Preface

This report is one of several publications of Volume 6, Topical Studies, of the 1972 Census of Governments.

The periodic census of governments is taken at 5-year intervals as required by law under Title 13, United States Code, Section 161. This 1972 census, similar to those taken since 1957, covers four major subject fields—governmental organization, taxable property values, public employment, and governmental finance.

Plans and specifications for this census were developed by the Governments Division in consultation with other offices and divisions of the Bureau, other Federal Government agencies, and the Census Advisory Committee on State and Local Government Statistics. David P. McNelis, former Chief of the Governments Division, played an important part in development of plans for the 1972 Census of Governments.

Most of the statistics shown in this report were developed under the supervision of John Coleman, Assistant Division Chief for Survey Operations, in connection with the recurrent assembly of detailed data on finances of State governments. Data processing was supervised by Sherman Landau, Assistant Chief for Research and Methodology.

A considerable portion of this report consists of a classified listing and description of individual programs of State payments to local governments as of 1972. This represents a

revision and updating of corresponding information last presented in a report of the 1967 Census of Governments (*State Payments to Local Governments*, Volume 6, Number 4) published in December 1968. This new presentation was prepared under the direction of Gertrude A. Whitehouse, Chief of the Governmental Organization Branch, with the assistance of Muriel D. Miller, and under the general supervision of Maurice Criz, Assistant Chief for Economic Statistics.

The Publication Services Division, Social and Economic Statistics Administration, provided advice and service in the preparation of copy for publication. Publication copy was prepared in part within the Governments Division, supervised by Helen D. Files.

Introduction

The 50 State governments paid \$36.8 billion to local governments in fiscal 1972, or \$177 per capita. This marks a 93 percent rise in State intergovernmental expenditure since 1967, when the total was \$19.1 billion, or \$97 per capita. Other State expenditure was going up at a similar pace, so that the proportion of total State general expenditure represented by distributive payments to local governments increased only moderately--from 35.7 percent in 1967 to 37.2 percent in 1972.

During the 30-year period from 1942 to 1972, the annual amount of State payments to local governments was multiplied twentyfold, moving up from \$1.8 billion to \$36.8 billion. Throughout this period, however, such payments made up a fairly consistent fraction of the annual nationwide total of State general expenditure. Between 1942 and 1952, this percentage relationship ranged between 34.4 and 40.9, and since then the percentage has varied only between 34 and 37. During the past decade, the proportion of all general revenue of local governments supplied by State distributive payments also has shown limited variation, ranging between 28.4 and 35.7 percent.

Table 1 provides a historical nationwide summary of State intergovernmental expenditure, showing data for each fiscal year from 1966 to 1972 and for selected earlier years back to 1902.

DEFINITION OF STATE INTERGOVERNMENTAL EXPENDITURE

As used in this report, the term "State payments to local governments" is synonymous with the term "State intergovernmental expenditure" which appears in recurrent Census Bureau reports on governmental finances. Such expenditure includes not only grants-in-aid and State-collected locally shared taxes, but also reimbursements paid to local governments by States for services rendered by them for State governments. Examples of services for which States often reimburse local governments are collection of taxes, care of prisoners, hospital care for the needy, and construction of public improvements. State intergovernmental expenditure also includes extension of contingent loans and advances, which provide that repayment by local governments is conditional.

By definition, State intergovernmental expenditure involves the actual payment of money to local governments. It thus excludes State transactions or activities which benefit localities without involving the flow of funds to local governments. Examples include the following:

1. Nonfiscal assistance by a State to local governments in the form of advisory or other services or aid in kind (e.g., free provision of commodities or textbooks, or the loan of equipment);

2. Assumption by a State of direct operating responsibility for functions customarily performed by local governments (e.g., direct maintenance of local public schools by the State of Hawaii and, in several States, provision of local streets and highways or of general relief);

3. Joint State-local activities involving State expenditure of the State's share of costs directly for goods, services, or public assistance payments rather than in the form of payments to local governments;

4. Contribution by a State to trust funds it administers for financing of retirement benefits to local government employees; and

5. Shares of State-imposed taxes which are collected and retained by local governments. (Such retained amounts are classed, in Census Bureau reports, as local tax revenue.)

On the other hand, certain transactions involving the flow of funds from States to local governments are excluded from Census reporting of intergovernmental expenditure, as follows:

1. Unconditional State loans to local governments, and State purchases of local government securities;

2. Transactions in which a State acts as an agent for local governments (e.g., collecting and returning to them locally imposed taxes, including State prescribed taxes imposed at local rates);

3. State payments for commodities, property, or utility services purchased from local governments; and

4. Taxes levied by local governments on facilities or property owned by the State. (However, State payments in lieu of taxes are classified as intergovernmental expenditure.)

The major portion of State payments to local governments consists of grants-in-aid and shared taxes--i.e., the kinds of items commonly referred to as "State aid." For this reason, and for ease of reference, the terms "State payments to local governments," "State aid," "fiscal aid," and "grants" are used interchangeably in the present study with the more technically exact phrase "State intergovernmental expenditure," which has been defined and explained above.

CLASSIFICATION OF STATE INTERGOVERNMENTAL EXPENDITURE

In table 6, and in the description of distributive programs for individual States which appears in table 7, State aid amounts are shown separately for the several

types of local governments which are distinguished in Census reporting. These are as follows:¹

1. County governments (including "parishes" in Louisiana and "boroughs" in Alaska);

2. Municipalities, which consist of all incorporated places having powers of general government, thus including units known locally as villages, boroughs (except in Alaska), and towns (except in the New England States and in New York and Wisconsin) as well as "cities";²

3. Townships, which include units locally called "towns" in the New England States and in New York and Wisconsin;

4. School districts, which include only those units of school administrator that have status as independent units of local government rather than as administrative segments of State, county, city, or township governments; and

5. Special districts, which include districts and authorities established for the performance of a single function or a designated combination of specific functions, and which have status as independent units of government rather than as administrative segments of State, county, city, or township governments.

