### DEFINITION OF STATE INTERGOVERNMENTAL EXPENDITURE

As used in this report, the term State payments to local governments is synonymous with the term State intergovernmental expenditure which appears in recurrent Census Bureau reports on governmental finances. Such expenditure includes not only grants-in-aid and State-collected, locally shared taxes, but also reimbursements paid to local governments by States for services rendered by them for State governments. Examples of services for which States often reimburse local governments are collection of taxes, care of prisoners, hospital care for the needy, and construction of public improvements. State intergovernmental expenditure also includes extension of contingent loans and advances, for which repayment by local governments is conditional.

By definition, State intergovernmental expenditure involves the actual payment of money to local governments. It thus excludes State transactions or activities which benefit localities without involving the flow of funds to local governments. Examples include the following:

1. Nonfiscal assistance by a State to local governments in the form of advisory or other services or aid-in-kind (e.g., free provision of commodities or textbooks, or the loan of equipment);
2. Assumption by a State of direct operating responsibility for functions customarily performed by local governments (e.g., direct maintenance of local public schools by the State of Hawaii and, in several States, provision of local streets and highways or of general relief);
3. Joint State-local activities involving State expenditure of the State's share of costs directly for goods, services, or public assistance payments rather than in the form of payments to local governments;

The 50 State governments paid \$96.2 billion to local governments in fiscal year 1982, or \$416 per capita. This marks a 58 percent rise in State intergovernmental expenditure since 1977, when the total was \$61.1 billion, or \$283 per capita. Other State expenditures were going up at a similar pace, so that the proportion of total State general expenditure represented by distributive payments to local governments decreased from 36.8 percent in 1977 to 35.7 percent in 1982.<sup>1</sup>

During the 20-year period from 1962 to 1982, the annual amount of State payments to local governments increased annually, moving up from \$10.9 billion to \$96.2 billion. Throughout this period, however, such payments made up a fairly constant fraction of the annual nationwide total of State general expenditure. Since 1952, this percentage relationship ranged between a low of 33.4 (1959) and high of 38.0 (1974). During the past decade, the proportion of all general revenue of local governments supplied by State distributive payments also has shown little variation, ranging between 33.8 and 35.6 percent.

<sup>1</sup>As used in this report, the term "State payments" and its various equivalents includes the pass-through of Federal funds to local governments. Also, the intergovernmental expenditure data shown here for 1982 and other census years (1977, 1972, 1967, 1962, and 1957) may not agree with those in other Census of Governments reports due to the reasons cited in the "Differences with other census reports" section of the text.

4. Contribution by State to trust funds it administers for financing of retirement benefits to local government employees; and
5. Shares of State-imposed taxes which are collected and retained by local governments. (Such retained amounts are classed, in Census Bureau reports, as local tax revenue.)

On the other hand, certain transactions involving the flow of funds from States to local governments are excluded from census reporting of intergovernmental expenditure, as follows:

1. Unconditional State loans to local governments, and State purchases of local government securities;
2. Transactions in which a State acts as an agent for local governments (e.g., collecting and returning to them locally imposed taxes, including State prescribed taxes imposed at local rates);
3. State payments for commodities, property, or utility services purchased from local governments; and
4. Taxes levied by local governments on facilities or property owned by the State. (However, State payments in lieu of taxes are classified as intergovernmental expenditure.)

The major portion of State payments to local governments consists of grants-in-aid and shared taxes, i.e., the kinds of items commonly referred to as State aid. For this reason, and for ease of reference, the terms State payments to local governments, State aid, fiscal aid, and grants are used interchangeably in the present study with the more technically exact phrase State intergovernmental expenditure, which has been defined and explained above.

#### CLASSIFICATION OF STATE INTERGOVERNMENTAL EXPENDITURE

In table 6, and in the descriptions of distributive programs for individual States which appear in table 7, State aid amounts are shown separately for the several types of local governments

which are distinguished in census reporting. These are as follows:<sup>2</sup>

1. County governments (including parishes in Louisiana and boroughs in Alaska);
2. Municipalities, which consist of all incorporated places having powers of general government, thus including units known locally as villages, boroughs (except in Alaska), towns (except in the New England States and in New York and Wisconsin), and cities;<sup>3</sup>
3. Townships, which include units locally called towns in the New England States and in New York and Wisconsin;
4. School districts, which include only units of school administration that have status as independent units of local government rather than as administrative segments of State, county, city, or township governments; and
5. Special districts, which include districts and authorities established for the performance of a single function or a designated combination of specific functions, and which have status as independent units of government rather

<sup>2</sup>Detailed data on the numbers and characteristics of the several types of local governments in each State appear in Governmental Organization (Vol. 1 of the 1982 Census of Governments--GC82(1)), together with a detailed statement of Census Bureau criteria for the identification and classification of governmental units.

