Act of 1948 was the first of a number of special acts passed to provide for the admission of refugees from Communist-dominated countries, victims of natural calamities, and orphan children without regard to quotas or the numerical ceilings specified above.

Status of Cubans.—Effective November 2, 1966, Cubans admitted or paroled into the United States after January 1, 1959, and present in the United States for at least 2 years may obtain permanent resident status. The Act was last amended in 1976; for details, see Public Law 94–571, signed on October 20, 1976.

Alien registration.—The Immigration and Nationality Act of 1952 provides that each alien who is required to be registered under the Alien Registration Act of 1940, and who is in the United States on January 1, must report his current address each year to the U.S. Attorney General during the month of January.

Naturalization.—Prior to 1907 each Federal court and each specially designated State court which conducted naturalization proceedings kept records of naturalizations but no national data were compiled. The Act of June 29, 1906, provided for periodic returns by all courts conducting naturalization proceedings, and for the filing with a central Federal agency of a duplicate copy of each declaration of intention and petition for naturalization filed, and of each certificate of naturalization issued.

Most aliens acquire U.S. citizenship under the general provisions of the Immigration and Nationality Act of 1952, as amended. As specified by that Act, the requirements which must be met by a prospective citizen relate to residency, language proficiency, moral character, loyalty to the United States, attachment to the principles of the Constitution, etc. Spouses and children of U.S. citizens can be naturalized under less stringent conditions. In certain cases, an administrative, judicial, legislative, or executive waiver of the requirements may be obtained.

Historical statistics.—Tabular headnotes provide cross-references, where applicable, to *Historical Statistics of the United States, Colonial Times to 1970*. See Appendix I.

No. 114. Immigration: 1820 to 1976

[**In thousands, except rate.** For years ending June 30, except as noted. For definition of immigrant, see text, pp. 79–80. For 1820–1867, alien passengers arriving; 1868–1891 and 1895–1897, immigrants arriving; 1892–1894 and 1898 to the present, immigrants admitted. Rates based on Bureau of the Census estimates as of July 1 for resident population through 1929, and for total population thereafter (excluding Alaska and Hawaii prior to 1959). See also *Historical Statistics, Colonial Times to 1970*, series C 89]