State intergovernmental expenditure is also subclassified here by "function." Most of the categories so designated in this report tie directly to functions which are defined and used for Census reporting of local government expenditure. For example, intergovernmental expenditure for "highways" is made up of State grants, shared taxes, and reimbursements paid to local governments specifically to help finance their activities with regard to the provision and maintenance of highway and street facilities. However, a distinctive kind of category also appears here as part of the "functional" presentation, showing State intergovernmental expenditure which is not thus restricted as to application but, instead, is made available for "general local government support" of the benefited types of local units.

¹Detailed data on the numbers and characteristics of the several types of local governments in each State appear in Governmental Organization (Volume 1 of the 1972 Census of Governments), together with a detailed statement of Census Bureau criteria for the identification and classification of governmental units.

²Recognized for Census Bureau reporting of governmental statistics as municipalities rather than as counties are the following local governments which, either specifically by law or substantially in fact, operate as composite city-counties: New York City, Philadelphia, Baltimore city, Washington, D.C., St. Louis city, San Francisco, Boston, New Orleans, Honolulu, Denver, Indianapolis, Baton Rouge, Nashville-Davidson, Columbus (Ga.), Carson City, Juneau, Sitka, and the 38 "independent" cities of Virginia. In this report, segregable amounts of State payments to these particular units have been classified accordingly.

STATISTICAL FINDINGS

Individual State governments differ widely in the amounts they pay to local governments. As indicated in table 2, State intergovernmental expenditure in 1972 ranged from \$386.43 per capita in New York down to \$24.26 in Hawaii, with the 50 States distributed as follows:

Per capita amount	Number of States
Total	50
\$250 or more . .	4
\$200 to \$250 . .	4
\$175 to \$200 . .	5
\$150 to \$175 . . .	8
\$125 to \$150 . . .	10
\$100 to \$125 . . .	14
Less than \$100 . .	5

The per capita amount of intergovernmental expenditure was higher in 1972 than in 1967 for every State except Hawaii and Massachusetts, but with considerable variation in the rate of change involved. During this 5-year interval, as table 2 shows, State aid per capita more than doubled in 12 States, but rose by less than 40 percent in Georgia, Oregon, Tennessee, and Washington.

Payments to local governments in the Nation as a whole made up 37.2 percent of all State government general expenditure in 1972. This relationship ranged widely, from less than 3 percent in Hawaii up to more than 57 percent in New York. Table 3 shows individual State percentages for 1972 and 4 earlier years. Following is a summary of the information shown in table 3:

Percent of all State general expenditure represented by payments to local governments	Number of States				
	1972	1967	1962	1957	1942
Total	50	50	50	¹ 49	¹ 46
40 or more	6	7	6	6	13
30 to 40	21	19	17	15	10
20 to 30	17	14	16	19	12
Less than 20	6	10	11	9	11

¹1957 data excludes Delaware; 1942 data excludes Alaska, Delaware, Hawaii, and North Carolina. See "Sources and Limitations of Data" below.

During the past 30 years, as these figures show, there has been a considerable decline in the number of States devoting either a relatively very high or very low percentage of their total general expenditure to distributive payments. In 1972, in 38 of the 50 States this proportion ranged between 20 and 40 percent, compared with only 22 of 46 States in 1942.

Most individual States showed little change between 1967 and 1972 in the fraction of all their expenditure devoted to local government aid. However, this proportion rose by more than 5 percentage points in 10 States--Alaska, Arizona, California, Connecticut, Iowa, Minnesota, Nevada, New Hampshire, North Dakota, and Rhode Island--but dropped by at least 5 percent in Georgia and Massachusetts. It should be noted, however, that in Georgia intergovernmental payments to local governments did increase between 1967 and 1972 but the State direct expenditure went up at a materially faster rate, while in Massachusetts the shift from local to State administration of categorical public assistance programs accounted for the decline.

Tables 4, 5, and 6 give State-by-State data on the functional distribution of intergovernmental payments in 1972. Following is a brief summary of these figures:

Function	State intergovernmental expenditure, 1972			
	Amount (in millions)	Per- cent	Per capita amount	
			50-State average	Median State
Total.....	\$36,759	100.0	\$177.16	\$142.20
General local government support.....	3,752	10.2	18.08	10.01
Education.....	21,195	57.7	102.15	98.02
Public welfare.....	6,944	18.9	33.47	(¹)
Highways.....	2,633	7.2	12.69	12.07
Hospitals.....	147	0.4	0.71	0.34
Other.....	2,088	5.7	10.06	6.00

¹No. computed.

The bulk of all State intergovernmental expenditure, as this summary shows, is made available to help finance some particularly designated function or activity. In 1972, only \$3,752 million, or 10 percent of the total, was provided without such functional designation--i.e., on terms that made funds available for "general local government support." There are four States with no distributive programs of this kind and, as table 4 shows, five other States where only a nominal amount (less than \$2 per capita) was thus made available in 1972. On the other hand, general support grants are highly significant in a number of States, equalling in 1972 about \$96 per capita in Wisconsin, \$70 in Minnesota, \$41 in New York, and between \$30 and \$40 per capita in six other States.