<sup>3</sup>Recognized for Census Bureau reporting of governmental statistics as municipalities rather than as counties are the following local governments which, either specifically by law or substantially in fact, operate as composite city-county; Anchorage, Alaska, Baltimore city, Md., Baton Rouge, La., Boston, Mass., Butte-Silver Bow, Mont., Carson City, Nev., Columbus, Ga., Denver, Colo., Honolulu, Hawaii, Indianapolis, Ind., Jacksonville, Fla., Juneau, Alaska, Lexington-Fayette, Ky., Nashville-Davidson, Tenn., New Orleans, La., New York City, N.Y., Philadelphia, Pa., San Francisco, Calif., Sitka, Alaska, St. Louis city, Mo., Washington, D.C. and the 41 "independent" cities of Virginia. Classified as part of Nantucket town government is Nantucket County. In this report, segregable amounts of State payments to these particular units have been classified accordingly.

than as administrative segments of State, county, city, or township governments.

Payments to dependent agencies of a government are recorded as amounts to the parent government. Thus, payments to county-dependent school systems are listed as aid to counties.

Payments to more than one type of government are listed as going to "Various Units" whenever the amount going to each type is unavailable. Note that aid to various units under "General Local Government Support" may include payments to school districts unless the same program is listed under "Education."

State intergovernmental expenditure is subclassified also by function. Most of the categories so designated in this report tie directly to functions which are defined and used for census reporting of local government expenditure. For example, intergovernmental expenditure for highways consists of State grants, shared taxes, and reimbursements paid to local governments specifically to help finance their activities for the provision and maintenance of highway and street facilities. However, a distinctive kind of category "General Local Government Support" also appears here as part of the functional presentation, showing State intergovernmental expenditure which is not restricted as to its application but, instead, is made available for general local government support of the benefited types of local units.<sup>4</sup>

#### STATISTICAL FINDINGS

Per capita payments in 1982 were highest in Alaska (\$2,144) and lowest in Hawaii (\$30) with the 50 States distributed as follows:

Per capita amount	Number of States
Total	50
Over \$750.....	2
\$500 to \$750.....	7
\$400 to \$500.....	5
\$350 to \$400.....	10
\$300 to \$350.....	12
\$250 to \$300.....	7
Less than \$250.....	7

The per capita amount of intergovernmental expenditure was higher in 1982 than in 1977 for every State (except Hawaii) but with considerable variation in the rates of change involved. During this 5-year interval, as table 2 shows, State aid per capita more than doubled in 5 States, but rose by less than 30 percent in 8 States.

Payments to local governments in the Nation as a whole made up 35.7 percent of all State government general expenditure in 1982. This relationship ranged widely, from 1.7 percent in Hawaii up to 47.4 percent in California. Table 3 shows individual State percentages for 1982 and earlier census years.

During the past 20 years, as this table shows, there has been a considerable increase in the number of States devoting a relatively high percentage of their total general expenditure to distributive payments. In 1982, 30 States expended over 30 percent, compared with only 23 States in 1962.

There was substantial variation among individual States in the fraction of general expenditure devoted to local government aid between 1977 and 1982. Twenty-seven States showed a decline but 7 States had an increase of 4 percentage points or more.

Tables 4, 5, and 6 give State-by-State data on the functional distribution of intergovernmental payments in 1982. The bulk of all State intergovernmental expenditure, as these tables show, was made available to help finance some particularly designated function or activity. In 1982, only \$10.1 billion, or 10.5 percent of the total, was provided without functional designation, i.e., on terms that made funds available for "General Local Government Support." There were 2 States with no distributive programs of this kind and, as table 4 shows, 9 other States where only a nominal amount (less than \$10 per capita) was made available in 1982. On the other hand, general support grants were highly significant in a number of States, equal-

<sup>4</sup>Caution should be exercised when comparing State payments by function to local direct expenditures for the same, since the former sometimes cross functional lines by the time they are directly expended at the local level. For example, amounts distributed to local units under the Federal Medicaid program are classified as State public welfare intergovernmental expenditure but cross over into the hospital function when expended by a local government-operated public hospital.

ing in 1982 about \$352 per capita in Wyoming, \$342 in Alaska, and over \$100 in 6 more States.

