

Here's What's New in Nebraska Truck Trends

Data from the Census Bureau's 1997 Vehicle Inventory and Use Survey are now available for Nebraska. This survey produces state and U.S. level statistics on the physical and operational characteristics of the Nation's truck, van, minivan, and sport utility vehicle population.

There were an estimated 639,700 private and commercial trucks registered in Nebraska during 1997, up more than 19 percent from the approximately 533,900 trucks registered in 1992.

The survey includes these highlights for Nebraska:

The number of sport utility vehicles (SUVs) registered in Nebraska during 1997 increased 49.6 percent from 1992. In comparison, the number of minivans increased 34.8 percent and the number of pickups increased 11.8 percent during this same period.

- Total truck registrations in 1997 included 53.6 percent pickups, 12.8 percent SUVs, and 9.7 percent minivans.
- Nebraska has approximately one pickup for every 5 people and about one SUV for every 20 people. It also has approximately one pickup for every 3 licensed drivers and about one SUV for every 14 licensed drivers.
- Approximately 5.2 percent of all large trucks carried hazardous materials in 1997.

- About 59.1 percent of all trucks were used for personal transportation, while 39.4 percent were operated for business, including for-hire use.
- Approximately 4.5 percent of all trucks were leased from someone else, compared with 2.1 percent in 1992.

The report also includes information on fuel efficiency, annual and lifetime mileage, model year, equipment accessories and other data for each kind of registered truck.

The U.S. Summary will be issued in late 1999, following the release of reports for the 50 states and the District of Columbia. This survey is conducted every five years as part of the Economic Census and data are used by government agencies, business, industry, academia, and the general public.

The estimates from the 1997 Vehicle Inventory and Use Survey are subject to sampling and nonsampling error. Sources of nonsampling error include errors of response, non-reporting and coverage. Measures of sampling variability, presented as relative standard errors, are shown in the tables in the report.