Grants for education make up a major portion of all State payments to local governments in most individual States as well as in the Nation as a whole. However, there is a wide variety in the scale of such State distributions, which ranged in 1972 from over \$250 per capita in Alaska down to \$22 per capita in New Hampshire. (Hawaii, where the State government administers and operates the public schools, had no educational grants.) The following figures, based on table 4, summarize the 1972 amount of intergovernmental expenditure for education by the various States:

Per capita amount	Number of States
Total.....	50
\$150 or more.....	4
\$100 to \$150.....	18
\$75 to \$100.....	18
\$50 to \$75.....	7
Less than \$50.....	3

In the Nation as a whole, public welfare ranks second only to education as a State-aided function, and it accounted in 1972 for nearly one-fifth of all State payments to local governments. This record is dominated, however, by the 11 States in which all or most "categorical" public assistance programs are administered by local governments, subject to State (and Federal) cost-sharing.³ Payments to local governments for public welfare purposes in 1972 ranged among these 11 States from \$153 per capita in New York down to \$16 per capita in Indiana. In the other 39 States, where all or most of the categorical assistance programs are directly handled by the State, local governments typically receive little or no State money for public welfare use. (It may be noted that an arrangement for direct State administration is likely to supply more "aid" to local governments, in a broad sense, than a system under which they must provide from local resources for part of the financing of public assistance, even though they also receive sizable amounts of intergovernmental revenue for this purpose.)

State payments to local governments for highway purposes amounted to \$2.6 billion in 1972, 7 percent of total State intergovernmental expenditure. Some such distributive payments were made by all except four States (Alaska, Hawaii, Montana, and West Virginia), and the per capita amount ranged up to \$31 in Iowa. The States were distributed as follows in terms of 1972 State aid for highways:

Per capita amount	Number of States
Total.....	50
\$25 or more.....	3
\$20 to \$25.....	8
\$15 to \$20.....	12
\$10 to \$15.....	3
\$5 to \$10.....	10
Less than \$5.....	14

State aid to local governments for hospital purposes totaled only \$147 million in 1972. This was a national average of 71 cents per capita, but the amount distributed

³The 11 States are California, Colorado, Indiana, Kansas, Maryland, Minnesota, New Jersey, New York, North Carolina, Virginia, and Wisconsin. A more complete picture of the diverse patterns of State government expenditure (direct and intergovernmental) for public welfare purposes is provided by table 9 of the Census Bureau report, State Government Finances in 1972.

was relatively much less in a majority of States. There were only 10 States where grants for hospitals equalled at least \$1 per capita.

Most of the States make some distributive payments to local governments for particular functions or purposes which fall outside any of the major categories discussed above. Such programs are reported in tables 4, 5, and 6 under the heading "Specified functions--miscellaneous and combined." Most of the \$2,088 million thus reported for 1972 was accounted for by some relatively large distributive programs in a few States--particularly California, Massachusetts, Michigan, New York, and Pennsylvania. Amounts shown for this category in the above tables, include State intergovernmental expenditure of \$808 million for health programs.

Table 6 provides a cross classification of intergovernmental expenditure, by States, in terms of the major functional categories mentioned above and the various types of recipient local governments. As shown there, State intergovernmental expenditure in 1972 went to various local governments as follows:

Type of government	Amount (in millions)	Percent
Total.....	\$36,759	100.0
Counties.....	9,700	26.4
Municipalities.....	8,634	23.5
Townships.....	1,066	2.9
School districts.....	17,131	46.6
Special districts.....	228	0.6

These proportions generally resemble those which were similarly reported from the 1967 Census of Governments.

INDIVIDUAL STATE DETAIL

Table 7 provides a summary textual description of the distributive programs of each of the 50 State governments. For brevity, certain very minor items have been omitted.

The distributive programs of each State are grouped under functional headings. For each program, the presentation indicates briefly the distributive formula and the sum paid in fiscal 1972, with a specific indication in most instances of the amount going to various types of local governments. In the presentation, the brief term "cities" has been used interchangeably with the technically more precise designation, "municipalities."

For many of the State aid items shown, the description will also make evident the source of financing involved. This is the case, for example, for allocations of particular earmarked taxes and for grant items that are payable distinctively from federally provided funds. However, it is often impossible to associate a particular distributive program with some specific

financing source. This is most obvious for a grant payable from a State "general fund" that is fed by numerous revenue sources. An intermediate situation involves aid payable from a special fund which in turn is fed by two or more earmarked revenue sources. Where the main components of such multiple-source funds could be readily ascertained and briefly stated (e.g., "highway-user revenues") they usually are mentioned here in the description of the distributive program concerned. Also, items financed in part from Federal resources are commonly described as payable from "State and Federal funds." These features of the presentation provide background about the financing of many individual grant items, but they do not afford a basis for comprehensive classification of all State intergovernmental expenditure by source of financing.

STATE AID FORMULAS

Particular programs of State aid to local governments involve various means by which (a) the total amount available for a particular fiscal year or biennium is established, and (b) the shares payable to various individual governments are determined.

The amount of some items of State intergovernmental expenditures is set by a specific appropriation of such a nature that a particular total sum named will be distributed without reduction or change.

At the other extreme are aid items whose total amount is not explicitly determined or even limited in advance. One example of this type is the distribution of a specified share of some particular State revenue source, with the actual current amount of aid determined by the yield of that source. Another example is the "open end" authorization of whatever amount is needed to meet the requirements of a particular distributive formula.

Between the absolutely fixed and the completely indeterminate types of aid provisions are numerous gradations and combinations of methods. Thus, a specified share of some revenue source may be authorized for a particular fiscal aid program, but with the total sum for the current period limited also by a specific-amount appropriation. Again, a definite amount may be appropriated as a maximum, subject to reduction by the operation of a distributive formula or by administrative action.