Grants for education made up a major portion of all State payments to local governments in most States as well as in the Nation as a whole. However, there was a wide variation in the scale of State educational funding, which ranged in 1982 from \$896 per capita in Alaska down to \$72 per capita in New Hampshire. (Hawaii, where the State government administers and operates the public schools, had no education grants). Note that these data include the pass-through of Federal funds under the Elementary and Secondary Education Act (ESEA), which subsequently has been amended by the Education Consolidation and Improvement Act of 1981. The following figures, based on table 4, summarize the 1982 amount of inter-governmental expenditure for education by the various States:

<u>Per capita amount</u>	<u>Number of States</u>
Total.....	50
Over \$45.....	6
\$35 to \$45.....	6
\$25 to \$35.....	8
\$15 to \$25.....	8
\$5 to \$15.....	17
Less than \$5.....	5

State aid to local governments for health and hospital purposes totaled \$2.9 billion in 1982. This was a national average of \$12.36 per capita, but the amount distributed was relatively much less in a majority of States. There were only 14 States where grants for health and hospitals equalled at least \$10 per capita.

Correction and law enforcement grants totaled \$839 million with a per capita average of \$3.63 in fiscal 1982. Sewerage payments by the States amounted to \$596 million with a per capita average of \$2.58. Only 33 States made identifiable sewerage program grants.

Table 6 provides a cross classification of intergovernmental expenditure by States, in terms of the major functional categories mentioned above and the various types of recipient local governments.

<u>Per capita amount</u>	<u>Number of States</u>
--------------------------	-------------------------

Total	50
Over \$350.....	8
\$250 to \$350.....	14
\$150 to \$250.....	24
Less than \$150.....	4

Public welfare ranked second only to education as a State-aided function, with payments totaling \$11.3 billion or almost 12 percent of all State payments. It should be noted that the administration of categorical welfare aid was changed in January 1974 when the Federal Government assumed direct payment to aged, blind, and disabled recipients. Since many States directly administer the balance of the welfare programs, either no payments or small amounts for special programs were made to local governments. Six States still had welfare grants of over \$50 per capita, indicating continued local government involvement in welfare activities.

State payments to local governments for highway purposes amounted to \$5.0 billion in 1982, 5 percent of total State inter-governmental expenditure. All but two States (Hawaii and West Virginia) made such payments, and the per capita amount went as high as \$94 (Alaska). The States were distributed as follows in terms of 1982 State per capita aid for highways:

#### INDIVIDUAL STATE DETAIL

Table 7 provides a summary narrative description of the distributive programs of each of the 50 State governments. Note that certain minor programs have been omitted. (As a general rule, programs with less than \$100,000 in 1982 expenditure often were omitted.)

The distributive programs of each State are grouped under 8 functional headings. For each program, the presentation describes briefly the distribution formula and the sum paid in fiscal 1982, with a specific indication in most instances of the amount going to various types of local governments. In the presentation, the term "cities" has been substituted for the technically more precise designation, "municipalities."

For many of the State aid items shown, the description will indicate also the source of financing involved. This is especially true for allocations of earmarked taxes and for grant items that are payable distinctively from Federal funds. However, it is often impossible to

associate a particular distributive program with some specific financing source. This is most obvious for a grant payable from a State "general fund" with its numerous revenue sources. An intermediate situation involves aid payable from a special fund which in turn is fed by two or more earmarked revenue sources. Where the main components of such multiple-source funds could be readily ascertained and briefly stated (e.g., "highway user revenues"), they usually are mentioned in the program description. Also, items financed in part from Federal resources commonly are described as payable from "State and Federal funds." While these features of the presentation provide background about the financing of many individual grant items, they do not afford a basis for the comprehensive classification of all State intergovernmental expenditure by source of funding.<sup>5</sup>

#### STATE AID FORMULAS

Programs of State aid to local governments involve various means by which the State (a) establishes the total amount available for a particular fiscal year or biennium, and (b) determines the share payable to individual governments.

The total amount of some State intergovernmental expenditures is set by a specific appropriation of such nature that a particular sum named will be distributed without reduction or change.