The bases for determining individual governments' shares of a particular grant or shared tax are also extremely varied.

The term "shared tax" has sometimes been applied strictly to specified portions of State taxes distributed back to local governments of origin without restriction concerning use. On the other hand, some aid thus distributed on a source basis is limited to particular functions or purposes.

More generally, aid for the support of specific local government functions is distributed with reference to some measure of local need or activity--for example, for education, school-age population, enrollment or

attendance, or actual local expenditure; for highways, miles of roads, number of vehicles, or particular local requirements; for public welfare programs, actual or estimated local expenditure.

A broad measure of need is expressed in formulas based on local population and applied to the distribution of money for general local government support.

For many aid programs using a measure of local need, some standard of local financial effort or ability is also applied, aiming at a degree of "equalization" as between relatively poor and more prosperous local units. A contrasting principle is applied where a "floor" is provided in terms of a minimum amount of aid payable to each local government unit involved. Finally, some aid programs provide an identical amount to all local units of a particular type.

SOURCES AND LIMITATIONS OF DATA

This report represents a comprehensive updating of the kind of information about State payments to local governments that was most recently presented in a similarly titled report of the 1967 Census of Governments (Volume 6, Number 4). Figures shown here for 1967 and prior years are repeated directly from that publication. Amounts appearing in tables 1 to 3 for 1968 through 1971 are from the Census Bureau's annual reports on State government finances for the years specified. The basic 1972 amounts in tables 1 to 5 are directly from State Government Finances in 1972.

Special research work was undertaken to develop the information about particular grant programs of individual States which is presented in table 7 of this report, and the cross classification of State distributive payments by function and type of recipient government which appears in table 6.

For numerous States, the aggregates shown in table 6 for particular classes of local governments are consistent with the type-of-government presentation initially given in table 10 of State Government Finances in 1972. In other instances, however, the two sets of figures do not exactly agree. This is mainly because of certain distributive items which in regular annual Census Bureau reports are treated as "Combined and unallocable" amounts going to two or more types of local governments. In table 6 here, on the other hand, such items have been fully distributed among the particular types of governments concerned, by reference to more detailed information obtained specially for this report or (where necessary) on an estimated basis, taking account of the particular distributive formula involved and relevant background data. In a few instances also the research carried out for this report led to some minor changes in the functional classification of intergovernmental payments, as initially published for fiscal 1972.

Most North Carolina amounts provided to finance local schools are now classed as State payments to local governments (for county-administered schools) for education. In Bureau of the Census reports on governments before 1961, most such amounts were

treated as direct State expenditure for local schools and, therefore, were not included in intergovernmental amounts. Figures shown here for 1957 and subsequent years have been accordingly revised.

Delaware statistics also are affected by a change in classification applied to Delaware school systems, effective with reports of 1962 data. "State Board Unit" schools there, formerly treated as a direct State government activity, are now classed as local school district governments. Financial support provided by the State for these schools, as well as for all other local public schools in Delaware, is now classed as intergovernmental rather than direct State expenditure. Prior-year figures for Delaware have not been revised.

All local public school systems in Vermont were classed as independent school districts, effective in fiscal 1967. In prior years, most had been classed as dependent city or town systems. Prior-year figures for Vermont have not been revised.

Information used in the preparation of this study has been obtained primarily from Census Bureau records and worksheets used in the compilation of data for the Bureau's annual series of reports on State government finances.

These records have been supplemented by reference to statutes and by the study of numerous official reports, special studies, and articles concerning particular States. Some use also has been made of publications of organizations and agencies concerned with certain major functional fields--e.g., for highways, reports of the Federal Highway Administration.

The description here of particular distributive programs is designed to cover arrangements that governed allocations in fiscal 1972.

It has not been considered within the scope of this report to provide full explanatory detail concerning each item of intergovernmental expenditure for each of the 50 States. Descriptions of the bases for distributing aid are stated in summary terms, with uniform phrasing for common patterns. In many cases, however, the descriptions omit specific amounts, ratios, and limitations that may enter into the actual computation of distributed shares.

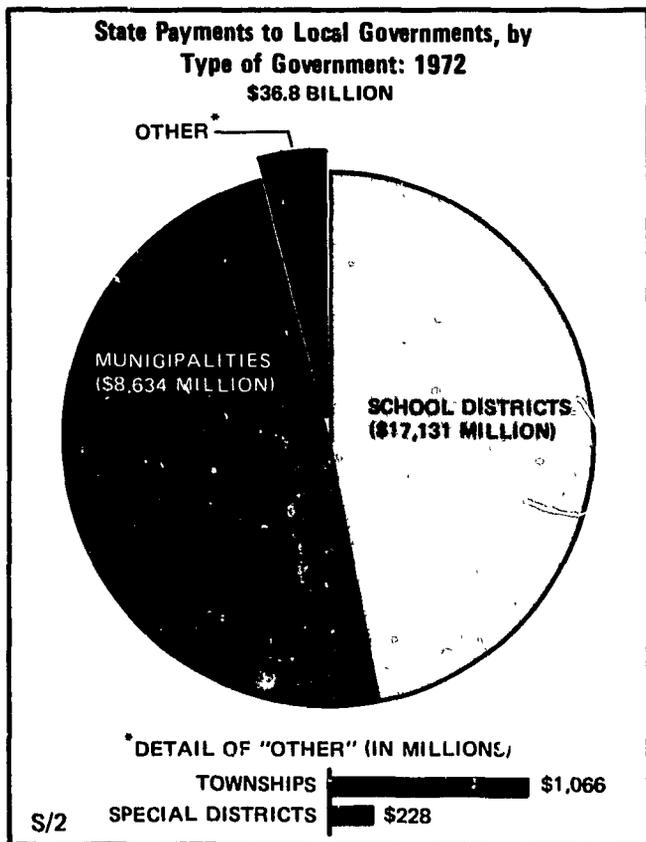

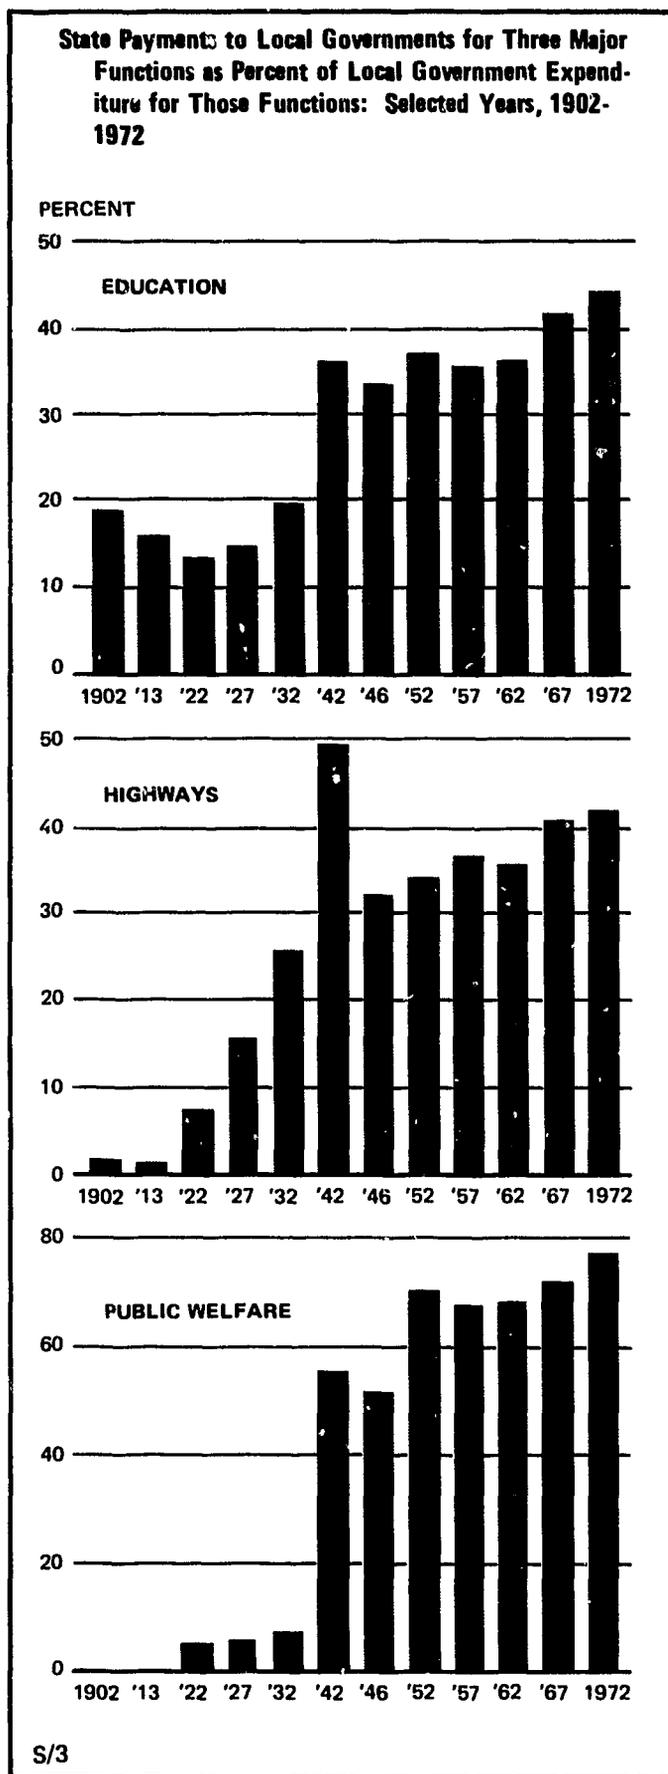

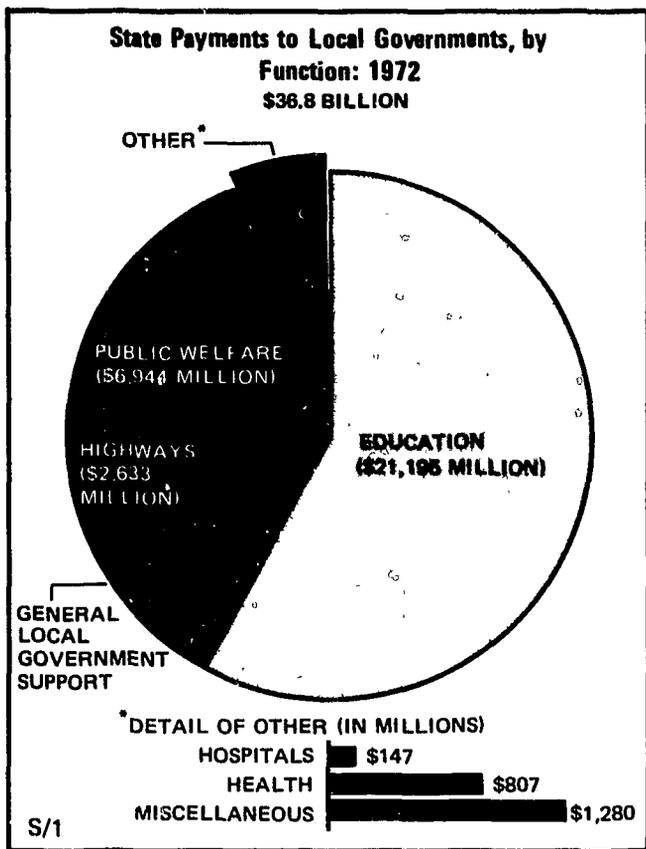

In the case of some items for which an amount is allocated by a simple mathematical formula, an apparent discrepancy may appear between the sum imputed by the formula and the figure appearing in the amount column. Such differences generally result from carry-over or adjustment of aid transactions between one fiscal period and another.