At the other extreme are aid items whose total amount is not determined explicitly or even limited in advance. One example of this type is the distribution of a specified share of some particular State revenue source, with the actual current amount of aid determined by the yield of that source. Another example is the "open end" authorization of whatever amount is needed to meet the requirements of a particular formula.

Between the absolutely fixed and the completely indeterminate types of aid provisions are numerous gradations and combinations of methods. Thus, a specified share of some revenue source may be authorized for a particular fiscal aid program, but with the total sum for the current period limited also by a specified appropriation. Again, a maximum amount may be appropriated, subject to reduction

by the operation of a distributive formula or by administrative action.

The bases for determining an individual government's share of a particular grant or shared tax also are extremely varied. Moreover, in some cases, funds are allocated to counties as intermediaries for further redistribution by formula.

The term "shared tax" has been applied sometimes strictly to specified portions of State taxes distributed back to local governments of origin without restriction concerning use. These are listed under "General Local Government Support." On the other hand, some aid is distributed on a source basis but is limited to particular functions or purposes, in which case it is listed under the appropriate functional category (e.g., highways).

Assistance for the support of specific local government functions often is distributed with reference to some measure of local need or activity--for example, education aid is based frequently on school-age population, enrollment or attendance, or actual local expenditure; highways, miles of roads, number of vehicles, or motor vehicle registrations; public welfare programs, actual or estimated local expenditure.

A broad measure of need is expressed in formulas based on local population and applied to the distribution of money for general local government support.

For many aid programs based on a measure of local need, some standard of local financial effort or ability is applied also, aiming to "equalize" aid between relatively poor and more prosperous local units. A contrasting principle is applied whenever a "floor," or minimum amount of aid, is provided. Finally, some aid programs provide an identical amount to all local units of a particular type.

#### SOURCES AND LIMITATIONS OF DATA

This report represents a comprehensive update of the information on State payments to local governments that was presented in a similarly titled report of the 1977 Census of Governments (Volume 6, Number 3). Figures shown here for 1977 and prior years are repeated directly from that publication. Amounts appearing in table 1 for 1977 through 1981 are from the Census Bureau's annual reports on State government finances for the years specified.

The 1982 intergovernmental expenditure amounts shown in this report may not agree with those published in other Census

<sup>5</sup>Detailed statistics on Federal grants to State and local governments appear in table 2 of the Bureau of the Census report, Federal Expenditures by State for Fiscal Year 1982.

of Governments reports due to the methodological differences cited in the next section. The other 1982 financial amounts in tables 1 and 3 are directly from State Government Finances in 1982 (GF82, No. 3).

The starting point for the preparation of this report was the research material from the 1977 compilation and the sources and worksheets used in the Bureau's 1982 survey of State government finances. These fiscal sources were supplemented by reference to other documents, such as State budgets, annual financial audits, and departmental reports. Also, some use was made of publications of organizations or agencies concerned with major functional fields, e.g., reports of the State education departments on local school finances.

It should be noted that these financial sources did not always identify one type of intergovernmental payment (so classified for census purposes): reimbursements for certain services provided the State by local governments. That is, a State's financial management system did not always distinguish between public and private providers of services. This omission probably is significant (in dollar terms) only for the Federal Medicaid program. Most available State financial sources did not identify those Medicaid payments going to public hospitals, instead lumping them into a "vendor payment" object category with those to private hospitals. In those cases, such payments could not be listed in this report and are included with other direct welfare expenditure of the State in other census publications.

The descriptions in table 7 of individual distributive programs, which are designed to cover arrangements that governed allocations in fiscal 1982, are based on a variety of sources. For some programs, particularly State aid programs shown under "Education," "General Local Government Support," and "Highways," authorizing statutes were referenced.<sup>6</sup> Descriptions of common Federal aid programs (e.g., Title I under the ESEA) are based on the 1981 Catalog of Federal Domestic Assistance published by the Office of Management and Budget. For still other programs, State budgets, annual reports, departmental publications, and special studies

<sup>6</sup>Two limitations of the legal research should be noted: first, available statutes did not always indicate the actual distribution formula provisions that applied during fiscal 1982. Second, statutory formulas may have been altered by other legislation not studied, such as appropriation bills.

were reviewed. Both fiscal and narrative data were supplemented, when necessary, by contacting State officials.

The titles used for individual programs generally reflect the terminology used by the State. Thus, the major State assistance program for education, referred to as "Foundation Aid" in most States, is called variously by others as "Adequate Program for Education" (Georgia), "Distributive School Fund" (Nevada), "General Formula Aid" (New Jersey), "Equalization Aid" (Montana), and more.