For Census Bureau reporting of governmental statistics on a nationwide basis, uniform terminology and concepts for classification of the data are essential. Thus, treatment of State intergovernmental expenditure in this report sometimes will differ from the practice of individual States in the classification of certain transactions as State aid to local governments, the terminology applied to purposes for which aid is granted, or the designation of types of government receiving State aid.

For similar reasons, amounts shown here, although compiled from detailed official records of the State themselves, will in some instances differ from amounts shown for related items in certain published State reports.

The statistics presented in various tables of this report afford a basis for comparing amounts of aid to local governments provided by individual States. It is important that such comparisons take adequate account of the concept of intergovernmental expenditure that has

been described above, and of the great variations which exist in the pattern of State-local responsibility for particular governmental functions throughout the Nation. Thus, State A directly provides public schools, local highways, or public assistance; State B grants to its local governments funds for local performance of these functions under State supervision. The total cost to each State government may be similar, although involving a different form of State expenditure in the two instances. Hasty conclusions and interpretations must therefore be avoided in this area, and interstate comparisons can be made only with caution and often with some qualification.

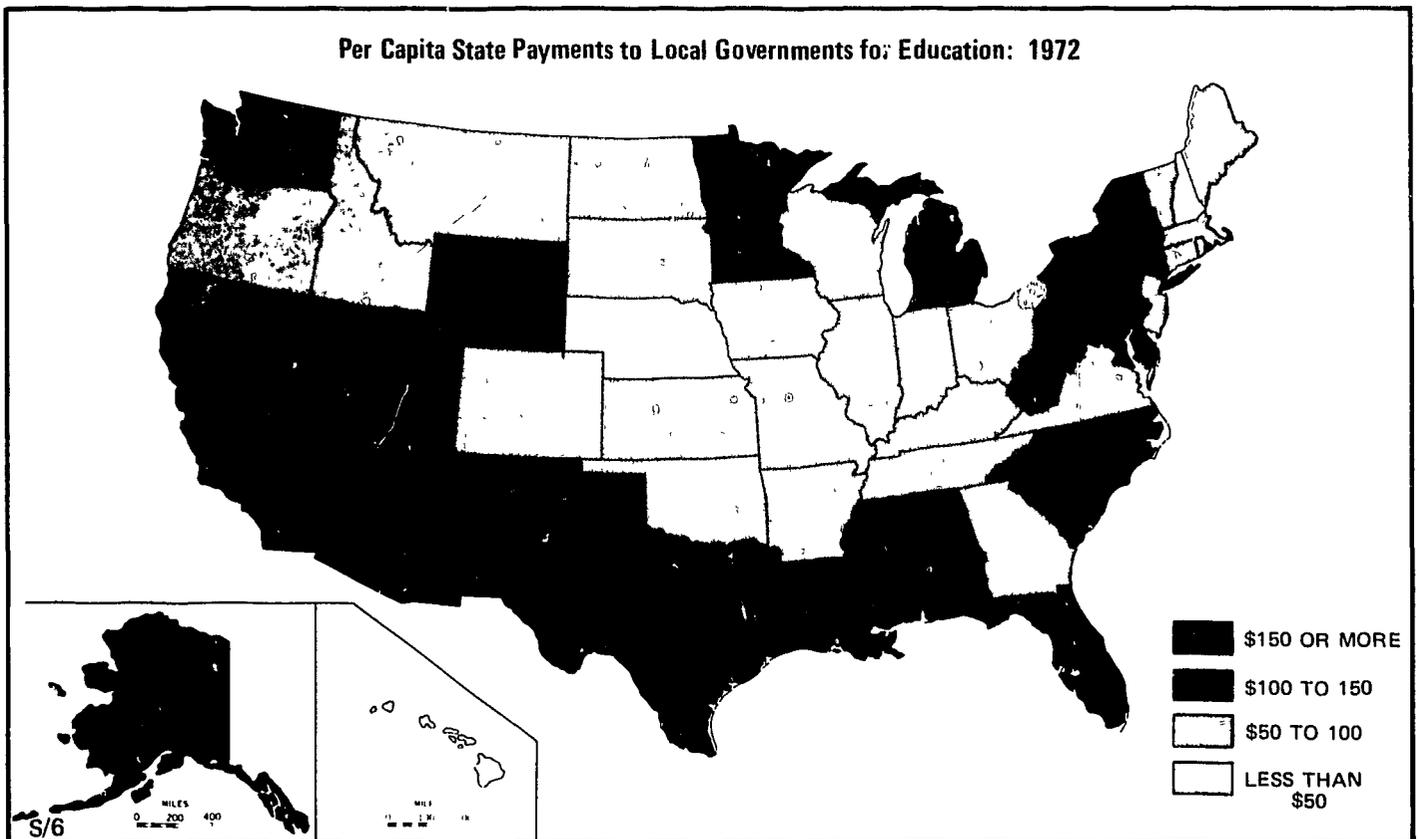

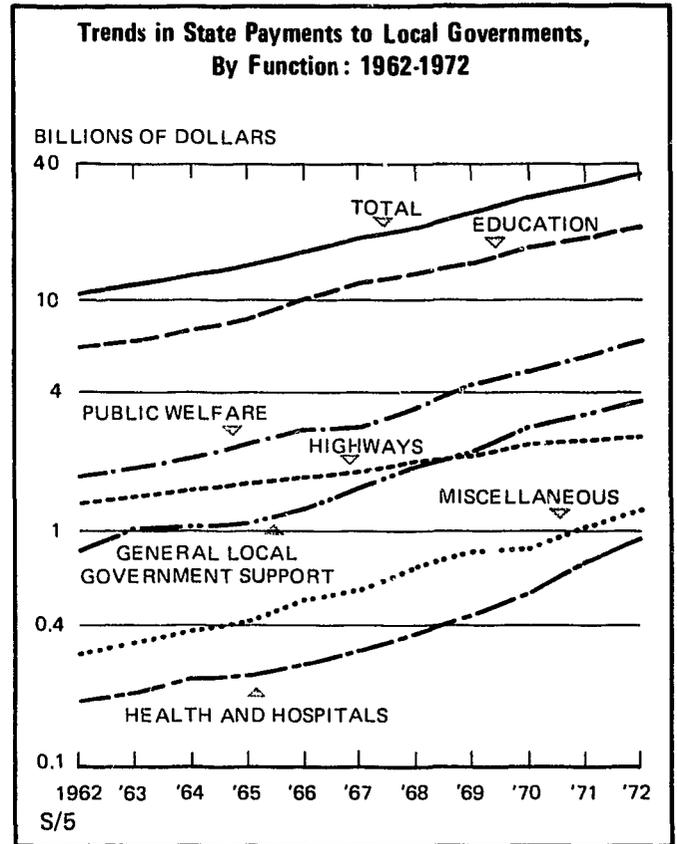

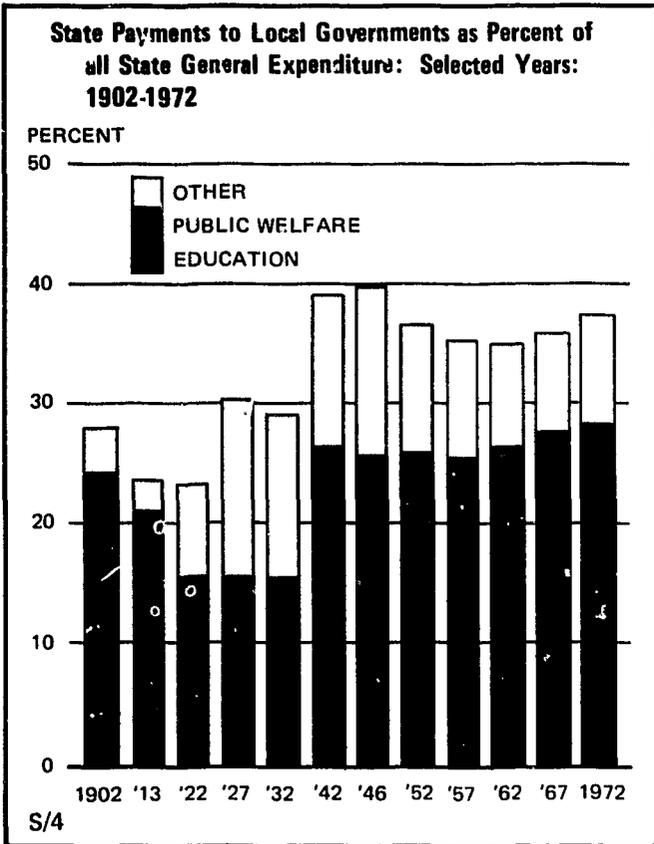

Table 1. National Summary of State Intergovernmental Expenditure, by Function for Selected Years: 1902 to 1972

Item	1972	1971	1970	1969	1968	1967	1966	1964	1962	1960	1958	1957	1956

1972 CENSUS OF GOVERNMENTS PUBLICATION PROGRAM

The results of the 1972 Census of Governments are being issued in eight volumes of paperbound reports. A brief description of each report is listed below. As each report becomes available, an order form will be issued. More detailed information can be obtained by writing to the Publications Distribution Section, Social and Economic Statistics Administration, Washington, D.C. 20233.

Volume 1.

GOVERNMENTAL ORGANIZATION

This volume provides data nationally, by States, and for standard metropolitan statistical areas on county, municipal, and township governments by size classes; on school districts and other public school systems by size of enrollment, by kind of area served, by grades provided, and by number of schools operated; and on special districts by function performed. Also shown is the number of local governments, by type, in each county in the Nation. The volume also includes a summary description of governmental structure in each State.

Volume 2.

TAXABLE PROPERTY VALUES AND ASSESSMENT-SALES PRICE RATIOS

Part 1. Taxable and Other Property Values--Part 1 contains amounts of assessed value (gross and net) officially determined in 1971 for local general property taxation, for counties and for each city having a 1970 population of 50,000 or more, with totals for States and their SMSA and non-SMSA components. Results for the latter jurisdiction are compared, on a total and per capita basis, with corresponding data for 1961. For a group of large assessing jurisdictions, part 1 also includes estimates of locally assessed realty distributed among major use categories. Values reported as applicable to totally exempt property are shown for a limited number of States.