It has not been considered within the scope of this report, however, to provide full explanatory detail concerning each item of intergovernmental expenditure for each of the 50 States. Descriptions of the bases for distributing aid are stated in summary terms, with uniform phrasing for common patterns. In many cases, however, the descriptions omit specific amounts, ratios, limitations, and local requirements that may enter into the actual computations.

When an amount is allocated by a simple mathematical formula, a discrepancy may appear between the sum imputed by the formula and the figure appearing in the amount column. Such differences generally result from carry-over or adjustment of aid transactions between one fiscal period and another or differences in fiscal year ending dates between the State and its local governments or between types of local governments.

For Census Bureau reporting of governmental statistics on a nationwide basis, uniform terminology and concepts for classification of the data are essential. Thus, treatment of State intergovernmental expenditure in this report sometimes will differ from the practice of individual States in the classification of certain transactions as State aid to local governments, the terminology applied to purposes for which aid is granted, or the designation of types of government receiving State aid.

For similar reasons, amounts shown here, although compiled from detailed official records of the State, will differ in some instances from amounts shown for related items in published State reports.

While statistics presented in various tables of this report afford a basis for comparing amounts of State aid to local governments, it is important that State to State comparisons take adequate account of the concept of intergovernmental expenditure that has been described above and of the great variations which exist

in State-local responsibility for particular governmental functions throughout the Nation. For instance, State A may provide directly public schools, local highways, or public assistance while State B makes grants to its local governments for local performance of these functions under State supervision. The total cost to each State government may be similar, but involve a different form of State expenditure in each instance. Hasty conclusions and interpretations therefore must be avoided in this area, and interstate comparisons made only with caution and some qualification.

#### DIFFERENCES WITH OTHER CENSUS REPORTS

The intergovernmental expenditure data in this report for 1982 and other census years (1977, 1972, 1967, 1962, and 1957) may not agree with those in other census reports due to the following methodological reasons.

**Refinement--**This report required fiscal and legal research that is more extensive than practicably can be achieved during the regular, annual survey of each State's finances. Such extensive research sometimes revealed information affecting the current treatment of an activity. For instance, research on one State's alcoholic beverage tax distribution, currently treated as general local government support, disclosed that it was to be used for alcohol abuse prevention and education. Accordingly, it was reclassified under "Health and Hospitals" for this report.

Similarly, a higher level of preciseness is needed for the program detail of this report than the broader functional data of the regular survey. An amount (such as payments to private organizations) which may be statistically insignificant when rolled up into a functional total may become material at the program level.

**Timing--**This report was prepared largely after the compilation work on the regular State financial survey was completed. Consequently, changes to 1982 data discovered during the detailed research necessary for this report (as described above) were not made to the regular data file (but were flagged for revision in future surveys).

**Different sources--**The intergovernmental expenditures shown in this publication are based on a summation of individual pro-

gram data. Since such program detail generally is not needed for the regular survey, it relies on financial sources that do not always provide sufficient information for this type of report. As a result, other financial sources were used, which did not show always the same level of expenditure for identical activities. For example, the regular State financial sources sometimes provided insufficient detail on payments for the various education programs, which comprise most State intergovernmental expenditure. In such cases, State education department reports frequently were used as a substitute.

**Scope--**The purpose of this report is to describe with statistics and narrative descriptions the financial relationships that exist between a State and its local governments. While it largely conforms to the classification scheme and practices of the regular survey, it also is freed to a certain extent of the burden of systematically accounting for all the financial activity of a State. Thus, certain liberties were taken in this report for the sake of consistency or other purposes, two examples of which will suffice: first, some programs were classified consistently in this report under one category, while the treatment of each in the regular survey may vary according to the function of the larger activity containing it (e.g., Child Support Enforcement always was categorized here under "Public Welfare" regardless of which agency performed it; in the regular survey, it most likely would be treated as a "Judicial-Legal" function whenever handled by a court or legal agency).

Second, the Census Bureau's classification scheme for governmental finances sometimes requires that certain intergovernmental transactions be treated as direct expenditure in order to ensure the integrity of the classification system. Specifically, payments to local government-administered retirement systems are not treated as intergovernmental expenditure because in this classification scheme no provision is made for intergovernmental revenues of insurance trusts, such as retirement systems. That is, all intergovernmental transactions are classified as general revenue/expenditure. To classify payments to locally administered retirement systems as intergovernmental expenditure of the State but insurance trust revenues of local governments, therefore, would destroy the "dual nature" of intergovernmental flows in census data (i.e., where State inter-

governmental expenditure to locals equals local intergovernmental revenue from the State). It was within the scope of this report, however, to include any payments to local pension systems (mostly teachers, fire, and police funds).