Part 2. Assessment-Sales Price Ratios and Tax Rates--Part 2 provides statistics, based on a sampling within more than 2,000 local assessing jurisdictions throughout the United States, on real properties involved in measurable sales during a 6-month period of 1971. Statistics include effective tax rates, assessment-sales price ratios, and dispersion coefficients applicable to single-family (nonfarm) houses and certain other realty, for States, local assessing jurisdictions classified by type, and selected local areas, each having a 1970 population of 50,000 or more. In addition, part 2 contains a summary of special property taxes of State and local governments for 1971-72.

Volume 3.

PUBLIC EMPLOYMENT

This volume consists of three separate paperbound reports on public employment.

No. 1. Employment of Major Local Governments--Statistics on October 1972 employment and payrolls of

individual major local governments. Data are presented individually for all county governments, municipalities, and selected townships of 10,000 population or more, school districts with 3,000 or more enrollment, and special districts with 100 or more full-time employees. Data reported includes total, full-time, and full-time equivalent employment as well as payrolls and average monthly earnings. Full-time equivalent employment of counties and municipalities is shown for selected functions.

No. 2. Compendium of Public Employment--National data on October 1972 government employment and payrolls (including Federal Government), by function, and by type of government. State-by-State statistics are provided for all levels of government and, for State and local governments, are shown by governmental function. Additionally, statistics are presented by county areas for local governments; by population size groups for counties, municipalities, and townships; by enrollment size groups for school districts; and by employment size groups for special districts. Data are presented by level of government and type of local government for State and local government full-time employees covered by contributory retirement systems; health, hospital or disability insurance and life insurance.

No. 3. Management-Labor Relations in State and Local Governments--National and State-by-State statistics on the number of full-time State and local employees who belong to an employee organization, type of labor relations policy practiced by State and local governments, number of written labor-management agreements and number of work stoppages in State and local governments, by level of government and type of local government. Data on organized full-time employees and work stoppages are also shown for selected functions of State and local government. Statistics on work stoppages include number of employees involved, workdays and mandays idle, major issues involved, and final methods of resolution.

Volume 4.

GOVERNMENTAL FINANCES

This volume consists of five separate paperbound reports on government finances.

No. 1. Finances of School Districts--Statistics on revenue, expenditure, debt, and financial assets of school districts for their fiscal years 1971-72. Figures are shown in detail for each State and, as to selected financial items, for enrollment-size groups of school districts and individual school districts enrolling 3,000 or more pupils.

No. 2. Finances of Special Districts--Data for fiscal 1971-72 on finances of special districts, by State, and for selected large districts.

No. 3. Finances of County Governments--Statistics for the United States and for each State on revenue, expenditure, debt, and financial assets of county governments. Selected financial items are shown for groups of counties, classified by size of population, and for individual county governments.

No. 4. Finances of Municipalities and Township Governments--Data on revenue, expenditure, debt, and financial assets of municipalities and townships for their 1971-72 fiscal years. Detailed statistics are given for States. Selected financial items are reported for population-size groups of these governments, and for individual municipalities and townships having 10,000 or more inhabitants.

No. 5. Compendium of Government Finances--A comprehensive summary of the census findings on governmental finances for fiscal 1971-72 showing data for the Federal Government, individual States, and local governments by type of government, and data for State and local governments by States, including a breakdown by type of government. Figures are given separately for local governments within standard metropolitan statistical areas and for county areas. Also shown are per capita figures, percentage distributions, and State rankings.

Volume 5.

LOCAL GOVERNMENT IN METROPOLITAN AREAS

This volume presents the census findings for standard metropolitan statistical areas (SMSA's) in three major subject fields: Numbers of local governments by type and size, local government employment, and local government finances. Data are shown in terms of nationwide aggregates, for population-size groups of SMSA's and for the SMSA portion of each State, as well as for individual SMSA's and their component counties. Data are also shown for selected items of direct State expenditure in these areas.

Volume 6.

TOPICAL STUDIES

This volume consists of five separate paperbound reports on selected subjects.

No. 1. Employee-Retirement Systems of State and Local Governments -- Membership, receipts, expenditures, number of beneficiaries and financial assets are presented

for State and local government employee-retirement systems. Also shown are national and State totals by membership size and coverage class of system, and individual-system data for those retirement systems with 200 or more members.

No. 2. State Reports on State and Local Government Finances --Concise descriptive listings, by State, of periodic State government publications that contain statistics on State and local government finances.

No. 3. State Payments to Local Governments --Programs for financial grants and reimbursements to local governments in each State are described, indicating the basis of allocation and amounts paid under each program during the fiscal year 1971-72. Statistics are also presented on State intergovernmental expenditure, by function and by type of recipient government, together with comparative historical data.

No. 4. Historical Statistics on Governmental Finances and Employment --Nationwide figures on governmental revenue, expenditure, and indebtedness, by Federal, State, and local levels of government, for selected years (1902, 1913, 1922, 1927, 1932, biennially from 1936 to 1966, and annually from 1967 to 1972). Nationwide figures on public employment are presented for the period since 1940. State-by-State data on the finances of State and local governments appear for selected years since 1957, and on employment for 1953, 1957, 1962, 1967, and 1972.

No. 5. Graphic Summary --Charts and maps first issued in other reports of the census are assembled here with a brief explanatory text and a reference guide to the subject matter reports where the underlying statistics appear.

Volume 7.

STATE REPORTS

This volume will be a series of 52 publications each of which presents, for a particular State, the principal findings of the census concerning governmental structure and numbers, public employment, and State and local government finances. Each report includes several charts which show key measures of finances and employment, State by State.

Volume 8.

GUIDE TO 1972 CENSUS OF GOVERNMENTS

This report presents detailed samples of tables published in the 1972 Census of Governments report series. It is a descriptive information source for users and potential users of data produced during the Census of Governments.