#### HISTORICAL CLASSIFICATION CHANGES

In reviewing the historical data contained in this report, certain changes in classification must be taken into account.

In North Carolina, most amounts distributed to finance local schools are classed as State payments to local governments (for county-administered schools) for education. In Bureau of the Census reports on governments before 1961, most such amounts were treated as direct State expenditure for local schools and, therefore, were not included in intergovernmental amounts. Figures shown here for 1957 and subsequent years have been revised accordingly.

Delaware statistics also are affected by a change in classification to its school systems, effective with reports

of 1962 data. "State Board Unit" schools, formerly treated as a direct State government activity, now are classed as local school district governments. Financial support provided by the State for these schools, as well as for all other local public schools in Delaware, is treated as intergovernmental rather than direct State expenditure. Figures for Delaware prior to 1962 have not been revised.

All local public school systems in Vermont are classified as independent school districts, effective in fiscal 1967. In prior years, most had been classed as dependent city or town systems. Data for Vermont prior to 1967 have not been revised.

#### MEANING OF SYMBOLS

The symbols in the tables have the following meanings:

Note: Because of rounding, detail may not add to total. Amounts for 1957 and earlier years exclude data for Alaska and Hawaii.

<sup>1</sup>Due to the methodological reasons described in the introductory text, the amounts shown here may not agree with those in other Census of Governments reports.

<sup>2</sup>Excludes payments to the Federal Government.

<sup>3</sup>Based on local government estimates, as shown in the Bureau of the Census report, *Governmental Finances in 1981-82* (GF82, No. 5).

<sup>4</sup>Caution should be exercised when using these data; see footnote 4 on page vii of introductory text.

<sup>1</sup>Includes \$160,343,000 financed by State lottery proceeds.  
<sup>2</sup>Represents cities of Buffalo, New York City, Rochester, Syracuse, and Yonkers.  
<sup>3</sup>Includes payments to county vocational education and extension boards, classified as county dependent agencies for census purposes.  
<sup>4</sup>Data shown are included in total "Support of public schools" amounts above, but when summed do not agree with these totals because most of the individual program detail represents estimated fiscal year 1982 expenditures from a different financial source.  
<sup>5</sup>Additional amounts for some of these programs may be included in programs shown above, particularly "Operating aid."  
<sup>6</sup>Any payments to CUNY and community colleges from these Federal funds are included with those programs.  
<sup>7</sup>Includes payments to two city-operated community colleges.  
<sup>8</sup>Includes vendor payments to the New York City Health and Hospitals Corporation, classified as a city dependent agency for census purposes.  
<sup>9</sup>Included in "Welfare administration" amount above.  
<sup>10</sup>Stock transfer tax was phased out through a rebate program which became 100 percent effective on Oct. 1, 1981.  
<sup>11</sup>Effective Apr. 1, 1982, these programs were abolished and combined into the "Consolidated local street and highway improvement program."  
<sup>12</sup>Included in "Public health work" amount above.  
<sup>13</sup>Represents 1981-82 payments from the State for these programs, as reported by local governments; these were used in lieu of actual State expenditures because available State financial sources provided insufficient program detail.  
<sup>14</sup>Westchester County only.  
<sup>15</sup>Represents New York City revenue from the State for this program, since available State financial sources provided insufficient detail on State payments. Any amounts to other governments are not available.

<sup>1</sup>Amounts shown for education represent 1981-82 receipts by local school districts for programs listed, as reported by the State Office of Education. These data were used because available State government financial reports did not provide sufficient expenditure detail. Note that total 1981-82 State payments to school districts for these programs were within 1 percent of total local receipts for same.

<sup>2</sup>Statutory provision repealed, effective July 1, 1982.

<sup>1</sup>1981 legislation requires city school districts to reorganize eventually as common school districts or as unified school districts.

<sup>2</sup>Represents 1981-82 State payments for these Federal programs (i.e., of funds passed through the State government), as reported by city-dependent schools and school districts; these were used in lieu of actual State expenditures because available State financial sources provided insufficient program detail.
